

DEMOLITION ARISING

Cubic metres

Demolition material from buildings:	32,054
Demolition material from roads	34,219
Demolition material from HASs	0
Demolition material from runway	<u>0</u>
	64,273

DEMOLITION MATERIAL REQUIRED ON SITE

Built Areas	45,127
New Infrastructure	17,923
POL Tanks	<u>131,927</u>
	194,977

Demolition material required on site will be used for fill and sub base material for new buildings and roads. POL material is estimated from the volumes of the existing tanks and pipelines within the site having regard to the fact that these are currently filled with water. It is necessary to fill the POL with material in order to prevent any build up of contaminant gasses.

The net requirement for fill amounts to 194,977 minus 64,273; a net import of about 130,000 cubic metres.
