Date: 03 July 2012

Dear Gill,

Re: Results of sampling from borehole BH225 and BH226 Heyford Park.

This letter is being issued as an addendum to the report entitled Heyford Park – Flying Field, Hydrogeological Characterisation and Groundwater Quality Assessment, Report Reference EED10658-109.9.3.1_FA. Following your review of the report you requested that two additional boreholes be drilled to the south and south east of the Fuel Entry Compound (FEC) and POL21 A, B & C (BH225 and BH226). The boreholes were installed to help confirm groundwater flow direction in this area and to determine the impact of Total Petroleum Hydrocarbon (TPH) contaminants detected in BH222 and BH223 are having on the down gradient water body.

The characterisation of the hydrological and contaminative status of the Flying Field was undertaken to address Conditions 33 and 34 as listed in Decision Notice APP/C3105/A/08/2080594, dated 11 January 2010 and as such this letter should be also be considered in relation to these Conditions.

The locations of BH225 and BH226 were agreed with you via email on 02-02-2012 and on the basis of monitored groundwater levels. As part of additional intrusive works three samples were collected from each of the new boreholes between 03 March and 05 April 2012. The Heyford Park Drain was also sampled as part of the additional work, as you requested. This was sampled on two occasions on the third visit the drain was found to be dry. Installation and sampling of the boreholes was carried concurrently with the intrusive investigation that was carried out in the New Settlement Area of Heyford as reported in Waterman Report Reference EED10658-13.2.1.

A plan showing the locations of boreholes BH225 and BH226 and the Heyford Park drain are shown in Figure A1, whilst borehole logs for BH225 and BH226 are appended to this letter. Table1 shows groundwater levels in boreholes BH225 and BH226.

Table 1: Groundwater level monitoring data in borehole BH225 and BH226.

Borehole	Depth m (mAOD) 07-03-2012	Depth m (mAOD) 24-03-2011	Depth m (mAOD) 04-04-2012	Average
BH225	2.05 (120.88)	2.2 (120.73)	2.27 (120.66)	120.75
BH226	2.99 (121.27)	3.84 (120.42)	4.67 (119.56)	120.43

Groundwater level monitoring results from boreholes drilled in the New Settlement Area and relevant boreholes installed on the Flying Field were used to generate the Surfer® plot depicting groundwater flow direction in the area. The surfer plot is presented in Figure A2, appended to this letter. It can be seen from the surfer plot that groundwater from the vicinity of the boreholes BH223 and BH224 is flowing in a southerly direction and therefore borehole BH201, BH225, BH226 are considered to be

down groundwater gradient from these boreholes, the FEC and POL21. Boreholes BHNSA21, BHNSA17, BHNSA18, BHYNSA19 and BHNSA20 are also located down groundwater gradient of the area. It should be noted however that boreholes BHNSA21, BHNSA18 and BHNSA19 were positioned to target buried fuel storage tanks. The results of the TPH analysis detected in samples collected from the above mentioned boreholes and the Heyford Park Drain are presented in Table 2. Extracts from the lab certificates containing the results of analysis for samples collected from BH225 and BH226 are appended to this letter.

Table 2: TPH concentrations detected in boreholes targeting the Fuel Entry Compound and boreholes down groundwater gradient.

Borehole	07 March 2012	23 March 2012	04 April 2012	Investigation Phase
BH225	<0.01	<0.01	0.034	2012 Investigation of the NSA
BH226	0.014	<0.01	<0.01	2012 Investigation of the NSA
HDP*	<0.01	<0.01	Dry	2012 Investigation of the NSA
Borehole	June 2011	July 2011	August 2011

BHNSA19	0.01	<0.01	0.03	2012 Investigation of the NSA
BHNSA20	<0.01	<0.01	<0.01	2012 Investigation of the NSA
BHNSA21	0.11	0.11	0.05	2012 Investigation of the NSA

Concentrations of TPH are provided in mg/l

*Heyford Park Drain.

The results of analysis show that for two of the three samples collected from borehole BH225 and BH226, concentrations of TPH were not reported above the limits of detection and the United Kingdom Water Industry Research (UKWIR) threshold concentration of 0.01mg/kg. Only minor exceedances were noted on the other sampling events. The exceedances recorded are consistent of results recorded for groundwater samples collected form the flying Field i.e. marginal and sporadic in nature.

The results of analysis from other boreholes down groundwater gradient show a marginal impact with the exception of BHNSA21 which was specifically positioned to target a buried fuel storage tank at this location and cannot be considered a reflection of the contamination detected in BH223 and BH224.

Both boreholes BH201 and BHNSA20 which were advanced close to the south boundary of the site and the Heyford Ford Park Drain which issues close of the site boundary show that groundwater leaving the site in this area is relatively good and is reflective of general groundwater quality across much of Heyford Park.

Based on the results of the analysis, in particular the results from BH225 and BH226, it is considered the contamination detected in BH223 and BH224 is not significantly impacting groundwater quality down gradient of the fuel entry compound and POL21. Results are considered consistent with the background quality of groundwater underlying Heyford Park and/or the Flying Field.

Also, as you are aware, since the time the samples were collected from BH223 and BH224 significant remedial work has taken place on the Flying Field which involved emptying, cleaning and filling of 99 tanks and the cleaning and foam filling of 23km of pipeline, thereby significantly reducing a potential residual risk to groundwater. A detailed description of these works is provided in Contract Completion Report, reference 1246DOR.

In view of the results of analysis from groundwater samples discussed above and the remedial works already undertaken, it is considered unwarranted to complete further remedial works or investigation in the vicinity of the FEC and POL21.

It is also worth noting that in report EED10658-109.9.3.1 it is proposed that quarterly sampling of specific boreholes including BH223, BH224, 225 and 226 will take place for a period of 2 years. This process has yet to begin however will obviously provide additional information regarding the groundwater quality in the vicinity of the FEC and POL 21.

We therefore ask that you consider the findings detailed in this letter in tandem with report EED10658-9.3.1 sufficient to fully discharge Condition 33 of Decision Notice APP/C3105/A/08/2080594.

If you have any further questions regarding this matter please do not hesitate to contact me.

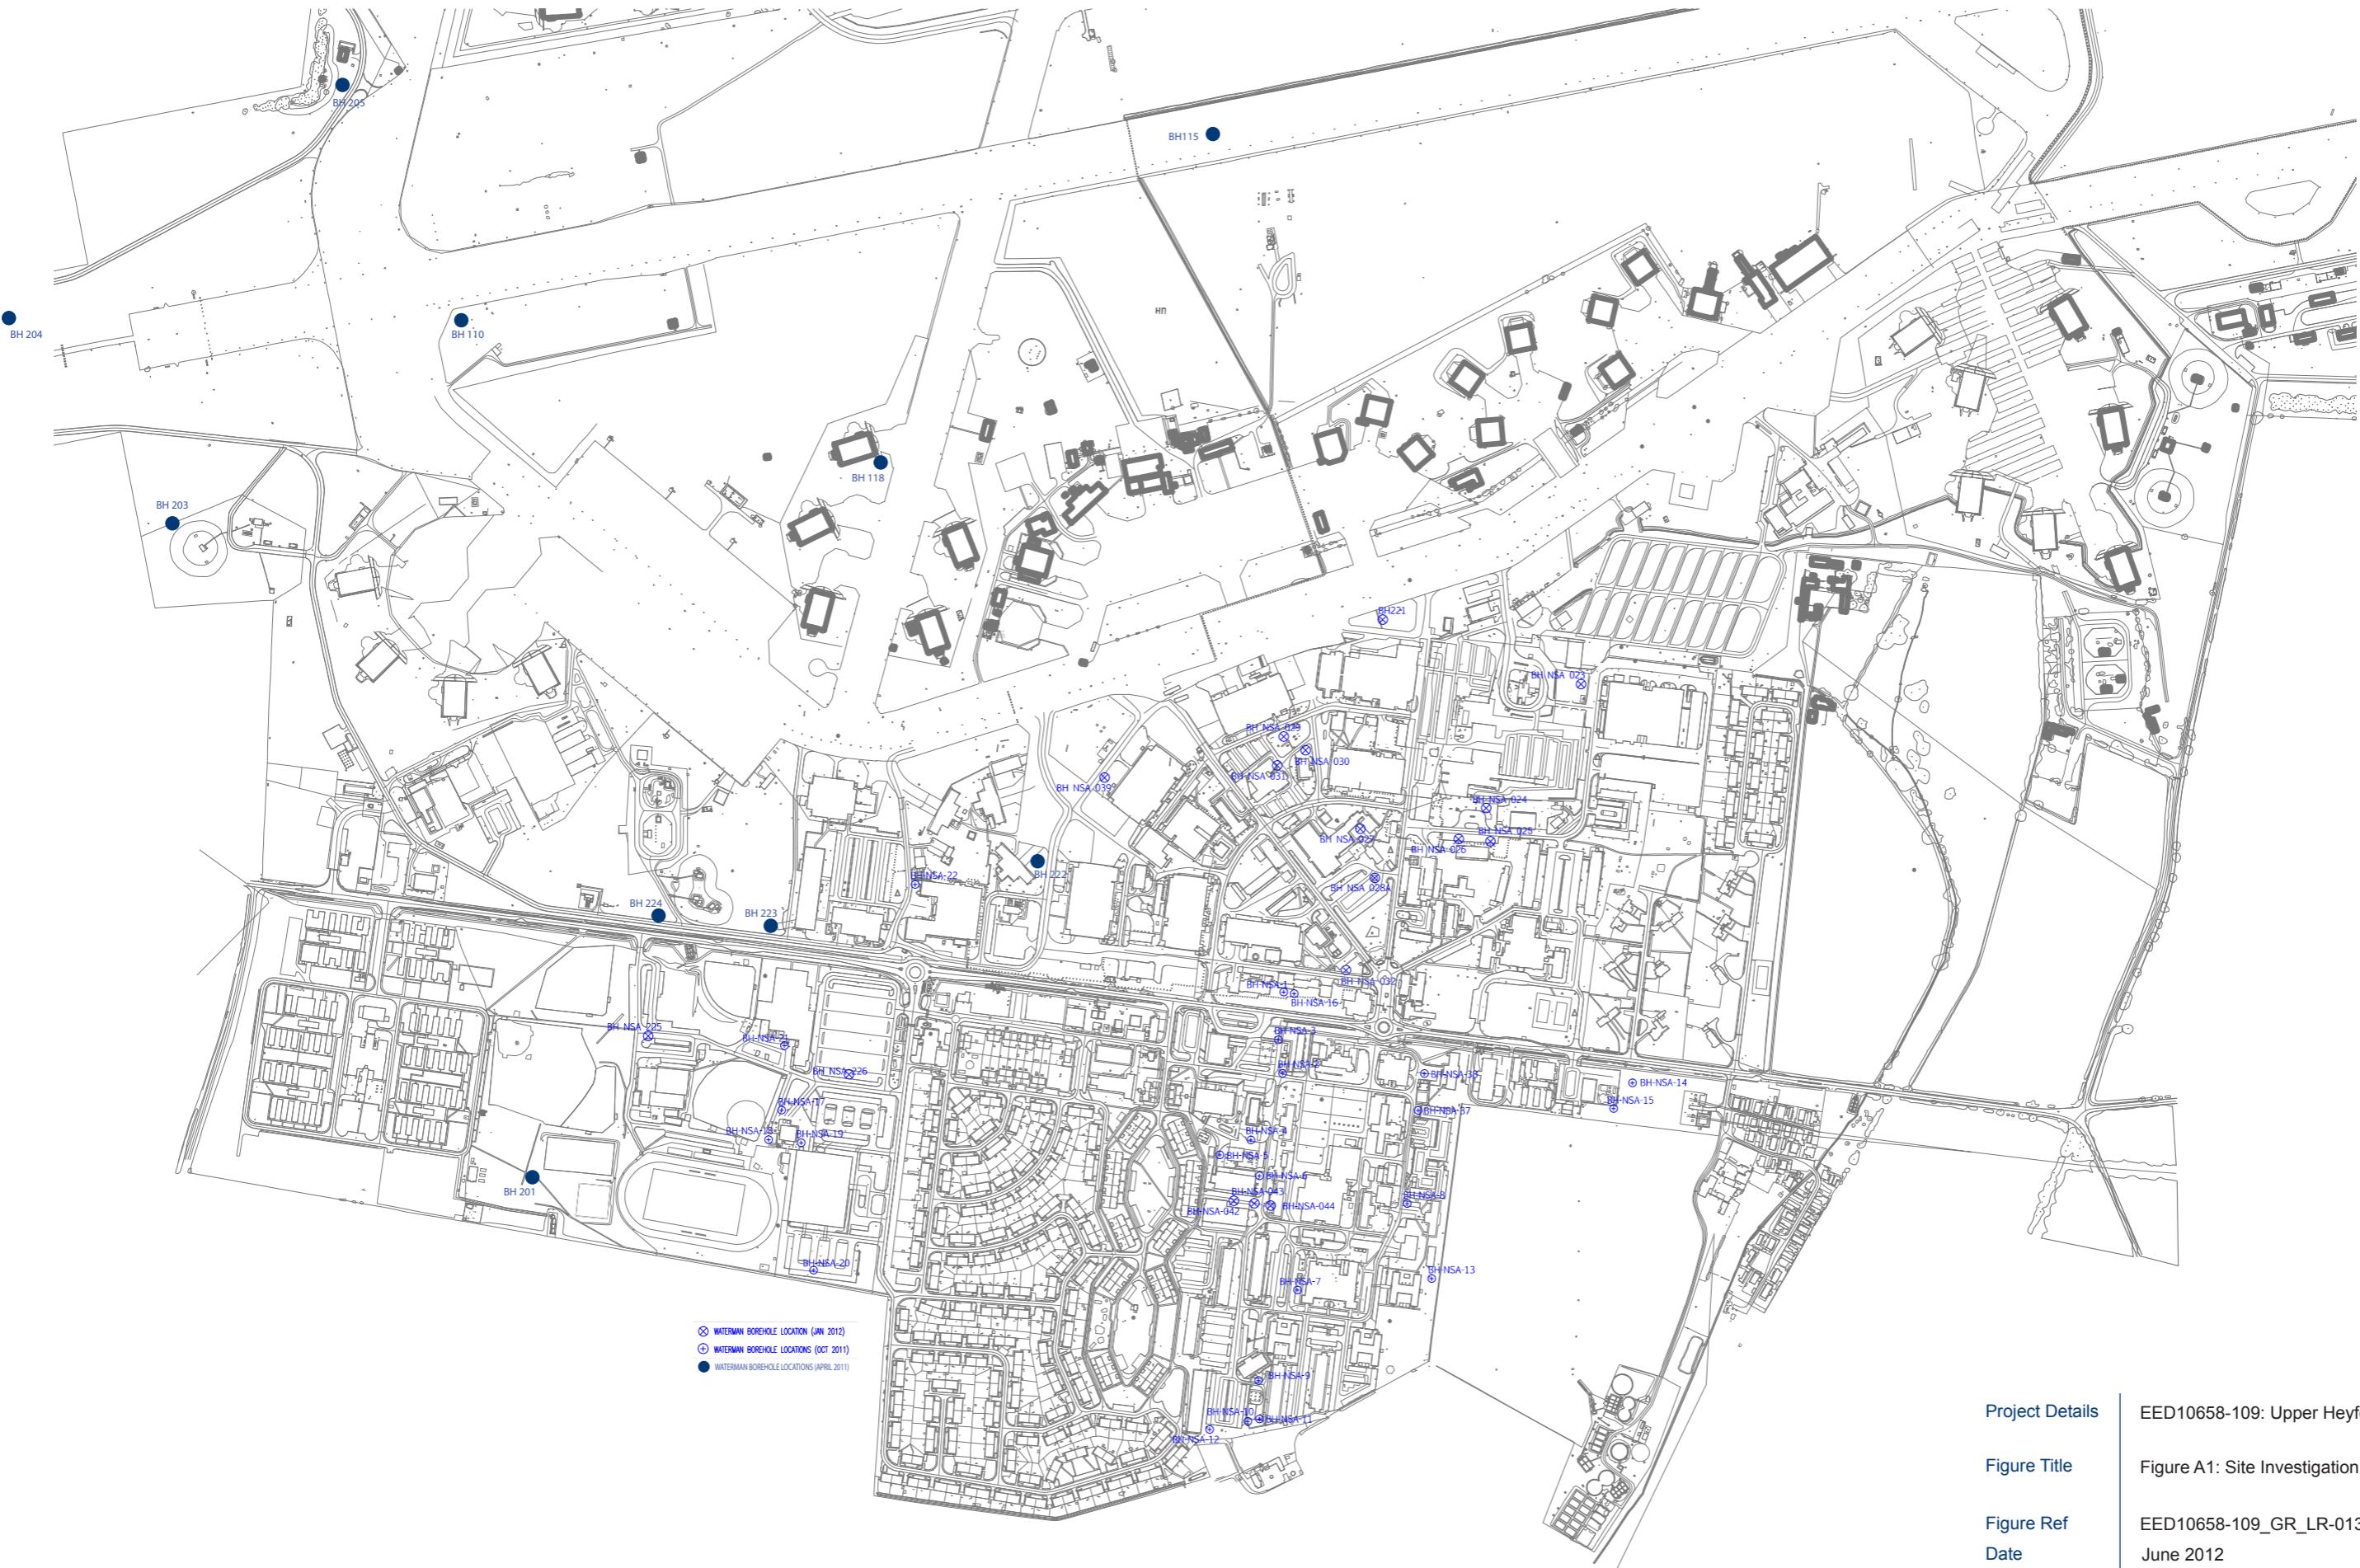

Regards

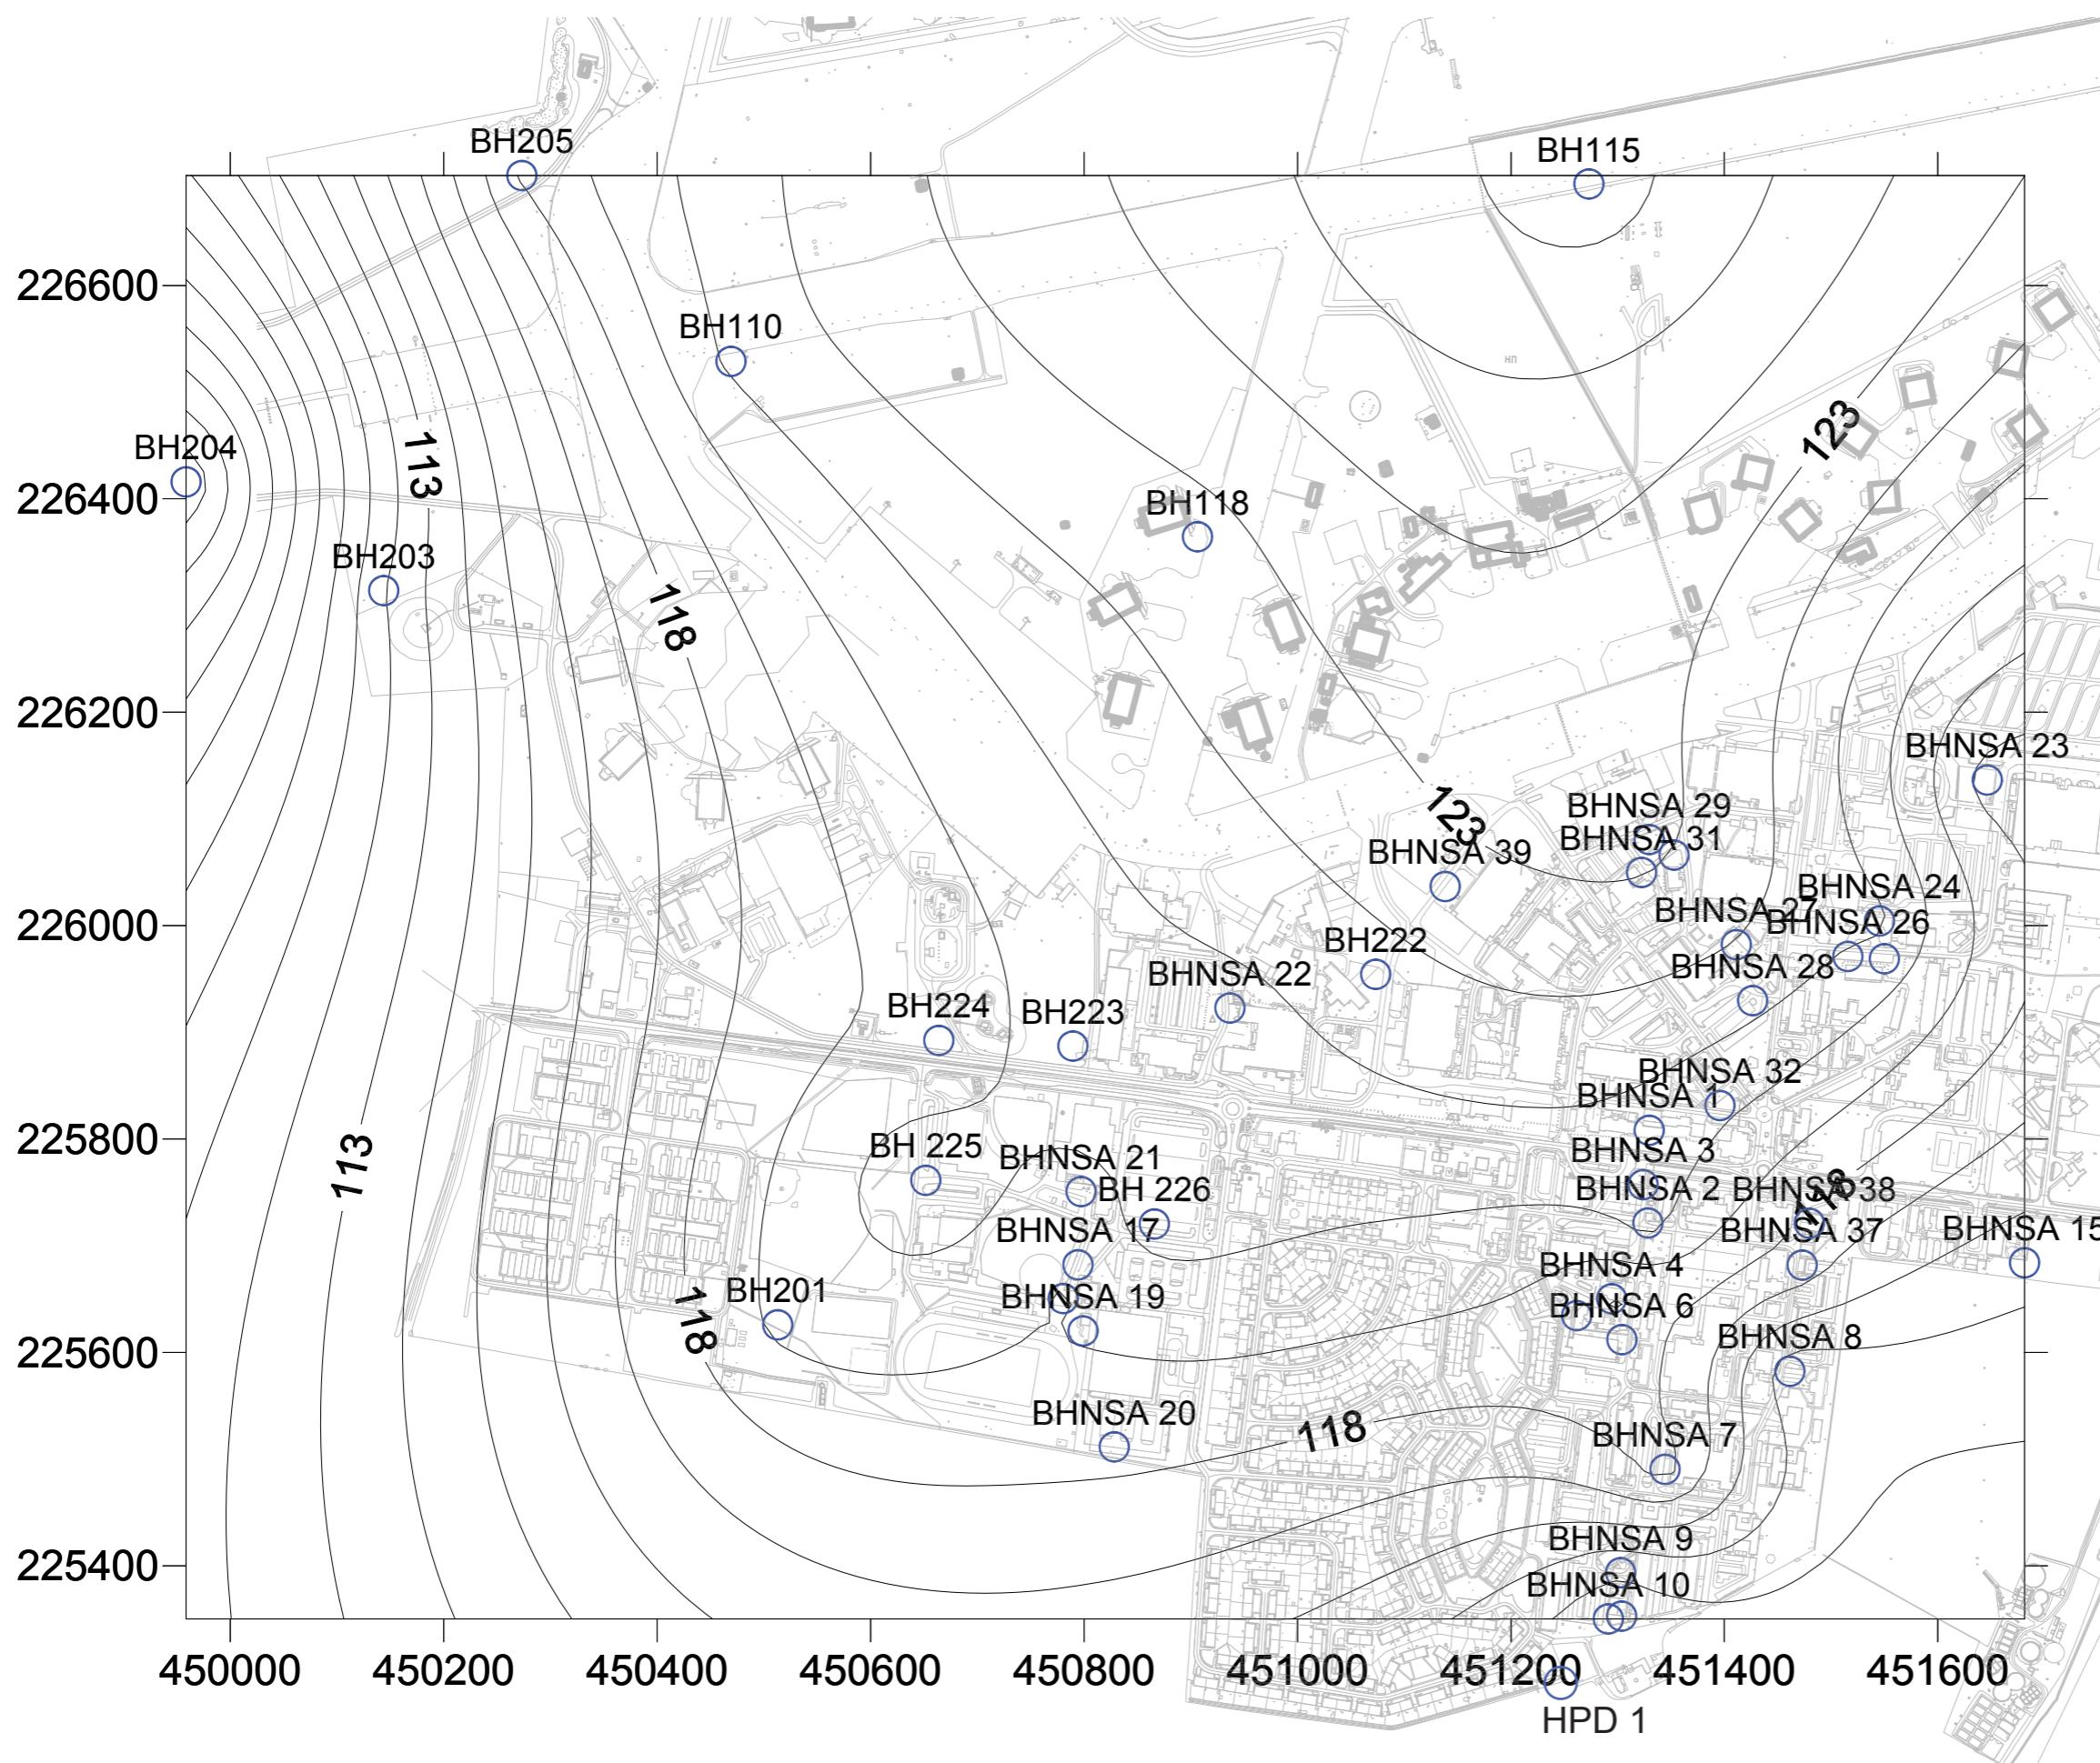

Freddie Alcock
Senior Consultant
For and on Behalf of Waterman, Energy Environment & Design.

Note: Benzene elutes between C6 and C7, toluene elutes between C7 and C8, ethyl benzene and the xylenes elute between C8 and C9.

Each BTEX compound is deducted from the appropriate band to give the aliphatic fractions, however aromatic compounds may still be contributing to these fractions

ALIPHATIC / AROMATIC FRACTION BY GC/FID

Customer and Site Details: Waterman EED : Upper Heyford
Job Number: W13_4281 **Separation:** Silica gel
QC Batch Number: 120252 **Eluents:** Hexane, DCM
Directory: D:\TES\DATA\Y2012\040512TPH_GC15\040512 2012-04-05 08-26-13\075B3401.D
Method: Bottle

Matrix: Water
Date Booked in: 27-Mar-12
Date Extracted: 03-Apr-12
Date Analysed: 05-Apr-12, 17:49:34

Gasoline Range Organics (BTEX and Aliphatic Carbon Ranges)

Customer and Site Details: Waterman EED : Upper Heyford
Job Number: W13_4836
Directory: D:\TES\DATA\Y2012\0416HSA_GC09\041612C 2012-04-17 12-52-29\107F2701.D
Method: Headspace GCFID

Matrix: Water
Date Booked in: 10-Apr-12
Date extracted: 16-Apr-12
Date Analysed: 17-Apr-12, 21:15:00

* Sample data with an asterisk are not UKAS accredited.

Note: Benzene elutes between C6 and C7, toluene elutes between C7 and C8, ethyl benzene and the xylenes elute between C8 and C9.

Each BTEX compound is deducted from the appropriate band to give the aliphatic fractions, however aromatic compounds may still be contributing to these fractions
