September 2006

TREE SURVEY NOTES

This Tree Survey has been undertaken within the recommendations of British Standards 5837:2005 and current good arboricultural practice.

- Each tree has been numbered and, where instructed, for future identification on site, have been tagged using small durable metal or plastic tags.
- Due to variations of existing ground levels through the site, height dimensions are estimated and are given in metres. Accurate heights, measured with the aid of optical instruments can be provided where instructed.
- Trunk/stem diameters are measured in mm at 1.5 metres above ground level, or immediately above the root flare for multi-stemmed trees, using a standard measuring tape as defined by British Standards, unless otherwise stated.
- Estimated branch spread is taken in metres from the centre of the trunk, at the four cardinal points of a compass, to achieve an accurate representation of the crown shape which will be recorded on the tree survey plan.
- An assessment of a tree's age classification is made in terms of its maturity within the site's landscape and recorded thus:

Y	=	young trees
MA	=	middle aged trees
M	=	mature trees
OM	=	over-mature trees
V	=	veteran
- An assessment of a tree's physiological condition is to be made as: **good, fair, poor, dead**
- Data on the structural condition of the tree should be entered, e.g. **collapsing, leaning, and the presence of any decay or physical defect should be noted.**
- An assessment of a tree's future life expectancy is made as: **<10, 10-20, 20-40 or >40 years.**

Categorisation of Trees

The category for each tree is assessed using the recommendations of BS5837:2005. The assessment has not considered any site specific development proposals, but will have considered any changes on or off site which may have an effect on the conditions surrounding the surveyed trees.

The trees have been classified into one of the following categories (and one or more sub-categories [this will however not increase the value of the tree]) and are indicated on the associated drawings by colours as indicated.

Category R	Trees in such a condition that any value would be lost within 10 years or should be removed for reasons of sound arboricultural management	DARK RED
Category A	1 – Mainly arboricultural values Trees of high quality and value: in such a condition as to make a substantial contribution (40 years or more is recommended)	2 – Mainly landscape values Trees, groups or woodlands providing definite screening of views in and out of the site, or softening effect to the locality, or those of particular visual importance.
Category B	Trees of moderate quality and value, capable of making a significant contribution for in excess of 20 years.	Trees which might be included in the A category, but are downgraded due to impaired conditions/remediable defects.
Category C	Trees of low quality and value which might remain for a minimum of 10 years or young trees with stems of less than 150mm diameter.	Trees not qualifying in higher categories

Clients are advised that Tree Surveys are a basic data collection exercise and record of tree condition at the time of survey. It will identify any visible signs of ill-health or major defects, advising a further detailed investigation where appropriate. This will most often take the form of a request for either “full ground level inspection” or “climbing inspection required”. There may also be a further reference to the need for “decay detection equipment” to aid diagnosis. A tree survey does not include a comprehensive schedule or specification of remedial tree works, but may contain a guide to the work which might be undertaken by a prudent tree owner, purely for reasons of health and safety.

A Tree Survey should not be confused with a Tree Inspection or Arboricultural Implication Assessment, which are totally separate exercises.

TREE SURVEY SCHEDULE

CBA6401

Client: Terence O'Rourke

Consultant/ Surveyor: Stefan Rose *BSc.Hons, AATech.Cert*
Alex Monk *NCH Arb, PHM*
Graham Sears *ND.Arb*

Site: Whitelands Farm, Bicester

Date: 18th November 2005
15th September 2006

Tagged: No

Weather: Clear sky, light winds, frosty

Notes:

1. Because of ivy smothering; dense vegetation, or trees located off-site with no access, it was only possible to estimate the diameter of the following tree/s: 14, 36, 57, 79, 82, 84, 88, 89, 95, 148, 158, 160 and 162
2. The estimated remaining contribution in years and the tree grading category have been calculated for the current situation and may alter where further investigation works are advised.
3. Tree Groups and hedges have been assessed with estimated and averaged data.

Tree No	Species	H't (m)	Single/Multi-stemmed (\$ or MS)	Stem Diam (mm)	Branch Spread (m)	H't of Crown AGL (m)	Age	Physical Condition	Structural Condition	Estimated remaining Contr. (Yrs)	Cat

SCHEDULE OF RECOMMENDED TREE WORKS

Client: Terence O'Rourke

Site: Whitelands Farm, Bicester

Date: November 2005

No	Species	Recommended Works
1	Flowering Cherry	• None required at time of survey
2	Field Maple	• None required at time of survey
3	Cherry	• None required at time of survey
4	Horse Chestnut	• None required at time of survey
5	Horse Chestnut	• None required at time of survey

No	Species	Recommended Works
6	Horse Chestnut	• None required at time of survey
7	Horse Chestnut	• None required at time of survey
8	Horse Chestnut	• None required at time of survey
9	Horse Chestnut	• None required at time of survey
10	Horse Chestnut	• None required at time of survey
11	Common Beech	• Advise removal
12	Horse Chestnut	• None required at time of survey
13	Chinese Lantern Tree	• None required at time of survey
14	Common Yew	• None required at time of survey
15	Common Walnut	• None required at time of survey
16	Magnolia	• None required at time of survey
17	Leyland Cypress	• None required at time of survey
18	Common Walnut	• None required at time of survey

No	Species	Recommended Works
19	Common Walnut	• None required at time of survey
20	London Plane	• Advise removal
21	Pedunculate Oak	• None required at time of survey
22	Pedunculate Oak	• None required at time of survey
23	Horse Chestnut	• None required at time of survey
24	London Plane	• None required at time of survey
25	Horse Chestnut	• None required at time of survey
26	Horse Chestnut	• None required at time of survey
27	Horse Chestnut	• None required at time of survey
28	Common Ash	• Remove major storm damage
29	Crack Willow	• Advise removal
30	Pedunculate Oak	• Remove major deadwood and stubs from trunk and crown area
31	Pedunculate Oak	• None required at time of survey
32	Common Ash	• Remove major deadwood and stubs from trunk and crown area

No	Species	Recommended Works
33	Pedunculate Oak	• None required at time of survey
34	Pedunculate Oak	• None required at time of survey
35	Dead tree	• Advise removal
36	Common Larch	• Clear brambles from base and re-survey
37	Pedunculate Oak	• Remove major deadwood and stubs from trunk and crown area
38	Pedunculate Oak	• None required at time of survey
39	Field Maple	• Advise removal
40	Common Ash	• Remove major deadwood and stubs from trunk and crown area
41	Crack Willow	• Remove storm damage, sever and remove ivy and re-survey
42	Pedunculate Oak	• Remove major deadwood and stubs from trunk and crown area
43	Wild Cherry	• None required at time of survey
44	Pedunculate Oak	• Remove major deadwood and stubs from trunk and crown area
45	Pedunculate Oak	• None required at time of survey
46	Pedunculate Oak	• None required at time of survey

No	Species	Recommended Works
47	Pedunculate Oak	• None required at time of survey
48	Common Ash	• Advise removal
49	Pedunculate Oak	• None required at time of survey
50	Pedunculate Oak	• None required at time of survey
51	Pedunculate Oak	• None required at time of survey
52	Pedunculate Oak	• None required at time of survey
53	Pedunculate Oak	• Remove major deadwood and stubs from trunk and crown area
54	Pedunculate Oak	• None required at time of survey
55	Pedunculate Oak	• Remove major deadwood and stubs from trunk and crown area
56	Common Ash	• Remove major deadwood and stubs from trunk and crown area
57	Common Ash	• Advise removal
58	Common Sycamore	• None required at time of survey
59	Common Sycamore	• None required at time of survey
60	Common Ash	• None required at time of survey

No	Species	Recommended Works
61	Common Sycamore	• None required at time of survey
62	Common Beech	• Remove storm damage
63	Common Ash	• None required at time of survey
64	Common Ash	• None required at time of survey
65	Common Sycamore	• None required at time of survey
66	Common Sycamore	• Sever ivy at ground level and remove a 300mm length from each ivy stem above this point to prevent wound healing and further growth
67	Common Sycamore	• None required at time of survey
68	Common Sycamore	• None required at time of survey
69	Common Sycamore	• None required at time of survey
70	Common Sycamore	• None required at time of survey
71	Common Sycamore	• None required at time of survey
72	Common Sycamore	• None required at time of survey
73	Aspen	• Remove major deadwood and stubs from trunk and crown area
74	Aspen	• None required at time of survey

No	Species	Recommended Works
75	Horse Chestnut	• None required at time of survey
76	Common Ash	• None required at time of survey
77	Common Ash	• None required at time of survey
78	Common Ash	• None required at time of survey
79	Common Lime	• None required at time of survey
80	Aspen	• None required at time of survey
81	Common Ash	• Advise removal
82	Common Ash	• None required at time of survey
83	Common Ash	• None required at time of survey
84	Common Sycamore	• None required at time of survey
85	Field Maple	• None required at time of survey
86	Field Maple	• None required at time of survey
87	Field Maple	• None required at time of survey
88	Crab Apple	• Sever ivy at ground level and remove a 300mm length from each ivy stem above this point to prevent wound healing and further growth

No	Species	Recommended Works
89	Common Ash	<ul style="list-style-type: none"> • Re-coppice to 300mm above ground level
90	Common Ash	<ul style="list-style-type: none"> • None required at time of survey
91	Common Hawthorn	<ul style="list-style-type: none"> • None required at time of survey
92	Common Hornbeam	<ul style="list-style-type: none"> • None required at time of survey
93	Aspen	<ul style="list-style-type: none"> • Remove major deadwood and stubs from trunk and crown area
94	Aspen	<ul style="list-style-type: none"> • Remove major deadwood and stubs from trunk and crown area

CBA6401

TREE ROOT PROTECTION AREA SCHEDULE

Client: Terence O'Rourke

Site: Whitelands Farm, Bicester

Date: November 2005
September 2006

Notes:

1. This is an assessment of the Root Protection Area (RPA) required, based on the individual tree data collected and Table 2 of BS5837:2005.
2. At this juncture this document is for your sole guidance and ongoing discussions purposes only and is not intended for general circulation, as it assumes that all but the 'R' trees will be retained, which clearly may not be the case.
3. The calculated RPA has been capped to 707m² in accordance with Section 5.2.3 of BS5837:2005 for all trees with a stem diameter greater than 1250mm.

Tree Ref No.	Species	Category	Single/Multi-Stemmed (S or MS)	Stem Diameter (mm)	Initial Linear Root Protection Distance (Radius m)	Root Protection Area (m ²)
1	Flowering Cherry	C1	S	220	2.64	21.90
2	Field Maple	C1	MS	280	2.80	24.63
3	Cherry	C1	S	340	4.08	52.30
4	Horse Chestnut	B1	S	1000	12.00	452.45
