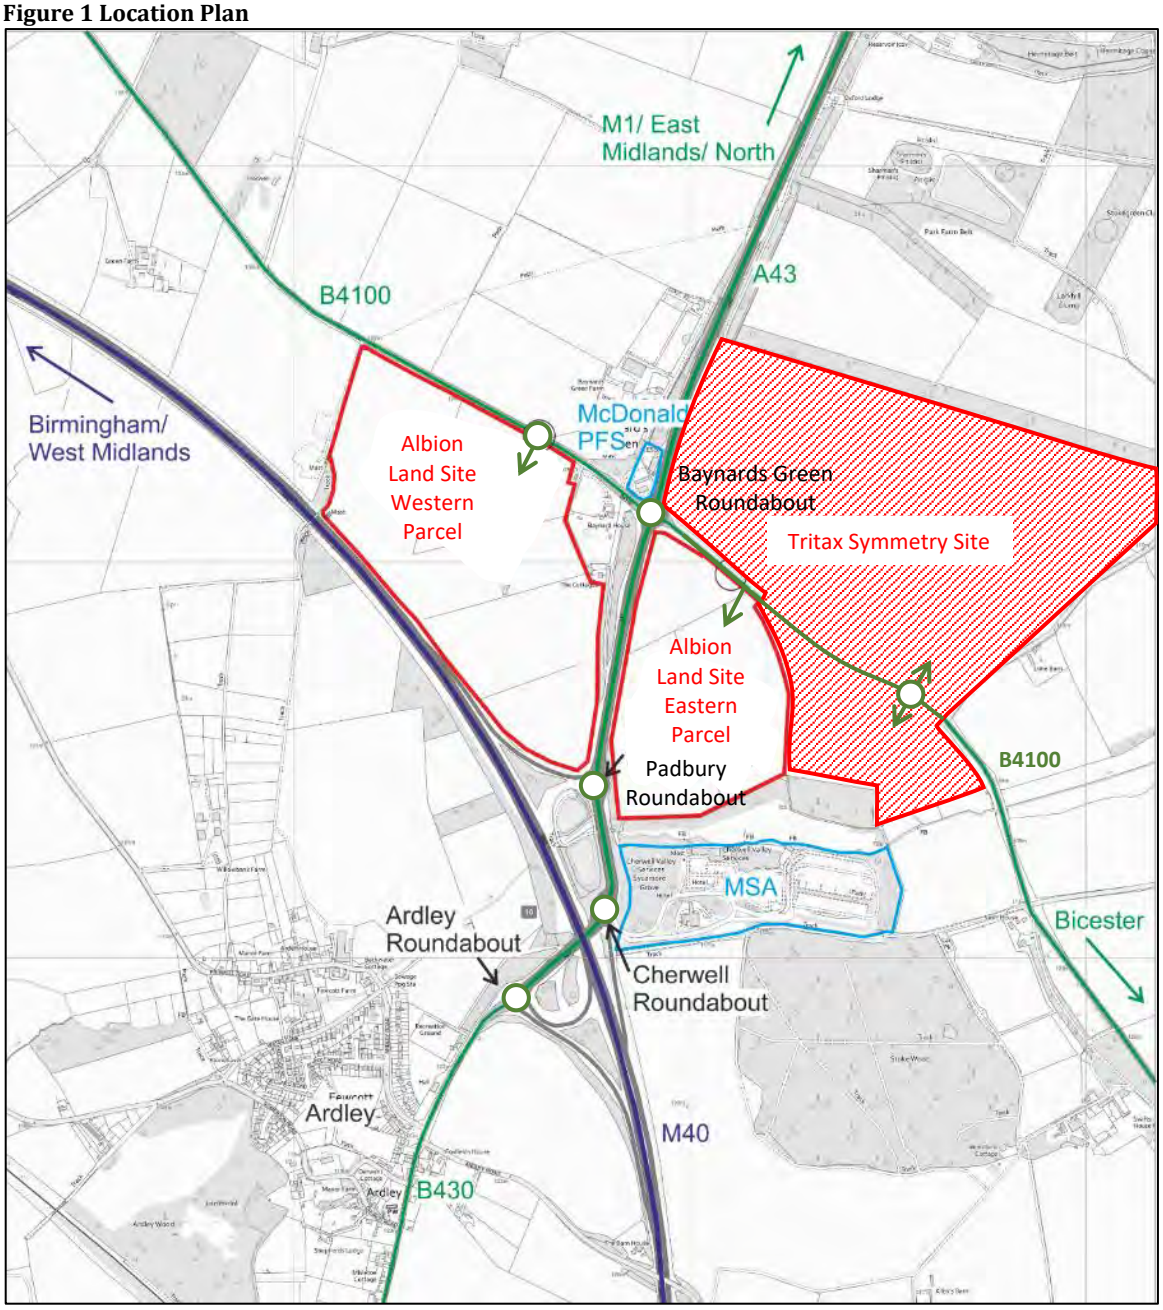
APPENDIX R Aynho Traffic Survey Reports

1. INTRODUCTION

1.1 Albion Land Ltd (AL) proposes the development of 280,000m^2 of commercial warehousing at Baynards Green adjacent to M40 Junction 10. The development is bisected by the A43 resulting in eastern and western development parcels. The location of the development parcels is shown on **Figure 1**.

Figure 1 Location Plan



1.2 Three planning applications were made by AL to the Local Planning Authority (LPA), Cherwell District Council (CDC) in 2021. These were:

- 21/03266/F Site clearance, construction of new site access from the B4100, permanent and temporary internal roads, an internal roundabout and a foul drainage station, diversion of an existing overhead power cable and public right of way, and soft landscaping

- 21/03267/OUT (Eastern Parcel) Outline planning permission (all matters reserved except for access) for the erection of buildings comprising logistics (Use Class B8) and ancillary Office (Use Class E(g)(i)) floorspace and associated infrastructure; construction of new site access from the B4100; creation of internal roads and access routes; and hard and soft landscaping. (100,000m^2)

- 21/03268/OUT (Western Parcel) Outline planning permission (all matters reserved except for access) for the erection of buildings comprising logistics (Use Class B8) and ancillary office (Use Class E(g)(i)) floorspace; construction of new site access from the B4100; creation of internal roads and access routes; hard and soft landscaping including noise attenuation measures; and other associated infrastructure. (180,000m^2)

1.3 Whilst the eastern and western development parcels are subject to separate planning applications, it is envisaged that the sites would come forward in parallel in 2026 and therefore the overall impact is assessed. The AL Masterplan is attached at **Appendix A**.

1.4 These applications are supported by a Transport Assessment (TA) prepared by David Tucker Associates (DTA) which considered the transport implications of the development. The applications have not, however, been determined pending additional detailed technical work on the transport implications of the development in response to consultees and cancelation of the Oxfordshire Growth Board (OGB) planned improvement works at A43 Baynards Green roundabout. Consultee responses include those from highway authorities:

- National Highways (NH) as the authority for the strategic road network (SRN) correspondence is attached at **Appendix B**;

- Oxfordshire County Council (OCC) as the local highway authority is attached at **Appendix C**;

- West Northamptonshire Council (WNC) correspondence is attached at **Appendix D**.

1.5 This report sets out the additional work that has been progressed by DTA on behalf of AL in consultation with the LPA, Oxfordshire County Council (OCC), as local highway authority (LHA), and National Highways (NH), as highway authority responsible for the strategic road network (SRN). This should be read in conjunction with the TA as this report primarily addresses the further work that has been undertaken since the TA was prepared.

1.6 As set out in Section 2 there have been changes in national guidance and development management policies of the LPA and LHA relating to transport. These include national and County level freight strategies.

1.7 Section 3 sets out the refined transport strategy whereby sustainable transport will be encouraged including by active travel modes and public transport. These initiatives will be supported by site travel policies as set out in the Travel Plan which has been updated.

1.8 Section 4 sets out the areas of technical agreement with respect to demand forecasting. This technical work has been aligned with and progressed in conjunction with SLR, acting on behalf of Tritax Symmetry Limited (TSL), the promotor of a development of 300,000m^2 of commercial warehousing on an adjacent site. The TSL Masterplan is attached at **Appendix E**.

- 22/01340/OUT - Outline planning permission (all matters reserved except means of access (not internal roads) from B4100) for the erection of buildings comprising logistics (use class B8) and ancillary offices (use class e(g)(i)) floorspace; energy centre, HGV parking, construction of new site access from the B4100; creation of internal roads and access routes; hard and soft landscaping; the construction of parking and servicing areas; substations and other associated infrastructure." (300,000m^2)

1.9 Section 5 considers the site access and internal layout issues including parking.

1.10 Section 6 considers the traffic implications of the development. The original approach adopted by SLR to their TA for the TSL proposals was broadly aligned with the DTA TA for the AL proposals whereby the development demand was manually added to a baseline reference case. This has been updated with the assessment of both proposals through NH and OCC traffic models. This has informed the development of an improvement scheme at the A43 Baynards Green roundabout.

1.11 Section 7 sets out the key findings and consideration of compliance with transport related policies.

1.12 A standalone Topic Paper prepared with SLR, advisers to TSL, considers common elements of the appraisal.

2. POLICY CONTEXT

2.1 Changes to prevailing policies since the original TA was prepared are set out in this section.

National Planning Policy Framework (NPPF) (December 2023)

2.2 NPPF sets out the Government's planning policies for England and how these are expected to be applied. Whilst the Framework has been updated and the relevant paragraphs references differ there has been no significant change in transport related requirements.

7. The purpose of the planning system is to contribute to the achievement of sustainable development, including the provision of homes, commercial development and supporting infrastructure in a sustainable manner.

2.3 Achieving sustainable development means that the planning system has three overarching objectives which are an economic objective, a social objective, and an environmental objective.

9. Planning policies and decisions should play an active role in guiding development towards sustainable solutions, but in doing so should take local circumstances into account, to reflect the character, needs and opportunities of each area.

2.4 Such local circumstances must be considered in the appraisal of the transport implications of a development.

89. Planning policies and decisions should recognise that sites to meet local business and community needs in rural areas may have to be found adjacent to or beyond existing settlements, and in locations that are not well served by public transport. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads and exploits any opportunities to make a location more sustainable (for example by improving the scope for access on foot, by cycling or by public transport). The use of previously developed land, and sites that are physically well-related to existing settlements, should be encouraged where suitable opportunities exist.

2.5 The key transport related tests are set out in paragraph 114 and 115.

114. In assessing sites that may be allocated for development in plans, or specific applications for development, it should be ensured that:

a) appropriate opportunities to promote sustainable transport modes can be – or have been – taken up, given the type of development and its location;

b) safe and suitable access to the site can be achieved for all users;

c) the design of streets, parking areas, other transport elements and the content of associated standards reflects current national guidance, including the National Design Guide and the National Model Design Code; and

d) any significant impacts from the development on the transport network (in terms of capacity and congestion), or on highway safety, can be cost effectively mitigated to an acceptable degree.

2.6 Paragraph 115 sets a high bar for refusal of an application on highway impact grounds.

115. Development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe.

Local Transport Connectivity Plan (LTCP) (July 2022)

2.7 The Oxfordshire Local Transport and Connectivity Plan (LTCP), the fifth Local Transport Plan, was adopted in July 2022. It replaced the previous Local Transport Plan (LTP4). It outlines a vision to deliver a net-zero Oxfordshire transport and travel system that enables the county to thrive whilst protecting the environment. The LTCP covers the time period 2022 to 2050.

2.8 The LTCP has four over-arching transport goals:

- *To support jobs and housing growth and economic vitality;*
- *To reduce transport emissions and meet our obligations to Government;*
- *To protect, and where possible enhance Oxfordshire's environment and improve quality of life; and*
- *To improve public health, air quality, safety and individual wellbeing.*

2.9 The LTCP has three transport targets are set:

- *reduce 1 in 4 current car trips by 2030;*
- *deliver a net zero transport network by 2040;*
- *and have zero, or as close as possible, road fatalities or life changing injuries by 2050.*

2.10 The LTCP sets out the policies that will be adopted to achieve the above goals which give an indication of the approach and priorities that will be followed. Policy 36 promotes a 'decide and provide approach'.

Policy 36 – We will:

a) Only consider road capacity schemes after all other options have been explored.
b) Where appropriate, adopt a decide and provide approach to manage and develop the county's road network.
c) Assess opportunities for traffic reduction as part of any junction or road route improvement schemes.

d) Require transport assessments accompanying planning applications for new development to follow the County Council's 'Implementing 'Decide & Provide': Requirements for Transport Assessments' document.
e) Promote the use of the 'decide and provide' approach in planning policy development to support site assessment.

2.11 Policies 47 and 48 relate to the freight and logistics strategy.

Policy 47 – We will develop and deliver a freight and logistics strategy based around the principles of:

- *Appropriate movement*
- *Efficient movement*
- *Net-zero movement*
- *Safe movement*
- *Partnership working*

Policy 48 – We will:

a) Promote rail freight as our priority for the long distance movement of goods.
b) Support a range of additional measures to improve the safety and efficiency of long distance goods movement.

Circular 01/22: Strategic Road Network and the delivery of sustainable development (December 2022)

2.12 The Circular sets out how National Highways engages in plan-making and decision -taking to support the delivery of sustainable development. It replaced Circular 02/2013.

The company's licence agreement defines sustainable development as encouraging economic growth while protecting the environment and improving safety and quality of life for current and future generations.

2.13 The Strategic Road Network (SRN) includes the M40 Motorway and the A43 and A34 Trunk Roads.

5. In this regard, the SRN provides critical links between our cities and other urban areas, serves as a gateway to global markets and travel destinations, connects our communities with families and job opportunities, and binds and strengthens our union. It drives productivity and prosperity by unlocking growth, encouraging trade and attracting investment, and plays a vital role in levelling up the country.

6. The SRN also has an essential role in supporting the government's commitments in Decarbonising Transport: A Better, Greener Britain ("the transport decarbonisation plan"). In particular, the company will prepare and plan for the delivery of future transport technology on the network, such as the installation of high-powered chargepoints for electric vehicles (EV). Further, it will support initiatives that reduce the need to travel by private car and enable the necessary behavioural change to make walking, wheeling, cycling and public transport the natural first choice for all who can take it.

2.14 The needs of the Freight and Logistics sectors is emphasised.

> *7. These actions must be carried out alongside effective engagement in the planning system, to enable the delivery of sustainable development, support the needs of the freight and logistics sector, and mitigate the impact of growth on the natural environment. As such, the company will share evidence, data, knowledge and experience, and work collaboratively and constructively with public bodies and other key stakeholders.*

2.15 It is recognised that the access to the SRN for storage and distributions operations is important and that large scale sites will be located in out-of-town locations with good SRN access.

> *30. The NPPF is clear that planning policies should recognise the specific locational requirements of different economic sectors, including for storage and distribution operations at a variety of scales and in suitably accessible locations. To operate efficiently, the freight and logistics sector requires land for distribution and consolidation centres at multiple stages within supply chains including the need for welfare facilities for the drivers of commercial vehicles. For instance, some hubs serve regions and tend to be located out-of-town near the SRN, while others are 'last-mile' facilities that will support more sustainable freight alternatives in urban areas. The Future of Freight Plan sets out that a joined-up approach between the planning system, local authorities and industry can safeguard and prioritise the land needed for these uses, such that all parties should work together to identify the specific requirements in their area*

Future of Freight Plan (2022)

2.16 Future of Freight is a policy paper of 2022 which sets out a long-term cross modal plan for the freight and logistics sector. The plan sets out a vision for a freight and logistics sector that is cost efficient, reliable, resilient, environmentally sustainable and valued by society. The plan identifies that the planning system has a crucial role in promoting development that supports the efficient supply of goods by ensuring that sufficient land is being made available in the right places for freight operations.

3. TRANSPORT STRATEGY

Active Travel

3.1 The development will require localised diversion of existing PRoW 109/5/10 within the Western Parcel. This is a footway and OCC has requested that this is upgraded to a bridleway to link Stoke Lyne Bridleway 367/29 and Ardley Bridleway 109/2. This will be a 3m wide path with a bound surface.

An agreed contribution of £65,000 will fund improvements to the Public Rights of Way Network (PRoW) as requested by OCC. These will fund improvements to routes primarily back towards the village of Ardley with Fewcott.

3.2 The site accesses and Baynards Green improvement schemes incorporate a high standard of dedicated pedestrian and cycle provision to ensure that workers can access amenities at the roadside service area as well as access public transport (bus) services.

3.3 The scope of the Local Cycling Walking Improvement Plan (LCWIP) for Bicester, limited within its existing developed area, does not extend to its functional hinterland. Notwithstanding this, OCC is seeking improvements to the B4100 corridor to encourage cycling.

3.4 The feasibility of the route has been considered with respect to the construction implications. This has been informed by a topographical survey, a highway extents search, and environmental walk-over surveys. A testing arrangement is attached at **Appendix F**.

3.5 The route is circa 4.5 kilometres in length. The construction of the path and supporting buffer could be achieved by narrowing of the carriageway. The narrowing would provide separation of the path from the running lanes where there is insufficient room within the verge. The need for separation will be speed related and therefore a reduction in the posted speed limit would support the corridor development. Where the buffer is narrow and/or there is no reduction in the posted speed limit splitter islands would need to be provided.

3.6 An active travel path would be dependent on infrastructure and traffic management policies (speed reduction) within the B4100 corridor.

Public Transport

3.7 This bus strategy is part of a wider sustainable travel strategy for the site as supported by the Travel Plan (TP). It is envisaged that bus services would provide 7.5% demand in 2025 increasing to 10% by 2030.

3.8 As confirmed by the Bicester Traffic Model (BTM) the main local population centres from which employees will come are Bicester and Brackley. For the development to be independently accessible to residents without a private car the sites will be integrated with existing bus services.

3.9 This is as set out in the TA and TP and there is no fundamental change to the bus strategy which has been planned around the existing Brackley to Bicester service. The proposals have however been refined in consultation with OCC.

3.10 The inter-urban bus service, Stagecoach route 505, runs between Brackley and Bicester. It is an express service which operates along the A43 and B4100. There are no stops between Brackley and Elmsbrook on the edge of Bicester and therefore it does not directly support the functional hinterlands of either market town within this corridor. OCC notes that *'non-development related passenger flows between Brackley and Bicester are needed to secure the overall long-term financial viability of the service'*.

3.11 It is understood from OCC that the service is currently supported financially by development contributions from sites in Brackley. OCC does not consider the route to be secure based on current patronage when these funds are exhausted.

OCC has identified a contribution of £2,133,333 (December 2023 cost) for the provision of two buses with one operating daily between 05:00 – 22:00 and the other operating Monday to Friday 06:00 - 18:00 creating a higher frequency (every 30 minutes) at the expected peak times

3.12 In the long term, the service will be supported by the additional travel demand within the corridor from the employment sites.

3.13 Bus stops within laybys are now proposed on the B4100 between the AL eastern access and the TSL access. These will be provided with sheltered seating and service information. OCC has requested a contribution of £8,904 (per shelter - Sept 2020 price base) if not delivered under S278/S38.

3.14 The arrangement for the western parcel is unchanged whereby buses will operate on a spur from Baynards Green and into the site.

3.15 Whilst the new bus stops are provided to serve the employment sites, these will benefit the local communities Baynards Green, Ardley with Fewcott, Fritwell, Bucknell and Stoke Lyne, more widely as rural mobility hubs to access employment and secondary schools in Brackley and Bicester.

3.16 Further consideration has been given to augmenting the bus strategy to support the overall sustainable travel aims. The associated funding requirements have been agreed with OCC.

An additional contribution of £1,796,667 (December 2023 cost) would increase the 30-minute service to a 15-minute service during peak hours through the funding of two further buses taking total additional buses to four.

3.17 In addition, as proposed within the TSL TAA, enhanced interchange opportunities, such as cycle lockers at key bus stops within Bicester, will increase the accessibility of the services to all town residents.

Travel Plan

3.18 The Travel Plan (TP) has been updated so the AL and TSL initiatives directly mirror each other. For the AL TP further cycling measures as per the TSL TP have been included such as bikeability training, cycle surgery days, health MOTs and car free days.

A contribution of £2,379 (December 2020 price base) plus additional amount for individual operator Travel Plans.

4. TRAVEL DEMAND FORECASTS

Baseline and Scenario Changes

4.1 The Oxfordshire Growth Fund (OGB) previously promoted a junction improvement scheme at Baynards Green to accommodate planned growth within the Cherwell District. £18M had been allocated for these works. Funding for this improvement was reallocated resulting in a smaller scheme of works at the Padbury Roundabout only.

4.2 The Oxfordshire Strategic Rail Freight Interchange (OxSRFI) proposal for 675,000m^2 GFA rail-connected warehousing has not progressed. The promotors announced in April 2023 an open-ended project hiatus. There have been no further updates and no application to the Planning Inspectorate has been made. It is agreed with the LHA and LPA that cumulative assessment with the OxSFRI is not required.

4.3 Tritax Symmetry (TSL) propose a development for 300,000m^2 GFA commercial warehousing on adjacent land at Baynards Green. As requested by the LHA and NH, the traffic impact in a cumulative scenario with both AL and TSL developments has been assessed.

Construction Travel Demand

4.4 The Enabling Works will be constructed over a period of approximately six months which includes the construction of the roundabout to the Western Site.

4.5 The construction of the Western Development will take access from the internal roundabout which in turn connects to a new B4100 roundabout, both of which are to be built as part of the Enabling Works. The construction of the Eastern Development will take temporary access from the B4100 with a simple priority access arrangement. Construction of the Western Development and the Eastern Development would take place concurrently.

4.6 Based on appraisal of other development sites of a similar nature in the Bicester area it is estimated that there will be 40 HGV deliveries and 190 car or van trips to the respective development parcels per day. These assumptions are robust and reflect the demand during the busiest stages of construction. Most of the demand will arise outside the peak network periods and as such the proportional change in flow will be negligible. As such there will be no significant change in traffic on the local road network from the construction.

4.7 There will be traffic management required during the road works. Details of the traffic management will be agreed with the LHA.

4.8 Parking for construction workers off the local roads will be provided. Measures will be put in place to avoid mud being brought on to the highways. These measures are set out in the Framework CEMP.

Operational Travel Demand

4.9 The Bicester Traffic Model (BTM) is a strategic traffic model covering the Bicester area which was developed and managed for the LHA. BTM has been extensively used in the area for development planning. The day to day running of the model is undertaken by Tetra

Tech (TT) on behalf of the LHA. BTM includes planned developments in the Bicester Area for future years of 2026 and 2031. 2026 broadly equates to the anticipated opening year of the development and is accordingly considered to be the relevant date for impact appraisal. 2031 is primarily presented as a sensitivity test which aligns with the end of the current Development Plan. Details of the development assumptions are set out in the uncertainty log (**Appendix G**).

4.10 The specification of BTM is defined and controlled by the LHA. The only parameters defined by DTA and SLR are the development travel demand forecasts and the HGV distribution and assignment. These parameters were agreed with the LHA and NH prior to the model runs.

4.11 The travel demand forecasts are as set out in Table 5 of the TA. These are based on surveys of large-scale commercial warehousing sites. The underlying data is unchanged. The reported weekday trip rates have been supplemented with an annual average trip rate (7-day) as summarised in **Table 1** below.

Table 1 Weekday Trip generation rates (per 100m²)

	HGV		Cars		Total		
	In	Out	In	Out	In	Out	Two-way
AM Peak (0800-0900)	0.019	0.019	0.092	0.027	0.111	0.046	0.157
AM Peak (0900-1000)	0.021	0.020	0.070	0.020	0.091	0.041	0.131
PM Peak (1600-1700)	0.018	0.016	0.021	0.114	0.039	0.129	0.168
PM Peak (1700-1800)	0.016	0.015	0.024	0.099	0.041	0.114	0.155
12 Hour (0700-1900)	0.226	0.217	0.610	0.710	0.836	0.927	1.763
16 Hour (0700-2300)	0.281	0.269	0.691	0.807	0.972	1.076	2.048
18 Hour (0600-2400)	0.305	0.299	0.787	0.903	1.092	1.202	2.294
8 Hour (2300-0700)	0.089	0.107	0.252	0.170	0.340	0.277	0.617
24 Hour (0000-2400)	0.370	0.376	0.942	0.977	1.312	1.353	2.665
24 Hour AADT	0.292	0.281	0.741	0.788	1.033	1.069	2.104

4.12 The light vehicle distribution reported in the TA is no longer used. As agreed with the LHA and NH the light vehicle distribution has been forecast within the BTM process. Within the BTM the home trip ends of employees are distributed and assigned. The BTM assignment is reported in passenger car units cumulatively with the heavy vehicle distribution.

4.13 The light vehicle distribution is summarised in **Table 2**.

Table 2 Light Vehicle Assignment

Assignment	% demand TA (2011 Census derived)	% demand BTM
B4100 (West)	8%	16.8%
B4100 (Aynho)	8%	6.8%
A43 (North)	10%	26.1%
B4100 (East)	54%	35.1%
M40 (Northwest)	3%	5.2%
B430	6%	12.2%
M40 (South)	16%	4.1%

4.14 The HGV distribution as before is based on the National Freight Matrices. These were assigned to the local road network using network analyst within ArcGIS. This was subject

to validation, in consultation with AECOM acting on behalf of NH, to align the assignment of HGVs with observed HGV movements through M40 Junction 10. The agreed assignment, summarised in **Table 3** below, was then provided to TT as an input to the BTM runs.

Table 3 HGV Assignment

Assignment	% HGV demand TA	% HGV demand Agreed
B4100 (West)	0%	0%
A43 (North)	31%	41%
B4100 (East)	5%	6%
M40 (Northwest)	19%	11%
B430	0%	2%
M40 (South)	45%	41%

4.15 The outputs from the BTM include turning movement matrices at key local junctions. These turning movements have been used for the detailed modelling of the M40 Junction 10 network of junctions including Baynards Green (these are included at **Appendix P** as set out below).

5. SITE ACCESS & LAYOUT

Albion Land Eastern Access (Signals)

5.1 The proposed junction form of the Eastern Site Access has changed from the original application (21/03267/OUT) from a roundabout to a traffic signal-controlled T-junction. This has allowed the introduction of active travel crossings across the site access. The new General Arrangement and Vehicle Tracking Drawings are attached at **Appendix H**.

5.2 There are two versions of the General Arrangement plans within **Appendix H** covering the scenario where the Eastern Site Access comes forward in advance of the TSL Access and a second where both accesses come forward together. The difference between the plans relates to the tie-in. The B4100 would be realigned on approach to the TSL access which overlaps with the AL access layout. The two plans show that either scenario is covered as the AL access layout can tie into either the existing or realigned B4100.

5.3 The more compact junction form has allowed the access to be moved eastward removing the need for a weaving section between the access and Baynards Green. Although not required given the available separation the future co-ordination with signals at the Baynards Green junction is possible.

5.4 The operation of the junction has been tested in LINSIG which shows that the junction has an appropriate level of capacity to accommodate the development demand. These results assume that the junction would operate with a common cycle time with the Baynards Green roundabout (72 seconds). Pedestrian crossings on the access operate on a walk with traffic basis and hence are called every cycle.

5.5 A summary of the junction performance is included in **Table 4** below and additional detail (model output reports) of the operational appraisal is attached in **Appendix I**.

Table 4 Eastern Access Performance Summary – Albion Land Only (eastern and western parcels)

	AM				PM			
	Queue (PCU)	**Degree of Sat.**	**Delay (pcuHr)**	**Practical Reserve Capacity**	**Queue (PCU)**	**Degree of Sat.**	**Delay (pcuHr)**	**Practical Reserve Capacity**
2026 Design								
1. B4100 W	6.3	53.7%	5.20	54.5%	3.7	35.8%	5.76	28.9%
2. B4100 E	9.0	58.2%			12.2	69.8%		
3. Site Access	0.8	10.6%			1.5	19.5%		
2031 Design								
1. B4100 W	6.1	52.4%	6.57	23.7%	4.4	41.3%	7.76	10.1%
2. B4100 E	13.1	72.8%			16.7	81.7%		
3. Site Access	0.8	10.6%			1.5	19.5%		

5.6 With the TSL development the ahead movements on the B4100 increase by circa 500 vehicles per hour in the peak direction resulting in a demand of 1,373 vehicles per hour in the westbound direction in the 2031 AM peak. As can be seen in **Table 5**, the junction still operates within capacity.

Table 5 Eastern Access Performance Summary – Albion Land and Tritax Symmetry

	AM				PM			
	Queue (PCU)	**Degree of Sat.**	**Delay (pcuHr)**	**Practical Reserve Capacity**	**Queue (PCU)**	**Degree of Sat.**	**Delay (pcuHr)**	**Practical Reserve Capacity**

1. B4100 W	20.7	89.5%	6.11	0.5%	10.6	65.6%	7.22	7.7%
2. B4100 E	11.1	66.4%			17.9	83.5%		
3. Site Access	0.7	7.8%			1.4	16.2%		

5.7 The Eastern Site Access has been subject to an independent Road Safety Audit Stage 1. No fundamental issues were identified. The recommendations of the audit have been taken on board and will inform the detailed design process. In the meantime, the general arrangement drawing has been updated where appropriate. The RSA1 including the designer's response is attached at **Appendix J**.

B4100 East Bus Stops

5.8 The original AL scheme allowed for a bus set down area within the eastern site. It is now proposed to provide bus stops online on the B4100 which will be accessible by both the TSL and AL developments. These will be to the east of the AL eastern parcel access and to the west of the TSL access. Both stops will be within laybys and will have shelters etc. as set out in Section 3. To allow pedestrians to access both eastbound and westbound stops it is proposed to provide an independent traffic signal-controlled crossing immediately to the west of the laybys.

Albion Land Western Roundabout

5.9 The proposed junction form of the Western Site Access is broadly unchanged from the original application (21/03268/OUT) and remains a roundabout. OCC, in their response of 24th November 2021) requested a review the conflict angles on the B4100 as these were deemed relatively sharp. These have been updated whilst maintaining the requirements of the DMRB. The new General Arrangement and Vehicle Tracking Drawings are attached at **Appendix K**.

5.10 The operation of the junction has been tested in JUNCTIONS which shows an appropriate level of capacity to accommodate the development demand. A summary of the junction performance is included in **Table 6** below and additional detail of the operational appraisal is attached in **Appendix L**.

Table 6 Western Access Performance Summary – Albion Land Only (eastern and western parcels)

	AM				PM			
	Queue (PCU)	**Delay (s)**	**RFC**	**Network Residual Capacity**	**Queue (PCU)**	**Delay (s)**	**RFC**	**Network Residual Capacity**
2026 Design								
1. B4100 W	1.0	6.03	0.51	75%	0.4	4.29	0.27	156%
2. B4100 E	1.0	6.07	0.48		0.6	4.73	0.36	
3. Site Access	0.2	5.18	0.12		0.3	4.72	0.23	
2031 Design								
1. B4100 W	1.3	6.72	0.56	60%	0.5	4.81	0.33	134%
2. B4100 E	1.3	6.76	0.54		0.6	4.60	0.34	
3. Site Access	0.2	5.31	0.12		0.3	4.61	0.23	

5.11 A summary of the junction performance including the TSL development is summarised in **Table 7**.

Table 7 - Western Site Access Junction Assessment – Albion and Tritax Symmetry Developments

	AM				PM			
	Queue (PCU)	**Delay (s)**	**RFC**	**Network Residual Capacity**	**Queue (PCU)**	**Delay (s)**	**RFC**	**Network Residual Capacity**
2026 Design								
1. B4100 W	1.7	7.94	0.63	43%	0.9	5.79	0.45	85%
2. B4100 E	2.0	8.86	0.64		1.0	5.98	0.47	
3. Site Access	0.2	5.88	0.13		0.4	5.20	0.25	
2031 Design								
1. B4100 W	1.8	8.50	0.65	34%	1.0	6.23	0.50	71%
2. B4100 E	2.4	9.90	0.68		1.0	5.96	0.47	
3. Site Access	0.2	5.98	0.13		0.4	5.16	0.25	

5.12 The results show that the geometry has ample capacity to accommodate the development demand (TSL, AL and wider planned growth) with limited delay or queueing on any arm. All approaches to the junction are single lane entries and therefore there are no lane balance issues.

5.13 The Western Site Access was previously subject to an independent Road Safety Audit Stage 1. No fundamental issues were identified. The recommendations of the audit have been taken on board and will inform the detailed design stage. The general arrangement drawing has been updated where appropriate. The RSA1 including the designer's response is attached at **Appendix M**.

5.14 The accesses are both safe and suitable in accordance with the policy requirements set out in the NPPF at paragraph 114.

Tritax Symmetry Site Access

5.15 The TSL site is proposed to be accessed from a four-arm roundabout on the B4100 to the east of the Eastern AL parcel. Details of the access are set out in the SLR TA Addendum where the performance of the junction is tested both with and without the AL development. This reports that the arrangement has appropriate capacity.

5.16 In addition, the operation of the TSL access and AL access are cumulatively tested in both the BTM and the VISSIM (considered in Section 6) as reported in **Appendix P**.

Parking

5.17 The development is subject to outline planning applications and as such the internal layout is indicative.

5.18 As per the TA, an appropriate level of vehicle, accessible parking, and cycle parking will be provided to meet the demand within the site but within the context of the sustainable travel strategy for the site.

5.19 Parking provision will be assessed on a case-by-case basis with consideration of trip rates, users groups and shift patterns, as well as site location and potential implications of off-site parking.

5.20 Cycle parking standards are expressed as the minimum that developments are expected to achieve, albeit it is considered reasonable that the level of cycle parking provided could be monitored through the staff Travel Plan and amended in response to demands.

5.21 Current LHA guidance indicates that there should be a minimum requirement for 1,120 long-stay staff cycle parking spaces and 560 short-stay visitor cycle parking spaces. AL proposes to safeguard land for the level of cycle parking identified by the LHA guidelines, but only provide a proportion of this from day one. The initial level of cycle parking provided will be identified at the reserved matters stage having regard to the requirements on individual users. Usage would be monitored via a Travel Plan and increased wherever necessary based on recorded demands.

5.22 The level of car parking will be determined as part of future reserved matters applications with consideration for the end occupier needs as well as reference to LPA and LHA standards.

5.23 Notwithstanding the above, the illustrative masterplan shows the car parking spaces which reflects the Applicant's experience of what the market would require from an operational perspective.

5.24 The site will provide electric vehicle charging facilities in line with OCC guidance. This required 25% of spaces to be equipped.

6. TRAFFIC IMPLICATIONS

Road Safety

6.1 The performance of the road network has been assessed by a review of reported incidents (STATS19 data). The LHA records were obtained, and a summary is attached at **Appendix N**. The study area includes the B4100 between Elmsbrook to the East to Baynards Green including the potential area of influence of the AL-western parcel access. The data covers the most recent five-year period 2018 to 2022 plus provisional data for 2023.

6.2 The data shows that there were 25 reported incidents.

6.3 There were 15 incidents at the Baynards Green roundabout and approaches including fourteen incidents of slight severity and one of serious severity.

6.4 There were no incidents on the B4100 on the frontage of the western parcel.

6.5 Between Baynards Green (excluding roundabout) and Bicester there were twelve incidents. There are no apparent locational trends or clusters. There was one fatal incident on this section of the B4100 which involved a cyclist. There were two serious incidents including a single vehicle loss of control.

6.6 At the Padbury roundabout there were eight reported incidents in the most recent six-year period. All incidents were of slight severity. Given the level of demand the reported safety performance is good. The junction will be upgraded to traffic signal control by others which will have a significant effect on the operation of the junction.

6.7 At the Cherwell roundabout there were three reported incidents in the most recent six-year period. The three incidents, on the southbound approach were of slight severity.

6.8 There were two incidents on the northbound link between the Cherwell and Ardley roundabouts both of which were of serious severity.

6.9 There was a single incident at the Ardley roundabout on the B430 entry. The incident was of serious severity.

M40 Junction 10 Network

6.10 The M40 Junction 10 VISSIM model is a micro simulation model which covers Junction 10 including the Ardley, Cherwell and Padbury Roundabouts as well as Baynards Green. The model was provided to SLR for the purposes of testing the AL and TSL developments and the junction improvements that would be delivered in conjunction with these developments.

6.11 The scope of this model includes Baynards Green Roundabout, Padbury Roundabout including signalisation improvements promoted by OGB, Cherwell Roundabout from which the Motorway Service Area (MSA) is accessed, Ardley Roundabout and the M40 Junction 10 slip roads including merges and diverges.

6.12 The base VISSIM was reviewed by SLR in conjunction with AECOM to ensure that it was appropriate for scenario testing. The NH model was further developed with respect to its structure and the demand forecasts. Network revisions to improve lane usage and gap

acceptance (at give way lines) and agreed with NH. The forecast demand from the BTM informed the VISSIM as set out in the SLR Matrix Development Methodology Note and agreed with NH. Model output is attached within the report at **Appendix P**.

6.13 The VISSIM model confirms that the throughput of the M40 Junction network is significantly increased, and benefits of the improvement scheme are not affected by the wider network. The summarised findings of the VISSIM modelling, ordered by year and peak, are:

2026 AM

- There is an overall reduction in delay for the whole network of at least 26s per vehicle. The actual reduced delay will be greater because the number of unreleased vehicles (traffic that cannot enter the network due to blocking) reduced from 1000 to 0.
- The A43 south-bound queue to Barnards Green roundabout reduces by around 700m in the AM peak. The actual reduction in queue is greater because of unreleased vehicles (latent demand which cannot enter the network). Overall, the latent demand reduces from 1000 vehicles to 0 vehicles equivalent to a queue of circa 3km across two lanes.
- The improvement at Baynards Green roundabout allows more traffic South in the AM peak. The model reports some additional south-bound queues (displaced downstream) at the Padbury and Cherwell MSA junctions, however, these queues are contained within links.
- The additional south-bound flow increases M40 northbound off-slip queues in the AM peak to circa 340m. However, these queues are wholly contained within the slip, i.e., not beyond the back of the nose, some 460m from the ICD.

2026 PM

- There is an overall reduction in delay for the whole network of at least 15s per vehicle. The B4100 East entry queue reduces by an average of nearly 400m, while the number of unreleased vehicles in the reduces from 50 (reference case) to 0 (development case).
- The Northbound queue to Barnards Green roundabout reduces by an average of c300m.
- The model reports south-bound queues (displaced from Baynards Green) to the Padbury and Cherwell MSA junctions, however, these queues are contained within links.

AM 2031

- The 2031 tests are not required as set out in DfT Circular 01/2022. However, the results are included as a sensitivity test.
- There is an overall reduction in delay for the whole network of at least 4s per vehicle. The south-bound approach to Barnards Green roundabout has around 900 fewer unreleased vehicles. While these vehicles do not contribute to the overall delay

statistics and queue length statistics, this level of reduction is clearly a significant improvement.

- Queues on the B4100 West reduce by nearly 400m while those on the B4100 East reduce by around 200m.
- The model reports south-bound queues (traffic displaced downstream from Baynards Green) to the Padbury and Cherwell MSA junctions, however, these queues are contained within links.
- The additional south-bound flow does increase M40 north-bound off-slip queues in the AM peak. These queues are wholly contained within the slip, i.e. not beyond the back of the nose.

2031 PM

- There is an overall reduction in delay of 33 seconds per vehicle.
- The North-bound queue to Barnards Green roundabout reduces by an average of circa 550m. This is an improvement when compared with the reference case where queues stretched to Padbury roundabout, which could have safety implications for the M40 south-bound off-slip.
- The B4100 East entry queue reduces by an average of nearly 450m, reducing the number of unreleased vehicles by around 300, to zero. The B4100 West queues are circa 250m shorter than the reference case.

6.14 The slip road merge and diverge arrangements perform well within VISSIM with no evidence of blocking back.

Baynards Green Roundabout

6.15 Baynards Green roundabout currently experiences stress during the peak hour periods. An £18M junction improvement scheme at Baynards Green was promoted by OGB to accommodate planned growth within Cherwell District including at Heyford Park. Funding for the scheme was, however, withdrawn at the concept design stage.

6.16 DTA and SLR have collaboratively worked to develop the concept into a deliverable scheme capable of accommodating the AL and TSL developments and the wider planned growth.

The A43 Baynards Green Improvement Scheme is to be delivered by AL and/or TSL. It will accommodate both the development and wider demands from planned growth within Cherwell District; a significant improvement to a long-identified need.

6.17 The proposed general arrangement is shown on **SLR drawing 216285/A/14 RevB** which is attached at **Appendix O**. All four arms of the roundabout will be signal controlled. Localised widening will be required on approaches to the junction and within the circulatory carriageway but where possible the scheme makes use of the existing layout to minimise disruption during construction. Vehicle tracking is shown on **SLR drawing 216285/SK12**.

6.18 Pedestrian and cycle crossings will be provided on both B4100 arms and on the A43 south. These will operate on a walk with traffic basis such that active travel demand will have no impact on overall junction performance.

The A43 Baynards Green Improvements Scheme requires land from both TSL and AL sites for the delivery of visibility splays. Without this land the scheme could not be delivered in its entirety. Agreement between TSL and AL allow for implementation by either party or together.

6.19 Performance of the junction has been tested based on BTM demands both through ARCADY, based on the current layout, LINSIG, based on the proposed layout, and within the NH M40 J10 VISSIM, in the context of the wider M40 Junction 10 network inclusive of the AL and TSL accesses. In **Table 8** is a summary of the existing arrangement, the reference case as reported in the ARCADY, and the proposed arrangement as reported in the LINSIG. This shows that in isolation the Baynards Green junction operation will significantly benefit from the improvement works both in terms of delay and queuing. Modelling output reports are attached at **Appendix P**.

Table 8 Baynards Green Capacity Assessment

	Reference Case		Design	
	Highest Ratio of Flow to Capacity	Longest Queue	Highest Ratio of Flow to Capacity	Longest Queue
AM 2026	1.21	221	0.92	21
PM 2026	1.25	95	0.88	25
AM 2031	1.37	425	1.00	37
PM 2031	1.58	231	0.97	36

6.20 The delivery of the scheme has been tested against the requirements of the Design Manual for Roads and Bridges. No new Departures from Standards (DfS) are required. Existing DfS relating to entry path curvature are retained and have been tested in accordance with the Departures Manual (v2.1.0), subject to the GG104 Risk Assessment process and provision approval has been granted by NH Safety Engineering and Standards Directorate (SES).

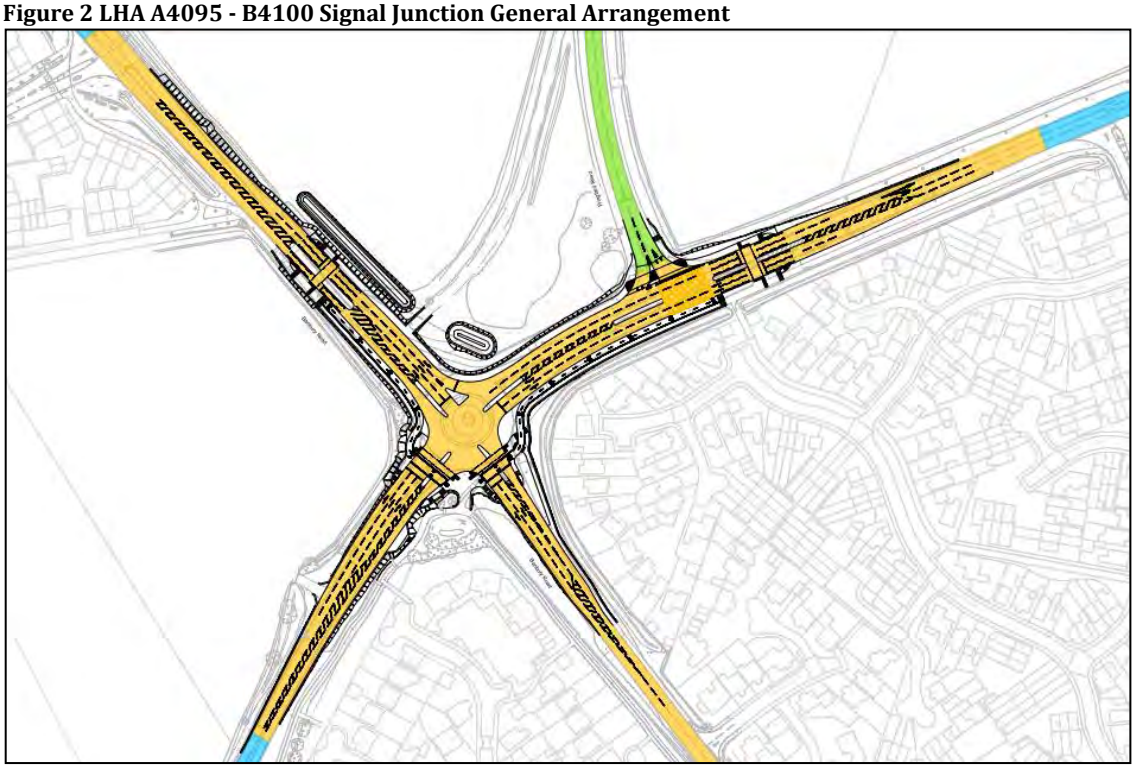
6.21 The scheme has been subject to an Independent Road Safety Audit undertaken by Gateway Road Safety Engineering (RSE) on behalf of the applicants but instructed by NH and OCC. The brief, was agreed in advance with NH and OCC, and undertaken in strict accordance with GG119 Road Safety Audit. A representative of NH accompanied the audit team. The audit RSE Report 2309-11 RSA1, dated 13th February 2024, identifies no fundamental issues but makes several recommendations. These recommendations have been accepted and will inform the detailed design stage. The Road Safety Audit Stage 1 and designers' response are attached at **Appendix Q**.

Bicester Area Transport Implications

6.22 No improvements to the Bicester Road network are required. The BTM reflects the planned growth within the Bicester Area including the proposed changes to the local road network. The BTM outputs indicate that no additional changes, in addition to those already planned, are required. Detailed micro-simulation modelling has been undertaken of the planned signalisation of the A4095/B4100 junction. This demonstrates no material change in future year performance of this junction.

6.23 Both the TSL and AL applications considered the impacts upon the Banbury Roundabout junction, which is currently a four-arm roundabout. However, as was reported in the SLR and DTA TAs, this junction is intended to be signalised. Indeed, since the respective TSL and AL applications were submitted, the LHA has granted itself planning permission under the provisions of application R3.0094/21 to construct the junction as shown in **Figure 2**.

Figure 2 LHA A4095 - B4100 Signal Junction General Arrangement



6.24 Given that this junction will be constructed in the coming months, the effects of the proposed developments upon this junction have been tested. For this assessment a VISSIM model is used developed using published information in the supporting TA (LPA/LHA application R3.0094/21).

6.25 On the basis of this modelling, which has used the BTM model demands, that was run to assess the impacts of the proposed developments at the TSL and AL site accesses, Baynards Green roundabout and M40 J10, there would be a limited impact on the overall performance of the junction. Using the same metrics that LHA used to inform its own application, Average delay per vehicles, as shown on **Figure 3** and **Figure 4**, there will be negligible changes in vehicle delays between the 2031 Reference Case and when traffic demand associated with both the AL scheme in isolation and with TSL taken into cumulatively.

Figure 3 A4095 - B4100 Junction Network Performance – Average Delay (AM Peak)

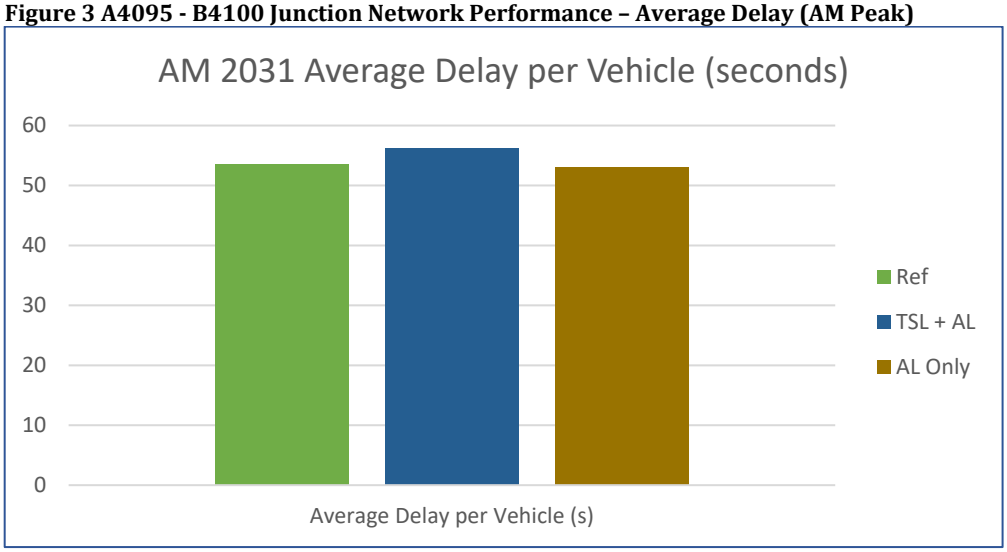


Figure 4 A4095 - B4100 Junction Network Performance – Average Delay (PM Peak)

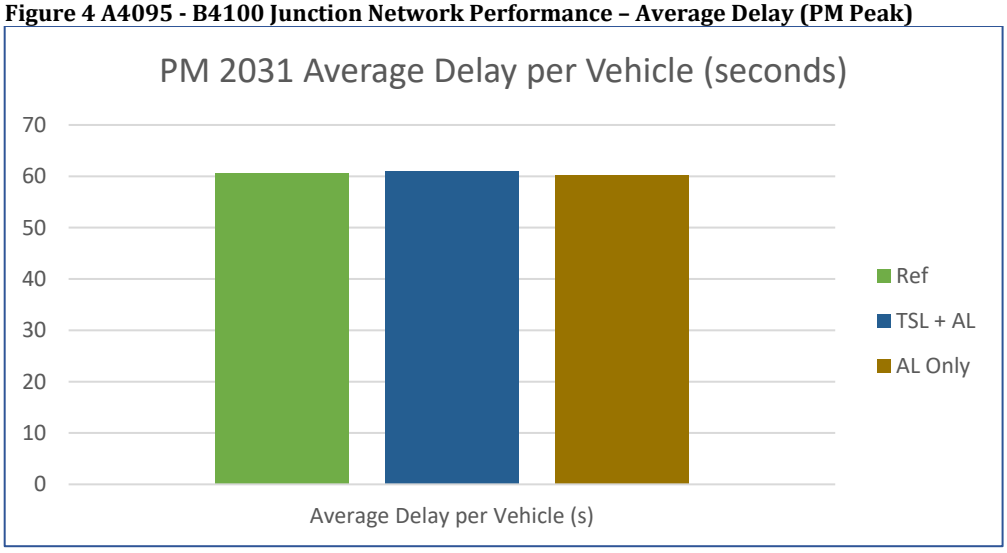

6.26 Similarly, vehicle speeds at the junction are expected to be similar to that which OCC approved pursuant to application R3.0094/21 as shown on the speed 'heat maps' shown at **Figure 5** (Reference Case), **Figure 6** (AL east and western parcels) and **Figure 7** (AL & TSL developments).

Figure 5 A4095 - B4100 Junction Network Performance – Average Speed (2031 Reference Case)

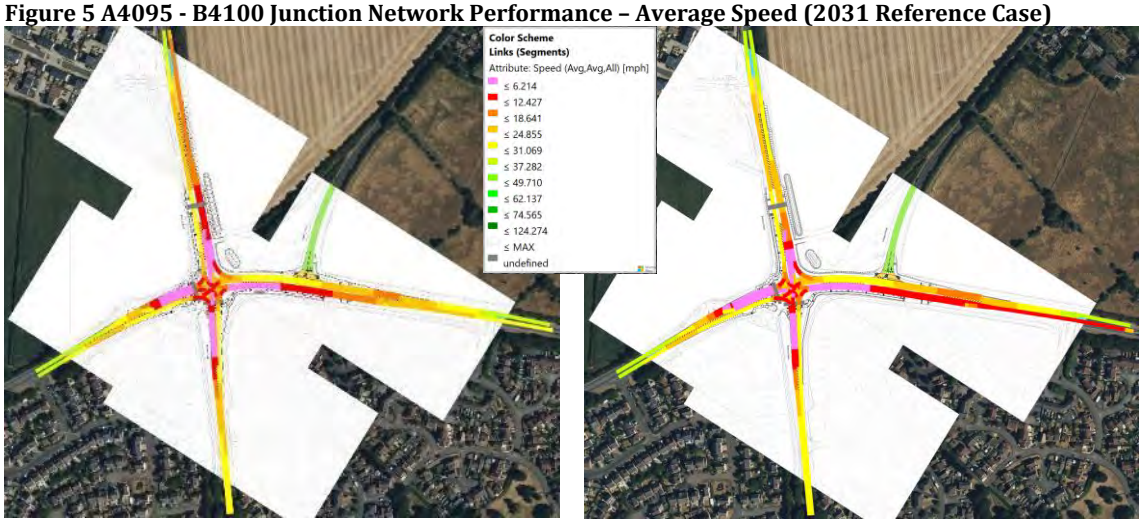

Figure 6 A4095 - B4100 Junction Network Performance – Average Speed (2031 AL only)

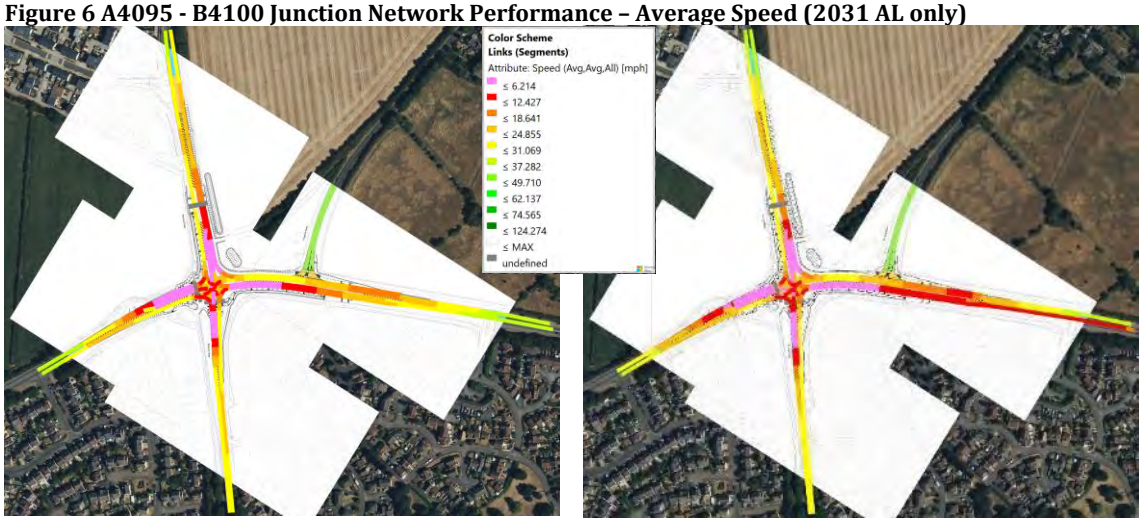

Figure 7 A4095 - B4100 Junction Network Performance – Average Speed (2031 AL & TSL)

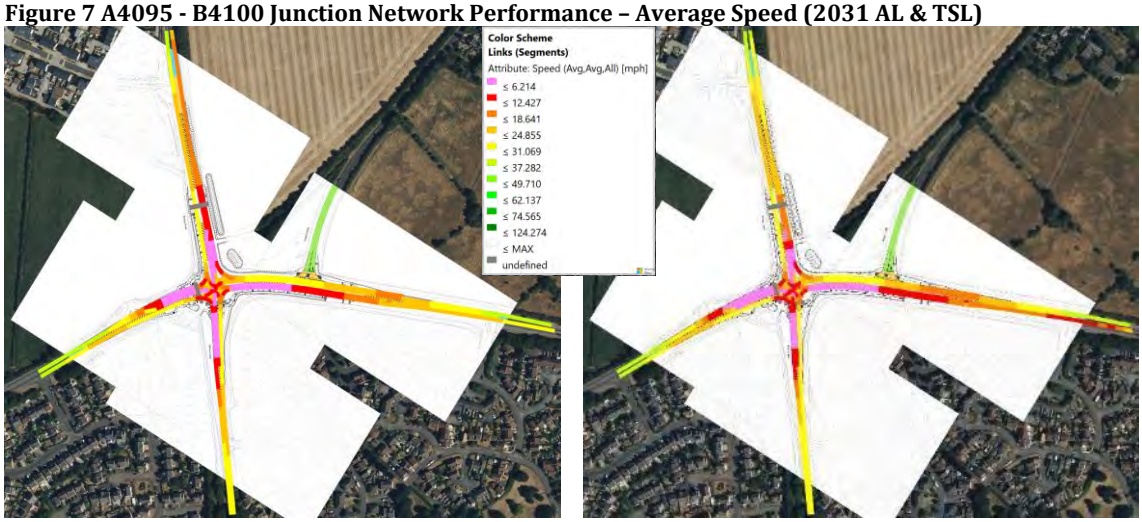

6.27 It is demonstrated above that there would be a negligible change in speeds at the junction following the inclusion of TSL and AL development trips. Overall, it is concluded that the development proposals will not have a material impact on the operation of the junction.

West Northants Area Transport Implications

6.28 WNC welcomed the use of the BTM. However, WNC requested further analysis of the transport implications for Aynho and Croughton in their letter of 14th March 2022 (**Appendix D**). Manual classified turning counts (MCC) were requested at two key junctions within Aynho to be undertaken over a period of three days. In addition, an automatic traffic counter (ATC) was installed. Full survey reports are attached at **Appendix R**.

6.29 The B4100 through Aynho carries around 11,000 vehicles per day two-way. The two-way peak hour flows by link are summarised in **Table 9** and **Table 10** below.

6.30 The development demands are derived from the BTM. These are also summarised in **Table 9** and **Table 10** for AL, TSL and the cumulative increase. This shows that the absolute increases are modest in all scenarios on all links within the day-to-day variations that already occurs.

Table 9 Aynho Assessment – Western Junction

Vehicles per hour (2-way)	3-day average	Tritax Symmetry	Albion Land Development			TSL & AL
West B4100/B4031 Jct			East Parcel	West Parcel	Combined	
B4100 Banbury Rd (N)	SURVEY	DEV	DEV	DEV	DEV	DEV
AM Peak	762	6	2	5	7	13
PM Peak	747	6	2	14	16	22
B4031 Station Road (W)	SURVEY	DEV	DEV	DEV	DEV	DEV
AM Peak	438	9	3	8	11	20
PM Peak	425	9	3	7	10	19
B4100 Roundtown	SURVEY	DEV	DEV	DEV	DEV	DEV
AM Peak	926	18	6	13	19	37
PM Peak	942	18	6	21	27	45
Overall Change (relative)		DEV	DEV	DEV	DEV	DEV
AM Peak	1063	1.7%	0.6%	1.2%	1.8%	3.5%
PM Peak	1057	1.7%	0.6%	2.0%	2.6%	4.3%

Table 10 Aynho Assessment – Eastern Junction

Vehicles per hour (2-way)	3-day average	Tritax Symmetry	Albion Land Development			TSL & AL
East B4100/B4031 Jct			East Parcel	West Parcel	Combined	
Unnamed Rd to Charlton (N)	SURVEY	DEV	DEV	DEV	DEV	DEV
AM Peak	46	0	0	4	4	4
PM Peak	46	6	2	4	3	9
B4031 Croughton Road (E)	SURVEY	DEV	DEV	DEV	DEV	DEV
AM Peak	450	0	0	8	8	8
PM Peak	477	0	0	0	0	0
B4100 Bicester Rd(S)	SURVEY	DEV	DEV	DEV	DEV	DEV
AM Peak	648	18	6	25	31	49
PM Peak	625	24	8	25	33	57
Overall Change (relative)		DEV	DEV	DEV	DEV	DEV
AM Peak	1056	1.7%	0.6%	2.4%	2.9%	4.6%
PM Peak	1064	2.3%	0.8%	2.3%	3.1%	5.4%

6.31 The additional information demonstrates that there is no material impact on the operation or performance of the WNC network. The BTM routes circa 1% of traffic to Croughton via the B4100. Croughton is the destination for this demand, i.e. it is not through traffic. The BTM routes circa 4% of traffic to and/or through Aynho; the increase is one additional vehicle every one to two minutes.

6.32 WNC confirm that their PRoW is not affected by the development.

7. CONCLUSION

7.1 This Transport Assessment Addendum considers the development of a proposed logistics development near at M40 Junction 10 which is being promoted by Albion Land. It updates the position set out on the Transport Assessment and should be read in conjunction with it.

7.2 The development aligns with the needs of the logistics and distribution industry providing modern large scale commercial warehousing that is well related to the strategic road network in a location which will minimise the impact of heavy goods vehicles on the local communities. The development will provide significant employment opportunities that will be accessible to residents from the expanding communities Bicester and Brackley including by non-car modes.

7.3 Responding both to the initial consultation responses and contextual changes, including the withdrawal of funding for the OGB Baynards Green improvement Scheme, a significant amount of technical work has been undertaken in consultation with the LPA, LHA and NH.

7.4 The sustainable travel strategy for the site has been refined to allow accessibility to the employment opportunities that will be created. A transit-oriented solution is now favoured.

7.5 The inter-urban bus service between Brackley and Bicester would in the short term be financially secured by financial support of up to £2.1M from AL and/or TSL and in the longer term will be supported by the additional travel demand within the corridor. The new stops that will be created will be usable by local communities as rural mobility hubs. A further contribution of up to £1.7M to further increase frequency is being considered and will be discussed further with the LHA.

7.6 Active travel provision has been significantly improved with a new controlled crossing facility across the A43. AL also agree to funding requested by OCC of £65k for improvements to the local PRoW. A further enhancement to active travel provision on the B4100 is being considered and will be discussed further with the LHA.

7.7 The Travel Plan, which sets out the operational travel policies for businesses on the site, has been updated with additional measures to support sustainable travel.

7.8 The implications of the operational traffic and residual employee travel demand from the AL development has been extensively tested independently and in conjunction with the TSL development using the traffic models developed by the LHA and NH. The future demand forecasts are fully aligned with planned growth in the area.

7.9 The OGB had previously allocated £18M to upgrade the Baynards Green roundabout to a traffic signal-controlled arrangement. This funding, however, was reallocated and the OGB scheme has not progressed.

7.10 A scheme for the signalisation of the Baynards Green junction has been developed and supported by detailed modelling, scrutiny on compliance with design standards and independent road safety auditing. The scheme, to be delivered by AL and/or TSL will accommodate both the development demand and wider demands from planned growth

within Cherwell District. This is a significant improvement to a long-identified need and removes the need for very significant public investment at this location.

7.11 The Baynards Green Scheme represents a significant upgrade, accommodating both development and wider growth, both in isolation and in the context of the wider M40 Junction 10 network. No additional works to the SRN network are required.

7.12 No improvements to the Bicester Road network are required. Testing of the planned signalisation of the A4095/B4100 junction demonstrates no material change in future year performance of this junction.

7.13 Overall, the development includes a balanced package of transport improvements including the upgrade of a key junction on the SRN, in support of the development and wider growth in the District, and improvements to the local transport network including support for bus services and the active travel network. This package brings the development proposals fully in line with the requirements of prevailing transport related planning policy.

National Highways Responses

National Highways Planning Response (NHPR 21-09)
Formal Recommendation to an Application for Planning Permission

From: Andrew Jinks (Regional Director),
Operations Directorate
Midlands Region
Highways England
PlanningM@highwaysengland.co.uk

To: **Cherwell District Council – FAO: David Lowin**

CC: transportplanning@dft.gov.uk
spatialplanning@highwaysengland.co.uk

Council's Reference: 21/03267/OUT

Location: OS Parcel 0006, South East of Baynards House Adjoining A43, Baynards Green

Proposal: Outline planning permission (all matters reserved except for access) for the erection of buildings comprising logistics (Use Class B8) and ancillary Office (Use Class E(g)(i)) floorspace and associated infrastructure; construction of new site access from the B4100; creation of internal roads and access routes; and hard and soft landscaping

National Highways Ref: 92857

Referring to the consultation on a planning application dated 5 Oct 2021 referenced above, in the vicinity of the A43 and M40 that form part of the Strategic Road Network, notice is hereby given that National Highways' formal recommendation is that we:

~~a) offer no objection (see reasons at Annex A);~~

~~b) recommend that conditions should be attached to any planning permission that may be granted (see Annex A – National Highways recommended Planning Conditions & reasons);~~

c) recommend that planning permission not be granted for a specified period (see reasons at Annex A);

d) ~~recommend that the application be refused (see reasons at Annex A)~~

Highways Act 1980 Section 175B is not relevant to this application.[1]

This represents National Highways' formal recommendation and is copied to the Department for Transport as per the terms of our Licence.

Should the Local Planning Authority not propose to determine the application in accordance with this recommendation they are required to consult the Secretary of State for Transport, as set out in the Town and Country Planning (Development Affecting Trunk Roads) Direction 2018, via transportplanning@dft.gov.uk and may not determine the application until the consultation process is complete.

Signature: [redacted]	**Date:** 25 January 2022
Name: Martin Seldon	**Position:** Assistant Spatial Planner
National Highways National Highways, The Cube, 199 Wharfside Street, Birmingham, B1 1RN Martin.Seldon@highwaysengland.co.uk	

[1] Where relevant, further information will be provided within Annex A.

Annex A National Highway's assessment of the proposed development

National Highways has been appointed by the Secretary of State for Transport as a strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the Strategic Road Network (SRN). The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Recommended Non-Approval

It is recommended that the application should not be approved for a further period of three months from the date of this response to allow the applicant to provide the additional information required.

Reasons

National Highways has engaged with the applicant/ their consultants on this development proposal since the pre-application stage in July 2021.

Having reviewed the information submitted in support of the planning application, we are content with the anticipated trip generation and growth rates proposed. However, several concerns were noted regarding traffic related matters and geotechnical matters. As such, National Highways issued a holding recommendation response on 26 October 2021 detailing the concerns identified.

Following this a meeting was arranged by the applicant's consultant with National Highways, the Local Highway Authority (LHA) and the Local Planning Authority (LPA) on 5 November 2021. Since then the consultant has been in continuous engagement with National Highways to resolve the outstanding matters relating to trip distribution, capacity assessments, committed development, etc. The following sections provide an overview of the outstanding concerns from a National Highways perspective.

Traffic related matters

Quantum of development

We noted some inconsistencies between the total floorspace proposed for the Eastern Parcel in the Application Form and that stated within the Transport Assessment (TA). While the floorspace for the Eastern Parcel is stated as 100,000 sq.m within the TA submitted, it is entered as 107,000 sq.m in the Application Form. Therefore, we require the applicant to use the floorspace stated within the Application Form for all the assessments to ensure that the worst-case scenario is considered.

Trip distribution

The applicant previously undertook the trip distribution for light vehicles based on 2011 Census data and heavy vehicles using the 2006 freight matrices published by DfT. While we acknowledged that the freight data on DfT's website is the latest available information, we noted in our response that this data is quite old and as such, may not capture the development growth that has happened in the area over the last 15 years. Further to this, as the vehicular accesses serving the Western Parcel and Eastern Parcel of the development are different, we required additional insight on how the distributions have been undertaken for the development at each.

In line with the above, National Highways welcomed an alternative methodology to be adopted for determining trip distribution to ensure a robust assessment.

Following further discussions, it was agreed that the trip distribution and assignment would be undertaken using the Bicester Transport Model (BTM) available for the area. A modelling brief was provided in December 2021 which detailed the scope of work to be undertaken. Overall, the scope of model runs to be performed and the outputs to be extracted were agreed with the applicant.

The traffic survey data available with National Highways for the area was supplied to the consultant to help determine the proposed HGV distribution for the development, which will be fed into the BTM model for undertaking the runs. The consultant has now undertaken further assessments and has provided the outputs for our review. We are currently reviewing this information and will respond to the consultant shortly.

Committed development

In our previous response, we welcomed clarification on whether the committed developments considered for the assessments have been finalised following the confirmation from the relevant LPAs.

Discussions are currently being held between the applicant and National Highways and Oxfordshire County Council on the need for sensitivity tests regarding development proposals in the area.

Capacity assessments

Capacity assessments have currently been undertaken for the western and eastern site accesses and A43 Baynards Green roundabout only. We noted that the applicant has referred to the Oxfordshire Housing and Growth Deal scheme which proposes improvements at the A43 Baynards Green roundabout and the Padbury roundabout of M40 J10, amongst other improvements. However, National Highways required that the applicant undertakes junction capacity assessments at M40 J10 and A43 Baynards Green roundabout using the latest available information regarding the proposed improvement schemes.

Following the discussion in November 2021, it was agreed with the applicant that the A43 Growth Deal scheme will be incorporated into the model for assessing the development impacts with the scheme in place.

Baseline traffic – We note from section 8.3.6 of the Environmental Statement (ES) that the baseline data has been collated from a number of sources, including the commissioning of traffic surveys, WebTRIS data, the historic Transport Assessment for North West Bicester Masterplan (2014), freight matrices published by DfT, etc. However, it is not clear how the data has been processed and used for the assessments. As such, it was stated in our previous response that we require the applicant to include a section on this in the TA to understand the suitability of the data used.

We also recommended that the traffic flow diagrams be provided (preferably in the form of spreadsheets) for all the scenarios under consideration.

Modelling software – The applicant has previously undertaken the capacity assessments at the site accesses and A43 Baynards Green roundabout using ARCADY. However, no information was provided regarding the source or validation of the models.

Notwithstanding the above, we required that the applicant model the junctions in the area (including Baynards Green roundabout and M40 J10) using a linked model to capture the likely interactions between these closely placed junctions. Further to the discussion in November 2021, it was agreed that National Highways' VISSIM model developed for M40 J10 in the area will be used for undertaking the capacity assessments. Following the completion of BTM runs, National Highways' VISSIM model can be shared.

Merge/ Diverge Assessments

While the applicant has carried out merge and diverge assessments on the slip roads at M40 J10, we are unable to undertake the checks as the flow data is unavailable. We would therefore welcome a review of this data.

Interim mitigation scheme

The applicant has proposed an interim mitigation scheme at the A43 Baynards Green roundabout which includes widening of the B4100 entries and a standalone signal-controlled toucan (pedestrian and cycle) crossing.

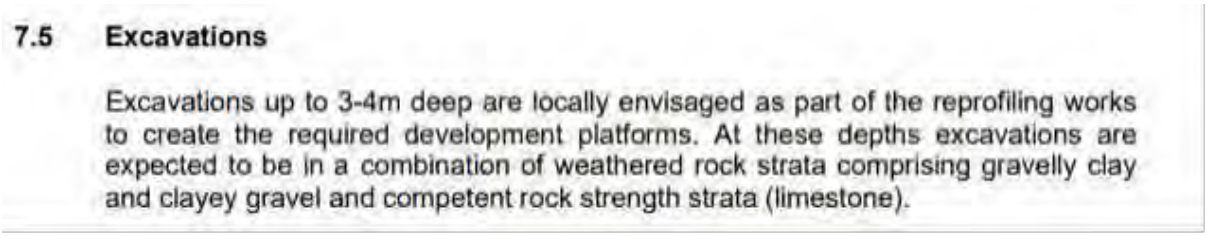
As there remain outstanding concerns, and the proposed improvement scheme as part of the Growth Deal scheme at the A43 Baynards Green roundabout and M40 J10 has not been modelled into the assessments, it was stated in our previous response that National Highways is not in a position to comment on the suitability of the interim mitigation scheme.

In line with the above, a detailed review of the assessments as presented within the TA was not undertaken by National Highways.

The outstanding concerns are likely to be resolved in due course and National Highways will provide comments accordingly.

Geotechnical matters

In addition, the submitted preliminary Ground Investigation report is a geo-environmental Phase 2 investigation for the main developments themselves. It does not include any details of the boundaries with National Highways operations, aside from a comment about excavations in (Part 1(2) (1).pdf):



7.5 Excavations

Excavations up to 3-4m deep are locally envisaged as part of the reprofiling works to create the required development platforms. At these depths excavations are expected to be in a combination of weathered rock strata comprising gravelly clay and clayey gravel and competent rock strength strata (limestone).

The applicant will need to advise / confirm if there will be any earthworks associated with the development(s) in relatively close proximity to National Highways boundaries (e.g. the stability of the balancing ponds, etc). In the first instance, some cross sections (to scale) through the boundaries showing the proposed extent of the development, its features and any proposed changes in elevation (excavations, landscaping) etc should be submitted for further assessment. Once received, we will review to determine the possible extent of any geotechnical reporting under the Design Manual for Roads and Bridges (DMRB) standard CD 622, which may be required to confirm the extent of any geotechnical risk to the SRN.

Once this information has been provided, we can fully assess the potential impact on the drainage of the site and whether this will be effectively mitigated.

National Highways Planning Response (NHPR 21-09)
Formal Recommendation to an Application for Planning Permission

Annex A National Highway's assessment of the proposed development

National Highways has been appointed by the Secretary of State for Transport as a strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the Strategic Road Network (SRN). The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Recommended Non-Approval

It is recommended that the application should not be approved for a further period of three months from the date of this response to allow the applicant to provide the additional information required.

Reasons

National Highways has engaged with the applicant/ their consultants on this development proposal since the pre-application stage in July 2021.

National Highways previously issued a holding recommendation response for this application on 26 October 2021. In our response we noted that more detailed information was required regarding the extent of proposed geotechnical activity, as well as the associated potential impact on the operation of the adjacent SRN. It was also noted that the outcome of this would, in turn, affect our review of the proposed drainage arrangements for the site.

Following the submission of this additional information, National Highways will be in a position to provide our comments regarding application 21/03266/F.

[1] Where relevant, further information will be provided within Annex A.

Annex A National Highway's assessment of the proposed development

National Highways has been appointed by the Secretary of State for Transport as a strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the Strategic Road Network (SRN). The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Recommended Non-Approval

It is recommended that the application should not be approved for a further period of three months from the date of this response to allow the applicant to provide the additional information required.

Reasons

National Highways was has engaged with the applicant/ their consultants on this development proposal since the pre-application stage in July 2021.

Having reviewed the information submitted in support of the planning application, we are content with the anticipated trip generation and growth rates proposed. However, several concerns were noted regarding traffic related matters and geotechnical matters. As such, National Highways issued a holding recommendation response on 26 October 2021 detailing the concerns identified.

Following this, a meeting was arranged by the applicant's consultant with National Highways, the Local Highway Authority (LHA) and the Local Planning Authority (LPA) on 5 November 2021. Since then the consultant has been in continuous engagement with National Highways to resolve the outstanding matters relating to trip distribution, capacity assessments, committed development, etc. The following sections provide an overview of the outstanding concerns from a National Highways perspective.

Traffic related matters

Quantum of development

We noted some inconsistencies between the total floorspace proposed for the Eastern Parcel in the Application Form and that stated within the Transport Assessment (TA). While the floorspace for the Eastern Parcel is stated as 100,000 sq.m within the TA submitted, it is entered as 107,000 sq.m in the application form. Therefore, we require that applicant to use the floorspace stated within the Application Form for all the assessments to ensure that the worst-case scenario is considered.

Trip distribution

The applicant previously undertook the trip distribution for light vehicles based on 2011 Census data and heavy vehicles using the 2006 freight matrices published by DfT. While we acknowledged that the freight data on the DfT website is the latest available information, we noted in our response that this data is quite old and as such, may not capture the development growth that has happened in the area over the last 15 years. Further to this, as the vehicular accesses serving the Western Parcel and Eastern Parcel of the development are different, we required additional insight on how the distributions have been undertaken for the development at each.

In line with the above, National Highways welcomed an alternative methodology to be adopted for determining trip distribution to ensure a robust assessment.

Following further discussions, it was agreed that the trip distribution and assignment would be undertaken using the Bicester Transport Model (BTM) available for the area. A modelling brief was provided in December 2021 which detailed the scope of work to be undertaken. Overall, the scope of model runs to be performed and the outputs to be extracted were agreed with the applicant.

The traffic survey data available with National Highways for the area was supplied to the consultant to help determine the proposed HGV distribution for the development, which will be fed into the BTM model for undertaking the runs. The consultant has now undertaken further assessments and has provided the outputs for our review. We are currently reviewing this information and will respond to the consultant shortly.

Committed development

In our previous response, we welcomed clarification on whether the committed developments considered for the assessments have been finalised following the confirmation from the relevant LPAs.

Discussions are currently being held between the applicant and National Highways and Oxfordshire County Council on the need for sensitivity tests regarding development proposals in the area.

Capacity assessments

Capacity assessments have currently been undertaken for the western and eastern site accesses and A43 Baynards Green roundabout only. We noted that the applicant has referred to the Oxfordshire Housing and Growth Deal scheme which proposes improvements at the A43 Baynards Green roundabout and the Padbury roundabout of M40 J10, amongst other improvements. However, National Highways required that the applicant undertakes junction capacity assessments at M40 J10 and A43 Baynards Green roundabout using the latest available information regarding the proposed improvement schemes.

Following the discussion in November 2021, it was agreed with the applicant that the A43 Growth Deal scheme will be incorporated into the model for assessing the development impacts with the scheme in place.

Baseline traffic – We note from section 8.3.6 of the Environmental Statement (ES) that the baseline data has been collated from a number of sources, including the commissioning of traffic surveys, WebTRIS data, the historic Transport Assessment for North West Bicester Masterplan (2014), freight matrices published by DfT, etc. However, it is not clear how the data has been processed and used for the assessments. As such, it was stated in our previous response that we require the applicant to include a section on this in the TA to understand the suitability of the data used.

We also recommended that the traffic flow diagrams be provided (preferably in the form of spreadsheets) for all the scenarios under consideration.

Modelling software – The applicant has previously undertaken the capacity assessments at the site accesses and A43 Baynards Green roundabout using ARCADY. However, no information was provided regarding the source or validation of the models.

Notwithstanding the above, we required that the applicant model the junctions in the area (including Baynards Green roundabout and M40 J10) using a linked model to capture the likely interactions between these closely placed junctions. Further to the discussion in November 2021, it was agreed that National Highways' VISSIM model developed for M40 J10 in the area will be used for undertaking the capacity assessments. Following the completion of BTM runs, National Highways' VISSIM model can be shared.

Merge/ Diverge Assessments

While the applicant has carried out merge and diverge assessments on the slip roads at M40 J10, we are unable to undertake the checks as the flow data is unavailable. We would therefore welcome a review of this data.

Interim mitigation scheme

The applicant has proposed an interim mitigation scheme at the A43 Baynards Green roundabout which includes widening of the B4100 entries and a standalone signal-controlled toucan (pedestrian and cycle) crossing.

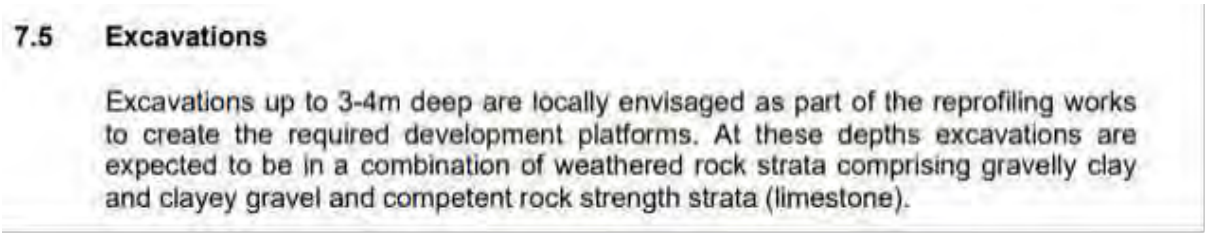
As there remain outstanding concerns, and the proposed improvement scheme as part of the Growth Deal scheme at the A43 Baynards Green roundabout and M40 J10 has not been modelled into the assessments, it was stated in our previous response that National Highways is not in a position to comment on the suitability of the interim mitigation scheme.

In line with the above, a detailed review of the assessments as presented within the TA was not undertaken by National Highways.

The outstanding concerns are likely to be resolved in due course and National Highways will provide comments accordingly.

Geotechnical matters

In addition, the submitted preliminary Ground Investigation report is a geo-environmental Phase 2 investigation for the main developments themselves. It does not include any details of the boundaries with National Highways operations, aside from a comment about excavations in (Part 1(2) (1).pdf):



7.5 Excavations

Excavations up to 3-4m deep are locally envisaged as part of the reprofiling works to create the required development platforms. At these depths excavations are expected to be in a combination of weathered rock strata comprising gravelly clay and clayey gravel and competent rock strength strata (limestone).

The applicant will need to advise / confirm if there will be any earthworks associated with the development(s) in relatively close proximity to National Highways boundaries (e.g. the stability of the balancing ponds, etc). In the first instance, some cross sections (to scale) through the boundaries showing the proposed extent of the development, its features and any proposed changes in elevation (excavations, landscaping) etc should be submitted for further assessment. Once received, we will review to determine the possible extent of any geotechnical reporting under the Design Manual for Roads and Bridges (DMRB) standard CD 622, which may be required to confirm the extent of any geotechnical risk to the SRN.

Once this information has been provided, we can fully assess the potential impact on the drainage of the site and whether this will effectively mitigated.

[1] Where relevant, further information will be provided within Annex A.

Annex A National Highways' assessment of the proposed development

National Highways has been appointed by the Secretary of State for Transport as a strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the Strategic Road Network (SRN). The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Recommended Non-Approval

It is recommended that the application should not be approved for a further period of three months from the date of this response to allow the applicant to provide the additional information required.

Reasons

National Highways has engaged with the applicant/ their consultants on this development proposal since the pre-application stage in July 2021.

Having reviewed the information submitted in support of the planning application, we have agreed with the anticipated trip generation and growth rates proposed. However, several concerns were outstanding relating to traffic related matters and geotechnical matters. As such, National Highways issued a holding recommendation response on 25 January 2022 detailing the concerns identified.

Discussions have taken place with the applicant's consultant to resolve the outstanding issues on the trip distribution element. The following sections detail the up-to-date position of this planning application from a National Highways' perspective.

Traffic related matters

Quantum of development

We noted some inconsistencies between the total floorspace proposed for the Eastern Parcel in the Application Form and that stated within the Transport Assessment (TA). While the floorspace for the Eastern Parcel is stated as 100,000 sq.m within the TA submitted, it is entered as 107,000 sq.m in the Application Form. Therefore, we require the applicant to use the floorspace stated within the Application Form for all the assessments to ensure that the worst-case scenario is considered.

Trip distribution

The applicant previously undertook the trip distribution for light vehicles based on 2011 Census data and heavy vehicles using the 2006 freight matrices published by DfT. While we acknowledged that the freight data on DfT's website is the latest available information, we noted in our response that this data is quite old and as such, may not

capture the development growth that has happened in the area over the last 15 years. Further to this, as the vehicular accesses serving the Western Parcel and Eastern Parcel of the development are different, we required additional insight on how the distributions have been undertaken for the development at each.

In line with the above, National Highways welcomed an alternative methodology to be adopted for determining trip distribution to ensure a robust assessment.

Following further discussions, it was agreed that the light vehicle trip distribution and assignment would be undertaken using the Bicester Transport Model (BTM) available for the area. Based on our review of the modelling brief provided in December 2021, the scope of model runs to be performed and the outputs to be extracted were agreed with the applicant. Following the completion of the BTM runs, we request that the applicant submits the model outputs for our review and agrees with us the wider SRN junctions that are to be assessed in detail.

The traffic survey data available with National Highways for the area was supplied to the consultant to help determine the proposed HGV distribution for the development, which will be fed into the BTM model for undertaking the runs. Having reviewed the HGV trip distributions undertaken by the consultant, we are content with the proposed HGV trip distribution and have no further comment to provide on this.

Committed development

We welcomed clarification on whether the committed developments considered for the assessments have been finalised following confirmation from the relevant Local Planning Authorities (LPA).

Discussions are ongoing between the applicant, National Highways and Oxfordshire County Council on the need for sensitivity tests regarding development proposals in the area.

Capacity assessments

Capacity assessments have been undertaken for the western and eastern site accesses and the A43 Baynards Green roundabout only. We noted that the applicant has referred to the Oxfordshire Housing and Growth Deal scheme which proposes improvements at the A43 Baynards Green roundabout and the Padbury roundabout of M40 J10, amongst other improvements. However, National Highways requires the applicant to undertake junction capacity assessments at M40 J10 and A43 Baynards Green roundabout using the latest available information regarding the proposed improvement schemes.

Based on discussions with the applicant, it was agreed that the A43 Growth Deal scheme will be incorporated into the model for assessing the development impacts with the scheme in place.

Following the review of the outputs from BTM runs, we may also require the applicant to undertake capacity assessments at wider SRN junctions in the area.

Baseline traffic – We noted from section 8.3.6 of the Environmental Statement (ES) that the baseline data has been collated from a number of sources, including commissioned traffic surveys, WebTRIS data, the historic Transport Assessment for North West Bicester Masterplan (2014), freight matrices published by DfT, etc. However, it was not clear how the data has been processed and used for the assessments. As such, we require the applicant to include a section on this in the TA to understand the suitability of the data used.

It was also recommended in our previous response that the applicant provides traffic flow diagrams (preferably in the form of spreadsheets) for all the scenarios under consideration. We are still waiting for these to be provided.

Modelling software – The applicant has previously undertaken the capacity assessments at the site accesses and A43 Baynards Green roundabout using ARCADY. However, no information was provided regarding the source or validation of the models.

Notwithstanding the above, we required that the applicant model the junctions in the area (including Baynards Green roundabout and M40 J10) using a linked model to capture the likely interactions between these closely placed junctions. Further to the this, it was agreed that National Highways' VISSIM model developed for M40 J10 in the area will be used for undertaking the capacity assessments.

Merge/ Diverge Assessments

While the applicant has carried out merge and diverge assessments on the slip roads at M40 J10, we are unable to undertake the checks as the flow data is unavailable. We would therefore welcome a review of this data.

Interim mitigation scheme

The applicant has proposed an interim mitigation scheme at the A43 Baynards Green roundabout which includes widening of the B4100 entries and a standalone signal-controlled toucan (pedestrian and cycle) crossing.

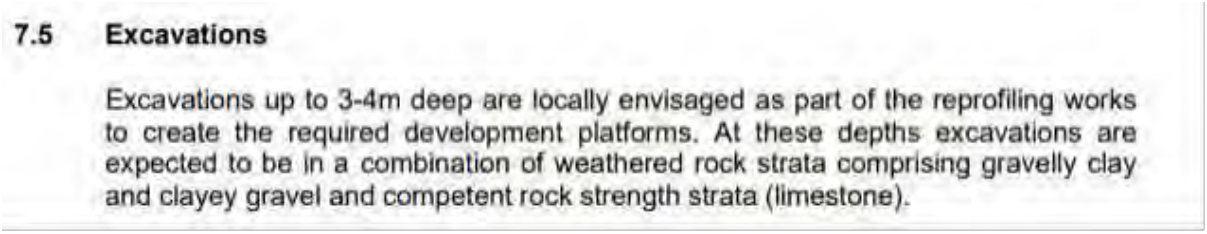
As there remain outstanding concerns, and the proposed improvement scheme as part of the Growth Deal scheme at the A43 Baynards Green roundabout and M40 J10 has not been modelled into the assessments, National Highways is not in a position to comment on the suitability of the interim mitigation scheme.

In line with the above, a detailed review of the assessments as presented within the TA was not undertaken by National Highways.

The outstanding concerns are likely to be resolved in due course and National Highways will provide comments accordingly.

Geotechnical matters

In addition, the submitted preliminary Ground Investigation report is a geo-environmental Phase 2 investigation for the main developments themselves. It does not include any details of the boundaries with National Highways operations, aside from a comment about excavations in (Part 1(2) (1).pdf):



7.5 Excavations

Excavations up to 3-4m deep are locally envisaged as part of the reprofiling works to create the required development platforms. At these depths excavations are expected to be in a combination of weathered rock strata comprising gravelly clay and clayey gravel and competent rock strength strata (limestone).

The applicant will need to advise / confirm if there will be any earthworks associated with the development(s) in relatively close proximity to National Highways boundaries (e.g. the stability of the balancing ponds, etc). In the first instance, some cross sections (to scale) through the boundaries showing the proposed extent of the development, its features and any proposed changes in elevation (excavations, landscaping) etc should be submitted for further assessment. Once received, we will review to determine the possible extent of any geotechnical reporting under the Design Manual for Roads and Bridges (DMRB) standard CD 622, which may be required to confirm the extent of any geotechnical risk to the SRN.

Once this information has been provided, we can fully assess the potential impact on the drainage of the site and whether this can effectively be mitigated.

National Highways Planning Response (NHPR 21-09)
Formal Recommendation to an Application for Planning Permission

From: Andrew Jinks (Regional Director)
Operations Directorate
Midlands Region
National Highways
PlanningM@highwaysengland.co.uk

To: **Cherwell District Council – FAO: David Lowin**

CC: transportplanning@dft.gov.uk
spatialplanning@highwaysengland.co.uk

Council's Reference: 21/03267/OUT

Location: OS Parcel 0006, southeast of Baynards House Adjoining A43, Baynards Green

Proposal: Outline planning permission (all matters reserved except for access) for the erection of buildings comprising logistics (Use Class B8) and ancillary Office (Use Class E(g)(i)) floorspace and associated infrastructure; construction of new site access from the B4100; creation of internal roads and access routes; and hard and soft landscaping

National Highways Ref: 92857

Referring to the consultation on a planning application dated 5 Oct 2021 referenced above, in the vicinity of the A43 and M40 that form part of the Strategic Road Network, notice is hereby given that National Highways' formal recommendation is that we:

~~a) offer no objection (see reasons at Annex A);~~

~~b) recommend that conditions should be attached to any planning permission that may be granted (see Annex A – National Highways recommended Planning Conditions & reasons);~~

c) recommend that planning permission not be granted for a specified period (see reasons at Annex A);

~~d) recommend that the application be refused (see reasons at Annex A)~~

Highways Act 1980 Section 175B is not relevant to this application.[1]

This represents National Highways' formal recommendation and is copied to the Department for Transport as per the terms of our Licence.

Should the Local Planning Authority not propose to determine the application in accordance with this recommendation they are required to consult the Secretary of State for Transport, as set out in the Town and Country Planning (Development Affecting Trunk Roads) Direction 2018, via transportplanning@dft.gov.uk and may not determine the application until the consultation process is complete.

Signature: [redacted]	**Date:** 25 April 2022
Name: Martin Seldon	**Position:** Assistant Spatial Planner
National Highways National Highways, The Cube, 199 Wharfside Street, Birmingham, B1 1RN Martin.Seldon@highwaysengland.co.uk	

[1] Where relevant, further information will be provided within Annex A.

Annex A National Highways' assessment of the proposed development

National Highways has been appointed by the Secretary of State for Transport as a strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the Strategic Road Network (SRN). The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Recommended Non-Approval

It is recommended that the application should not be approved for a further period of three months from the date of this response to allow the applicant to provide the additional information required.

Reasons

National Highways has engaged with the applicant/ their consultants on this development proposal since the pre-application stage in July 2021.

Having reviewed the information submitted in support of the planning application, we have agreed with the anticipated trip generation and growth rates proposed. However, several concerns were outstanding relating to traffic related matters and geotechnical matters. As such, National Highways issued a holding recommendation response on 25 January 2022 detailing the concerns identified.

Discussions have taken place with the applicant's consultant to resolve the outstanding issues on the trip distribution element. The following sections detail the up-to-date position of this planning application from a National Highways' perspective.

Traffic related matters

Quantum of development

We noted some inconsistencies between the total floorspace proposed for the Eastern Parcel in the Application Form and that stated within the Transport Assessment (TA). While the floorspace for the Eastern Parcel is stated as 100,000 sq.m within the TA submitted, it is entered as 107,000 sq.m in the Application Form. Therefore, we require the applicant to use the floorspace stated within the Application Form for all the assessments to ensure that the worst-case scenario is considered.

Trip distribution

The applicant previously undertook the trip distribution for light vehicles based on 2011 Census data and heavy vehicles using the 2006 freight matrices published by DfT. While we acknowledged that the freight data on DfT's website is the latest available information, we noted in our response that this data is quite old and as such, may not

capture the development growth that has happened in the area over the last 15 years. Further to this, as the vehicular accesses serving the Western Parcel and Eastern Parcel of the development are different, we required additional insight on how the distributions have been undertaken for the development at each.

In line with the above, National Highways welcomed an alternative methodology to be adopted for determining trip distribution to ensure a robust assessment.

Following further discussions, it was agreed that the light vehicle trip distribution and assignment would be undertaken using the Bicester Transport Model (BTM) available for the area. Based on our review of the modelling brief provided in December 2021, the scope of model runs to be performed and the outputs to be extracted were agreed with the applicant. Following the completion of the BTM runs, we request that the applicant submits the model outputs for our review and agrees with us the wider SRN junctions that are to be assessed in detail.

The traffic survey data available with National Highways for the area was supplied to the consultant to help determine the proposed HGV distribution for the development, which will be fed into the BTM model for undertaking the runs. Having reviewed the HGV trip distributions undertaken by the consultant, we are content with the proposed HGV trip distribution and have no further comment to provide on this.

Committed development

We welcomed clarification on whether the committed developments considered for the assessments have been finalised following confirmation from the relevant Local Planning Authorities (LPA).

Discussions are ongoing between the applicant, National Highways and Oxfordshire County Council on the need for sensitivity tests regarding development proposals in the area.

Capacity assessments

Capacity assessments have been undertaken for the western and eastern site accesses and the A43 Baynards Green roundabout only. We noted that the applicant has referred to the Oxfordshire Housing and Growth Deal scheme which proposes improvements at the A43 Baynards Green roundabout and the Padbury roundabout of M40 J10, amongst other improvements. However, National Highways requires the applicant to undertake junction capacity assessments at M40 J10 and A43 Baynards Green roundabout using the latest available information regarding the proposed improvement schemes.

Based on discussions with the applicant, it was agreed that the A43 Growth Deal scheme will be incorporated into the model for assessing the development impacts with the scheme in place.

Following the review of the outputs from BTM runs, we may also require the applicant to undertake capacity assessments at wider SRN junctions in the area.

Baseline traffic – We noted from section 8.3.6 of the Environmental Statement (ES) that the baseline data has been collated from a number of sources, including commissioned traffic surveys, WebTRIS data, the historic Transport Assessment for North West Bicester Masterplan (2014), freight matrices published by DfT, etc. However, it was not clear how the data has been processed and used for the assessments. As such, we require the applicant to include a section on this in the TA to understand the suitability of the data used.

It was also recommended in our previous response that the applicant provides traffic flow diagrams (preferably in the form of spreadsheets) for all the scenarios under consideration. We are still waiting for these to be provided.

Modelling software – The applicant has previously undertaken the capacity assessments at the site accesses and A43 Baynards Green roundabout using ARCADY. However, no information was provided regarding the source or validation of the models.

Notwithstanding the above, we required that the applicant model the junctions in the area (including Baynards Green roundabout and M40 J10) using a linked model to capture the likely interactions between these closely placed junctions. Further to the this, it was agreed that National Highways' VISSIM model developed for M40 J10 in the area will be used for undertaking the capacity assessments.

Merge/ Diverge Assessments

While the applicant has carried out merge and diverge assessments on the slip roads at M40 J10, we are unable to undertake the checks as the flow data is unavailable. We would therefore welcome a review of this data.

Interim mitigation scheme

The applicant has proposed an interim mitigation scheme at the A43 Baynards Green roundabout which includes widening of the B4100 entries and a standalone signal-controlled toucan (pedestrian and cycle) crossing.

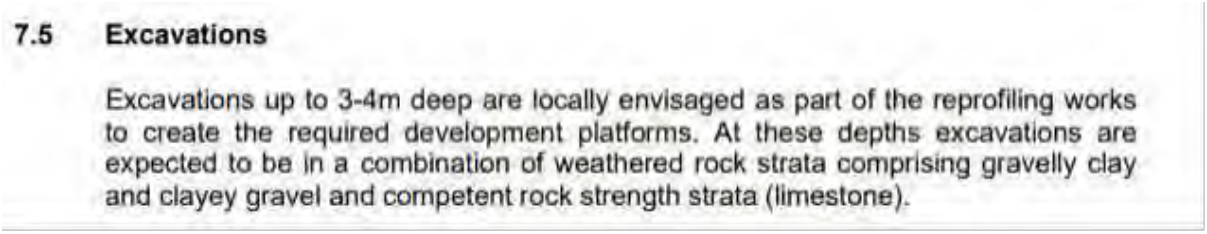
As there remain outstanding concerns, and the proposed improvement scheme as part of the Growth Deal scheme at the A43 Baynards Green roundabout and M40 J10 has not been modelled into the assessments, National Highways is not in a position to comment on the suitability of the interim mitigation scheme.

In line with the above, a detailed review of the assessments as presented within the TA was not undertaken by National Highways.

The outstanding concerns are likely to be resolved in due course and National Highways will provide comments accordingly.

Geotechnical matters

In addition, the submitted preliminary Ground Investigation report is a geo-environmental Phase 2 investigation for the main developments themselves. It does not include any details of the boundaries with National Highways operations, aside from a comment about excavations in (Part 1(2) (1).pdf):



7.5 Excavations

Excavations up to 3-4m deep are locally envisaged as part of the reprofiling works to create the required development platforms. At these depths excavations are expected to be in a combination of weathered rock strata comprising gravelly clay and clayey gravel and competent rock strength strata (limestone).

The applicant will need to advise / confirm if there will be any earthworks associated with the development(s) in relatively close proximity to National Highways boundaries (e.g. the stability of the balancing ponds, etc). In the first instance, some cross sections (to scale) through the boundaries showing the proposed extent of the development, its features and any proposed changes in elevation (excavations, landscaping) etc should be submitted for further assessment. Once received, we will review to determine the possible extent of any geotechnical reporting under the Design Manual for Roads and Bridges (DMRB) standard CD 622, which may be required to confirm the extent of any geotechnical risk to the SRN.

Once this information has been provided, we can fully assess the potential impact on the drainage of the site and whether this can effectively be mitigated.

APPENDIX C

Oxfordshire County Council Responses

OXFORDSHIRE COUNTY COUNCIL'S RESPONSE TO CONSULTATION ON THE FOLLOWING DEVELOPMENT PROPOSAL

District: Cherwell
Application no: 21/03267/OUT
Proposal: Outline planning permission (all matters reserved except for access) for the erection of buildings comprising logistics (Use Class B8) and ancillary Office (Use Class E(g)(i)) floorspace and associated infrastructure; construction of new site access from the B4100; creation of internal roads and access routes; and hard and soft landscaping
Location: South East Of Baynards House Adjoining A43, Baynards Green

Date: 18 November 2021

This report sets out the officer views of Oxfordshire County Council (OCC) on the above proposal. These are set out by individual service area/technical discipline and include details of any planning conditions or Informatives that should be attached in the event that permission is granted and any obligations to be secured by way of a S106 agreement. Where considered appropriate, an overarching strategic commentary is also included. If the local County Council member has provided comments on the application these are provided as a separate attachment.

Application no: 21/03267/OUT
Location: South East Of Baynards House Adjoining A43, Baynards Green

---

General Information and Advice

Recommendations for approval contrary to OCC objection:
If within this response an OCC officer has raised an objection but the Local Planning Authority are still minded to recommend approval, OCC would be grateful for notification (via planningconsultations@oxfordshire.gov.uk) as to why material consideration outweigh OCC's objections, and to be given an opportunity to make further representations.

Outline applications and contributions
The anticipated number and type of dwellings and/or the floor space may be set by the developer at the time of application which is used to assess necessary mitigation. If not stated in the application, a policy compliant mix will be used. The number and type of dwellings used when assessing S106 planning obligations is set out on the first page of this response.

In the case of outline applications, once the unit mix/floor space is confirmed by reserved matters approval/discharge of condition a matrix (if appropriate) will be applied to establish any increase in contributions payable. A further increase in contributions may result if there is a reserved matters approval changing the unit mix/floor space.

Where a S106/Planning Obligation is required:

- **Index Linked** – in order to maintain the real value of S106 contributions, contributions will be index linked. Base values and the index to be applied are set out in the Schedules to this response.

- **Administration and Monitoring Fee - TBC**
  This is an estimate of the amount required to cover the monitoring and administration associated with the S106 agreement. The final amount will be based on the OCC's scale of fees and will adjusted to take account of the number of obligations and the complexity of the S106 agreement.

- **OCC Legal Fees** The applicant will be required to pay OCC's legal fees in relation to legal agreements. Please note the fees apply whether a S106 agreement is completed or not.

Security of payment for deferred contributions - Applicants should be aware that an approved bond will be required to secure a payment where a S106 contribution is to be paid post implementation and

- the contribution amounts to 25% or more (including anticipated indexation) of the cost of the project it is towards and that project cost £7.5m or more
- the developer is direct delivering an item of infrastructure costing £7.5m or more
- where aggregate contributions towards bus services exceeds £1m (including anticipated indexation).

A bond will also be required where a developer is direct delivering an item of infrastructure.

The County Infrastructure Funding Team can provide the full policy and advice, on request.

Application no: 21/03267/OUT
Location: South East Of Baynards House Adjoining A43, Baynards Green

---

Transport Schedule

Recommendation:

Objection for the following reasons:

- The transport assessment provided with the application is not adequate to demonstrate that the development would not have a severe impact on the operation of the highway network.
- Further information is required to demonstrate that safe and suitable pedestrian and cycle access can be provided to the development, in accordance with NPPF.
- The geometry of the access junction has associated safety risks for all users and could affect its potential for signalisation.

If despite OCC's objection permission is proposed to be granted then OCC requires prior to the issuing of planning permission a S106 agreement including an obligation to enter into a S278 agreement and S38 agreement to mitigate the impact of the development plus planning conditions as detailed below.

S106 Contributions

Contribution	**Amount £**	**Price base**	**Index**	**Towards** (details)
Highway works	TBC		Baxter	Proportionate contribution towards imrovements to M40 J10 (which includes Baynards Green rbt)
Public transport services	£714,000	November 2021	RPI-x	Bus services serving the site
Public transport infrastructure (*if not dealt with under S278/S38 agreement*)	£8,904	September 2020	Baxter	Real time information unit at bus stop
Traffic Reg Order (*if not dealt with under S278/S38*	Possible changes to speed limit and parking		RPI-x	

agreement)	controls - will be part of highways agreement			
Travel Plan Monitoring	£2,379 plus additional amount for individual operator travel plans - see below.	December 2020	RPI-x	**T**o cover the OCC cost of monitoring for the life of the travel plan.
Administration fee	**TBC depending on total amount of contributions**			**To cover the cost of OCC monitoring the agreement.**
Total				

Other obligations:

- Off-site highway works – see below
- On site highway works – Provision of suitable bus loop, shelter, flagpole plus footway/cycleway within the site
- Other:

Key points

- The development has not taken into account the committed 'Growth Deal' scheme of capacity improvement at Baynards Green roundabout, which will involve enlarging and signalising the roundabout, both in terms of road safety, and capacity modelling.
- The transport assessment has not adequately tested the impact on the adjacent junctions, using available transport models, including the various elements of M40 J10 which are closely linked.
- The site access junction is proposed as a four arm roundabout with two arms leading into the development. This is considered to have potential safety issues due to the proximity of the arms, and the number of crossing points of the proposed pedestrian and cycle route. A single arm should suffice for this size of development.
- **Further information is required to confirm that the pedestrian/cycle link to Bicester is feasible.**

No safe pedestrian access is proposed to nearby restaurant and retail facilities, which employees would want to access at lunch time/breaks.
Comments:

This application is for 100,000sqm GIA of logistics space, located to the east of the A43, accessed via a new roundabout on the B4100, with two arms leading into the development.

A separate outline application has been received from the same applicant for a further 180,000sqm GIA of logistics space to the west of the A43, again with access via a new roundabout onto the B4100. A transport assessment has been provided, assessing the impact of each site, and the cumulative impact of the two sites together.

Vehicular access

A new roundabout junction is proposed onto the B4100. A drawing has been provided showing how this meets DMRB standards. However, OCC has concerns about the geometry of the roundabout and considers that only one arm should be provided leading into the development. The arms are very close together, which makes it difficult for drivers to assess gaps, and could lead to potential conflicts. It also leads to more crossing points than necessary for the pedestrian/cycle route proposed along the frontage, to provide access to the western site. The geometry of the western access arm into this site in particular, will make it difficult for cyclists and pedestrians to judge when to cross safely. There does not appear to be any justification for having two arms off the roundabout, and the design should be amended to provide a single arm.

Further, it is very likely that the roundabout may need to be signalised, due to capacity constraints, and due to the proximity to Baynards Green. The layout, with arms close together, is likely to preclude future signalisation.

Drawings have been provided showing the new roundabouts in the context of the current highway network including Baynards Green Roundabout, and in the context of the proposed redesign of Baynards Green, which is being taken forward by National Highways and currently due for completion in 2024 (the 'Growth Deal' scheme referred to in the Transport Assessment). However, the Road Safety Audit has not taken into account the new accesses in conjunction with the new layout. This must be addressed.

Further discussion will be needed with OCC about the extent of adoption. Normally OCC does not adopt cul de sacs into industrial estates, but if this is to be formally part of a bus route that will need to be considered.

'Growth Deal' scheme

A scheme to increase capacity at M40 J10 is planned to be delivered by National Highways in 2024, using forward funding from the Oxfordshire Growth Deal. This will

see Baynards Green roundabout enlarged and signalised, and the signalisation of the junction of the M40 northbound off slip with the A43.

In both the Oxfordshire County Council's Local Transport Plan 4 LTP4 policy document and Cherwell District Councils Local Plan and Infrastructure Delivery Plan (IDP), there is a strong emphasis on seeking the necessary contributions relating to junction capacity improvements on the M40 junction 10.

- The Cherwell District Council IDP refers to Junction capacity improvements with contributions necessary as required by the Highways England (now National Highways) – see Appendix 8; no. 14b.
- The Cherwell District Council IDP refers to Junction capacity improvements with contributions necessary as required by the Highways England (now National Highways) – see Appendix 8; no. 14e.
- LTP4 - BIC1 – Improve access and connections between key employment and residential sites and the strategic transport system by:
    - Continuing to work with HE to improve connectivity to the strategic highway. Continue to work in partnership on the A34 and A43 strategies, as well as Junction 9 and 10 of the M40 to relieve congestion particularly in the peak periods.

The modelling carried out so far shows that Baynards Green roundabout is operating over capacity and the addition of the development will make it worse. If the development is approved a S106 financial contribution must be made towards the improvement scheme. We would expect that to be proportionate in terms of peak hour trips with contributions being secured from development at Heyford. It may also be necessary to restrict development that can be occupied prior to the scheme being implemented.

Depending on further modelling results, it may be necessary to provide additional capacity to accommodate the traffic from the development. Further works or contributions may be sought.

Sustainable transport access

The site is remote from any built up area, but is within reasonable cycling distance from Bicester, which would generate a large proportion of the potential workforce. The developer is offering to construct an off carriageway cycle route within highway land between the site and Elmsbrook, where cyclists could connect safely with the rest of Bicester. The proposed cycle route would be a 3m wide route (with slight narrowings in some places where there is insufficient highway land) shared with pedestrians. Given the likely level of usage by pedestrians and cyclists in any hour, based on the travel plan targets, and the constraint of the available highway land, this is likely to be acceptable in the context of LTN 1/20 guidance.

There would be a 1m separation from the carriageway, which should be increased where possible as it would make the route more attractive. Most of the route would not be lit, and it needs to be acknowledged that some potential cyclists would not use the route for that reason.

Having walked some of the route, I noted that the ground slopes away from the carriageway in places, which could make construction challenging. Also along part of the route there are ditches and trees on the road side of a fence. The highway boundary will need to be researched carefully to ascertain whether there is sufficient space.

Given how critical this cycle route is to the sustainability of the site, and to providing safe access via a choice of sustainable modes, more information is required to demonstrate its feasibility. The information must be based on a topographical survey and include cross sections. This should not be left to condition given how critical it is. Without a safe walking and cycling route, OCC would consider the site unsustainable.

The TA acknowledges that further work is required to assess how the cycle and pedestrian facilities can be accommodated into the Growth Deal scheme.

Along the site frontage, it would be preferable to set the pedestrian/cycle route further back into the site, particularly immediately adjacent the roundabout.

No pedestrian link is proposed to the nearby restaurant and retail facilities at Baynards Green or the Motorway service area. It is inevitable that there would be a demand to access these at break times, and walking would be unsafe. For this site, a connection across the boundary to the MSA would overcome this issue. See below under public rights of way.

Public transport

Bus service requirements:

An existing bus route, 505 (Bicester – Brackley), currently passes to the north of the eastern part of the site along the B4100 from Bicester, then turns right at Barnard's Gate towards Brackley along the A43.

The route is S106 funded by West Northamptonshire using money from housing developments in Brackley. Initially the service was hourly but since Covid has been permanently reduced in frequency to eight journeys in each direction per day. The funding for the service will run out in the near future and the service is not financially viable at present without further funding. It is reasonable to assume that route 505 will no longer exist when this development commences.

Looking at the combined public transport demand from this site and the proposed western site, the transport assessment has a 7.5% bus mode share for bus equating to 564 trips per day, and a higher bus target of 10% by 2030 in the travel plan.

(However looking at the predicted 18-hour car trip generation and factoring this down base on the ratio of 'bus' to 'car driver' percentage modal shares below, I estimate 493 trips in 2025, and 763 in 2031).

To achieve this level of bus usage will require an attractive, high quality bus service with the timetable covering the majority of shift change times. The stated level of trips by bus generated by the development, 564 per day, won't alone be sufficient to support a financially sustainable bus route in the long-term. However the trips will generate revenue to form a substantial proportion of bus routes costs, which when combined with other passenger flows not related to the development (e.g. Bicester to Brackley), should be enough to financially sustain a service at the level required.

For a sufficiently attractive service, a service operating half-hourly in each direction for most of the operating day will be required. A Bicester to Brackley via Barnard's Green service will require two buses to operate at this frequency. While it is acknowledged that substantially fewer trips generated by the development will originate from Brackley compared to Bicester, we feel the proportion from Brackley will be considerably higher than the 4% stated, given the population of the town and the short distance to the development. In addition, non-development related passenger flows between Brackley and Bicester are needed to secure the overall long-term financial viability of the service. There are also bus connections at Brackley to a wide area towards Banbury, Towcester and Milton Keynes that will enable a wider range of possible bus journeys to the development.

A contribution is required towards the cost of providing two buses over an eight year period to serve the development, to provide a Bicester – Barnard's Green – Brackley route operating half-hourly most of the day and hourly in the evenings and on weekends. Costs have been calculated based on OCC's standard declining subsidy profile – subsidy costs decline each year as patronage/revenue levels rise, ultimately to the point the that service requires no subsidy after eight years.

Costs:
Monday to Friday core service (half hourly 6am – 6pm, 2 buses): £300,000 per year
Monday to Friday evenings / early am (hourly, 5am – 6am, 6pm – 10pm, 1 bus): £50,000 per year
Saturdays and Sundays (hourly, 5am – 10pm, 1 bus): £75,000 per year

Year 1 cost	£425,000
Year 2 cost	£375,000
Year 3 cost	£325,000
Year 4 cost	£275,000
Year 5 cost	£225,000
Year 6 cost	£175,000
Year 7 cost	£125,000
Year 8 cost	£75,000

Total	£2,000,000

The rate of subsidy decline is £50,000 per year.

Costs have been based on bus operating costs of £50 per hour during core times and £40 per hour at other times.

OCC would endeavour to integrate the route with others to provide longer distance direct journey opportunities (e.g. Oxford – Bicester – Barnard's Green).

We have considered the situation where the western and eastern sites come forward in isolation, which is quite likely, since they are proposed via separate planning applications. The potential passenger numbers from a single site are unlikely to ever be enough for financial sustainability of a half hourly service. A lesser lower level of service would reduce the attractiveness of public transport, and it is highly unlikely the predicted modal share would be achieved.

The proportion of the contribution split based on size would be £714,000 east and £1,286,000 western, which is almost exactly the split of the differences in costs for each bus (one bus does all day and weekends, the other does just 6-6 Mon-Fri).

The eastern site contribution would pay for one bus – operating M-F core service hourl, while the western site would pay for one bus – operating M-F core service hourly + evenings and weekends hourly

This would allow OCC to be able to procure a sensible proportion of the total service if one site comes forward independently of the other.

OCC considers that the modal share target will be challenging to achieve due to the isolated location. The application does not specify the number of parking spaces. Alongside travel plan incentives to support use of the bus service, we would want parking provision to reflect modal share targets, supported by parking demand management.

<u>Bus stop locations:</u>

The two bus stop locations proposed, one within each part of the development, are well located for the development. They are however located off-line of a Bicester to Brackley bus route – to serve them will increase the overall bus journey time and lessen the attractiveness of the bus for passengers travelling that are not going to the development. This is particularly the case for the western side of the development. However, locating the stops on the B4100 would increase the walking distance to the development and lessen the attractiveness of bus for passengers travelling to the development. On balance, the proposed stop locations are probably the best within the

constraints of the current development proposal. If the layout of the development is revised, it would be beneficial to investigate whether more efficient stop locations can be found, particularly for the western part of the site, without the stops becoming too remote from the building entrances they serve.

Bus stop facilities:

Both bus stops should have a bus shelter (at least three bays long with seating) provided and maintained by the site. In addition, a separate bus stop pole, flag and timetable cases should be provided to OCC specification. The shelters must be suitable for OCC to install real time information displays, with ducting provided. A contribution will be sought for the provision of these displays.

Travel Plan

A draft Framework Travel Plan has been produced for this application, as part of the Environmental Statement, but it requires further site-based information before it can meet the criteria outlined within appendix 7 of the OCC guidance document 'Transport for New Developments – Transport Assessments and Travel Plans 2014'. I have added some specific points below for information.

- As the site is adjacent to another large site and employees will be travelling to a similar destination it would be advantageous to open a dialogue with the adjacent site to discuss possible joint working opportunities. It is therefore encouraged that this is included as an action for the TPC and identified within the action plan.

- Information about on site facilities should be included. Levels and type of cycle parking, changing facillities, restaurant facillities (reducing the need to leave the site during the day) etc.

- A dedicated cycle route to Bicester has been discussed within the document but this has not been included within the action plan. Similarly with information about EV charging points?

- Anticipated number of occupiers on site?

- Estimated date of occupation?

- What are the barriers to the promotion of sustainable, active travel in this location? How will these be mitigated?

- How will deliveries be managed?

It is requested that an amended travel plan is submitted as a separate document.

Cycle parking and EV charging points for both cycles and vehicles should be provided within the site boundary. Cycle parking must be covered and secure and conveniently located near to the entrance to each building.

As each of the units will be occupied independently by different organisations, a Framework Travel Plan and associated monitoring fee (£2,379 index linked) will be required for the site. Depending on the individual sizes of the units it is likely that each organisation will also be required to produce either a Full Travel Plan (with associated monitoring fee) or Travel Plan Statement. However, as I am unable to find definitive sizes, I am unable to confirm the exact requirements. I have therefore included a copy of the threshold and monitoring fee table relevant to this application for information.

B8 Storage or distribution • wholesale warehouses; • distribution centres; • repositories.	**B8 Storage or distribution -** This class includes open air storage.	Over 7500m^2	Travel Plan	2,379
		3000-7499m 2	Travel Plan	2,379
		2000-2999m 2	Travel Plan Statement	None

Traffic impact

A Transport Assessment has been provided, covering both the western and eastern sites, and considering them individually and cumulatively. The TA acknowledges that further modelling work is required to make use of the local, detailed VISSIM Model that National Highways holds for M40 Junction 10, including Baynards Green roundabout. This was recommended as part of our preapplication advice and is a vital part of understanding the traffic impact of the site, given the proximity of the access junctions to Baynards Green, and the complex interaction of the various junctions that form M40 Junction 10. Modelling the roundabouts individually (as has been done in this TA) is not sufficient, largely because traffic is not free flowing at each due to their proximity. Traffic queueing on the A43 at Baynards Green could lead to exit blocking for the M40 northbound off slip, which would then present a safety hazard due to queueing on the M40, so this needs to be examined carefully. Lack of this modelling in the current application is a reason for objection.

The TA also acknowledges that further modelling must be carried out to take into account the Growth Deal scheme. Again, lack of this modelling in the current application is a reason for objection.

At the time of writing, discussions are ongoing to scope out the further traffic modelling work that will be necessary, in conjunction with National Highways.

The Highway Authority will submit further representations in due course, to take into account this work.

I have the following further comments on the TA:

Future year baseline traffic: Traffic counts were carried out in June 2021, when traffic volumes were still below pre-pandemic levels. No assumptions can be made that future traffic volumes will remain lower than pre-pandemic levels. These counts have then been growthed up using TEMPRO. Instead, future year flows from the Bicester Transport Model should be used, as this takes into account the concentration of development locally. This data is being used for transport assessments of other strategic developments in the area.

Committed development: Cumulative assessment should take into account the Oxfordshire Strategic Railfreight Interchange. It is formally registered with the Planning Inspectorate and public consultation is expected in spring 2022. It is therefore moving forward on a scale of certainty of delivery. The published scoping report provides sufficient information on land use to make assumptions about lorry movements, and additional information could be provided. OCC considers that it should be taken into account in the cumulative assessment, at least in a form of sensitivity test. Emerging proposals for significant employment development at Junction 9 should also be taken into account, **as should the Great Wolf resort and other significant development proposals in the area.**

Trip generation: The proposed trip generation is based on surveys obtained or carried out by the applicant for comparable sites. The full survey report should be provided.

Trip distribution: Light traffic has been distributed on the basis of 2011 Census travel to work data for an MSOA in NE Bicester. I do not follow the discussion in paragraph 5.3.5. Although I understand why the MSOA in which the proposal is located, has not been used (there is very little employment in the ward), I don't follow the justification for using a ward in Bicester, where it is very likely that employment would attract a large proportion of employees from the immediate surrounding area. A site remote from Bicester would certainly attract a high proportion of employees from Bicester, as it is the nearest town, but I think would attract more people from other settlements than would a site in Bicester.

HGV distribution: This has been based on DfT data using a 2006 base year, which is considered too old as it would not take into account the pattern of development since then. A more recent dataset should be used or an alternative methodology for distribution should be discussed with OCC and NH. A gravity model would be more appropriate.

Trip assignment: For both light and heavy traffic, tables should be provided to show how the assignment was arrived at. Given the desire to locate on the M40 corridor, the proportions predicted to travel via M40 N and S look surprisingly low.

Junction capacity assessment: M40 Junction 10 has not been assessed, which is unacceptable for a development of this scale, which will clearly have an impact on the junction. The TA shows that the development would increase the traffic on the A43 approaching the junction by 7%, which demonstrates a significant impact that must be assessed.

Junctions 10 software has been used to assess the site access roundabouts and Baynards Green roundabout, as well as the A4095/B4100 junction at Bicester. For reasons stated above this is not sufficient for the first three. Notwithstanding that, I query whether the assessments are reliable because the queue lengths at Baynards Green have not been validated against the traffic surveys, albeit those surveys themselves are not reliable due to the fact they were carried out when traffic conditions were not back to pre-pandemic levels. Even taking the output tables at face value, the roundabout is showing as over capacity in the base year and the development, individually and cumulatively with the eastern site, makes the RFC worse.

At the A4095/B4100 junction, the queue lengths are not validated and the queue lengths are not borne out by anecdote. The planned improvement scheme there will deliver additional capacity, but that additional capacity is intended to release housing growth at Bicester.

I will leave NH to comment on the M40 slip roads and the merge/diverge assessments.

Interim mitigation scheme: A slight increase in flare on the approach to Baynards Green roundabout has been proposed. This is shown to bring about only marginal benefit on some arms and makes one arm worse. The scheme would cause significant disruption to construct at this very busy junction.

Public rights of way

A connection should be made within the site to the bridleway which runs along the southern boundary, both to enable access to the facilities at the MSA, and to help link up public rights of way in the area.

S106 obligations and their compliance with Regulation 122(2) Community Infrastructure Levy Regulations 2010 (as amended):

£TBC Highway Works Contribution indexed from TBC using Baxter Index
Towards: Capacity improvements at M40 J10 including Baynards Green Roundabout

Justification: A high proportion of the development traffic will pass through Baynards Green and the rest of Junction 10. A scheme of improvements is planned for the junction, which is required to accommodate planned growth. Subject to further modelling, additional works may be required to accommodate the traffic from this development.

Calculation: TBC - Contribution towards the planned scheme will be proportionate based on contributions to be secured from development at Heyford, with additional amount as required to provide for additional capacity.

£714,000 Public Transport Service Contribution indexed from November 2021 using RPI-x
Towards: Bus services serving the site.

Justification: A range of sustainable travel options to the site is required to make the site sustainable in planning terms. The existing bus service between Bicester and Brackley is unlikely to continue past the end of its current contract, which would leave the site with no public transport.

Calculation: See commentary above.

£TBC Public Transport Infrastructure Contribution indexed from TBC using Baxter Index
Towards: Provision of Real Time Information unit in the bus shelter which are to be provided by the developer.

Justification: To encourage public transport use, people will need the reassurance that the bus is on its way, especially given local traffic congestion.

Calculation: The amount will be based on the cost to OCC to provide the unit, together with a commuted sum for maintenance.

£TBC Travel Plan Monitoring Fee indexed from December 2020 using RPI-x

Justification: To ensure that the travel plan is delivered and revised as required in order to be effective, OCC will need to monitor it over its life.

Calculation: The amount is based on the staff cost for OCC to monitor the travel plan, based on an estimate of the time it will take over the life of the plan.

S278 Highway Works:

An obligation to enter into a S278 Agreement will be required to secure mitigation/improvement works, including:

- Access junction- details to be agreed, including bus turning facility and bus stop
- Footway/cycleway linking the site with Elmsbrook, Bicester.

Notes:
This is to be secured by means of S106 restriction not to implement development (until S278 agreement has been entered into. The trigger by which time S278 works are to be completed shall also be included in the S106 agreement. With this site, the safety of construction traffic access will be critical, so the junction may be required to be constructed prior to construction activity on the rest of the site. The footway/cycleway would be required prior to first occupation.

Identification of areas required to be dedicated as public highway and agreement of all relevant landowners will be necessary in order to enter into the S278 agreements. A detailed survey of the highway boundary should be carried out to ensure that the adopted highway abuts the land holding. This may not be the case where there is a ditch, and all highway record plans provided by OCC contain a caveat about this. Such 'gaps' can lead to significant delays to S278 agreements.

S38 Highway Works – [Spine Road][/ On-Site Rights of Way]:

An obligation to provide a bus turning loop will be required for the development. The S106 agreement will secure delivery via future completion of a S38 agreement.

Planning Conditions:

In the event that permission is to be given, the following planning conditions should be attached:

No development shall commence unless and until full details of the means of access between the land and the highway, including, position, layout, construction, drainage and vision splays have been submitted to and approved in writing by the Local Planning Authority. The means of access shall be constructed in strict accordance with the approved details and shall be retained and maintained as such thereafter. Agreed vision splays shall be kept clear of obstructions higher than 0.6m at all times.
Reason - In the interests of highway safety and to comply with Policy ESD15 of the Cherwell Local Plan 2011-2031 Part 1 and Government guidance contained within the National Planning Policy Framework.

No development shall commence unless and until full specification details (including construction, layout, surfacing and drainage) of the turning areas and parking spaces within the curtilage of the site, arranged so that motor vehicles may enter, turn round

and leave in a forward direction and vehicles may park off the highway, have been submitted to and approved in writing by the Local Planning Authority. The turning area and car parking spaces shall be constructed in accordance with the approved details prior to the first occupation of the development shall be retained as such for the parking and manoeuvring of vehicles at all times thereafter.
Reason - In the interests of highway safety and to comply with Policy ESD15 of the Cherwell Local Plan 2011-2031 Part 1 and Government guidance contained within the National Planning Policy Framework.

Prior to the first use or occupation of the development hereby permitted, covered cycle parking facilities shall be provided on the site in accordance with details which shall be firstly submitted to and approved in writing by the Local Planning Authority. Thereafter, the covered cycle parking facilities shall be permanently retained and maintained for the parking of cycles in connection with the development.
Reason - In the interests of sustainability, to ensure a satisfactory form of development and to comply with Government guidance contained within the National Planning Policy Framework.

Prior to the first occupation of the development, a scheme for the provision of vehicular electric charging points to serve the development shall be submitted to and approved in writing by the Local Planning Authority. The vehicular electric charging points shall be provided in accordance with the approved details prior to the first occupation of the unit they serve, and retained as such thereafter.
Reason - To comply with Policies SLE 4, ESD 1, ESD 3 and ESD 5 of the adopted Cherwell Local Plan 2011-2031 Part 1 and to maximise opportunities for sustainable transport modes in accordance with paragraph 110(e) of the National Planning Policy Framework

Prior to commencement of the development hereby approved, a Construction Traffic Management Plan (CTMP) shall be submitted to and approved in writing by the Local Planning Authority. Thereafter, the development shall not be carried out other than in accordance with the approved CTMP.
Reason: In the interests of highway safety and the residential amenities of neighbouring occupiers and to comply with Government guidance contained within the National Planning Policy Framework.

Prior to the first occupation of the development hereby approved, a Travel Plan, prepared in accordance with the Department of Transport's Best Practice Guidance Note "Using the Planning Process to Secure Travel Plans", shall be submitted to and approved in writing by the Local Planning Authority. Thereafter, the development shall be implemented and operated in accordance with the approved details.
Reason - In the interests of sustainability and to ensure a satisfactory form of development, in accordance with Government guidance contained within the National Planning Policy Framework.

The development shall not be occupied until a signage strategy for the site has been

submitted and approved in writing by the Local Planning Authority. The development shall thereafter be completed and signage installed in accordance with the approved details prior to the first use of any building on the site.
Reason - To ensure that traffic is directed along the most appropriate routes and to comply with Government guidance contained within the National Planning Policy Framework.

Subject to further traffic modelling: The development shall not be occupied until the planned scheme of enlargement and signalisation of Baynards Green roundabout, or other similar capacity improvement scheme as agreed with National Highways, has been implemented at Baynards Green junction.

Lead Local Flood Authority

Recommendation:

Objection

Detailed comments:

Unable to find FRA in the submission.

Where car parking spaces and access roads are proposed, water quality standards must be met. Proposed development needs a water quality assessment in accordance with Section 4 and Section 26 of SuDS Manual.

Proposed development must meet local standards, L19, "At least one surface feature should be deployed within the drainage system for water quality purposes, or more features for runoff which may contain higher levels of pollutants in accordance with the CIRIA SuDS Manual C753. Only if surface features are demonstrated as not viable, then approved proprietary engineered pollution control features such as vortex separators, serviceable/ replaceable filter screens, or pollution interceptors may be used"

Furthermore, a detailed surface water management strategy must be submitted in accordance with the Local Standards and Guidance for Surface Water Drainage on Major Development in Oxfordshire

In line with this guidance, runoff must be managed at source (i.e. close to where it falls) with residual flows then conveyed downstream to further storage or treatment components, where required. The proposed drainage should mimic the existing drainage regime of the site as much as possible.

The applicant is required to provide a Surface Water Management Strategy in accordance with the following guidance:

The Sustainable Drainage Systems (SuDS) Policy, which came into force on the 6th April 2015 requires the use of sustainable drainage systems to manage runoff on all applications relating to major development. As well as dealing with surface water runoff, they are

required to provide water quality, biodiversity and amenity benefits in line with National Guidance. The Sustainable Drainage Systems (SuDS) Policy also implemented changes to the Town and Country Planning (Development Management Procedure) (England) Order 2010 to make the Lead Local Flood Authority (LLFA) a statutory Consultee for Major Applications in relation to surface water drainage. This was implemented in place of the SuDS Approval Bodies (SAB's) proposed in Schedule 3 of the Flood and Water Management Act 2010.

All full and outline planning applications for Major Development must be submitted with a Surface Water Management Strategy. A site-specific Flood Risk Assessment (FRA) is also required for developments of 1 hectare or greater in Flood Zone 1; all developments in Flood Zones 2 and 3 or in an area within Flood Zone 1 notified as having critical drainage problems; and where development or a change of use to a more vulnerable class may be subject to other sources of flooding.

Further information on flood risk in Oxfordshire, which includes access to view the existing fluvial and surface water flood maps, can be found on the Oxfordshire flood tool kit website. The site also includes specific flood risk information for developers and Planners.

The National Planning Policy Framework (NPPF), which was updated in July 2021 provides specific principles on flood risk (Section 14, from page 45). National Planning Practice Guidance (NPPG) provides further advice to ensure new development will come forward in line with the NPPF.

Paragraph 159 states; "Inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future). Where development is necessary in such areas, the development should be made safe for its lifetime without increasing flood risk elsewhere."

As stated in Paragraph 160 and 161 of the NPPF, we will expect a sequential approach to be used in areas known to be at risk now or in the future from any form of flooding.

The Non-statutory technical Standards for sustainable drainage systems were produced to provide initial principles to ensure developments provide SuDS in line with the NPPF and NPPG. Oxfordshire County Council have published the "Local Standards and Guidance for Surface Water Drainage on Major Development in Oxfordshire" to assist developers in the design of all surface water drainage systems, and to support Local Planning Authorities in considering drainage proposals for new development in Oxfordshire. The guide sets out the standards that we apply in assessing all surface water drainage proposals to ensure they are in line with National legislation and guidance, as well as local requirements.

The SuDS philosophy and concepts within the Oxfordshire guidance are based upon and derived from the CIRIA SuDS Manual (C753), and we expect all development to come forward in line with these principles.

In line with the above guidance, surface water management must be considered from the beginning of the development planning process and throughout – influencing site layout and design. The proposed drainage solution should not be limited by the proposed site layout and design.

Wherever possible, runoff must be managed at source (i.e. close to where it falls) with residual flows then conveyed downstream to further storage or treatment components, where required. The proposed drainage should mimic the existing drainage regime of the site. Therefore, we will expect existing drainage features on the site to be retained and they should be utilised and enhanced wherever possible.

Although we acknowledge it will be hard to determine all the detail of source control attenuation and conveyance features at an outline stage, we will expect the Surface Water Management Strategy to set parameters for each parcel/phase to ensure these are included when these parcels/phases come forward. Space must be made for shallow conveyance features throughout the site and by also retaining existing drainage features and flood flow routes, this will ensure that the existing drainage regime is maintained, and flood risk can be managed appropriately.

Drainage Pro-Forma

Archaeology

Recommendation:

Objection

Key issues:

The site is located in an area of archaeological interest on the site of a medieval and post medieval green mentioned in historical records. An archaeological desk based assessment will need to be undertaken for the site to assess the potential of any proposed development to impact on archaeological deposits and heritage assets. The results of an archaeological field evaluation will also need to be submitted along with any planning application for the site.

Legal agreement required to secure:

Conditions:

Informatives:

Detailed comments:

The site is located in an area of archaeological interest immediately south of the site of a medieval and post medieval green mentioned in historical records. The area of the green has been suggested to be either the site of medieval jousting or a camp site for these jousts, horse racing and a rendezvous site during the C17th civil war. A number of possible Bronze or Iron Age banjo enclosures have been recorded in the vicinity of the site from aerial photographs and a ring ditch has been recorded 500m north east of the site.

An archaeological desk-based assessment will need to be undertaken for the site to assess the potential of any proposed development to impact on archaeological deposits and heritage assets.

A written scheme of investigation has been agreed for this desk-based assessment and a short statement on the historic environment has been submitted with this application. This submitted document however does not however appear to contain the whole assessment as set out in the agreed WSI. This will need to be submitted.

A programme of archaeological evaluation will need to be undertaken on the site and the report submitted ahead of the determination of any planning application. This must be carried out by a professionally qualified archaeological organisation and should aim to define the character and extent of the archaeological remains within the application area, and thus indicate the weight which should be attached to their preservation. This evaluation must be undertaken in line with the Chartered Institute for Archaeologists standards and guidance for archaeological evaluation including the submission and agreement of a suitable written scheme of investigation.

This information can be used for identifying potential options for minimising or avoiding damage to the archaeology and on this basis, an informed and reasonable decision can be taken.

OXFORDSHIRE COUNTY COUNCIL'S RESPONSE TO CONSULTATION ON THE FOLLOWING DEVELOPMENT PROPOSAL

District: Cherwell
Application no: 21/03268/OUT
Proposal: Outline planning permission (all matters reserved except for access) for the erection of buildings comprising logistics (Use Class B8) and ancillary Office (Use Class E(g)(i)) floorspace; construction of new site access from the B4100; creation of internal roads and access routes; hard and soft landscaping including noise attenuation measures; and other associated infrastructure
Location: NW Of Baynards House, Ardley

Date: 19 November 2021

This report sets out the officer views of Oxfordshire County Council (OCC) on the above proposal. These are set out by individual service area/technical discipline and include details of any planning conditions or Informatives that should be attached in the event that permission is granted and any obligations to be secured by way of a S106 agreement. Where considered appropriate, an overarching strategic commentary is also included. If the local County Council member has provided comments on the application these are provided as a separate attachment.

Application no: 21/03268/OUT
Location: NW Of Baynards House, Ardley

General Information and Advice

Recommendations for approval contrary to OCC objection:
If within this response an OCC officer has raised an objection but the Local Planning Authority are still minded to recommend approval, OCC would be grateful for notification (via planningconsultations@oxfordshire.gov.uk) as to why material consideration outweigh OCC's objections, and to be given an opportunity to make further representations.

Outline applications and contributions
The anticipated number and type of dwellings and/or the floor space may be set by the developer at the time of application which is used to assess necessary mitigation. If not stated in the application, a policy compliant mix will be used. The number and type of dwellings used when assessing S106 planning obligations is set out on the first page of this response.

In the case of outline applications, once the unit mix/floor space is confirmed by reserved matters approval/discharge of condition a matrix (if appropriate) will be applied to establish any increase in contributions payable. A further increase in contributions may result if there is a reserved matters approval changing the unit mix/floor space.

Where a S106/Planning Obligation is required:

- **Index Linked** – in order to maintain the real value of S106 contributions, contributions will be index linked. Base values and the index to be applied are set out in the Schedules to this response.

- **Administration and Monitoring Fee - TBC**
  This is an estimate of the amount required to cover the monitoring and administration associated with the S106 agreement. The final amount will be based on the OCC's scale of fees and will adjusted to take account of the number of obligations and the complexity of the S106 agreement.

- **OCC Legal Fees** The applicant will be required to pay OCC's legal fees in relation to legal agreements. Please note the fees apply whether a S106 agreement is completed or not.

Security of payment for deferred contributions - Applicants should be aware that an approved bond will be required to secure a payment where a S106 contribution is to be paid post implementation and

- the contribution amounts to 25% or more (including anticipated indexation) of the cost of the project it is towards and that project cost £7.5m or more
- the developer is direct delivering an item of infrastructure costing £7.5m or more
- where aggregate contributions towards bus services exceeds £1m (including anticipated indexation).

A bond will also be required where a developer is direct delivering an item of infrastructure.

The County Infrastructure Funding Team can provide the full policy and advice, on request.

Application no: 21/03268/OUT
Location: NW Of Baynards House, Ardley

Transport Schedule

Recommendation:

Objection for the following reasons:

- The transport assessment provided with the application is not adequate to demonstrate that the development would not have a severe impact on the operation of the highway network.
- Further information is required to demonstrate that safe and suitable pedestrian and cycle access can be provided to the development, in accordance with NPPF.
- The geometry of the access junction has associated safety risks for all users and could affect its potential for signalisation.

If despite OCC's objection permission is proposed to be granted then OCC requires prior to the issuing of planning permission a S106 agreement including an obligation to enter into a S278 agreement and S38 agreement to mitigate the impact of the development plus planning conditions as detailed below.

S106 Contributions

Contribution	**Amount £**	**Price base**	**Index**	**Towards** (details)
Highway works	TBC		Baxter	Proportionate contribution towards imrovements to M40 J10 (which includes Baynards Green rbt)
Public transport services	£1,286,000	November 2021	RPI-x	Bus services serving the site
Public transport infrastructure (*if not dealt with under S278/S38 agreement*)	£8,904	September 2020	Baxter	Real time information unit at bus stop
Traffic Reg Order (*if not*	Possible changes to		RPI-x	

dealt with under S278/S38 agreement)	speed limit and parking controls - will be part of highways agreement			
Travel Plan Monitoring	£2,379 plus additional amount for individual operator travel plans - see below.	December 2020	RPI-x	**T**o cover the OCC cost of monitoring for the life of the travel plan.
Admin fee	TBC dependent on final amount agreed			Fee for the monitoring and administration of the S106 agreement
Public rights of way improvements	**£65,000**	**November 2021**	**Baxter**	**Upgrades to PRoW between the site and Fewcott and Fritwell**

Other obligations:

- Off-site highway works – see below
- On site highway works – Provision of suitable bus loop, shelter, flagpole plus footway/cycleway within the site
- Other:

Key points

- The development has not taken into account the committed 'Growth Deal' scheme of capacity improvement at Baynards Green roundabout, which will involve enlarging and signalising the roundabout, both in terms of road safety, and capacity modelling.
- The transport assessment has not adequately tested the impact on the adjacent junctions, using available transport models, including the various elements of M40 J10 which are closely linked.
- The site access roundabout has very straight approaches, which could be a safety hazard and should be reviewed.

Comments:

This application is for 180,000sqm GIA of logistics space, located to the west of the A43, stretching between the M40 and the B4100, with access via a new roundabout onto the B4100. A separate full application (21/03266/F) has been submitted for the roundabout and access road into the parcel.

A separate outline application has been received from the same applicant for a further 100,000sqm GIA of logistics space to the east of the A43, again with access via a new roundabout onto the B4100. A transport assessment has been provided, assessing the impact of each site, and the cumulative impact of the two sites together.

Vehicular access

A new roundabout junction is proposed onto the B4100. A drawing has been provided showing how this meets DMRB standards. However, OCC has concerns about the straightness of the approaches on the B4100, especially given the national speed limit. Experience of similar layouts of recently constructed roundabouts on high speed roads has shown that some drivers fail to appreciate the roundabout until the last minute, leading to collisions or driving over the roundabout. Further work is needed to adjust the alignment of the B4100 on approaches. This is challenging due to the land on the northern side of the B4100 not being available. This has not been picked up in the Road Safety Audit provided, but OCC would welcome further discussions given their experiences elsewhere. Consideration could be given to a reduction in the speed limit along the site frontage extending to Baynards Green roundabout.

Drawings have been provided showing the new roundabouts in the context of the current highway network including Baynards Green Roundabout, and in the context of the proposed redesign of Baynards Green, which is being taken forward by National Highways and currently due for completion in 2024 (the 'Growth Deal' scheme referred to in the Transport Assessment). However, the Road Safety Audit has not taken into account the new accesses in conjunction with the new layout. This must be addressed.

Further discussion will be needed with OCC about the extent of adoption. Normally OCC does not adopt cul de sacs into industrial estates, but if this is to be formally part of a bus route that will need to be considered.

'Growth Deal' scheme

A scheme to increase capacity at M40 J10 is planned to be delivered by National Highways in 2024, using forward funding from the Oxfordshire Growth Deal. This will

see Baynards Green roundabout enlarged and signalised, and the signalisation of the junction of the M40 northbound off slip with the A43.

In both the Oxfordshire County Council's Local Transport Plan 4 LTP4 policy document and Cherwell District Councils Local Plan and Infrastructure Delivery Plan (IDP), there is a strong emphasis on seeking the necessary contributions relating to junction capacity improvements on the M40 junction 10.

- The Cherwell District Council IDP refers to Junction capacity improvements with contributions necessary as required by the Highways England (now National Highways) – see Appendix 8; no. 14b.
- The Cherwell District Council IDP refers to Junction capacity improvements with contributions necessary as required by the Highways England (now National Highways) – see Appendix 8; no. 14e.
- LTP4 - BIC1 – Improve access and connections between key employment and residential sites and the strategic transport system by:
    - Continuing to work with HE to improve connectivity to the strategic highway. Continue to work in partnership on the A34 and A43 strategies, as well as Junction 9 and 10 of the M40 to relieve congestion particularly in the peak periods.

The modelling carried out so far shows that Baynards Green roundabout is operating over capacity and the addition of the development will make it worse. If the development is approved a S106 financial contribution must be made towards the improvement scheme. We would expect that to be proportionate in terms of peak hour trips with contributions being secured from development at Heyford. It may also be necessary to restrict development that can be occupied prior to the scheme being implemented.

Depending on further modelling results, it may be necessary to provide additional capacity to accommodate the traffic from the development. Further works or contributions may be sought.

Sustainable transport access

The site is remote from any built up area, but is within reasonable cycling distance from Bicester, which would generate a large proportion of the potential workforce. The developer is offering to construct an off carriageway cycle route within highway land between the site and Elmsbrook, where cyclists could connect safely with the rest of Bicester. The proposed cycle route would be a 3m wide route (with slight narrowings in some places where there is insufficient highway land) shared with pedestrians. Given the likely level of usage by pedestrians and cyclists in any hour, based on the travel

plan targets, and the constraint of the available highway land, this is likely to be acceptable in the context of LTN 1/20 guidance.

There would be a 1m separation from the carriageway, which should be increased where possible as it would make the route more attractive. Most of the route would not be lit, and it needs to be acknowledged that some potential cyclists would not use the route for that reason.

Having walked some of the route, I noted that the ground slopes away from the carriageway in places, which could make construction challenging. Also along part of the route there are ditches and trees on the road side of a fence. The highway boundary will need to be researched carefully to ascertain whether there is sufficient space.

Given how critical this cycle route is to the sustainability of the site, and to providing safe access via a choice of sustainable modes, more information is required to demonstrate its feasibility. The information must be based on a topographical survey and include cross sections. This should not be left to condition given how critical it is. Without a safe walking and cycling route, OCC would consider the site unsustainable.

The TA acknowledges that further work is required to assess how the cycle and pedestrian facilities can be accommodated into the Growth Deal scheme. Without this work there is a risk that there is insufficient space within the highway boundary to accommodate the cycle link.

The TA proposes an interim scheme, which could be delivered in advance of the Growth Deal scheme, which includes a Toucan crossing of the A43. This would need to be agreed with National Highways.

Where the shared use route runs along the site frontage, it would be preferable for it to run within the site rather than adjacent the carriageway, as it would only be accessing the site. To provide a direct route to the western building in the indicative masterplan, I recommend a safe crossing point part way along the access road – this could be a parallel crossing if the access road is subject to a 30mph speed limit, or combined with some sort of traffic calming feature such as a refuge.

The crossing of the A41 across to the motorway service area should be made suitable for cycles, providing a good quality refuge and a 3m wide path on the northern side, leading into the service area track that connects to bridleway 367/29 (see Public Rights of Way below).

Public transport

Bus service requirements:

An existing bus route, 505 (Bicester – Brackley), currently passes to the north of the eastern part of the site along the B4100 from Bicester, then turns right at Barnard's Gate towards Brackley along the A43.

The route is S106 funded by West Northamptonshire using money from housing developments in Brackley. Initially the service was hourly but since Covid has been permanently reduced in frequency to eight journeys in each direction per day. The funding for the service will run out in the near future and the service is not financially viable at present without further funding. It is reasonable to assume that route 505 will no longer exist when this development commences.

Looking at the combined public transport demand from this site and the proposed western site, the transport assessment has a 7.5% bus mode share for bus equating to 564 trips per day, and a higher bus target of 10% by 2030 in the travel plan. (However looking at the predicted 18-hour car trip generation and factoring this down base on the ratio of 'bus' to 'car driver' percentage modal shares below, I estimate 493 trips in 2025, and 763 in 2031).

To achieve this level of bus usage will require an attractive, high quality bus service with the timetable covering the majority of shift change times. The stated level of trips by bus generated by the development, 564 per day, won't alone be sufficient to support a financially sustainable bus route in the long-term. However the trips will generate revenue to form a substantial proportion of bus routes costs, which when combined with other passenger flows not related to the development (e.g. Bicester to Brackley), should be enough to financially sustain a service at the level required.

For a sufficiently attractive service, a service operating half-hourly in each direction for most of the operating day will be required. A Bicester to Brackley via Barnard's Green service will require two buses to operate at this frequency. While it is acknowledged that substantially fewer trips generated by the development will originate from Brackley compared to Bicester, we feel the proportion from Brackley will be considerably higher than the 4% stated, given the population of the town and the short distance to the development. In addition, non-development related passenger flows between Brackley and Bicester are needed to secure the overall long-term financial viability of the service. There are also bus connections at Brackley to a wide area towards Banbury, Towcester and Milton Keynes that will enable a wider range of possible bus journeys to the development.

A contribution is required towards the cost of providing two buses over an eight year period to serve the development, to provide a Bicester – Barnard's Green – Brackley route operating half-hourly most of the day and hourly in the evenings and on weekends. Costs have been calculated based on OCC's standard declining subsidy

profile – subsidy costs decline each year as patronage/revenue levels rise, ultimately to the point the that service requires no subsidy after eight years.

Costs:
Monday to Friday core service (half hourly 6am – 6pm, 2 buses): £300,000 per year
Monday to Friday evenings / early am (hourly, 5am – 6am, 6pm – 10pm, 1 bus): £50,000 per year
Saturdays and Sundays (hourly, 5am – 10pm, 1 bus): £75,000 per year

Year 1 cost	£425,000
Year 2 cost	£375,000
Year 3 cost	£325,000
Year 4 cost	£275,000
Year 5 cost	£225,000
Year 6 cost	£175,000
Year 7 cost	£125,000
Year 8 cost	£75,000
Total	£2,000,000

The rate of subsidy decline is £50,000 per year.

Costs have been based on bus operating costs of £50 per hour during core times and £40 per hour at other times.

OCC would endeavour to integrate the route with others to provide longer distance direct journey opportunities (e.g. Oxford – Bicester – Barnard's Green).

We have considered the situation where the western and eastern sites come forward in isolation, which is quite likely, since they are proposed via separate planning applications. The potential passenger numbers from a single site are unlikely to ever be enough for financial sustainability of a half hourly service. A lesser lower level of service would reduce the attractiveness of public transport, and it is highly unlikely the predicted modal share would be achieved.

The proportion of the contribution split based on size would be £714,000 east and £1,286,000 western, which is almost exactly the split of the differences in costs for each bus (one bus does all day and weekends, the other does just 6-6 Mon-Fri).

The eastern site contribution would pay for one bus – operating M-F core service hourly, while the western site would pay for one bus – operating M-F core service hourly + evenings and weekends hourly

This would allow OCC to be able to procure a sensible proportion of the total service if one site comes forward independently of the other.

OCC considers that the modal share target will be challenging to achieve due to the isolated location. The application does not specify the number of parking spaces. Alongside travel plan incentives to support use of the bus service, we would want parking provision to reflect modal share targets, supported by parking demand management.

Bus stop locations:

The two bus stop locations proposed, one within each part of the development, are well located for the development. They are however located off-line of a Bicester to Brackley bus route – to serve them will increase the overall bus journey time and lessen the attractiveness of the bus for passengers travelling that are not going to the development. This is particularly the case for the western side of the development. However, locating the stops on the B4100 would increase the walking distance to the development and lessen the attractiveness of bus for passengers travelling to the development. On balance, the proposed stop locations are probably the best within the constraints of the current development proposal. If the layout of the development is revised, it would be beneficial to investigate whether more efficient stop locations can be found, particularly for the western part of the site, without the stops becoming too remote from the building entrances they serve.

Bus stop facilities:

Both bus stops should have a bus shelter (at least three bays long with seating) provided and maintained by the site. In addition, a separate bus stop pole, flag and timetable cases should be provided to OCC specification. The shelters must be suitable for OCC to install real time information displays, with ducting provided. A contribution will be sought for the provision of these displays.

Travel Plan

A draft Framework Travel Plan has been produced for this application, as part of the Environmental Statement, but it requires further site-based information before it can meet the criteria outlined within appendix 7 of the OCC guidance document 'Transport for New Developments – Transport Assessments and Travel Plans 2014'. I have added some specific points below for information.

- As the site is adjacent to another large site and employees will be travelling to a similar destination it would be advantageous to open a dialogue with the adjacent site to discuss possible joint working opportunities. It is therefore encouraged that this is included as an action for the TPC and identified within the action plan.

- Information about on site facilities should be included. Levels and type of cycle parking, changing facillities, restaurant facillities (reducing the need to leave the site during the day) etc.

- A dedicated cycle route to Bicester has been discussed within the document but this has not been included within the action plan. Similarly with information about EV charging points?

- Anticipated number of occupiers on site?

- Estimated date of occupation?

- What are the barriers to the promotion of sustainable, active travel in this location? How will these be mitigated?

- How will deliveries be managed?

It is requested that an amended travel plan is submitted as a separate document.

Cycle parking and EV charging points for both cycles and vehicles should be provided within the site boundary. Cycle parking must be covered and secure and conveniently located near to the entrance to each building.

As each of the units will be occupied independently by different organisations, a Framework Travel Plan and associated monitoring fee (£2,379 index linked) will be required for the site. Depending on the individual sizes of the units it is likely that each organisation will also be required to produce either a Full Travel Plan (with associated monitoring fee) or Travel Plan Statement. However, as I am unable to find definitive sizes, I am unable to confirm the exact requirements. I have therefore included a copy of the threshold and monitoring fee table relevant to this application for information.

B8 Storage or distribution • wholesale warehouses; • distribution centres; • repositories.	**B8 Storage or distribution -** This class includes open air storage.	Over 7500m^2	Travel Plan	2,379
		3000-7499 m^2	Travel Plan	2,379
		2000-2999 m^2	Travel Plan Statement	None

Traffic impact

A Transport Assessment has been provided, covering both the western and eastern sites, and considering them individually and cumulatively. The TA acknowledges that further modelling work is required to make use of the local, detailed VISSIM Model that National Highways holds for M40 Junction 10, including Baynards Green roundabout. This was recommended as part of our preapplication advice and is a vital part of understanding the traffic impact of the site, given the proximity of the access junctions to Baynards Green, and the complex interaction of the various junctions that form M40 Junction 10. Modelling the roundabouts individually (as has been done in this TA) is not sufficient, largely because traffic is not free flowing at each due to their proximity. Traffic queueing on the A43 at Baynards Green could lead to exit blocking for the M40 northbound off slip, which would then present a safety hazard due to queueing on the M40, so this needs to be examined carefully. Lack of this modelling in the current application is a reason for objection.

The TA also acknowledges that further modelling must be carried out to take into account the Growth Deal scheme. Again, lack of this modelling in the current application is a reason for objection.

At the time of writing, discussions are ongoing to scope out the further traffic modelling work that will be necessary, in conjunction with National Highways. The Highway Authority will submit further representations in due course, to take into account this work.

I have the following further comments on the TA:

Future year baseline traffic: Traffic counts were carried out in June 2021, when traffic volumes were still below pre-pandemic levels. No assumptions can be made that future traffic volumes will remain lower than pre-pandemic levels. These counts have then been growthed up using TEMPRO. Instead, future year flows from the Bicester Transport Model should be used, as this takes into account the concentration of development locally. This data is being used for transport assessments of other strategic developments in the area.

Committed development: Cumulative assessment should take into account the Oxfordshire Strategic Railfreight Interchange. It is formally registered with the Planning Inspectorate and public consultation is expected in spring 2022. It is therefore moving forward on a scale of certainty of delivery. The published scoping report provides sufficient information on land use to make assumptions about lorry movements, and additional information could be provided. OCC considers that it should be taken into account in the cumulative assessment, at least in a form of sensitivity test. Emerging proposals for significant employment development at Junction 9 should also be taken into account, **as should the consented Great Wolf resort and other significant development proposed in the area.**

Trip generation: The proposed trip generation is based on surveys obtained or carried out by the applicant for comparable sites. The full survey report should be provided.

Trip distribution: Light traffic has been distributed on the basis of 2011 Census travel to work data for an MSOA in NE Bicester. I do not follow the discussion in paragraph 5.3.5. Although I understand why the MSOA in which the proposal is located, has not been used (there is very little employment in the ward), I don't follow the justification for using a ward in Bicester, where it is very likely that employment would attract a large proportion of employees from the immediate surrounding area. A site remote from Bicester would certainly attract a high proportion of employees from Bicester, as it is the nearest town, but I think would attract more people from other settlements than would a site in Bicester.

HGV distribution: This has been based on DfT data using a 2006 base year, which is considered too old as it would not take into account the pattern of development since then. A more recent dataset should be used or an alternative methodology for distribution should be discussed with OCC and NH. A gravity model would be more appropriate.

Trip assignment: For both light and heavy traffic, tables should be provided to show how the assignment was arrived at. Given the desire to locate on the M40 corridor, the proportions predicted to travel via M40 N and S look surprisingly low.

Junction capacity assessment: M40 Junction 10 has not been assessed, which is unacceptable for a development of this scale, which will clearly have an impact on the junction. The TA shows that the development would increase the traffic on the A43 approaching the junction by 7%, which demonstrates a significant impact that must be assessed.

Junctions 10 software has been used to assess the site access roundabouts and Baynards Green roundabout, as well as the A4095/B4100 junction at Bicester. For reasons stated above this is not sufficient for the first three. Notwithstanding that, I query whether the assessments are reliable because the queue lengths at Baynards Green have not been validated against the traffic surveys, albeit those surveys themselves are not reliable due to the fact they were carried out when traffic conditions were not back to pre-pandemic levels. Even taking the output tables at face value, the roundabout is showing as over capacity in the base year and the development, individually and cumulatively with the eastern site, makes the RFC worse.

At the A4095/B4100 junction, the queue lengths are not validated and the queue lengths are not borne out by anecdote. The planned improvement scheme there will deliver additional capacity, but that additional capacity is intended to release housing growth at Bicester.

I will leave NH to comment on the M40 slip roads and the merge/diverge assessments.

Interim mitigation scheme: A slight increase in flare on the approach to Baynards Green roundabout has been proposed. This is shown to bring about only marginal benefit on some arms and makes one arm worse. The scheme would cause significant disruption to construct at this very busy junction.

Public rights of way

Footpath 109/5/10 is proposed to be diverted as it passes through the site. OCC would like to see this dedicated as a bridleway at the same time as any diversion, which would allow for cycling, and complete a missing link between Stoke Lyne Bridleway 367/29 and Ardley Bridleway 109/2. This could be a 3m wide tarmac path with a verge on either side. See map and annotations below. This comment is made without prejudice to the desirability/outcome of any application to divert PRoW. The existing/altered footpath connection to opposite the services should be retained.

The preferred alignment would be as shown below, and make use of the 3m wide cycle connection to the site, although as stated above, it would be better within the site rather than alongside the B4100. An improved crossing point leading across the B4100 into the service area site, would provide an onward connection to brideway 367/29. As the area of highway land on the western side of the service area access is quite wide, it should be separated from the access road by a verge until it can connect with the access road at a safe point.

It is suggested that a bridleway/cyclepath margin is provided for within the red line of the site rather than trying to upgrade footpath 367/28 which has a potentially hazardous road crossing.

As part of the S278 works, it is also requested that the bridleway crossing of the B4100 at the western end of the site, is improved by creating a more level and suitably surfaced landing area on the northern side, as well as veg clearance to provide improved visibility.

A contribution of £65,000 is requested towards upgrading public rights of way to enable cycling between the site and Fewcott and/or Fritwell. This offers onward connections via quiet roads, including to Heyford Park. This contribution would be spent on OCC Countryside negotiating upgraded access rights and undertaking surface and furniture measures to provide access for cyclists/riders

on a number of route options between the site and Fewcott as well as improvements for bridleway to Fritwell – plus other minor works within 3km of the site. This would further improve the possibilities of sustainable access to the site, with Heyford Park becoming a more important potential source of employees over the next few years.

S106 obligations and their compliance with Regulation 122(2) Community Infrastructure Levy Regulations 2010 (as amended):

£TBC Highway Works Contribution indexed from TBC using Baxter Index
Towards: Capacity improvements at M40 J10 including Baynards Green Roundabout

Justification: A high proportion of the development traffic will pass through Baynards Green and the rest of Junction 10. A scheme of improvements is planned for the junction, which is required to accommodate planned growth. Subject to further modelling, additional works may be required to accommodate the traffic from this development.

Calculation: TBC - Contribution towards the planned scheme will be proportionate based on contributions to be secured from development at Heyford, with additional amount as required to provide for additional capacity.

£1,286,000 Public Transport Service Contribution indexed from November 2021 using RPI-x
Towards: Bus services serving the site.

Justification: A range of sustainable travel options to the site is required to make the site sustainable in planning terms. The existing bus service between Bicester and Brackley is unlikely to continue past the end of its current contract, which would leave the site with no public transport.

Calculation: See commentary above.

£8,904 Public Transport Infrastructure Contribution indexed from Sept 2020 using Baxter Index
Towards: Provision of Real Time Information unit in the bus shelter which are to be provided by the developer.

Justification: To encourage public transport use, people will need the reassurance that the bus is on its way, especially given local traffic congestion.

Calculation: The amount will be based on the cost to OCC to provide the unit, together with a commuted sum for maintenance.

£TBCTravel Plan Monitoring Fee indexed from December 2020 using RPI-x

Justification: To ensure that the travel plan is delivered and revised as required in order to be effective, OCC will need to monitor it over its life.

Calculation: The amount is based on the staff cost for OCC to monitor the travel plan, based on an estimate of the time it will take over the life of the plan.

£65,000 Public Rights of Way Contribution indexed from November 2021 using Baxter

Justification: The improvements are required to ensure that a range of sustainable travel options are provided to the site, as well as ensuring safe and suitable access from the nearest settlements. In particular this would assist in making it possible to cycle to the site from the nearby large and growing settlement at Heyford Park.

Calculation: The amount is based on a desk top estimate for negotiating upgraded access rights and undertaking surface and furniture measures. OCC would agree to a longstop of 10 years in the event that if it is not possible to negotiate upgraded rights.

S278 Highway Works:

An obligation to enter into a S278 Agreement will be required to secure mitigation/improvement works, including:

- Access junction- details to be agreed, including bus turning facility and bus stop
- Footway/cycleway linking the site with Elmsbrook, Bicester
- Crossing facilities over the B4100 at the service area, plus minor improvements to bridleway crossing to west of site

Notes:
This is to be secured by means of S106 restriction not to implement development (until S278 agreement has been entered into. The trigger by which time S278 works are to be completed shall also be included in the S106 agreement. With this site, the safety of construction traffic access will be critical, so the junction may be required to be constructed prior to construction activity on the rest of the site. The footway/cycleway would be required prior to first occupation.

Identification of areas required to be dedicated as public highway and agreement of all relevant landowners will be necessary in order to enter into the S278 agreements. A detailed survey of the highway boundary should be carried out to ensure that the adopted highway abuts the land holding. This may not be the case where there is a

ditch, and all highway record plans provided by OCC contain a caveat about this. Such 'gaps' can lead to significant delays to S278 agreements.

S38 Highway Works – [Spine Road][/ On-Site Rights of Way]:

An obligation to provide a bus turning loop will be required for the development. The S106 agreement will secure delivery via future completion of a S38 agreement.

Planning Conditions:

In the event that permission is to be given, the following planning conditions should be attached:

No development shall commence unless and until full details of the means of access between the land and the highway, including, position, layout, construction, drainage and vision splays have been submitted to and approved in writing by the Local Planning Authority. The means of access shall be constructed in strict accordance with the approved details and shall be retained and maintained as such thereafter. Agreed vision splays shall be kept clear of obstructions higher than 0.6m at all times.
Reason - In the interests of highway safety and to comply with Policy ESD15 of the Cherwell Local Plan 2011-2031 Part 1 and Government guidance contained within the National Planning Policy Framework.

No development shall commence unless and until full specification details (including construction, layout, surfacing and drainage) of the turning areas and parking spaces within the curtilage of the site, arranged so that motor vehicles may enter, turn round and leave in a forward direction and vehicles may park off the highway, have been submitted to and approved in writing by the Local Planning Authority. The turning area and car parking spaces shall be constructed in accordance with the approved details prior to the first occupation of the development shall be retained as such for the parking and manoeuvring of vehicles at all times thereafter.
Reason - In the interests of highway safety and to comply with Policy ESD15 of the Cherwell Local Plan 2011-2031 Part 1 and Government guidance contained within the National Planning Policy Framework.

Prior to the first use or occupation of the development hereby permitted, covered cycle parking facilities shall be provided on the site in accordance with details which shall be firstly submitted to and approved in writing by the Local Planning Authority. Thereafter, the covered cycle parking facilities shall be permanently retained and maintained for the parking of cycles in connection with the development.
Reason - In the interests of sustainability, to ensure a satisfactory form of development and to comply with Government guidance contained within the National Planning Policy Framework.

Prior to the first occupation of the development, a scheme for the provision of vehicular electric charging points to serve the development shall be submitted to and approved in writing by the Local Planning Authority. The vehicular electric charging points shall be provided in accordance with the approved details prior to the first occupation of the unit they serve, and retained as such thereafter.
Reason - To comply with Policies SLE 4, ESD 1, ESD 3 and ESD 5 of the adopted Cherwell Local Plan 2011-2031 Part 1 and to maximise opportunities for sustainable transport modes in accordance with paragraph 110(e) of the National Planning Policy Framework

Prior to commencement of the development hereby approved, a Construction Traffic Management Plan (CTMP) shall be submitted to and approved in writing by the Local Planning Authority. Thereafter, the development shall not be carried out other than in accordance with the approved CTMP.
Reason: In the interests of highway safety and the residential amenities of neighbouring occupiers and to comply with Government guidance contained within the National Planning Policy Framework.

Prior to the first occupation of the development hereby approved, a Travel Plan, prepared in accordance with the Department of Transport's Best Practice Guidance Note "Using the Planning Process to Secure Travel Plans", shall be submitted to and approved in writing by the Local Planning Authority. Thereafter, the development shall be implemented and operated in accordance with the approved details.
Reason - In the interests of sustainability and to ensure a satisfactory form of development, in accordance with Government guidance contained within the National Planning Policy Framework.

The development shall not be occupied until a signage strategy for the site has been submitted and approved in writing by the Local Planning Authority. The development shall thereafter be completed and signage installed in accordance with the approved details prior to the first use of any building on the site.
Reason - To ensure that traffic is directed along the most appropriate routes and to comply with Government guidance contained within the National Planning Policy Framework.

Subject to further traffic modelling: The development shall not be occupied until the planned scheme of enlargement and signalisation of Baynards Green roundabout, or other similar capacity improvement scheme as agreed with National Highways, has been implemented at Baynards Green junction.

Application no: 21/03268/OUT
Location: NW Of Baynards House, Ardley

Lead Local Flood Authority

Recommendation:

Objection

Detailed comments:

Unable to find FRA in the submission.

Where car parking spaces and access roads are proposed, water quality standards must be met. Proposed development needs a water quality assessment in accordance with Section 4 and Section 26 of SuDS Manual.

Proposed development must meet local standards, L19, "At least one surface feature should be deployed within the drainage system for water quality purposes, or more features for runoff which may contain higher levels of pollutants in accordance with the CIRIA SuDS Manual C753. Only if surface features are demonstrated as not viable, then approved proprietary engineered pollution control features such as vortex separators, serviceable/ replaceable filter screens, or pollution interceptors may be used"

Furthermore, a detailed surface water management strategy must be submitted in accordance with the Local Standards and Guidance for Surface Water Drainage on Major Development in Oxfordshire

In line with this guidance, runoff must be managed at source (i.e. close to where it falls) with residual flows then conveyed downstream to further storage or treatment components, where required. The proposed drainage should mimic the existing drainage regime of the site as much as possible.

The applicant is required to provide a Surface Water Management Strategy in accordance with the following guidance:

The Sustainable Drainage Systems (SuDS) Policy, which came into force on the 6th April 2015 requires the use of sustainable drainage systems to manage runoff on all applications relating to major development. As well as dealing with surface water runoff, they are required to provide water quality, biodiversity and amenity benefits in line with

National Guidance. The Sustainable Drainage Systems (SuDS) Policy also implemented changes to the Town and Country Planning (Development Management Procedure) (England) Order 2010 to make the Lead Local Flood Authority (LLFA) a statutory Consultee for Major Applications in relation to surface water drainage. This was implemented in place of the SuDS Approval Bodies (SAB's) proposed in Schedule 3 of the Flood and Water Management Act 2010.

All full and outline planning applications for Major Development must be submitted with a Surface Water Management Strategy. A site-specific Flood Risk Assessment (FRA) is also required for developments of 1 hectare or greater in Flood Zone 1; all developments in Flood Zones 2 and 3 or in an area within Flood Zone 1 notified as having critical drainage problems; and where development or a change of use to a more vulnerable class may be subject to other sources of flooding.

Further information on flood risk in Oxfordshire, which includes access to view the existing fluvial and surface water flood maps, can be found on the Oxfordshire flood tool kit website. The site also includes specific flood risk information for developers and Planners.

The National Planning Policy Framework (NPPF), which was updated in July 2021 provides specific principles on flood risk (Section 14, from page 45). National Planning Practice Guidance (NPPG) provides further advice to ensure new development will come forward in line with the NPPF.

Paragraph 159 states; "Inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future). Where development is necessary in such areas, the development should be made safe for its lifetime without increasing flood risk elsewhere."

As stated in Paragraph 160 and 161 of the NPPF, we will expect a sequential approach to be used in areas known to be at risk now or in the future from any form of flooding.

The Non-statutory technical Standards for sustainable drainage systems were produced to provide initial principles to ensure developments provide SuDS in line with the NPPF and NPPG. Oxfordshire County Council have published the "Local Standards and Guidance for Surface Water Drainage on Major Development in Oxfordshire" to assist developers in the design of all surface water drainage systems, and to support Local Planning Authorities in considering drainage proposals for new development in Oxfordshire. The guide sets out the standards that we apply in assessing all surface water drainage proposals to ensure they are in line with National legislation and guidance, as well as local requirements.

The SuDS philosophy and concepts within the Oxfordshire guidance are based upon and derived from the CIRIA SuDS Manual (C753), and we expect all development to come forward in line with these principles.

In line with the above guidance, surface water management must be considered from the beginning of the development planning process and throughout – influencing site layout and design. The proposed drainage solution should not be limited by the proposed site layout and design.

Wherever possible, runoff must be managed at source (i.e. close to where it falls) with residual flows then conveyed downstream to further storage or treatment components, where required. The proposed drainage should mimic the existing drainage regime of the site. Therefore, we will expect existing drainage features on the site to be retained and they should be utilised and enhanced wherever possible.

Although we acknowledge it will be hard to determine all the detail of source control attenuation and conveyance features at an outline stage, we will expect the Surface Water Management Strategy to set parameters for each parcel/phase to ensure these are included when these parcels/phases come forward. Space must be made for shallow conveyance features throughout the site and by also retaining existing drainage features and flood flow routes, this will ensure that the existing drainage regime is maintained, and flood risk can be managed appropriately.

Drainage Pro-Form

Officer's Name: Sujeenthan Jeevarangan

Archaeology

Recommendation:

Objection

Key issues:

The site is located in an area of archaeological interest on the site of a medieval and post medieval green mentioned in historical records. An archaeological desk based assessment will need to be undertaken for the site to assess the potential of any proposed development to impact on archaeological deposits and heritage assets. The results of an archaeological field evaluation will also need to be submitted along with any planning application for the site.

Legal agreement required to secure:

Conditions:

Informatives:

Detailed comments:

The site is located in an area of archaeological interest immediately south of the site of a medieval and post medieval green mentioned in historical records. The area of the green has been suggested to be either the site of medieval jousting or a camp site for these jousts, horse racing and a rendezvous site during the C17th civil war. A number of possible Bronze or Iron Age banjo enclosures have been recorded in the vicinity of the site from aerial photographs and a ring ditch has been recorded 500m north east of the site.

An archaeological desk-based assessment will need to be undertaken for the site to assess the potential of any proposed development to impact on archaeological deposits and heritage assets.

A written scheme of investigation has been agreed for this desk-based assessment and a short statement on the historic environment has been submitted with this application. This submitted document however does not however appear to contain the whole assessment as set out in the agreed WSI. This will need to be submitted.

A programme of archaeological evaluation will need to be undertaken on the site and the report submitted ahead of the determination of any planning application. This must be carried out by a professionally qualified archaeological organisation and should aim to define the character and extent of the archaeological remains within the application area, and thus indicate the weight which should be attached to their preservation. This evaluation must be undertaken in line with the Chartered Institute for Archaeologists standards and guidance for archaeological evaluation including the submission and agreement of a suitable written scheme of investigation.

This information can be used for identifying potential options for minimising or avoiding damage to the archaeology and on this basis, an informed and reasonable decision can be taken.

Officer's Name: Richard Oram

Date: 27 October 2021

Annex A National Highways' assessment of the proposed development

National Highways has been appointed by the Secretary of State for Transport as a strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the Strategic Road Network (SRN). The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Recommended Non-Approval

It is recommended that the application should not be approved for a further period of three months from the date of this response to allow the applicant to provide the additional information required.

Reasons

National Highways has engaged with the applicant and their consultants on this development proposal since the pre-application stage in July 2021.

National Highways previously issued a holding recommendation response for this application on 25 July 2022. In our response, we noted that more detailed information was required regarding the extent of the proposed geotechnical activity, as well as the associated potential impact on the operation of the adjacent SRN. It was also noted that the outcome of this would, in turn, affect our review of the proposed drainage arrangements for the site.

Following the submission of this additional information, National Highways will be in a position to provide comments regarding application 21/03266/F.

APPENDIX D

West Northants Council Response

West Northamptonshire Council

Town and Country Planning Act 1990 (As Amended)
Local Highway Authority (LHA) Response

Application Reference	21/03266/F		
Proposal	Site clearance, construction of new site access from the B4100, permanent and temporary internal roads, an internal roundabout and a foul drainage station, diversion of an existing overhead power cable and public right of way, and soft landscaping. **Amendment details** Full application for access associated with applications 21/03267/OUT & 21/03268/OUT Further information comprising site sections through Junction 10 sites and information on Bio Diversity Net gain for Piddington site, an off-site biodiversity area put forward by the applicants.		
Location	OS Parcel 2636 NW Of Baynards House, Ardley		
Case Officer	Joy White/David Lowin		
Date Consulted	31/03/2022	**Date Sent**	14/03/2022

Further to the response made in November 2021 by West Northants Council (WNC) acting as the local highwy authotity in respect of the above planning application, the LHA have the following observations and requests to make;

We understand that a Revised Transport Assessment is currently being prepared by the applicant for this site that includes tests via the Bicester Model that should identify other traffic flows than previously assumed and considered.

This is welcomed by the LHA as it has come to our attention that a number of residents in West Northants villages; predominantly those living at Aynho, fear that significant volumes of light traffic associated with this proposed site, will be attracted to using the local highway network through and around these villages. Whilst the LHA are fully aware and supportive of the fact that all taxed and insured vehicles should be able to travel freely on the network, we would request that a data counting exercise be undertaken in order to prove or disprove this suggestion.

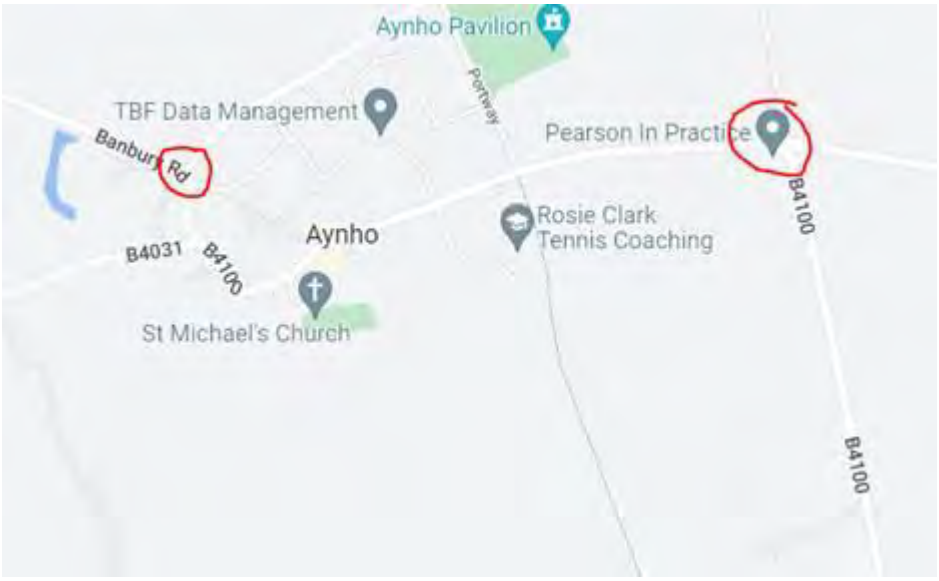
The LHA therefore request that the consultant undertake counts of traffic coming from the north / west / east to the site, which will then allow us to consider actual traffic flows affecting Aynho and Croughton villages, which can then be used as base model data for the Bicester Transport Model future year tests and any detailed junction capacity assessments within Aynho that are the concern WNC.

We request that monitoring using manual classified counts be undertaken over three days in three neutral weeks, as detailed on the plan section overleaf, and a report provided to evidence traffic patterns.

Planning Permission does not give or imply permission for adoption of new highway or to implement any works within the highway and / or a Public Right of Way

The views, observations, comments and recommendations contained in this response represent those of West Northamptonshire Council as Local Highway Authority and in no other function or authority.

West Northamptonshire Council



This will enable WNC to see through traffic from north to south and also left turners / right exits that go into Croughton. This could also identify B4031 west of the site traffic patterns

Should the residents fears prove to be founded then possibly it may be reasonable to request traffic that further horizontal traffic calming features be installed to support the residents in these villages.

Public Rights of Way

The application site is not affected by a Public Right of Way

APPENDIX G

Bicester Traffic Model Uncertainty Log

A099211-05 Bicester Transport Model
BTM_UncertaintyLog_Post2022Update_Clean_(2026-2031)-Tritax

Summary of Spreadsheet: Uncertainty log for Bicester Transport Model (2022 Update Version)

Original Author: Sacha Pearson

Notes: This version of the uncertainty log has been created specifically in relation to the Tritax Symmetry Barnards Green project. The 2026 and 2031 Reference Case scenarios produced for that project removed the Baynards Green improvement works, as per email correspondance between Sacha Pearson (Tetra Tech) and James Bancroft (Vectos) of 18th October 2022.

SUMMARY OF WORKSHEETS	
Tab Name	**Brief Explanation**
Residential	Presents data for residential developments
Employment	Presents data for employment developments
Retail	Presents data for retail developments
Education	Presents data for education developments
Infrastructure	Presents data for infrastucture schemes

CHECK LOG		
Date	**Initials**	**Description**

Bicester Transport Model Uncertainty Log - 2022 Update
Residential Developments

ID	Name	Description / Planning Reference / Notes	Dev Type			Certainty
				2026	2031	
Ret1	Bicester Village Phase 4	**15/00082/F**: Demolition of existing Tesco food store, and petrol filling station to provide an extension to the Bicester Village retail outlet centre. Comprises 5,181 sqm (GIA) of class A retail floorspace. Development was completed by 2019, but after base model was validated using 2016 traffic count data.	A1	5181	5181	Completed
Ret2	Bicester Gateway (Kingsmere Retail) (Bicester 3)	**16/02505/OUT**: Bicester Gateway (Kingsmere Retail) Four Class A1 (retail) units, one Class A3 (cafe/restaurants) unit, a Class D2 (gym) unit. The planning application form sets the development quantum at 7,832sqm of A1, 443sqm of A3 and 967sqm of D2 (a total of 9,242sqm). The TA that accompanied the planning application used slightly different floor areas to calculate trips, these being 7,472sqm of non-food retail (A1), 891sqm of food retail (A1), 494sqm for a restaurant (A3) and 1,056sqm for a gym (D2) which gives a total of 9,913sqm. The development was under construction in July 2019 and open by 2021.	A1 / A3 / D2	9913	9913	Completed
Ret3	McDonalds Drive-thru	**17/00889/F:** Two storey drive-thru restaurant (class A3/A5) with flor area of 548sqm. Development was completed by 2019, but after base model was validated using 2016 traffic count data.	A1 / A5	548	548	Completed

Notes: (1) Completion rates are in square metres (sqm) of floor area.

Bicester Transport Model Uncertainty Log - 2022 Update
Retail Development

ID	Name	Description / Planning Reference / Notes	Dev Type	2026	2031	Certainty
Emp101	NW Bicester (Bicester 1)	**20/02454/REM**: Reserved Matters application to 19/00347/OUT - layout, scale, appearance and landscaping details for Phase 2 of the employment development (23,226 sqm flexible B1c and / or B2 / and/or B8 floorspace), associated utilities and infrastructure and swale (SuDS) and strategic green infrastructure landscaping. **19/00349/REM**: Reserved Matters to 19/00347/OUT - layout, scale, appearance and landscaping details for Phase 1 of the employment development (21,584 sq.m flexible B1c / B2 / B8 floorspace) and earthworks for Phase 2 of the	B2	15,900	15,900	Completed
			B8	37,100	37,100	
			Total	**44,810**	**44,810**	
Emp102	Graven Hill (Bicester 2)	Subsequent planning applications (15/02159/OUT, 16/01802/OUT, 18/00325/OUT, 19/00937/OUT) have varied the planning conditions, however the quantum of B-class employment uses is unchanged. **11/01494/OUT**: Redevelopment of former MOD sites including employment floorspace comprising up to B1(a) 2,160sqm, B1(b) 2,400sqm, B1(c) and B2 20,520sqm and B8 uses up to 66,960sqm. The TA that accompanied the application did not differentiate between B1(c) and B2, and uses TRICS data for a combined 'B1(c)/B2 Light Industry' land use.	B1(a)	1,080	2,160	Near Certain
			B1(b)	1,200	2,400	
			B2	10,260	20,520	
			B8	34,079	68,158	
			Total	**46,619**	**93,238**	
Emp103	Bicester Business Park (Bicester 4)	**17/02534/OUT**: The erection of a business park of up to 60,000 sq.m (GEA) of flexible Class B1(a) office / Class B1(b) research & development floorspace. Outline permission was granted in May 2020. The TA that accompanied the planning application used pre-agreed trip rates and did not differentiate between B1(a) and B1(b) uses. B1(a) has therefore been used as a worst case scenario.	B1(a)	30,000	60,000	Near Certain
Emp104	Bicester Gateway (Bicester 10)	**20/00293/OUT**: Outline application (Phase 1B) for approximately 4,413 sqm B1 office space (47,502 sqft) GIA, approximately 15,030 sqm (161,800 sqft) GIA of residential space (comprising approximately 273 residential units). The 273 dwellings have been included in the updated residential element of the uncertainty log, **therefore the B1 area from 16/02586/OUT is superseded by the 4,413 sqm**.	B1(a)	4,413	4,413	Near Certain
		16/02586/OUT: Phase 1 of the proposed new business park ("Bicester Gateway") comprising up to 14,972 sqm (Gross External Area) of B1 employment based buildings, plus a hotel (up to 149 bedrooms). The application form details 10,000sqm of B1(a) and 2,726sqm of B1(b) [internal floor area], however the TA that accompanied the planning application calculated traffic based purely on B1(a) office trip rates from TRICS.	Hotel employees	50	50	Completed
Emp105	NE Bicester Business Park (Bicester 11)	**15/01012/OUT**: Land North East Of Skimmingdish Lane: Development of up to 48,308sqm of employment floorspace (Class B1c, B2, B8 and ancillary B1a uses). The TA that accompanied the application accounted for traffic being generated from 14,492 sqm of B2 and 33,816 sqm of B8 land use.	B2	14,492	14,492	Completed
			B8	33,816	33,816	
			Total	**48,308**	**48,308**	
Emp106	Wretchwick Green (Bicester 12)	**16/01268/OUT** - Outline application for residential development including up to 1,500 dwellings, **up to 7ha of employment land for B1 and / or B8 uses**, a local centre with retail and community use and up to a 3 Form Entry Primary School. The TA that accopanied the planning application did not specify a split of B1 / B8 use, and did not calculate trips - instead it used traffic data directly from the BTM. The B1 / B8 floor areas from the previous Uncertainty Log have therefore been maintained.	B1(c)	22,733	45,465	Near Certain
			B8	15,913	31,826	
			Total	**38,646**	**77,291**	
Emp107	SE Bicester (Symetry Park) (Bicester 12)	**21/01330/F**: Full Planning Permission for **23,195sqm** of logistics floor space within Class B8 of the Town and Country Planning Use Classes Order 1987, including ancillary Class E(g)(i) (offices) (**Unit C**). NOTE: This is on the same plot of land as Unit C in application 19/00388/F. **21/01331/F**: Full Planning Permission for 22,986sqm of logistics floor space within class B8 of the Town and Country Planning Use Classes Order 1987, including 1,399sqm ancillary Class E(g)(i) offices, comprising (i) Unit C1: 15,267sqm of Class B8 and 729sqm of ancillary Class E(g)(i) offices, (ii) Unit C2: 7,719sqm of Class B8 and 670sqm of ancillary Class E(g)(i) offices. NOTE: These are on the same plot of land as Unit C in application 19/00388/F. **20/00530/F**: (Symmetry Park **Phase 2**) Full planning application for **4,635sqm** of logistics floor space, within Class B8, including ancillary Class B1 (a) office.	B8 (Units A1 and A2)	18,394	18,394	Near Certain
			B8 (Unit B)	14,200	14,200	
			B8 (Unit C)	23,195	23,195	
			B8 (Phase 2)	4,635	4,635	
			Total	**60,424**	**60,424**	
Emp114	Bicester Village Phase 4	**15/00082/F**: Demolition of existing Tesco food store, petrol, filling station and part of the existing Bicester Village retail outlet centre, to provide an extension to provide new A class floor space. The TA accompanying the planning application details that there would be 5,181 sqm (GIA) retail floorspace.	Retail employment	5,181	5,181	Completed
Emp115	Bicester Gateway (Kingsmere Retail)	**16/02505/OUT**: Bicester Gateway (Kingsmere - Retail) Four Class A1 (retail) units, one Class A3 (cafe/restaurants) unit, a Class D2 (gym) unit. The planning application form sets the development quantum at 7,832sqm of A1, 443sqm of A3 and 967sqm of D2 (a total of 9,242sqm). The TA that accompanied the planning application used slightly different floor areas to calculate trips, these being 7,472sqm of non-food retail (A1), 891sqm of food retail (A1), 494sqm for a restaurant (A3) and 1,056sqm for a gym (D2) which gives a total of 9,913sqm. The development was under construction in July 2019 and open by 2021.	Retail / leisure employment	9,913	9,913	Near Certain
Emp116	McDonalds Drive-thru	**17/00889/F**: Two storey drive-thru restaurant (class A3 / A5) - 548sqm	Retail employment	548	548	Completed
Emp117	Heyford Park Consented [2]	1700 jobs in total predicted. Already 1509 jobs in 2016, therefore scope for an additional 191 jobs.	Number of Jobs	191	191	Near Certain
Emp118	Heyford Park Allocated	**18/00825/HYBRID**: Hybrid planning application that includes 35175sqm of new employment buildings, comprising up to 6330sqm Class B1(a), 13635sqm B1(b/c), 9250sqm Class B2, and 5960sqm B8. The TA that accompanied the planning aplication calculated employment trips based on there being B1(a), B2 and B8 development.	B1(a)	3165	6330	Near Certain
			B2	11443	22885	
			B8	2980	5960	
			Total	**17,588**	**35,175**	
Emp119	Great Wolf Lodge, Chesterton	**19/02550/F**: Redevelopment of part of golf course to provide new leisure resort (sui generis) incorporating waterpark, family entertainment centre, hotel, conferencing facilities and restaurants. Under the Employment secion of the planning application form it is noted that the proposed development would have 460 equivalent number of full time employees.	Number of Jobs	460	460	Near Certain
Emp120	Ardley Energy Recovery Facility [3]	This development was operational in 2016, so car / goods vehicle traffic flows from the development at that time will have been included in the base traffic count data, all be it that the site is not specifically modelled as a zone in the BTM. The proposed increase in waste to be processed will increase goods vehicle movements by **10 two-way trips per day**, as set out in the reports that accompanied the 2017 application. **CDC Ref 17/02104/CM, County Ref: MW/0085/17**: Application seeking to increase the maximum limit of waste that can be processed by the Ardley Energy Recovery Facility (ERF) from 300,000 tonnes per annum to 326,300 tonnes per annum. **CDC Ref: 08/02472/CM, County Ref: MW/0044/08**: The construction and operation of an energy from waste facility. The application form notes that there will be 40 employees.	Number of Jobs	0	0	Completed
Emp121	Bicester Heritage (Hotel)	**18/01253/F**: Erection of hotel and conference facility (Permission granted March 2020). Planning form details a floor area of 18,003sqm, 343 bedrooms and 180 full-time equivalent employees. The TA that accompanied the planning application calculated trips based on number of bedrooms and using TRICS.	Number of Jobs	180	180	Near Certain
Emp122	Bicester Heritage (Experience Quarter)	**21/01224/OUT**: Outline planning application for Automotive Experience Quarter comprising Commercial, Business and Services uses (Class E), Light Industrial (Class B2), Local Community and Learning Uses (Class F) and vehicle circuits (Sui Generis). **Note: Application has not been decided yet – currently under consultation**. The TA that accompanied the planning application calculates trips on a first principals basis, and assumes circa 200 full-time	Number of Jobs	100	200	More than likely
			Number of Visitors	313	625	More than likely
Emp123	Bicester Heritage (Extension to technical site)	**18/01333/F**: Extension to existing Technical Site to provide new employment units comprising flexible B1(c) light industrial, B2 (general industrial), B8 (storage or distribution) uses with ancillary offices, storage, display and sales. The TA that accompanied the planning application details that there will be 6,530sqm of B1c / B2 / B8, but calulcates traffic generation based on traffic surveys of the existing site, and does not break the overall floor area down into individual land use classes. OCC have indicated that as of April 2022 the development has been built and occupied. Note: Veicular access will be via the eixisitng priotity junction onto the A4221 Buckingham Road.	B1(c)	2,177	2,177	Completed
			B2	2,177	2,177	
			B8	2,177	2,177	
			Total	**6,530**	**6,530**	
Emp124	Bicester Heritage (Innovation Quarter)	**19/02708/OUT**: Provide new employment units comprising B1 (Business), B2 (General Industrial), B8 (Storage) and D1 (Education) uses with ancillary offices, storage, display and sales. The planning application form details that there will be 21,994sqm of non-residential floorspace, while the TA that accompanied the planning application details that there will be 21,194sqm of light industrial/workshops/vehicle maintenance/repair workshops (B1c, B2 & B8). The TA calulcates traffic generation based on traffic surveys of the existing site, and does not break the overall floor area down into individual land use classes.	B1(c)	3,666	7,331	Near Certain
			B2	3,666	7,331	
			B8	3,666	7,331	
			Total	**10,997**	**21,994**	
Emp125	Bicester Catalyst	**19/01740/HYBRID**: 'Hybrid' planning application comprising: - Outline planning permission for B1 development (Use Classes B1a and/or B1b and/or B1c); highway works (including provision of a new roundabout at the junction between Vendee Drive and Wendlebury Road). - Full planning permission for a health and racquets club, associated access and car parking, outdoor tennis courts, air dome, outdoor swimming pool, spa garden and terrace, and associated landscaping. The planning application fom details that the development will employ 1159 staff. The planing statement details that the health and racquets club would generate in the order of 110 jobs. **20/02779/REM**: Reserved Matters application to 19/01740/HYBRID - layout, scale, appearance and landscaping details for Phase 1 of the employment development (5,126 sqm GIA), enabling works for later phases and SuDS Swale delivery, with associated landscaping, utilities and access.	Number of Jobs (B1)	1,049	1,049	Under Construction
			Number of Jobs (Health Club)	110	110	

Notes: (1) Completion rates are in square metres (sqm) of floor area, unless specified otherwise.
(2) Heyford Park consented data is in number of jobs rather than floor area
(3) This development was operational in 2016 so car / goods vehicle traffic flows will have been included in the base traffic count data. The extra 10 two-way HGV trips resulting from the increase in waste limit is not significant and will not be speciifcally modelled.

Bicester Transport Model Uncertainty Log - 2022 Update
Employment Development

ID	Name	Description / Planning Reference / Notes	Dev Type			Certainty
				2026	2031	
Sch101	Bicester – SW (Kingsmere)	Due to open 2019	600 place secondary school	600	600	Near Certain
Sch102	Bicester – SW (Kingsmere)	Possibly +420 places, most likely after 2021 but by 2026	Primary: Probably 2fe	420	420	More Than Likely
Sch103	Bicester – S (Graven Hill)	Start delayed but still expected by 2026 (comment from CDC in October 2021)	Primary: 2 - 3fe	630	630	Near Certain
Sch104	Bicester – NW (Ecotown)	+210 places in 2017; probably another +210 places by 2021; by 2026 say another +420 places; another +420 places possible by 2031 or might be later.	3 - 4 primaries	840	1260	More Than Likely
Sch105	Bicester – NW (Ecotown)	Assume +600 by 2026; possibly another +600 by 2031	Secondary: size tbc	600	1200	More Than Likely
Sch106	Bicester – SE	Possibly +420 places, most likely after 2021 but by 2026	Primary: 2fe	420	420	More Than Likely

Inf105	SE Bicester Additional Area	Access Arrangements	Infrastructure	Yes	Yes	More Than Likely
Inf106	Proposed new Garden Town motorway junction	(location to be determined)	Infrastructure	No	No	Hypothetical
Inf107	A41 infrastructure improvements and bus priority	Potential bus priority improvements on A41 from Jn 9 to Boundary Way.	Infrastructure	No	No	Hypothetical
Inf108	Vendee Drive improvements	To be determined	Infrastructure	No	No	Hypothetical
Inf109	Western peripheral corridor	Realigning the A4095 Howes Lane, including a new tunnel under the railway	Infrastructure	No	Yes	Near Certain
Inf110	Western peripheral corridor	Improvements to Lord's Lane / B4100 roundabout	Infrastructure	Yes	Yes	More Than Likely
Inf111	Eastern peripheral corridor	Replace level crossing on Charbridge Lane with a road bridge. Level crossing had been removed by April 2021 (based on google street view)	Infrastructure	Yes	Yes	Completed
Inf112	Eastern peripheral corridor	Upgrade the A4421 Charbridge Lane to dual facility plus junction improvements - to Charbridge Lane/ Bicester Rd roundabout	Infrastructure	No	No	Hypothetical
Inf113	Eastern peripheral corridor	Upgrade the A4421 Skimmingdish Lane to dual facility plus junction improvements (to A4421/Bicester Rd roundabout)	Infrastructure	No	No	Hypothetical
Inf114	Eastern peripheral corridor:	A link through the SE development site to aid connectivity and provide capacity	Infrastructure	Yes	Yes	More Than Likely
Inf115	Pioneer Road roundabout improvements	Design agreed and costed - fully grant funded and contract about to be let for imminent construction start (these comments provided by CDC in October 2021). Construction underway in November 2021 based on google street view.	Infrastructure	Yes	Yes	Near Certain
Inf155b	Ploughley Road	Ploughley Road / A41 Junction Improvements	Infrastructure	Yes	Yes	Near Certain
Inf116	Southern peripheral corridor:	A new south east link road - route options	Infrastructure	No	No	Hypothetical
Inf117	London Road level crossing solution	Hypothetial, therefore not included	Infrastructure	No	No	Hypothetical
Inf118	Oxford Rd / Pingle Drive juncrion	Upgrading of roundabout to signal controlled junction. Work completed by September 2018 (based on google street view)	Infrastructure	Yes	Yes	Completed
Inf119	A41/ Neunkirchen Way Roundabout (Rodney House)	Signalisation of priority roundabout. Construction underway in Sept 2018 and scheme complete by July 2019 (based on google street view)	Infrastructure	Yes	Yes	Completed
Inf120	A41 Oxford Rd / Boundary Way roundabout	Upgrading of priority roundabout to signal controlled 'hamburger' junction. Construction underway in Sept 2016 and scheme complete by May 2017 (based on google street view)	Infrastructure	Yes	Yes	Completed
Inf122	Bus Route S5/X5	Inter Urban 8ph (2 pk via Kingsmere) Expected to be 4bph (2bph peak via Kingsmere) later in 2022	Infrastructure	Yes	Yes	Near Certain
Inf123	Bus Route 25A (Now renamed 250)	This is as per 2016 - Will be amended to operate Heyfords – Bicester only in early 2023. Funding secured to beyond 2031	Infrastructure	1ph	1ph	
Inf124	Bus Route E1	NW Bicester NE - Exists, but funding expires May 2023	Infrastructure	No	No	More Than Likely
Inf125	Bus Route E2	NW Bicester SE - Dependent on progress of development north of Middleton Stoney Road	Infrastructure	No	6ph	More Than Likely
Inf126	Bus Route E3	NW Bicester NE - Likely to supersede bus service E1 – but hopefully there will not be a funding gap	Infrastructure	No	6ph	More Than Likely
Inf127	Bus Route 21	Highfield 2ph - Exists, commercial service	Infrastructure	Yes	Yes	Near Certain
Inf128	Bus Route SEB	SE Bicester 2ph - Services 29/H5 provides 2bph to Graven Hill/Ambrosden, contract until December 2024	Infrastructure	Yes	Yes	More Than Likely
Inf129	Bus Route GH	Graven Hill 2ph - See above, but likely service will exist beyond 2024 as additional funds secured from Graven Hill and Health Hub. Wretchwick Green will also provide funds for bus services once it is delivered	Infrastructure	Yes	Yes	More Than Likely
Inf130	Bus Route 26	Kingsmere 2ph - Exists – agreement was for 8 years after occupation of Phase 2 so probably until about 2028. Can be absorbed into other services (Heyford/Himley/Great Wolf) if needed	Infrastructure	Yes	Yes	More Than Likely
Inf131	Reading – Bedford with a headway of 60 minutes all day;	East West Rail comprises four new services:	Infrastructure	Yes	Yes	More Than Likely
Inf132	Reading – Milton Keynes with a headway of 60 minutes all day;	East West Rail comprises four new services:	Infrastructure	Yes	Yes	More Than Likely
Inf133	Bletchley – Milton Keynes with a headway of 60 minutes all day;	East West Rail comprises four new services:	Infrastructure	Yes	Yes	More Than Likely
Inf134	Milton Keynes – Marylebone with a headway of 60 minutes all day.	East West Rail comprises four new services:	Infrastructure	Yes	Yes	More Than Likely
Inf135	Evergreen3 from Chiltern Railway	Consists of the creation of a new service between Oxford and London Marylebone, with a headway of 30 minutes all day.	Infrastructure	N/A	N/A	Completed
Inf136	Kingsmere Retail Mitigation Scheme	**16/02505/OUT**: Bicester Gateway (Kingsmere Retail) Four Class A1 (retail) units, one Class A3 (cafe/restaurants) unit, a Class D2 (gym) unit. The highway improvement works set out in Appendix G the TA comprise changes on the A41 to the Pioneer Way, Lakeview Drive and B4030 junctions. These works were under construction in July 2019 and complete by 2021.	Infrastructure	Yes	Yes	Near Certain
Inf137	Bicester 10 transport mitigation	**16/02586/OUT**: TA that accompanied this application details improvements at the A41 / Vendee Drive Roundabout (increased flare lengths on Vendee Drive and Charles Shoulder Way arms) and the Vendee Drive /Wendlebury Road Priority Junction (conversion to a mini-roundabout).	Infrastructure	Yes	Yes	Near Certain
Inf138	Bicester 11 Transport Mitigation	**15/01012/OUT**: Land North East Of Skimmingdish Lane: Development of up to 48,308sqm of employment floorspace (Class B1c, B2, B8 and ancillary B1a uses). Highway access via a new ghost island junction onto Skimmingdish Lane. Highway mitigation include signal pedestrian crossing on Skimmingdish Lane and alterations to A4421 / Lauton Road roundabout to increase the SE arm to two lanes at the give-way line. Development was built by Sept 2018 (based on google street view).	Infrastructure	Yes	Yes	Completed
Inf139	Skimmingdish Lane housing site mitigation	**14/00697/F**: Land To Rear Of Tangmere Close And Scampton Close, Skimmingdish Lane, Bicester (46 dwellings). Highway access via a new ghost island junction onto Skimmingdish Lane. Construction of development had not begun in May 2017, though access junction had been constructed. Development was built by Sept 2018 (based on google street view).	Infrastructure	Yes	Yes	Completed
Inf140	A4095 / A4260 Shipton Junction	Quarry site access requirements. Signalisation of the existing A4095 / A4260 staggared priority crossraods junction.	Infrastructure	No	Yes	Near Certain
Inf141	Bicester 4	**17/02534/OUT**: The erection of a business park of up to 60,000 sq.m (GEA) of flexible Class B1(a) office / Class B1(b) research & development floorspace. The TA that accompanied the planning application detailed highway improvement works at the A41 / Lakeland Drive signal junction (additional right turn lane into Lakeland Drive and additional southbound ahead lane on the A41) and the Oxford Road / Middleton Stoney Road mini roundabout (additional lane at southbound give-way line). Outline permission was granted in May 2020 and none of the improvement works were in place by 2021.	Infrastructure	Yes	Yes	Near Certain
Inf142	Heyford Park Existing Permission Infrastructure	This comprises the access roads required to allow connection to the highway network only e.g. access junctions on Camp Road.	Infrastructure	Yes	Yes	Completed
Inf143	HPA Mitigation: Public transport	Increased bus services to to HPA site	Infrastructure	Yes	Yes	Near Certain
Inf145	HPA Mitigation: M40 J10	Signals on Padbury roundabout	Infrastructure	Yes	Yes	Near Certain
Inf146	HPA Mitigation: B430 / Unammed Road Junction	Existing three arm priority junction changed to signal controllled junction	Infrastructure	No	Yes	Near Certain
Inf147	HPA Mitigation:Hopcrofts Holt Junction	Increased capacity at existing signal controlled junction	Infrastructure	No	Yes	Near Certain
Inf148	HPA Mitigation: Middleton Stoney Junction	Improvements to existing four arm signal controlled junction in the centre of Middleton Stoney	Infrastructure	Yes	Yes	Near Certain
Inf149	HPA Mitigation: Ardley Village B430 Signalisation	Existing staggered priority crossroads changed to a signal junction	Infrastructure	Yes	Yes	Near Certain
Inf150	HPA Mitigation: Chilgrove Drive / Camp Road Junction Upgrade	Existing staggered priority crossroads changed to a signal junction	Infrastructure	Yes	Yes	Near Certain
Inf151	Great Wolf Lodge, Chesterton	**19/02550/F**: Redevelopment of part of golf course to provide new leisure resort (sui generis) incorporating waterpark, family entertainment centre, hotel, conferencing facilities and restaurants. Vehicular access will be provided via a new ghost island priority junction onto the A4095.	Infrastructure	Yes	Yes	Near Certain
Inf152	Bicester Heritage (Hotel)	**18/01253/F**: Erection of hotel and conference facility. Vehicular access will be provided via a new ghost island priority junction onto the A4221 Buckingham Road.	Infrastructure	Yes	Yes	Near Certain
Inf153	Bicester Heritage (Experience Quarter)	**21/01224/OUT**: Outline planning application for Automotive Experience Quarter comprising Commercial, Business and Services uses (Class E), Light Industrial (Class B2), Local Community and Learning Uses (Class F) and vehicle circuits (Sui Generis). Vehicular access will be provided via a new ghost island priority junction onto the A4221 Buckingham Road.	Infrastructure	Yes	Yes	More Than Likely
Inf154	Bicester Heritage (Innovation Quarter)	**19/02708/OUT**: Provide new employment units comprising B1(c), B2, B8 and D1. Vehicular access will be provided via a new ghost island priority junction onto the A4221 Skimmingdish Lane. Note: Egress from the site onto Skimmingdish Lane will be left turn only.	Infrastructure	Yes	Yes	Near Certain
Inf155	Bicester Catalyst	**19/01740/HYBRID**: Outline planning permission for B1 development; highway works (including provision of a new roundabout at the junction between Vendee Drive and Wendlebury Road). Full planning permission for a health and racquets club. Vehicular access into the development will be via the new four-arm roundabout that will replace the existing Vendee Drive / Wendlebury Road three-arm priority junction.	Infrastructure	Yes	Yes	Completed

CONTENTS

Appendices

1 INTRODUCTION

1.1 This report describes a Stage 1 Road Safety Audit (RSA) of highway works on the B4100 south of Baynards Green, within the District of Cherwell and the County of Oxfordshire. The audit brief, dated 20th October 2023 (ref. 17213-13), describes the scheme as follows:

> *A development of 280,000m² commercial warehousing (GFA) is proposed by Albion Land on two sites east and west of the A43. This RSA is to consider the eastern site only.*
>
> *A development of 300,000m² commercial warehousing (GFA) is proposed by Tritax Symmetry Land on land north of the B4100 and east of the A43.*
>
> *The eastern site access will serve up to 100,000m² GFA B8 use. A three-arm signal controlled junction is proposed in line with the requirements of DMRB CD123.*
>
> *A pedestrian and cycle route will be provided between the access to and from the roadside services. The route has yet to be determined as this is to be incorporated into a wider improvement scheme at the Baynards Green roundabout. This is not therefore within the scope of this RSA.*
>
> *A further pedestrian and cycle route is proposed eastwards towards the NW Bicester development. The route has yet to be determined and is not within the scope of this RSA.*

1.2 In March 2024 the Audit Team received an amended drawing showing modifications to the signal junction, bus stops with lay-bys and shelters to the east, extended shared use paths and a signal-controlled crossing.

1.3 The B4100 is a rural 2-lane single carriageway road running broadly southeast from the Baynards Green roundabout on the A43. It is unlit, has verges but no footways, and is subject to the national speed limit.

1.4 The Audit Team is aware of the following planned works (the final designs are subject to further discussion and approval) that do not form part of this Audit, although the Audit Team has considered the Albion Land East signal junction in both the existing and planned scenarios:

- Carriageway widening and signalisation of the Baynards Green Roundabout. It is understood that, if this scheme comes forward, the Albion East signal junction (the subject of this audit) would very likely be linked to the Baynards Green roundabout.
- A new 4-arm roundabout to the south on the B4100, serving the Tritax North and Tritax South development sites.
- A new 3-arm roundabout north of Baynards Green Roundabout, serving the Albion Land West development site.

1.5 This Road Safety Audit was carried out by Steve Giles and Wendy Palmer and consisted of a desktop study and a site visit, which was carried out between 12:00 and 12:45 on Monday 25th September 2023 (as part of a previous audit), when the weather was fine and the road surface dry. No traffic congestion was observed, and no pedestrian or cyclist movements occurred along the B4100.

1.6 The terms of reference for this RSA are as described in the Design Manual for Roads and Bridges (DMRB) document GG119. The Audit Team is independent of the project design team and has not been involved in the design process in any other capacity. The audit considers only the potential road safety implications of the scheme and has not verified compliance of the design with any other criteria.

1.7 The Audit Team has not been made aware of any Departures from Standard. Whilst reference may be made to design standards, this report is not intended to provide a design check.

1.8 Recommendations are aimed at addressing the identified potential road safety problems. However, there may be other acceptable ways to overcome a problem, considering wider constraints and opportunities; the Auditors would be pleased to discuss such alternative solutions as appropriate. The recommendations contained herein do not absolve the Designer of his/her responsibilities.

Collision Data

1.9 Personal Injury Collision (PIC) information is summarised by the Audit Brief, which described 13 collisions at or on the entry/exit lanes of the A43/B4100 roundabout. One PIC occurred close to the proposed 3-arm signal junction considered by this audit, involving two cars in a front/rear ('shunt') impact, causing slight injury to the front driver. Conditions were described as fine/dry/daylight.

Previous Road Safety Audit

1.10 A Stage 1 Road Safety Audit of a similar scheme was undertaken by this Audit Team in October 2023. It raised eight problems, two of which have been addressed and six are re-raised in this report. One new problem has been raised.

2 PROBLEMS IDENTIFIED BY THIS ROAD SAFETY AUDIT

General Matters

2.1 The Audit Team raises no concerns in respect of general matters.

Local Alignment

2.2 The Audit Team raises no concerns in respect of local alignment.

Junctions

2.3 Problem

Vehicle front/rear and loss of control collisions due to heavy braking.

Location: B4100 approaches to junction

Drivers travelling along the B4100 may be travelling at or close to the 50mph speed limit as they approach the new junction. They may need to brake hard to stop at a red/amber signal or the back of any traffic queue. This could lead to front/rear ('shunt') or loss of control type collisions.

Recommendation

Review the need for lighting and high friction surfacing, or a reduced speed limit.

2.4 Problem

Insufficient junction manoeuvring space may lead to collisions between vehicles or with other road users.

Location: Site access junction

No vehicle swept path drawings have been provided and it is not clear that large vehicles would be able to complete turning manoeuvres without overrunning opposing traffic lanes or pedestrian/cyclist areas. This may lead to collisions between vehicles or with other road users.

Recommendation

Carry out vehicle swept path analysis and, if necessary, adjust the junction geometry.

Walking, Cycling and Horse Riding

2.5 Problem

Inadequate refuge area may lead to pedestrian and cyclist injuries.

Location: Site access arm of the junction

The stagger distance on the refuge island within the development arm is limited and the Audit Team is concerned that pedestrians/cyclists may inadvertently attempt to cross the second leg without waiting for a second green signal. It is also not clear that refuge island widths will adequately protect cyclists from passing vehicles.

Recommendation

Increase the stagger distance on the development arm refuge island and check that refuge island width is adequate to accommodate cyclists without overhanging traffic lanes.

2.6 Problem

Overhanging branches/foliage may obstruct cyclists and/or cause them to lose control.

Location: Along the B4100

Branches/foliage may occasionally encroach into or over the proposed shared path along the B4100. This is likely to obstruct cyclists using the facility, leading to loss of control or collisions with pedestrians/vehicles.

Recommendation

Branches and other foliage should be cut back clear of the shared path, with sufficient horizontal and/or vertical clearance to minimise future maintenance and reduce the risk of future obstruction.

2.7 Problem

Level drop/ditch at back of shared path may lead to pedestrian and cyclist injuries.

Location: New sections of shared path

Finished levels are unknown at this Stage 1 Audit, but it seems likely that there will be a level drop at the rear of the proposed shared paths. In the event that pedestrians and cyclists stray from the shared path they may fall, causing injury or increased severity of injury.

Recommendation

The verge levels should be raised to remove the drop at the rear of the new shared paths, or a restraint system should be provided.

Road Signs, Carriageway Markings and Lighting

2.8 Problem

Collisions due to stop line overshoots at night.

Location: Approaches to junction

In the event of a power or signal failure, the junction may be inconspicuous at night, causing drivers unfamiliar with the local highway environment to overshoot the stop lines. This could lead to collisions with other vehicles, or pedestrians/cyclists, or (in the case of the development arm) the verge/ditch opposite.

Recommendation

Provide additional clear junction signs/road markings and lighting to increase junction conspicuity, particularly at night.

2.9 Problem

Horizontal and vertical clearances to signal heads/signs may lead to loss of control type collisions.

Location: Proposed junction, in particular splitter islands on south-eastbound approach

Horizontal and vertical clearances to signal heads/signs are unknown at this Stage 1 RSA. Street furniture with insufficient clearances may be struck by passing vehicles, leading to loss of control type collisions.

Recommendation

Suitable horizontal and vertical clearances should be provided to signal heads and signs.

2.10 Problem

Collisions due to obstruction of signal heads.

Location: Controlled crossing

It is not clear that forward visibility to both east-facing signal heads will be available if a bus is present in both lay-bus. In the event of bulb, this could lead to drivers striking pedestrians or cyclists on the crossing.

Recommendation

Check forward visibility to the east facing signal heads at the crossing when a bus is present in each lay-by. If necessary, provide additional signal heads to mitigate the risk of vehicles striking pedestrians or cyclists on the crossing.

3 AUDIT TEAM STATEMENT

3.1 We certify that this Road Safety Audit has been carried out in accordance with DMRB document GG119.

ROAD SAFETY AUDIT RESPONSE REPORT

Project Details

Project:	Land Adjacent to M40 Junction 10 Albion Land, B4100 East Access
GRSE Ref:	SG/WP/2309-10 RSA1 v2.0
Status:	Issued as v2.0
Issue date:	15/03/2024
Design Organisation:	DTA Transport Planning
Overseeing Organisation:	Oxfordshire County Council
Client:	Albion Land

Authorisation

Prepared by:	
Name:	Richard McCulloch
Position:	Associate Director
Organisation:	DTA Transport Planning
Approved by:	
Name:	Simon Parfitt
Position:	Director
Organisation:	DTA Transport Planning
Signed:	

The Scheme

The highway works considered by the Road Safety Audit comprise:

- A signal controlled 3-arm junction on the B4100
- Bus stops with lay-bys and shelters to the east
- Shared use paths and a signal-controlled crossing

Key Personnel

Overseeing Organisation:	Oxfordshire County Council
RSA Team:	Steve Giles, Senior Road Safety Engineer, Gateway RSE
	Wendy Palmer, Senior Road Safety Engineer, Gateway RSE
Design Organisation:	Richard McCulloch, Associate Director, DTA Transport Planning
	Simon Parfitt, Director, DTA Transport Planning

RSA Decision Log				
Item No.	RSA Recommendation	Design Organisation Response	Overseeing Organisation Response	Agreed RSA Action
2.3	Review the need for lighting and high friction surfacing, or a reduced speed limit.	Agree. Lighting, surfacing and speed limit will be reviewed at the detailed design stage.		
2.4	Carry out vehicle swept path analysis and, if necessary, adjust the junction geometry.	Agree. Swept path analysis has been undertaken as shown on DTA Drawing 17213-13i-TRK		
2.5	Increase the stagger distance on the development arm refuge island and check that refuge island width is adequate to accommodate cyclists without overhanging traffic lanes.	Agree. Stagger distances on the pedestrian/cycle crossings on the access and mainline can be increased at the detailed design stage. The refuge width can accommodate cyclists without overhang.		
2.6	Branches and other foliage should be cut back clear of the shared path, with sufficient horizontal and/or vertical clearance to minimise future maintenance and reduce the risk of future obstruction.	Agree. Realignment of the site boundaries to accommodate the access and shared path will consider future maintenance at the detailed design stage.		
2.7	The verge levels should be raised to remove the drop at the rear of the new shared paths, or a restraint system should be provided.	Agree. Level differences will be graded out or a restraint system will be provided at the detailed design stage.		
2.8	Provide additional clear junction signs/road markings and lighting to increase junction conspicuity, particularly at night.	Agree. The lighting strategy will be agreed at the detailed design stage		

RSA Decision Log				
Item No.	RSA Recommendation	Design Organisation Response	Overseeing Organisation Response	Agreed RSA Action
2.9	Suitable horizontal and vertical clearances should be provided to signal heads and signs.	Agree. There are no identified constraints to providing suitable clearances to signal heads and signs		
2.10	Check forward visibility to the east facing signal heads at the crossing when a bus is present in each lay-by. If necessary, provide additional signal heads to mitigate the risk of vehicles striking pedestrians or cyclists on the crossing.	Agree. The need for secondary signal heads will be confirmed at the detailed design stage.		

Design Organisation Statement:

On behalf of the design organisation, I certify that:
The RSA actions identified in response to the road safety audit problems in this road safety audit have been discussed and agreed with the Overseeing Organisation.

.....

1 Introduction

This report describes a Stage 1 Road Safety Audit carried out on the proposed access arrangements for a new 280,000m^2 employment development on land adjacent to the M40 J10. Two access points (eastern and western) will be provided either side of the A43 / B4100 Baynards Green roundabout junction. This audit report considers the western access.

The audit was carried out at the request of David Tucker Associates.

The audit took place at the Bristol office of Mott MacDonald and consisted of a detailed examination of the submitted documentation and drawings listed in **Appendix A**.

It is confirmed that this is a Stage 1 Road Safety Audit and that the audit was undertaken upon completion of the preliminary design work.

The Road Safety Audit Team, as approved by the David Tucker Associates' Project Sponsor, Simon Parfitt, consisted of:

Tim Blaney	BSc (Hons), CMILT, MCIHT, MSoRSA (Certificate of Competency in Road Safety Audit, July 2012) Audit Team Leader, Mott MacDonald
Rachael Collins	BA (Hons), MSc, MCIHT (Certificate of Competency in Road Safety Audit, July 2016) Audit Team Member, Mott MacDonald

A visit to the site was completed on Wednesday 4th August at 1100 hrs. During this visit the weather was overcast, with sunny spells and the road surface was dry. Traffic conditions were moderate and free flowing. No pedestrian or cycle activity was observed.

This Road Safety Audit was carried out in accordance with Highways England's Departmental Standard GG119 and the Road Safety Audit Brief (*Doc. Ref: 17213-05*). The Road Safety Audit Team has examined and reported only on the road safety implications of the scheme as presented and has not examined or verified the compliance of the designs to any other criteria.

The comments and suggestions for road safety improvements made in this report seek to address matters that might have an adverse effect on road safety in the context of the chosen design. No attempt has been made to comment on the justification of the scheme. Consequently, the auditors accept no responsibility for the design or construction of the scheme.

All the issues raised in this report are considered to be required for action. The comments contained in the report are based on safety related concerns and as such the design engineer will need to consider carefully how to respond to each of the issues. The Audit Response Report should be completed by the Design Team and kept on file for future reference.

A Key Plan indicating the location of any identified safety related issues is provided in **Appendix B**.

Scheme Description

Taken from the Audit Brief:

The western site access will serve up to 180,000m² GFA B8 use. A three-arm roundabout junction is proposed in line with the requirements of DMRB CD116. Access to plots will be taken from an internal roundabout junction within the site. A bus layby will be provided on the link between the two site roundabouts.

A pedestrian and cycle route will be provided between the B4100 accesses and will provide a safe route to and from the roadside services. The route has yet to be determined as this is likely to be incorporated into a wider HE improvement scheme at the Baynards Green roundabout. This is not therefore within the scope of this RSA.

This audit therefore considers the proposed provision of a new roundabout junction on the B4100 as well as the internal site roundabout and link road.

2 Items Raised at this Stage 1 Audit

This section describes road safety related issues identified by the Audit Team during the Stage 1 Road Safety Audit.

2.1 Problem 1.01

Location: *Throughout Scheme.*

Summary: *Unclear impact of additional traffic on surrounding highway network.*

The proposed development and its western access are in close proximity to the A43 Baynards Green roundabout. At present, no junction appraisals have been undertaken therefore it is not possible to consider the impact that this development will have on the local highway network and particularly the A43 junction. Should the junction fail to accommodate the increase in traffic, and particularly HGVs, there is an increased risk of rear end shunt or side impact type collisions associated with inappropriate turning manoeuvres resulting from driver frustration / impatience.

Recommendation

It is recommended that traffic modelling is undertaken to assess the impact that the proposed development will have on the surrounding highway network, and particularly the A43 Baynards Green roundabout.

2.2 Problem 1.02

Location: *B4100 Roundabout junction.*

Summary: *Unclear lighting provision may lead to loss of control collisions.*

The B4100 at the location of the proposed roundabout junction is a relatively straight section of single carriageway unlit rural highway. It is not clear from the information submitted if it is intended to light the roundabout. Failure to light this roundabout may result in motorists misjudging the position or geometry of the roundabout during the hours of darkness, increasing the risk of loss of control type collisions.

Figure 1: Existing B4100 on northbound approach to proposed roundabout.

Source: Mott MacDonald

Recommendation

Given the proximity of the illuminated A43 Baynards Green roundabout, it is considered appropriate for the proposed access roundabout to also be lit. Furthermore, the internal site roundabout is likely to also require lighting due to its close proximity. It is recommended that through the design process, a lighting assessment is carried out to confirm the need for lighting.

3 Audit Team Statement

We certify that this audit has been carried out in accordance with Highways England's Departmental Standard GG119.

M40 Junction 10 and Baynards Green Modelling Report

Proposed Logistics Development at Baynards Green
M40 Junction 10 & Baynards Green – Technical Note

N02/216285/RB
August 2023

Introduction

1. Tritax Symmetry (TSL) has applied for planning permission for employment development on land at Baynards Green (LPA Reference: 22/01340/OUT). This application is supported by transport planning advice from Vectos SLR.

2. Albion Land (AL) has applied for planning permission for employment development on adjacent land at Baynards Green (LPA Reference: 21/03267/FUL, 21/03268/OUT & 21/03269/OUT). This application is supported by transport planning advice from David Tucker Associates (DTA).

3. Vectos SLR and DTA have prepared this technical note as a follow-up to the previous note N01/21285/RB issued in April 2023. This update covers:

   - Issue of VISSIM data.
   - Update to note N01.

4. The A43 Baynards Green roundabout currently experiences operational stress resulting in significant peak hour queuing. TSL and AL jointly propose improvement works here to support their proposed employment developments. This will fully signal control the roundabout and provide widening on the approaches and circulatory carriageway. A broadly equivalent scheme (the Growth Fund scheme) was promoted by the highway authorities to accommodate planned growth, but this has not progressed due to a lack of funding.

5. The proposed improvement works have been tested with VISSIM in the context of the wider M40 Junction 10 network to understand whether other works are required at other locations to address the development impact. However, compared to the reference case, i.e. no development or improvement at Baynards Green, the combined developments and junction improvement at Baynards Green will reduce net delay and queuing across the M40 Junction 10 network. The efficacy of the works to address the proposed developments is therefore not externally constrained and no other works are required.

6. The modelling demonstrates that the method of control and form of junction are appropriate, however, agreement in principle by the highway authorities to the proposed geometry parameters is sought. A detailed appraisal of the geometry against the requirements of the Design Manual for Roads and Bridges (DMRB) is set out in this report. No new departures from standard are required. There are, however, current features of the existing roundabout which are not compliant, e.g. entry path curvature, which are to be carried forward. Agreement is also sought on measures to reduce approach speeds, which are generally beneficial, but would also allow flexibility in visibility terms and benefit for active travel modes.

Design Flows

7. The design flows are based on the 2026 scenarios with the Bicester Traffic Model (BTM) which is maintained by Tetra Tech (TT) on behalf of Oxfordshire County Council (OCC). The reference case scenarios include existing traffic demand, traffic growth and traffic demand from planned development. The design case scenarios include the reference case demands plus the development demand from the proposed TSL and AL developments. In addition, the 2031 scenarios have also been run as a sensitivity test.

8. The appendices in note N01 contained incorrect reference case data. **Annex B** contains the correct BTM data. Analysis of the reference case was based upon the correct flows and all previous capacity analysis remains valid.

Baynards Green – Junction Improvement Scheme

9. National Highways (NH) kindly shared their topographical survey for the A43 and Baynards Green roundabout. The design that was shown on drg. 216285/A/07 has been updated to 216285/A/14 and included at **Annex C**.

10. An excerpt of drg. 216285/A/14 is shown below:

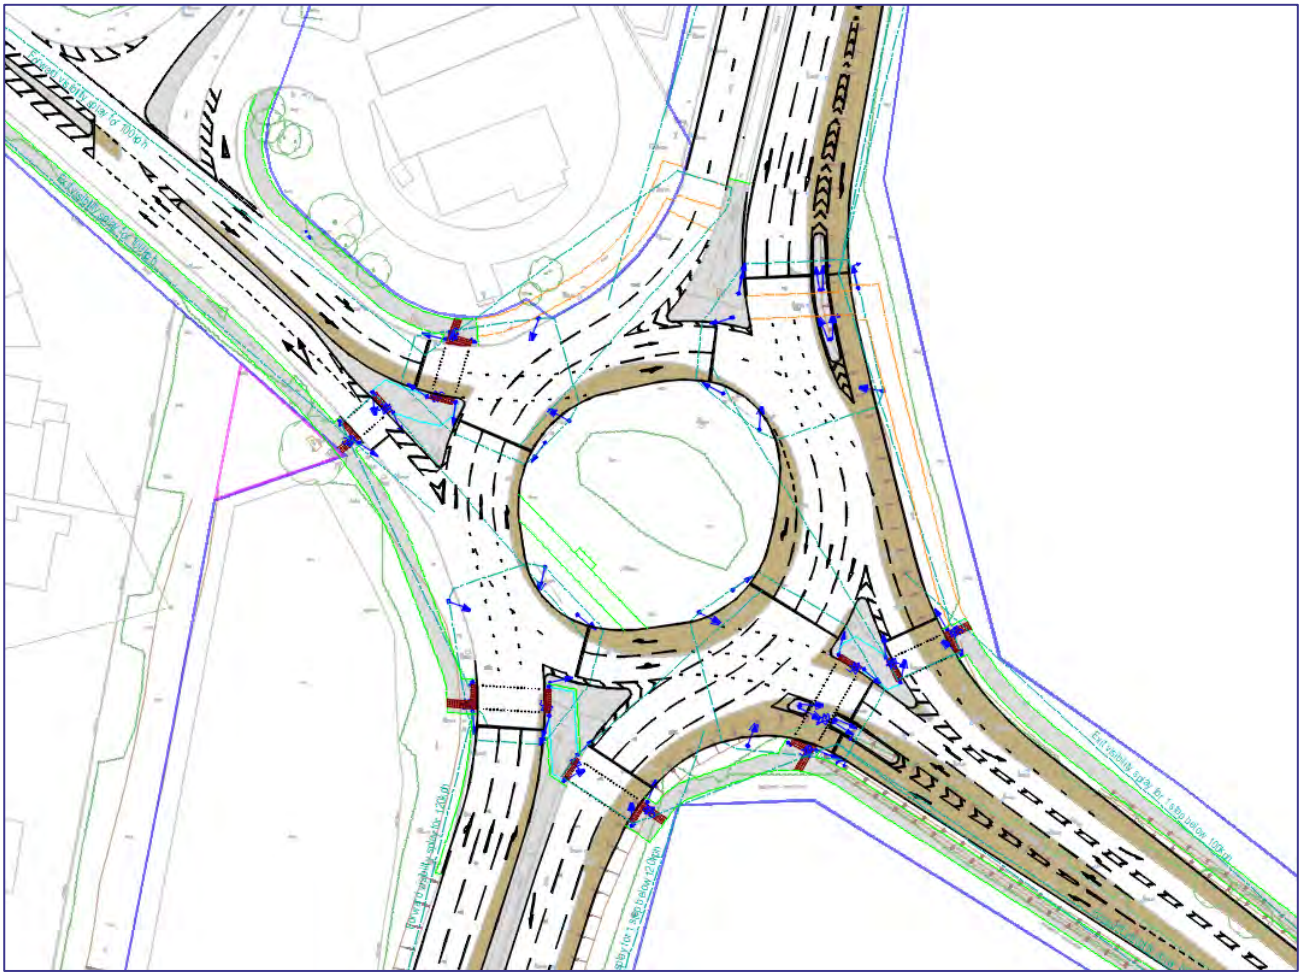

Figure 1 – A43 / B4100 Baynards Green improvement scheme

11. Vectos SLR and DTA met with National Highways following the initial submission of note N01. The meeting was to refine the Baynards Green improvement LINSIG model to ensure the scheme was represented appropriately in the VISSIM model. The main changes were to the A43 North and South right turn clearances.

12. It was agreed that the VISSIM modelling would test the implications of the developments and the suitability of the mitigation proposals. The ARCADY/LinSig junction analysis results for Baynards Green are updated below in **Table 1**. The timings used to forecast the development case reflect the changes agreed with National Highways and show the best potential results at Baynards Green using the flows agreed for use in the VISSIM development case assessment.

	Existing Layout / Ref Case		Improved Layout / Dev Case	
	Highest Ratio of Flow to Capacity	Longest Queue (pcu)	Highest RFC (PRC)	Longest Queue (pcu)
AM 2026	1.21	221	0.92 (-2.7%)	21
PM 2026	1.25	95	0.88 (+2.4%)	25
AM 2031	1.37	425	1.00 (-10.9%)	37
PM 2031	1.58	231	0.97 (-8.1%)	36

Table 1 – Baynards Green capacity assessment

13. The values referred to in **Table 1** are Ratio of Flow to Capacity and Practical Reserve Capacity. The RFC is the highest proportion of flow to capacity for a priority-controlled roundabout. RFCs are not usually used to express performance for signal junctions, but they are presented here to allow a like-for-like comparison. For information, the RFC calculation is very similar to Degree of Saturation (DoS) although they are presented differently, e.g. 50% DoS equates to 0.5 RFC. For traffic signals, the highest DoS determines PRC, expressed as a percentage, with 90% DoS considered the highest practical value. Positive PRC values indicate a junction has spare capacity whereas a negative value indicates a deficit.

14. From the table above it can be seen that the improvement at Baynards Green roundabout is forecast to provide significant benefits when compared to the reference case. This is supported by the VISSIM modelling results.

15. The updated LinSig analysis is included at **Annex E**.

VISSIM – Modelling Summary

16. The VISSIM report is included at **Annex A.** The data to accompany this has been issued separately. The key structural changes between the reference and development case models are the Baynards Green scheme and the introduction of the AL and TSL development access junctions. The VISSIM model confirms that the throughput of the M40 Junction network is significantly increased, and benefits of the improvement scheme are not affected by the wider network. The summarised findings of the VSSIM modelling, ordered by year and peak, are:

2026 AM

- There is an overall reduction in delay for the whole network of at least 26s per vehicle. The actual reduced delay will be greater because the number of unreleased vehicles (traffic that cannot enter the network due to blocking) reduced from 1000 to 0.
- The A43 south-bound queue to Barnards Green roundabout was reduced by around 700m in the AM peak. The actual reduction in queue is greater because of unreleased vehicles (latent demand which cannot enter the network). Overall, the latent demand is reduced from 1000 vehicles to 0 vehicles equivalent to a queue of circa 3km across two lanes.
- The improvement at Baynards Green roundabout proposal allowed more traffic South in the AM peak. The model reported some additional south-bound queues (displaced downstream) at the Padbury and Cherwell MSA junctions, however, these queues were contained within links.
- The additional south-bound flow increased M40 northbound off-slip queues in the AM peak to circa 340m. However, these queues were wholly contained within the slip, i.e., not beyond the back of the nose, some 460m from the ICD.

2026 PM

- There was an overall reduction in delay for the whole network of at least 15s per vehicle. The B4100 East entry queue reduced by an average of nearly 400m, while the number of unreleased vehicles in the reduced from 50 (reference case) to 0 (development case).
- The Northbound queue to Barnards Green roundabout was reduced by an average of c300m.
- The model reported south-bound queues (displaced from Baynards Green) to the Padbury and Cherwell MSA junctions, however, these queues were contained within links.

AM 2031

- The 2031 tests are not required as set out in DfT Circular 01/2022. However, the results are included as a sensitivity test.
- There was an overall reduction in delay for the whole network of at least 4s per vehicle. The south-bound approach to Barnards Green roundabout had around 900 fewer unreleased vehicles. While these vehicles did not contribute to the overall delay statistics and queue length statistics, this level of reduction is clearly a significant improvement.
- Queues on the B4100 West reduced by nearly 400m while those on the B4100 East reduced by around 200m.

- The model reported south-bound queues (traffic displaced downstream from Baynards Green) to the Padbury and Cherwell MSA junctions, however, these queues were contained within links.

- The additional south-bound flow did increase M40 north-bound off-slip queues in the AM peak. However, these queues were wholly contained within the slip, i.e. not beyond the back of the nose.

2031 PM

- There was an overall reduction in delay of 33s per vehicle.

- The North-bound queue to Barnards Green roundabout was reduced by an average of circa 550m. This was an improvement when compared with the reference case where queues stretched to Padbury roundabout, which could have safety implications for the M40 south-bound off-slip.

- The B4100 East entry queue reduced by an average of nearly 450m, reducing the number of unreleased vehicles by around 300, to zero. The B4100 West queues were circa 250m shorter than the reference case.

VISSIM – Queue Lengths and Journey Times

17. The VISSIM assessment shows that the Baynards Green roundabout improvement is forecast to provide significant benefits. Management of the local network is achieved in the AM peak by balancing the reduced A43 south-bound queue to Baynards Green while maintaining acceptable conditions downstream at the Cherwell MSA and Ardley junctions. In the PM peak, the capacity increase provided at Baynards Green largely resolves the queue for A43 north-bound traffic.

Route	2026 Journey Time Change		2031 Journey Time Change	
	AM	PM	AM	PM
A43 North to M40 South	-331s	+39s	-87s	+37s
A43 North to B430 South (via Ardley)	-359s	+30s	-136s	+23s
M40 South to A43 North	+97s	-92s	+107s	-159s

Table 2 – A43 / M40 Journey Time Changes

18. In **Table 2** above, a negative figure means an improvement in journey time. The table shows the change in journey time for the A43 north and south-bound, i.e. the through-route on the SRN.

19. The reference case had congestion south-bound towards Baynards Green in the AM and north-bound in the PM peak. The proposed scheme is forecast to improve journey times considerably for these approaches in their respective congested peak periods, i.e. >5 minutes faster south bound in the AM peak and at least 1.5 minutes better for the north-bound in the PM peak.

20. The Baynards Green signalisation allows delay to be balanced over all the entries. This means a slight worsening for those approaches that are not currently (or in the reference case) congested, i.e. the north-bound in the AM and the south-bound in the PM. The increase in delay is partly due to traffic waiting at a red signal which would not be the case for an existing uncongested priority entry. The net position, however, is one of significant benefit.

21. The queues along with the available link lengths are reported in **Table 3** and **Table 4**.

Route	Available Queuing Capacity (m)	2026 Ref Case Queue (m)		2026 Dev Case Queue (m)		2031 Ref Case Queue (m)		2031 Dev Case Queue (m)	
		AM	PM	AM	PM	AM	PM	AM	PM
A43 SB to Baynards (QC1)	-	769*	132	203	122	769*	182	767	144
A43 SB from Baynards to Padbury (QC7)	600	59	60	280	161	67	71	178	163
A43 SB from Padbury to Cherwell MSA (QC9)	310	124	96	286	125	150	103	261	144
A43 SB from Cherwell MSA to Ardley Rbt (QC16)	245	189	67	127	55	250	99	111	55

*reported queues only include vehicles within the model and do not reflect significant latent demand of up to 1000 vehicles on this approach in the AM peak periods.

Table 3 – Queue length changes – A43 South-bound

Route	Available Queuing Capacity (m)	2026 Ref Case Queue (m)		2026 Dev Case Queue (m)		2031 Ref Case Queue (m)		2031 Dev Case Queue (m)	
		AM	PM	AM	PM	AM	PM	AM	PM
M40 NB Off-slip (QC17)	455	102	82	339	96	176	105	383	158
A43 NB from Ardley to Cherwell MSA (QC15)	245	57	100	84	101	109	232	134	148
A43 NB from Padbury to Baynards (QC5)	620	106	599	187	201	214	944	253	233

Table 4 – Queue length changes – A43 North-bound

22. A summary of **Table 3** and **Table 4** is given below:

- The only exceedances on available stacking were in the 2031 reference case, shown in red. The 944m queue in the 2031 reference case represents an interaction between junctions and a resilience concern for the M40 south-bound off-slip to Padbury roundabout. The Baynards Green scheme resolves these exceedances.

- The Baynards improvement is forecast to reduce the AM 2026 south-bound queue to Baynards by over 0.5km in 2026 within the modelled network. The latent demand, those that cannot gain access to the network due to queuing, i.e. sitting outside the modelled network, reduced by circa 1000 vehicles. Modest reductions in queue are forecast for the PM peak. In 2031 the south-bound queue is reported as the same, but the latent demand is considerably lower.

- Queues between Baynards and Padbury roundabouts increased slightly but were easily contained within the link.

- Queues between Padbury roundabout and the Cherwell MSA junction increased but did not exceed available stacking capacity.

- Queues on the M40 north-bound off-slip increased, particularly in the AM peak. These increases were almost entirely due the success of the Baynards Green improvement which allowed more traffic south towards Ardley roundabout. The forecast slip queue lengths did not exceed the available stacking to the back of the nose.

- The PM north-bound queue lengths to Baynards Green roundabout are improved considerably by the introduction of the proposed scheme.

DMRB Geometric Compliance

23. The N01 report included an initial DMRB compliance review of the proposal for Baynards Green. An updated plan is included at **Annex D**.

24. Discussion is sought on the following points. It is envisaged that these will be recorded in a Safety Risk Assessment in line with the requirements of GG104.

- A43 Entry path radius of the existing and proposed layouts.

- The design speeds for the roundabout approaches have initially been determined as 120kph for the A43 and 100 kph for the B4100. Discussions on the nature of the approaches (rural or urban) and the potential for reducing design speed for the mainline and B4100 are sought.

Conclusion

25. AL and TSL propose an improvement at A43 Baynards Green roundabout.

26. The VISSIM assessment supports the LINSIG appraisal which shows that the Baynards Green scheme with the AL and TSL developments operates much more efficiently when compared to the existing layout in the reference case. It also provides formal facilities for active travel on the A43 and B4100 arms.

27. The VISSIM assessment shows that the combined development and scheme is compelling when considered in the context of the wider M40 Junction 10 network. No further works are needed, including at the Cherwell MSA or Ardley roundabouts, to accommodate the traffic generated by the AL and TSL developments.

28. The modelling demonstrates that the method of control and form of junction are appropriate. Agreement is principle for the geometric parameters is sought from the highway authorities to allow further design development. A detailed appraisal of the geometry against the mandatory requirements of the DMRB is included in the report which is now based on NH land survey. No new departures from standard are required. There are, however, features of the existing roundabout which are not compliant, e.g. entry path curvature, which are to be carried forward. Agreement is also sought on measures to reduce approach speeds, which are generally beneficial, but would also allow flexibility in visibility terms and deliver benefits for active travel modes.

VISSIM Modelling – M40 J10 TSL and AL Development Testing

M40 J10 Tritax and Albion Land Development Testing

VM210412.TN004
July 2023

Introduction

1. Vectos Microsim, part of SLR Consulting (VM) has been commissioned to provide microsimulation modelling expertise in support of two proposed logistics developments near to M40 J10 in Cherwell District, Oxfordshire.

2. Symmetry Park Ardley is a proposed 3.2m sq ft development located to the east of Baynards Green Roundabout on the A43 corridor, with land on the northern and southern side of the B4100 to be accessed via a new 4-arm roundabout on B4100 east. The development is led by Tritax Symmetry (Tritax) with highway support provided by SLR Consulting's transport planning division, previously known as Vectos.

3. Axis J10 is a proposed 3m sq ft development located on two plots east and west of Baynards Green Roundabout on the A43 corridor. The western site is proposed to be accessed via a new 3-arm roundabout on the B4100 west, while the eastern site is proposed to be accessed via a 3-arm signalised junction. The development is led by Albion Land with highway support provided by David Tucker Associates (DTA).

4. This Note sets out the methodology for the microsimulation testing of these two proposed sites, and an overview of the results of the tests.

Background

5. VM compiled a Matrix Development Methodology Note, issued to NH on 23rd February 2023, along with a spreadsheet which used the outputs from the Bicester Transport Model (as provided by TetraTech) and calculated the demand matrices for input into VISSIM for the updated Reference Case and With Development modelling. The Note is provided in Appendix A.

6. Whilst the Methodology Note was accepted, NH initially identified some discrepancies in the spreadsheet that accompanied submission of the Note. Through discussions between VM, NH and AECOM, the vehicle demands to be used for testing the development scenarios were agreed on 18th May 2023. The agreed demands are those as contained within spreadsheet *VM210412.Sp014 Post Audit Demands_v7*.

7. Demands have been provided for a total of 4 development scenarios, for future years 2026 and 2031:

   i. Dev Sc1: Tritax Symmetry Development Only

   ii. Dev Sc2: Tritax Symmetry Development and Albion Land Development East

   iii. Dev Sc3: Tritax Symmetry Development and Albion Land Development West

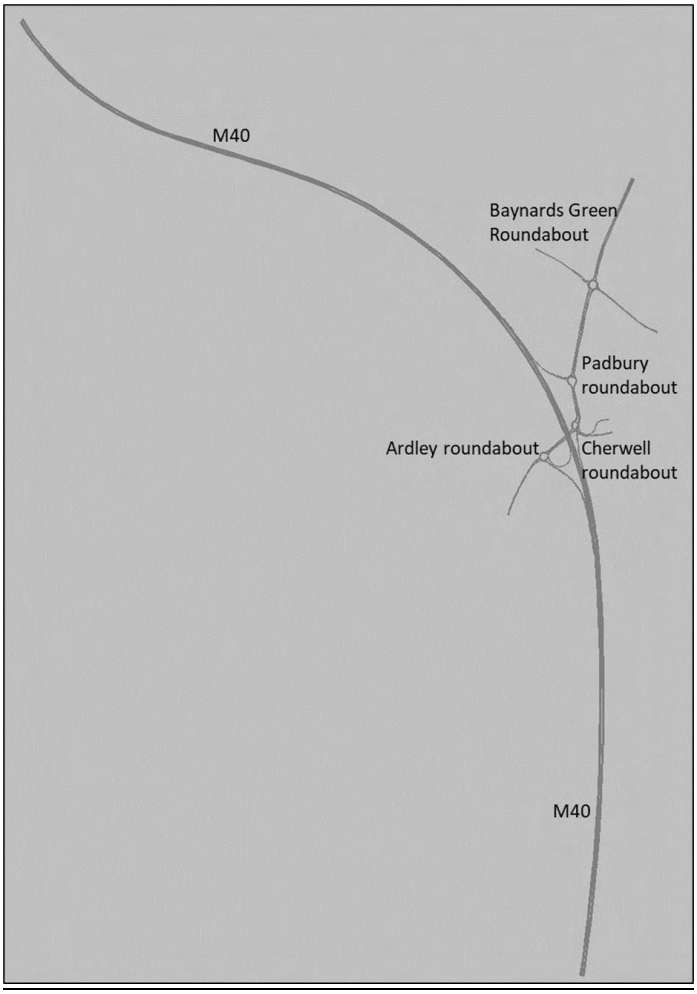
   iv. Dev Sc4: Tritax Symmetry Development and Albion Land Developments East and West

8. Development Scenario 4 has been tested in VISSIM; this Note sets out the build and results of this test on the basis that it represents the position whereby both development sites come forward.

Reference Case VISSIM Modelling

9. The development testing built upon the 2026 and 2031 Reference Case models, which were issued for agreement with NH on 23rd March 2023. The VISSIM network is provided below:

Figure 1: Reference Case Model VISSIM Network



10. The Reference Case models remain unchanged from the March submission and are re-reported in the results spreadsheet which accompanies this submission[1] for comparison against the Development 4 scenario.

Do-Something VISSIM Modelling

11. Both the 2026 and 2031 Do-Something scenarios test full build out of the Tritax and Albion Land development sites. This includes three site accesses which have been coded into the VISSIM network:

    i. Albion Land West Access: 3-arm priority-controlled roundabout on B4100 to the west of Baynards Green Roundabout

    ii. Albion Land East Access: Signalised 3-arm junction on B4100 to the east of Baynards Green Roundabout

    iii. Tritax Access: 4-arm priority-controlled roundabout to the east of the Albion Lane East Access

12. In addition to the three site accesses, a scheme at Baynards Green has been introduced to help mitigate the impacts of the development. The scheme aims to improve the traffic flow on Baynards Green through the following highway upgrades:

    i. Increasing the capacity on the roundabout with additional lanes on the circulatory

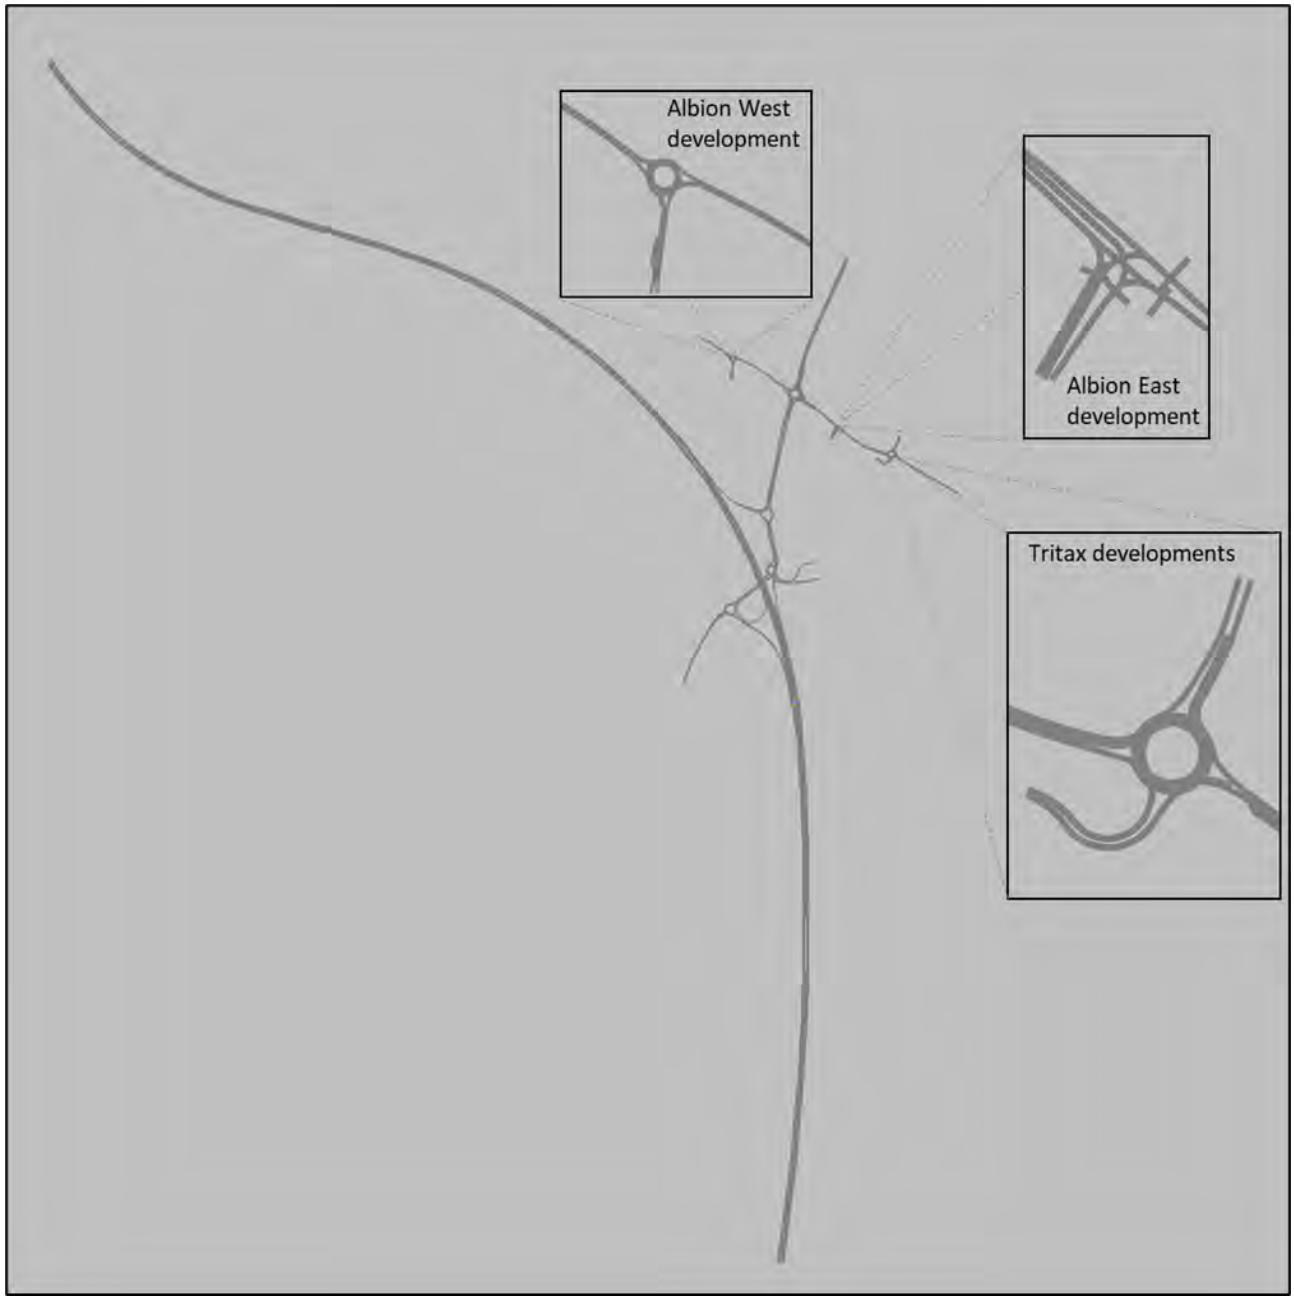
    ii. Adding extra flare lanes on the northbound, southbound, and westbound approaches

    iii. Full signalisation of the roundabout

13. The Baynards Green scheme and three site access arrangements are shown in the drawing in Appendix B. The 2026/2031 DS VISSIM network encompasses the Baynards Green scheme and all three accesses, and is illustrated in **Figure 2** overleaf:

[1] VM210412.Sp014 Result Spreadsheet Dev Sc4.xls

Figure 2: 2026/2031 Development Scenario 4 VISSIM Network



Network Revisions

14. Following initial tests of the development scenario, model observations demonstrated that with the inclusion of additional demand the model was exhibiting unusual behaviour that undermined the reliability of the testing.

15. A small number of network changes were therefore applied to the Do-Something models to rectify these issues. These are included in both the 2026 and 2031 Do-Something Scenarios and are listed below, followed by an image to illustrate the locations of the network elements referred to.

Lookback Distance Changes Adjustments:

i. Link 10059, changed from 200m to 250m

ii. Link 10060, changed from 200m to 250m

iii. Link 10050, changed from 250m to 500m

iv. Link 10051, changed from 250m to 500m

Emergency Stop Distance Changes Adjustments:

i. Link 10050, changed from 100m to 15m

ii. Link 10051, changed from 160m to 15m

Priority Rule Changes Adjustments:

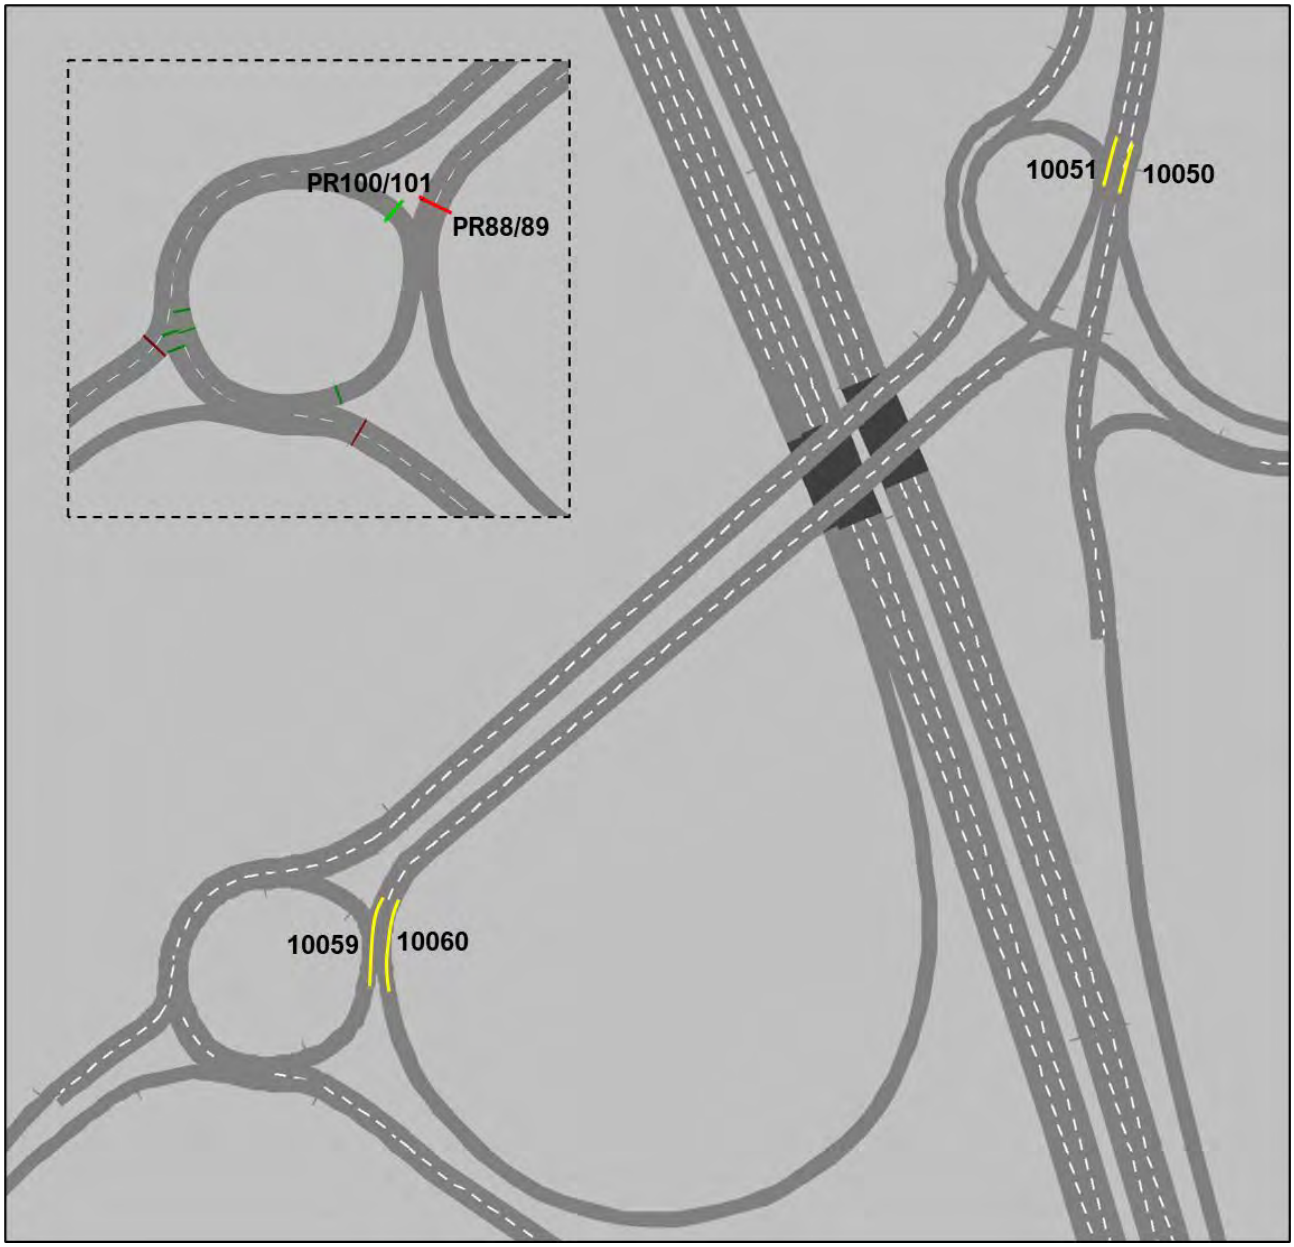
i. Priority Rule 88 (Lights), Min.Gap time changed from 4s to 2.4s

ii. Priority Rule 89 (Heavies), Min.Gap time changed from 4.5s to 2.8s

iii. Priority Rule 100 (Heavies), Min.Gap time changed from 4.5s to 2.8s

iv. Priority Rule 101 (Lights), Min.Gap time changed from 4s to 2.4s

Figure 3: Link and Priority Rule Locations for Network Changes



16. Regarding connectors 10050 and 10051, the lookback distance was increased to encourage earlier lane change to prevent unrealistic lane changing on the section between Padbury and Cherwell. The emergency stop distances were reduced to prevent vehicles in Lane 2 of Link 2 stopping to change lane into Lane 1 (due to original emergency stop distance on connector 10051); originally this behaviour caused bottlenecks on Link 2 and prevented vehicles from accessing Lanes 2 and 3 of Link 36.

17. **Figures 4** and **5** below show vehicles approaching Cherwell in the incorrect lane, and bottlenecks occurring due to the original emergency stop distances:

Figure 4: Original A43 Lane Change Behaviour between Padbury and Cherwell

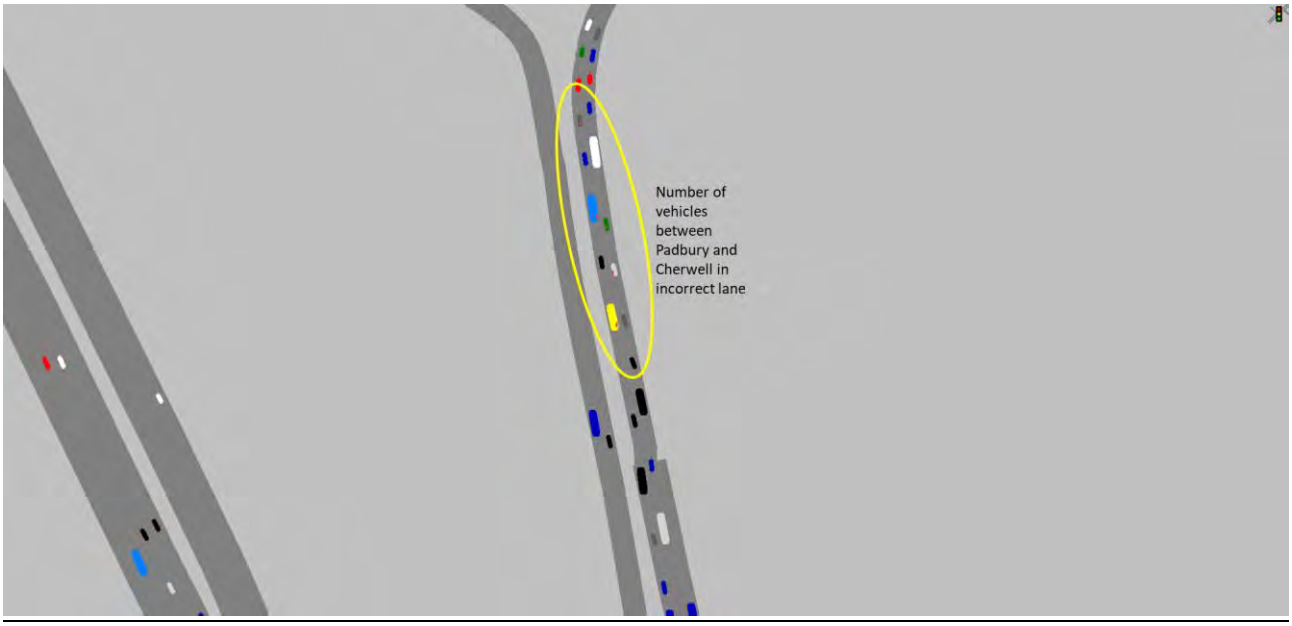


Figure 5: Bottleneck on Approach to Cherwell from Padbury Roundabout

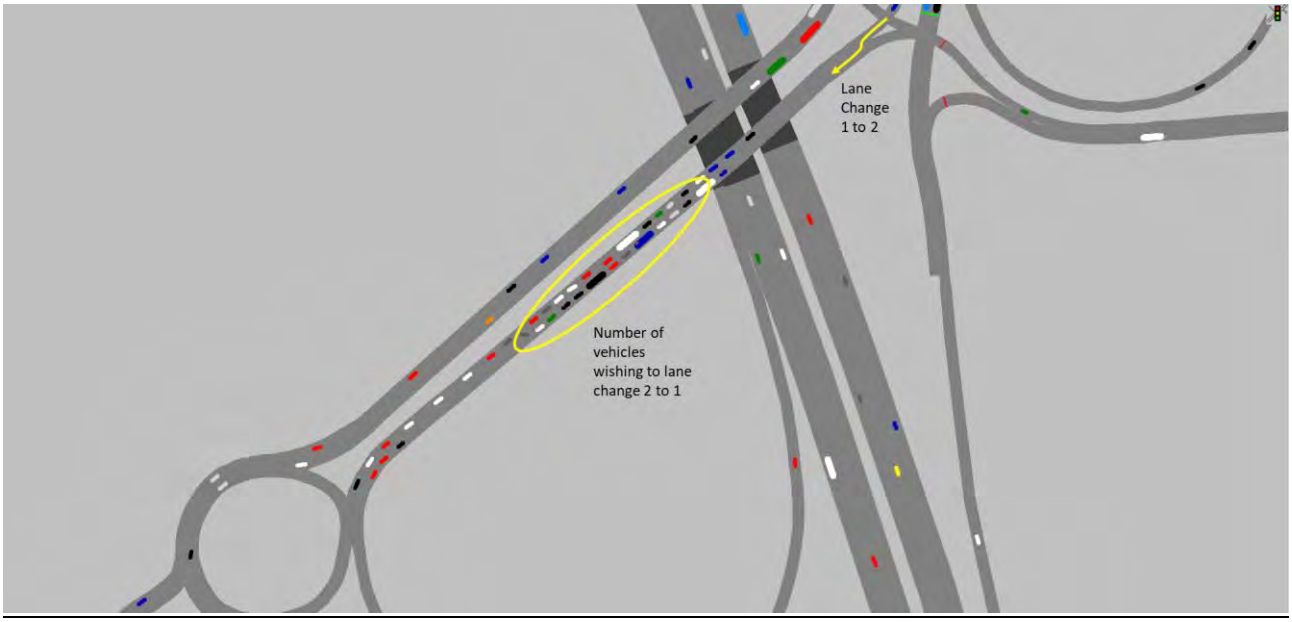
18. The look back distance on connectors 10059 and 10060 was revised to prevent unrealistic lane change behaviour on the A43 bridge over the M40. The distance between these connectors and connector 10053 (the single lane connector which routes vehicles from the A43 north of Cherwell Services junction to the A43 bridge) is approximately 240m, while the original look back distance was

200m. This resulted in a number of trips joining the bridge in lane 1, changing to lane 2 and then immediately looking to change back to lane 1. This is observed in the screenshot below:

Figure 4: Original A43 Lane Change Behaviour between Cherwell and Ardley



19. Priority rules 88, 89, 100 and 101 were revised to reduce observed behaviour whereby vehicles on the A43 westbound approach to Ardley Roundabout were giving way to circulating trips exiting the roundabout at the A43 eastbound exit. This behaviour resulted in unrealistic queues on the A43 bridge, while correcting this behaviour results in a higher number of conflicting trips for the M40 northbound off-slip.

Demand Matrices

20. Demand matrices for VISSIM are derived from outputs from the Bicester Transport Model (BTM); details on the conversion from BTM output to VISSIM input are detailed in Appendix A.

21. The total peak hour demands are given in **Table 1** and **Table 2** below:

Table 1: AM Peak Hour Demands

AM Peak (07:45-08:45)			
Scenario	**Lights**	**Heavies**	**Total**
2016 Base	8955	1377	10332

VISSIM Modelling Results Summary

2026 AM

22. The introduction of the Development trips, along with the associated site accesses and Baynards Green mitigation scheme, results in average delay per vehicle decreasing by 26s in 2026 for the AM peak compared to the Reference Case.

23. While VISSIM average queue results show a reduction of ~700m in the 2026 AM DS scenario compared with the Reference Case on the A43 southbound approach to Baynards Green, the queue reduction in reality would be far higher due to the presence of latent/unreleased demand in the Reference Case, which stands at over 1000 vehicles. Following introduction of the proposed mitigation scheme, this reduces to zero.

24. The mitigation at the roundabout introduces an additional ahead lane on the southbound approach and a separate left-turn filter, which, combined with the signals creating more gaps, means throughput improves and queues decrease.

25. As a result of the improved throughput from the north, some minor queue increases are forecast on the southbound approaches to Padbury Roundabout and Cherwell, however these are contained within the road sections between the junctions and do not reach back to upstream junctions. Queue increases are also forecast on M40 northbound off-slip due to the additional number of vehicles able to traverse the network following the unlocking of Baynards Green Roundabout, which conflict against the northbound slip give-way. These queues however reach a maximum of ~340m which is well within the road-space available on the slip road.

2026 PM

26. Compared to the 2026 PM Reference Case, average delay per vehicle decreases by 15s in the 2026 Development Scenario.

27. Queues decrease by an average of nearly 400m on B4100 East at Baynards Green Roundabout, as well as releasing the ~50 vehicles of latent demand that are present within the Reference Case. Large average queue reductions of ~300m are also observed on the A43 South (northbound) approach to Baynards Green as a result of the proposed mitigation scheme.

28. As observed in the AM, improvements at Baynards Green result in minor queue increases on the southbound approaches to Padbury and Cherwell, however maximum queue lengths on these approaches are maintained within the available space between the upstream junction.

2031 AM

29. In the AM 2031 testing, average delay per vehicle decreases by 4s in the AM DS Scenario in comparison to the 2031 Reference Case.

30. Although the average delay statistics do not indicate a major betterment on the Reference Case, the total latent demand value has decreased by ~900 vehicles indicating significant delay savings outside of the model network. The 2031 AM Development Scenario removes the small amount of latent demand from B4100 West, and significantly reduces the latent demand from A43 North. These improvements are attributable to the Baynards Green scheme improving throughput at the roundabout and mean average queue lengths on B4100 West decrease by nearly 400m compared to the 2031 Ref. Reported queues on A43 North remain similar to the Reference values due to the queues often reaching the edge of the model, however it is clear this approach to the roundabout has improved due to the significant reduction in latent demand. Queues on B4100 East approach to Baynards Green are also reduced by an average of ~200m.

31. As per the 2026 scenario, southbound approaches to Padbury and Cherwell exhibit minor queue increases but are maintained within the available road-space. Similarly, queue lengths are forecast to increase on the M40 northbound off-slip, however these are well within the available length of the slip road.

2031 PM

32. Compared to the 2031 PM Reference Case, average delay per vehicle decreases by 33s in the DS Scenario.

33. Where the 2031 Reference Case model exhibits latent demand of over 300 vehicles from B4100 East, inclusion of the proposed mitigation scheme removes this entirely. Average queue lengths are ~450m shorter on this approach.

34. In a similar pattern to 2026, average queues decrease by ~550m on the A43 South (northbound) approach to Baynards Green, meaning that where these queues reach back to Padbury Roundabout in the Reference Case, thereby posing a risk to the southbound off-slip, delivery of the proposed mitigation scheme at Baynards Green removes this risk.

35. Average queue length reductions of ~250m are also observed on the western arm of the junction.

Summary & Conclusion

36. Vectos Microsim, part of SLR Consulting (VM) has been commissioned to provide microsimulation modelling expertise in support of two proposed logistics developments near to M40 J10 in Cherwell District, Oxfordshire. The developments are promoted by Tritax Symmetry and Albion Land, with highways support provided by SLR Consulting and David Tucker Associates respectively.

37. VM has previously engaged with National Highways on the development of a VISSIM Reference Case, and on the development of a set of demand matrices to be used within the VISSIM modelling informed by turn count outputs from the Bicester Transport Model (BTM). Both the Reference Case and the With Development demand matrices have been agreed and signed off by National Highways.

38. This Note sets out how the VISSIM assessment has been carried out, and presents a proposed mitigation strategy at Baynard's Green Roundabout to facilitate delivery of the two proposed development sites.

39. Results of the VISSIM modelling demonstrate that the proposed mitigation results in significant improvements at the junction. In the AM period, existing queuing on the A43 southbound is significantly reduced, along with improvements on the B4100 east and west arms, particularly in 2031. In the PM period, forecast queues on the A43 northbound to Baynard's Green are significantly reduced. In 2031, where queues are forecast to extend back to the southbound off-slip at Padbury, the proposed mitigation is highly successful at mitigating this impact.

40. Overall the results show that the mitigation scheme put forward is more than commensurate with the forecast impact of the combined developments, resulting in a network-wide performance that far exceeds that of the respective Reference Case models in both AM and PM peak periods.

REPORT

M40 J10 VISSIM

Matrix Development Methodology

February 2023

Vectos South

Contents

1 Introduction

1.1 Vectos Microsim (VM) has been commissioned by Vectos South on behalf of Tritax, to provide VISSIM microsimulation modelling support regarding an on-going planning application for a proposed logistics development on land to the east and west of the A43, adjacent to M40 J10 in Cherwell District, Oxfordshire.

1.2 AECOM, in their capacity as Highway Consultant for National Highways (NH), undertook proposed scheme testing around M40 J10 in March 2020. VM acquired the models from AECOM via email on 5th May 2022, along with the results of those tests. These were also accompanied by a Technical Note[1] outlining the contents of each tested scenario. VM has utilised these models to develop new Reference Case models to become the basis for the Tritax testing.

2 Background

2.1 In addition to the models received on 5th May 2022, AECOM provided further commentary outlining that the DS3 scheme was selected as the preferred option and taken forward for delivery through the Growth Fund, but that the schemes had been updated since completion of the initial testing. As a result, VM proceeded to update the model in line with the latest drawings, as well as presenting results for scenarios that preceded the update.

2.2 Throughout testing however, the funds allocated for the improvements at Baynards Green roundabout were re-allocated elsewhere, resulting in this scheme no longer being considered. Following correspondence with NH, the scheme will now only comprise of the Padbury junction element, corresponding to the DS2 model provided by AECOM which VM has therefore taken as the new starting point for testing. This Note sets out the methodology for developing the Reference Case and Do-Something matrices for use within the testing.

2.3 This Note follows a previous Note[2] that was submitted to NH on 5th January 2022. The Note included a proposed methodology for the Reference Case demands, details regarding amendments required to the model network following errors noted in the models received (i.e. the DS2 scenario that has become the 'Reference Case' network for the purposes of this testing), and results of the new Reference Case tests.

2.4 The proposed methodology involved taking turn count outputs and converting to network matrices by a process of proportional calculations, taking trips through the network based on turning proportions calculated from the turn counts. The method in principle is accurate, however the original calculations failed to exclude the M40 southbound off-slip to Padbury to Cherwell to M40 southbound on-slip movement which distorted the matrix once these trips were removed and replaced with mainline counts.

2.5 NH provided comments on 5th January 2023 highlighting the issue and proposing an amendment to the methodology for calculating the Reference Case demands:

> *"We therefore recommend that you calculate a growth factor using the BTM flows by comparing the Base BTM flows and Reference Case BTM flows and applying these percentages on top of the base VISSIM matrices in order to develop the future year matrices. […] Should you have an alternative approach to propose please let us know. We recommend that a matrix methodology note be provided to us for our review prior to undertaking any further assessment."*

[1] M40 J10 TN11_submitted.pdf
[2] VM210412.TN002 VISSIM Methodology Note

2.6 Having considered this approach we do not consider this to be suitable in this instance. Applying a growth percentage to the baseline matrices removes any re-routing that is forecast within the BTM following the application of growth and/or proposed highway schemes. In addition, various development scenarios are being tested within the BTM and turn counts are being extracted for each individually. We cannot use this 'growth percentage' methodology for the development scenarios because not only will background re-routing and trip pattern changes be unaccounted for, but the development itself will also be unaccounted for (as the specific development values will become lost within the overall growth percentage).

2.7 The alternative could be to develop the Reference Case as per the methodology proposed by NH, and then add development trips directly onto that Reference Case (through a development-specific trip generation and distribution – a 'development-only matrix'). However this maintains the Reference Case demands as they are, again discounting the possibility of background re-routing following inclusion of development and any associated mitigation thereby removing the very purpose of the BTM testing.

2.8 As a result, VM has revisited the original methodology and recalculated the demand matrices, but this time excluding, amongst others, the M40 southbound off-slip to M40 southbound on-slip as a possible movement. Details are provided in the section to follow.

3 Reference Case Demands

3.1 Base model turn counts were supplied by TetraTech on 6th February 2023, which supplemented the 2026 and 2031 Reference Case turn counts already received. The turn counts have been compiled into a single spreadsheet and this, alongside all BTM outputs, are contained within the package of data that accompanies this Note.

3.2 The broad methodology remains unchanged from the original; the number of trips entering from a particular zone are proportioned through the network based on turning proportions at downstream junctions. However, some rules are observed that prevent certain movements from being included in the calculations:

i) As per paragraph 2.8 above, the movement from zone 6 (M40 North) to zone 4 (M40 South) is assumed to be zero. To be clear, this refers only to movements that would take this movement via Padbury and Cherwell. Mainline counts are included separately later on (to be discussed)

ii) Movements from zone 6 to zone 6, and from zone 4 to zone 4 (M40 U-turns in either direction), are also assumed to be zero

3.3 In fixing these values, the methodology of proportioning in-bound trips through downstream junctions is insufficient in some cases, as the totals travelling to/from particular zones becomes distorted by these fixed values that are not subjected to the proportional method. Therefore calculations for some movements are revised and bespoke to that particular movement.

3.4 One example is as follows. As we assume the M40 South to M40 South demand movement to be zero, that means we assume all movements from the A43 bridge to M40 South to be originated from B430 west. This is highly likely to be the case in reality. This fixed value must be taken into consideration when proportioning all other trips from B430 west to the north of the network.

3.5 Similarly, of all trips leaving the M40 at the southbound off-slip and travelling south towards Cherwell, none of these are assumed to re-join the mainline. This therefore changes the values used to proportion every other trip through Cherwell from the north of the model.

3.6 As a final step, any minor negative values resulting from the calculations are removed.

3.7 The calculations are provided within the spreadsheets and are therefore available for a full review. As a check that the demands are an accurate reflection of the turning movements output from the BTM, the total inbound and outbound zone totals in the calculated matrices are compared with the total turning movements at that appropriate zone location, and the majority show a close correlation. The exception is in the 2031 PM Lights calculations, where the matrix total for trips travelling to A43 north of Baynards Green and B4100 east of Baynards Green is 93 trips and 15 trips lower than the totals from the respective turn count totals. The reason this discrepancy exists is that the turn counts do not correlate between Padbury Roundabout and Baynards Green Roundabout. The recorded turn count total travelling northbound away from Padbury Roundabout (Cars + LGV) is equal to 2007 trips. The recorded turn count total travelling northbound towards Baynards Green is 2117 trips. This is the source of the difference as the total amount of traffic feeding the Baynards Green exits is lower than the recorded turn movements.

3.8 Having requested clarification from TetraTech, suppliers of the BTM outputs, the response was as follows:

> *The reason for these differences is that the turning movements for Padbury, Cherwell and Ardley are calculated by Select Link Analysis (SLA). The SLA process effectively runs one extra iteration of traffic assignment and hence the results are likely to be slightly different from the original model assignment.*
>
> *This SLA process is described in detail in SATURN manual Chapter 11. Section 11.8.1.2 states:*
>
> *"the routes which are reconstructed in order to carry out a select link analysis do not necessarily correspond exactly to those used within the actual assignment……..any output data at this level of disaggregation should always be taken with a large pinch of salt. We therefore recommend treating SLA outputs as representative rather than precise estimates."*

3.9 While this presents a level of uncertainty insofar as it is impossible for us to reconcile all matrix totals with the BTM turn count outputs, we still maintain this methodology is superior to the % growth method for the reasons outlined earlier.

3.10 Regarding the mainline movements that do not interact with Padbury/Ardley/Cherwell, no BTM output is available. As a result, as per the NH suggestion a growth factor is calculated by comparing total demands in the Base with the total demands in the 2026 and 2031 outputs. The total traffic in each case is calculated as the total amount of traffic from the strategic model outputs that correspond to counts that would enter the VISSIM model network.

3.11 The resulting growth factors are provided in **Table 1** below:

Table 1: 2026 and 2031 Growth Factors

	2026		2031	
	Lights	Heavies	Lights	Heavies
AM	116.0%	78.0%	129.4%	86.0%
PM	110.6%	89.8%	122.1%	94.9%

3.12 These growth totals are applied to the zone totals present within the Base VISSIM models, thereby providing the necessary mainline growth.

3.13 <u>The final proposed hourly demands for 2026 AM and PM Lights and Heavies matrices are contained within the "BTM 2026 Turning Movements" tab, cells AA32:AU54. It is proposed that these are entered into VISSIM as a single hourly matrix. Warm up and cool-down matrices will be calculated by applying the proportion present within the Base.</u>

3.14 <u>Corresponding 2031 demands are contained within the same location of the "BTM 2031 Turning Movements" tab.</u>

4 Next Steps

4.1 Following review of this proposed methodology, VM seek agreement from National Highways that it is considered appropriate for development of a 2026 and 2031 VISSIM Reference Case. Once agreed VM will run and report the Reference Cases whilst also reviewing the approach to the development demands, which assuming the above is agreeable will follow the exact same methodology to ensure consistency through the testing.

User and Project Details

Project:	**Tritax Bicester**
Title:	**A43 / B4100 Baynards Green - Junction Improvement**
Location:	
Client:	Tritax Group
Design Layout Ref:	216285/A/14
Flow Details:	BTM refers to Bicester Traffic Model issued by Tetra Tech on behalf of OCC. V7 flows reflect the agreed demand sets used in the VISSIM model with a heavy PCU factor of 2.0.
Additional detail:	Circulatory phases mins allow entry peds to time off when demanded. Exit stream ped leaving intergreens reflect O/C detection (maximums are also included).
File name:	216285 Baynards Green Rbt v1_8b (Drg A-14).lsg3x
Author:	R Bishop

CONTENTS

Appendices

1 INTRODUCTION

1.1 This report describes a Stage 1 Road Safety Audit (RSA) of proposed roundabout improvement works on the A43 at Baynards Green, within the District of Cherwell and the County of Oxfordshire. The Road Safety Audit has been undertaken at the request of Martin Seldon, Assistant Spatial Planner at the Overseeing Organisation, National Highways. The audit was carried out in February 2024.

1.2 The Road Safety Audit Team membership approved by Martin Seldon was as follows:

Steve Giles*	Senior Road Safety Engineer Gateway RSE Audit Team Leader
Julian Smith	Senior Road Safety Engineer Gateway RSE Audit Team Member

**Steve Giles holds an Approved Certificate of Competency (CoC) in Road Safety Audit, in accordance with Article (1-3) of EC Directive 2008/96/EC.*

1.3 The audit took place at the Farnham office of Gateway RSE on 8th February 2024. It was undertaken in accordance with the Road Safety Audit Brief provided by Martin Seldon, and comprised an examination of the documents provided in the Brief, as set out within Appendix A.

1.4 The Audit Team visited the site together between 12:00 and 13:00 on Wednesday 7th February 2024 when the weather was overcast/cold and the road surface dry. Traffic flows were steady and no congestion was observed, whilst no pedestrian or cyclist movements were seen.

1.5 The terms of reference for this RSA are as described in the Design Manual for Roads and Bridges (DMRB) document GG119. The Audit Team is independent of the project design team and has not been involved in the design process in any other capacity. The audit considers only the potential road safety implications of the scheme and has not verified compliance of the design with any other criteria. This Road Safety Audit has been undertaken based on the Road Safety Audit Team's previous experience and knowledge in undertaking collision investigation, road safety engineering and road safety audits.

1.6 The Audit Team has been made aware of the following Departures from Standard and Relaxations:

i) Entry path curvature on A43 north approach (departure)

ii) Entry path curvature on A43 south approach (departure)

iii) Visibility 2 steps below DMSSD A43 north arm exit (relaxation)

iv) Visibility 2 steps below DMSSD A43 south arm exit (relaxation)

1.7 Whilst reference may be made within this audit report to design standards, it is not intended to provide a design check.

1.8 Recommendations are aimed at addressing the identified potential road safety problems. However, there may be other acceptable ways to overcome a problem, considering wider constraints and opportunities; the Auditors would be pleased to discuss such alternative solutions as appropriate. The recommendations contained herein do not absolve the Designers of their responsibilities.

1.9 An audit team led by Steve Giles has carried out two Stage 1 road safety audits of proposed site access schemes on the B4100, to the east of the A43. The first, in April 2022, considered a 50m ICD 4-arm roundabout intended to serve the Tritax sites north and south of the B4100. That audit is being updated for the latest design concurrently with this audit of the A43 roundabout. The second audit, in October 2023, relates to a signal-controlled junction providing access only to the Albion Land East site, south of the B4100 and between the A43 and the Tritax roundabout referred to above.

1.10 This audit relates solely to the proposed A43 roundabout improvements but considers potential safety problems that might arise with and without the proposed signal junction and 4-arm roundabout to the east.

1.11 The Audit Team is also aware of the proposed Albion Land West access, a 3-arm roundabout on the B4100, west of the A43. It was the subject of a Stage 1 RSA by others in 2021 and is outside the scope of this audit.

2 PROBLEMS IDENTIFIED BY THIS ROAD SAFETY AUDIT

General Matters

2.1 Problem

Collisions during maintenance operations.

Location: North and east arms of roundabout / general

No provision is made for an operative to stop a vehicle and carry out maintenance of the traffic signals. This could cause inappropriate parking on the carriageway, footway, or verge, which may in turn lead to vehicle collisions, or pedestrian/cycle injuries if they divert into the carriageway.

Furthermore, maintenance of the signal equipment on the narrow refuge/traffic islands at the segregated left turn lanes may leave operatives vulnerable to vehicle strikes.

Recommendation

Provide a suitable highway maintenance bay and identify safe arrangements for maintenance of signal equipment on the left turn segregation islands.

Local Alignment

2.2 The Audit Team raises no concerns in respect of local alignment.

Junctions

2.3 Problem

Insufficient queue storage may lead to vehicle collisions at upstream traffic link/node.

Location: Short links within signal-controlled network

No junction model has been provided and the Audit Team is concerned that vehicle queues on short links, including at the signal-controlled crossings on the exit arms, might extend to upstream nodes. This could lead to vehicle collisions.

Recommendation

Review the junction model to ensure that the risk of vehicles queuing to the upstream node is reasonably minimised. If necessary, adjust signal timings or increase queuing capacity.

2.4 Problem

Insufficient visibility to signal heads.

Location: Circulatory stop line on east side of roundabout

The two middle lanes may not have good visibility of the primary signal heads, and only one secondary signal head is provided. This may cause uncertainty and hesitation, particularly if one of the secondary signal aspects is out, leading to vehicle collisions.

Recommendation

Provide an additional secondary signal head to assist drivers in the middle two lanes of the internal stop line on the east side of the circulatory carriageway.

2.5 Problem

Vehicle collisions due to signal 'see-through'

Location: East, south and west entry nodes

Vehicles approaching stop lines at nodes incorporating a pedestrian crossing may see a secondary green signal intended for the other stop line and inadvertently contravene a red light, leading to vehicle collisions on the roundabout.

Recommendation

Provide cowls on secondary signal heads at nodes incorporating pedestrian crossing facilities.

2.6 Problem

Potential collisions due to foliage/boundary treatments obscuring visibility splays.

Location: Throughout, but particularly the east arm exit

It is not clear to what extent foliage will be removed to provide visibility splays (forward, exit, and signal heads), particularly from the left turn lane to the pedestrian crossing on the east arm exit. If foliage clearance is insufficient, it could in future grow back and obstruct visibility, which could lead to vehicle turning or vehicle/pedestrian collisions.

Recommendation

Cut back foliage with sufficient clearance behind the visibility splays to minimise future maintenance and limit the risk of obstruction to the drivers' view.

2.7 Problem

Vehicle nose/tail collisions due to high speeds/heavy braking.

Location: All arms of the proposed roundabout

Drivers approaching the roundabout may be travelling at high speeds, requiring hard braking at stop lines or the back of traffic queues. This could lead to nose/tail ('shunt'), loss of control, or vehicle/pedestrian (at crossing stop lines) collisions.

Recommendation

Review the need for extended lighting, additional signs/markings, high friction surfacing and a reduced speed limit on the roundabout approaches.

Walking, Cycling and Horse Riding

2.8 Problem

Pedestrians/cyclists using staggered signal crossings at roundabout may stray and collide with vehicles.

Location: Refuge islands on east, south and west arms

Sight impaired pedestrians may cross the exit arm and then turn right on the refuge island to complete the crossing movement, but then miss the tactile paving and stray into the circulating carriageway. This would lead to collisions between the pedestrian and circulating vehicles.

Recommendation

Provide a barrier on refuge/splitter islands accommodating staggered pedestrian crossings to prevent sight impaired pedestrians from straying into the circulating carriageway.

2.9 Problem

Vehicle/pedestrian collisions.

Location: A43 north arm

The Audit Team notes the Tritax development proposals on the northeast quadrant of the junction and is concerned that pedestrians travelling between it and the service area may find a way through any boundary treatment and attempt to cross the A43 on the north side of the junction, rather than use the formal crossings on the other three arms. This could lead to collisions between pedestrians and vehicles.

Recommendation

Install strong deterrent barriers to prevent pedestrians from the Tritax site from reaching the A43 north carriageway; or provide a formal crossing on the north side of the junction and a route to it from within the development.

Road Signs, Carriageway Markings and Lighting

2.10 Problem

Collisions due to inadequate horizontal clearances to signals/signs/lighting.

Location: Traffic islands separating left turns on north and west arms of roundabout

Signals, signage and lighting details are not available at this Stage 1 RSA, but the audit team is concerned that the left turn refuge/traffic islands on the north and west arms may not be sufficiently sized to accommodate street furniture with appropriate horizontal clearances. This may lead to vehicle strikes or collisions between pedestrians, cyclists and vehicles.

The Audit Team considers it unlikely that the segregated left turn lanes would be separately staged because they would then conflict with circulating traffic in the same way as the ahead entry lanes.

Recommendation

Review the layout of refuge/traffic islands to ensure that (a) left turn segregation is appropriate and (b) if so, sufficient space will be available to accommodate signals, signs, and lighting columns with appropriate horizontal clearances from the carriageway and any pedestrian/cycle routes. If the islands are omitted, review the need for and location of any alternative signal heads.

2.11 Problem

Collisions due to misinterpretation of right turn arrow markings.

Location: Roundabout approaches

Right turn arrows are proposed on the roundabout approaches, which could potentially mislead drivers, leading to collisions on the circulating carriageway.

Recommendation

Change right turn arrows on approach arms to ahead arrows and clarify lane destinations with advance direction signs and lane destination carriageway markings.

3 AUDIT TEAM STATEMENT

3.1 We certify that this Road Safety Audit has been carried out in accordance with DMRB document GG119.

Audit Team Leader

Steve Giles
BEng (Hons), IEng, FIHE, MCIHT, MICE, CMILT, MSoRSA, HE Cert Comp
Senior Road Safety Engineer

Signed: [redacted]

Date: 09/02/2024

Audit Team Member(s)

Julian Smith
BEng, MCIHT, MSoRSA
Senior Road Safety Engineer

Signed: [redacted]

Date: 09/02/2024

2 General Details

GENERAL DETAILS:				
Highway scheme name and road number:	**A43 / B4100, Baynards Green Roundabout.**			
Type of scheme:	Junction Improvement - signalisation of an existing priority junction			
RSA Stage:	☒ Stage 1	☐ Stage 2	☐ Stage 3	☐ Stage 4
	Interim			
Overseeing Organisation details:	National Highways			
Design organisation details:	Martin Seldon (martin.seldon@nationalhighways.co.uk)			
Police contact details:	N/A			
Maintaining agent contact details:	N/A			
RSA team membership:	Steve Giles (Team Lead), Julian Smith (Team Member)			
Terms of reference:				

3 Road Safety Audit Decision Log

RSA PROBLEM	RSA RECOMMENDATION	DESIGN ORGANISATION RESPONSE	OVERSEEING ORGANISATION RESPONSE	AGREED RSA ACTION
2.1	Provide a suitable highway maintenance bay and identify safe arrangements for maintenance of signal equipment on the left turn segregation islands.	Accepted. An appropriate maintenance access will be included at detailed design.	Noted.	To be considered during detailed design.
2.2	No comments on local alignment.	No response required.	N/A	N/A
2.3	Review the junction model to ensure that the risk of vehicles queuing to the upstream] node is reasonably minimised. If necessary, adjust signal timings or increase queuing capacity.	Accepted. The method of control is deliberately designed to minimise queues on the circulatory carriageway. A LinSig analysis excerpt is included at **Appendix B**.	Noted.	Review to be continued during detailed design to ensure queuing is minimised.
2.4	Provide an additional secondary signal head to assist drivers in the middle two lanes of the internal stop line on the east side of the circulatory carriageway.	Accepted. To be incorporated at detailed design.	Noted.	To be considered during detailed design.

2.5	Provide cowls on secondary signal heads at nodes incorporating pedestrian crossing facilities.	Accepted. To be incorporated at detailed design.	Noted.	To be considered during detailed design.
2.6	Cut back foliage with sufficient clearance behind the visibility splays to minimise future maintenance and limit the risk of obstruction to the drivers' view.	Accepted. Refer to the GA included at **Appendix A**.	Noted. The Designer has submitted a GA drawing which includes a note that, vegetation will be cut back, with boundary treatment considered during detailed design.	To be considered during detailed design.
2.7	Review the need for extended lighting, additional signs/markings, high friction surfacing and a reduced speed limit on the roundabout approaches.	Accepted. To be investigated at detailed design.	Noted.	To be considered during detailed design.
2.8	Provide a barrier on refuge/splitter islands accommodating staggered pedestrian crossings to prevent sight impaired pedestrians from straying into the circulating carriageway.	Accepted. Guardrails are shown on the GA. A revised GA will be supplied that clarifies intended guardrail and fencing provision.	Noted. Revised GA drawing, emphasising the guardrails, has been submitted.	To be considered during detailed design.

2.9	Install strong deterrent barriers to prevent pedestrians from the Tritax site from reaching the A43 north carriageway; or provide a formal crossing on the north side of the junction and a route to it from within the development.	Accepted, with clarification. A crossing over the A43 north cannot be provided due to land ownership and highway extent. Strong deterrent barriers, as suggested, to be incorporated at detailed design.	Noted.	To be considered during detailed design.
2.10	Review the layout of refuge/traffic islands to ensure that (a) left turn segregation is appropriate and (b) if so, sufficient space will be available to accommodate signals, signs, and lighting columns with appropriate horizontal clearances from the carriageway and any pedestrian/cycle routes. If the islands are omitted, review the need for and location of any alternative signal heads.	Accepted. The proposed traffic islands are intended to benefit entry deflection. Dimensions are sufficient to accommodate signal equipment and give appropriate clearances. Dimensions to be further reviewed at detailed design once more information is known about road sign provision and positioning.	Noted. The Designer has clarified that the splitter islands are needed to provide the appropriate entry path curvature, associated with the provisional approval of the related Departure from Standard.	To be considered during detailed design. To ensure that the islands are able to accommodate the equipment.

2.11	Change right turn arrows on approach arms to ahead arrows and clarify lane destinations with advance direction signs and lane destination carriageway markings	Accepted. The signing strategy will be reviewed at detailed design to ensure drivers are appropriately informed as to the correct lane choice.	Noted. The Designer has clarified that right turn markings will not be used. Increasing driver comprehension, through signing for lane destinations and appropriate ADS, will be considered.	To be considered during detailed design.

4 Design Organisation and Overseeing Organisation Statements

ON BEHALF OF THE DESIGN ORGANISATION I CERTIFY THAT: THE RSA ACTIONS IDENTIFIED IN RESPONSE TO THE ROAD SAFETY AUDIT PROBLEMS IN THE ROAD SAFETY AUDIT HAVE BEEN DISCUSSED AND AGREED WITH THE OVERSEEING ORGANISATION.	
Name	Richard Bishop
Signed	[redacted]
Position	Associate Director
Organisation	SLR Consulting Ltd
Date	11.03.2024

ON BEHALF OF THE OVERSEEING ORGANISATION I CERTIFY THAT: THE RSA ACTIONS IDENTIFIED IN RESPONSE TO THE ROAD SAFETY AUDIT PROBLEMS IN THE ROAD SAFETY AUDIT HAVE BEEN DISCUSSED AND AGREED WITH THE DESIGN ORGANISATION; AND THE AGREED RSA ACTIONS WILL BE PROGRESSED.	
Name	Martin Seldon
Signed	[redacted]
Position	Assistant Spatial Planner
Organisation	National Highways
Date	12.03.2024

Appendix A

General Arrangement and RSA1 Response Plan

Notes:
1. This is not a construction drawing and is intended for illustrative purposes only.
2. White lining is indicative only.

Forward visibility splay for 120kph (295m)

247m Forward visibility within Highway

Forward visibility splay for 100kph (215m)

Exit visibility splay for 1 step below 120kph

RSA1 2.6: Highways boundary to be revised in TSL land to maintain 120kph visibility splay.

Forward visibility splay for 100kph

Exit visibility splay for 100kph

RSA1 2.9: Fencing to be provided to deter pedestrians from crossing the A43 North.

Inset A

RSA1 2.1: Grasscrete Maintenance Access to signal control equipment to be positioned in the central island.

RSA1 2.9: Fencing to be provided to deter pedestrians from crossing the A43 North.

RSA1 2.6: Vegetation to be cut back or removed, as agreed. An appropriate low-maintenance boundary treatment to be considered at detailed design. Tritax Symmetry (the Applicant) own the adjoining land. Vegetation for the whole junction to be cut-back as required to maintain visibility splays.

Exit visibility splay for 1 step below 100kph

Forward visibility splay 85kph

Inset B

RSA1 2.4: Additional secondary head provided to ensure good visibility for drivers in the east circulatory lanes 2 and 3 (NB very few drivers will wait on a red due to coordination).

Forward visibility splay for 120kph

Exit visibility splay for 1 step below 120kph

RSA1 2.6: Highways boundary to be revised in Albion land to maintain 100kph visibility splay.

Forward visibility

Key

- New channel
- Carriageway
- Footway Construction
- Verge
- New road markings
- New traffic signals
- Pedestrian guardrail / timber fencing
- Highway Extents
- Junction intervisibility zones & visibility splays
