Comment for planning application 21/03452/TEL56

Application Number	21/03452/TEL56
Location	Street Record Station Road Kirtlington
Proposal	Proposed 15.0m Phase 8 Monopole C/W wrapround Cabinet at base and associated ancillary works.
Case Officer	John Cosgrove
Organisation Name	Amanda Kelly
Address	1 South End Cottages,Bletchington Road,Kirtlington,Kidlington,OX5 3HF
Type of Comment	Objection
Type	neighbour
Comments	<p>I would like to put forward my objection to this proposed 5g mast in the village of Kirtlington. I understand that we need technology but not to the detriment of rural areas. It is not like we need google maps wandering around the village trying to find the nearest restaurant! The 50 ft 5g mast is not something that is in keeping with village environment and should be located further away from housing. The mast is large and intrusive and would be an eyesore to anyone entering and leaving the village. I understand moving the mast further away from housing may be at an extra cost to the telecommunication company, but I am sure they will make a lot of money from their mast and recuperate their initial layout! My points of objection are as follows. It is located within the Kirtlington conservation area. A conservation area is an area with special architectural or historical interest. A 5g mast would certainly not fit in here. It will be visible from housing located in the conservation area. As conservation area residents we go to a lot of expense to keep our houses looking a certain way with strict conditions to adhere to. It would make a mockery of the conservation system if this was allowed to go ahead in this historical village. It is far too close to residential housing (which I notice is why the applicant has turned down various other locations within the village). For a lot of houses, it will be the first thing seen when opening bedroom windows. I am not sure if there is lighting on the mast, but I am guessing there will be. The village does not have street lighting in this area, or most of the village for that matter. The application says that it will blend in with street furniture? What street furniture? One very old small wooden post? The health impacts of are unknown of a mast like this in close proximity to housing. Disturbance from pulsing waves of the antenna for those residents nearest to it. I find it odd that we have notices all around the village for someone needing to cut down a tree or have patio doors fitted in their property. Yet we get NO notification for a 50ft 5g mast. It is astounding! I implore the council to reject this application on the above grounds. So many residents will be affected by this. A lot of whom have not been informed or notified by the council.</p>

Comments	<input type="text" value="We object to the proposed 5G mast on the following grounds. The location within the village is hugely detrimental to the area, being too close to residential property and a conservation area. We are very proud of the villages efforts to encourage wildlife and create more natural spaces within the village. These have been achieved as a community with a collective spirit to improve our environment and this mast goes against every principal that we hold to that. A number of families including ourselves walk to school past the proposed location and we don't wish to see a phone mast on our route. Please reconsider this proposal and take highly into account the natural spaces within and around villages and communities because they are valuable beyond measure. Yours sincerely Victoria Borondo"/>

Comments	<input type="text" value="Appreciating that improved communication would be a good thing this location, within the Conservation Area, is entirely unsuitable as it is a very prominent position which will be in view from many houses and on driving through the village. The application refers to telegraph poles and street furniture in the vicinity but even the telegraph poles are less than half the height of the proposed mast. Other locations that are shown to have been considered are also on the main road or within housing areas. Surely a more suitable location can be found."/>

Comments	<input type="text" value="This is an inappropriate application for a significant 50m structure to be cited within a conservation area being close to residential properties. Not only will it have a visual impact but likely to affect the value of properties to adjacent homes. The development is on a busy junction which could lead to visual impairment. I note there are two separate applications for what is clearly one development. The applications are inaccurate with regards to the description of the surroundings and it's placement. There are no telegraph poles, pavements or brick walls as cited in the application. It is not in keeping with the conservation area. No application notice has been displayed."/>

Comments	<input type="text" value="Completely inappropriate proposed location. This is a conservation area and a main thoroughfare of a historical village. A mast and the associated cabinets at this location would be an entirely avoidable imposing eyesore to all residents. This should be moved away from such an obvious residential area and not proposed in a conservation area such as this that should be preserved. There are also very minimal benefits to placing a 5G mast and cabinets in this location specifically and the village in general and any minor benefits are unlikely to apply to the majority of residents locally. These very minor benefits are heavily outweighed by the negatives and the detrimental impact to the village of placing a 15m mast at this location and the proposal should be rejected."/>

Comments	<input type="text" value="I strongly object to this planning request and its second associated planning request. The objections should be taken together as a whole for the two submissions for the 5G mast at this site. The submission for the proposed mast and associated cabinets is misleading, there are no large trees or existing street furniture that this would blend in with at this location, it would dwarf everything. It would also sit in front of a carefully preserved and recently repaired historic Cotswold dry stone wall and not a 'brick wall' that they claim in the application. The mast would be completely out of keeping with the rest of the village and the very minor existing street scene. It would stick out like a sore thumb surrounded on all sides by residents who would be forced to look at it every day, it would also be visible to all on entry and exit of the village, forever blighting this historical village. Not to mention the proposed location is a conservation area and placing this here would be incredibly damaging to the preservation of the area. The installation of these masts should not be done at the destruction of our preserved rural areas especially when there are plenty of alternative locations that could be used. This should be moved to a location that would be less obvious and far less impactful on the majority of residents than this. There has also been no consultation with village residents on this which is incredibly disrespectful and demonstrates a lack of care by CK Hutchinson to work to install these masts in more appropriate and agreeable locations. They have clearly proposed this location as it is cheapest for them, with complete disregard for the significant negative long term impact that the installation of a 15m monstrosity at this location would have on local residents and the village as a whole and the destruction it would cause to a well preserved conservation area. Any one who has ever visited the village would recognise that the proposed location makes no sense for this installation. The submission for planning permission at this location should be firmly rejected."/>

Comments	<input type="text" value="I am deeply concerned about the proposal for a 5G mast to be located in a residential area next to so many houses. The 15m height will dwarf the surroundings, placed in a conservation area with houses dating back to the 16th century it will be out of place and an eyesore. It's prominent spot in such an historic village is poorly planned and I am sure numerous other sites would be better considered. I am sure the council has an obligation to keep the historic nature of this village and conserve as much as is possible. This planning application seems at odds with this. It will obstruct views and ruin the landscape. I have issue with this planning application process as well, I live about 10 metres away from this mast and I have received no correspondence on this proposal or seen any letters near the proposed site. I am concerned about the handling of this planning application, given that my house will overlook this site, as our other residents. I have attached a photo of the proposed site. This dates back hundreds of years and I think highlights how the historic nature of this area of kirtlington would be ruined forever by this planning proposal."/>

Comment for planning application 21/03452/TEL56

Application Number	21/03452/TEL56
Location	Street Record Station Road Kirtlington
Proposal	Proposed 15.0m Phase 8 Monopole C/W wrapround Cabinet at base and associated ancillary works.
Case Officer	John Cosgrove
Organisation Name	Helen Macbeth
Address	4 South End Cottages,Bletchington Road,Kirtlington,Kidlington,OX5 3HF
Type of Comment	Objection
Type	neighbour
Comments	<p>Strong Objection to Planning Application 21/03452/TEL56 I argue that a 5G mast should not be sited at all near residences. This view has supported arguments for refusal of a 5G mast elsewhere and proximity to residential housing is even mentioned in this SSSI as reason against some options. As scientific discussions on distance and longer-term effects remain real and unresolved (see points made below), the proximity issue should preclude a 5G mast from being within a village. The proposed site is not only within Kirtlington's village envelope, with residences all around it, but it is within the CONSERVATION AREA of this old stone Oxfordshire village. The exact position proposed for mast with wrap-around cabinet, plus 3 other large cabinets, plus paved area, would have a totally inappropriate visual effect soon after entering this traditional rural village. Seen at ground level, today that site has green verge around a junction where two minor roads join the main road. Verge on northwest side of road is a wildflower area. For those entering the village, the current view is of old stone buildings in several directions and traditional stone walls seen across green verge and, in season, wildflowers. It is a very traditional village scene. The 15 metre height of the mast with structure at top, even without any light, will also be overwhelming and visible from several angles further away. If such a mast is to be accepted at all, the Council should require it to be sited outside the village envelope, and away from residences. Connectivity is understood, but costs of additional cabling are not a planning matter, but a cost to the firm which it would recoup with later profits from transmissions via the mast. The extra length of optical-fibre and other cabling needed to site the mast outside of the village would have minimal if any effect on its connectivity. From the limited information given, plus the sites considered in the SSSI and turned down, one gains some idea of the radii of coverage desired for the proposed mast, and so, because our village is linear, coverage can be presumed to be equally good or even better from several sites not far outside of the village. Again, cost issues are not a planning matter. Scientific papers on radiofrequency radiation/health have regularly drawn attention to specific risks to human health and other life near such masts, including a criticism of how the WHO reassurances on the matter were reached. Please note that the E.U.'s SCENIHR report on potential health effects of exposure ends with the warning statement 'Further research should be conducted, particularly as pertains to long term exposure and potential risks of exposure to multiple sources.' The point about multiple sources is noted, as that makes it a matter of accumulation; so, the risks from this mast should not be added within a village. A mast once erected is permanent and today very young children live within short radii of this proposed site. If the benefits from the progress of 5G communication technology cannot wait for the 'further research' recommended by the SCENIHR, then the site for this 5G mast should be outside of the village envelope, away from all homes. As some serious scientific research papers support the view that there are health risks, the suggestion of harm cannot be neglected and at least one must conclude that the matter is unresolved, which is not proof of the negative. Instead consider, if one day such harm is found to have occurred, whom will the affected individuals or their families sue in the future? One cannot say that there have been no serious warnings of health issues. CDC should take note of all these points and its potential responsibility for any risk, and not allow a 5G mast on this site or anywhere within a village envelope.</p>

Subject: New comments for application 21/03452/TEL56

New comments have been received for application 21/03452/TEL56 at site address: Street Record Station Road Kirtlington

from John Moore

Address:
4 The Chestnuts, Kirtlington, Kidlington, OX5 3UB

Comment type:
Objection

Comments:
The choice of location of this mast on a roadside verge, in full view of large parts of the village and in a conservation area is inappropriate. We may need 5G but more effort should go into finding a more suitable location.

Comments	<input type="text" value="A 15m high, 5g telecoms mast within Kirtlington, on such an openly visible site as the one proposed, will be a complete monstrosity. It will be totally out of keeping with surroundings. When villagers have to comply with CONSERVATION AREA regulations within their own homes, it is no surprise to think they won't vehemently object to this eyesore. No amount of camouflage will hide it from villagers or passers by. Without mentioning health concerns, or dropping of house prices, we have a beautiful village and improved coverage for just some of the villagers is not adequate reason to allow this structure. I feel ill simply at the thought of this thing being erected in the only place I have ever called home. It's a huge NO from me."/>

Comments	<input type="text" value="I wish to object strongly to this application. My reasons for objecting to the proposed mast are as follows: 1. Any rural village would be a totally unsuitable location for a mast of this size. It could never blend into the local character of the village. The planned mast does not 'integrate with the existing built environment' as is required of such an application. 2. The proposed site is also in the designated conservation area of the village, so emphasizing its unsuitability in a domestic rural setting. This mast could never 'blend into the existing street scene' and it would be to the visual detriment of the surrounding area. 3. The mast is not needed in this location as the village itself is already very well connected with fast fibre broadband. 4. Such a mast would impact on the overall village in the landscape, as the church is the only tall building in the village. There are no existing vertical structures or street furniture approaching the height of the proposed mast in this location. Notably, there are no 'street lighting columns' here as the application claims, as there is no street lighting at all. 5. There must be several, far more suitable, alternative sites outside a village setting. Why plan to place any mast in a village setting? If the mast must be on a main road for access and/or if the particular elevation above sea level is an issue for its effective range: a. There are sections of the A4095 outside the village to the north which are on the same contour/height above sea level. b. Near-by sections of the A4260 are at a considerably greater height above sea level than the A4095 in this area."/>

Subject: New comments for application 21/03452/TEL56

New comments have been received for application 21/03452/TEL56 at site address: Street Record Station Road Kirtlington

from Jean Leeming [REDACTED]

Address:
20 Park Close, Kirtlington, Kidlington, OX5 3HR

Comment type:
Objection

Comments:

We live in a beautiful rural village, with plenty of wide open spaces for miles and miles around, who thought that putting such a structure so close to the village is a good idea? I note that the applicants are from Leeds and Reading - have they ever visited the village? or are they just thinking that any location will do and it is based on the least cost solution.

The idea of 5G would be welcome, particularly as the mobile coverage is sometime sketchy, but putting such an unsightly mast, so close to such a beautiful village is at best fanciful and at worst disrespectful.

I strongly object.

Comments	<input type="text" value="I wish to object to this application which seems to be being rushed through without allowing sufficient time for residents to voice their opinions. The siting of a 15m mast in this position in a conservation area is completely inappropriate and out of keeping with the village surroundings. I am particularly concerned that the application documents appear to be inaccurate, with the illustration (fig 2) showing an existing 1.5 m brick wall, with the mast and associated hardware adjacent to it. No such brick wall exists - the wall here is of Cotswold stone. I wonder, therefore, whether there are other errors or misleading information in the application. I urge you reject this application."/>

Comments	<input type="text" value="I object to this proposal for three main reasons: - the proposed site is within a conservation area, where such a substantial structure is completely out of place; - the mast is in the direct line of vision of a significant number of residents and will in no way blend into the background; and - the justification for having the mast at this site rather than in a less obtrusive position is not adequately explained. I am not opposed in principle to a 5G mast - though the need is somewhat doubtful given the quality of broadband in the village - but I do not think sufficient thought was given to the location. Further discussion with the whole village seems to me to be essential. Michael Shackleton"/>

Comment for planning application 21/03452/TEL56

Application Number	21/03452/TEL56
Location	Street Record Station Road Kirtlington
Proposal	Proposed 15.0m Phase 8 Monopole C/W wrapround Cabinet at base and associated ancillary works.
Case Officer	John Cosgrove
Organisation Name	Thaddaeus Ramos
Address	Dolphin Cottage,Bletchingdon Road,Kirtlington,Kidlington,OX5 3HF
Type of Comment	Objection
Type	neighbour
Comments	<p>To whom it may concern, I am writing to object to Planning Application 21/03350/TEL to erect a 5G mast on the entry to Kirtlington village on the verge next to the A4095 Oxford Road and Bletchingdon Road by CK Hutchinson Networks (UK) Ltd. I live with my family at Dolphin Cottage, Bletchingdon Road, OX5 3HF, 82 meters from the intended location. The objection is on two grounds: 1. The intended location is in a Conservation Area, please see attached document from our Home Buyers report in July 2020 (see attached, Kirtlington Conservation Area - Groundsure Homebuyers - 20.07.2020). Having reviewed the plans the height (15m) and material used would be visually obtrusive and out of keeping with the buildings surrounding it. As it will be placed on entrance to the village it is in a 'visually prominent position' and a reason South Oxfordshire District Council cited when rejecting a similar application in Swiss Farm (see link https://www.henleyherald.com/2021/10/15/5g-mast-refused-planning/). I note that this example was opposite and not in a Conservation Area. 2. The proximity to residents. I note that alternative locations in Kirtlington have been reviewed and rejected based on the 'proximity to residential housing'. The current location is in the middle of a residential area, with housing to the north, east, south and west of the 5G mast and dwellings within 10m of the planned site. Due to its height it will be visible from homes and there are also reports of noise pollution from masts, as well as unknown medical risks from radiation (see link, https://www.who.int/news-room/q-a-detail/radiation-5g-mobile-networks-and-health) that the location could expose residents to. With two young children, of 3 years and 9 months, I would like to avoid this uncertainty as research continues. For these reasons I object to the mast being built in this location and hope there is a more convenient site in a less prominent area of Kirtlington that can be considered. Your sincerely, Thaddaeus Ramos Resident at Dolphin Cottage, Bletchingdon Road, Kirtlington, OX5 3HF</p>

Planning Constraints

Visual and Cultural Designations

Conservation Areas

Conservation Areas exist to protect special architecture and historic interest in an area. It may mean that the property is located in or close to a beautiful or architecturally interesting place to live. There may be extra planning controls restricting some development. This particularly applies to developing the outside of the building and any trees at the property.

Type	<input type="text" value="neighbour"/>
Comments	<input type="text" value="The objection is not to having a mast erected in the village but an objection to the location. It is beyond belief that anyone would think it IS a suitable place to install a mast. It would be in a conservation area, ruining the view for the villagers close by and significantly ruining the approach into the village. It would be a total eyesore. It will not directly be in front of my house but would be awful to see on driving in and out of the village and completely unacceptable to anyone who cares about conservation areas. Please do not accept this application. It is a large village and there will be MANY more suitable, more 'hidden' locations to place a mast. I guess this is cheap and pure laziness or concern for the countryside."/>

Comments	<input type="text" value="As others, I welcome the prospect of better signals in the village and surrounding areas; however, I would have thought there could be found a more amenable site. If not, I am hopeful that the Planning Committee will impose a condition that the totally incongruous galvanized pole and (if applicable) cabinets are painted green to blend in with the rural surroundings, and perhaps desirable planting around for camouflage (Ref. National Planning Policy, Para. 113). It is difficult from internet inspection of the submission to ascertain sizes of the three cabinets, nor is the colour specifically depicted. As an observation, there are several inaccuracies in the paperwork, one of which is that the long wall behind the proposed site as shown on the plans submitted is brick whereas everything in Kirtlington is of stone. Please ensure that this rural location is preserved and enhanced as opposed to being ruined."/>

Comments	<p>We object to this planning application. A 15m 5G mast in a prominent position inside the Conservation area will detract and harm the character and appearance of Kirtlington Village. Kirtlington Conservation Area Appraisal September 2011 was developed to document and protect the special character and appearance of the Village, which can be dated back to early settlements in AD 945. The location of the 5G mast is within the Conservation area, and this particular site will be seen from many locations within the conservation area. Kirtlington's appeal and character includes protection from modern features such as street lighting as these are considered to blight the appearance of the village. Technology has its place, but should not be to the detriment of historical values. This is a brief moment in time when a 15m 5G mast is a solution to telecoms connection for some people but not all, and should not blight the landscape for decades against a backdrop of thousands of years of history. Technology will no doubt also find a solution to resolve these objections, or the operator can simply relocate the mast to a less obtrusive location. This application states that there are no other viable locations. This seems to conflict with the fact that the entire West side of the village lies outside the Conservation Area. In summary a 15m 5G mast in a prominent position inside the Conservation area will detract and harm the character and appearance of Kirtlington Village. Regards Alex & Clare</p>

Rickyard House
Kirtlington
OXFORD OX5 3HF

21st October '21

Dear Sirs

21/03452/TELSG
re: Planning Applications 21/03350/TEL

I should like to object most strongly to the planned application for a 15 metre mast & metal apparatus being installed just to the left of my drive.

It would be an enormous & completely out of place construction in a very prominent site, and, as I believe this is a conservation area, it could not be a less suitable position.

Traffic coming through Kirtlington on the A4095 would approach this Moustwits head on, as the road bends sharply to the right in the direction of Woodstock or sharply to the left onto the Bletchington Road.

At present the view is a pleasant, recently repaired, cold stone wall, with a view across the fields behind it.

A "mowpole and surrounding equipment" will hardly enhance this view.

I understand that there are also health issues from radiation. I am worried about this.

Yours faithfully,

[Redacted]

Comment for planning application 21/03452/TEL56

Application Number	21/03452/TEL56
Location	Street Record Station Road Kirtlington
Proposal	Proposed 15.0m Phase 8 Monopole C/W wrapround Cabinet at base and associated ancillary works.
Case Officer	John Cosgrove
Organisation Name	Gavin & Joanna Jones
Address	Rose Mount, Station Road, Kirtlington, Kidlington, OX5 3HE
Type of Comment	Objection
Type	neighbour
Comments	<p>We are writing to object to planning application number 21/03452/TEL56. Firstly, the proposed site for the mast is within the conservation area in the village. A conservation area is "an area of special architectural or historic interest, the character or appearance of which it is desirable to preserve or enhance". A 15m mast (and additional cabinets) is definitely not going to preserve or enhance the appearance of the village. The proposal is to site the mast against a recently renovated stone wall (not a brick wall as shown in the illustration) and the implication is that it will merge into the background. As there is nothing nearly as tall as the proposed mast already at the site, we think this is highly unlikely. There are trees nearby, but the proposed site appears to be between the trees so the mast will be clearly visible to anyone in the immediate vicinity and in the surrounding areas. Even at ground level it will be conspicuous as there is no street furniture to speak of in the area. Secondly, there are ongoing concerns regarding the safety of 5G technology. In 2011, the World Health Organization stated that radio-frequency radiation is "possibly carcinogenic to humans". So far, this does not appear to have been proven to be unfounded, indeed in February of this year, an article appeared in the British Medical Journal arguing that 5G rollout should be halted until more research has been conducted in to safety. Given that there are ten years between the two, it would appear that 5G safety has not yet been conclusively proved. The proposed site of the mast is extremely close to a number of houses. Surely, until their safety has been proven, these masts should not be sited near houses. We understand that 5G masts can be sited several kilometres apart in rural areas so we feel it would be more appropriate to site them between villages rather than within them. Thirdly, this application does appear to have been pushed very much under the radar. We live within the immediate vicinity of the proposed site, and have not been officially informed of the application either by letter or even by a public notice even though it states in the documentation that neighbours and the local community have been consulted. This is not standard procedure in a planning application. We found out about it through word of mouth, and it appears that many other villagers have had a similar experience. It would seem that the hope was that the application would be approved before anyone in the village was really aware of it. In conclusion, we strongly object to this planning application.</p>

Application Number	21/03452/TEL56
Location	Street Record Station Road Kirtlington
Proposal	Proposed 15.0m Phase 8 Monopole C/W wrapround Cabinet at base and associated ancillary works.
Case Officer	John Cosgrove
Organisation Name	Stephanie Hilborne
Address	Sunnyside, Troy Lane, Kirtlington, Kidlington, OX5 3HA
Type of Comment	Objection
Type	neighbour
Comments	<p>I object to this application for development within 50m of our house. In terms of process: 1. The Council has not informed me of this planning application or the separate application 21/03350/TEL for what is clearly the same single development. 2. The submission of two separate applications is cynical and I am surprised the Council has not merged them and also informed the residents directly affected. 3. I would welcome an explanation as to why a notice was not posted through my door given its obvious impact on all the properties near the junction. In terms of impact: 1. A 15m mast would be a blight on the appearance of our village and the surrounding landscape - therefore "visually intrusive" and "incongruous" 2. We recently bought a house in a Conservation Area and invested many tens of thousands of pounds on a mortgage - this is likely to reduce the value of our house. 3. The application is dishonest and the developer should be challenged for saying that: a. "The equipment is adjacent to tall vertical columns (telegraph pole)..... ..the combined street furniture allows the monopole to more easily blend into the street scene." A brief visit to the site would make it clear that this would not be the case at all with no high trees directly adjacent and telegraph poles being dwarfed. b. Their drawings shows a brick wall as background when in fact there is a newly restored beautiful dry stone wall against which these cabinets would sit - and be extremely ugly and disfiguring. c. They say "The proposed works are not to the visual detriment of the surrounding area (being suitably distant from sensitive receptors). The proposal would not result in demonstrable harm to the character of the immediate or wider area." The site is opposite some beautiful old cottages, is within sight of tens of houses and gardens, very close to our property and our neighbours and visible from houses along Bletchingdon Road. It would stand out for miles around and be ugly and intrusive ruining the attractive entrance to our village. d. The application does not show the true impact of how invasive this structure will be to the whole village. e. There is factually incorrect information including a drawing that includes a tree that doesn't exist and photos exclude the houses that exist all around it in direct line of the mast. This is one of two blatantly connected planning applications which I object to for all the above reasons and in summary: 1. The visual impact on this village and the Conservation Area would be very negative indeed - the wording in the application suggesting it is in keeping with the location was blatantly untrue 2. This is a rural junction with hedges and trees around it with a deep road verge opposite which we have sown with wildflower seed within the last year 3. The power usage for these masts is extremely high at a time when climate change mitigation has never been more urgent. 4. We do not want 5G coverage or need it given the broad band available in the village 5. The long term health impacts of these masts is as yet unknown.</p>

Type of Comment	Objection
Type	neighbour
Comments	<p>It is disappointing to see that two separate planning applications have been made, one for the tower and one for the base unit. The community was not made aware of EITHER application and, of course, having discovered the tower application, most remain unaware of this, the base unit application. Residents who have made one objection are therefore, by and large, unaware of the possible need to comment twice. I therefore urge you to ensure that objections made to the tower are applied equally to this application and vice versa as, clearly, the planning applications amount to different elements of the same technological construction. Otherwise, the number of objections to either plan will have effectively been diluted. Please see my objection to the tower, provided on the principle grounds that it is entirely unsuitable to position this dominant structure within the Kirtlington conservation area. I should add that this bulky apparatus will be positioned in front of an attractive, traditionally constructed and recently repaired dry stone wall. NOT a brick wall as indicated in the proposal. The apparatus is entirely unsympathetic to the surroundings and should not be built. The applicant claims to have considered alternative locations for the tower and equipment. Their preferred site just happens to be a location where construction costs will be minimised: a roadside location with straightforward access for construction vehicles and existing power infrastructure. No doubt these were key factors in selecting this particular location. If a 5G tower is deemed to be needed - which is highly questionable in a village with excellent, fibre-optic broadband / wi-fi - then alternative, potentially more costly locations must be considered. The enjoyment of our surroundings must be prioritised. I do find it astounding that the planners have not provided photographs such that residents can see what it all would all actually look like. This is not like a plan for a house where only an artist's impressions is available. The applicants must have a full specification for the apparatus including photographs. One can only assume - viewing other Three mobile 5G apparatus constructed elsewhere - that they realise that upon seeing such photographs residents would be horrified. Furthermore, a full technical specification for the equipment surely exists and yet the energy consumption of the apparatus has not been shared. Searches on the internet do not reveal the energy consumption for Three mobile 5G installations. However, there is information about other, comparable 5G masts, such as one by an alternative supplier, which is quoted as consuming: 11,577 W = 11.6KW (Note: this feels about right: something like 4 x 3 bar electric heaters). Running 24/7 365 that equates to: $24 \times 365 \times 11.6 = 101,616$ kWh The average UK house consumes 3,760 kWh per year (generally electricity plus gas). So, the example 5G base station and mast consumes the equivalent of: $101,616 / 3,760 = 27.03$ average UK homes. Or, put another way, if villagers take measures in line with government initiatives to reduce their household carbon footprint by 10% (not an easy task) the mast will offset the efforts of about 270 Kirtlington dwellings. Now these figures could be way off because we have not been informed of the energy consumption of the proposed equipment. Can you please ensure that any proposals for 5G equipment include manufacturer's data on energy consumption? Thank you.</p>

Comment for planning application 21/03452/TEL56

Application Number	21/03452/TEL56
Location	Street Record Station Road Kirtlington
Proposal	Proposed 15.0m Phase 8 Monopole C/W wrapround Cabinet at base and associated ancillary works.
Case Officer	John Cosgrove
Organisation Name	Susan Brown
Address	Tree Cottage, Bletchingdon Road, Kirtlington, Kidlington, OX5 3HF
Type of Comment	Objection
Type	neighbour
Comments	<p>Dear Sir/Madam I most strongly object to this application. I believe that the proposed intention to erect a 15 Metre mast and the variety of associated metal cabinets is both intrusive and totally inappropriate in a conservation area and so close to many residential properties. One of the planning drawings shows a large mature tree close to where the proposed mast would stand but this is no longer there and the mast and ugly metal cabinet structures would be isolated and dominate the corner of Oxford Road and Bletchingdon Road and the surrounding residential area. The Kirtlington village area is currently well served with fibre optic cables underground and excellent WiFi so I cannot see the benefit or need for this new 5G telecoms installation in the village. I hope this application will be rejected.</p> <p>Susan Brown</p>

Comment for planning application 21/03452/TEL56

Application Number	21/03452/TEL56
Location	Street Record Station Road Kirtlington
Proposal	Proposed 15.0m Phase 8 Monopole C/W wrapround Cabinet at base and associated ancillary works.
Case Officer	John Cosgrove
Organisation Name	John Bradley
Address	Troy House, Troy Lane, Kirtlington, Kidlington, OX5 3HA
Type of Comment	Objection
Type	neighbour
Comments	<p>I refer to the application 21/03452/TEL56 and would like to make the following points: 1. The location of the proposed mast sits within a conservation area. Should the application not therefore be accompanied by a Design and Access statement? More importantly, according to my understanding, the NPPF requires that the significance of Heritage Assets affected by the application should be assessed. Again this does not appear to have been completed. 2. In recent years, the lack of rectification/reinstatement after their works, by the various telecoms and cabling companies, has invariably been somewhat between inadequate and non-existent, with residents being required to complete the necessary repairs - see examples below. Given the proposed location of the mast is on a grassed land and on a corner, with no immediate area for parking, is there a plan for reinstatement and future maintenance? I am not sure these companies appreciate the efforts and costs borne by the residents of the conservation area with particular regard to the maintenance of trees and verges which amount to 000's per annum. 3. The proposed location of the mast is also on a z bend corner, where drivers arriving from the Woodstock direction are often caught out and end up on the wrong side of the road or, in extreme cases, the grassed area on the opposite side of the road. Given the increased element of surprise/diversion of a 15m 'satellite age' mast in a rural area, surely the safety of drivers and pedestrians is being compromised by this installation. "See attached"</p>

Comments	<input type="text" value="I am writing to object strongly to this proposal primarily on the grounds of the suggested location of the mast which will be substantially higher than anything remotely similar in the area and would be an absolute eyesore. Kirtlington is one of the more attractive villages in the Cherwell area and this proposed location is not only in a conservation area but is in such a prominent position - of the three entrances/exits to the village it would be immediately visible from two of them, as well as being visible from several miles around. Given the significant constraints on residential property in a conservation area, I find it extraordinary that such a proposal should even be considered. I am most certainly not against the improvement in technology - although fibre optic direct broadband is already available throughout the village; I would just request that an alternative more appropriate location is sought (in conjunction with the Parish Council - representing residents' views). For the above reasons I must firmly object to this proposal. With many thanks."/>

Comments	<input type="text" value="I wish to object to the proposed 5G mobile phone mast for the following reasons: -The sheer size of the mast compared to any other structure or above ground utility in the proposed locality is inappropriate. It needs to be more carefully considered in terms of its location. - The size, design and aesthetics of the mast is not sympathetic to the character of the village and will not be in-keeping with other acceptable above ground utilities such as timber telegraph poles -Although there is not enough statistical evidence currently, there are several on-line publications that provide information on the serious long-term health risks these masts pose to people living near them. I personally do not want to find out the hard way, when the correlations and evidence does come to light. -It will create a dangerous visual distraction for drivers on an already dangerous bend in the village."/>

Comment for planning application 21/03452/TEL56

Application Number	21/03452/TEL56
Location	Street Record Station Road Kirtlington
Proposal	Proposed 15.0m Phase 8 Monopole C/W wrapround Cabinet at base and associated ancillary works.
Case Officer	John Cosgrove
Organisation Name	Sophie and Ed Macfarlane
Address	Windover, Station Road, Kirtlington, Kidlington, OX5 3HE
Type of Comment	Objection
Type	neighbour
Comments	<p>Dear Sir/Madam Re: planning application number 21/03452/TEL56 We are writing to object to the above. Our reasons are as laid out below: The associated apparatus for the 15m (near 50ft) mast proposed would be "visually intrusive" and "incongruous" in a prominent position on the Oxford Road (A4095)/Bletchington Road. It would fail to conserve the landscape qualities of the conservation area. The application states: "The equipment is adjacent to tall vertical columns (telegraph pole), with additional tall vertical columns across the further pavements. There are high reaching mature trees dispersed around the surrounding area, where the combined street furniture allows the monopole to more easily blend into the street scene." Any inspection of the site demonstrates that this above statement is misleading. The proposed mast dwarfs the existing street furniture in the vicinity which consists of: a wooden telegraph pole; an attractive signpost dating back to the 1930s; a traditional road nameplate; a give way sign; a low profile wooden traffic calming box now populated with flowers. There is no relevant existing 'street furniture' for the mast and it to integrate with. Furthermore, the mast will not blend in with trees in the vicinity. The artist's impression is misleading in this respect. The fig.2 photograph supplied in the application itself makes this clear. Further the proposed elevation drawing shows a 'brick wall' as backgrounding the apparatus cabinets this is inaccurate and misleading: this is in fact an ancient Cotswold dry stone wall against which these cabinets would sit incongruously. The application further states: "The proposed works are not to the visual detriment of the surrounding area (being suitably distant from sensitive receptors). The proposal would not result in demonstrable harm to the character of the immediate or wider area." This is demonstrably not true in that there are in excess of 30 houses and gardens within the conservation area and elsewhere in direct line of the proposed mast. The siting of this mast is entirely inappropriate, directly in front of attractive houses on entry to the village meaning it would be a constant eyesore, to anyone entering or leaving the village. In addition, it would be seen for miles around in the open countryside meaning it would have an intrusive and negative impact on the nearby residences, village as a whole and open countryside surroundings. Looking at the other rejected locations in the village (many rejected due to proximity to dwellings) it seems this location has been chosen for financial reasons as there is no landowner to pay off and an ease of access; this location has been chosen with no thought to the 30 + residences that will have full view of it. The above objections are not withstanding the questionable health risks associated with these installations for all those living in their shadow and the questionable needs given a top rate fibre-optic broadband network already in Kirtlington, meaning there is certainly no rush to install 5G. In addition, there is no photography to show the actual look of the mast (they have installed these elsewhere so this is possible), meaning the application does not show the true impact of how invasive this structure will be to the whole village. There are no details of the range of radiation it will emit, the health and wildlife welfare considerations, or its range of use (ie who will benefit from it). Nor are there details of the carbon considerations of how much energy this mast will consume. Further many villagers have been unaware of this application. Even villagers living in the visual vicinity have not been written to and have not seen written, posted notices relating to the application, finding out only through Facebook or word of mouth. This is non-standard. It would also be useful to know how many masts have currently been erected. According to the following article of August 2021, the total is only 300. This causes one to question, why has Kirtlington been prioritized: a rural, residential area with low population density and negligible mobile business, decent 4G/3G coverage and excellent broadband? https://www.ispreview.co.uk/index.php/2021/08/three-uk-sees-5g-mobile-broadband-coverage-reach-29-percent.html Overall we are astounded at the misleading nature of this planning application, in its plan drawings (of existing and</p>

proposed) including lack of details both in what the mast will look like bar a misleading drawing against a non-existent tree, and photography that shows very little of the actual area - including NONE of the surrounding houses who will be in direct line of the mast. The half term objection deadline is also very inconvenient to those who want to object. The very fact no one knew about it or was contacted officially suggests the proposers are trying to get it through under radar. Overall we fully object to the above planning application. Yours faithfully Sophie and Ed Macfarlane
