- 7.17. The appellant has identified that the deliverable HLS at the base date of 1 April 2019 would be 3.55 years (7,161 dwellings) and at the base date of 1 October 2019 would be 3.76 years (7,579 dwellings).
- 7.18. In comparison, the Council's respective figures are understood to be 6.41 years (12,931 dwellings) for the 1 April 2019 base date and 6.91 years (13,949 dwellings) for the 1 October 2019 base date
- 7.19. Deductions of 2,844 dwellings against the 1 April base date and 3,858 dwellings against the 1 October base date would result in the Council having less than a 5 year HLS.
- 7.20. The appellant submits that a deduction of that scale is justified on three site-specific bases. Firstly, that sites with detailed permission (category (a) in the NPPF definition) require deductions to reflect unrealistic build-out rates. Secondly that sites with outline permissions or allocations (category (b) in the definition) require deductions or removal to reflect the absence of clear evidence to demonstrate deliverability at the base date. Thirdly, other sites which do not fall within either category (principally prior notification sites under Class O) require removal to reflect the absence of clear evidence to demonstrate deliverability at the base date.

*Deliverability*

- 7.21. The Council refer to the judgments in *St Modwen*<sup>42</sup> as to the distinction between certainty and a realistic prospect. That latter judgment was considered further and qualified in *Babergh*<sup>43</sup>. The revised NPPF in 2018 and 2019 altered the definition of deliverable in two key respects. Firstly, the requirement to demonstrate clear evidence and secondly the use of closed categories in the definition with the burden of proof distributed accordingly. These changes have been described as ensuring a stricter approach by Inspectors<sup>44</sup>. *Babergh* is more recent than *St Modwen*.
- 7.22. A site specific approach must be applied to an assessment of deliverability to comply with the NPPF. The SoS DL on this case was quashed based on the failure to provide site specific analysis on any reasons for the final HLS figure. It is permissible to consider the broader context of HLS in terms of the size and type of sites included, historic rates of delivery and the accuracy of past forecasts, but this cannot replace site specific analysis. In this respect, the Council states that their historic use of a generic "optimism bias" no longer meets the requirements of the NPPF nor the PPG<sup>45</sup>. That said, the Council continue to use it and adopt that position in the context of this appeal.

*The base date*

- 7.23. The appellant's HLS witness explained why it is essential that the evidential position ('clear evidence') is assessed by looking to what existed at the base date. A 'backfilled' approach whereby a site was simply deemed to be deliverable and evidence then adduced and accumulated over the course of the year was not methodically sound and not compliant with the NPPF or PPG. There is Inspectorial authority on this point from the Woolpit decision<sup>46</sup>. It is possible to take into account information that has arisen after the base date, but only where the site passed the test of deliverability at the base date<sup>47</sup>. This was the approach of the last decision within the Milton Keynes area at Castlethorpe Road<sup>48</sup>. The earlier Globe decision cited Woolpit but appeared not to apply it, notably omitting to set out the state of the evidence at the base date for respective sites.
- 7.24. The Council has further cited the Colchester Road decision<sup>49</sup>, but the example cited by the Inspector of a separate full permission being excluded, is not replicated in the instant case. Moreover, that Inspector in disagreeing with Woolpit in respect of new permissions again did not address the specific problem of completions.
- 7.25. In assessing the intention of the NPPF, it is instructive to consider the position of Annual Position Statements requiring research to be complete prior to the necessary consultation with stakeholders which must take place between notification on 1 April and submission on 31 July of the given year. It is

<sup>42</sup> CD7.1 [2016] EWHC 968 (Admin) and CD7.6 [2017] EWCA Civ 1643

<sup>43</sup> RID09 [2019] EWCA Civ 2200 paragraphs 45-50

<sup>44</sup> CD6.18 for example

<sup>45</sup> LPA1 page 22 para 4.54

<sup>46</sup> CD6.16 paragraphs 67 and 70-79

<sup>47</sup> CD6.13, CD6.14 and CD6.15

<sup>48</sup> CD6.18 paragraphs 58-61 and 65

<sup>49</sup> CD6.22, paragraph 63

therefore entirely practical and consistent with the intention of national policy to ensure that the evidence base is assembled prior to a 1 April base date, including the draft written agreements. The appellant referred to two examples from Mid Suffolk<sup>50</sup> and Babergh<sup>51</sup> District Councils which respectively itemise the extent of prior consultation and evidence collection, resulting in the production of Memoranda of Understanding (MOU).

- 7.26. The fundamental principle at stake is that of robustness in the evidence base to give effect to the policy imperative of boosting the supply of housing. This can only be ensured by looking to the full 5 year period (not a shortened 4 ¼ period) and by ensuring full transparency on the part of the Council when drawing up its Annual Monitoring Report. The Council's HLS witness accepted that none of the evidence provided in its June 2019 HLS Statement contained documentary evidence at the base date of 1 April 2019. They either substantially pre-dated 1 April 2019 (based on Plan:MK information) or substantially post-dated it (such as the proformas). No amount of chasing of proformas or sense checking could repair the fundamental deficit of evidence at the base date. The appellant disputes the Council's claim that the appellant promotes an artificial two stage approach as one stage should suffice.
- 7.27. It is for this reason that the appellant advances an updated base date to 1 October 2019 to allow the most up to date evidence to be adduced, but only in a manner that reflects the level of completions that have occurred since 1 April 2019.

#### *Proformas*

- 7.28. The Council's proformas are not written agreements in line with the PPG ID68-007. They present the trajectory with a simple box to check without identifying the extent of the evidence of progress or testing the build out rate. Supporting information by way of covering emails was often sparse. As such, the Council has had to rely on variety of updates from its witness' proof to oral additions in the roundtable session. This is wholly inconsistent with national policy and does not reflect clear evidence to reflect the position as at the base date.

#### *Build-out rates*

- 7.29. The evidence of the appellant's HLS witness sets out the national perspective<sup>52</sup> which identified the highest build-out rates of 268dpa averaged over 5 years at the Eastern Expansion Area in Milton Keynes (Broughton Gate and Brooklands). Based on the local experience of the appellant's HLS witness, any rates significantly in excess of this figure should be treated with scepticism.

#### *Public ownership of land*

- 7.30. Another key obstacle for the Council has been the extent to which it relies on sites in public ownership including the Milton Keynes Development Partnership (MKDP), the Milton Keynes Community Foundation and Homes England. The reason for delays in releasing sites are myriad. The proformas submitted by the Council were subject to assessment by a body that included officers of the

---

<sup>50</sup> RID10

<sup>51</sup> RID08

<sup>52</sup> CD11.1 and APP3 appendix 1 paragraphs A1.18-A1.22

Council and MKDP. Contrary to the Council's advocate's suggestion that this impugned their professional judgment, there was an inevitable circularity in the proforma assessments submitted by these bodies, unjustifiably reinforcing misplaced optimism as to delivery rates.

#### *Past forecasts*

- 7.31. The Council has had historic difficulties in the accuracy of its forecasting. When tabulating actual completions against forecasts<sup>53</sup>, there is an under-delivery against forecasts of 28-30%. Current and past trajectories have failed to be met. Historic rates are instructive in identifying persistent trends and providing a sense check with long-range date.
- 7.32. Inspectors have commented on the way the Council's supply assumes very sharp increases in delivery beyond those experienced either locally or nationally<sup>54</sup>. In response to this, the Council have sought to rely on recent short-term uplifts in completion rates to suggest that there has been a change of direction. Such data is too short-term and too limited in any supporting analysis to justify any conclusion that there has been improvement in their forecasting exercise. There is no evidence that Plan:MK is responsible for recent uplift in delivery. Peaks in development activity have historically been attributable to apartment blocks. This provides limited assistance in respect of how sharp and continuing increases can occur on strategic sites.

#### *Consistency with previous decisions in Milton Keynes*

- 7.33. The Castlethorpe Road decision, being the most recent and having taken into account the earlier Globe decision remains the most helpful reference point for the Inspector and SoS. The legal challenge to the Castlethorpe Road decision was unsuccessful. The decision sets out robust approach to individual sites at paragraphs 58-60 identifying longstanding delays to delivery and an overall absence of strong evidence. The Inspector in paragraph 63 made clear that he stopped halfway through looking at sites as it was already evident that the Council did not have a 5 year HLS.

#### *Individual site analysis*<sup>55</sup>

- 7.34. The appellant's analysis is based on the evidence of its HLS witness in his proof (Appendix 3) and rebuttal (Appendices 3 and 3a)<sup>56</sup>. The errata document<sup>57</sup> updates the evidence in several respects following the roundtable session.

#### *Site 1: Brooklands (deduct 232 units for 1 April or 267 units for 1 October)*

- 7.35. Sites with detailed permission but Council's rate of delivery is excessive, assuming a sharp uplift in delivery from 182 dwellings in 2019/20 to 347 dwellings in the following year with only 2 developers on site across 7 parcels. This would be substantially higher than the highest figures hitherto achieved (268dpa across 12 parcels). Reduce delivery from 222dpa to 175dpa (April) or 168dpa (October).

---

<sup>53</sup> APP3 appendix 2, table 2 and table 3

<sup>54</sup> CD5.32 paragraph 145 and CD10.33 paragraph 9.9

<sup>55</sup> The appellant's closing submissions sets out its case for each site in more detail

<sup>56</sup> APP3, 4 and 6

<sup>57</sup> RID20

- 7.36. For Phases 1B and 5B-6B, the Council's evidence comprised in proforma responses compiled as late as June 2019. These both assume rates of 60dpa, which are at odds with an average annual rate of 45dpa across Brooklands.
- 7.37. For Land south west of Fen Street, the Council have confirmed that no proforma was submitted for this site and accordingly, the Council have essentially relied on data from other developers on other sites. The appellant's figures reflect the commencement of completions on the site, but deduct the completions on this strategic site as the forecast rates are unrealistic.

*Site 2: Tattenhoe Park (deduct 447 units for 1 April or 530 for 1 October)*

- 7.38. Sites with outline permission with the Council relying on proformas from Homes England submitted in June 2019. Tender documents for Phases 2 and 3 dated July 2018 do not declare extent of progress at 1 April 2019 base date. Council sought to add extra 83 dwellings as a result of potential delivery agreement. No developer commitment for Phases 4 and 5.
- 7.39. Detailed permissions for Phases 2 and 3 granted on 15 November 2019 and 24 October 2019 respectively after the 1 April. Sites have had outline permission for over 10 years and failed to deliver any units. Proformas insufficient for either 1 April or 1 October base date. Castlethorpe Road Inspector agreed that sites were not deliverable.

*Site 3: Western Expansion Area (deduct 1,503 units for 1 April or 1,084 for 1 Oct)*

- 7.40. Outline permissions only for Area 10 and Area 11 Remainders at 1 April. Council rely on proformas. Detailed permission for 152 dwellings granted 24 September 2019. Following advice from developer, the Council has removed 306 units from Area 10 and 229 units from Area 11.
- 7.41. No evidence of deliverability at 1 April for either area and no evidence for why delivery rate of 300dpa for Area 10 would be realistic. Very large strategic sites and Council's expectations need reducing. Castlethorpe Road Inspector agreed the site was not deliverable.

*Site 4: Strategic Land Allocation (deduct 864 units for 1 April or 743 for 1 Oct)*

- 7.42. The disputed sites within this allocation all had outline permission at 1 April. No lead developer. Proformas not supplied for all sites. Belated evidence at roundtable session. Council's average delivery rate of 399dpa should be adjusted to 274dpa based on local and national evidence.
- 7.43. No proforma for Ripper Land site, only an email about access issues, so remove all units from supply for either base date. No proforma for Land West of Eagle Farm South although reserved matters application awaiting legal agreement at 1 April, so reduce supply by 64 units for either base date. No proforma for Eagle Farm site and the information from October 2019 on developer's intentions is not clear evidence and so remove all units from supply for either base date.
- 7.44. For Glebe Farm site, the Council rely on updated proformas and 2 detailed permissions granted in September and October 2019. Appellant taken into account September permission if 1 October base date used. Supply reduced by either 310 units (April) or 142 (October). For the Golf Course Land, the Council

rely on detailed permission for 180 units granted on 1 November 2019 which the appellant accepts could be included in 1 October base date but not April. For the Church Farm site, the Council rely on a proforma where only one condition has been discharged from outline permission so remove all units from supply for either base date.

*Site 5: Newton Leys (deduct 80 units for 1 April and 0 for 1 October)*

- 7.45. Outline permission at 1 April with reliance on proforma means removal of all units from supply at this base date. Reference to pre-application discussions at roundtable session not sufficient evidence of progress to reserved matters. Detailed permission granted in September so can include 80 units at October base date.

*Site 6: Campbell Park Remainder (deduct 300 units for either 1 April or 1 October)*

- 7.46. Proforma from MKDP limited and does not even confirm agreement to Council's forecast. Council referred to development brief and ambitions for a mixed use development at roundtable and an email from December 2019 refers to a joint strategy between MKDP and two named developers, but forecasts no planning application until latter half of 2020 and no start on site until 2021. The Castlethorpe Road Inspector agreed that the site was not deliverable.

*Site 7: SEMK Strategic Growth Area (deduct 50 units for either 1 April or 1 Oct)*

- 7.47. Allocated site in Plan:MK with no outline permission. No evidence of pre-application activity and SOCG from June 2018 is relatively high level and does not provide up to date evidence.

*Site 8: Berwick Drive (deduct 16 units for 1 April or 11 units for 1 October)*

- 7.48. Allocated site in Plan:MK and Council owned. Council rely on proforma from June 2019 and November update that refers to pre-application discussions and reduces number of units from 16 to 11. Delete site from supply.

*Site 9: Wyevale Garden Centre (deduct 328 units for 1 April or 142 for 1 October)*

- 7.49. Proforma from June 2019 limited. Permission not granted until July 2019. Delete site from April base date. Can include with October base date but with a deduction to reflect likely delivery rates over 5 years as the Council's rates of 150 and 130 in years 4 and 5 are unrealistic. 62dpa is more realistic.

*Site 10: Food Centre (deduct 298 units for 1 April or 200 for 1 October)*

- 7.50. Allocated site with no planning application as of 1 April and no proforma until November 2019. No detail of pre-application discussions. Hybrid planning application not submitted until 23 October. Delete site from supply.

*Site 11: Redbridge (deduct 19 units for 1 April or 48 units for 1 October)*

*Site 12: Rowle Close (deduct 18 units for either 1 April or 1 October)*

- 7.51. These sites are adjacent and have been considered as one. They are covered by an allocation but no planning application or permission. Reliance on a proforma only. Delete both sites from supply.

*Site 13: Agora Redevelopment (deduct 104 units for either 1 April or 1 October)*

- 7.52. Allocated site with no extant permission and no application pending. Council rely on amended trajectory in June 2019 proforma. Castlethorpe Road Inspector considered site was not deliverable as at 1 April.

*Site 14: Galleon Wharf (deduct 14 units for either 1 April or 1 October)*

- 7.53. The main parties agree this site can be deleted from the supply.

*Site 15: Railcare Maintenance Depot (deduct 175 units for either 1 Apr or 1 Oct)*

- 7.54. Outline application for mixed use development with activity focussed on non-residential uses at both base dates. June 2019 proforma limited and no new information to indicate progress towards implementing the residential elements. Delete site from the supply.

*Site 16: Eaton Leys (deduct 308 units for 1 April or 182 units for 1 October)*

- 7.55. Outline permission only at 1 April with no proforma until December 2019. Submission of reserved matters application means appellant accepts site is deliverable but with a consequent reduction in completions to reflect local and national data: 52dpa from 2021/22 to reflect that the site competes with other Barrett David Wilson sites locally.

*Site 17: Lakes Estate Neighbourhood Plan Sites (deduct 130 units for 1 April or 279 units for 1 October)*

*Site 18: Phelps Road (deduct 11 units for either 1 April or 1 October)*

*Site 27: Southern Windermere Drive (deduct 11 units for either 1 April or 1 October)*

- 7.56. These sites form part of a phased Council regeneration proposal. June 2019 proforma from Housing and Regeneration Manager reveals complexity of works commencing with demolition and re-housing of Council tenants. Hybrid application mentioned in proforma not submitted in late 2019. Considerable discussion at roundtable on the correct way of assessing impact of demolition and replacement dwellings. Appellant's approach is that the completion of dwellings to replace those that are due to be demolished does not meet housing need and therefore should not be permitted to address the housing requirement. The maximum number of units that can be taken into account is therefore 110, although there is no clear evidence for even this number.

*Site 19: Land off Hampstead Gate (deduct 16 units for 1 April or 34 units for 1 Oct)*

- 7.57. MKDP site with proforma submitted 13 November after both base dates. The accompanying email sets out project dates but nothing else provided. Delete site from supply.

*Site 20: Land off Harrowden (deduct 25 units for either 1 April or 1 October)*

- 7.58. Council owned site with June 2019 proforma. Uncertainty of delivery and Council accept trajectory should be pushed back to 2022/23. Delete site from supply.

*Site 21: Broughton Atterbury Self Build Plots (deduct 6 units for either 1 April or 1 October)*

- 7.59. MKDP site with June 2019 proforma and no further evidence. While Council referred to wider planning permission for wider site, no clear evidence of deliverability for the specific site. Assertion of demand for custom-built plots. Delete site from supply.

*Site 22: Hendrix Drive (deduct 10 units for either 1 April or 1 October)*

- 7.60. MKDP site with June 2019 proforma limited. No clear evidence of deliverability.

*Site 23: Kellan Drive 1 (deduct 10 units for 1 April or 12 units for 1 October)*

- 7.61. Council owned site with June 2019 proforma limited. Application submitted by 1 October but not determined and no identified developer. No clear evidence of deliverability.

*Site 24: Singleton Drive (deduct 22 units for either 1 April or 1 October)*

- 7.62. MKDP site with June 2019 proforma limited. Reference to pre-application advice and development brief not documented by Council. No clear evidence of deliverability.

*Site 25: Former MK Rugby Club (deduct 100 units for either 1 April or 1 October)*

- 7.63. Council owned site and Plan:MK allocation with land on long leasehold to the Parks Trust. No application submitted. May 2019 proforma from Bellway Homes but not yet the site owner and text of accompanying email states they are not under contract. Council rely on December 2019 email from Property team recording a putative land disposal agreement in an advanced state but no clear evidence of deliverability. Castlethorpe Road Inspector found site was not deliverable.

*Site 26: Timbold Drive (deduct 130 units for 1 April or 118 units for 1 October)*

- 7.64. MKDP site and SAP allocation. June 2019 proforma limited. New outline permission being sought but no reported progress on any reserved matters applications. No clear evidence of deliverability.

*Site 27 (see above)*

*Site 28: Land north of Vernier Crescent (deduct 14 units for either 1 Apr or 1 Oct)*

- 7.65. MKDP site and SAP allocation. June 2019 proforma limited. Pre-application work not documented and disposal plan pushed back. No clear evidence of deliverability.

*Site 29: Manifold Lane (deduct 18 units for 1 April or 33 units for 1 October)*

- 7.66. MKDP site and SAP allocation. June 2019 proforma limited and simply refers to application for permission. Council latterly referred to email correspondence but site still in MKDP ownership and sale dependent on permission. In roundtable Council only able to say application anticipated in January 2020. No clear evidence of deliverability.

*Site 30: Daubeney Gate (deduct 90 units for 1 April or 73 units for 1 October)*

- 7.67. MKDP site and SAP allocation. June 2019 proforma limited and simply refers to site being marketed. Council latterly referred to email correspondence with Taylor Wimpey but site still in MKDP ownership and purchase dependent on board approval and site investigation. Site capacity already reduced to 73 units. In roundtable, Council only able to say application forecast for March 2020. No clear evidence of deliverability.

*Site 31: Springfield Boulevard (deduct 12 units for 1 April or 13 units for 1 October)*

- 7.68. Council owned site and neighbourhood plan allocation. June 2019 proforma limited. Application submitted and then withdrawn. Application submitted in November but not registered until 2 December. No clear evidence of deliverability.

*Site 32: Hindhead Knoll (deduct 30 units for either 1 April or 1 October)*

- 7.69. MKDP site and neighbourhood plan application. June 2019 proforma limited. Application submitted October 2019 but not yet determined. No clear evidence of deliverability.

*Site 33: Land at Walton Manor (deduct 115 units for either 1 April or 1 October)*

- 7.70. MKDP site and SAP allocation. June 2019 proforma limited. Council rely on outline application submitted January 2019 and approved in November. Site remains in MKDP control and further sale to development dependent on progress with site disposal. No clear evidence of deliverability.

*Site 34: Land at Towergate (deduct 150 units for either 1 April or 1 October)*

- 7.71. Homes England site with outline permission and SAP allocation. June 2019 proforma merely looks ahead to future marketing activity. Landowner sought to discharge part 1 and 2 of condition 6 in September 2019. Later application to discharge ecological mitigation was withdrawn in August 2019. Indicates marketing activity has been inhibited. No clear evidence of deliverability.

*Site 35: Reserve Site 3 (deduct 22 units for either 1 April or 1 October)*

- 7.72. MKDP site and SAP allocation. June 2019 proforma limited. No further progress with an allocation. No clear evidence of deliverability.

*Site 36: High Park Drive (deduct 74 units for either 1 April or 1 October)*

- 7.73. Site with outline planning permission. No proforma. Work to discharge condition post-dates both base dates. No clear evidence of deliverability.

*Site 37: Maybrook House (deduct 25 units for either 1 April or 1 October)*

- 7.74. Prior notification site. Appellant explained that such a site does not fall within category (a) or (b) in the NPPF definition of deliverable. The PPG reference to "conversions" in 68-029 only refers to completions, it does not designate such units as part of a supply. If sites are to be included, there is still a requirement to assess the extent to which the sites are available in light of ongoing activity in existing use and whether there is clear evidence they will deliver completions at the rate forecast. No proforma for this site and no further evidence from Council. Site is still not fully vacated and so should not be

considered for residential use. Clear evidence that the site could not be delivered at either base date.

*Site 38: Mercury House (deduct 113 units for either 1 April or 1 October)*

7.75. Prior notification site. No proforma and no further evidence from Council. Grant of approval for demolition as at 9 January 2020 but no evidence of any timescale for further works. Clear evidence that the site could not be delivered at either base date.

*Site 39: Bowback House (deduct 107 units for either 1 April or 1 October)*

7.76. Prior notification site. No proforma and no further evidence from Council. Site is still not fully vacated and still be marketed for office use. Should not be considered available for residential use. Clear evidence that the site could not be delivered at either base date.

*Site 40: Land east of Tillbrook Farm (deduct 36 units for either 1 April or 1 October)*

7.77. Site with outline planning permission. June 2019 proforma and follow-up email from November 2019 refer to delays of further 3 months for submission of reserved matters. No clear evidence of deliverability.

*Site 41: Tickford Fields (deduct 220 units for either 1 April or 1 October)*

7.78. Council owned site with no outline permission. June 2019 proforma records start date as unknown. December 2019 email refers to future application but no further progress towards securing developer partner. No clear evidence of deliverability.

*Site 42: Land west of Yardley Road (deduct 210 units for either 1 April or 1 October)*

7.79. Site with outline permission and allocated in Olney Neighbourhood Plan. Council rely on June 2019 proforma. Reserved matters application submitted November 2019. No clear evidence of deliverability.

*Site 43: Omega Mansions (deduct 10 units for 1 October)*

7.80. Prior notification site for purposes of 1 October base date. No progress of further works. No clear evidence that the site was deliverable at base date.

*Site 44: Cable House – duplication with Site 38 (Mercury House)*

*Site 45: Chancery House { deduct 40 units for 1 October)*

7.81. Prior notification site for purposes of 1 October base date. No progress of further works. No clear evidence that the site was deliverable at base date.

*Site 46: Land south of Cresswell Lane – Central MK C3.2 (deduct 294 units for either 1 April or 1 October)*

7.82. The Council did not consider that this site was deliverable as at the 1 April 2019 base date. Full planning permission was only granted on 31 July 2019. There was therefore no clear evidence that the site was deliverable as at April base date. This application did not result in an amendment to the MK Housing Statistics and as such it was considered that the site remains undeliverable.

*Site 47: Castlethorpe Road (deduct 50 units for 1 October)*

- 7.83. Outline permission granted at appeal after 1 April. No clear evidence from Council as to why it should be included in the supply.

*Site 48: Station Road Elder Gate*

- 7.84. [Not covered in closing submission or in detail elsewhere by appellant]

*Sites 49-52: Council's "Year 6" sites*

- 7.85. The Council sought to add 4 sites predicted to deliver in first half of 2024/25 year (if the base date is 1 October). The appellant's overall position is that the timescales for delivery are extremely uncertain given that completions are only anticipated at the end of the period. None have outline permission and no recorded developers.

*Site 49: Rear of Saxon Court (deduct 20 units for 1 October)*

- 7.86. Council referred to development brief consultation in summer 2019. MKDP acting for Council and does not provide sufficient evidence of progress. Council's most recent assessment in December 2019 was that there was no clear evidence of delivery in 5 years.

*Site 50: Rear of Westminster Court (deduct 15 units from 1 October)*

- 7.87. MKDP acting for Council and does not provide sufficient evidence of progress. Council's most recent assessment in December 2019 was that there was no clear evidence of delivery in 5 years.

*Site 51: C4.2 (deduct 22 units from 1 October)*

- 7.88. MKDP acting for Council and does not provide sufficient evidence of progress. Council's most recent assessment in December 2019 was that there was no clear evidence of delivery in 5 years.

*Site 52: Cavendish House (deduct 9 units from 1 October)*

- 7.89. Part of Fullers Slade regeneration proposals now approved at referendum with a development option selected. Proforma from MKDP states 'strong possibility' site will come forward, but still not clear evidence of delivery.

*Summary on housing land supply*

- 7.90. The Council does not have a robust, deliverable five-year supply of housing land. This has been the case for some considerable time. The appeal site if released would be delivered within 5 years as a small site under the control of a SME developer which the Council's Housing Delivery Action Plan seeks to promote. Further, there has been a significant shortfall in the provision of affordable housing over the years which this site would help to address. The shortfall in housing for a new town is beyond problematic and the imbalance between jobs and housing increases in-commuting and frustrates sustainable growth.

### Location of the development

- 7.91. The first Inspector found site to be in a sustainable location due to accessibility of public transport and local facilities and the absence of any unacceptable environmental effects.

#### *Development plan and national policy*

- 7.92. The adoption of Plan:MK has not altered this but recognised and reinforced it. Policies DS1 and DS2 identify Woburn Sands as a sustainable location with no cap on development. There is very limited space within the settlement boundary for development. Changes to the boundary in Plan:MK have reflected existing commitments, the Frosts appeal, the Nampak permission and the Frosts retail permission.
- 7.93. The revised NPPF in 2018 and 2019 has not altered sustainability. It continues to boost HLS (para 59), direct housing to sustainable locations (para 103) and ensure development is located within locations including rural locations where it can contribute to the vitality of the community (para 78). Majority of recent development at the Nampak site and of a density and general form that takes little account of town's existing character.
- 7.94. Housing would support public transport, shops and services. The existing doctor's surgery has capacity for new patients and financial contributions can be made for school places. Woburn Sands and the appeal site are appropriate locations for future growth. The fact that the Plan:MK Inspector did not require further allocations and the Town Council are declining to review WSNP does not alter this.

#### *Oxford-Cambridge Expressway*

- 7.95. The Council did not cite this as any basis for refusal of scheme and this remains their position in the SOCG and at the inquiry. The appellant has set out that plans are at the very earliest stages of consultation with the Secretary of State for Transport indicating that he will review whether there is a continuing justification for the proposal having described its benefits as finely balanced and the need to demonstrate a strong case that it will boost jobs, prosperity and has local support<sup>58</sup>.
- 7.96. Examining the site and locality there is no realistic prospect of substantial road construction at the appeal site or vicinity. The appellant has explained the extent of constraints preventing road construction, most notably the registered park and garden and residential development including the Strategic Land Allocation. Further, the suggestion made by Highways England that development on the site would be contrary to the adopted development plan and potentially result in conflict with the expressway is wrong. Plan:MK only deals with the expressway in the context of the SEMK Strategic Growth Area. Therefore, the expressway does not constitute a reason to withhold consent.

---

<sup>58</sup> APP8 paragraph 4.6

## Housing density

- 7.97. At this Inquiry, the appellant has made clear that the density figure should be assessed at 20.3 dwellings per hectare (dph) applying a net density approach that subtracts the area's listed in the planning witness' proof<sup>59</sup>. That approach reflects the absence of any statutory definition or any extant policy or guidance. Changes to the housing mix would increase density in respect of habitable rooms per hectare<sup>60</sup>.
- 7.98. The Council's case at the first Inquiry sought to prolong the initial objection on the basis of Policy H8 of the Local Plan 2005 which looked for a density of 35dph for locations like Woburn Sands. The first Inspector found no substance in this point in his paragraphs IR9.43 and IR9.45. The SoS DL paragraphs 24-26 referred consistently to conflict with Policy H8. The SoS referred only in DL paragraph 24 to NPPF paragraphs 122-123 in assessing the accordance of the policy with NPPF, notably identifying its use of a range of average net densities.
- 7.99. The development plan position and national policy position have both moved on markedly since the original Inquiry with the expiry of Policy H8. The policy framework for density is now Policy HN1(c) with contextual support from Policy SD1 and D1. Policy HN1 conforms with NPPF paragraph 122 and was found sound by the Plan:MK Inspector albeit in the context of NPPF 2012.
- 7.100. The correct approach to assessing acceptability of density is to assess those areas immediately adjacent to the development, not an arbitrary wider area comprising the whole settlement. The appellant's evidence carries out a systematic calculation<sup>61</sup> of density of area surrounding the site with regard to Policy HN1(c) and NPPF paragraph 122(d) in particular. The Council's planning witness accepted in cross-examination that he had undertaken no calculation of density of his own, had relied on the Nampak Inspector's finding of density, and had not identified any minimum density. His 27dph represented one variant of an acceptable scheme and he considered the acceptable number of dwellings on the site may be higher or lower than 203. He also accepted that NPPF paragraph 123(a) is a plan-making provision and 123(c) is to be read in the broader context of paragraph 122.
- 7.101. The Council's planning witness conceded that the layout of the development was a reserved matter and one the Council could control in due course. Article 2 of the Town and Country Planning (Development Management Procedure) Order 2015 defines "layout": "*means the way in which buildings, routes and open spaces within the development are provided, situated and orientated in relation to each other and to buildings and spaces outside the development*".
- 7.102. The Council's suggestion that a Council cannot control density at the reserved matters stage relies on the solitary basis of a single paragraph of the Planning Encyclopedia's section 3B-2200.5 citing *R v Newbury DC Ex p Chieveley Parish Council* [1998] PLCR 51<sup>62</sup>. The Council has not explained

---

<sup>59</sup> APP8 paragraph 5.5

<sup>60</sup> APP8 paragraph 5.6-5.8

<sup>61</sup> APP10 appendices 2-6, especially appendix 2 which focuses on the built up area of Woburn Sands only

<sup>62</sup> RID23

which part of the judgment is relied upon. However, on its face the judgment is not authority for the Council's proposition and it focuses on the issue of floor area, not density. The same section of the Encyclopedia reveals another authority which confirms that density is indeed capable of forming a reserved matter: *Inverclyde DC v Inverkip Building Co. Ltd* 1983 SLT 81, 90.<sup>63</sup>

- 7.103. On a correct understanding of the development plan, national planning policy and the legal powers available to the Council at the reserved matters stage, there is simply no basis to refuse permission on grounds of density. The Council's attempts to retract their witness' clear concessions in evidence should be rejected.

#### Landscape and impact on character of settlement

- 7.104. The issue was considered in detail at the first Inquiry. The first Inspector found the effects would be limited and give rise to no unacceptable harm (IR9.26 and 9.27). The SoS concurred in the DL at paragraph 27. The Council agrees with this position as set out in the SOCG and that any adverse effects would carry limited weight against the proposals. The appellant has explained that such harm would be significantly and demonstrably outweighed by the benefits.

#### Heritage

- 7.105. The appellant's heritage consultant<sup>64</sup> has considered the effect on the listed farmhouse and Wavendon House and the registered park and garden. The first Inspector found less than substantial harm to the listed farmhouse (IR9.41) and the SoS agreed in his DL at paragraph 28. The appellant's heritage consultant has found the scheme would cause no harm to the significance of Wavendon House and the registered park and garden. The Council in the SOCG agrees that the proposal would result in a low level of less than substantial harm to the listed farmhouse and that there is no basis to refuse the scheme on heritage grounds subject to a satisfactory detailed scheme/design at reserved matters stage. The Council's planning witness confirmed that the public benefits would outweigh the low level of harm for the purposes of NPPF paragraph 196.
- 7.106. In summary, whilst considerable weight and importance should be attached to the desirability of protecting and enhancing the character and appearance of designated heritage assets for the purposes of s66(1) of the Planning (Listed Buildings and Conservation Areas) Act 1990, there is no basis for refusal on this ground in relation to the Appeal Scheme. For the purposes of NPPF 11d(i) there is no basis for refusal on heritage grounds.

#### Highways

- 7.107. Third parties raised traffic and transport concerns at the first inquiry and these have been raised to a more limited extent at the present inquiry. The first Inspector addressed these issues at IR9.35-9.38 and the SoS endorsed

---

<sup>63</sup> RID26

<sup>64</sup> APP9 appendix 4

these findings that the proposal would not give rise to unacceptable effects in his DL at paragraph 30. The TA has been updated<sup>65</sup>.

- 7.108. The Council has confirmed in the SOCG that the proposal is acceptable in all respects, that the access is appropriate and would not put undue pressure on local road network. All other detailed matters can be considered under reserved matters applications. The TA remains robust and justifies the conclusions of the appellant and the Council's highway officers.

#### Best and Most Versatile Agricultural Land

- 7.109. The Council's planning witness raised this issue for the first time in his proof of evidence<sup>66</sup>. While identifying a conflict with Policy NE7, he made clear in cross-examination that this did not amount to a freestanding basis for refusing the proposal. It is accepted that there would be a loss of Grade 3a agricultural land and that this gives rise to a conflict with NE7. However, both Policy NE7 and NPPF paragraph 170(b) make clear that this is an economic factor to be weighed against the economic benefits that would arise from the development, listed in the Economic Benefits Statement<sup>67</sup> and set out further below. The Council has allocated land on sites around the Borough which are of equal or greater agricultural value as the site<sup>68</sup>.

#### Planning Balance

##### *Affordable housing*

- 7.110. The appellant's witnesses have identified a substantial need for affordable housing within Milton Keynes borough in their respective proofs<sup>69</sup>. The Council has already seen a shortfall of 640 dwellings in the first 3 years of the plan period<sup>70</sup> with a chronic failure to deliver a sufficient amount from 2007 to 2018<sup>71</sup>. As set out above, there is a clear recognition in Plan:MK that additional weight should be accorded to the provision of affordable housing in excess of the policy minimum. The Council's planning witness confirmed in cross-examination that this was a benefit to which significant weight (the highest weight) should be attached.

##### *Market housing*

- 7.111. Significant weight should be attached to the benefits of providing market housing irrespective of the precise HLS position. The Government is committed to boosting significantly the supply of housing to meet the chronic and continuing shortfall both nationally and where it arises locally, but also to diversify the base of house builders to meet that need. One of the difficulties identified by the Government in its White Paper was the excessive concentration and dominance of the major national house builders which is seen to have a distorting and negative effect upon the continuous supply of housing up and down the country.

---

<sup>65</sup> APP9 appendix 7

<sup>66</sup> LPA4 paragraph 10.31-10.32

<sup>67</sup> APP9 appendix 6

<sup>68</sup> RID24

<sup>69</sup> APP2 chapter 7 and APP8 paragraphs 6.34-6.36

<sup>70</sup> APP2 table 13

<sup>71</sup> APP2 table 17

- 7.112. The house builder in this case, Storey Homes, is a small to medium sized developer whom the Government wishes to encourage to provide housing, not only as a matter of choice but in order to meet a diversity of suppliers. The appellant's note<sup>72</sup> has provided evidence both upon that, the track record of the company and the anticipation that it will be able to deliver all of the proposed housing within 5 years of the date of its permission. The proposal would deliver at least 150 dwellings within the current 5 year period up to March 2024, allowing for a year to clear reserved matters and conditions. The Council's suggestion that there should be any diminution in the weight to be accorded the proposal by reason that not all of the 203 dwellings might be delivered within the 5 year period (principally due to the suggested significant delay on the part of the SoS in issuing his decision letter on this appeal) is not credible.
- 7.113. The proposal will provide much-needed housing in an important growth location both regionally and nationally and where the provision of each type of housing has materially lagged over a prolonged period of time.

#### *Economic benefits*

- 7.114. There are substantial economic benefits as set out in the Economic Benefits Statement and accepted by the Council's planning witness at cross-examination. These comprise temporary construction employment of 180 workers per annum, or 630 workers over the course of a 3.5 year construction period, both on and off-site; demographic and labour market benefits, including a high proportion of working-age residents (75% in employment), and a cross-section of working people due to the range of accommodation offered; secondary employment generated by increased spending in the local area by new residents (£5 million total per annum), directly supporting around 40 gross full-time equivalent jobs; and New Homes Bonus paid to the Council of c.£1.4 million over 4 years.

#### *Social benefits*

- 7.115. The development will provide social benefits through housing (including much needed affordable housing) to meet future need and is accessible to the local services provided within the wider area including education facilities. The site would also provide a social benefit in the form of the doctor's surgery to be provided on site and the site would be within reasonable walking distance of existing local services and facilities.

#### *Environmental benefits*

- 7.116. There will be the opportunity to provide a net environmental benefit by the site having the potential to enhance the habitats within it, given that the appeal site has little value for wildlife at present. These are set out in an update report from CSA Environmental<sup>73</sup>.
- 7.117. Clearly the site is outside the present settlement boundary of Woburn Sands but so would any site which is presently not allocated. Much of the Council's HLS is and will be located on green field sites. In that context, there

---

<sup>72</sup> APP9 appendix 13

<sup>73</sup> APP appendix 5 paragraph 5.20

would have to be something distinct and material about this site in order to suggest that its green field location would render it unsustainable. That was certainly not the view of officers in their report recommending approval and it is freely recognised by the Council that there is no landscape or similar argument to support objection to the appeal site here.

#### *Highways/Traffic benefits*

- 7.118. There are highways and transportation benefits, by providing additional flexibility in the local network and an alternative to the existing Newport Rd / Cranfield Rd junction. These can be classified as both environmental and social benefits. The proposal would also help to contribute towards sustainable patterns of development and help to counteract the increasing levels of commuting which can be created by an imbalance of homes and jobs.

#### *Summary on benefits*

- 7.119. The proposed development is one which, by reason of its location and accessibility to a range of services, facilities and transport links, and having regard to the three dimensions set out in the NPPF, is sustainable development which properly benefits from the presumption in its favour. Even in circumstances (though not here) where an Inspector were to conclude that the Council was able to demonstrate a 5 year HLS, the sustainability and other advantages constituting material considerations in this case would be sufficient to justify the grant of consent.

#### Conclusions

- 7.120. The appeal proposal represents sustainable development adjacent to a settlement which is identified in Plan:MK as being a key settlement and which contains not only a wide range of service and facilities but also a railway station. The Council does not have a 5 year HLS and that the shortfall in both market and affordable housing is longstanding, acute and continuing.
- 7.121. The proposed development gives rise to substantial benefits which are not outweighed by any of the alleged detrimental impacts and is consistent with the presumption in favour of sustainable development. It is therefore respectfully submitted that the appeal should be upheld and planning permission ought to be granted.

## 8. The Case for Milton Keynes Council<sup>74</sup>

### Introduction

- 8.1. The Council submits that this appeal should be dismissed. In its evidence to this inquiry and questions in cross-examination, the appellant has demonstrated an obsession with process, an interpretative approach which is contrary to the plain words of local and national policy, and a selective approach to the evidence which ignores that which does not support its case. By contrast, the Council's approach has been straightforward, consistent with national policy, and should be preferred

### Previous Decision Letter (DL)

- 8.2. The DL is a material consideration in the redetermination of this appeal, notwithstanding the fact that it was quashed by the High Court: see *R. (Davison) v Elmbridge Borough Council* [2019] EWHC 1409 (Admin)<sup>75</sup>. This is to give effect to the well-established principle of consistency in decision making. In *Davison*, the judge gave specific guidance on the application of consistency to a quashed decision as follows:
- (a) The principle of consistency is not limited to the formal decision but extends to the reasoning underlying the decision.
  - (b) Of itself, a decision quashed by the Courts is incapable of having any legal effect on the rights and duties of the parties. In the planning context, the subsequent decision maker is not bound by the quashed decision and starts afresh taking into account the development plan and other material considerations.
  - (c) However, the previously quashed decision is capable in law of being a material consideration. Whether, and to what extent, the decision maker is required to take the previously quashed decision into account is a matter of judgment of the decision maker reviewable on public law grounds. A failure to take into account a previously quashed decision will be unlawful if no reasonable decision maker could have failed to take it into account.
  - (d) The decision maker may need to analyse the basis on which the previous decision was quashed and take into account the parts of the decision unaffected by the quashing.
  - (e) The greater the apparent inconsistency between decisions the more the need for an explanation of the position
- 8.3. Applying these principles, the Council submits:
- (a) The DL is a material consideration in the present case. No reasonable decision maker could fail to take the DL into account given the obvious relevance to the issues in dispute. However, the DL does not bind the decision maker who must start afresh, taking into account the

---

<sup>74</sup> Largely taken from the Council's closing submissions RID34

<sup>75</sup> Insofar as the Appellant may seek to rely on *West Lancashire v SSCLG* [2017] EWHC 3451 as establishing a different approach, *Davison* is to be preferred given that it expressly considered *West Lancashire*.

development plan and other material considerations, of which the DL is one.

- (b) The DL was quashed because the Secretary of State failed to give adequate reasons for concluding that the Council could demonstrate a 5 year HLS. Accordingly, the Secretary of State's conclusions (and reasoning) on all matters unrelated to 5 year HLS were not impugned by the High Court.
- (c) Notwithstanding the fact that the SoS's conclusions on these matters was not impugned, it is necessary to consider whether those conclusions remain relevant, and if so, whether they hold good, taking into account any changes in circumstances that may have arisen since the SoS's decision

8.4. In respect of the Secretary of State's principal conclusions, the Council's position is that:

- (a) 5 year HLS: The conclusion at DL paragraph 18 that the Council could demonstrate a 5 year HLS formed the basis on which the DL was quashed. Accordingly, no weight can be given to this conclusion and the issue must be considered afresh by reference to the new evidence now presented at this Inquiry.
- (b) Location of site: The conclusion at DL paragraph 19 that the development fails to accord with Policy WS5 of the WSNP is relevant and unaffected by the quashing of the DL. However, given the changes to the development plan since the DL was issued, the conclusion that the development was contrary to saved local plan policy S10 is no longer relevant. Further, given the changes to the development plan, it is necessary to consider afresh the weight to be afforded to the conflict with Policy WS5.
- (c) Housing density: The conclusion at DL paragraph 26 that the development fails to accord with NPPF 2018 paragraphs 122–123 is relevant and holds good given the similarity with the relevant paragraphs in the NPPF 2019. However, given the changes to the development plan since the DL was issued, the conclusion that the development was contrary to Policy H8 is no longer relevant.
- (d) Character of the area: The conclusion at DL paragraph 27 that "the significant visual and landscape effects of the scheme would be very local, while beyond those immediate surroundings, the effects would be very limited" is relevant and holds good as there has been no material change of circumstances.
- (e) Heritage: The conclusion at DL paragraph 28 that there would be less than substantial harm to Deethe Farmhouse is relevant and holds good as there has been no material change of circumstances.
- (f) Benefits of the scheme: The conclusion at DL paragraph 29 that the benefits of the scheme comprise affordable housing, temporary construction employment and secondary employment is relevant and holds good. However, it is necessary to consider afresh the weight to be

afforded to these benefits given the changed housing and economic environments.

- (g) Other matters: The conclusion at DL paragraph 30 that matters relating to traffic and parking, the impact of the development on the facilities of the town, and ecology and drainage, do not weigh against the proposal is relevant and holds good as there has been no material change of circumstances.

- 8.5. It is necessary to consider afresh the conclusions in respect of planning conditions and obligations and the planning balance given changes to the development plan and amendments to both conditions and obligations.

### Housing Land Supply

*The general approach to the assessment of HLS at this appeal*

- 8.6. There is a need to adopt a proportionate and realistic approach to the assessment of evidence at an appeal compared to local plan examination as acknowledged by the Inspector at the Castlethorpe Road appeal<sup>76</sup>. The policy imperative of demonstrating a 5 year HLS in NPPF paragraph 73 and the consequences of not being able to in terms of NPPF paragraph 11 is to ensure that there is an adequate supply of housing land. This is clear from NPPF paragraph 59. Contrary to the approach of the appellant, the assessment of 5 year HLS is concerned with the endpoint and a sufficient supply of deliverable land, not with the assessment process. There is a need for good planning judgment.
- 8.7. The appellant's approach to the assessment of deliverability invites the decision-maker to ignore evidence which is obviously material to the assessment of realistic prospects. It is well established that policy cannot lawfully make immaterial that which is material<sup>77</sup>. The Appellant ignores this, and this is one of many reasons why its approach is wrong in law.
- 8.8. The Council's 5 year HLS must be viewed in the context of the recently adopted Plan:MK, which has brought about a robust supply and resulted in dramatic improvements in housing delivery. Since adoption in March 2019, the Council has achieved its annual delivery requirement in 2018/19 for the first time since 2007/08 consistent with the continual year on year improvement over the first 3 years of Plan:MK. In quarters 1-3 of 2019/20, the Council has delivered 92% of its annual requirement such that it is near certain that it will meet its annual delivery requirement again for the second consecutive year<sup>78</sup>. The number of units under construction at the end of quarter 2 of 2019/20 was the highest number since June 2008 and quarter 3 only marginally lower. The first 3 quarters of 2019/20 is the first time since at least 2007/08 that the Council has recorded over 2000 units under construction for 3 consecutive quarters.

---

<sup>76</sup> CD6.18 paragraph 51 [the Council's closing submission refer to this appeal as 'Hanslope', but for consistency this report has used the same address used by the appellant]

<sup>77</sup> See *Gransden & Co. Ltd. and Another v Secretary of State for the Environment* (1987) 54 P. & C.R. 86 per Woolf J (as he then was) at 94.

<sup>78</sup> LPA1 table 5.1 and RID07

- 8.9. The Plan:MK Inspector confirmed the Council has a clear and robust roadmap to delivering housing and was satisfied with its housing trajectory, with special circumstances for significantly higher delivery over next few years, significant number of small and medium sites and the risk of non-delivery minimal<sup>79</sup>. The Council submits that the change in the NPPF definition of deliverable does not affect these conclusions as they go to the underlying approach of the Council and the underlying circumstances of the local area.

*Other recent appeal decisions dealing with 5 year HLS*

- 8.10. Both the Castlethorpe Road and the Globe appeal decisions<sup>80</sup> are material considerations, but neither is binding on the decision maker. Given the conflicting conclusions on HLS, the decision maker will need to disagree with at least one and give reasons. Neither decision is more lawful than the other and their planning judgments have not been challenged. The differences between the appeals relate to the different evidence presented to each appeal and the different manner in which the evidence was presented. The fact that more time was spent on site by site analysis at the hearing for the Castlethorpe Road appeal does not make it a more considered decision. The evidence was presented in advance for the Globe hearing and there was only one appellant. The HLS evidence at the Globe hearing was more up to date and was presented earlier on. While this might mean the Globe decision should be preferred on this basis, there is still a need to reach a fresh judgment for this appeal based on the evidence before this Inquiry.
- 8.11. Both appeal decisions considered the most up to date evidence like this appeal. Both decisions noted the improving housing completions. The Castlethorpe decision dismissed criticism of the Council's proformas. This Inquiry has the benefit of the Council's note<sup>81</sup> explaining the proforma process and that respondents did amend build out rates where necessary. A statement from a developer would provide no greater certainty of delivery. The evidence presented by the appellant from Mid Suffolk District Council<sup>82</sup> accepts an email confirmation to support build out rates.
- 8.12. The Castlethorpe Road decision applies an optimism bias (OB) using a midpoint between the Council and appellants (paragraph 62). It is important to note that the Council and appellants were referring to two different things when using the term OB: the Council was referring to a lapse rate while the appellants were referring to an adjustment for alleged inaccuracies in the 5 year HLS assessment. The alleged inaccuracy was the discrepancy between the Council's previous assessments of HLS and the number of homes delivered. The midpoint applied by the Inspector was not 17.5% but a broader approach and the Council would have been able to demonstrate a 5 year HLS otherwise.
- 8.13. The Castlethorpe Road conclusion that it was not particularly apparent that the Council had reduced its calculations of housing land supply to reflect the revised definition of deliverable in the NPPF no longer holds good as the Council has given clear evidence<sup>83</sup> to this Inquiry of the approach and

---

<sup>79</sup> CD5.32 paragraphs 136, 145 and 152

<sup>80</sup> CD6.18 and CD6.17 respectively

<sup>81</sup> RID13

<sup>82</sup> RID15

<sup>83</sup> LPA2 appendix 2, section 2

methodology followed. Moreover, the Council has discounted sites from the Plan:MK 5 year HLS due to the new definition of deliverable<sup>84</sup>.

*Timescale of the evidence*

- 8.14. There is dispute between the parties as to the use of evidence which post-dates the base date of 1 April 2019 to assess deliverability. This is a matter of principle which falls to be determined by interpreting national policy and is not an issue specific to the facts of the case. The Council's position is that the calculation of 5 year HLS should not introduce new sites granted permission after 1 April 2019 which were not identified as part of the supply at 1 April in Council's June 2019 HLS assessment. Moreover, regard should be had to all of the evidence presented to this inquiry even it was created after 1 April or relates to events which postdate 1 April. The assessment needs to ask a simple question in respect of each site – does the evidence presented to this inquiry demonstrate that the site is deliverable in the five-year period 1 April 2019 – 31 March 2024.
- 8.15. The appellant advocated an artificial two stage approach. Firstly, to consider, by reference only to evidence which predates 1 April (either because it was created before that date or because it was created after that date but referable back to matters known before that date), whether the site was deliverable as at 1 April. Secondly, to consider whether the conclusion reached at the first stage holds good today by reference to other matters since 1 April. The Council submits this is wrong and should be rejected for the following reasons.
- 8.16. Firstly, it is an approach that has no basis in the NPPF or PPG. Reference in paragraph 73 to a minimum of 5 years' worth of housing is simply an expression of the need for the supply to cover at least a 5 year period. Reliance on the PPG paragraph 68-001-20190722 is misplaced as 'next five years' operates as a contrast to 'last 3 years' to illustrate difference between retrospective Housing Delivery Test and prospective calculation of 5 year HLS. It does not impose an evidential cut-off date. The appellant accepts that the base date for assessment may be a date which has passed such that 'next' is not imbued with any special meaning. There is no basis for only considering evidence prior to the base date and no basis for a two stage approach.
- 8.17. Secondly, the PPG approach accords with the Council when considering the provisions relating to preparation of an Annual Position Statement (APS)<sup>85</sup> where the base date is 1 April and a local planning authority has until 31 July to prepare and consult on its APS before submission to PINS and PINS issues its recommendation by October. This allows for stakeholders to agree or disagree with evidence to allow robust challenge and reasoned conclusion on deliverability which is then assessed by PINS.
- 8.18. Thirdly, neither Woolpit nor Darnall School Lane decisions<sup>86</sup> support the appellant's approach. The former discounts sites not identified at the base date from the assessment which the Council follows in its approach. The latter considered information after the base date where it was relevant to identified sites with no artificial cut-off date for evidence.

<sup>84</sup> RID19

<sup>85</sup> PPG ID: 68-012-20190722, ID: 68-013-20190722, ID: 68-015-20190722

<sup>86</sup> CD6.16 and CD6.14/6.15 respectively

- 8.19. Fourthly, the appellant's approach is impractical and seeks to create an artificial process. An HLS assessment requires understanding of actual completions which cannot be known until after the base date. The Mid Suffolk and Babergh HLS assessments illustrate this reality<sup>87</sup>. Both refer to MOUs/SOCGs agreed after base date; these may support evidence but can only mean there was sufficient clear evidence without them. The MOUs contained matters post-dating the base date that were taken into account in calculating 5 year HLS such as build out rates<sup>88</sup>. The assessment of deliverability requires consideration of how many homes are deliverable and not simply that the site is deliverable<sup>89</sup>. There is no basis in policy or logic to impose artificial time restrictions on the assessment of deliverability but not the other elements of the 5 year HLS assessment.
- 8.20. Fifthly, where an APS is not used, the PPG is clear that HLS should be demonstrated using the latest available evidence and up to date evidence<sup>90</sup>. The Council's approach is consistent with this. The appellant seeks to disaggregate evidence so that there is a threshold test at first stage which omits the most recent evidence as it is limited only to evidence which predates the base date. The consequence is to invite the decision maker to disregard obviously material evidence in the assessment of whether there is a realistic prospect that a particular site is deliverable.
- 8.21. Sixthly, the Council's approach is consistent with the Colchester Road decision<sup>91</sup> regarding evidence after the base date, the Globe decision<sup>92</sup> regarding the use of proformas after 1 April base date, and the Castlethorpe Road decision regarding the use of proformas<sup>93</sup>.
- 8.22. The appellant's approach seeks to create an obstacle course for local planning authorities to negotiate every time there is an appeal. It bears no resemblance to national policy and departs from clear purpose of HLS mechanism to ensure that there is a pool of sites of sufficient capability to create a realistic prospect that local housing need will be met in a timely fashion in the relevant 5 year period. The appellant places process above good, sound and sensible planning.

*Deliverability, not delivery*

- 8.23. There is a clear distinction in NPPF paragraph 73 between delivery and deliverable. The appellant conflates the two and the error manifests itself in two principal ways: it forms the basis for the application of an inflated OB to the Council's deliverable sites; and it forms the basis for the appellant's erroneous discounting of deliverable sites.
- 8.24. The *St Modwen* judgment<sup>94</sup> in paragraphs 35-39 highlights the essential distinction between the two concepts. Deliverability is a less demanding test than delivery. The fact that a particular site is capable of being delivered within five years and thus deliverable, does not mean that it necessarily will be

---

<sup>88</sup> RID15 paragraphs 24 and 25

<sup>89</sup> See Colchester Road decision at CD6.22 paragraph 65

<sup>90</sup> PPG ID: 68-004-20190722 and 68-007-20190722

<sup>91</sup> CD6.22 paragraph 62

<sup>92</sup> CD6.17 paragraphs 23 and 24

<sup>93</sup> CD6.18 paragraph 55

<sup>94</sup> CD7.6

delivered. The judgment also highlights that the likelihood of housing being delivered within 5 year period is no greater than a realistic prospect, not certain or probable. The revisions to the NPPF does not affect this judgment including the definition of deliverable which is materially unchanged in the first part of that definition in the 2012 and 2019 versions.

- 8.25. *St Modwen* does not create new law but explains the correct interpretation of national policy. This is confirmed in the more recent *East Bergholt* judgment<sup>95</sup> at paragraphs 47-51, which highlights that 'realistic prospect' is a matter of planning judgment

*Adjusting the assessment of deliverable sites*

- 8.26. This issue relates to whether the assessment of deliverable sites should be adjusting by applying an OB and if so, what method of discount for OB should be applied. The Council uses OB to refer to lapse rates while the appellant uses it to refer to a discount to apply to the Council's HLS to address alleged inaccuracies in the assessment. The Council applies a lapse rate to all sites with forecast delivery in the 5<sup>th</sup> year of supply by discounting delivery of the site in each year by 10%. The appellant advocates a blanket discount of 28-30% to the supply but applies no such discount in its own assessment.
- 8.27. The Council's position is that it no longer considers it appropriate to apply a lapse rate due to the site by site assessment it undertakes. However, to be consistent with the approach for Plan:MK, a lapse rate was included in the HLS assessment in June 2019 and in the evidence to this appeal. This is to ensure robustness. The appellant's HLS witness has also carried out a site by site assessment and so there appears to be little difference that a lapse rate or OB is not required. It is open to the decision-maker to conclude that it is not required as the detailed assessment of sites reduces uncertainty.
- 8.28. The appellant's OB should not be applied as its HLS witness has compared the assessment of deliverable supply with actual delivery. This is erroneous and an unrelated comparison contrary to *St Modwen*. Just because a deliverable site was not delivered does not undermine the assessment of deliverability. It would also be inconsistent with national policy. For the purposes of NPPF paragraph 73, it is agreed that only a 5% buffer is necessary rather than 20% which is intended to make up for the significant under delivery of housing over previous three years. This achieves the same purpose as the appellant's OB. To impose the OB would be inconsistent with the NPPF which has decided it is not appropriate to apply a 20% buffer. Lapse rates were not applied in Mid Suffolk or Babergh's HLS assessments and the appellant has confirmed that it does not support a lapse rate<sup>96</sup>.
- 8.29. If a discount is to be applied to this appeal, then it should be the lapse rate in accordance with the Council's methodology and not the appellant's OB.

*Permitted development prior approval notifications*

- 8.30. This relates to the grant of prior approval pursuant to Class O of Schedule 2 to the Town and Country Planning (General Permitted Development) (England)

---

<sup>95</sup> RID09

<sup>96</sup> RID17 paragraph 1.16

Order 2015 (GPDO) and the calculation of 5 year HLS. The Council's position is that it results in detailed planning permission which falls within category (a) of the NPPF definition of deliverable. This is a matter of law not planning judgment.

- 8.31. The NPPF should be interpreted consistently with the planning acts as judgments have found<sup>97</sup>. Section 336(1) of the Town and Country Planning Act 1990 (TCPA 1990) defines "planning permission" as a permission under Part III TCPA 1990. The GPDO is made pursuant to Section 58 TCPA 1990, which falls within Part III TCPA 1990. Accordingly, where article 3 of the GPDO grants planning permission for development in Schedule 2 to the GPDO (including Class O), that planning permission is a permission under Part III TCPA 1990 and thus within the definition of "planning permission" in s. 336(1) TCPA 1990. On this basis, the reference to "detailed planning permission" must include planning permission granted pursuant to Class O.
- 8.32. The appellant's argument that the government was aware of Class O permitted development rights when drafting the NPPF definition of deliverable and the express omission of Class O is deliberate fails because the definition of deliverable includes such permissions under Class O.
- 8.33. A development with prior approval is indistinguishable from other types of permission in category (a). No further consent is required other than discharge of conditions like a site with full planning permission. This contrasts with the sites in category (b) where further consent is required. This approach is consistent with the SoS in the Hanging Lane decision<sup>98</sup> at paragraph 21 where he agreed with the Inspector's analysis regarding the inclusion of prior approval sites.
- 8.34. If the appellant is correct, then homes created under Class O would fall outside the 5 year HLS entirely. The PPG<sup>99</sup> states for the purposes of calculating 5 year supply housing completions can include conversions and changes of use. Furthermore, it is inconsistent with the rationale for Class O which is to boost housing delivery. The appellant has not referred to any appeal decisions or case law to support its approach and offered no cogent reason why homes created under Class O should be excluded from the definition of deliverable. Under category (a), the burden of proof is on the appellant to show clear evidence that a site will not be delivered.

*Site by site assessment – general points<sup>100</sup>*

- 8.35. At the roundtable session, the appellant's approach was based on a number of common and erroneous themes. Firstly, the criticism of the proformas which has been dealt with above. Secondly, the discounting of proformas from MKDP for no reason other than assertion that they would be inaccurate for the purposes of the Council preparing its assessment. MKDP is an arms-length organisation with the remit of bringing land forward for housing, it has detailed local knowledge and no reason to doubt its responses. A similar approach was taken to responses from Homes England, who are a non-departmental public

<sup>97</sup> CD7.4 paragraphs 19 and 20

<sup>98</sup> CD6.20

<sup>99</sup> PPG ID: 068-029-20190722

<sup>100</sup> Appendix 1 to the Council's closing submissions sets out a summary on strategic sites

body and statutory corporation to improve the supply and quality of housing and the regeneration or development of land or infrastructure in England.

- 8.36. The proformas make clear that the information is being sought on the basis of a year running from 1 April to 31 March, with forecasts being sought from the year 2019/20 onwards, i.e. from 1 April 2019 onwards. Accordingly, the suggested completions of the Council (and any confirmation or amendment by the respondent) can only be on the basis of starting from the base date. As such, it is evidence which can be taken into account even on the appellant's artificial basis because it refers to matters as they were at the base date.
- 8.37. The appellant's distinction between sites in the control of land promoters or landowners and developers is without consequence as there is clear evidence that the former are no more likely than the latter to landbank sites as set out in the NLP report<sup>101</sup>.
- 8.38. The appellant's suggestion that the evidence gathered for the Plan:MK preparation was of no assistance as it had been prepared with the NPPF 2012 definition of deliverable erroneously conflates the collection of evidence with the judgment made on the basis of that evidence. There is no reason why Plan:MK evidence could not be taken into account and reappraised under the revised definition of deliverable.
- 8.39. The Council's approach to build out rates is robust, as the Plan:MK Inspector found, because it has adopted an individualised approach to each site, sense checked against build out rates derived from local context and subject to further checking by the Joint Housing Delivery Team.

*Brooklands (Site 1)*

- 8.40. Appellant's criticism of build out rates is misplaced as the Council's projected completions are consistent with local evidence and increasing pattern of completions. Over the last 4 years, the average delivery has been 247dpa which is above the 222dpa average rate for the next 5 years which the appellant criticises. Recent monitoring data illustrates that the site has already delivered well over Council projections of 182 completions for 2019/20, with 267 homes completed by the end of quarter 3. The evidence supports that the Council's figures are realistic and robust since delivery is already in advance of the Council's projections. This is also confirmed by the proformas provided by the Council from the housebuilders involved and who are already building out some parts of the strategic site.

*Tattenhoe Park (Site 2)*

- 8.41. Criticism of Homes England's involvement is misplaced for the reasons above. Homes England provided further information as part of Plan:MK process supported by continuing dialogue. Two parcels are in the hands of developers and Homes England is engaged in a clearly documented marketing exercise to secure developer involvement on remaining parcels via tender process. This documentation contains a clear timeline for this to happen (including the build out rates and lead in times which the developers must adhere to) and supports the proforma responses from Homes England (including the most recent

---

<sup>101</sup> CD11.1 page 12, second column, first paragraph

updated proformas). All of this progress is consistent with the two recent grants of detailed planning permission, both of which were for more homes than expected.

*Western Expansion Area (Site 3)*

- 8.42. There have been completions on Area 10 for 4 years (5 including current year). Up to 1 April 2019 there have been 712 completions since the site started delivering and 300 delivered in this year alone. This area has delivered 1000 homes and is only 32 short of meeting this year's projected figure. For Area 11, there has been 834 completions over last 4 years and over the last 2 years the completions have been 267 and 268 homes. There have been 133 completions for this year, more than projected. Combined, the two areas are delivering in the same manner (high 200dpa almost 300dpa each). The Council's assessment is consistent with the proformas and supported by a documented disposal strategy. There has been a sense check of developer information with a more conservative approach adopted by the Council.

*Strategic Land Allocation (Site 4)*

- 8.43. The Council's careful parcel by parcel analysis is to be preferred as it is clearly grounded in the evidence of ongoing completions. For example, taking the area as a whole, 181 completions were projected across the whole site for 2019/20 and as the Q3 monitoring data demonstrates, 187 have been completed.

*The Council's final 5 year HLS position*

- 8.44. Scenario 1: removal of conceded site – Land at Galleon Wharf (Site 14) for 14 units.

1 April 2019	No. of Units
Annual requirement	1,767
Requirement to 1 April 2019	5,301
Completions to 1 April	4,529
Shortfall	772
5 year requirement	9,607
5 year requirement including 5% buffer	10,087
Supply as at 1 April 2019	13,610
MKC Lapse Rate	678
Supply as at 1 April 2019	12,932
5 year	6.41
Surplus	2,845

- 8.45. Scenario 2: removal of conceded site – Land at Galleon Wharf for 14 units and inclusion of all adjustments in paragraph 4.62 of Council's HLS proof of evidence with the exception of paragraph 4.6.11 (Site C3.2 Central Milton Keynes) as this was deemed undeliverable as of 1 April 2019.

1 April 2019	No. of Units
Annual requirement	1,767
Requirement to 1 April 2019	5,301

Completions to 1 April	4,529
Shortfall	772
5 year requirement	9,607
5 year requirement including 5% buffer	10,087
Supply as at 1 April 2019	13,252
MKC Lapse Rate	650
Supply as at 1 April 2019	12,602
5 year	6.25
Surplus	2,515

8.46. Scenario 3: as per Scenario 2 but with Council lapse rate not applied.

1 April 2019	No. of Units
Annual requirement	1,767
Requirement to 1 April 2019	5,301
Completions to 1 April	4,529
Shortfall	772
5 year requirement	9,607
5 year requirement including 5% buffer	10,087
Supply as at 1 April 2019	13,252
MKC Lapse Rate	0
Supply as at 1 April 2019	13,252
5 year	6.57
Surplus	3,165

#### *Conclusions on 5 year HLS*

8.47. For the reasons above the Council submits that its approach should be preferred and that it has demonstrated a 5 year HLS. The Council's approach is robust, sensible and consistent with national policy. By contrast the appellant's approach is artificial, focussed on process not good planning and inconsistent with national policy.

#### The Development Plan

*Plan: MK*

8.48. The appellant's planning witness accepted at cross-examination that the development is contrary to Policies DS1 and DS2 of Plan:MK. He suggested that it was nevertheless in general conformity with the approach that underlines the spatial strategy, but the spatial strategy is DS1 and DS2 and so this must be rejected. Policy DS1 draws a distinction between the urban area of Milton Keynes where development should be within and adjacent to that area, and the rural area where new development should be within the key settlements, villages and other rural settlements. The appellant's planning witness accepted that Policy DS2 is to be read in combination with Policy DS1. Thus, it only contemplates housing within the defined boundary of the key settlements. He also accepted that the appeal site does not fall within any of the 13 criteria in Policy DS2.

- 8.49. The Plan:MK Inspector as recently as February 2019 found Policies DS1 and DS2 were consistent with NPPF 2012 subject to modifications<sup>102</sup>. The Inspector considered the overall strategy for Woburn Sands and found no need to modify the settlement boundary to make a specific allowance for additional development<sup>103</sup>. The appellant's witness accepted that the spatial strategy of Plan:MK is that there is no requirement for Woburn Sands to meet. Thus, there is no inconsistency between Policies DS1 and DS2 and NPPF paragraph 65 (which requires plans to set out housing requirements for neighbourhood areas) given the findings of the Plan:MK Inspector. The policies therefore carry full weight for this appeal.
- 8.50. The objective of Policy DS5 is, amongst other things, to recognise and safeguard the character of the areas within the Borough beyond the settlement boundary. The appellant's witness accepted conflict with this policy and that it is consistent with the NPPF 2019 and up to date. As such, it carries full weight. The Plan:MK Inspector found the policy was sound. The NPPF allows plans to include policies that conserve and enhance the natural environment, not just protect valued landscapes.

#### *The Neighbourhood Plan*

- 8.51. The policies in the WSNP remain the same as the first Inquiry but circumstances have moved on not least with the adoption of Plan:MK. Paragraph 19 of the SoS's decision only gave moderate weight to Policy WS5 since it defined boundaries by reference to a Local Plan only intended to guide development to 2011. However, the role of the WSNP and its boundaries have been considered afresh within Plan:MK and particularly Policy DS2. As above, the Plan:MK Inspector concluded that no modification was required in terms of the settlement boundary. Further, he concluded that Plan:MK was the first opportunity to systematically review settlement boundaries in the Borough and he found them to be robust. Therefore, the WSNP boundary is robust and up to date.
- 8.52. Policy WS5 is not purely a countryside protection policy, it is a settlement boundary policy indicating the approach to development within the boundary. This is not contrary to the NPPF, which also allows neighbourhood plans to include policies to conserve and enhance the natural environment. The appellant cannot assert that Policy WS5 is inconsistent and out of date but agree that Policy DS5 is consistent and up to date. The two policies reflect the same policy approach. The arguments concerning the bullet points in WS5 go nowhere since they are all contingent on Plan:MK identifying a need for a boundary change which it did not. As such they do not apply. Accordingly, Policy WS5 is to be given full weight for this appeal.
- 8.53. The same is true in respect of Policy WS6. The appellant only raised points regarding the consistency of bullet points in that policy, none of which are engaged as Plan:MK did not identify any need for boundary changes. Thus, Policy WS6 is consistent with the NPPF and up to date and should be given full weight.

---

<sup>102</sup> CD3.32 paragraphs 31-45

<sup>103</sup> CD3.32 paragraph 34

## Density

- 8.54. As a matter of law, the grant of outline planning permission will establish that the density of the development, however it is distributed across the appeal site and, however many units will come forward, will be acceptable in principle. Accordingly, if outline permission were granted as sought and a developer were to apply at the reserved matters stage for 203 units distributed across the appeal site, the Council would not lawfully be able to refuse planning permission on the basis that the density of what is proposed is too low and makes an inefficient use of land contrary to Policy HN1 and/or paragraphs 122/123 of the NPPF. The Planning Encyclopedia states that density is not a reserved matter referred to the court judgment in *Chieveley*<sup>104</sup>. The appellant has not suggested the use of a condition to reserve density for later approval and this has not been addressed at the Inquiry. Thus, there is no evidence for the SoS to consider such a condition.
- 8.55. The Council's planning witness was confused in cross-examination on the matter of whether reserved matters approval could be refused on the grounds of density. That suggestion cannot be found in the written evidence of either party since it is wrong as a matter of law. The decision-maker has to determine now whether a proposal which would allow up to 203 units across the whole of the redline area would be acceptable in density terms. This is a planning judgment as to whether the development would make efficient use of land.
- 8.56. NPPF paragraph 122 sets out a number of factors to consider as to whether a development makes efficient use of land. This approach is echoed in Plan:MK via Policy HN1(c) which is consistent with NPPF paragraphs 122 and 123 and so is up to date and given full weight. The policy adopts a flexible approach to ensure appropriate densities on a case by case basis. Any judgment needs to be sensitive to the extent to which land is being released to meet a housing need. The appellant's planning witness accepted the greater the need and/or shortfall in HLS the greater this will pull towards a higher density level.
- 8.57. Local market conditions and viability in this case do not pull towards a higher or lower density. There is no constraint in the availability and capacity of infrastructure and services which would prevent additional housing above 203 units. This site is in a sustainable location and no evidence that any increase in units would give rise to severe consequences for the local highway network.
- 8.58. In terms of maintaining the area's prevailing character and setting, the SoS's decision considered this matter in relation to the then extant Policy H8 which sought a density of 35dph. The SoS must have considered that such a density was acceptable in terms of character and appearance. He noted that the scheme was a significant departure from policy in paragraph 26 of his DL.
- 8.59. Since the SoS decision, the only material change in terms of the character of the area is that Policy H8 has been replaced with Policy HN1. While the latter does not contain a requirement for 35dph, the objection of bringing forward the highest density that can be delivered while ensuring that the development would still relate well to character and appearance has not.

---

<sup>104</sup> RID23

- 8.60. It is evident from paragraph 26 of the DL that the SoS must have concluded conflict with NPPF paragraph 122 since in paragraph 24 he had found that Policy H8 was consistent with this paragraph. The SoS had previously found only limited effects of the scheme on visual and landscape considerations implying that the site has strong visual containment. As such, there is scope for the density to increase while maintaining an appropriate buffer and landscape boundary without unduly affecting character and appearance. There is no reason to reach a different conclusion now as the scope for additional development to be accommodated. Thus, the only reasonable conclusion is that the development does not make efficient use of land contrary to NPPF paragraph 122 and Policy HN1.
- 8.61. The appellant argues the site should be released due to a lack of 5 year HLS. NPPF paragraph 123 is highly relevant here. Where there is shortage of housing land, it is especially important to avoid low densities and to optimise the use of each site. Paragraph 123(a) relates to plan making, but the policy response of a significant uplift in the average density applies in a decision-taking context. Paragraph 123(c) is clear that proposals which fail to make efficient use of land they should be refused planning permission, even in the context that includes circumstances where there is a shortage of housing land. If sites are to be released to meet housing needs, they must be utilised efficiently to reduce the overall amount of land that has to be released.
- 8.62. Where a development comes forward that does not make efficient use of land it must be refused even in the context of additional housing need. Any conflict with NPPF paragraphs 122/123 must be given significant weight against the grant of permission. Any less weight would not achieve the policy objective of optimising densities in situations of housing need.
- 8.63. The appellant cannot argue for a site to be released due to a shortfall of sites but propose a scheme which reflects the low density of adjacent development that is below the average density for Woburn Sands (26-27dph). There is no evidence that even with 203 units the amount of development is optimal. The appellant has not produced evidence that shows a higher density would be unacceptable in planning terms<sup>105</sup>. The appellant has reduced the planning judgment to a series of comparisons of density calculations.
- 8.64. The appellant's recalculation of density was flawed in that it omitted access roads and other elements. This excluded roads initially described as estate roads which should have been included in the net developable area as without them access to houses could not be achieved. The Council's Urban Capacity Study which supported Plan:MK makes it clear this approach was inconsistent<sup>106</sup>. The appellant revised density figure is thus flawed and overstates the density. The reliance placed by the appellant on the 50% net developable area approach adopted in the Strategic Housing Land Availability Assessment<sup>107</sup> is also misplaced since that documents predates the revisions to the NPPF on density.

---

<sup>105</sup> In response before its closing submissions, the appellant noted that at the first Inquiry, an illustrative proposal by the appellant for 303 dwellings (Document 11.13) did not find favour with the Inspector at paragraph IR9.46

<sup>106</sup> CD5.12 paragraphs 1.1.3 and 1.2.2

<sup>107</sup> CD5.15 paragraph 7.7 and table 7.2

- 8.65. The comparative exercises in the appellant's planning witness' rebuttal<sup>108</sup> is flawed as it does not compare like with like. The areas examined include larger areas of open countryside rather than focusing on the built-up area and so does not help with whether the development makes efficient use of land. None of the above gives rise to any reason to reach a different view from that concluded previously by the SoS. It is submitted that the simple fact here is that the proposed development would not make efficient use of land and is unacceptable in policy terms as a result. Regardless of the HLS position, the conflict with the NPPF is so significant it justifies refusal in its own right.

#### Best and most versatile land (BMV)

- 8.66. The appellant accepted that the development will result in the loss of some BMV and that this gives rise to a conflict with Policy NE7. He accepted that Policy NE7 is consistent with the NPPF and up to date and is to be given full weight in the determination of this appeal.

#### Benefits of the proposed development

- 8.67. Regardless of the HLS position, it is accepted that the provision of affordable housing should be given significant weight. If there is a 5 year HLS, the benefits of extra market housing are moderate at best. The weight to ascribe should take into account that the actual amount of housing that may come forward is uncertain (up to 203). If there is no 5 year HLS then the benefits of extra market housing could be significant, depending on the number and how many units are likely to be delivered in the 5 year period.
- 8.68. It will take time for decision on this appeal. It took 18 months last time. If it is assumed that a decision to allow is reached in 6 months (July 2020) there would be a period of time to secure reserved matter approvals and discharge pre-commencement conditions before works start on site. Based on the evidence of the appellant's HLS witness, the average time from grant of outline permission to commencement on site is 5 years. If that were applied here, the development would make no contribution to the 5 year HLS. If commencement began at a rate 5 times faster i.e. July 2021 there would be delivery in the 5 year period. At 50dpa, this would be 150 units at most, so the weight to be given to the contribution to 5 year HLS must be reduced.
- 8.69. There have been no material changes in circumstances in terms of economic benefits, which should be ascribed moderate weight.
- 8.70. The appellant cites the provision of an alternative route to the existing Cranfield Road / Newport Road junction as a highway benefit, but the updated TA presents modelling that shows increases in queue lengths and traffic flows at both the Newport Road and Cranfield Road junctions. While a very modest impact, this does not suggest improvement. There is no appraisal of the benefit to safety and so anything suggested is just assertion. Thus, while the development is acceptable in highway terms, there are no material benefits to be weighed in favour.
- 8.71. It is unclear the extent to which the offer relating to medical facilities is justified as necessary to make the development acceptable in planning terms

---

<sup>108</sup> APP10

or the extent to which that offer goes beyond the mitigation of what is proposed. To the extent that it mitigates the effect of the development it is not a benefit but rather what is required to render the scheme policy compliant. To the extent that it goes beyond that position then it cannot be given weight as a benefit since to do so would be contrary to regulation 122 of the Community Infrastructure Levy (CIL) Regulations 2010.

- 8.72. No details have been provided to show that the development would provide potential to mitigate the risk of surface water flooding. Since this alleged benefit would involve drainage proposals which seek to address a pre-existing issue it cannot be required by condition or by a planning obligation since it goes beyond that which is related to the development proposed. To give this factor weight would thus be contrary to the requirements of NPPF paragraphs 55 and 56 and to regulation 122 of the CIL Regulations 2010
- 8.73. A high quality living environment is unknown at this stage given the outline nature of the proposal. Further, such a requirement is required to be delivered by all development in Milton Keynes as a result of Policies D1 and SD1 of Plan:MK. This is not a benefit but a policy requirement and so carries no weight.

#### The proper approach to the determination of this appeal

- 8.74. Policies DS1, DS2, DS5, HN1 and NE7 of Plan:MK and Policies WS5 and WS6 of the NP are all relevant development plan policies. They are also the policies which are the most important to determining the application<sup>109</sup>. Further, as has been established above, they are all consistent with the NPPF and are up to date. The Council has a 5 year HLS. Thus, NPPF paragraph 11(d) is not engaged and rather it is NPPF paragraph 11(c) that should be used.
- 8.75. Plan:MK is up to date. The development does not accord with it overall since it conflicts with the spatial strategy, its policy approach to making efficient use of land and to avoiding the loss of BMV. Section 38(6) of the 2004 Act requires the application to be determined in accordance with the development plan unless material considerations indicate otherwise. The development conflicts with the above policies and so is not in accordance with the development plan.
- 8.76. The development's benefits are not of such a nature or scale to justify departure from the constraint policies of a recently adopted plan. All of the benefits could be claimed by any housing development on greenfield land on the edge of any settlement in Milton Keynes. The weight to these benefits cannot be such as to outweigh the conflict with the development plan. Thus, the development conflicts with NPPF paragraph 11(c) and is not sustainable development. It does not accord with the development plan with insufficient material considerations to outweigh the conflict.
- 8.77. If, contrary to the Council's case, NPPF paragraph 11(d) is engaged, it is accepted that the application of policies in the NPPF that protect areas or assets of particular importance do not provide a clear reason for refusing the proposed development. As such, NPPF paragraph 11(d)(i) does not provide a

---

<sup>109</sup> Based on the cross-examination of appellant's planning witness and the evidence in chief of the Council's planning witness

reason for refusing planning permission. Accordingly, the tilted balance in paragraph 11(d)(ii) would be engaged.

- 8.78. There would be adverse impacts in a development of inappropriate density and the loss of BMV. These impacts would conflict with NPPF paragraphs 122, 123(c) and 170(b). In circumstances where greenfield land is to be released to meet housing needs due to inadequacies in the 5 year HLS it is all the more important that efficient use is made of that greenfield resource to meet as much of the unmet need as is possible (NPPF paragraph 123). The development does not optimise the use of the site but promotes a sub-optimal density and continues the inefficient low density development of the past. This clear breach of NPPF paragraph 123 should result in refusal given the importance of the issue and the clear words of paragraph 123(c). This is an adverse impact contemplated by the NPPF as justifying refusal.
- 8.79. Even if NPPF paragraph 11(d) is applied, the Council submits that the adverse impacts of granting planning permission would significantly and demonstrably outweigh the benefits. Accordingly, the proposed development does not represent sustainable development even on this basis. This means that the NPPF weighs heavily in favour of refusal of planning permission. Applying section 38(6), even in circumstances where there is no 5 year HLS, the breach of the development plan together with the breaches of the NPPF weigh heavily in favour of refusal. It is submitted that the other material considerations which weigh in favour of the grant of planning permission are not sufficient to outweigh these factors. Thus, even if there is no 5 year HLS, planning permission should be refused for the proposed development.

### Conclusion

- 8.80. The planning system should not be an obstacle course for local planning authorities. It should be about delivering homes that are needed at the right time and in the right place. That is best achieved via the plan-led system and not ad hoc at appeal, making judgments on the capability of housing supply with regard to all material evidence.
- 8.81. Plan:MK is not even 12 months old since adoption and yet is faced with submissions that there is no 5 year HLS. All relevant evidence should be considered for the 5 year HLS position. All that a decision maker has to guard against is skewing the 5 year period by not including schemes in the assessment that were not there at the outset. The obstacle course promoted by the appellant has no place in policy or guidance and is wholly impracticable.
- 8.82. The proposed development is contrary to a development plan which is less than a year old and up to date. It is contrary to the NPPF. The application of section 38(6) points firmly in favour of refusal.

## **9. The Case for Interested Parties**

- 9.1. A number of interested parties made representations to the first Inquiry. Paragraphs IR7.1 to IR7.49 of the first Inspector's report<sup>110</sup> provide an overview of their comments. In summary, the representations focused on traffic and parking impacts, ecology, flooding, development plan compliance, and the effect on existing services and facilities. The following parties made representations to the second Inquiry:

*Councillor Jacky Jeffries – Woburn Sands Town Council*<sup>111</sup>

- 9.2. Woburn Sands was still a small town at the start of the 21<sup>st</sup> century with a population of about 2,500 in 950 dwellings. New housing since 2006 have added 622 homes, a 65% increase and an even bigger population increase. Yet, the infrastructure remains virtually unchanged and restricted by available land. Milton Keynes has always sought to preserve the character of existing settlements and the WSNP seeks to preserve green space around town to create small separation from Milton Keynes. Hence, the site is designated open countryside.
- 9.3. Education and medical services in Woburn Sands are at capacity and the proffered doctor's site will not be taken up as it will not be viable. The town has lost shops and the bus service to central Milton Keynes is once an hour. The library remains open thanks to volunteers. The future of East-West rail is uncertain and the line separates the development from the town. There is also the threat of the Oxford to Cambridge Expressway with the preferred corridor almost certain to go through part of this development.

*Councillor David Hopkins – Milton Keynes Council and Wavendon Parish Council*<sup>112</sup>

- 9.4. Plan:MK is recently adopted and should be afforded full weight for applications and appeals. The Plan:MK Inspector did not support the representations of the appellant made at the examination. Plan:MK sets out where development should and should not take place. The site is open countryside. The appellant can make representations to the Plan:MK Review should they wish.
- 9.5. The Council can demonstrate a 5 year HLS with enough land in excess of the Plan:MK housing requirement including the shortfall and a 5% buffer. There is clear evidence of deliverability for each site in the 5 year supply.
- 9.6. The WSNP makes it clear that the site is not included directly or as a reserve site for development. Wavendon does not have a neighbourhood plan but does have 4000 dwellings underway within the parish boundary as part of the Strategic Land Allocation first identified in the Local Plan 2001-2011.
- 9.7. The land is close to the East-West rail link and the preferred option for the Oxford to Cambridge Expressway. The Plan:MK Inspector while allowing the South East Milton Keynes allocation restricted development before 2023 to allow for full consultation and approval of the Expressway. If the Expressway does not come forward or the route goes elsewhere, then this site could be considered against other sites.

---

<sup>110</sup> CD10.33

<sup>111</sup> RID04

<sup>112</sup> RID05

- 9.8. There are issues regarding density. There are issues regarding the capacity of the local highway network now and in the future with East-West rail seeing additional trains and the level crossing closed more often. The neighbouring land at Wavendon House is now a registered park and garden. There needs to be a masterplan when this site does come forward to take account of the park and garden, the need for highways infrastructure and other improvements and the provision of local services.

*Judith Barker – local resident*<sup>113</sup>

- 9.9. Plan:MK has been adopted and does not designate the land for development. Policy WS5 of the WSNP protects the field behind Tavistock Close from development. Woburn Sands' character and identity needs protecting. New flats at the Greens development remain unsold. The town's infrastructure cannot cope and the railway is due to be upgraded. When there is a problem on the M1, traffic re-routes through Woburn Sands.
- 9.10. The appellant has control over land to the east of the site and permission would set precedent for more rural development. Land along the A421 is already being developed for 4000-6000 dwellings with extra cars on local roads. New housing is not being bought by local people. Milton Keynes has a 20 year land supply in pipeline. Highways England has recommended no permission on land within the preferred route corridor until further consultation on route options in 2020.
- 9.11. If applications get turned down and the developer appeals and wins the Council has to recompensate the development with council tax money. The appellant has prejudiced the appeal outcome by giving a story to The Times complaining that smaller building companies are not getting permissions for political reasons when the reality is based on planning grounds. The importance of open countryside for nature and wildlife cannot be ignored in light of climate change issues and sustainability. There is a shortage of Council housing rather than housing in general. Firms are getting approvals and then not building to raise the land value for speculation purposes. Finally, Milton Keynes has 4 times more urban land than UK average and over 10 times less natural areas, all the more important to protect open countryside.

*Jenny Brook – local resident*<sup>114</sup>

- 9.12. We will need farmland even more in the context of Brexit. Curveballs are being thrown at the local planning authority. Milton Keynes was intended as a city for 250,000 people and is now planning for 500,000 people. There are national infrastructure issues with East-West Rail and the Expressway. Network Rail has said the level crossing is not their issue. Plans need to be put in place to deal with the through traffic issue.

---

<sup>113</sup> RID16

<sup>114</sup> Oral comments only

## **10. Written Representations**

- 10.1. In terms of the original application and appeal, paragraphs IR8.1 to IR8.6 of the first Inspector's report set out the comments that were made. They covered many of the points raised by interested parties above.
- 10.2. In terms of the redetermined appeal, there have been 11 letters of objection<sup>115</sup> from local people and statutory bodies, and a further written objection received at the Inquiry highlighting concerns with surface water flooding from the site to adjoining properties<sup>116</sup>. The concerns raised in all of the other letters highlighted similar issues to those raised above. They included the loss of open countryside, ecological and flooding impacts, the capacity for Woburn Sands to take more development, increased strain on local services including the doctors and the police, traffic effects including delays at the level crossing, and the route of the potential Expressway.
- 10.3. One of the letters was from Highways England dated 13 December 2019 noting that the site lies within the preferred corridor of the Expressway. The letter registered concerns that development of the site could affect or be affected by a potential route option either directly or indirectly. The letter noted that environmental and planning constraints in the Woburn Sands area effectively limit the potential availability of route options in this area. As such, there are risks of conflict with the Expressway particularly in relation to proposals for major development which lie outside defined settlement boundaries. Highways England supports Plan:MK which seeks to accommodate necessary growth in the form of sustainable development whilst facilitating the Expressway as a key national infrastructure project with the potential to increase connectivity in Milton Keynes. The letter concludes that the development would be contrary to the adopted development plan and as such would potentially result in conflict with the Expressway.

<sup>116</sup> RID11

## 11. Conditions and Obligations

- 11.1. Suggested conditions are included in Section A2 of the agreed SOCG between the parties<sup>117</sup>. They are based on the conditions recommended by the first Inspector with an additional condition relating to housing mix. The list of recommended conditions (28) in the attached annex are broadly the same of those in the SOCG with some small drafting changes to reflect discussions at the Inquiry. The main change is to Condition 3 which only requires compliance with those parts of the plans not reserved for later approval; the previous wording required the development to be along the lines of the illustrative layout and parameters plans which would prejudice the reserved matter applications.
- 11.2. Should the Secretary of State decide to allow the appeal, I consider all of the conditions to be necessary and meet the tests in NPPF paragraph 55. The reasons for each condition, including why some need to be pre-commencement, are set out in the annex.
- 11.3. The main thrust of the S106 agreement is set out above in Section 3 of this report. The justification for each obligation was set out by the Council before the Inquiry opened with further clarification provided during the Inquiry<sup>118</sup>. The affordable housing obligation meets the requirements of Policy HN2 of Plan:MK. The carbon neutrality obligation meets the requirements of Policy SC1 to help offset the carbon impact of the development. The obligations relating to education facilities are in accordance with Policy INF1 of Plan:MK and the Planning Obligations for Education Facilities SPG<sup>119</sup> to address the impact of the development on school places. The leisure, recreation and sports obligations<sup>120</sup> are in accordance with Plan:MK Policies INF1 and L4 and the Planning Obligations for Leisure Recreation and Sports Facilities SPG<sup>121</sup> to address the on-site and off-site impact of the development on such facilities. This includes an obligation to agree the specification of public open space within the development.
- 11.4. The social infrastructure obligations<sup>122</sup> are in accordance with Policies INF1 and CC1 of Plan:MK and the Social Infrastructure Planning Obligations SPD<sup>123</sup> and address various social requirements arising from the development. They include a financial contribution either towards the provision of the on-site surgery or expanding capacity at the nearest surgery serving the development. There is also an obligation relating to reserving a site within the development for a potential health facility should this be required to address capacity issues in the local area that have been identified by the Council and relevant parties.
- 11.5. There is an obligation relating to the provision of bus vouchers and the distribution of travel information packs to promote more sustainable mode of transport in accordance with Policy CT5 of Plan:MK on public transport. There

---

<sup>117</sup> Section A2 of RID06

<sup>118</sup> RID12

<sup>119</sup> RID32

<sup>120</sup> Relating to playing fields, local play, neighbourhood play, community hall, local park, district park, allotments, and sports hall

<sup>121</sup> CD5.9

<sup>122</sup> Relating to public art, libraries, burial grounds, heritage, health facilities, waste management, social care-day care, emergency services, voluntary sector, skills and training, and inward investment

<sup>123</sup> CD5.10

is also an obligation to secure the highway works necessary to form the highway accesses and connecting footpaths to the site.

- 11.6. All of the above obligations are necessary to make the development acceptable in planning terms. They are also directly related to the development, and fairly and reasonably related in scale and kind to the development. Therefore, they meet the 3 tests set out in NPPF paragraph 56 and regulation 122 of the CIL Regulations 2010.

## 12. Conclusions

- 12.1. The numbers in square brackets refer back to earlier paragraphs which are relevant to my conclusions.

### Main Considerations

- 12.2. The main considerations for the reopened Inquiry were informed by the previous decision letter, notwithstanding submissions by both main parties on the extent to which specific sections of that letter remain a material consideration. Nevertheless, it was broadly accepted that those sections which did not form part of the High Court judgment to quash the first decision, or have not been overtaken by circumstances such as the adoption of Plan:MK, remain relevant to this redetermination. **[7.1-7.4 and 8.2-8.4]**
- 12.3. The main considerations were narrowed down at the pre-Inquiry meeting<sup>124</sup>. At the start of the Inquiry the main parties confirmed that the effect on the character and appearance of the landscape was no longer a main consideration. It was agreed that the main considerations now are as follows<sup>125</sup>:
- (a) whether or not the Council can demonstrate a 5 year supply of deliverable housing sites;
  - (b) whether the proposed housing would be in an appropriate location having regard to the development plan and national policies, as well as routes of potential new transport infrastructure;
  - (c) the acceptability of the proposed housing density; and
  - (d) the overall planning balance in relation to the economic, social and environmental dimensions of sustainable development.

### Housing Land Supply

- 12.4. A number of overarching themes were debated at the Inquiry which are discussed below before turning to an assessment of specific sites and whether the Council can demonstrate a 5 year HLS.

#### *The definition of deliverability*

- 12.5. The 2019 revision to the NPPF definition of deliverable retains reference to “a realistic prospect that housing will be delivered on the site within five years” as it did in the original 2012 version of the NPPF. The Court of Appeal judgment in *St Modwen* found that realistic prospect did not mean a site’s deliverability must necessarily be certain or probable. It also noted the distinction between deliverability and delivery in that a deliverable site does not necessarily have to be delivered. **[8.23-8.24]**
- 12.6. The more recent Court of Appeal judgment in *East Bergholt* noted that a decision maker could adopt a more cautious view when assessing a “realistic prospect”. It went on to say that the assessment of realistic prospect falls

---

<sup>124</sup> CD10.44

<sup>125</sup> It was agreed by the main parties at the start of the inquiry that the effect of the development on the character and appearance of the landscape and surrounding area was no longer a main consideration

within the realms of policy and planning judgment rather than a legal concept. The judgment did not seek to take a different view on the distinction between deliverability and delivery. Therefore, I consider that the *St Modwen* and *East Bergholt* approaches are broadly compatible and there is no need to favour one over the other when assessing deliverability. **[7.21, 8.25]**

- 12.7. Nevertheless, the 2019 revision to the NPPF resulted in a more precise approach to the assessment of deliverability, with two specific categories (a) and (b) and the need to provide clear evidence in both. This necessitates a site specific assessment to determine whether a site is deliverable.

*The base date and timescale of the evidence*

- 12.8. The Council uses a base date of 1 April 2019 for the purposes of calculating its 5 year HLS position. It published its assessment in June 2019 with the housing trajectory in Appendix 1 containing notes on deliverability. Proformas were sent out by email on 20 May 2019 asking for a reply by 7 June 2019. Where no response was received, this was followed up. It was accepted by the Council that the amount of evidence predating 1 April 2019 that informed the assessment was limited. **[7.26]**
- 12.9. However, there is nothing in the NPPF or PPG that stipulates that all of the documentary evidence for a 5 year HLS has to be available at the base date itself. Instead, the PPG advocates the use of the latest available evidence. A local planning authority can prepare and consult on an APS after the 1 April base date before submission to the Planning Inspectorate by 31 July. While not directly applicable here, this indicates that evidence can be produced and tested after the base date. The HLS position statements in Babergh and Mid Suffolk for the 2019-2024 period were published in September 2019 and included data to justify supply that was only known about after 1 April. **[7.25, 8.16, 8.17, 8.19, 8.20]**
- 12.10. The Council has avoided adding new sites after the base date to prevent the skewing of supply in line with the Woolpit decision. While the Woolpit Inspector criticised the retrospective justification of sites after the publication of the Annual Monitoring Report, the Inspector at Darnall School Lane permitted additional evidence to support sites identified as deliverable at the base date which was a position accepted by the SoS in that case. The Longdene and Colchester Road Inspectors took a similar approach. In terms of Milton Keynes appeals, the Castlethorpe Road and the Globe Inspectors took into account the proformas used by the Council to inform its June assessment of 5 year HLS. **[7.23, 7.24, 8.18, 8.21]**
- 12.11. Therefore, I consider it acceptable that the evidence can post-date the base date provided that it is used to support sites identified as deliverable as of 1 April 2019.
- 12.12. The appellant argues for a 1 October 2019 base date in order to take into account the Council's June assessment and quarterly monitoring data. This would result in a necessary adjustment of the 5 year supply period to 30 September 2024. There is little in national policy or guidance that advocates such an approach and it would appear to go against efforts to create greater certainty in the planning process. I concur with the Council that such an approach would mean having to argue HLS at every appeal, rather than having

a fixed base date. Moreover, the quarterly monitoring data is not intended to be an updated assessment of supply<sup>126</sup>. Thus, I do not consider it necessary to apply a 1 October base date. Nevertheless, if the SoS disagrees on this point, my assessment of specific sites below includes an assessment of the 5 year HLS supply position using a 1 October base date. **[7.27, 8.22]**

#### *The proformas*

- 12.13. The appellant's criticisms of the Council's use of proformas focused on whether they provided sufficient written evidence in line with the guidance in the PPG 68-007 and, in some cases, whether the reliance on information provided by bodies such as Homes England and the MKDP on sites in public ownership was appropriate. **[7.28, 7.30]**
- 12.14. Dealing with the former, the Council clarified at the Inquiry that the proformas included a covering letter explaining their purposes for assessing 5 year HLS. Representatives of each site were asked to confirm or amend the Council's trajectory for each site. Although relevant boxes were not always ticked, the proformas were signed and returned with a covering email in many cases. While a SOCG or MOU could provide more information, they offer no more of a commitment to the deliverability of homes than a proforma. Therefore, I consider that a proforma can, in principle, provide clear evidence of a site's deliverability. Additional evidence to support a proforma can also be taken into account subject to its specific content and timing. **[8.11, 8.21, 8.36]**
- 12.15. Turning to the latter, it is apparent that some publicly owned sites have not come forward as quickly as anticipated such as Tattenhoe Park. However, the evidence linking slow delivery to unreliable forecasting from the bodies responsible for managing the disposal of these sites is not conclusive. Although representatives of Homes England and MKDP form part of the group that assesses the proformas, there is little to suggest that their responses to their own proformas is misleading or inaccurate in principle. Therefore, it would not be appropriate to automatically disregard all of their sites. **[8.35]**

#### *Past forecasts and the application of discount rates*

- 12.16. The first Inspector for this appeal noted the uncertainty, slippage and failure in the Council's forecasts of housing delivery and that reasonable adjustments would clearly reduce the HLS to less than 5 years. Evidence presented to this Inquiry has noted the historic under-delivery of housing against forecasts of around 28-30%. While delivery is not the same as deliverability, it is apparent that past forecasting has not been particularly accurate. However, recent evidence in terms of housing delivery has shown that the Council met its annual delivery requirement from Plan:MK for 2018/19 and is set to do so again for 2019/20. The number of units under construction is at a high rate. **[7.31, 7.32, 8.8].**
- 12.17. The Plan:MK Inspector found the plan sound in terms of housing delivery rates and considered the higher delivery to be realistic with minimal risk of non-delivery. I accept that the Inspector examined the plan under the

---

<sup>126</sup> LPA3 paragraph 2.9

2012 NPPF definition of deliverable and it should not be assumed that because the plan was found sound that a 5 year HLS can be demonstrated now. There is a need to review sites on the basis of the 2019 NPPF definition. Indeed, the Council has removed sites in the Plan:MK supply for completion by 31 March 2024 where it no longer considers they meet the new definition. **[7.16, 8.9, 8.13]**

12.18. Nevertheless, the appellant has not applied a discount of 28-30% to their assessment of the Council's 5 year HLS as they have carried out a site by site assessment. Moreover, the appellant accepted that for the purposes of establishing whether a 5 year HLS exists, it is only necessary to apply a 5% rather than a 20% buffer in Milton Keynes due to rates of delivery. **[8.26, 8.28]**

12.19. The Council has historically applied a lapse rate to its forecasting of HLS for sites with delivery in Year 5, where a 10% discount is applied across the 5 years for those sites. Given that the Council has moved to a site by site assessment, it considers that such a discount is no longer necessary. However, for robustness and consistency with the Plan:MK trajectory, the discount has been applied to this appeal by the Council. Therefore, I have taken into account the Council's lapse rate as part of my HLS assessment. Based on recent delivery rates and Plan:MK, I see no reason to apply a greater discount than the Council's rate **[8.27, 8.29]**

#### *Build-out rates*

12.20. National reports<sup>127</sup> are helpful in identifying previous maximum average built-out rates over 5 years for large strategic sites like Brooklands (268 dwellings per annum). However, they can only be a guide and consideration should be given to evidence relating to specific sites as set out below. **[7.29, 8.37, 8.39]**

#### *Prior approval sites*

12.21. Prior approval sites are not mentioned in categories (a) or (b) of the NPPF definition of deliverable. However, I am persuaded by the Council's argument that where Article 3 of the GPDO grants planning permission for development in Schedule 2, that is within the definition of planning permission in the TCPA 1990. Such approvals are designed to provide a boost to new housing and are required to be implemented within 3 years. The PPG at 68-029 only refers what can count as a completion for the purposes of calculating HLS. It refers to new build, conversions and changes of use, but only in the context of where housing has been completed. Nevertheless, the PPG and NPPF do not explicitly exclude prior approval sites from housing supply. The Inspector and SoS at the Hanging Lane decision found that such sites can be taken into account as part of a 5 year HLS assessment. **[7.74, 8.30-8.34]**

12.22. Thus, I consider that prior approval sites can be regarded as having detailed planning permission and can form part of the supply of deliverable sites within category (a). The onus is on the appellant to demonstrate clear

---

<sup>127</sup> Such as CD11.1

evidence that such sites do not have a realistic prospect of being delivered within 5 years.

*Consistency with previous appeal decisions in Milton Keynes*

- 12.23. The Globe and the Castlethorpe Road appeal decisions dated 5 and 26 September respectively came to different conclusions on whether the Council could demonstrate a 5 year HLS. The former said it could and dismissed the appeal whereas the latter said it could not and allowed both appeals. Both had regard to the most up to date evidence including the proformas and both noted the recent improvement in housing delivery. The Castlethorpe Road decision found that reliance on past rates of delivery to be inappropriate, but nevertheless applied an optimism bias to the supply at a point midway between the appellants and the Council. The decision also considered that clear evidence for at least 2,717 houses had not been shown.
- 12.24. The Castlethorpe Road decision was challenged by the Council, but permission to apply for statutory review was refused by the High Court. Nevertheless, it would be wrong to afford Castlethorpe Road more weight than the Globe on the premise that it was more legally robust as the Globe has not been tested in the same way. Likewise, while the Castlethorpe Road Inspector explains in paragraph 65 why he has come to a different view on HLS to the Globe Inspector, this is largely on the basis of the nature and manner in which evidence was presented to him rather than any criticism of the Globe decision. **[7.33, 8.10-8.13]**
- 12.25. Therefore, it is not possible to say that one decision should be preferred over the other. There is a need for consistency in appeal decisions along with clear explanations of any divergence in views from another Inspector. This report is based on the evidence before me, and where necessary, it will explain any difference in findings to the Castlethorpe Road or Globe Inspectors.

*Assessment of disputed sites*

- 12.26. The following assessment is based on the disputed sites set out in the appellant's proof of evidence for HLS (APP2/3), specifically in Table 23 and Appendix 3, along with the HLS SOCG (SOCG1), specifically Table 3. The appellant's rebuttal proof updated Appendix 3 and included at Appendix 3a summarising the main parties' positions on each site (APP4/5/6). Following the roundtable session, the appellant produced an errata document (RID20/RID36) that updates Table 23 in the proof of evidence and Table 3 in the SOCG. The errata document also contains updates to Tables 21 and 22 in the appellant's proof setting out the contended land supply positions at 1 April and 1 October 2019. Appendix 6 of the Council's proof of evidence on HLS (LPA2) contains the primary source of evidence for each site.

*Strategic sites - Brooklands (Site 1) [7.35-7.37, 8.40]*

- 12.27. Brooklands has detailed planning permission for all of its remaining parcels. While the projected completions are high, the rate of delivery over the past 4 years has been high at an average of 247dpa. There have been 267 completions in 2019/20 up to 1 January 2020 against a projection of 182. While one parcel did not submit a proforma response, the Council's projections are based on delivery across the wider site and the phasing methodology. The

appellant's criticisms in terms of the limited number of developers, local experience, past rates of delivery and national reports do not match the current build out rates since 2015/16. Therefore, there is a realistic prospect that the projected housing will be delivered in the 5 year period with no clear evidence to the contrary. This applies to the April and October base dates.

*Strategic sites – Tattenhoe Park (Site 2) [7.38-7.39, 8.41]*

- 12.28. The projected completions on Phases 2-5 at Tattenhoe Park were considered deliverable by the Council in the June HLS assessment, based on proformas returned that month. The completions were taken into account by the Globe Inspector and rejected by the Castlethorpe Road Inspector, both based on the above proformas. The 2018 tender documents for Phases 2 and 3, which were provided to the Council in November 2019, are an indication that Homes England is actively seeking to facilitate delivery of housing (including lead-in times and build out rates). Both phases now have detailed permission via reserved matter applications granted in October and November 2019. While the Castlethorpe Road Inspector found the evidence to be lacking, the additional information provides clear evidence that there is a realistic prospect of housing delivery in the 5 year period for Phases 2 and 3. This applies to both the April and October base dates. Conversely, no additional information has been put forward for Phases 4 and 5 and so there is an absence of clear evidence of their delivery. Thus, these phases are removed from both the April and October base dates (delete 195 units from Site 2)

*Strategic sites – Western Expansion Area (Site 3) [7.40-7.41, 8.42]*

- 12.29. The Western Expansion Area in terms of disputed elements consists of Area 10 Remainder and Area 11 Remainder. Both areas are covered by outline planning permission apart from one parcel that now has reserved matters approval for 152 units. The Council highlights the rate of completions for Area 10 since delivery began in 2015/16 which are now up to 300dpa. For Area 11, completions are up to 288dpa and have exceeded projections already for 2019/20. Site wide infrastructure is in place for the plots expected to deliver in the 5 year period. The Globe decision took the Council's projections into account whereas the Castlethorpe Road decisions did not. However, it is not evident that the latter had the benefit of the proformas dated 10 July 2019 given this was the same date as the hearing. A disposal strategy from the landowners dated December 2019 has been added to the evidence for both areas which sets out further evidence of projected completions. Based on the lack of land disposals since March 2019, this has led to the Council revising down its 5 year trajectory by 306 units for Area 10 and 229 units for Area 11 as a worst case scenario. Nevertheless, apart from these reductions, I consider that there is clear evidence of a realistic prospect of housing delivery for the remaining units in the 5 year period for either April or October (delete 535 units from Site 3).

*Strategic sites – Strategic Land Allocation (Site 4) [7.42-7.44, 8.43]*

- 12.30. The Strategic Land Allocation is divided into a number of large outline sites with several developers. There are 5 parcels that only had outline permission as of 1 April 2019. No proforma was submitted for the Ripper Land parcel and the only evidence is an email from the landowner who highlights

access issues. In line with the Castlethorpe Road Inspector, there is a lack of clear evidence regarding the deliverability of this site (delete 85 units).

- 12.31. No proforma has been submitted for the Land West of Eagle Farm South parcel but this has reserved matter approval. The appellant has queried the build-out rate alongside the other two Eagle Farm parcels with reserved matter approvals, but all 3 parcels have started delivering in line with or ahead of projections. As such, there is no clear evidence to indicate that Land West of Eagle Farm South will not deliver the projected housing in the 5 year period.
- 12.32. The remaining Eagle Farm parcel for 125 units has outline permission only with no proforma returned. An email from October indicates a reserved matter application in the summer of 2020, but it provides little else in the way of clear evidence that the projected number of units will be delivered within the 5 years (delete 125 units).
- 12.33. The proforma for the remaining outline permission at Glebe Farm was submitted after the June HLS assessment but indicates a strong rate of delivery of units. Two parts of the remaining outline permission now have reserved matters approvals from September and October 2019 for a total of 366 units. This surpasses the 310 projection in the 5 year supply and with two developers operating the build-out rates appear realistic. A proforma from one of the developers in November supports these rates. Although this evidence post-dates 1 April 2019, it clearly demonstrates there is a realistic prospect of delivering the projected amount of housing within the 5 year period.
- 12.34. The Council's projection of 180 units for the Golf Course Land was based on the proforma dated May 2019. Since then, reserved matters approval was granted on 1 November 2019. This additional information provides clear evidence of deliverability within the 5 year period.
- 12.35. The proforma for Church Farm indicates a reserved matters application by late 2019. The Globe decision found this to be sufficient information whereas the Castlethorpe Road decision considered it fell short. Further information indicates that the application submission has now slipped to Easter 2020 with issues regarding road to be agreed. This continues to fall short of the clear evidence to demonstrate a realistic prospect of delivery (delete 90 units).

*Outline or pending permissions as at 1 April 2019*

- 12.36. The June 2019 proforma for Newton Leys (Site 5) indicates the delivery of 80 units, which has been reinforced by reserved matters approval in September 2019. The Globe decision considered the site was deliverable and I consider there is clear evidence and a realistic prospect of delivery at either base date.
- 12.37. The June 2019 proforma for Campbell Park Remainder (Site 6) indicates the delivery of 300 units in the 5 year period. The Globe and Castlethorpe Road decisions came to opposite conclusions on the deliverability of this site. There is now further information in the form of email correspondence from December 2019 that outlines progress towards starting on site in 2021. This represents clear evidence of deliverability and as such there is a realistic prospect of the projected numbers coming forward for either base date.

- 12.38. The June 2019 proforma for Wyevale Garden Centre (Site 9) noted a resolution to grant planning permission. This was granted in July 2019. This supports clear evidence of the site being deliverable, while the build-out rates of 150 and 130 units in 2021/22 and 2022/23 appear achievable given that the development relates to apartments that can be delivered in larger numbers at one time. Therefore, there is a realistic prospect of the projected numbers coming forward for either base date.
- 12.39. Planning permission for the Agora redevelopment (Site 13) has lapsed and the June 2019 proforma noted viability issues and a pending decision on whether to list the existing building. The Castlethorpe Road decision found clear evidence to be lacking. Further information from November 2019 notes that the listing request was turned down and there has been progress towards planning permission and building demolition in 2020. While viability issues remain over S106 contributions, this does not appear to be a significant constraint. Based on the above, clear evidence of deliverability has been demonstrated and as such there is a realistic prospect of the projected numbers coming forward for either base date.
- 12.40. At the inquiry, the Council accepted that Galleon Wharf (Site 14) is not deliverable. I have no reason to disagree (delete 14 units).
- 12.41. The Railcare Maintenance Depot (Site 15) has outline permission, but the June 2019 proforma provides no information on progression towards approving reserved matters. The appellant also notes that part of the site has now been developed for a supermarket. Based on the lack of clear evidence, it has not been demonstrated that a realistic prospect of delivery exists for either base date (delete 175 units).
- 12.42. Eaton Leys (Site 16) has outline permission but no proforma was submitted in June 2019. However, a reserved matter application was pending and due to be determined by January 2020. A proforma was provided by the developer in December 2019 updating projections which appear achievable for the size of development and a major housebuilder. Thus, there is clear evidence of deliverability and as such a realistic prospect of the projected numbers coming forward for either base date.
- 12.43. The June 2019 proforma for Timbold Drive (Site 26) provides limited information on the delivery of the site notwithstanding an existing outline permission. The Council notes in its proof that a new outline permission is being sought. There is a lack of clear evidence of progress towards a reserved matters approval and a realistic prospect of delivery within 5 years has not been demonstrated (delete 130 units).
- 12.44. The June 2019 proforma for Land at Walton Manor (Site 33) provides little information on delivery. The site had an application for outline permission as at 1 April 2019 which was granted in November 2019. However, there is little information on start times and build out rates. Thus, clear evidence is lacking and a realistic prospect of delivery in 5 years has not been demonstrated (delete 115 units).
- 12.45. The June 2019 proforma for Land at Towergate (Site 34) notes marketing in the summer of 2019 and a start date of January 2021. Progress has been made in terms of discharging conditions, but there is limited

information on progress towards approving reserved matters. Thus, clear evidence is lacking and a realistic prospect of delivery in 5 years has not been demonstrated (delete 150 units).

- 12.46. For High Park Drive (Site 36), no proforma was submitted in June 2019. However, a reserved matters application was submitted in November 2019 along with applications to discharge conditions. A proforma from November 2019 indicates a start date of autumn 2020. Thus, there is clear evidence of deliverability and as such a realistic prospect of the projected numbers coming forward for either base date.
- 12.47. For Land East of Tillbrook Farm (Site 40), the anticipated reserved matters application in the summer of 2019 did not materialise but a January/February 2020 application was indicated in further information. Thus, there is clear evidence of deliverability and as such a realistic prospect of the projected numbers coming forward for either base date.
- 12.48. The June 2019 proforma for Land West of Yardley Road (Site 42) indicated the submission of a reserved matters application in July. The Globe decision found the site was deliverable. The application was delayed until November 2019, but this still demonstrates progress towards securing detailed permission. Thus, there is clear evidence of deliverability and a realistic prospect of the projected numbers coming forward for either base date.

*Sites with prior notification approval as at 1 April 2019*

- 12.49. Based on the above reasoning, Maybrook House (Site 37), Mercury House (Site 38) and Bowback House (Site 39) can be considered as having detailed planning permission based on their prior notification approval to convert from officers to residential. No proformas have been submitted for these sites, but the assumption should be that there is a realistic prospect of delivery unless clear evidence indicates otherwise. All 3 sites had prior notification granted in 2018 and so as of 1 April 2019 there was still ample time to implement. While the sites may not be fully vacated now and being marketed for office use, there was a realistic prospect of delivery as of 1 April 2019 with no clear evidence to the contrary. Therefore, all 3 sites can be included within the 5 year supply.

*Allocated sites as at 1 April 2019*

- 12.50. No evidence for the South East Milton Keynes Strategic Growth Area (Site 7) was presented to the Castlethorpe Road Inspector and so it was discounted. However, the Council note that the projection is based on the Plan:MK trajectory and the SOCG to the plan examination. There is the uncertainty of whether the route of the Oxford to Cambridge Expressway will go through the site, delaying progress with delivering housing. However, the Plan:MK Inspector referred to a modest output by 2023/24. Although there have been delays to announcements on the preferred route of the Expressway, progress is being made towards a planning application for a smaller part of the site and a wider Development Framework is being prepared. Therefore, clear evidence of a realistic prospect of delivering 50 units on the site has been demonstrated.

- 12.51. Berwick Drive (Site 8), Food Centre (Site 10), Redbridge and Rowle Close (Sites 11 and 12), Land off Hampstead Gate (Site 19), Land off Harrowden (Site 20), Hendrix Drive (Site 22), Kellan Drive (Site 23), Singleton Drive (Site 24), the former Milton Keynes Rugby Club (Site 25), Land north of Vernier Crescent (Site 28), Manifold Lane (Site 29), Daubney Gate (Site 30), Springfield Boulevard (Site 31), Reserve Site Hindhead Knoll (Site 32), Reserve Site 3 (Site 35) and Tickford Fields (Site 41) are all allocated sites where the June 2019 proformas gave little information on the delivery of these sites and the Castlethorpe Road decision found clear evidence to be lacking.
- 12.52. For Site 8, Site 23 and Site 31 there is further information from the Council's property team dated November 2019 setting out a specific timetable for delivery by 2021, albeit with a revised number of dwellings. For Site 10, there is now a planning performance agreement for the site, and hybrid planning applications have been submitted following positive public consultation events for a significantly larger number of units overall. The Council's June assessment projected 298 units delivered in the 5 years, although this has been revised down to 200 units based on the further information. For Site 19, Site 29, Site 30, Site 32 and Site 41 there is further information in the form of emails setting out the timetable for an application and construction. For Site 25, land disposal has been agreed and plans prepared. Based on the above, clear evidence of deliverability has been demonstrated and as such there is a realistic prospect of the projected numbers coming forward for either base date.
- 12.53. For Sites 11 and 12, an updated proforma and letter from November 2019 confirms that the sites have passed through a neighbourhood plan examination with increased unit numbers. However, there is no clear evidence of a timetable for submitting planning applications and starting on site (delete 19 + 18 units). For Sites 20, 22, 24, 28 and 35 there is no further information provided meaning that there is still a lack of clear evidence to demonstrate a realistic prospect of delivery for either base date (delete 25 + 10 + 22 + 14 + 22 units).
- 12.54. The Lakes Estate Neighbourhood Plan site allocations (Site 17 as well as Site 18 Phelps Road and Site 27 Southern Windermere Drive) gave limited information on firm progress towards the submission of an application and the Castlethorpe Road decision found clear evidence to be lacking. Further information and timings have been submitted in November 2019 providing greater detail on progress towards submitting the application and starting on site. The development would deliver a net total of 398 dwellings allowing for the demolition of existing Council homes. Phase A will involve the construction of 110 new homes, with further new homes in Phase B only once demolition has taken place in early 2022. Therefore, there is a realistic prospect of delivering the 130 units projected by the Council over the 5 year period, with clear evidence to support this for either base date.
- 12.55. The self-build plots at Broughton Atterbury (Site 21) form part of an allocated site with the wider site subject to detailed planning permission. However, the June 2019 proforma provides little information on the delivery of this site and no further information has been provided on this matter or evidence of demand for such plots. Thus, there is a lack of clear evidence to

demonstrate a realistic prospect of delivery for either base date (delete 6 units).

*New sites between 1 April and 1 October 2019*

- 12.56. In the event that a 1 October 2019 base date is preferred, there are a few sites that could be included in the 5 year supply, although the appellant disputes their inclusion. Omega Mansions (Site 43) and Chancery House (Site 45) are prior notification approvals for office to residential granted in July and August 2019 respectively. There is no clear evidence to indicate these sites with detailed permission will not deliver within the 3 years of their approval. Therefore, they can be included for an October base date. Cable House (Site 44) is a duplication with Mercury House and so has not been included. The appellant has also referred to a prior notification site at Station Road Elder Gate (Site 48) although I have little information on this site including any projected numbers. As such, it makes no difference to the supply either way.
- 12.57. Land south of Cresswell Lane (Site 46) was an allocated site as of 1 April 2019 but gained detailed permission for 294 flats in July 2019. A proforma from November 2019 indicates delivery within the 5 years which is achievable for two blocks of flats. There is no clear evidence to suggest there is not a realistic prospect of delivery and so the site can be included for an October base date.
- 12.58. The Castlethorpe Road decisions (Site 47a/b) granted outline permission for 50 units on one site (a) and detailed permission for 51 units on the other site (b). For the latter, there is no clear evidence to indicate non-delivery in the next 5 years. For the former, there is no clear evidence to demonstrate progress towards reserved matters approval. Therefore, I can include Site 47(b) for an October base date but exclude Site 47(a) (delete 50 units).

*Sites potentially delivering between 1 April and 30 September 2024*

- 12.59. If the base date is shifted to 1 October 2019, this would necessitate moving the end date to 30 September 2024 in terms of the 5 year period. Based on the June 2019 assessment, there are 13 sites currently in Year 6 (2024/25) that are shown as starting to deliver in that year. At the Inquiry, the Council only sought to argue that 4 of them have a realistic prospect of delivery. The amount for each site would be half of that shown in Appendix 1 of the June assessment for 2024/25 given that 1 April to 30 September is 6 months.
- 12.60. The sites at the rear of Saxon Court (Site 49), the rear of Westminster House (Site 50), Site C4.2 (Site 51) and the Cavendish site (Site 52) within the Fullers Slade regeneration project are all allocations in Plan:MK. There is little evidence of progress towards applications for any of these sites. Site 49 has had a development brief prepared but there is no other information. The regeneration project has been through a referendum and a development programme agreed. While an application could be submitted in late 2020 and delivery commence in the 5 year period for Site 52, there is little evidence to support this position. Therefore, it has not been shown that there is a realistic prospect of delivery for these 4 sites and they should not form part of the 5 year supply for a 1 October 2019 base date (delete 20 + 15 + 22 + 9 units).

*Conclusion on housing land supply*

- 12.61. For the 1 April 2019 base date, the Council considers it has a surplus of 2,845 units with a lapse rate applied to the supply (removing 678 units) in Scenario 1 above **[8.44]**. The appellant's closing statement reports the Council's contended surplus to be 2,844 which is one unit lower **[7.19]**. The discrepancy is not clear, but I have used the lower surplus figure just in case. The above assessment deletes a number of units from specific sites coming to a total of 1,750 units deleted for a 1 April base date. This would reduce the surplus to 1,094 units and result in a supply of 11,181 units (12,931 – 1,750). Set against an agreed 5 year requirement of 10,087 units this would result in a HLS of 5.5 years. Bearing in mind that the lapse rate has only been applied to ensure robustness, I am satisfied that the Council can realistically demonstrate a 5 year HLS for this base date.
- 12.62. For a 1 October 2019 base date position, the Council's surplus based on its monitoring data and its approach to assessing deliverability is 3,859. The reduction in units set out above, including those sites purported to be in a 5 year supply between 1 October 2019 and 30 September 2024, comes to a total of 1,866 units deleted. The effect on the surplus would reduce it to 1,993 units and result in a supply of 12,083 units (13,949 – 1,866). Set against a 5 year requirement of 10,091 units, this would result in a 5 year HLS of 5.99 years for this base date.
- 12.63. I have had regard to the Council's Scenario 2 **[8.45]** which includes all of the adjustments in paragraph 4.62 of the Council's proof (LPA1) except paragraph 4.62.11 along with the removal of Site 14 at Galleon Wharf. This scenario sees an overall reduction in supply by 330 units from Scenario 1 but still provides a 5 year HLS of 6.25 years. My assessment above has already applied the adjustments to the sites in paragraphs 4.62.1 and 4.62.2 and deleted all or part of the sites in paragraphs 4.62.6, 4.62.12 and 4.6.13. It has not applied the adjustments in the remaining paragraphs, but even if it did, this would result in a minor overall addition of 95 units to the supply for the April base date. Thus, Scenario 2 does not affect my findings on HLS.
- 12.64. Scenario 3 is the same as Scenario 2 **[8.46]** but without the Council's lapse rate applied. I have decided that it would be prudent to apply the lapse rate and so this scenario also does not affect my findings on HLS.
- 12.65. In conclusion and based on the evidence before me, I find that the Council can demonstrate a 5 year supply of deliverable housing sites whichever approach is taken in terms of the base date, and even with the application of the Council's lapse rate. In the event that the SoS finds that a 5 year supply cannot be demonstrated, I deal with this scenario and its implications below.

The Location of the Development*The Development Plan – Plan: MK*

- 12.66. The appellant accepts that the proposal conflicts with Policies DS1, DS2 and DS5 of Plan:MK due its location in the open countryside outside of the development boundary for Woburn Sands. While adjacent to this key settlement, the proposal does not meet any of the 13 criteria set out in Policy

DS2 and neither does it meet any of the exceptions in Policy DS5. **[7.5, 8.48, 8.50]**

- 12.67. The appellant argues that the proposal is in accordance with the approach that underpins the Plan:MK spatial strategy given that it adjoins a key settlement that Plan:MK defines as 'chosen for development'. There is general agreement between the main parties that the site is in a sustainable location with regards to its proximity to a range of services and facilities in Woburn Sands. The NPPF supports housing in such locations and where it can enhance or maintain the vitality of rural communities. However, I consider that the location and type of development does not comply with Policies DS1, DS2 and DS5 which sets out the spatial strategy for residential schemes. The presence of a 5 year HLS means the weight to any conflict with these policies is not diminished. **[7.5, 7.93, 7.94, 8.49]**
- 12.68. While Plan:MK does not set out housing requirements for the Woburn Sands neighbourhood area as advocated in NPPF paragraph 65, the Plan:MK Inspector considered that no specific allowance for additional development was necessary for this settlement. The development boundary is tightly drawn around the settlement but it has been reviewed as part of the Plan:MK examination with amendments made to accommodate recent planning approvals. This is not to say that there is a cap on development in Woburn Sands, but there is no policy requirement to deliver additional housing in this settlement. Moreover, it has not been demonstrated that Policies DS1, DS2 and DS5 are inconsistent with the NPPF in terms of their approach to the spatial strategy and the location of housing and the objective to safeguard the countryside from inappropriate development. **[7.6, 7.7, 7.92, 8.49, 8.50]**

*The Development Plan - Woburn Sands Neighbourhood Plan*

- 12.69. The appellant accepts that the proposal conflicts with WSNP Policy WS5 as none of the exceptional circumstances currently apply to allow for an extension of the current development boundary. The appellant stressed that WSNP Policy WS6 is parasitic on Policy WS5 and only allows for a limited amount of additional housing in the plan area and none of the listed circumstances apply. **[7.9, 7.13]**
- 12.70. The WSNP has not been reviewed within 5 years of it being made and it makes no allocations for housing. The previous Inspector's report and SoS decision only gave moderate weight to Policy WS5 as it was based on tightly drawn boundaries and the old Milton Keynes Local Plan 2001-2011. The requirement in the policy for any boundary amendment through Plan:MK to be agreed by the Town Council was not recommended by the examiner. Such a requirement is at odds with the NPPF which clarifies the hierarchy of local plans over neighbourhood plans. **[7.10-7.12]**
- 12.71. However, as noted above, the development boundary has been reviewed and updated as part of the Plan:MK process and no specific allowance for additional development was necessary. There is no inconsistency with the NPPF in terms of how Policies WS5 and WS6 seek to safeguard the countryside and direct development to specific locations. Therefore, significant weight can be afforded to both policies and any conflict with them, particularly in light of a demonstrable 5 year HLS. Neither policy should be regarded as being out of date. **[7.14, 8.51-8.53]**

*Proposed new transport infrastructure*

- 12.72. It is conceivable that the route of the Oxford to Cambridge Expressway could travel through or near to the appeal site based on the preferred option of Highways England and the various constraints within the Woburn Sands area. However, there has yet to be a formal announcement on the next stage of this road project or further public consultation on specific options or routes. Plan:MK addresses the Expressway in relation to the South East Milton Keynes extension in terms of the timing of any planning permission but does not preclude development in specific locations as the details and future of the project are still yet unclear. The main parties agree that the proposal does not conflict with the development plan insofar as the Expressway is concerned and so does not warrant refusal of the proposal on this matter. **[6.1, 7.95, 7.96, 9.3, 9.7, 9.10, 10.3]**
- 12.73. The East-West rail project would see greater use of the line through Woburn Sands and interested parties have expressed concerns regarding the potential increased frequency of the level crossing being closed. However, there is little evidence that the appeal proposal would hamper the delivery of the rail project or result in unacceptable traffic conditions insofar as the level crossing is concerned. Again, there is no conflict with the development plan or reason to refuse the proposal on this matter. **[9.3, 9.7, 9.8, 9.12]**

*Conclusion on the location of the development*

- 12.74. While there are no reasons to withhold permission having regard to routes of potential new transport infrastructure, the proposed housing would not be in an appropriate location having regard to the development plan and national policies. As noted above, it would conflict with Plan:MK Policies DS1, DS2 and DS5 and WSNP Policies WS5 and WS6.

Housing Density

- 12.75. At the time of the first SoS decision, Policy H8 of the Local Plan 2001-2011 sought a density of 35dph. The SoS found that the density of the proposed development, which was generally considered to be 16dph at the time, was a very significant departure from this policy with significant weight given to the conflict. Policy H8 has since been replaced with Policy HN1 of Plan:MK which sets no density limit but seeks a balance between making efficient use of land with respecting the surrounding character and context. **[7.99, 8.58]**
- 12.76. Paragraphs 122 and 123 of the NPPF have not changed between the 2018 version considered by the SoS and the current 2019 version. Paragraph 122 seeks efficient use of land taking into account various factors including the desirability of maintaining an area's prevailing character and setting. Paragraph 123 seeks to avoid low densities, but only in the context of an existing or anticipated shortage of land. Given my findings above, this paragraph is not applicable. Policy H8 was considered by the SoS to be consistent with the NPPF, but it is clear that he found conflict with the policy only. This is because he said that the various factors in paragraph 122 did not justify the departure from policy (DL26). **[7.98, 8.60]**

- 12.77. At the first Inquiry, the appellant demonstrated<sup>128</sup> how 16dph was broadly comparable to the densities of immediately adjoining residential streets. The first Inspector found the proposed density to be acceptable. At the second Inquiry, the appellant contended that the net density based on the illustrative layout would actually be 20.3dph. The parties disagreed on the extent of land within the site that would be developed for housing and directly associated uses including the access roads. Around 50% of the site would be developed for housing, but there is no agreement on the overall density. **[7.97, 8.64]**
- 12.78. The fact that there is disagreement over an illustrative layout for a proposal where all matters are reserved apart from access indicates that the final density figure cannot be established at this point. As part of any reserved matter application relating to layout, the provision and situation of buildings, routes and open spaces across the site area is to be assessed and determined. Thus, while density is not a specific reserved matter, the eventual layout could affect the density figure. If the layout was unacceptable to the Council in terms of how it related to the development and buildings and spaces beyond, it could refuse the reserved matters application. Thus, I am persuaded more by the judgment in *Inverclyde* which found density could be considered as part of a reserved matter than the judgment in *Chieveley* which focused on gross floor space. **[7.101, 7.102, 8.54, 8.55]**
- 12.79. No condition has been put forward to fix a specific density or developable area. The development is for up to 203 dwellings. Thus, it is not possible to be certain of the final density figure. There is no detailed analysis from the Council on a specific density figure or range of figures. Its planning witness stated that the development should reflect the overall average density of Woburn Sands which is 27dph. However, this is based on an unverified figure in the appeal decision for the Nampak site. The appellant's analysis indicates that the built-up area of Woburn Sands has a density of 23.7dph. Its density figures for the individual parishes are lower but less helpful as they include large area of countryside. **[7.100, 8.63, 8.65]**
- 12.80. Notwithstanding the disagreement over density figures and the scope of reserved matters, even if the original figure of 16dph is preferred, this would be in keeping with the surrounding character and context of the adjoining streets. The illustrative layout would reflect the spaciousness of these existing streets with the use of open space buffers to safeguard the living conditions of neighbouring properties and the setting of the listed farmhouse. Little evidence has been presented to suggest that a density beyond 16 or 20dph would be acceptable in terms of character and appearance. The first Inspector found that an indicative layout for 303 dwellings would not be desirable in terms of landscaping, amenity and context. Although the site's location has good access to facilities including public transport, it has not been demonstrated that higher density development would be acceptable. In the event that a 5 year HLS could not be demonstrated, there would need to be adequate justification that a higher density could work in this location. **[7.100, 8.63]**

---

<sup>128</sup> CD2.6 appendix 13

- 12.81. While the final layout and density of the development has yet to be fixed, I consider that a scheme based on the illustrative layout with a density of 16-20dph would be relatively low but would be acceptable in this instance for this location. It would balance an efficient use of land with respecting the surrounding character and setting, and so would accord with Plan:MK Policy HN1 and NPPF paragraph 122. While I have reached a different conclusion to the SoS in his first decision, this is based on the changed development plan context, the ability to finalise density at reserved matters, and having regard to the context and character of nearby residential streets. **[7.4, 7.103, 8.65]**
- 12.82. If the SoS concludes differently and finds that the proposed density would not represent an efficient use of land, then there would be conflict with Plan:MK Policy HN1 and NPPF paragraph 122. This would increase the amount of weight against the proposal.

### Other Matters

#### *Best and most versatile agricultural land*

- 12.83. The loss of Grade 3a agricultural land within the site would conflict with Plan:MK Policy NE7. However, site allocations such as the South East Milton Keynes Strategic Growth Area encompass larger areas of best and most versatile agricultural land. The Council has not sought to argue that this matter on its own would justify refusing the development and so the policy conflict only carries moderate weight. A balance needs to be struck between the economic and other benefits of such land versus the benefits of the development. **[7.109, 8.66, 9.12]**

#### *Ecology and drainage*

- 12.84. The first Inspector noted that the ecological value of the site was limited due to its agricultural use with most of the existing habitats contained within the trees, hedgerows and ponds on the field margins. These habitats would be mostly retained and enhanced by the development with measures secured by condition. An updated desktop study and site assessment was undertaken in September 2019 with no major changes since the original 2016 ecology reports. **[6.1, 7.116, 9.11]**
- 12.85. The existing badger sett would be removed to allow for the new access from Newport Road. This would require a derogation licence to avoid an offence under the Conservation of Species and Habitats Regulations 2010. There is no requirement for a derogation licence to be provided prior to grant of planning permission, but the decision-maker must be assured that there would be a reasonable prospect of the licence being granted by Natural England.
- 12.86. The provision of housing is in the public interest, while there is no alternative but to move the badger sett given its location. The creation of an artificial sett as close as possible to the original location would provide temporary refuge and would have to be in use before the licence application. Other mitigation measures during construction would also seek to limit risks to badgers. These measures should maintain the species at a favourable conservation status. Based on these considerations, there is reasonable prospect of Natural England granting a licence. As a consequence, the

development would not have an unacceptable effect on ecology or protected species.

- 12.87. As noted by the first Inspector, the development offers the means to alleviate current drainage problems through additional attenuation and the use of a suitable maintenance regime. There should be sufficient space to allow for the drains set out in the hydrology assessment. The site is within Flood Zone 1 which has the lowest risk of flooding and the development would provide sufficient ponds, swales and ditches to address surface water run-off. The measures and maintenance plan can be secured by conditions and so the development would not have an unacceptable effect on drainage. **[6.1, 10.2]**

#### *Highways and parking*

- 12.88. The development would provide a new route between Newport Road and Cranfield Road to alleviate some of the problems associated with the junction next to the level crossing. The first Inspector noted that all of the junctions would achieve suitable visibility splays and that there would be no unacceptable highway safety impacts. The updated TA for the second Inquiry provides new trip generation and distribution estimates taking into account more recent data and reviews existing and proposed junction modelling. It concludes that there would be very modest impact on all junctions and routes with no adverse effect on highway capacity or the need for any more complex highway designs such as ghost island right turn lanes. While I note the concerns raised by interested parties about traffic impacts, the evidence before me does not indicate that the development should be restricted on highways grounds. The first Inspector noted little evidence of parking stress within Woburn Sands and the intention for a Travel Plan to encourage sustainable modes of transport. I have no reason to come to a different view on parking. **[6.1, 7.107, 7.108]**

#### *Facilities and services in Woburn Sands*

- 12.89. Woburn Sands retains a number of services and facilities including schools, shops and a medical centre, with a bus service and train station. While it may have lost or reduced the amount of services and facilities in recent years, the town remains designated as a key settlement in Plan:MK. Concerns regarding capacity limits at the schools and medical centre can be addressed via financial contributions in the S106 agreement, which also provides the opportunity for additional medical provision within the site. There is little evidence before me to indicate that the development would have an unacceptable impact on services and facilities in Woburn Sands. **[6.1, 7.115, 9.2, 9.3, 9.9]**

#### *Heritage assets*

- 12.90. The Grade II listed Deethe Farmhouse has architectural and historic interest as an 18<sup>th</sup> century property with later alterations. Its significance is also informed by its setting, which today includes the industrial estate as well as the agricultural fields of the appeal site. The former, due to their modern utilitarian appearance and use contribute little to the significance of the farmhouse, whereas the latter make a positive contribution as remnants of the building's agricultural past. The building is not highly visible from either the road or the site due to planting and so the positive contribution of the appeal site is only moderate.

- 12.91. The development would change the rural setting of the farmhouse but the illustrative layout plans shows that a landscaping buffer can be provided within the site to wrap around the shared boundary. Layout and landscaping details could be addressed at reserved matters stage. For the above reasons, the development would result in less than substantial harm to the significance of the listed building. The level of harm would be low due to the existing setting and the proposed mitigation measures. Nevertheless, NPPF paragraphs 193 and 194 state that great weight should be given to the conservation of the listed building and that any harm requires clear and convincing justification. In line with NPPF paragraph 196, this harm will be weighed against the public benefits below. **[6.1, 7.105]**
- 12.92. The recently designated Grade II registered park and garden at Wavendon House forms part of the grounds to the Grade II\* listed Wavendon House and extends close to the northern boundary of the site. The significance of the park and garden derives from its historic and design interest as an 18<sup>th</sup> century pleasure ground and park laid out by a significant landscape improver of the time (Richard Woods). Wavendon House itself has architectural and historic interest as a country estate home of 17<sup>th</sup> century origins largely remodelled in the 18<sup>th</sup> century. A mature belt of trees on the edge of the former golf course limit views between the park and garden and the site, while the listed house is further away to the north with additional landscape screening in place. Thus, the site only makes a minor contribution to the significance of both heritage assets as part of their wider setting. The development would provide trees and a landscape buffer along the boundary nearest to Wavendon House. Details could be addressed at the reserved matters stage. Given the existing screening and distances involved, there would be no harm caused to either heritage asset. **[7.105]**

#### *Character and appearance of the landscape*

- 12.93. The development would have a significant visual and landscape effect on the site itself given that it would change from agricultural fields to housing. However, as noted by the first Inspector and the first SoS decision, the site does not comprise a valued landscape and is contained by existing boundary vegetation which limits views from wider vantage points. Moreover, the site adjoins the edge of Woburn Sands and the development would be seen in the context of existing housing. Although some hedgerows and trees would be lost including those subject to a TPO, the intention is to retain and enhance planting. Little has changed in visual and landscape terms since the first Inquiry and decision. Therefore, I concur that the development would have a very limited effect on the character and appearance of the landscape. **[6.1, 6.3, 7.104, 7.117]**

#### The Planning Balance

- 12.94. A number of benefits have been put forward by the appellant. The provision of affordable housing beyond the minimum policy requirement should be strongly supported in line with Policy HN2 and so carries significant weight. The provision of market housing carries similar weight given the potential number that could be delivered and the eagerness of the appellant as a small to medium sized developer to deliver housing as swiftly as possible. The provision of medical facilities within the site is a potential social benefit but

only if it goes beyond mitigating the effect of the development which has not been proven. **[7.110-7.113, 7.115, 8.67, 8.68, 8.71]**

- 12.95. The economic benefits would include temporary construction employment, the provision of a range of homes for a cross-section of working people, secondary employment through increased spending in the local area and the payment of a new homes' bonus to the Council, some of which could be remitted to Woburn Sands Town Council. As such, reasonable weight can be afforded to these benefits. **[7.114, 8.69]**
- 12.96. In highways terms, while the new road through the site between Newport Road and Cranfield Road would offer an alternative route to the level crossing junction, the appellant's update TA notes very modest impacts on all junctions as a result of the development. The housing would reduce the extent and distance of car-borne commuting although not remove it altogether given the distance to major areas of employment and the relatively limited train and bus services. Therefore, only limited weight can be afforded any highway benefits. **[7.118, 8.70]**
- 12.97. The environmental enhancement of ecology and the provision of drainage measures to try and address existing problems would provide moderate benefits. Little weight can be afforded to the appellant's claim of a high quality living environment given the limited information at outline stage and the policy requirement that all development should be high quality. **[7.116, 8.72, 8.73]**
- 12.98. Taken a whole, the benefits range from limited to significant in magnitude. They can all be regarded as public benefits and set against the low level of harm to the significance of the listed farmhouse, they would provide clear and convincing justification for that harm. Having special regard to the desirability of preserving listed buildings and their setting in line with Section 66(1) of the Planning (Listed Buildings and Conservation Areas) Act 1990, the development would have an acceptable effect in terms of heritage assets. **[12.102-12.104]**
- 12.99. The development would have an acceptable effect on a range of other matters listed above. It would also be acceptable in terms of housing density. There are insufficient grounds for withholding permission based on routes of potential national infrastructure projects and the negative effect on best and most versatile agricultural land would not, in itself, be a reason for refusal. The conflict with Plan:MK Policy NE7 carries moderate weight as set out above and would be outweighed by the benefits. **[12.88-12.95]**
- 12.100. However, there would be conflict with Plan:MK Policies DS1, DS2 and DS5 and WSNP Policies WS5 and WS6 due to the location of the site in the open countryside. I have found that a 5 year HLS can be demonstrated and so there is no reason to reduce the weight to the conflict with these policies on that basis. Policies DS1, DS2 and DS5 are not inconsistent with the NPPF and so carry full weight, while significant weight can be afforded to Policies WS5 and WS6 based on their NPPF consistency. As policies most important for determining the application, none of these 5 policies are out of date. As such, the tilted balance in NPPF paragraph 11(d) is not engaged. **[7.119, 8.74-8.76, 12.79-12.84]**

- 12.101. The development's conflict with the development plan in terms of the location of the housing carries substantial weight as it would not accord with the spatial strategy set out in Plan:MK. While a number of benefits would be achieved, they would be insufficient to outweigh the conflict with the development plan. In line with Section 38(6) of the Planning and Compulsory Purchase Act 2004, planning permission should not be granted.
- 12.102. Alternatively, if the SoS finds that a 5 year HLS cannot be demonstrated or that the most important policies are out of date for other reasons, then the tilted balance in NPPF paragraph 11(d) would be engaged. As there are no policies in the NPPF that provide a clear reason for refusing the development (having had regard to the effect on designated heritage assets), it would be necessary to consider whether any adverse impacts of granting planning permission would significantly and demonstrably outweigh the benefits when assessed against the policies in the NPPF taken as a whole.
- 12.103. Moreover, it should be noted that if the SoS finds that there is a housing land supply shortfall, then NPPF paragraph 123 would be engaged which seeks to avoid homes being built at low densities. NPPF paragraph 123(c) states that proposals should be refused where the decision maker considers that they fail to make efficient use of land taking into account the policies of the NPPF.

### **13. Recommendation**

- 13.1 For the reasons set out above, I recommend that the appeal be dismissed.
- 13.2 Nonetheless, if the SoS is minded to disagree with my recommendation and allow the appeal, then the conditions listed in Annex 1 should be attached to any permission granted along with the obligations set out in the S106 agreement.

*Tom Gilbert-Wooldridge*

INSPECTOR

## **ANNEX 1: SUGGESTED CONDITIONS (28)**

### *Details, phasing and lighting*

- 1) No development shall commence on any phase of the development until details of the layout, scale, appearance and landscaping for that phase (hereinafter called 'the reserved matters') have been submitted to and approved in writing by the Local Planning Authority  
Reason: To meet the requirements of the Town and Country Planning (Development Management Procedure) Order 2015
- 2) Application/s for approval of all the reserved matters shall be made to the Local Planning Authority before the expiration of three years from the date of this permission. The development hereby permitted shall be begun no later than the latest of the following dates:
  - i. The expiration of three years from the date of this permission; or
  - ii. The expiration of two years from the date of the approval of the last of the reserved matters to be approved.

Reason: To meet the requirements of Section 92 of the Town and Country Planning Act 1990 as amended by Section 51 of the Planning and Compulsory Planning Act

- 3) The development hereby permitted shall be carried out in accordance with the following approved plans: PL-X-001 Rev B, PL-X-003 Rev C and PL-X-004, but only in respect of those matters not reserved for later approval.  
Reason: For the avoidance of doubt and in the interests of proper planning of the development
- 4) The development hereby permitted shall not exceed 203 dwellings (Use Class C3). The use classes are those set out in the Town and Country Planning (Use Classes) Order 1987 (as amended) or in any provision equivalent to that Class in any statutory instrument revoking or re-enacting that order with or without modification.  
Reason: To ensure the development conforms to the outline planning permission
- 5) Prior to the commencement of development of any phase of the development, a phasing plan for the whole site shall be submitted to and approved in writing by the Local Planning Authority. For the avoidance of doubt the phasing plan shall include the phasing of the delivery of all roads, footways, redway and bridleway links and Framework Travel Plan measures. The development shall take place in accordance with the approved phasing plan.  
Reason: In order to clarify the terms of this planning permission and ensure that the development proceeds in a planned and phased manner. This is pre-commencement condition as the phasing plan would need to be agreed before any works begin.
- 6) The access arrangements hereby permitted shall be carried out in accordance with Proposed Site Access drawings nos.WO1188-101 Rev P05 and WO1188-102 rev.P03

Reason: To provide satisfactory highway connections to the local highway network

- 7) Reserved matters applications for each phase of the development shall include details of the proposed finished floor levels of all buildings and the finished ground levels in relation to existing surrounding ground levels for that phase. Development for that phase shall be undertaken in accordance with the approved levels.

Reason: To ensure that construction is carried out suitable levels having regard to drainage, access, the appearance of the development and the amenities of neighbouring properties in accordance with Policy D5 of Plan:MK

- 8) Reserved matters applications for each phase of the development shall include details of the proposed boundary treatments for that phase. The approved boundary treatments shall be carried out in accordance with the approved details for that phase and be completed prior to the occupation of the associated dwelling or first use of such phase of the development.

Reason: To provide adequate privacy, to protect the external character and appearance of the area and to minimise the effect of development on the area in accordance with Policy D5 of Plan:MK

- 9) Reserved matters applications for each phase of the development shall include a lighting scheme for all public and private streets, footpaths and parking areas. The lighting scheme shall include details of what lights are being proposed, a lux plan showing maximum, minimum, average and uniformity levels, details of means of electricity supply to each light and how the lights will be managed and maintained in the future. If any lighting is required within the vicinity of current or built-in bat features, it shall be low level with baffles to direct the light away from the boxes and units, thus preventing severance of bat commuting and foraging routes. The approved scheme shall be implemented prior to the occupation of each associated dwelling within that phase of the development.

Reason: In the interests of safety and amenity and in order to comply with Policies D5 and NE6 of Plan:MK

- 10) Reserved matters applications for each phase of the development shall incorporate measures to minimise the risk of crime in accordance with Secured by Design principles. All dwellings shall be designed to achieve Secured by Design accreditation (as awarded by Thames Valley Police) in accordance with details to be submitted to, and approved in writing by, the Local Planning Authority.

Reason: In the interests of reducing crime and disorder in accordance with Policy EH7 of Plan:MK

- 11) Reserved matters applications for each phase of the development shall be accompanied by a Sustainability Statement for that phase including, as a minimum, details required by Policy SC1 of Plan:MK. The approved details shall be implemented for each dwelling prior to the occupation of that dwelling.

Reason: In the interests of achieving a sustainable form of construction and to ensure the development complies with Policy SC1 of Plan:MK

- 12) No development shall take place above slab level until samples of the external materials to be used in the construction for each phase of the development (if any) have been submitted to and approved in writing by the Local Planning Authority. The development shall thereafter be carried out in full accordance with the approved details.

Reason: To ensure that the development does not detract from the character and appearance of the area in accordance with Policy D2 of Plan:MK

*Affordable housing*

- 13) Reserved matters applications for each phase of development shall include details of the location and type of affordable housing pursuant to the development phase for which approval is sought. Each phase of the development shall be carried out in accordance with the approved details.

Reason: To ensure that the development and location of affordable housing is appropriate and in accordance with Policy HN2 of Plan:MK

*Drainage*

- 14) Prior to the commencement of the development hereby permitted a detailed design, and associated management and maintenance plan, for a surface and storm water drainage scheme, based on sustainable drainage principles for the site shall be submitted to and approved in writing by the Local Planning Authority. The management and maintenance plan shall include details of the way the surface and storm water drainage scheme will be implemented for each phase of development. The approved drainage scheme shall subsequently be implemented and maintained in accordance with the approved detailed design and scheme for maintenance, and in accordance with the approved phasing details and be retained thereafter.

Reason: To ensure satisfactory and sustainable surface water drainage to prevent the increased risk of contamination and flooding on or off site in accordance with Policy FR1 of Plan:MK. This is a pre-commencement condition as it is necessary to establish a drainage scheme before works begin.

- 15) Prior to the commencement of each phase of the development, a foul water strategy shall be submitted to and approved in writing by the Local Planning Authority. No dwellings in that phase shall be occupied until the works have been carried out in accordance with the approved foul water strategy for that phase.

Reason: To ensure satisfactory and sustainable foul water drainage to prevent the increased risk of contamination and flooding on or off site in accordance with Policy FR1 of Plan:MK. This is a pre-commencement condition as it is necessary to establish a drainage scheme before works begin.

*Car parking, travel and access*

- 16) Reserved matters applications for each phase of the development shall include a scheme to provide car parking and cycle parking and manoeuvring of vehicles within the development in accordance with the Milton Keynes Council Parking Standards SPG (2016) or any subsequent parking standards adopted at the time any reserved matters application is

submitted and in accordance with the Council's New Residential Development Design Guide (2012) or any further guidance on parking that may be adopted at the time any reserved matters application is submitted. The approved scheme shall be implemented and made available for use for each dwelling prior to the occupation of that dwelling and shall not thereafter be used for any other purpose.

Reason: To ensure adequate parking provision at all times and to enable vehicles to draw off, park, load/unload and turn clear of the highway so that the development does not prejudice the free flow of traffic or the safety on the neighbouring highway in accordance with Policies CT3 and CT10 of Plan:MK

- 17) No development shall take place until there has been submitted to and approved in writing by the Local Planning Authority a Construction and Delivery Plan that shall outline, in accordance with the phasing as approved under Condition 5 the proposed access works and which shall include links to the existing highway, footpaths and cycle ways (including the specification thereof). Development shall then take place in accordance with the approved Construction and Delivery Plan. No other parts of the development shall begin until the new means of access for that phase has been provided and laid out in accordance with the Construction and Delivery Plan and constructed in accordance with Milton Keynes Council's standard specification.

Reason: In the interests of highway safety and to ensure adequate mitigation measures are in place. This is a pre-commencement condition to ensure that there is agreement on construction traffic and deliveries before works begin

- 18) Measures proposed within the approved Framework Travel Plan dated March 2016 will be implemented in a phased manner, in accordance with Condition 5. No phase of the development shall be occupied prior to the implementation of the agreed Framework Travel Plan measures relating to that phase. Those parts of the approved Framework Travel Plan that are identified therein as being capable of implementation after occupation shall be actioned and reported in accordance with the timetable contained within, with a minimum of annual reporting for the first five years.

Reason: To support sustainable transport objectives including a reduction in single occupancy car journeys and the increased use of public transport, walking and cycling in accordance with Policy CT2 of Plan:MK

- 19) No dwelling shall be occupied in any phase of the development until the estate road which provides access to the dwelling, from the existing highway, has been laid out and constructed.

Reason: To provide satisfactory highway connections to the local highway network in accordance with Policy CT2 of Plan:MK

#### *Archaeology*

- 20) Prior to the commencement of each phase of the development a programme of archaeological field evaluation comprising trial trenching shall be completed. The programme of archaeological evaluation shall be detailed in a Written Scheme of Investigation submitted to and approved by the Local Planning Authority in writing. On completion of the agreed

archaeological field evaluation for each phase a further Written Scheme of Investigation for a programme of archaeological mitigation in respect of any identified areas of significant buried archaeological remains shall be submitted to and approved by the Local Planning Authority in writing. The scheme for archaeological mitigation shall include an assessment of significance and research questions; and

- i. The programme and methodology of site investigation and recording;
- ii. The programme for post investigation assessment;
- iii. Provision to be made for analysis of the site investigation and recording;
- iv. Provision to be made for publication and dissemination of the analysis and records of the site investigation;
- v. Provision to be made for archive deposition of the analysis and records of the site investigation; and
- vi. Nomination of a competent person or persons/organisation to undertake the works set out within the Written Scheme of Investigation.

No development in any phase shall take place other than in accordance with the Written Scheme of Investigation so approved. The development hereby permitted shall not be occupied until the site investigation and post investigation assessment has been completed in accordance with the programme set out in the approved Written Scheme of Investigation and the provision made for analysis, publication and dissemination of results and archive deposition has been secured.

Reason: To enable expert investigation of cultural remains at this site of archaeological interest in accordance with Policy HE1 of Plan: MK

### *Ecology*

- 21) Any protected species survey report in excess of three years old at the time of the commencement of development of each phase of the development shall be updated and submitted to and approved in writing by the Local Planning Authority prior to the commencement of development of that phase of the development. Natural England derogation licence(s) shall be obtained for any protected species likely to be harmed prior to the commencement of the development.

Reason: To safeguard protected species and biodiversity in accordance with Policy NE2 of Plan: MK

- 22) Prior to the commencement of development of each phase of the development, a Landscape and Ecology Management Plan which covers the landscape and ecological features of the development ensuring net gains for wildlife compliance with local and national policies shall be submitted to and approved in writing by the Local Planning Authority. The submitted plan shall include the creation of additional habitat areas and a scheme to incorporate additional biodiversity features such as swallow cups, bird and bat boxes, bricks or cavities into appropriate buildings. Thereafter the development shall be carried out in accordance with the approved scheme and all features and access to them shall be maintained in perpetuity.

Reason: To ensure the development incorporates adequate biodiversity enhancements in accordance with Policies NE3 and NE4 of Plan:MK

*Tree protection*

- 23) All existing trees and hedgerows to be retained in each phase of the development are to be protected according to the provisions of BS 5837:2012 'Trees in relation to design, demolition and construction - Recommendations' prior to the commencement of any works on each phase. All protective measures shall be in place prior to the commencement of any building operations (including any structural alterations, construction, rebuilding, demolition and site clearance, removal of any trees or hedgerows, engineering operations, groundworks, vehicle movements or any other operations normally undertaken by a person carrying on a business as a builder) in that phase.

Reason: To protect significant trees and hedgerows, safeguarding the character of the area and preserving habitats and to minimise the effect of the development on the area

*Open space, play areas and landscaping*

- 24) Prior to the commencement of any phase of the development, an open space specification which includes the location, details and specification for all areas of open space including the Neighbourhood Play Area shall be submitted to and approved in writing by the Local Planning Authority. Detailed proposals for play areas shall be submitted and agreed at the same time as the detailed housing layouts or otherwise demonstrate that the minimum buffer distances between residential property boundaries and the play area active zone can be achieved in compliance with the standards set out in Plan:MK Appendix C, or any subsequent standards. The open space specification shall also include the phasing for the laying out of all areas of open space including any Play Areas and the long term management and maintenance arrangements for all open space and play facilities, to cover a minimum period of ten years. The development shall be completed in accordance with the approved details.

Reason: To minimise the effect of the development on the area in accordance with Policy L4 of Plan:MK

- 25) Reserved matters applications for each phase of the development shall include a landscaping scheme with detailed drawings showing which trees and hedgerows are to be retained in that phase and which trees and hedgerows are proposed to be felled or lopped in that phase. The landscaping scheme shall also show the numbers, types and sizes of trees and shrubs to be planted in that phase including their locations in relation to associated infrastructure and a species list to include native species and species beneficial to wildlife. The planting plans shall include existing trees and/or hedgerows to be retained and/or removed within each phase accurately shown with root protection areas and based up to date tree surveys. Any trees or shrubs removed, dying, or which become severely damaged or diseased within two years of planting shall be replaced in the next planting season with trees or shrubs of such size and species to be agreed in writing by the Local Planning Authority.

Reason: To protect significant trees and hedgerows, safeguarding the character of the area and preserving habitats and to minimise the effect of the development on the area

*Construction*

- 26) Prior to the commencement of development of any phase of the development, a Construction Environmental Management Plan (CEMP) shall be submitted to and approved in writing by the Local Planning Authority. The CEMP shall include Noise Action Levels (based on a noise survey) and site procedures to be adopted during the course of construction including working hours, intended routes for construction traffic, details of vehicle wheel washing facilities, location of site compound, lighting and security and how dust and other emissions will be controlled. The development shall be carried out in accordance with the approved CEMP.

Reason: To ensure there are adequate mitigation measures in place in the interests of highway and pedestrian safety and in order to protect the amenities of existing and future residents in accordance with Policies CT2 and NE6 of Plan:MK

- 27) Prior to the commencement of development on any phase, the developer shall carry out an intrusive site investigation into the ground conditions at the site to determine the likelihood of any ground, groundwater or gas contamination of the site. The results of this survey detailing the nature and extent of any contamination, together with a strategy for any remedial action deemed necessary to bring each phase to a condition suitable for its intended use, shall be submitted to and approved in writing by the Local Planning Authority before construction works commence on that phase. Any remedial works shall be carried out on each phase in accordance with the approved strategy and validated on a phase by phase basis by submission of an appropriate verification report prior to the first occupation on that phase of the development. Should any unforeseen contamination be encountered, the Local Planning Authority shall be informed immediately. Any additional site investigation and remedial work that is required as a result of unforeseen contamination shall also be carried out to the written satisfaction of the Local Planning Authority.

Reason: To ensure the site is fit for its proposed purpose and any potential risks to human health, property and the natural and historic environment area appropriately investigated and minimised in accordance with Policy NE6 of Plan:MK

*Housing mix*

- 28) Any reserved matters application shall be accompanied by details outlining the proposed housing mix strategy which takes account of the latest housing need within the District. The development shall be carried out in accordance with the approved details.

Reason: To ensure that the development hereby approved reflects housing need within the Borough in accordance with Policy HN1 of Plan:MK

## **ANNEX 2: APPEARANCES**

### FOR THE APPELLANT

Peter Goatley and James Corbet Burcher of Counsel instructed by Stephen Webb of Clyde and Co LLP.

They called:

Roland Burton BSc (Hons) MRTPI	DLP (Planning) Limited
Tim Waller BA (Hons) DipTP MRTPI	Waller Planning
Julian Hudson MA (Oxon) MSc MSc MCIHT	Scott White and Hookins
Stephen Webb	Clyde and Co LLP

### FOR THE LOCAL PLANNING AUTHORITY

Reuben Taylor QC and Matthew Henderson of Counsel instructed by Sharon Bridglalsingh of Milton Keynes Council.

They called:

James Williamson BA (Hons) MSs MRTPI	Milton Keynes Council
Niko Grigoropoulos BSc (Hons) MA MRTPI	Milton Keynes Council
Paul Van Geete	Milton Keynes Council
Nazneen Roy	Milton Keynes Council

### INTERESTED PERSONS WHO SPOKE AT INQUIRY

Councillor Jacky Jeffries	Woburn Sands Town Council
Councillor David Hopkins	Danesborough and Walton Ward Councillor (Milton Keynes Council) and Chairman of Wavendon Parish Council
Judith Barker	Local resident
Jenny Brook	Local resident

### **ANNEX 3: DOCUMENTS**

#### **INQUIRY DOCUMENTS (FOR REDETERMINED APPEAL)**

RID01	Opening submissions on behalf of the appellant
RID02	Opening statement on behalf of the Council
RID03	High Court judgment R(oao Matthew Davison) v Elmbridge Borough Council [2019] EWHC 1409 (Admin)
RID04	Statement by Councillor Jacky Jeffries
RID05	Statement by Councillor David Hopkins
RID06	Statement of Common Ground between the appellant and the Council
RID07	Quarter 3 (1 October to 31 December 2019) monitoring data of housing starts and completions in Milton Keynes
RID08	Babergh District Council Housing Land Supply Position Statement 2019/20 to 2023/24
RID09	Court of Appeal judgment R (on the application of East Bergholt Parish Council) v Babergh District Council) [2019] EWCA Civ 2200

## RIGHT TO CHALLENGE THE DECISION IN THE HIGH COURT

These notes are provided for guidance only and apply only to challenges under the legislation specified. If you require further advice on making any High Court challenge, or making an application for Judicial Review, you should consult a solicitor or other advisor or contact the Crown Office at the Royal Courts of Justice, Queens Bench Division, Strand, London, WC2 2LL (0207 947 6000).

The attached decision is final unless it is successfully challenged in the Courts. The Secretary of State cannot amend or interpret the decision. It may be redetermined by the Secretary of State only if the decision is quashed by the Courts. However, if it is redetermined, it does not necessarily follow that the original decision will be reversed.

### SECTION 1: PLANNING APPEALS AND CALLED-IN PLANNING APPLICATIONS

The decision may be challenged by making an application for permission to the High Court under section 288 of the Town and Country Planning Act 1990 (the TCP Act).

#### Challenges under Section 288 of the TCP Act

With the permission of the High Court under section 288 of the TCP Act, decisions on called-in applications under section 77 of the TCP Act (planning), appeals under section 78 (planning) may be challenged. Any person aggrieved by the decision may question the validity of the decision on the grounds that it is not within the powers of the Act or that any of the relevant requirements have not been complied with in relation to the decision. An application for leave under this section must be made within six weeks from the day after the date of the decision.

### SECTION 2: ENFORCEMENT APPEALS

#### Challenges under Section 289 of the TCP Act

Decisions on recovered enforcement appeals under all grounds can be challenged under section 289 of the TCP Act. To challenge the enforcement decision, permission must first be obtained from the Court. If the Court does not consider that there is an arguable case, it may refuse permission. Application for leave to make a challenge must be received by the Administrative Court within 28 days of the decision, unless the Court extends this period.

### SECTION 3: AWARDS OF COSTS

A challenge to the decision on an application for an award of costs which is connected with a decision under section 77 or 78 of the TCP Act can be made under section 288 of the TCP Act if permission of the High Court is granted.

### SECTION 4: INSPECTION OF DOCUMENTS

Where an inquiry or hearing has been held any person who is entitled to be notified of the decision has a statutory right to view the documents, photographs and plans listed in the appendix to the Inspector's report of the inquiry or hearing within 6 weeks of the day after the date of the decision. If you are such a person and you wish to view the documents you should get in touch with the office at the address from which the decision was issued, as shown on the letterhead on the decision letter, quoting the reference number and stating the day and time you wish to visit. At least 3 days notice should be given, if possible.

Mr Jon Suckley  
HOW Planning  
40 Peter Street  
Manchester M2 5GP

4 November 2019

Dear Sir

**TOWN AND COUNTRY PLANNING ACT 1990 – SECTION 78  
APPEAL MADE BY DARNHALL ESTATE  
LAND OFF DARNHALL SCHOOL LANE, WINSFORD, CHESHIRE  
APPLICATION REF: 13/03127/OUT**

1. I am directed by the Secretary of State to say that consideration has been given to the report of Melvyn Middleton BA (Econ), DipTP, Dip Mgmt, MRTPI, who held a public local inquiry on 27-30 November 2018 into your client's appeal against the decision of Cheshire West and Chester Council to refuse your client's application for planning permission for a high quality residential development with associated open space, access and infrastructure, in accordance with application ref: 13/03127/OUT, dated 12 July 2013.
2. On 25 February 2014, this appeal was recovered for the Secretary of State's determination, in pursuance of section 79 of, and paragraph 3 of Schedule 6 to, the Town and Country Planning Act 1990.
3. The Secretary of State initially issued his decision in respect of the above appeal by way of his letter dated 7 July 2016. That decision was challenged by way of an application to the High Court and was subsequently quashed by order of the Court dated 10 August 2017. The appeal has therefore been redetermined by the Secretary of State, following a new inquiry into this matter. Details of the original inquiry are set out in the 2016 decision letter.

**Inspector's recommendation and summary of the decision**

4. The Inspector recommended that the appeal be allowed and planning permission granted.
5. For the reasons given below, the Secretary of State disagrees with the Inspector's conclusions, and disagrees with his recommendation. He has decided to dismiss the appeal and refuse planning permission. A copy of the Inspector's report (IR) is enclosed. All references to paragraph numbers, unless otherwise stated, are to that report.

## **Matters arising since the close of the inquiry**

6. On 4 July 2019 the Secretary of State wrote to the main parties to afford them an opportunity to comment on the publication of the Cheshire West and Chester Local Plan Part 2 (CW&CLP P2) Inspector's Report and Schedule of Main Modifications. A list of representations received in response to this letter is at Annex A. These representations were circulated to the main parties on 19 and 29 July 2019. The Secretary of State's conclusions on these representations are set out in this Decision Letter below.

## **Policy and statutory considerations**

7. In reaching his decision, the Secretary of State has had regard to section 38(6) of the Planning and Compulsory Purchase Act 2004 which requires that proposals be determined in accordance with the development plan unless material considerations indicate otherwise.
8. In this case, the adopted development plan for the area comprises the Cheshire West and Chester Local Plan P1 (CW&CLP P1) Strategic Policies to 2030 (adopted 29 January 2015); the Cheshire West and Chester Local Plan P2 (the P2 plan) (adopted 18 July 2019); and the made Winsford Neighbourhood Plan (November 2014). The Secretary of State considers that relevant development plan policies include those set out at IR28-33 and P2 plan Policies W1, GBC 2 and DM19.
9. Other material considerations which the Secretary of State has taken into account include the National Planning Policy Framework ('the Framework') and associated planning guidance ('the Guidance'), as well as supplementary planning guidance on affordable housing, developer contributions and landscape character. The revised National Planning Policy Framework was published on 24 July 2018 and further revised in February 2019. Unless otherwise specified, any references to the Framework in this letter are to the 2019 Framework.

## **Main issues**

### *Development plan*

10. The Secretary of State has had regard to the Inspector's conclusions on the VRBLP at IR378-382. At the time of the inquiry, the Inspector undertook a planning balance based on a finding that saved policy GS5 of the VRBLP in terms of its settlement limits was out of date such that planning permission should be granted unless any adverse impacts of doing so would significantly and demonstrably outweigh the benefits when assessed against the policies in the Framework ("tilted balance").
11. Matters regarding the VRBLP have now moved on as the P2 Plan has been adopted which includes allocations, boundaries and detailed policies replacing those parts of the VRBLP that were saved. The Secretary of State considers that the most important policies for the purposes of this appeal are STRAT 1, STRAT 2, STRAT 6, STRAT 9, Policies H1 and H2 of the WNP, and P2 plan Policies W1 and GBC 2.
12. The appellant does not argue that Policies STRAT 1 or STRAT 2 are out of date (IR48). The Secretary of State considers that STRAT 1's aim of enabling development that improve and meets the economic, social and environmental objectives of the Borough in line with the presumption in favour of sustainable development is consistent with the Framework, and thus concludes that the policy is not out of date. He further considers that Policy STRAT 2's objective of setting minimum housing and employment

development targets and requiring development to be brought forward in line with the settlement hierarchy is consistent with the Framework, and thus concludes that the policy is not out of date. For the reasons given at IR384 he agrees that while STRAT 9 is not fully consistent with the wording of the Framework, it is not out of date and is capable of attracting weight for the reasons set out below.

13. The Secretary of State considers that the P2 Plan policies W1 and GBC 2 have been found compliant with the Framework by the Plan Inspector, and for that reason the Secretary of State concludes they are not out of date. He further notes that there is no contention that the WNP is out-of-date. As such he concludes that these policies when taken as a whole are not out of date, and that thus the development plan is not out-of-date.

#### *Five year housing land supply*

14. For the reasons given at IR325-6, the Secretary of State agrees with the Inspector that there is no evidence for disagreeing with the housing land supply details set out in the Housing Statement of Common Ground. He has had regard to the report of the Inspector into LLP Part 2, and the representations of the Council of 16 July 2019 and from the appellant of 18 July and 26 July 2019 as to whether the report on the plan confirms that the Council can demonstrate a 5 year housing land supply. However, he considers that the focus of the local plan examination was not to reach a judgment on housing land supply, that the plan Inspector did not have access to the Housing Land Monitor Review and was not considering the definition of deliverable as set out in 2019 Framework. As such has based their conclusions on the recommendation of the appeal Inspector, who heard the evidence, including more recent changes, cross examined at Inquiry at greater length than the plan Inspector, and subsequent representations from the parties.
15. The Secretary of State has gone on to consider the issue of supply. In doing so he has had regard to his guidance on deliverability issued 22 July 2019. For the reasons given at IR341-344 the Secretary of State agrees with the Inspector's conclusions on preliminary points. The Secretary of State has had regard to representations on behalf of the appellant dated 26 July 2019, with regards to evidence of deliverability.
16. For the reasons set out at IR345, the Secretary of State agrees that 167 dwellings should be deducted from the five year supply figure to account for potential future demolitions. He has gone on to deduct a further 430 dwellings, namely student accommodation, for the reasons set out at IR346-350.
17. For the reasons given at IR360-364 he considers that there is clear evidence to conclude that the disputed sites as set out in paragraph 3.9 of the Statement of Common Ground are deliverable.
18. He has gone on to consider the deliverability of six non allocated sites without planning permission that are disputed. The Secretary of State disagrees with the reasons given at IR 365 to 367, and does not consider that the sites, amounting to 222 dwellings, are deliverable since they do not fall within category a or b of the Framework's definition of deliverable, and he does not consider that there is clear evidence of deliverability within five years as required by the Framework, given the outstanding issues of the need for legal agreements and agreements on reserved matters.
19. The Secretary of State has gone on to consider the Inspector's analysis of build-out rates and lead in time at IR368-70. For the reasons given he agrees that supply should be

reduced by 505 dwellings. For the reasons given at IR371-372, he agrees that 115 dwellings should be removed from the supply figure for windfalls.

20. For the reasons given above, he thus concludes that 1,439 dwellings should be deducted from the supply figures. He thus agrees that supply is 5,838.
21. He has gone on to consider the housing requirement. The Secretary of State has noted the Inspector's analysis at IR327 – 335 and conclusions that the surplus to date should be deducted from the minimum target across the remainder of the plan period when calculating the ongoing annual requirement, based on the facts of this case. He has had further regard to the representations from the Council of 16 July 2019 and from the appellant of 18 July and 26 July 2019. While he accepts that the method of dealing with past oversupply is disputed, whether the requirement is 5,150, as stated by the Council, or 5,775, as stated by the appellant, in any case the Secretary of State concludes that the Council can demonstrate a 5 year housing land supply.

*Settlement boundaries, impact on countryside & countryside policies*

22. At the time of the Inquiry the Inspector considered all the relevant development policies relating to settlement boundaries and countryside protection. However, since then the Council has adopted the P2 plan, which sets out new settlement boundaries in policy W1. The proposal sits outside these development boundaries.
23. For the reasons given at IR383 the Secretary of State agrees that the proposal is in clear breach of policy STRAT9. For the reasons given at IR384 he agrees that while not fully consistent with the wording of the Framework, the policy is not out of date and is capable of attracting weight depending on the circumstances of the case. The Secretary of State recognises that the Council has breached the settlement boundaries in previous grants of planning permission to ensure that there is a sufficient supply of housing land. Nonetheless, those cases would have been decided on their individual merits and in a different planning context. In any case, the settlement boundaries that were breached in those instances were those set out in VRBLP, not those established by SW&CLP P2. However, for the reasons given at IR385 he agrees that it should be given reduced weight given to the site's position adjacent to a new urban area proposed under STRAT 2. The Secretary of State has had regard to the Inspector's conclusion (IR388-389) that as the impact of the proposal on the landscape would not be significant, and thus the conflict with policy Strat 9 is limited. Although the Secretary of State agrees that the proposal would not have a significant impact on the landscape, given the loss of open countryside and the clear conflict with STRAT 9 and its aim of protecting the intrinsic character and beauty of the Cheshire countryside, as underpinned by the boundary policy W1 in the CW&CWLP P2, he concludes that this should attract significant weight.

24. For the reasons given at IR390 the Secretary of State agrees that the proposal would conflict with Policy STRAT 1 by virtue of not minimising the loss of greenfield land. He further agrees however that in respect of the other elements of the policy, except as set out below, the proposal is either neutral or contributes towards their requirements, for the reasons given at IR391. The Secretary of State that there are other sites that have been allocated or granted planning permission prior to the adoption of P2 which also do not encourage the redevelopment of previously developed land (PDL) (IR391), but that does not diminish the harm that arises in this case. The Secretary of State has judged the appeal on its own merits in the context of an up-to-date plan and a five year housing supply. As such while the extent of the conflict with policy STRAT 1 is limited, he gives moderate weight to this conflict.

#### *The Winsford Neighbourhood Plan (WNP)*

25. The Secretary of State has had regard to the Inspector's analysis at IR395-398. The Secretary of State agrees for the reasons given that Policy H1 is a policy that guides and regulates whether new development in and around Winsford should be located. He further concludes, in agreement with the Inspector at IR398 that as the appeal proposal is not one of those proposed for residential development in the WNP it is contrary to Policy H1 and contrary to the WNP as a whole. While he agrees that there is support from the proposal from Policy H2 (IR398), that the proposal does not conflict with the seven themes of the plan (IR397), and the fact that housing requirement Policy H1 is expected to meet is a minimum requirement, he does not agree that Policy H1 should be given no more than moderate weight. He considers that as the Council can demonstrate a five year housing land supply H1 is not restricting housing delivery, and he affords this conflict significant weight.

#### *Housing*

26. For the reasons set out at IR392 the Secretary of State agrees that it would be premature to suggest that the requirement from the Station Quarter cannot be delivered over the next eleven years. He further agrees (IR393) that Policy STRAT 6 does not give support to the proposal, but there is also no conflict with it.

#### **Economic benefits**

27. For the reasons set out at IR403-407, the Secretary of State agrees that the economic impacts from the provision of market housing are a benefit of significant weight. He further agrees (IR406) that the impact on agricultural land does not weigh against the proposal.

#### **Social benefits**

28. The Secretary of State agrees that the social benefits of the provision of affordable housing should be given substantial weight, for the reasons set out at IR408-411. He further agrees, for the reasons set out at IR412-414, that the social benefits of the self-build element of the scheme should attract substantial weight. He also agrees with the Inspector (IR415) that the local training, employment and procurement elements should attract significant weight in favour of the proposal.

#### **Environmental**

29. The Secretary of State notes the Inspector's findings at IR 417-420 that that the negative environmental impacts of the proposal are counterbalanced by the ecological and

recreational benefits, and as such neutral in the planning balance. However, given his findings on the conflict with STRAT 9 above he concludes that the environmental harms outweigh the benefits.

### **Planning conditions**

30. The Secretary of State has given consideration to the Inspector's analysis at IR317-318 the recommended conditions set out at the end of the IR and the reasons for them, and to national policy in paragraph 55 of the Framework and the relevant Guidance. He is satisfied that the conditions recommended by the Inspector comply with the policy test set out at paragraph 55 of the Framework. However, he does not consider that the imposition of these conditions would overcome his reasons for dismissing this appeal and refusing planning permission.

### **Planning obligations**

31. Having had regard to the Inspector's analysis at IR319-322, the planning obligation dated 6 December 2018, the Unilateral Undertaking dated 17 December 2018, paragraph 56 of the Framework, the Guidance and the Community Infrastructure Levy Regulations 2010, as amended, the Secretary of State agrees with the Inspector's conclusion for the reasons given in IR322 that the obligation complies with Regulation 122 of the CIL Regulations and the tests at paragraph 56 of the Framework. However, the Secretary of State does not consider that the obligation overcomes his reasons for dismissing this appeal and refusing planning permission.

### **Planning balance and overall conclusion**

32. For the reasons given above, the Secretary of State considers that the appeal scheme is not in accordance with policies STRAT 1, STRAT 9 or WNP Policy H1 and outside the settlement boundary established by policy W1 of the P2 plan, and is not in accordance with the development plan overall. He has gone on to consider whether there are material considerations which indicate that the proposal should be determined other than in accordance with the development plan. Having regard to his conclusions on the development plan and housing land supply above, he concludes that the presumption in favour of sustainable development is thus not engaged.

33. In favour of the proposal he finds the economic benefits from the provision of housing, to which he attaches significant weight. He accords further substantial weight to the social benefits of the provision of affordable housing, local procurement, training and employment.

34. Against this he attaches moderate weight to the conflict with policy STRAT 1. He attaches significant weight to the impact on the loss of countryside contrary to policy STRAT 9. He finds that the conflict with WNP Policy H1 should attract significant weight.

35. As such the Secretary of State concludes that there are no material considerations which indicate that the proposal should be determined other than in accordance with the development plan.

36. The Secretary of State therefore concludes that the appeal should be dismissed, and planning permission refused.

## **Formal decision**

37. Accordingly, for the reasons given above, the Secretary of State disagrees with the Inspector's recommendation. He hereby dismisses your client's appeal and refuses planning permission.

## **Right to challenge the decision**

38. A separate note is attached setting out the circumstances in which the validity of the Secretary of State's decision may be challenged. This must be done by making an application to the High Court within 6 weeks from the day after the date of this letter for leave to bring a statutory review under section 288 of the Town and Country Planning Act 1990.

39. A copy of this letter has been sent to Cheshire West and Chester Council, and notification has been sent to others who asked to be informed of the decision.

Yours faithfully

*Philip Barber*

Authorised by the Secretary of State to sign in that behalf

**Land off Darnhall School Lane, Winsford, Cheshire**

- The appeal is made under section 78 of the Town and Country Planning Act 1990 against a refusal to grant outline planning permission.
- The appeal is made by Darnhall Estate against the decision of Cheshire West & Chester Council.
- The application Ref 13/03127/OUT, dated 12 July 2013, was refused by notice dated 26 November 2013.
- The development proposed is a high-quality residential development with associated open space, access and infrastructure.
- This report supersedes that issued on 7 July 2016. That decision on the appeal was quashed by order of the High Court.

**Summary of Recommendation: That the appeal is allowed, and outline planning permission be granted.**

---

**BACKGROUND**

1. The original inquiry into this appeal opened on 10 June 2014 and closed on 11 June 2014. Following the inquiry, the Inspector's original report (OR) and recommendation to allow the appeal were submitted to the Secretary of State (SoS).
2. By letter dated 14 April 2015 the SoS decided to reopen the inquiry as he had received representations that material considerations had changed. In essence the Council considered by then that it could demonstrate more than a five-year supply of housing land. Additionally, the Cheshire West and Chester (CW&C) Local Plan (LP) Part One (P1) Strategic Policies had been adopted in January 2015 and the Winsford Neighbourhood Plan (WNP) had been made in November 2014.
3. The matters upon which the SoS wished to be further informed related to
  - a) the extent to which the appeal proposal complied with the Development Plan (DP);and
  - b) whether the proposal amounted to sustainable development, having regard to national policy, including whether there is a demonstrable 5-year supply of deliverable housing sites.
4. The inquiry reopened on 15 September 2015 and closed on 18 September 2015. The Appellant proposed a revision to the housing offer in advance of the reopened inquiry. The new proposal was that 40% of the dwellings would be affordable, that 10% of the housing would be self-build and that the remaining 50% of the housing, the 'unrestricted' open market element, would be developed by local house builders. The proposal considered at the original inquiry was for 30% affordable housing (OR37 & 149). The Appellant also proposed a revised condition entitled 'Training and Employment' and new conditions entitled 'Self-build Housing', 'Local Builders' and 'Local Procurement'. The Inspector referred to these other 'non-housing' benefits as 'novel' elements.

5. A supplementary report (SR) dealing solely with the additional matters raised by the SoS and the Appellant, along with a further recommendation on the appeal, were subsequently submitted to the SoS.
6. The Inspector once again recommended that the appeal be allowed, and outline planning permission granted subject to conditions. For the reasons set out in SR 248-259 the Inspector found that the proposal overall would be contrary to the DP (SR 260). For the reasons set out in SR 211-246, he also found that there was a housing land supply of 5.12 years (SR 246) and therefore that the DP's policies for the supply of housing were up to date (SR 247).
7. He then went on to look at whether the proposal would amount to sustainable development. He found that there would be significant economic benefits and very substantial social benefits from the development and that they clearly outweighed the moderate environmental harm that he had identified. The Inspector went on to point out that the DP should not be set aside lightly and that a failure to comply with the DP could give an indication that the development would not be sustainable overall.
8. In concluding, he said that it was a matter of balancing the harm, conflict with the DP and the adverse impacts through the loss of countryside, against the economic and social benefits arising from the provision of new homes. He found that there were substantial economic and social benefits arising from the proposal, particularly the significant proportion of affordable homes and the other 'novel' elements of the housing offer (SR 115&119). In his opinion, the conflict with the DP, the starting point for decision making, and the adverse impacts on the countryside were outweighed by other material considerations, namely the significant economic and very substantial social benefits arising from additional housing, particularly the affordable homes and the other benefits then being offered. He therefore recommended that the appeal be allowed, and outline planning permission be granted subject to conditions.
9. The SoS disagreed with the Inspector's recommendation. That was largely because he considered the conditions entitled 'Training and Employment', 'Self Build Housing', 'Local Builders' and 'Local Procurement' would not satisfy all the relevant policy tests in paragraph 203 of the then National Planning Policy Framework (Framework) 2012 and the National Planning Practice Guidance (NPPG), and therefore should not be attached to any planning permission (SoS 16-22).
10. The SoS considered that this reduced the economic and social benefits of the development identified by the Inspector in his SR. In the SoS's opinion the situation effectively reverted to the position at the time of the original inquiry as set out in the OR where the Inspector concluded that the proposal would result in a number of economic benefits, including the New Homes Bonus Scheme, construction jobs, additional local spend and employment arising from the additional expenditure (OR 147).
11. In concluding the SoS did not consider that the reduced economic and social benefits outweighed the clear conflict with the up to date DP and the moderate harm to the environmental dimension of sustainable development. He therefore dismissed the appeal and refused planning permission (SoS 31).

12. The Appellant appealed to the High Court on twelve grounds. It succeeded in the case of three, all of which related to the claimant's allegation that the SoS had erred in law in wrongly rejecting some of the proposed conditions. These conditions required training and employment measures, local building firms and local procurement to be provided/used as a part of the development.
13. The Court rejected the SoSs claim that the conditions had insufficient precision and/or there would be difficulty of detection and therefore enforcement. In the Court's opinion these conditions did potentially go to the weight to be attached to the economic and social sustainability of the proposal and accordingly would have been material in forming part of the overall planning balance<sup>1</sup>.
14. On 7 November 2017 the SoS wrote to the parties to inform them that he needed to reopen the inquiry. In his view the following matters require further consideration.
  - a) Having regard to the terms of the Consent Order quashing the SoS's decision (Richard James Verdin (t/a the Darnhall Estate) v Secretary of State for Communities and Local Government and Cheshire West & Chester Borough Council and Winsford Town Council), the implications of this in relation to the evidence that was before the Inspector and before the SoS;
  - b) The current state of play with regard to the CW&CLP, part 2 (P2) and any implications for the further consideration of this appeal;and
  - c) Any other material changes in circumstances, fact or policy, that may have arisen since his decision of 7 July 2016 was issued and which the parties consider to be material to his further consideration of this appeal.

## PROCEDURAL MATTERS

15. The resultant inquiry was held on 27-30 November 2018. I carried out an accompanied site visit on 30 November. Unaccompanied site inspections were also carried out by me, on 26 November, when I observed the site and its surroundings from public viewpoints, as well as the extent and nature of the local facilities and on 27-30 November when I visited Winsford Town Centre and other locations in the area referred to in evidence.
16. This report should be read alongside the relevant parts of the SR dated 7 July 2016. The figures in square brackets [ ] in the following paragraphs relate to the various cases advanced at this Inquiry and refer to either the relevant Inquiry Document or Core Document, which contain the source of the material being reported upon and which are set out in the lists at the end of this report. References to paragraphs in the previous Inspector's original report are prefixed "OR", those in his supplementary report are referenced "SR". I shall use the abbreviation "para." for paragraph, "pg." for page, "S." for section "Ap." for appendix, "CD" for core document and "ID" for inquiry document.

---

<sup>1</sup> High Court Case No: CO/4195/2016, para 81 [CD 16/1].

17. This further report addresses the implications of the Consent Order and provides an update on the DP and its relevant planning policies as well as other material changes in circumstances, fact or policy that have arisen since the SoS made his decision. It also sets out the updated cases of the parties and my conclusions and recommendations in relation to the redetermination of the appeal. Lists of appearances, inquiry documents and recommended conditions for the reopened inquiry are appended.
18. An updated Planning Statement of Common Ground (PSoCG) [ID 1], dated 19 November 2018, was agreed between the Council and the Appellant. This document updates those submitted in advance of the original inquiry (OR7) and the supplementary inquiry (SoCG2). The updated PSOCG again records that the appeal site is situated in a sustainable and accessible location. It also confirms that the development would not result in any adverse technical impacts that cannot be mitigated against through the implementation of conventional mitigation measures. These could all be made the subject of conditions.
19. The relevant DP policies and the current status of the emerging CW&CLP P2 are set out and agreed, together with the economic, social and environmental benefits of the scheme. The document concludes by setting out six areas where the parties disagree. These include the weight to be given to some policies and whether the proposal accords with the DP when read as a whole, the five-year housing land supply position, whether the appeal proposals constitute sustainable development and the weight to be attributable to the 'novel' elements referred to by the previous Inspector and the mechanisms by which they could be secured.
20. A Supplementary SofCG on five-year housing land supply (HSoCG) was submitted on 23 November 2018 [ID 2]. Within this document, certain matters in relation to housing land supply are outlined and with an indication as to whether they are individually agreed or in dispute. I will refer to these later.
21. An updated transport assessment [CD 5/11] was submitted to the Council by the Appellant on 31 August 2018. It demonstrates that the conclusions of the original assessments remain valid. The Highways Authority has raised no objections to this or the details of the proposed means of access, which is not a reserved matter.
22. In November 2017 the Council requested an updated ecology report. This was submitted on 12 October 2018 (Appendix 4 to SoCG). Among other matters it identified that Great Crested Newts (GCNs) were foraging on the site and breeding in ponds close to the site. A mitigation strategy is proposed to compensate for the loss of GCN habitat within the site. This includes:
  - a) Provision of 2.4 hectares (ha.) of high-quality terrestrial habitat for GCNs immediately off-site to the west, including long-term management and safety;
  - b) Provision of four new ponds for GCNs immediately off-site to the west (within range of other identified breeding ponds), including long-term management and safety;and
  - c) Enhancements to three ponds off-site which were recorded as containing GCNs but could be improved to enhance their value to GCNs and improve their breeding opportunities.

23. If the appeal is allowed and the development implemented, a traditional Natural England European Protected Species licence would be required before the works are implemented.

## **THE SITE AND SURROUNDINGS**

24. The appeal site, extending to about 6.5ha, comprises three fields divided and bounded by hedgerows. Within the hedges are several mature trees. The site slopes slightly down from north-east to south-west, with an overall fall of about 3 to 4metres (m.) across the site.
25. A bridleway, which also acts as an access track to Beech House Farm, runs along the south-western boundary of the site, beyond which is undulating open countryside. To the north-west are further larger fields, with similar topography to the appeal site, stretching towards schools and other development at Hebden Green, on the western edge of Winsford. To the north-east the site is contiguous with the large housing areas of south-west Winsford, the cul-de-sac of large dwellings in Peacock Avenue being immediately adjacent. Darnhall School Lane bounds the site to the south-east, with further housing estates on the opposite side of the road. Beyond the southern tip of the site, where the bridleway meets Darnhall School Lane, lies Knobs Cottage and two former small farmsteads, one of which is now used as a livery. They are collectively known as School Green. Further south is agricultural land and woodland separating Winsford from the small village of Darnhall which lies about 1.0kilometre (km.) beyond the edge of the built-up area of the town.
26. The appeal site is some 1.5km. to the south-west of Winsford Town Centre. Within about 1km. of the site is a small convenience store in Vauxhall Way, the primary school on Darnhall School Lane and bus routes which pass along Glebe Green Road, Swanlow Way and Darnhall School Lane.
27. One field, which is about 2.0ha. (31% of the site area) in extent, is located within the township of Winsford, which has a made Neighbourhood Plan (NP). The other two fields, which are about 4.42ha. (69% of the site area) in extent, are located within the parish of Darnhall.

## **PLANNING POLICY**

28. The development plan now comprises the CW&CLP P1, the WNP (in as much as its area affects the appeal site) and the saved policies of the Vale Royal Borough Local Plan (VRBLP) [CD 13/2]. The Council approved the CW&CLP P1 Strategic Policies [CD13/1] for adoption in January 2015. This followed its examination in 2013/14 and the publication of the Examining Inspector's Report on 15 December 2014 [CD13/3a]. The Inspector agreed a minimum net housing requirement for the plan period of 22,000 new dwellings (Policy STRAT 2) or 1,100 dwellings per annum (dpa). The parties agree that 9 of its policies are relevant to the determination of the appeal.
29. Policy STRAT 1 (Sustainable Development) seeks to enable development that improves and meets the economic social and environmental objectives of the Borough in line with the presumption in favour of sustainable development. As

- well as setting minimum housing and employment development targets, Policy STRAT 2 (Strategic Development) requires development to be brought forward in line with a settlement hierarchy. Most of the new development is to be located within or on the edge of one of four towns, of which Winsford is one. Several key sites were identified, leaving further sites to be identified through the CW&CLP P2 and/or NPs.
30. Policy STRAT 6 (Winsford) says that the town will be a focus for development in the east of the Borough and that development proposals will help to support the continued regeneration of the town. Additionally, it indicates that at least 3,500 dwellings will be provided in the town.
  31. Policy STRAT 9 (Green Belt and Countryside) seeks to protect the intrinsic character and beauty of the Cheshire countryside by restricting development to that which requires a countryside location and cannot be accommodated within identified settlements. It lists the types of development that will be permitted in the countryside. These include replacement and reused buildings and developments which have an operational need for a countryside location that is of an appropriate scale and does not harm the character of the countryside.
  32. Other policies of the adopted plan relevant to the appeal are STRAT 10 (Transport and Accessibility), SOC 1 (Delivering Affordable Housing), SOC 3 (Housing mix and type), SOC 6 (Open space, sport and recreation), ENV 2 (Landscape), ENV 4 (Biodiversity) and ENV 6 (Design and Sustainable Construction).
  33. The WNP [CD15/1] was made on 19 November 2014 following a referendum on 23 October 2014. These events followed its examination in May 2014 and the report of the Examiner dated 30 July 2014 [CD 15/2]. The housing policies of the WNP, amongst other things, indicate that permission will be granted for residential development on 24 sites set out in a table (totalling some 3,362 homes) and on previously developed land (Pdl) (Policies H1 and H2). Only a part of the appeal site is within the WNP area, but it is not allocated for development in the plan.
  34. Some of the policies of the VRBLP remain saved following the adoption of the CW&CLP P1. Of particular relevance to the appeal is Policy GS5 (Open Countryside) [OR 17] which along with the VRBLP Proposals Map defines the extent of open countryside where Policy STRAT 9 of the CW&CLP and Policy GS5 of the VRBLP apply.
  35. Policies BE1 (Safeguarding and improving the quality of the Environment), BE4 (Planning Obligations), BE21 (Renewable Energy), RT3 (Recreation and open space in New Developments), NE7 (Protection and Enhancement of Landscape Features) and NE8 (Provision and Enhancement of Landscape in New Development) are also considered to be relevant [OR 17 & 18. SoCG pg.10].
  36. The Council has prepared the CW&CLP P2. This includes allocations, settlement boundaries and detailed policies. The P2 plan will eventually replace those parts of the VRBLP which are still saved. It was submitted for examination on 12 March 2018 and examined in September. Main Modifications have still to be published and the plan's adoption is not anticipated before the summer of 2019.

37. Relevant policies include Draft Policy W1 (Winsford settlement area), against which there are unresolved objections concerning the land allocations and the location of the settlement boundary. Draft Policy DM20 (Mix and Type of New Housing Development) also has outstanding objections.
38. Draft Policy GBC2 (Protection of Landscape) is intended to replace VRBLP Policy GS5. Draft Policy DM19 (Proposals for residential development) includes assessment criteria for housing development in the countryside.
39. Supplementary planning guidance on affordable housing, developer contributions and landscape character are still in place [OR 21].
40. The Framework remains as the main expression of the Government's policies on achieving sustainable development. The document was revised in July 2018 and updated in February 2019. The revisions have resulted in a change of emphasis in some parts of the document. The supporting NPPG is continuously reviewed and updated. I will deal with the relevant changes later in this report.

## **OTHER AGREED FACTS**

41. The main parties agree that the Appeal site is in a sustainable and accessible location. The centre of Winsford, where there are a wide range of shops and services is located approximately 1.5km. to the north east of the site.
42. The site has good accessibility for pedestrians and cyclists. There is an uncontrolled crossing point on Darnhall School Lane to the north east of the site that includes dropped crossings and tactile paving. This crossing links the pedestrian routes out of the site into the wider pedestrian network on both sides of Darnhall School Lane and beyond. In terms of cycle provision, regional cycle route 75 is carriageway based within the locality, with cyclists using lightly trafficked routes to the north and south of the appeal site.
43. The site is well connected by local public transport. The closest bus stops to the site are situated on Glebe Green Drive and are about 380 metres from the site's Darnhall School Lane frontage and around 540 metres from the middle of the site. There is a half hourly bus service in both directions to Crewe and Northwich, the latter via Winsford Town Centre.
44. Winsford railway station is within a 5km. cycle ride of the appeal site. The station is situated on the Birmingham to Liverpool line and provides services that stop at key destinations including Crewe, Stafford and Wolverhampton. The station offers potential opportunities for future residents to undertake employment related trips via rail.
45. In March 2017 the Council revised its open space standards. It is agreed that the required provision can be accommodated on the site. Indicative proposals are shown in Appendix 3 to the PSoCG. These substantially exceed the requirements.
46. The parties agree that the mitigation proposals to compensate for the loss of GCN Habitat meet the three derogation tests.
47. The Appellant and the Council agree that the appeal proposals will deliver the following benefits:

## **Economic Benefits**

- a) The creation of up to 370 temporary jobs in the construction sector, or up to 75 full time equivalent jobs over a 5-year period;
- b) The creation of up to 184 additional households that would generate additional household spending in the local economy;
- c) The support of around 22 additional permanent jobs in the local economy due to additional local expenditure;

## **Social Benefits**

- d) The proposals will deliver a choice and mix of up to 184 high quality dwellings, which comprises 2, 3, 4 and 5-bedroom dwellings in the form of mews, semidetached and detached properties;
- e) The development would be implemented in a timely manner through a reduced time-limit condition for the submission of reserved matters that would also require the development to be started within 2 years from the date of the outline planning permission or 1 year from the date of the approval of the Phase 1 reserved matters, whichever is the later;
- f) Up to 74 affordable housing units (40%) in the tenure mix that the Council has requested (50% intermediate housing and 50% social rented). That provision is 10% higher than the percentage that the Council seeks, and it is agreed that significant weight should be given to this in the re-determination of the appeal;
- g) On site open space provision (including formal and informal public open spaces). The Indicative On-site Open Space Plan demonstrates that 12,281 square metres (sqm.) of on-site open space could be provided. This significantly exceeds the Council's adopted open space standards. These require only 5,080.40sqm. of on-site open space. The open space provision would take the form of high-quality linked open spaces that are easily accessible to both the proposed residents and the local community;
- h) A financial contribution based on the Sports England Playing Pitch New Development Calculator would be provided towards the provision of off-site outdoor sports facilities and playing pitches, as well as a maintenance contribution;
- i) A Parks and Recreation contribution of £828 per dwelling which could result in a maximum contribution of £152,352;
- j) A 'Play Youth' contribution of £117.30 per dwelling which could result in a maximum contribution of £21,583.20 for a Non-equipped Area of Play for children of an older age;

## **Environmental Benefits**

- k) The site is situated in a sustainable and accessible location and the scheme is accessible in respect of bus, walking and cycling provision;
- l) Accessible new spaces will be created which will be accessible to the local community;

m) New footpath and cycle links and enhanced connections to the wider public footpath network to include pedestrian and cycle movements;

and

n) The appeal proposals would conserve the natural environment and sufficient appropriate mitigation would be provided to ensure that there would be no detrimental impact on protected species. Furthermore, the creation and long-term management of four new ponds and associated terrestrial habitat off-site, to offset the loss of two small ponds of low biodiversity value on site, would result in enhanced habitat available to the local amphibian population.

## **MATTERS OF DISAGREEMENT**

48. The matters of disagreement between the Council and the Appellant are:

- a) The weight to be attributed to Policies GS9 of the VRBLP and STRAT9 of CW&CLP P1;
- b) Whether the appeal proposals accord with the DP, when read as a whole;
- c) The Council's deliverable 5-year housing land supply (HLS) position;
- d) Whether the appeal proposals constitute sustainable development;
- e) The weight to be attributed to the proposals for self-build housing, involvement of a small and medium sized employer (SME) local builder and the benefits to the local employment strategy and the local procurement strategy;

and

- f) The mechanisms to secure the proposals for self-build housing, an SME local builder, the local employment strategy and the local procurement strategy.

## **THE CASE FOR DARNHALL ESTATE<sup>2</sup>**

### **Introduction**

49. The Appellant's case is not predicated on identifying a shortfall in the 5-years HLS. It relies on the fact that it is a proposal for housing on the edge of one of the four main towns in the Borough, where there is a minimum housing requirement of 3,500 and a pressing need for more affordable housing. This proposal is an innovative way to deliver both in a positive way that will assist in diversifying the housing offer at Winsford. All of this is within the context of the Government seeking to boost significantly the supply of housing.

50. Numerous appeal decisions show that there is no need to demonstrate a shortfall in HLS to secure a planning permission. These are set out in CDs/17. However,

---

<sup>2</sup> References to the Framework refer to the revised Framework July 2018 as the cases for Darnhall Estate and Cheshire West and Chester Council predates the updated Framework February 2019.

the Appellant believes that there is a shortfall in the 5 years supply. It considers the Council's supply figure to be inappropriately inflated for a variety of different reasons. A shortfall is of course both an additional material consideration which weighs heavily in favour of the proposal. And it is a route to triggering the tilted balance.

### **Five-year housing land supply**

51. The parties disagree as to whether the Council can demonstrate a five-year HLS. The reasons relate to both the housing requirement for the 5-year period and the supply.
52. Ben Pycroft (BP)'s proof of evidence (PoE) at paragraphs 4.10 to 4.15 explains that the Council is not able to demonstrate a five-year supply in accordance with paragraph 74 of Framework 2018. The Council's figure should be *"produced through engagement with developers and others who have an impact on delivery and been considered by the Secretary of State."* The Council has not engaged in any such engagement with developers or others.
53. The Council has also failed to follow the guidance in the NPPG. This explains the need for LPAs to engage with stakeholders when preparing their five-year supply position statements at paragraphs 3-030, 3-047, 3-050 and 3-051. This has not happened at CW&C.

### *Past surplus*

54. The Council's position is that there has been a surplus in delivery of some 2,192 dwellings since 2010. That figure is arrived at by comparing the requirement for the first 8 years of the plan period (2010-2018), which is a figure of 8,800 (8 x 1,100) with the supply over the same period, which the Council say is 10,992. Hence the Council say there is an oversupply of 2,192. This then leads the Council to claim that the annual requirement for calculating the 5-years supply is only 917 dwellings per annum. This removed 915 dwellings from the requirement over the 5-year period.
55. The Appellant asserts that one takes the annual figure of 1,100 dwellings per annum (agreed with the Council)<sup>3</sup> multiplied by 5 to arrive at the base requirement (before adding the agreed 5% buffer). Past surpluses should not be used to discount the future requirement. The Council's approach (the residual method) forms no part of present national policy or guidance. Indeed, it would seem a very odd approach to take in the light of the Framework's priority to boost significantly the supply of new homes<sup>4</sup>, and especially when the Council's housing requirement is set at a minimum. If any 'carry forward' of historic over-supply was intended, the Government would have said so and used similar wording to that set out in paragraph 3-044 of the NPPG, which confirms that when there is a shortfall, it should be added to the five-year requirement.
56. The Council's suggestion that this approach gives rise to a "free-for-all"<sup>5</sup> is unconvincing. Each proposal that comes forward is judged on its merits. Whilst

---

<sup>3</sup> BP PoE paragraph 6.1 and BF PoE paragraph 6.4.

<sup>4</sup> Framework 2018, paragraph 59.

<sup>5</sup> Council's closing submission, paragraph 51.

the residual approach may have been appropriate Government Policy before 2,000, in the context of the current housing crisis and the acceptance that as a nation we are not building enough homes<sup>6</sup>, it is no longer appropriate.

57. The Council's approach contrasts with its approach in its Annual Monitoring Report (AMR). The current AMR says that the annual net requirement remains at 1,100. Monitoring indicator STRAT 2(A) also measures annual net completions against a target of 1,100 net dwellings and indicator STRAT 2(B) measures net completions against a target of 5,500 dwellings over a five-year period. Neither measure makes provision for a requirement reduction based on over-supply [CD13.4, pages 37-39].
58. Beth Fletcher (BF) in cross examination (Xx) on Day 2 accepted that a delivery of 24,000, an amount over the minimum 22,000 set out in STRAT 2, would not be unsustainable. Added to which, the affordable housing needs have not been addressed over the past eight years.
59. The Council has referred to the Cotswold Local Plan Inspector's Report [CD18/10]. However, as BF explained in re-examination, 80% of the Cotswold District is restricted by being within an Area of Outstanding Natural Beauty (AONB). Providing a surplus there would be potentially problematic. CW&C has Green Belt. However, it amounts to nothing like such a high proportion of the Borough as to constrain the opportunity for exceeding the plan target, which is actually what the CW&CLP allows.

*Communal Establishment and student accommodation completions*

60. Since the Council engaged in this exercise of seeking to reduce their annual requirement to 917 dpa, the Appellant is bound to point out that what the Council has included in their surplus figure of 2,192 dwellings are 630 student units and 230 units in extra care residential institutions (C2). To be clear this is related to the Appellant's criticism of the Council's inclusion of such forms of development in their future 5-year supply calculation. But it is equally relevant to a claimed surplus, because the surplus itself is comprised of units derived from these forms of supply. The difference here being that the student accommodation and C2 uses form part of the completions, not the commitments.
61. This issue only arises if the Council's residual method is adopted and the surplus against the annual requirement in past years is deducted from the annual requirement. The need to consider the C2 issue here and the student accommodation point below (in terms of the housing requirement) is unnecessary on the Appellant's approach. But if the Council's approach is adopted, then completions were in fact 10,132 (860 lower) and the surplus should be reduced to 1,332. The difference between the parties relates to C2 (230) completions and student accommodation (630) completions.
62. 230 completions in respect of C2 communal care for the period 2010 to 2018 were wrongly included in the Council's completion figures. Paragraph 3.4 of the Housing Land Monitor (HLM) [CD13/5] states:

*"The proposed revisions to the Framework suggest the inclusion of communal accommodation in the calculation of the housing delivery test. This type of*

---

<sup>6</sup> Housing White Paper, Foreword by the SoS (Feb 2017)

*accommodation will be monitored through the Housing Land Monitor (HLM) process but will continue to be excluded from the housing completions and forecasting figures in accordance with **the Local Plan (Part One)**.*"

63. This was accepted by the Council's witness BF on Day 2 of the inquiry, albeit her view was that it had not been included in the first place. The Appellant does not think that is right. BP shows the sources of these in table 8.3 of his Proof of Evidence (PoE) on page 22. The difference between BF and BP is that some permissions have been included which the Council thought were C3 (dwellings) but in fact are C2. As such the Council's completions figure drops by 30 units to 10,762.
64. The Appellant's position is that 630 completions in respect of student accommodation should also be removed from the Council's surplus figure. These are shown on BP's Table 8.2 in his main PoE.
65. Much of what BP says about student accommodation being inappropriately included, in the Council's 5 Year Supply calculation, applies equally to the inappropriateness of including student accommodation in the Council's completion data: BP's PoE section 13 (pages 39 - 47).
66. The NPPG says that this is important to the requirement. Paragraph 3-042 of the Housing Land Availability Assessments NPPG (updated) in relation to 'How should local planning authorities deal with student housing' confirms that:
- "all student accommodation, whether it consists of communal halls of residence or self-contained dwellings, and whether or not it is on campus, can be included towards the housing requirement, based on the amount of accommodation it releases in the housing market. Notwithstanding, local authorities should take steps to avoid double counting."*
67. The Council has not undertaken any such assessment to calculate the amount of accommodation that would be released into the housing market following completion of new student accommodation, as required by the NPPG. As such the Council has provided no evidence to the inquiry to demonstrate that any would be. The student accommodation completion figures should not form part of the completion data for the housing requirement in CW&C until such time as the Council can show development is releasing dwellings back into the housing market.
68. The issue of student accommodation was covered in the Tattenhall recovered appeal decisions<sup>7</sup>. The Inspector's conclusions in relation to student accommodation are detailed in paragraphs 300-304 of the report to the SofS (pages 73 and 74) [CD 17/3]. In those decisions the Inspector found that as the Council had provided no evidence that the student units would release housing, currently occupied by students, into the market, the student units should be removed from the supply.
69. For the reasons BP explains in his detailed analysis of this issue (PoE chapter 13), students seem to be occupying an ever-increasing amount of homes in Chester, especially in the Garden Quarter where the Council have resorted to banning the

---

<sup>7</sup> APP/A0665/A/12/2185667, APP/A0665/A/12/2188464 and APP/A0665/A/12/2180958 [CDs 17/3, 17/4 and 17/5].

conversion of houses to HMO through issuing Development Management Orders. BP's evidence shows the number of Class N properties in the Council Tax base data has been consistently rising (PoE Table 13.2, page 44). The evidence shows that a lack of student accommodation in Chester, which the University itself has noted<sup>8</sup>, is being met by more homes being converted into student Houses in Multiple Occupation, not less. The University has in fact noted students securing lodgings as far away as Liverpool, Manchester and Wrexham: (BP PoE, para 13.22). The number of full-time students at the university has increased significantly in recent years (see Table on page 3 of BP's Rebuttal PoE). As Inspector Dakeyne observed, many students will come into Chester from elsewhere or will be merely freeing up a bedroom in a family home. BP addresses all of these issues in detail. Full time student numbers at the University are increasing. Consequently, the Council will find it very difficult to find evidence that the new accommodation is releasing housing back into the housing market.

70. Students are part of the wider population. Nevertheless, their housing needs are not to be treated as part of the housing requirement unless they are expressly dealt with at the time of the Local Plan. The extent to which they are included in the resident population can vary between different towns and cities. When assessing overall housing needs it is necessary to look at the extent to which they form part of the census population and also if their numbers are likely to change. CW&C did look at this issue but its consultants (Nevin Leather Associates) advised that student numbers would remain static (see BP PoE, para 13.10, page 41). That being so, the fact that full time student numbers have increased means that one cannot simply take purpose-built student accommodation off the completion figures when it is plainly addressing an unforeseen increase in student numbers.
71. The 630 student accommodation completions are recorded in the Council's completion data to arrive at their surplus. The Appellant removes the related 630 completions to arrive at its total completions figure of 10,132.

#### *Supply*

72. The parties disagree as to whether the Council can demonstrate a supply of housing to meet the five-year requirement. The main point of contention is whether the Council has the requisite clear evidence that the sites it includes are deliverable within the five-year period, and what exactly is required by clear evidence.
73. In relation to supply, Framework 2018 at paragraph 67 states:

*"Strategic policy-making authorities should have a clear understanding of the land available in their area through the preparation of strategic housing land availability assessment. From this, planning policies should identify a sufficient supply and mix of sites, taking into account their availability, suitability and likely economic viability. Planning policies should identify a supply of:*

- i) Specific, deliverable sites for years one to five of the plan period and*

---

<sup>8</sup> Nevin Leather Associates report 2012 [BP Ap.2C].

ii) *Specific, deliverable sites or broad locations for growth, for years 6-10 and*

iii) *Where possible, for years 11-15 of the plan”.*

74. Paragraph 73 of Framework 2018 also states that local planning authorities should identify and update annually a supply of specific “*deliverable*” sites. Paragraphs 67 and 73 of Framework 2018 state that sites should be ‘*deliverable*’. ‘*Deliverable*’ is now defined within the glossary as:

*“To be considered deliverable, sites for housing should be available now, offer a suitable location for development now, and be achievable with a realistic prospect that housing will be delivered on the site within five years. Sites that are not major development, and sites with detailed planning permission, should be considered deliverable until permission expires, unless there is clear evidence that homes will not be delivered within five years (e.g. they are no longer viable, there is no longer a demand for the type of units or sites have long term phasing plans). Sites with outline planning permission, permission in principle, allocated in the development plan or identified on a brownfield register should only be considered deliverable where there is clear evidence that housing completions will begin on site within five years.”*

75. The above definition in the glossary can be split into two parts.

- a) those sites that require the appellant/developer/promoter to adduce clear evidence to remove them from being considered deliverable. These sites, of under 10 units or those benefitting from a detailed permission, benefit from what might be called a presumption of deliverability.
- b) Secondly, for sites with outline permission, permission in principle, allocated in the development plan or identified on the brownfield register, the Council must provide clear evidence that housing completions will begin on site within five years. This list does not benefit from a deliverable presumption and such sites should not be included in the five-year supply until the Council provides the necessary clear evidence.

76. The definition was changed to remove, from active consideration, sites which do not have detailed planning permission. Other sites from the closed list can be included, but there is a need for clear evidence on delivery from such sites. The new definition is much more realistic than the previous one because there is often little prospect or certainty of an outline planning permission delivering completions within five years. That is because the conditions imposed on outline permissions often allow five years or more even for just a material commencement (i.e. no actual completions or delivery). Reserved matters can often take a long time to agree, often out-with the five-year period. Added to this, reserved matters applications can be refused and the yield from sites can often be changed.

77. Regarding allocations, where there is no outline permission, the prospect of delivery within five years is even less likely. One does not know when the application will be submitted, how long the negotiation of the planning permission will take and what the conditions will say about the amount of time, which will be

- allowed for the submission of reserved matters, other conditions etc. Sites which are not even allocated and have no permission should not be in the supply at all.
78. The NPPG was updated on 13th September 2018. Paragraph 3-036" *what constitutes a deliverable site in the context of housing policy?*" provides examples of what form clear evidence may take and whilst not a closed list, it is indicative of the level and strength of evidence required by the Council.
79. The Appellant's case in relation to "*clear evidence*" is that the Council cannot demonstrate this for the vast majority of the sites with outline planning permission. Most fall far short of the required evidential hurdle and in consequence they should be removed from the supply. The "*Council has not come close to discharging the burden to provide the clear evidence that is needed for it to be able to rely upon such sites*" which was the approach taken by the Inspector in the Woolpit decision at para 68, [CD 17/12].
80. The disputed elements within the Council's supply cover six categories. Three relate specifically to individual sites. The quantum and sites in dispute are all set out in the HSoCG. In total there are 1,854 dwellings in dispute in terms of the 5-year supply.
81. The Appellant's position in relation to the three categories of site is that none should be included within the Council's housing land supply. That is because none of them can be considered to be deliverable within the relevant 5-year period under the new Framework definition.
82. Sites under categories II (non-allocated sites without permission) and III (small windfall allowances) are not sites where the Council can demonstrate clear evidence that completions can be delivered on-site within five years.
83. For the avoidance of any doubt, the concept of a small site windfall allowance is not covered by the second sentence of the definition of deliverable. Sites that are not major development (i.e. sites of 9 units or less) can be included in the supply, but only if they have planning permission. Windfalls do not fall within that category.
84. A roundtable session was held on day 1 of the inquiry in respect of HLS. At no point in respect of any disputed site in categories I and III did the Council provide any documentary evidence, of the type suggested by the NPPG or at all, to support the deliverability of each site in these three categories. The Council offered oral evidence on some matters, but they produced not a single letter, email or SoCG to support it.
85. The Council offers no SoCG signed by a developer or anything similar. The Council does not have the necessary evidence suggested in the NPPG to support delivery on sites without detailed permission. At the same time, it relies upon evidence obtained after the base date, so its own case is not predicated on that being a hindrance. In reality the Council will not be able to obtain the necessary evidence until the next Annual Monitoring Report (AMR) and Housing Land Monitor (HLM). The new policy and guidance in the Framework and NPPG respectively require certainty in evidence. The Council simply does not have that evidence at the moment.

*Allocated sites or sites with outline permission – (300 dwellings).*

86. The Appellant now disputes 300 dwellings across six sites. The starting point for these disputed sites (outlined in chapter 14 of BP's PoE) is that they are not to be considered deliverable unless the Council adduces clear evidence. They are one of the four categories detailed in the closed list in Annex 2 of Framework 2018.
87. The Appellant's submissions in respect of all six sites is that the Council has not adduced sufficient evidence in relation to any of the sites to provide the clear evidence required. Their approach was strikingly similar to that of Welwyn Hatfield Borough Council at the recent Woolmer Green inquiry<sup>9</sup>, with only verbal updates forthcoming, entirely unsupported by any documentary evidence. The inspector at that inquiry found the Council's evidence fell "*well short*"<sup>8</sup> of what was required. One has to ask why these verbal updates which BF provided were only verbal. One must assume if the relevant developer had been contacted, then they were simply not willing to commit what they were saying to writing.
88. Ledsham Garden Village (28 units) – no documentary evidence was forthcoming from the Council and reliance was placed by BF on '*intelligence*' received from a housebuilder, however this "*intelligence*" was not put before the inquiry in part or at all in any form which could be read, examined, scrutinised or tested in any way whatsoever. To a lawyer such evidence is usually dismissed as pure hearsay. These 28 units are in phase 6 of the development, the outline permission for which included a condition (condition 2) that states that all reserved matters do not need to be made until 24th July 2025, extendable by a further 8 years.
89. Rossfield Road Phase 5 (70 units) – There was no evidence before the inquiry regarding when reserved matters would be submitted, what they will include or when commencement would take place. Outline permission was granted just three days before the base date and as such completions should be expected post the 5-year period.
90. Lyndale Farm (24 units) – There has been no application for reserved matters and the submission of the construction management plan is a fairly simple act from the developer and is not clear evidence of the strength suggested in the NPPG.
91. Former Delamere Forest School (16 units) – Despite an application for reserved matters having been made, this was after the base date and is pending determination.
92. Land at Oakmere Road (24 units) – There has been no application for reserved matters and no clear evidence submitted by the Council to show that this site is deliverable.
93. Land at Wrexham Road (138 dwellings) – The site does not have planning permission but is allocated in the LP. The first application was made in June 2017 and a further full application and an outline application were made in December 2017. None have yet been determined. The phasing plan considers a construction period of over 14 years. The Council's verbal evidence was simply

---

<sup>9</sup> APP/C1950/W/17/3190821 and as set out in the PoE of BP at 4.35-4.38, and [CD 17/12].

that a case officer had been assigned and it would be taken to the committee “*next year*” but that it had been pushed back to “*deal with and sort issues*”<sup>10</sup>. Again, this is wholly insufficient.

*Non-allocated sites without planning permission – 282 units*

94. As explained in BP’s PoE (pg19), the base date is a cut-off date. Whilst the previous NPPG indicated that sites without planning permission should automatically be considered deliverable, this is no longer the case. These sites are not contained within the closed list within the definition of ‘*deliverable*’ and as such have a lower planning status than the previous category.
95. The Council has provided nothing by way of ‘*clear evidence*’ for these sites, which are for reasons explained above problematic as a category anyway. Without planning permission, it is difficult to know when they will be delivered as one cannot even have sight of the conditions which will determine the timescale by which the permission is to lawfully come forward. None of these sites can be included in the supply.
96. The largest site within this category and touched upon during the round table session is Winnington Business Park (88 Units). It took the Council a year to determine the outline application, approval of which occurred after the base date<sup>11</sup>.
97. An application for reserved matters is required to be made before a period of three years after the decision date has elapsed. This could be as late as 20th July 2021. That is just for the submission of the reserved matters. Lawfully, material commencement need not take place until after 2023. There is no evidence as to when completions will begin.

*Small Windfall Allowances – 230 units*

98. Paragraph 70 of the Framework 2018 provides:

*“Where an allowance is to be made for windfall sites as part of anticipated supply, there should be compelling evidence that they will provide a reliable source of supply. Any allowance should be realistic having regard to the strategic housing land availability assessment, historic windfall delivery rates and expected future trends”.*

99. Section 17 of BP’s PoE deals in detail with the issue of windfall allowance. The Council’s approach to this issue is simply to rely on past trends to support its windfall allowance. Past trends reveal that 122 dwellings could be expected to be delivered each year on small windfall sites (i.e. 610 dwellings over the five-year period). However, 620 dwellings on small sites with planning permission are already included in the supply. Therefore, by including a further 230 dwellings (i.e. 115 dwellings per year in years 4 and 5), this would mean delivery well in excess of past trends.
100. The Council includes all small sites without applying a lapse rate at all. That is not remotely credible because small sites lapse all the time. Additionally, some

---

<sup>10</sup> BF on day 1 of the inquiry.

<sup>11</sup> Decision Notice issued on 20th July 2018

small site permissions, such as a house or a bungalow proposed in the applicants own back garden (often known as retirement houses) can be repeatedly renewed because the applicant is not yet ready to move out of the main house. Such sites may be saved by modest implementation (i.e. they are not part of a non-implementation allowance). They are instead part of a non-delivery allowance. It is wholly unrealistic to assume that all of the 610 dwellings on the small sites will come forward in the 5-year period and then to add on top of that an extra 230 units from additional small sites. The past trend data does not support what the Council are doing and yet that is what the Framework requires.

101. The Inspector's decision in the appeal at Longden Road, Shrewsbury<sup>12</sup>, in circumstances such as this was that the windfall allowance should be removed, and the same approach is encouraged to be followed here.

*Demolitions and losses – 167 units*

102. The Local Plan Part 1 is explicit in recognizing that the 1,100 dwellings to be achieved each year must be a net figure<sup>13</sup> and that therefore a gross delivery figure, which is higher, needs to be achieved. The Local Plan at para 5.21 actually refers to a gross figure of 1,150. The 1,100 needs to be achieved after having made an allowance for demolitions and losses.
103. BP has not simply stuck to the 1,150-gross figure in the plan. He has looked at the actual level of demolitions and losses which have taken place. This is lower than the evidence of 50 dpa which the Local Plan Inspector had before him. BP has therefore accepted that the trend in demolitions and losses has reduced since then. The 50 dpa figure was trend based at the time of the Local Plan. And the figure of 39 dpa now relied upon is similarly so.
104. The HLM report<sup>14</sup> details the demolitions and losses on an annual basis. This sums to 315 for the previous 8-year period, an average of 39 per annum. The figure included for the 5-year period by BP is 195 (39 p/a x 5 years), carrying forward the actual average of 39 dpa demolitions from the previous 8 years into the future 5-year period. BP's figure of 39 is therefore entirely trend based.
105. The table at Appendix 4 of the HLM does not record demolitions or losses as high as this. It simply identifies 28 demolitions which are expected to take place within the next 5-year period, and which are included within the Council's supply figure. As such, whilst BP's evidence of past trends suggests demolitions of 39 units p/a, giving rise to a total of 195 to be included over the five-year period, he gives credit for the 28 included in the Council's figures: 195 minus 28 = 167. Consequently 167 units should be deducted from the Council's five-year supply figure.
106. This same argument was advanced by BP at the Tattenhall appeals and was endorsed by the Inspector. There was nothing within the subsequent SoS report that suggested any departure from that Inspector's conclusions on the matter of demolitions.

<sup>13</sup> Local Plan Part 1, paragraph 5.21, last sentence of the paragraph.

<sup>14</sup> HLM report appendix 2, at page 24 and table 4.2 on page 10.

*Student accommodation – 430 units*

107. As recorded above, BP's PoE at chapter 13 deals with this issue in detail (pages 39 to 47). Student accommodation can only be included within the Council's supply if they are able to demonstrate the amount of housing released into the market. They are not able to do that, not least because the Council have not undertaken any exercise to show this. They have no evidence that a single dwelling will be released into the market, as a result of the student accommodation to be built.
108. In reality this may be difficult to achieve anyway. The number of full-time students increased by 2,265 between 2010/11 and 2016/17 (26.8%), (see the table on page 3 of BP Rebuttal PoE). In the most recent year for which there is data (2016/2017) there was an increase of 610 units. For full-time student numbers to have grown by over a quarter in that period is a very large increase.
109. There has been a corresponding decrease in the number of part time students. However, such students' accommodation needs are very often different. They often live at home and combine their academic studies with a job or other commitments, such as caring. Full time students in contrast are much more likely to need accommodation. The University of Chester itself is aware of this as set out in the Nevin Leather Associates report of January 2012. This states that
- "part-time students tend to remain in their existing homes, and many travel from outside of the City to study. The great majority of part-time students are unlikely to change their living arrangements in order to study"* (BP Rebuttal PoE, page 3, para 2.9).
110. The University of Chester is not the only further educational institution in Chester. Many solicitors train for their Legal Practice Course in Chester. The College of Law is now known as the University of Law in Chester. There are other FE institutions in the Borough as well. All of this adds to the increasing presence of students in the Garden Quarter (Chester) of which the Council is only too aware because some existing permanent residents are unhappy about this, hence the Council has been forced to restrict the conversion of houses to HMOs.
111. The Council tried to downplay the growth in full-time students by seeking to show that the University is located in a variety of different locations. However, the University's own documents show that around 60% of its students are based in Chester<sup>15</sup>.
112. Much emphasis was placed at the Inquiry on the new campus at Shrewsbury, which being in Shropshire is outside of the Borough. This is however a new and very small part of the University. The in-take last years was around 170 students, which was said to be its biggest intake (BP Examination in Chief (XiC)). On that basis the earlier years must be smaller. It is but a small satellite campus. This position was endorsed by Inspector Dakeyne in the previous decision for this appeal and in the Tattenhall appeals decisions. The evidence presented to them was that student numbers would increase at the University such that the new accommodation, that is being built, would simply absorb the

---

<sup>15</sup> Background of Assessing demand for purpose-built student accommodation in Chester, University of Chester, August 2014: BP PoE, Ap EP 2D (pg2 first para)

additional numbers of students or those who at the moment are unable to find accommodation in Chester. For those reasons, the Appellant removes all 430 units in relation to student accommodation from the Council's supply.

*Build rates and lead times – 505 units*

113. The Appellant's challenge to the Council's suggested build rates and lead-in times results in a deduction of 505 dwellings from the Council's supply (S16 of the PoE of BP (pg.64 onwards)). To be clear all the Appellant has done is rely on the rates the Council itself has suggested in the HLM, or on empirical evidence.
114. In relation to the Ledsham Garden Village site, BP has applied a build rate based on the empirical evidence as to what was the actual build out rate achieved on an earlier phase on the site i.e. 66dpa. This is important because Ellesmere Port is not a strong housing market and local factors are relevant to what sales rates can be achieved there. The Council officers seek to distance themselves from the tangible, empirical evidence and instead base their projection on supposed intelligence from the housebuilder. There is no proof that the 140dpa. in years 3 and 4, are achievable on the site. BP applied the same consistent approach for the site at Grange Farm. Again, the Council provided no evidence to the Inquiry in any written or tangible form.
115. In relation to the former British Gas and Part of the former Gulf Oil sites, the Council has provided no evidence as to how their delivery rate has been calculated, save that they have departed from the standard method and assumptions for calculating this, as contained within their Housing and Economic Land Availability Assessment (HELAA) 2017 [CD13/6]. BP has applied the standard method and HELAA assumptions in his calculation.
116. In all cases, in relation to the build-out rates, the Council has failed to provide any documentary evidence to support their case or justify why it departs from its own standard method and assumptions. The 'email' highlighted by BF in relation to the Station Quarter, which suffers from ground conditions problems and fractious land ownership, was not provided to the inquiry.

*Conclusion on Five Year Supply*

117. The Council's approach suggests a five-year requirement figure of 4,815 dwellings, which is an annualized figure of 963 dpa. The Council's final supply figure is 7,277. This gives rise to a supply of 7.56 years<sup>16</sup>.
118. The Appellant's approach is different. The Council's requirement for the 5-year period from the base date of 1st April 2018 is 5,500 (5 x 1,100 annual requirement). A 5% buffer is then applied (275 units), which means that a supply of 5,775 dwellings must be demonstrated. That gives rise to an annualized figure of 1,155 dwellings<sup>17</sup>.
119. The Appellant's supply figure is 5,423<sup>18</sup> following removal of 1,854 units from the Council's supply. On that basis, the Council are unable to demonstrate a

<sup>16</sup> SCG on 5YS, dated 23 November 2018, third table under para. 3.15 on page 7, lines F- I.

<sup>17</sup> SCG on 5YS, dated 23 November 2018, first table under para 3.15 on page 7.

<sup>18</sup> SCG on 5YS, dated 23 November 2018, second table under para 3.15 on page 7, line G.

deliverable 5-year supply of housing land, having just a 4.69 years supply<sup>19</sup>. The inspector at Nether Peover, highlighted the fact that because the 5-years supply is a minimum requirement, then even a shortfall of 150 homes in Cheshire West should be seen as significant (BP PoE, Ap EP 1D, para 35). That approach seems particularly apposite when one is talking about a minimum on a minimum (i.e. a minimum 5-years supply requirement, based on a minimum LP requirement of "at least 22,000"). In the conjoined Tattenhall inquiry, the Inspector found a very modest shortfall.

120. As such, footnote 7 of the Framework 2018 is brought into play and the tilted balance in paragraph 11d is triggered in favour of the application. This is a second route to the tilted balance in addition to the fact that Policy GS5 is out of date.

### **The Statutory Development Plan**

121. The starting point for the determination of this appeal is the DP. That is now,

a) CW&CLP P1, adopted on 29th January 2015;

b) The WNP, made on 19th November 2014;

and

c) The saved policies of the VRBLP First Review Alteration, adopted in June 2006, (specifically Policy GS5).

122. The primacy of the DP in decision making is reiterated at paragraphs 12 and 47 of the Framework. With regards to the specific weight to be attached to existing DP policies, paragraphs 212 and 213 state that due weight is to be given to relevant policies according to their degree of consistency with the Framework from the day of its publication.

123. The Framework (2018) states that existing policies should not be considered out-of-date simply because they were adopted or made prior to the publication of the Framework (para 213). The closer a policy in a plan is to the policies in the Framework, the greater the weight that may be given. However, Lord Carnworth in his Supreme Court judgement reminds us that both a policy from a plan which is beyond its end date and a policy based on out of date housing requirements are out-of-date [CD 16/8].

124. As such, it follows and is accepted that should any of these policies be found to be '*out of date*', then the titled balance within paragraph 11d) of the Framework 2018 would be applicable.

### *Conflict with the DP*

125. It is important to note that it is a plan-led system not a plan-dictated system. A DP provides the opportunity to set spatial strategies, set minimum housing targets, remove land from the Green Belt and to allocate sites (which is especially important for large sites where developers need certainty). However,

---

<sup>19</sup> It is right to record that these figures do vary from the proofs of evidence as both parties have sought to adjust their figures following discussion on the HSoCG. It is the figures in the HSoCG of 23 November 2018 which are to be relied upon.

plans are not the last word on everything that should come forward. That would be a misunderstanding of what is meant by a plan led system. The second sentence of paragraph 12 of the Framework (2018) needs to be read in that context. Critically, the last sentence of that paragraph reverts back to the statutory test.

126. A plan-led system is also not a system where only allocated sites are required or receive permission. The Planning Inspectorate granted planning permission for 30,000 dwellings in 2017. Many will have been on unallocated sites. Without these important sites coming forward, the housing crisis would be even worse than it is already. Planning applications and appeals on non-allocated sites are vitally important to the system.

127. CW&CLP P1 Policies STRAT 9 and H1 and VRBLP Policy GS5 were considered by Inspector Dakeyne to be the dominant policies, as per paragraph 11d) of the Framework 2018, for the purposes of determining this appeal. This is agreed by both parties having been accepted by Jill Stephens (JillS) on day 3 of the inquiry.

*Cheshire West and Chester Local Plan (Part One)*

128. The proposal is largely consistent with the CW&CLP P1<sup>20</sup>. This includes the fact that the proposal is consistent with Policy STRAT 6 which is the policy for Winsford. The conflict with the LP is predominantly focused on Policy STRAT 9<sup>21</sup>. This restricts development to that which requires a countryside location and cannot be accommodated within identified settlements.

129. The opening line of the policy sets out that its aim is to protect the intrinsic character and beauty of the Cheshire countryside. This policy goes beyond and is more restrictive to development than the Framework, as JillS accepted in Xx. Although the policy was found to be sound at examination, the Framework 2018, which postdates Policy STRAT 9, at paragraph 170 b) does not go as far as stating that the intrinsic character and beauty of the countryside is to be '*protected*' as Policy STRAT 9 does. A less restrictive bar is set, in that it should be '*recognised*'.

130. This is an important distinction and a deliberate drafting difference within the Framework 2018. As such and in accordance with paragraph 213, Policy STRAT 9 is not consistent with the Framework 2018 and is out of date, triggering the titled balance within paragraph 11d).

131. The importance of the distinction between recognised and protected is well explained and was addressed by the Inspector in an appeal decision for a site at Cornerways, High Street, Twyning, Tewkesbury at para. 7-17 [CD17/43]. However, the later Court case of Cawrey Limited<sup>22</sup> does suggest that even under the Framework, the countryside does enjoy a degree of protection. Nevertheless, that is not the same as giving it outright protection.

132. The fact that the policy is not consistent with the Framework, diminishes the weight that can be given to it, reducing in parallel the magnitude of any conflict

---

<sup>20</sup> PoE of JonS.

<sup>21</sup> CD 13.1 pg.41.

<sup>22</sup> Cawrey Limited v SSCLG (2016) EWHC 1198 [CD11/3].

with it. The Council says that the conflict should be given full weight, but for a policy that is not consistent with the Framework, this cannot be the case. It must only attract reduced weight. However, to be clear, Jon Suckley (JonS) in his PoE has looked at the planning balance in circumstances where this argument is not accepted.

133. Policy STRAT 1 concerns sustainable development. In para. 3.5 of her PoE, JIIS states that the proposal should support sustainable development principles set out within the policy: one such principle being to minimise the loss of greenfield land<sup>23</sup>. However, this is not an embargo against the loss of any greenfield land and as such the loss of greenfield land would not be contrary to this policy. If that was what was intended the drafting would have said so.
134. Policy STRAT 1 does not include a checklist of rules, mandating that all items be 'ticked off', but instead contains more flexible 'principles'. The PoE of JonS, at chapter 7, deals entirely with the topic of sustainable development, concluding at para.7.23 on pg.32 that the proposal will deliver benefits in all three objectives of sustainable development in accordance with Framework 2018 para.8. The section below, in relation to sustainable development, outlines the same and why there is no conflict with Policy STRAT 1.

*Winsford Neighbourhood Plan ("WNP")*

135. The WNP was made over four years ago. Only about 2 ha of the application site, the northern most field, falls within the remit of the WNP, equating to roughly 50 homes. The remainder of the site, approximately 4.5 ha cannot be said to be in conflict with the WNP in any shape or form as it is not within the WNP area.
136. Similarly, any conflict suggested with Policy H1 of the WNP cannot be levelled against the application as a whole, it can only exist against 31% of it, which in turn must reduce the weight of any conflict, if found. However, more importantly Policy H1 of the WNP does not contain a cap on development. This was accepted by the Council's witnesses repeatedly throughout the Inquiry. The examiner's report [CD 15/2] also confirmed this at paras 3.13 and 3.18.
137. Consequently, the housing requirement and allocation within the WNP is not a preventative ceiling to additional development. JIIS accepted on Day 3 of the Inquiry that the wording within Policy H1 permits additional development over and above that allocated.
138. When the WNP was still in draft, but at the same committee as the Appellant's proposal, the Council itself granted planning permission for sites outside of the Policy H1 allocations and settlement boundaries, most notably at Swanlow Lane<sup>24</sup>.
139. The Council's case focuses on the need to limit development in Winsford to the allocations made in the WNP. However, the allocations (3,362) do not add up to the LP's requirement (Policy STRAT 6). This requires at least 3,500. More housing is consequently needed at Winsford than just the WNP allocations.

---

<sup>23</sup> STRAT 1, bullet 6.

<sup>24</sup> JonS at para 13.16.

140. Mr Wood and the Council suggest that the WNP examiner rejected the site. However, this was not a LP examination. One needs to read the relevant paragraphs of Dr Mynors report accurately [CD 15/2], with care and in context. The Examiner was careful to say that he was not assessing the suitability of any particular site (para 3.29) and he made clear that he had a limited role as an Examiner (para 3.54). Whilst he had no reason to disagree with the Town Council's reasons for rejecting the site, he was plainly very mindful (and recorded the fact) that the Appellant was expecting to receive planning permission and the Borough Council were not opposing the site (para 3.50). He also made the very important point that sites can come forward, which are not in the plan, based on other material considerations (para 3.47).
141. One also needs to look at the context of the WNP itself. It was actually prepared against an intended housing figure for the Borough of just 21,000 new homes (see para 2.1.19 of the WNP). One thousand homes less than the LP actually requires.
142. Furthermore, a full investigation of the plan's housing allocations (which did not take place at the second inquiry) has revealed that 1,224 of the dwellings in the plan had permission before the plan was made. Additionally, there are delivery problems at the main location for development at the Station Quarter. That context is important because it suggests that despite the WNP having been made 4 years ago, it is not actually providing much assistance in meeting Cheshire West's housing needs. The lack of delivery at Winsford compared to Chester and Northwich suggests that there are real problems with delivery at Winsford.
143. The Council's case has evolved into suggesting that the proposal conflicts with the themes of the WNP. However, it is genuinely difficult to see how the proposal offends these when the proposal is similar to other housing proposals at Winsford. For example, the proposal will bring in new households and they will support the town centre, just as the allocations will do (see Theme 1, on pg.17 of the WNP). Added to which, the proposal will in fact assist in promoting some of the objectives of the WNP, such as the objective to create a variety of employment opportunities where initiatives to develop skills are proposed (WNP pg43). The training and employment obligation or condition, proposed by the Appellant will plainly do just that. In line with observations from the Inspector, the Appellant has sought to make that more localised with 20% of those employed needing to come from Winsford or the surrounding parishes.
144. The suggestion that the proposal is not in a gateway location was also easily dismissed by JonS in both Xx with regard to site W5 and in re-examination with regard to site O3. If anything, the appeal site offers more of an opportunity to create a gateway than either of these sites.
145. The Borough Council is careful to suggest that it was the view of the Town Council that the proposal offended the vision of the WNP. In truth, there is no conflict with the vision.

146. The Crane case suggests that the WNP needs to be read as a whole<sup>25</sup>. However, the Tesco case decided that all policies in the DP need to be read in their proper context<sup>26</sup>. This was reiterated and made clear by Lord Carnwath at para 63 in the Suffolk Coastal/Richborough Estates case<sup>27</sup>. The fact the WNP Examiner made clear that the allocations were not to be seen as a cap is a critical part of the context here. It would therefore be wrong to read into this plan, any suggestion that other sites cannot come forward.
147. In any event, the WNP was made on 19th November 2014 and allocated 3,362 homes (WNP page 46). However, following this on 25th January 2015, the CW&CLP P1 was adopted, and its policies take precedent<sup>28</sup>. This included the aim of 3,500 new homes being delivered at Winsford over the plan period.
148. For the reasons outlined above, the WNP is not delivering new homes in the numbers required. It allocates less than the Local Plan, which post-dated it and windfalls have not taken it above that. All the more serious because the Local Plan figure for the town is expressed as a minimum. Over one third of the dwellings in the plan already had planning permission by the time the WNP was made. A second third, at the main development location in the town (the Station Quarter), are simply not coming forward.

*Vale Royal Borough Local Plan saved policies*

149. Policy GS5 is the only saved policy of this plan that the proposal is stated as being in conflict with [CD 13/2]. It relates to development within the open countryside (pg 18). The policy is out of date because it is from a plan which only addressed development needs up until March 2016. More importantly it is based upon strategic housing and employment policies which are plainly out of date. This matter was considered in paragraph 63 of the Judgment discussed above<sup>26</sup>.
150. The Daventry case<sup>29</sup>, relied upon by the Council, relates to the guidance in the old Framework. It relates to a situation where the Inspector simply accepted that the policy was out of date without considering the extent to which the housing requirement in that plan was based on out of date housing requirements. That is what the Inspector did in the Cheshire East/Richborough appeal. The Supreme Court supported his approach. That case post-dates the Daventry case on which the Council rely.
151. Policy GS5 is retained simply as a 'stop gap' to prevent a 'policy vacuum' from occurring if it were to be removed. It will be removed when the CW&CLP P2 comes forward. The settlement boundaries proposed in P2 of the LP do not match those within GS5, further evidencing the out-datedness of GS5. The Council cannot suggest the policy has little relevance in the light of Policy STRAT 9. The fact is the Council need Policy GS5 to show where the settlement boundary is located. In granting permission for lots of sites beyond the Policy

---

<sup>25</sup> Crane v SSCLG (2015) EWHC 425 [CD16/3].

<sup>26</sup> Tesco Stores v Dundee (2012) UKSC.

<sup>27</sup> Suffolk Coastal DC v Hopkins Homes: Richborough Estates v Cheshire East Council (2017) UKSC 37 [CD16/8].

<sup>28</sup> Section 38(5) TCPA and NPPG Neighbourhood Planning, Paragraph: 084 Reference ID: 41- 084-20180222

<sup>29</sup> Daventry BC v SSCLG & Gladman Developments (2016) EWCA 1646 [ID 38]

GS5 boundary in Winsford, the Council have plainly not seen that boundary as a hindrance and must have given it reduced weight.

152. The Council's professional planning officers in their report to committee on 21 November 2013 [CD2/2] gave Policy GS5 reduced weight, correctly so, and stated it to be more restrictive than the Framework 2012, as was then.
153. The settlement boundaries contained within Policy GS5 have not prevented the Council from themselves granting planning permission for sites that sit outside of them and so it cannot be said to preclude such development. Jills accepted as much in Xx on day 3.
154. The Council made clear on Day 1 of the inquiry that Policy GS5 is to be viewed as an important policy. It is nevertheless plainly out of date. Consequently, the tilted balance is triggered through this alone, regardless of the 5-year supply issue.

#### *Development plan conclusions*

155. In relation to the policies most important for determining the application;
- a) Whilst there is conflict with Policy STRAT 9 of the CW&CLP P1, this policy cannot be afforded full weight as it is more restrictive than the Framework 2018. In particular, it is not consistent with para 213. As such, the impact of any conflict with Policy STRAT 9 is reduced. Even if it is given full weight, it does not stand in the way of granting planning permission as Inspector Dakeyne's recommendation made clear.
  - b) Policy STRAT 1 of the CW&CLP P1 does not contain a mandated checklist of obligatory requirements. It is a flexible list of principles or desires. Loss of greenfield land is not embargoed within STRAT 1 and the proposal delivers on all three sustainable development objectives (see para. 204 below). The appeal proposal as such does not conflict with this policy.
  - c) Policy H1 of the WNP, does not set a maximum figure or a cap on development, this was outlined by Dr Mynors at the examination and is accepted by all parties. There is no conflict with this policy. However, even if there is, this policy does not stand in the way of granting planning permission as Inspector Dakeyne's recommendation made clear.
  - d) Finally, saved policy GS5 of the VRBLP is out of date. It is based on out of date housing requirements. Being out of date it triggers the tilted balance within paragraph 11d) of the Framework 2018 and permission should as such be granted unless any adverse impacts of doing so would significantly or demonstrably outweigh the benefits, when assessed against the policies in the Framework 2018 taken as a whole.

#### **The benefits of the proposal**

156. There are multiple benefits. These include the delivery of new homes to address the shortfall in the 5-year supply, the delivery of much needed affordable housing (AH), the provision of self-build housing, and the economic benefits of the proposal.

157. These are not to be treated as neutral. The point is well explained by the Inspector in the very recent appeal at Land East of Park Lane, Coalpit Heath [CD 17/13], who said at para 61 that:

*"There are three different components of the housing that would be delivered: market housing, affordable housing and custom-build housing. They are all important and substantial weight should be attached to each component for the reasons raised in evidence by the appellants, which was not substantively challenged by the Council, albeit they all form part of the overall housing requirement and supply."*

*Small and Medium Sized Local House Builders*

158. The proposal will deliver up to 92 market homes at a time when the Government has enshrined its objective of "*significantly boosting*" the supply of homes within national policy<sup>30</sup>.
159. The benefit of these market homes is substantial, simply on the basis of a national housing crisis, but is increased on the Appellant's case where the Council cannot demonstrate a five-year supply of housing land. However, the Appellant's case does not live or die by the presence or not of a five-year supply, as many appeal decisions have seen permission granted in circumstances where the Council can demonstrate a 5-year supply of housing land<sup>31</sup>.
160. The critical feature in terms of market housing is that the proposal is to be built specifically by small and medium sized builders from Cheshire. The Government's desire to support local housebuilders who are Small and Medium Sized Employer(s) (SME) is well documented [CD 12/10]. There is an increasing awareness of the important role that they can play in helping to address the national housing crisis, the government has encapsulated this within national policy at paragraph 68 of the Framework 2018. This accords with the aims and desires of Government, something not lost on the Inspector at the Lydney appeal<sup>32</sup>.
161. Further, the Lyons Review [CD 9/12] has identified the over reliance placed on large-volume, national house builders as one of the two main contributory causes for the housing crisis.
162. The Appellant has provided four letters from local SME building firms; Apex, Cruden, Garratt and Moorcroft. These explain the difficulties faced by such SME firms when competing against national housebuilders and outline the lack of suitable sites locally. All four express their interest in the appeal site and the proposal. These are real words from local, real builder SMEs, the exact businesses that the local approach of this proposal aims to assist. For these reasons the local SME builders' provision, to be secured through a legal agreement, should attract significant weight.
163. The Appellant also plans to implement a local training and employment strategy, to be approved by the Council prior to the commencement of

---

<sup>30</sup> Framework 2018 paragraph 59

<sup>31</sup> Appendix 18 to the PoE of JonS

<sup>32</sup> APP/P1284/13/OUT Land off Driffield Road, Allaston Road, Lydney, Gloucester

development, delivering localised benefits to the peoples of Winsford in the form of new skills, qualifications and careers. It should attract significant weight.

164. A very similar 'local approach' to the one offered here was put forward by the Appellants in the Lydney appeal. The SoS ultimately concluded that the benefits of this were significant enough to outweigh the conflicts with the development plan.
165. Following the concerns that the SoS had about the conditions used previously, the Appellant has sought to promote these local aspects of the proposal by way of a planning obligation. That was the successful approach taken by the appellant in the Lydney case.
166. The Appellant was content with conditions last time, as it would be this time as well. The Council officers prefer them as they believe conditions are easier to enforce in the event of a breach. However, having seen the Lydney decision approved on the basis of ensuring its 'Local Approach' was made legal through a planning obligation, the Appellant is reluctant to not make that the preferred mechanism now in this case.
167. Given the obligation (or condition) for the market housing to be built by a local SME builder(s), there is no real need to have a local procurement obligation (or condition). They will inevitably obtain a high percentage of their employees and material from the local area. That is why the Appellant agreed to its removal from the list of draft conditions.

#### *Affordable Housing (AH)*

168. At the heart of the Framework, is the government's objective to significantly boost the supply of homes of the right size, type and tenure (para 59 and 61). The Appellant contends that there is incontrovertible evidence of the need for significantly more new housing nationally, particularly affordable housing, given the existence and extent of the national housing crisis.
169. JonS's evidence at S8 suggests that many of the affordability indicators are now worse than in 2015. Affordability has worsened and so have housing waiting lists. Consequently, he rightly describes a graver more serious problem meriting an enhanced weight to this crucial benefit. The Council considers this to be part of a wider problem. However, the lack of a 5-year supply is a local manifestation of a more systemic problem. As the Inspector set out in the Ludlow case at para 40 page 9:

*"whilst the LPA is able to demonstrate a deliverable five-year supply of housing sites based upon its requirements set out in Policy CS1, this is not a limit: there is an acute housing shortage in England. It is recognised in National policy that the government anticipates a significant boost to the supply of housing. In this respect, the provision of any extra housing to this national shortfall is a benefit in favour of the proposal, including both market and affordable housing" [CD17/33].*

170. The proposal will make a substantial contribution towards meeting the general housing needs in the area in accordance with the requirement placed upon local planning authorities to provide for the full objectively assessed housing needs of the area. The 2013 SHMA [CD13/8] sets out a requirement for 714 affordable houses per annum.

171. The problems of unmet housing need and delivery problems do not just beset market housing or general housing need. There is a particular problem in this Borough with affordable housing and Custom/Self-Build housing. As Cllr Hooton (Chairman of Planning – Winsford Town Council) explained, social housing has posed problems for Winsford over the years. He advised that the Town Council want to see more social housing from the Council and social landlords. The affordable houses proposed will be transferred to and managed by a Registered Social Landlord exactly how Cllr Hooton wishes.
172. The Council wish to portray the position of affordable housing delivery as being “*admirable*”. However, the LP target is less than half the annual need arising in the District. The LP is failing at the outset to meet the full needs of household’s requiring assistance with their housing choices. Whilst obviously now forming part of the DP, this requirement was not what JonS was comparing when assessing net annual affordable housing delivery against annual needs.
173. Comparing net annual AH delivery against the annual requirement in the Strategic Housing Market Area (SHMA), covering exactly the 5-year period, the delivery record is much less rosy. As JonS’s evidence shows with this comparison (JonS Figure 4.7 page 37 of PoE) there is an accumulated shortfall of -1,503 dwellings over the first 5-year period. These households have not had their housing needs met. These households are being failed by this Council.
174. Given that the backlog is increasing, there can be no net ‘social progress’ in addressing AH needs in the District. Subsequently, it is highly questionable how the Council can be content with this, regardless as to how well it is performing against the pragmatically founded LP target. Any additional AH contribution must be especially beneficial in at least mitigating the continuing harm. In this context JonS considered the delivery of AH to be abysmal<sup>33</sup>. JonS agreed in Xx that delivery compared to the LP target was better but that is not the true picture of AH provision and need in CW&C.
175. A major part of the Appellant’s case is the fact that the proposal involves the delivery of up to 74 affordable homes, equivalent to 40% affordable housing. The affordable housing offer at 40% is numerically 10% more than required by Policy SOC1. This equates to an extra 18 affordable homes or 32% more than would have been delivered by a policy compliant proposal. Furthermore, in the event that the Custom and Self-Build housing is not provided, that 10% would revert to AHs so that the AH offer would total 50% of the entire dwellings on the site. It was agreed in Xx of Jills that in this scenario the appropriate weight to be given in the planning balance would be very substantial.
176. The appropriate weight to be given to AH in the overall planning balance is of fundamental importance and has been a matter which the SoS and Inspectors have regularly considered. In JonS’s opinion it should attract nothing less than very substantial weight. This contrasts with the substantial weight awarded by the Council, which appears to be a deliberate ploy on its part to downplay the vast array of worsening market indicators. These justify JonS’s position of ascribing a greater degree of weight than was given in 2015. To merely accept the same weight would fail to take account of significant changes in local circumstances.

---

<sup>33</sup> See Section xiv of JonS’s Executive Summary

177. The delivery of new housing contributes to the social and economic roles of sustainable development (SD). It delivers major benefits in line with the Framework's policy. Those merits are brought into stark reality by the evidence of JonS, and especially the 6,204 households falling into need. JonS explained that in spite of stricter registration criteria there remains a high number of households needing assistance with their housing needs. As the Inspector asserted at para 8.122 in the Pulley Lane, Droitwich Spa appeal [CD17/8]

*"Needless to say, these socially disadvantaged people were unrepresented at the Inquiry".*

178. As is evident from JonS's evidence, the need for accelerated AH provision pervades national and local policy. The estimated AH needs are considerable, with the 2013 SHMA setting out a requirement of some 714 affordable dwellings per annum.

179. As JonS explains, there is an accumulated shortfall of some 1,503 dwellings since 2013/14 (JonS figure 4.7 page 37 of PoE). Not an insignificant figure equating to almost half the growth in the waiting list between April 2015 and April 2018 (Change of 3,414 more households). The growth in the housing register has been staggering. It was previously acknowledged that the housing register had been artificially reduced in 2014 from 19,000 households to 2,790 households in 2015 (JonS figure 4.1 and para 4.7 page 32 of PoE). Despite the stricter qualification criteria introduced by changes allowed in the Localism Act 2011, the housing register has increased by over 3,400 households in the space of just 3 years. This is more than 3 households per day registering or re-registering (JonS XIC). There are now 6,204 households on the register as at 1st April 2018. Yet the Council make no reference to the worsening of the housing register.

180. The hugely important benefits of living in a home such as: secure tenure, ability to set down roots, ability to plan for families and to be close to relatives and support groups is immeasurable and has no doubt manifested itself into the "*grief and hardship*" referred to by Mr Boles back in 2013.

181. The Appellant contends that there is a vast array of indicators which have also not been fully considered by the Council. These indicators are illustrated by JonS in his PoE<sup>34</sup>.

182. There can be no doubt that there is an acute need for AH in CW&C. The proposals will deliver a substantial number of AH, for which there is a significant demonstrable need and in a sustainable location. This should be considered in the context of significant under-delivery against the SHMA requirement, with JonS ascribing very substantial weight to the delivery of much needed AH. The need for AH at Winsford is also very evident. This point was echoed by Mr. Tony Hooton (see para 315 below).

183. Finally, Table 4.7, as contained within the PoE of JonS<sup>35</sup>, highlights the underperformance of the Council when it comes to the provision of AH since

---

<sup>34</sup> JonS pgs. 31-34, 36, 37 & 51.

<sup>35</sup> Ibid at paragraph 4.22 page 37.

2013/14. In none of the previous five years has the Council achieved its identified AH need of 714 dpa<sup>36</sup>. The closest it has got was in 2017/18, with 552, still some 162d short. In the previous 5 years, the Council has achieved 2,067 net AH completions, 1,503 less than the required 3,570. It has delivered less than 58% of that which was required. This shortfall affects real people, in real need. Given the above, the AH provision must attract nothing less than very substantial weight.

#### *Self-build*

184. The Housing White Paper (CD12/7) is clear that:

*"The government wants to support the growth of custom build homes".*

185. As recently as 16 October 2018, during a debate on housing and homeownership in the House of Commons (Appendix AM2), the Housing Minister Kit Malthouse reaffirmed the Government's commitment to self-build and custom build, stating that:

*"We are very keen to encourage self-build".*

186. The revised Framework sets out at Paragraph 60 that in determining the minimum number of homes needed, strategic policies should be informed by a local housing need assessment. It goes on at Paragraph 61 to say that within this context, the size, type and tenure of housing needed for different groups in the community should be assessed and reflected in policy, including *"people wishing to commission or build their own homes"* with footnote 26 of the Framework detailing that:

*"Under Section 1 of the Self-Build and Custom Housebuilding Act 2015, local authorities are required to keep a register of those seeking to acquire serviced plots in the area for their own self-build and custom house building. They are also subject to duties under sections 2 and 2A of the Act to have regard to this and to give enough suitable development permissions to meet the identified demand. Self and Custom-Build properties could provide market or affordable housing".*

187. The Council does not dispute that there are 309 households on their self-build register seeking a self-build or custom housebuilding serviced plot, nor do they appear to dispute that the Self-Build and Custom Housebuilding Act 2015 requires them to grant enough suitable development permissions to meet identified demand.

188. What has become apparent however is that the Council has no idea whether it is granting sufficient permissions to meet demand. As Jills conceded in Xx she does not know how many self-build plots the Council has granted planning permission for in the plan period. Furthermore, Jills was unable to point to any other site in Winsford that provides a self-build plot.

189. In the re-examination (re) of Jills, the Council sought to contend that because Winsford urban area is nil-rated for CIL then the chances of learning about self-build from CIL exemptions in Winsford was not possible. However,

---

<sup>36</sup> Taken from the 2013 SHMA.

this merely seeks to distract from the fact that the Council simply do not know how many self-build plots there are in CW&C and have no idea whether they have granted sufficient suitable development permissions to meet demand on their register.

190. It is important to remember that the Self-Build register, whilst being an important tool in helping to gauge local demand, cannot predict longer term demand for plots and is therefore only a part of the picture in robustly assessing demand.

191. The Framework is clear that:

*"Local authorities should use the demand data from the registers in their area, supported as necessary by additional data from secondary sources (as outlined in the housing and economic development needs guidance within NPPG)"<sup>37</sup>.*

192. It signposts the reader to the housing and economic development needs guidance, which states that:

*"In order to obtain a robust assessment of demand for this type of housing in their area, local planning authorities should assess and review the data held on their register. They should also supplement the data from the registers with secondary data sources such as: building plot search websites, 'Need-a-Plot' information available from the Self Build Portal, and enquiries for building plots from local estate agents."<sup>38</sup>*

193. Appendix AM3 to Andy Mojer's (AM's) Self-Build and Custom Build Statement [ID9 Ap.13] contains secondary data supplied by Build Store who hold the UK's largest database of self-build building plot opportunities. This data shows that there were 443 registrants on their Custom Build Register wishing to create their own home within a 10-mile radius of the appeal site.

194. In addition to this, the Build Store secondary data shows that there were 1,209 Plot Search subscribers within a 10-mile radius of the appeal site. These are people who are actively looking for a plot to build or commission their own home within this area.

195. This is precisely the type of secondary data source that the NPPG expects to be used to supplement the Council's own self-build register, in order to obtain a robust assessment of demand in the area. The Council have failed to do this and in doing so cannot consider the data on their self-build register alone to form a robust assessment of demand within CW&C.

196. The fact that the Council have failed to robustly assess demand in line with the requirements of the NPPG calls into questions their contention that the 18 self-build plots on the appeal site would fail to come forward due to a lack of demand.

197. Emerging CW&CLP P2 Policy DM20 is intended to require residential development proposals to demonstrate how development proposals will address

---

<sup>37</sup> Paragraph: 011 Reference ID: 57011-2016040127.

<sup>38</sup> Paragraph: 020 Reference ID: 2a-020-20180913.

demand for self-build and custom build housing. But it sets no targets and allocates no sites.

198. It follows that it must be noted that neither adopted nor emerging policy expressly define a target for self-build and custom house building in CW&C. Additionally, the Council does not appear to have any particular mechanism (such as a percentage requirement to provide self-build plots on qualifying sites for example) for securing delivery.
199. Without sites such as the appeal site, which could deliver 10% of its units as serviced self-build and custom housebuilding plots, it is unclear how the Council intends to address demand for self-build and custom housebuilding within CW&C.
200. The Council's contention that there is insufficient demand and therefore the benefit of the self-build plots would fail to materialise as a deliverable benefit was mitigated during the inquiry by the introduction of a fall-back position. Should the self-build units remain undelivered within five years, then they would revert to affordable housing plots, thus increasing the overall affordable housing offer to 50%. The appellant contends that this should be afforded nothing less than very substantial weight. As Jills conceded in Xx, the fall-back position means that in either eventuality a material benefit of substantial weight would be delivered through the appeal proposals.
201. The appellant's position remains that there is sufficient demand for the 18 self-build plots despite the introduction of a fall-back position. When considered against the scale of unmet demand and the lack of a suitable strategy from the Council to address demand, the provision of 18 self-build and custom build plots through the appeal proposals should be afforded nothing less than substantial weight in the planning balance.
202. Full details of the self-build evidence is provided in the evidence of AM [ID9 Ap.13] and supplemented by evidence from JonS.

#### *Local Training and Employment*

203. The proposed condition is very similar but more specific than the condition the Council itself imposed on the Ledsham Road permission. The Appellant's suggested condition is much superior in its clarity and intention. The purpose is to ensure that some of the work carried out in building the site is done by people local to both Winsford and Cheshire West. There is clear evidence of multiple deprivation in Winsford and one might have expected the Council to welcome such a condition. There are no enforcement problems. The Appellant will ask the house builders and their contractors to keep a record of the people they employ, and each contractor will plainly be made aware of the condition. The Appellant's Estate office will itself keep all of the records.

### **Sustainable development**

204. The proposal would deliver sustainable development, offering a wide range of benefits within all three objectives of sustainable development<sup>39</sup>, on a site that is

---

<sup>39</sup> NPPF 2018 paragraph 8.

accepted as being in a sustainable location. Whilst this is dealt with in detail in chapter 7 of the PoE of JonS, the key benefits would be:

*Economic*

- a) House building, with specific support for a local SME building firm with exclusive access for them to a major housing site;
- b) Additional employment opportunities within both Cheshire West and Winsford in particular;
- c) A commitment to the training of local people to work on the site;
- d) Additional expenditure by the new households in the local economy;

*Social*

- e) The delivery of a choice and mix of housing in a sustainable location, including: market housing, affordable housing and self-build on the one site;
- f) An affordable housing provision of 40% against a Council requirement of 'up to 30%';
- g) On site open space provision of at least 8,000sqm. against a Council minimum of 5,000sqm;
- h) Financial contributions towards a new playing pitch, parks and recreation and play for youth;

*Environmental*

- i) The site is located in a sustainable and accessible location in respect of bus, cycling and walking provision;  
and
- j) An enhanced habitat will be made available on site with the creation and long-term management of four ponds for the use of GCNs.

## **The Planning Balance**

*The Tilted Balance*

205. The titled balance applies because Policies GS5 and STRAT 9 are out of date. It would also apply if there was not a 5-year supply of housing land. The proposal plainly satisfies the test in Framework, para 11(d) (ii). The adverse impacts come nowhere close to outweighing the benefits, which are many and attract much weight. There are no 11(d)(ii) policies which apply here.

*Section 38(6) PCPA Balance*

206. If the titled balance does not apply, then it is the conventional status test which applies. The Appellant does not consider that this proposal conflicts with the DP, save for Policy STRAT 9 of the CW&CLP P1, which should be afforded reduced weight in any event, owing to its inconsistency with para 213 of the Framework 2018.

207. However, in the alternative and should further conflict with the DP be found, including with regard to Policy H1 of the WNP, then the benefits which are termed other material considerations far outweigh the conflict found with the DP. This is the exact route to approval taken by Inspector Dakeyne and which can properly be taken again if required, based on the considerations and sustainable development outlined above.

### Overall Conclusion

208. There is a real need for this type of development in England and Cheshire West, to assist in addressing the housing crisis. It is a proposal entirely aligned with Government policy. It is a proposal comprised solely of plots for self-build, custom build, small and medium sized local builders and affordable housing. The SoS should properly take these into account. His failure to do so last time was unlawful. Giving them little weight, as the Council suggests, would be wholly contrary to the thrust of Government policy, statement and emphasis. It would send precisely the wrong message to the house building and self-build sectors.

209. The WNP does not allocate the level of housing necessary to meet the Council's minimum requirement for the town as set out in the LP. It allocated land for 3,362 new homes, whereas the Local Plan requires a minimum of 3,500 new homes. Being later in time it is the LP figure which takes precedence<sup>40</sup>. Being a minimum, the Local Plan figure for Winsford is to be exceeded. That is what the plan intends. But to be clear, at para 3.13 pg 25 the WNP Examiner was plain that the housing allocations in the WNP were not to be seen as a cap [CD 15/2]. There are clearly delivery problems with the main site at the Station Quarter where over 1,000 homes are allocated. Not a single house has been completed in that area and the vast majority of the sites (nearly 800d) do not have planning permission.

210. The Appellant believes the Council is not able to demonstrate a 5-year supply of housing land. But to be clear, a shortfall in the 5-year supply is not a requirement to grant planning permission, as evidence by the SoS's own decisions at Hook Norton in Cherwell [CD17/42], and Watery Lane in Lichfield [CD17/39]. The former was also contrary to a newly made NP. The latter was contrary to a whole host of LP policies. The SoS also took that view in CW&C at Sealand Road, Chester [CD17/1]. There are a host of other appeal decisions in which this has also been the case, such as sites at Upper Chapel, Launceston [CD 17/23], Foldgate Lane, Ludlow [CD17/33], Drakes Broughton, Worcestershire [CD17/35] and Whitworth Way, Wilstead in Bedfordshire [CD17/45]. Additionally, in this Borough at Fountain Lane, Davenham [CD17/41] and Hill Top Farm, Northwich [CD17/40]. However, if there is a shortfall, it is another route to the tilted balance and also a major material consideration weighing in favour of the proposal.

211. In the light of the evidence of BP, AM, JS and JonS, the Appellant once again invites an Inspector to recommend approval of the proposal (as has been the

---

<sup>40</sup> Section 38(5) of the Planning and Compulsory Purchase Act 2004: *"(5) If to any extent a policy contained in a development plan for an area conflicts with another policy in the development plan the conflict must be resolved in favour of the policy which is contained in the last document to become part of the development plan"*.

case twice before) and invites the SoS to grant planning permission in a manner which is consistent with his own decision at Lydney.

## THE CASE FOR CHESHIRE WEST AND CHESTER COUNCIL<sup>2</sup>

### Introduction

212. The Appellant has persistently referred to large numbers of other appeal decisions both of Inspectors and the SoS, pointed to the language used, particularly as regards the weighting of various factors used in that case, and invited others to agree that such language would be appropriate in this case. That is a simplistic and inappropriate approach.
213. It is the most basic principle of decision making that all cases must be addressed on their own merits. A decision maker's choice of language and of adjective to describe weighting is a classic example of a case-specific and a fact-specific assessment. For example, the Inspector's and the Secretary of State's findings about the weighting to be given to the "*local approach*" and to the completion of the scheme by small or medium builders in the Lydney appeal [CD 17/2] was no more than a product of the facts at play in that case. To lift the language from the decision letter, deprive it of context and then seek to insert it into the balancing exercise at play in this case is to make a basic and fundamental error.

### Five-year housing land supply

214. The Council's position remains that there is a five-year supply of deliverable housing land. It is common ground that the five-year supply position is to be tested borough-wide and that the requirement figure for the Winsford area is not to be used to calculate the five-year supply.
215. It is notable that the Appellant's very best case only reduces the Council's supply to 4.69 years<sup>41</sup>. The Appellant only has to be slightly wrong in order for the Council to have a five-year supply. Indeed, if BP's approach to the requirement calculation is wrong, then even if he is right on every single point that he takes in relation to the supply side of the calculation, the Council would still have a 5-year supply<sup>42</sup>.

#### *The Housing Requirement*

216. Part 1 of the LP provides that at least 22,000 net new dwellings should be provided over the twenty-year plan period. That is an annual rate of at least 1,100 dwellings. The dispute in calculating the requirement is limited to the question of whether past annual delivery over 1,100 dwellings per annum should be discounted from the minimum requirement calculated for future years. Provision could not sensibly be tested by reference to an unspecified, but higher, figure.

---

<sup>41</sup> See the summary table on page 72 of BP's proof.

<sup>42</sup> Council 5-year requirement = 4814, Appellant supply = 5423, giving a supply of 5.63 years.

217. Even if some student accommodation completions were to be deducted from the Council's figure for completions, in the eight years of the plan period so far (10,992 units), provision well above the minimum requirement has been made. The minimum requirement to be met over the rest of the plan period can only be the 22,000 figure minus completions so far. On the Council's completions, that means that at least  $22,000 - 10,992 = 11,008$  units have to be provided over the remaining 12 years of the plan (at least 917.3 net new units per annum).
218. The five-year requirement should be a product of that residual figure. To do otherwise risks imposing a requirement figure upon the Council, which, if in relation to which there is not a five-year supply, imposes the tilted planning balance and a finding that important policies are not up to date, even though housing provision is well on track to meet needs over the plan period and is meeting needs in the plan period to date. Such an approach makes no sense.
219. It is no answer to say that the Framework, in all of its versions, implores us to boost significantly the supply of housing. The way in which the Framework sees that objective, as set out in para. 59, is by identifying and meeting needs as para 73 requires. The Council is doing so. Furthermore, as was pointed out in cross-examination of BS, CW&C is an authority where the plan's annual requirement figure of 1,100 net new dwellings was not a reduction from the OAN figure but is the full OAN.
220. Further, as BF sets out, to keep providing at a rate of 1,100 dwellings per annum, regardless of the plan's performance to date, risks having to provide houses in places which conflict with the plan's strategy and which therefore risks being unsustainable.
221. The Appellant refers to two decision letters which it says support its case. They are both markedly different from the position in this Borough:
- a) In the Doncaster [CD 17/16] case, the Council was using a requirement figure from its SHMA, with a base date of 2015/2016 (para.8), which had been exceeded in the first year of the relevant period (para.37). That was hardly a firm foundation against which to test housing provision and it is not surprising that the Inspector took the approach she did in that case in those circumstances;
  - and
  - b) In the Wendover appeal [CD 17/15], the Council seems to have been making its case by reference to alleged oversupply which took into account delivery in years prior to the requirement's base date (para.118), which is odd to say the least, as BP accepted in cross-examination. Further, in asserting that delivery at higher rates would not be problematic (para.119), the Inspector does not address (and may not have had to address) the point made by BF about the risks of unsustainable development at much higher rates than the plan period minimum rate.
222. Instead, the Council can draw firm support from the report of the Cotswold LP Inspector [CD 18/10]. He concluded in that case at para 187 that:
- "An approach that fails to take account of completions during the plan period would result in additional land being made available for development that is not required to meet identified needs. In a high demand area such as*

*Cotswold district such land would no doubt be developed. This would lead to the unnecessary loss of greenfield sites and be likely to lead to increased commuting out of the district."*

223. This appeal is a manifestation of the risk that greenfield land could be unnecessarily lost if the housing land requirement is not calculated on a residual basis. There is every sense in using the residual basis to calculate the requirement here and no sense in using a flat annual rate, whatever past performance. With the agreed 5% buffer, the five-year requirement in this case is 4,814 units, net.

#### *Supply issues*

224. The Appellant complains about the way in which the Council's five-year supply assessment is carried out, particularly as regards consultation. However, there is no merit in its criticism, for the following reasons:

- a) The Appellant points to NPPG<sup>43</sup> paragraph 3-030-20180913 "*How can an authority demonstrate a 5-year supply of deliverable housing sites?*". That paragraph refers to consultation in the context of plan preparation and, even then, only refers to consultation as regards the assumptions being used. As is clear from the evidence, the Council has consulted upon the assumptions which are used in the absence of site-specific evidence, both in the SHMA and Housing and HELAA processes;
- b) The Appellant also refers to NPPG paragraph 3-047-20180913 "*How can authorities review their five-year supply annually?*". Again, the reference to consultation is in the context of formulating assumptions;
- and
- c) Paragraph 3-051-20180913 of the NPPG "*What engagement should the authority undertake to prepare an annual position statement?*" is wholly about the requirements relating to annual position statements. It is irrelevant.

225. The Council's forecasting has proven to be remarkably cautious. The graph/bar chart on page 34 in Appendix 3 of the 2018 Housing Land Monitor [CD 13/5] shows that for the numerous forecasting exercises made for a number of future years, only one forecast for one specific year proved too high. Every other forecast made produced a figure which is lower than the figure for completions, which was subsequently achieved for that year. This Council does not make over-optimistic and unrealistic forecasts for delivery.

226. The revised Framework does change the definition of "*deliverable*", as regards the evidential requirements for demonstrating whether sites are deliverable or not. The Council does not accept that sites without planning permission, a plan allocation or sites which are not included in the brownfield register can never be included in a five-year supply. The basic definition of "*deliverable*" is still set out in the first part of the definition, and refers to sites which are available now, offer a suitable location for housing now, and which are achievable, with a realistic prospect that housing will be delivered on the site within 5 years.

---

<sup>43</sup> All of the NPPG paragraphs referred to in this paragraph can be found in CD12/2.

227. The rest of the definition sets out where the evidential burden lies for various sites. To read the rest of the definition as two "*closed lists*" as the Inspector did in para 30 of the Woolmer Green decision [CD 17/11], reads too much into the paragraph. If the SoS really meant to exclude greenfield sites (or brownfield sites which are not on the brownfield register) with no permission and no allocation from the possible five-year supply (even if, for example, they had a resolution to grant full planning permission), he could be expected to have said so in plain terms.
228. It is notable that the recent consultation on amendments to the Framework states that the SoS is contemplating clarifying the guidance on what weight can be given to sites with different levels of planning certainty<sup>44</sup>. That part of the consultation does not suggest that the SoS intends there to be a "*bright line*" between sites which can be included in the five-year supply and those which can never be included. The purpose of the two lists is to explain when sites need to be shown to be undeliverable and when they need to be shown to be deliverable. They are not exhaustive lists of the only types of site which can be included in the supply calculations.
229. Further, the Appellant is far too demanding as regards the "*clear evidence*" of delivery that the Framework and NPPG expects to see before a site can be included in the five-year supply. The NPPG at 3-036-20180913 [CD 12/2] sets out three bullets listing the types of material which could contribute towards demonstrating clear evidence "*may include*" and then gives two "*examples*". It is self-evident that this paragraph does not provide an exhaustive list of the type of "*clear evidence*" which may be expected. Yet the Appellant's repeated position, during the round table discussion on supply, was to use these examples as though they were the only types of evidence which could be used. BP even went so far at one point as to claim that a site should be excluded from the supply simply because it was not the subject of a SoCG between the developer and the Council.
230. The Appellant also takes a point about post-base date information. The Council is not guilty of trying to shift a base date. No category shifting of sites is going on. No site which was not in the supply as of 1<sup>st</sup> April 2018 is now being included through the partial review of supply or BF's evidence. Where new information is being referred to, it is for the purpose of testing the judgments formed about a site and its categorisation at the base date and for showing that those judgments are correct. Inspector Dakeyne understood and properly concluded upon this issue in para 220 of his supplementary report on this appeal [CD 2/7], where he stated:

*"So far as post-base date information is concerned, it is appropriate to take into account information received after 1 April 2015 if it affects events prior to, or predictions as to delivery beyond, that date. Moreover, I agree that information that supports a pre-base date judgement should not normally be ignored [SR131]. However, generally sites should not be added or taken out post-base date. They will be picked up in the next HLM equivalent."*

231. That is the precise and sole purpose for which post-base date information is being used by the Council now, as it was in 2015. The irony, of course, is that

---

<sup>44</sup> "Technical Consultation on Updates to National Guidance" Page 15, para 38 [CD 12/14].

the Appellant condemns the Council for not immediately responding to the Framework revision in July and the NPPG revisions in September with a whole new set of evidence to prove deliverability of sites at the base date. However, had it done so, the Appellant would have said that such information was an illegitimate attempt to use post-base date information.

232. Finally, the Appellant points to the risk of developers with sites in the five-year supply "*talking up*" forecast delivery in order to promote their sites at the expense of competitors' sites. There are two simple answers to that point:

a) The point can be met with the equal and opposite point that the Appellant has a very direct interest in "*talking down*" sites in the supply in order to promote its own position, so the point goes nowhere;

and

b) Rather more constructively, such a risk of sites being talked up has not manifested itself, given how cautiously robust the Council's forecasting has proven to be, as set out above.

### *Specific Categories of Site*

#### *Communal Establishments*

233. There is no issue in this regard. Only C3 uses are counted towards the five-year supply. C2 uses appear in the monitoring information as DHCLG requires the information, but those units do not figure in completions against the five-year requirement or forward-looking supply calculations.

#### *Demolitions and other losses*

234. Every element of the Council's housing land supply assessment is done on a net basis. Paragraph 5.21 of the LP points out that an assessment needs to be done on a net basis. It is. Completions are assessed net. Every known site in the housing land supply is looked at net. Even the modest small sites windfall allowance for years 4 and 5 is done on a net basis. It is even the case that the future forecasts take into account future losses from residential use, which are not connected to a scheme creating new dwellings: see, for example, site HOO/0061, 5 Derby Place, Chester, on the sixth page of the tables in Appendix 4 of the HLM [CD 13/5], where net housing losses without any new housing creation are allowed for. The Council again points to Inspector Dakeyne's conclusions in paras 225 and 226 of his SR [CD 2/7], where he accepted the Council's submissions. There is no reason to take a different view at this Inquiry.

235. The Nether Peover Inspector at para 19 of his decision letter<sup>45</sup> expressly said he was discounting from a net figure. The purpose of a net figure is to account for demolitions and losses. One discounts from a gross figure of losses and demolitions to get to the net figure in the first place. To discount from a net figure to allow for demolitions is to perform the discounting process twice. Whilst the Inspector's decision at Hill Top Farm [CD 17/40] is not explicit, he does not appear to have discounted any figure from the Council's supply to allow for

---

<sup>45</sup> BP's App EP1D.

demolition or losses, because he noted that monitoring and forecasting was all done on a net basis.

236. There is no reason to discount from the Council's supply figure on this issue.

*Student Accommodation*

237. This is an issue which has been gone over on a number of previous occasions. The Council recognises that Inspectors have found for Appellants on this point, notably at Tattenhall [CD 17/3] and previously in this case. However, events have moved on since this issue was last considered by Inspectors.

238. CW&CLP P1 took into account the housing need generated by students in self-contained student accommodation. That is made clear by note ED112 which was submitted to the LP [CD 13/10]<sup>46</sup>. A need which is accounted for in requirement ought to be taken into account when provided, as a contribution to supply. BP agreed with that principle. The two sides of the requirement and supply calculation need to be conducted on the same basis.

239. The nub of the Appellant's point is that self-contained student accommodation is not freeing up general market housing in Chester because the University is expanding to a degree which was unforeseen when CW&CLP P1's housing requirement was devised.

240. Whatever the position in front of previous Inspectors, the evidence at this inquiry does not support that contention. The Higher Education Statistics Authority (HESA) figures, to which the Appellant has had access via the weblink referred to in BF's evidence (but has not challenged) show that, overall, student numbers have not increased and the rise in full time students has been much more modest than predicted in the 2013 and 2014 reports appended to BP's evidence. The Appellant has totally failed to consider whether the evidence relied upon at previous inquiries is still up to date. It manifestly is not.

241. Further, on the evidence, it is impossible to conclude that any increase in full-time student numbers across the whole university manifests itself in increased need in Chester. The University of Chester has multiple sites – in Chester, Rease Heath (near Nantwich and out of the Borough), Warrington and Shrewsbury. The University cannot or will not release figures broken down by site. BP's assertion that the Shrewsbury campus is small turned out to be an erroneous reliance upon the entry into studies by one cohort of students in one year. Without more information about the number of years of study pursued by students and whether there are undergraduate courses, post-graduate courses or both available, makes his reliance on that simple figure meaningless.

242. The HESA data and the points about the existence of the Rease Heath, Warrington and Shrewsbury sites are new ones, to which the Council has not drawn attention before. There is thus a justifiable reason for the Council inviting a different conclusion on this issue now. The facts have changed, with important consequences.

243. Further, the NPPG makes it clear that all types of student accommodation can count: see NPPG ref 3-042-20180913 [CD 12/2]. The Council only includes self-

---

<sup>46</sup> See, especially, the table summarising the position.

contained accommodation and so takes a cautious approach. Further still, if it is not accepted that self-contained student accommodation can be counted towards meeting requirements, then BF has provided unchallenged evidence of the average student household size. By reference to table 6.2 on page 19 of BF's evidence, 442 units should be included in supply on the basis that all of those units go to meet identified needs. But, at the very least, 137 units should be included, as she sets out.

244. No deduction should be made to the supply or past completion figures on this issue.

*Sites with Outline Planning Permission or subject of a development plan allocation*

245. The November 2018 partial HLM review [ID 17] led to a narrowing of issues in relation to this category. The remaining sites that are in issue are listed in para. 3.09 of the HSoCG. Six sites that account for 300 dwellings are disputed.

246. These sites were discussed at the round table session. In very large measure, the Appellant's position is explained by what it regards as being necessary if the Council is to provide "*clear evidence*" of deliverability in five years. The Council's position is summarised in the entries in the tables at Appendix 1 of the November partial HLM review for all of these sites, save for Wrexham Road, which is dealt with in Table 2 in Appendix 2. In each case, for the reasons set out in the tables and expanded upon by BF, in the round table session, the Council's contribution to supply from these sites is supported by clear evidence on a site by site basis.

*Non-Allocated Sites without planning permission*

247. Again, the partial HLM review of November 2018 has narrowed the issues. The remaining sites that are at issue are listed in para. 3.11 of the HSoCG. Six sites that account for 222 dwellings are disputed.
248. The Council's position on each site is set out in table 3 of Appendix 3 of the November 2018 partial HLM review. In each case, there are sound reasons amounting to "*clear evidence*" for their inclusion. The Appellant's point largely rests on its contention that such sites can never be included in a five-year supply calculation, a point which is rejected for the reasons set out earlier.

*Build-Out Rates and Lead-In Times*

249. There are 5 disputed sites in this category, which are listed in para. 3.12 of the HSoCG. 505 dwellings are disputed. All of these sites were discussed at the round table session and the Council's position on the first, third and fourth of these sites are summarised on page 22 of BF's evidence at table 7.3.
250. This issue is not one where the Framework definition of deliverability puts the burden on any particular person. Site specific evidence of build out rates and lead in times are used when available. For Roften Works, standard lead-in times have been used by the Council. Further, BP's calculation for delivery at Ledsham Garden Village is unreliable because it applies, in part, to a build out rate for a part of a year and he turns that into an annual figure for the purpose of calculating average delivery, thus underplaying the delivery from the site. The Council's position on these sites is robust.

### *Small Sites Allowance*

251. The Council only uses an allowance for small sites, namely those below 5 units in size, and then only in years 4 and 5. Small site delivery in years 1, 2 and 3 is forecast on a site by site basis, making a further allowance for a lapse rate unnecessary. Small sites have an estimated contribution of 115 units in each year, making a total contribution to supply of 230 units in years 4 and 5.
252. BF's evidence explains that such small sites have consistently been shown to be a reliable source of completions. The rate of completions has generally increased as time progresses: see para 6.47 of her evidence. The 115-unit rate of delivery in years 4 and 5 accords well with the rate of completions from this source in recent years: see table 5.1 in the 2017-2018 HLM [CD 13/5]. Comparing forecast delivery to past-completions means that it is, again, unnecessary to make a further allowance for a lapse rate as the completions are the reality of what number of units has been delivered from this source over time. Again, there is no reason to deduct from supply on this issue.

### *Housing Land Supply – Conclusion*

253. The requirement figure for the five-year period is 4,814 units<sup>47</sup>. The Council's deliverable supply, taking the Framework revisions into account, stands at 7,277 units<sup>48</sup>. The supply is 7.56 years. As a result, the housing land supply position in CW&C does not engage the tilted planning balance.

## **Development Plan policies, the weight to be afforded to them and whether the appeal would accord with the Development Plan**

### *Local Plan Policies*

254. It is common ground that the proposals breach both Policy GS5 and Policy STRAT 9. Saved VRLP Policy GS5, has to be addressed in the light of Policy STRAT 9 of the CW&CLP P1. Policy GS5 performed two functions: it provided settlement boundary limits for, among other places, Winsford, and then applied a development control test to proposals for development beyond those settlement limits. The policy, along with its boundaries, has been saved.
255. CW&CLP P1 Policy STRAT 9 provides a new development management test, and is applied, at present, to the saved Policy GS5 boundaries. Policy GS5 was saved because, without it, Policy STRAT 9 would have no territorial application in the former Vale Royal part of the Borough<sup>49</sup>. The development management test in Policy STRAT 9 is more up to date than that in Policy GS5, has been found sound, and is to be preferred. The position is that Policy STRAT 9's test is to be preferred to that in Policy GS5 and Policy STRAT 9's test applies beyond the Policy GS5 boundaries, at least until CW&CLP P2 is adopted.
256. The Appellant's contention that Policy STRAT 9 only deserves modest weight because it is out of date by reason of being inconsistent with the Framework is not correct. Policy STRAT 9 was found sound in accordance with the 2012

---

<sup>47</sup> November 2018 partial HLM Review table 5.1, page 10.

<sup>48</sup> Ibid table 5.2 pages 10-11.

<sup>49</sup> And the same difficulty would have arisen in the former areas of Chester City Council and Ellesmere Port and Neston Borough Council.

version of the Framework. Nothing has changed in the 2018 Framework to mean that a formerly sound policy became out of date in July 2018. In para 161 of the Examination report, the Local Plan Examiner did take into account a contention that Policy STRAT 9 was inconsistent with the Framework because it referred to protecting the countryside [CD13/3a]. The Inspector still found the policy sound. Furthermore, Inspector Dakeyne found Policy STRAT 9 to be up to date and did not reduce the weight he would otherwise have given it (see SR para252 [CD 2/7]). The decision-making test in Policy STRAT 9 deserves full weight.

257. The Appellant makes the point that the boundaries to which Policy GS5 apply are out of date because they come from a time-expired Local Plan and planning permission has been granted for housing on land beyond those settlement limits. This is an argument which has been put to and comprehensively rejected by the Court of Appeal<sup>50</sup>. In that case, Gladman argued that as a five-year supply had been achieved by granting planning permission beyond settlement limits, those limits were out of date because development in accordance with them could not meet up to date needs, and that, in other words, the plan was "*broken*" in that regard. The Court held that the mere age of a policy does not deprive it of the statutory priority given to it by section 38(6) of the Planning and Compulsory Purchase Act 2004<sup>51</sup>.
258. Further, because the Framework attaches importance to plan-led development, significant weight should be given to the general public interest in having plan-led planning decisions, even if particular policies in a DP might be old. There may still be a considerable benefit in directing decision-making according to a coherent set of plan policies, even though they are old, rather than having no coherent plan-led approach at all [para 40(iv)]. The Court expressly rejected the argument that the plan, or its settlement limits were "*broken*", holding at paras 43 and 44 that such grants of permission were simply an illustration of section 38(6) at work. It characterised the argument as "*unsustainable*". The argument put to JILLS on this issue at this inquiry is just a repetition of Gladman's rejected case. It must fail for the same reasons as it failed in Daventry.
259. Inspector Dakeyne picked up on the point about the reasons for Policy GS5 being saved and its relationship to Policy STRAT 9. He observed that the decision-making test in GS5 had been effectively superseded by that in Policy STRAT 9. That meant that Policy GS5 should not be afforded full weight in terms of its general application [CD 2/7]<sup>52</sup>. However, he also recognised that the position of GS5 as regards Winsford was different. He noted the allocation of sites for some 3,360 units in the NP and that Pdl sites have been and will be found in accordance with its policies H1 and H2. He also noted that, although CW&CLP P2 will have to define new settlement boundaries, the NP allocations will form the main basis for the settlement boundary. As a result, sites which are not allocated by the NP and which lie beyond the GS5 boundaries do not comply with STRAT 9<sup>53</sup>.

---

<sup>50</sup> Daventry BC v SoSCLG and Gladman Developments Limited (2016) EWCA Civ 1646 (ID 38).

<sup>51</sup> Judgment para 40(i).

<sup>52</sup> SR pg 47 para 251.

<sup>53</sup> Ibid pg 48 para 255.

260. That conclusion led to Inspector Dakeyne affording "*considerable weight*" to Policy GS5 "*in the context of Winsford*"<sup>54</sup>. The Council supports those conclusions and the reasoning which led to them. Indeed, the Council's position has, if anything strengthened since the 2015 inquiry because the Council is not proposing to amend the settlement boundary in P2 of the LP so as to include the appeal site. It is plain that the NP allocations have, as Inspector Dakeyne foresaw, been the dominant factor in the approach to the proposed settlement boundaries at Winsford.
261. Furthermore, Inspector Dakeyne is not alone as an Inspector in concluding that more weight can be afforded to Policies GS5 and STRAT 9 than the Appellant considers. The same conclusions were reached by the Inspectors in appeals at:
- Shepherds Fold Drive, Winsford [CD 11/1]<sup>55</sup>;
- Hill Top Farm [CD 17/40]<sup>56</sup>;
- Fountain Lane, Davenham [CD 17/41]<sup>57</sup>;
- and
- West Winds, Winsford [CD 11/2]<sup>58</sup>.
262. Policy STRAT 1 embodies the requirement to provide sustainable development. It seeks to minimise the loss of greenfield land. Inspector Dakeyne was right to find that the appeal scheme involves a "*degree of conflict*" with Policy STRAT 1 because of the loss of a greenfield site<sup>59</sup> :- a conclusion which led him clearly to find that there was a breach of the policy overall [CD 11/1]<sup>60</sup>.
263. The Appellant relies upon the housing requirement figures for the Borough, as set out in Policy STRAT 2 and for the Winsford area, as set out in Policy STRAT 6, being minima as a reason to support the appeal scheme. But the plan has to be read as a whole. The plan does not advocate a free-for-all on housing numbers. Although the simple fact of provision over the minimum figures does not constitute harm, the plan's requirement figures are applied in relation to settlement boundaries. The Appellant's argument logically leads to the conclusion that a breach of Policies STRAT 9 and GS5 can be overlooked or downplayed. It cannot. Providing development within settlement limits, unless it falls within one of the types of acceptable development listed in Policy STRAT 9, is as much a component of the plan's strategy as the fact that the requirements figures are minima. The two issues go together.
264. Policy STRAT 6 sets out the indicative minimum requirement for the Winsford area. In re-examination (Re) of JonS, the point was made that the NP over-relied upon the Station Quarter. A mathematical exercise was undertaken, comparing the WNP allocations with those in CW&CLP P1. The exercise was a false one, because the policy provides approximate figures for the number of dwellings to

---

<sup>54</sup> Ibid pg 49 para 260.

<sup>55</sup> Paras 14 to 17.

<sup>56</sup> Para 8.

<sup>57</sup> Paras 18 and 25.

<sup>58</sup> Paras 15 to 23.

<sup>59</sup> Ibid page 48 para 253.

<sup>60</sup> Ibid page 52 para 282.

be provided at the Station Quarter of "*in the region of 1000 new dwellings*" and the reference to the 775 units to be provided in the plan period must be seen in that context. The LP cannot be interpreted in a way which properly admits to such mathematical precision. There is no reason to think that the allocations in Policy H1 of the WNP are inappropriately high.

#### *Winsford Neighbourhood Plan*

265. The WNP has been made. It is part of the DP. The appeal site was put forward as an allocation for the WNP by the Appellant in the preparation and examination processes for that plan but was rejected. It was rejected because the Town Council did not think that the allocation would accord with the plan's vision<sup>61</sup> – an argument which the Examiner regarded as a sound reason [CD 15/2]<sup>62</sup>.
266. The WNP says that it seeks to actively plan where development should go<sup>63</sup>. For housing development, the plan contains a clear strategy of locating development close to the town centre, creating a new quarter around the railway station and creating positive new "gateways" at key arrival points into the town [CD 15/1]<sup>64</sup>. Developing the appeal site would not accord with any element of that vision.
267. The Appellant points to the key themes set out in the plan [CD 15/1]<sup>65</sup>. As to those themes which are relevant to the appeal scheme<sup>66</sup>:
- a) The Appellant says that the first theme would be served by the development providing new high-quality buildings. That point does not serve to justify a contention that the appeal site is a location for development which accords with the plan. Any development anywhere would be expected to be high quality;
  - b) The Appellant contends that the third theme would be served by residents of the scheme contributing to spend in the town centre. The same could be said of any site within reasonable proximity of the town centre and, again, this point cannot support the appeal site as a location for development within (or adjacent to) Winsford;
  - c) The reference in theme 4 to strengthening the employment base is obviously referring to employment development, not the employment provided by the construction of a housing estate. In any event, and once again, it does not support the appeal site in locational terms;
  - d) The reference to sustainable growth in theme 5 only makes sense if it is read alongside the plan's vision for locating development, as set out above, which the appeal site does nothing to support;
  - e) Theme 6 is about improving social, community and leisure facilities. The Appellant refers to the contributions to be made by the planning obligation. As those contributions comply with the requirements of Regulation 122 of the

---

<sup>61</sup> Para 3.52.

<sup>62</sup> Para 3.54.

<sup>63</sup> Page 4 para 1.1.3 and page 20 para 4.1.1.

<sup>64</sup> Page 44, shaded box in left hand column.

<sup>65</sup> Page 17: themes 1 to 7.

<sup>66</sup> Theme 2 is not really relevant to the appeal scheme.

CIL Regulations, they are necessary to make the development acceptable in planning terms by satisfactorily mitigating impacts which would otherwise occur. In any event, this matter does not point to the appeal site being acceptable as a location for development;

and

- f) Theme 7 seeks the improvement of movement around the town and the region. The only improvements which the appeal scheme would bring would be to a short length of footway and the provision of cycling access into the site. These are very modest matters and do not support the appeal site as a location.

Overall, the appeal site draws no support as a location for development within Winsford from the themes of the plan.

268. Policy H1 (pg. 44) allocates sites to meet the vast majority of the need with which the plan deals [CD 15/1]. The appeal site is not allocated for development by that policy. The Appellant argues that the site's non-allocation does not weigh against the appeal proposal, as the housing requirement to which the plan relates is not a maximum or ceiling figure. However, as Inspector Dakeyne concluded [CD 2/7]<sup>67</sup>, *"such an interpretation would mean that policy H1 served no purpose in guiding and regulating development."* Further, the policy can derive no support from Policy H2 (pg. 46), which adopts a permissive approach to development on PDL land [CD 15/1].

269. Policy H1 of the WNP also requires proposals to accord with other policies of the NP and the LP. Development of the appeal site would not accord with Policies GS5 and STRAT 9, as is agreed. The appeal scheme conflicts with Policy H1 of the WNP, as Inspector Dakeyne accepted [CD 2/7]<sup>68</sup>. The policies of the NP have not changed since Inspector Dakeyne reported and there is no justification for reaching a different conclusion on that matter now.

270. There is no policy of the WNP which provides support for the development of the appeal site in locational or any other terms. JonS could point to none in Xx. The appeal scheme would accord with CW&CLP P1 Policy SOC1 on affordable housing, as is set out in a little more detail below.

*Breach of the Development Plan taken as a whole?*

271. The Council's position is that VRBLP Saved Policy GS5, CW&CLP P1 Policies STRAT 1 and STRAT 9 and Policies H1 and H2 of the WNP are the dominant policies of the DP for the purposes of determining this appeal. Inspector Dakeyne also accepted that Policies GS5, STRAT 9 and H1 were the dominant policies for development outside of the settlement limits [CD 2/7]<sup>69</sup>. The Council contends that the breach of those policies of the DP which are breached in this case amounts to a breach of the DP overall. Again, Inspector Dakeyne agreed<sup>70</sup>. There is no reason to reach a different conclusion now. The appeal scheme is in conflict with the DP when taken as a whole.

---

<sup>67</sup> Supp report pg 48 para 256.

<sup>68</sup> Supp report pg 49 para 260 and pg 52 para 282.

<sup>69</sup> Supp report pg 49 para 260.

<sup>70</sup> Ibid pg 49 paras 260 and 282.

272. None of the relevant DP policies, still less those which could be called the most important for determining the appeal, are out of date for reasons relating to a lack of consistency with the Framework. The second possible route into the tilted planning balance does not apply in this case. Given the housing land supply position, there is thus no route into the tilted planning balance available to the Appellant.
273. It follows that a decision in accordance with the DP would be a decision to dismiss the appeal. The issue is therefore whether there are material considerations which indicate that a decision otherwise than in accordance with the DP should be taken in this case.

### **Scheme Benefits**

#### *Market Housing*

274. The appeal scheme would contribute more market housing. That is a social benefit deserving of weight, but the weight is tempered by the presence of a five-year supply across the Borough. As set out earlier, the requirement of the Framework to boost significantly the supply of housing is one which is to be met by identifying and meeting the need for housing. As far as market housing is concerned, that is being done.

#### *Affordable Housing*

275. The appeal scheme would contribute affordable housing at a rate of 40%, as opposed to a policy requirement of a target of up to 30% on qualifying sites. JILLS agrees that this is a social benefit which can be afforded substantial weight<sup>71</sup>. The issue is therefore limited to whether the word "very" should be added before the word "substantial", as JonS contends.
276. It should not. The position on affordable housing is not as bad as JonS would have us believe. Indeed, his written evidence calls the Council's delivery record as regards affordable housing "*abysmal*", which is not fair, as he accepted in Xx.
277. The Council points to the following matters on affordable housing. If it were to be (wrongly) assumed that every site was a qualifying site for affordable housing provision and every site provided at the full 30% rate (which would never happen), then the delivery of 22,000 dwellings over the plan period would lead to the delivery of 6,600 affordable units. In fact, the Council has delivered 3,139 affordable units over the eight years of the 20-year plan period to date<sup>72</sup>. That is a useful benchmark for assessing its performance, especially given the unrealistic assumptions in the calculation.
278. JS points out that the Council has not delivered 714 units in any one year since 2013/2014, which is the base date for the affordable housing need figure for five years, assuming the backlog is eradicated in five years. However, the Council has never been required to provide that amount, as can be seen from an analysis of the LP Inspector's report [CD 13/3a]:

---

<sup>71</sup> Her oral evidence in chief.

<sup>72</sup> JILLS proof, table on pg 21.

- a) The content of para 23 of the report shows that the Inspector was alive to the need for the LP to meet the full OAN for market and affordable housing;
- b) At para 31, he noted that affordable housing need contributed to the reasons for uplifting the objectively assessed need above purely demographically generated need;
- c) At para 36 and footnote 2, he noted that the SHMA gave the annual figure of 714 units per annum for affordable housing need if the backlog were to be cleared over 5 years;
- d) He concluded, at para 39, that an OAN above 1,100 dwellings per annum would require higher job growth, population growth and in-migration than the demography would suggest;
- e) His judgment at para 46 was that an OAN of 1,100 dwellings per annum was optimistic and aspirational and would have a "significant positive effect upon the provision of affordable housing";
- f) The requirement was 22,000 dwellings over the plan period, or 1,100 per annum (para 144);

and

- g) The OAN constituted the full need for housing in the plan period (para 145).

279. Therefore, the Local Plan Inspector never concluded and never said that the LP had to deliver 714 affordable homes in each of the first five years from the SHMA base date. If, using a requirement for 1,100 dwellings per annum, 714 affordable homes per year would have to be provided, then 65% of all dwellings in the first five years of the plan would have to be affordable. That is plainly unrealistic. Alternatively, if 30% of dwellings were to be affordable, then providing 714 affordable homes each year would require 1,900 new homes to be delivered each year. That is plainly not realistic either.

280. In fact, JonS's own evidence shows that the Council's Borough-wide affordable housing delivery has been admirable. That is shown by the revised version of figure 4.6 of BS's evidence. Policy SOC1 of the CW&CLP applies the up to 30% target as a proportion of new homes permitted on qualifying sites. Using that approach, the new column in the revised figure 4.6 shows that the Council has been delivering at a rate of 26% across all sites, not just those on which affordable homes could be required by Policy SOC1. If student completions need to be removed, as BP insists, then the performance would rise to 27.9%.

281. The picture becomes even more favourable to the Council once the Winsford area is considered. Figure 4.9 of JS's proof tests delivery in Winsford against the need for 98 units. That 98 figure is the Winsford component of the Borough-wide 714 need figure. Even if the Council's performance were tested against that 98 figure, the Council has delivered just 25 units short of the 495 units that would have been required over the first five years of the Local Plan period. Again, that is not evidence of a Council which is seriously failing to deliver affordable homes.

282. Further, table D6 on pg.102 of the 2013 SHMA shows that the Winsford urban area has the lowest mean average house prices in the Borough [CD 13/8]. The

Council has also secured and accepted funding for affordable housing delivery on three Council-owned sites in Winsford at the 30% rate.

283. Ascribing substantial weight to the affordable housing provision on the appeal site is reasonable and generous to the Appellant's case.

*Self-build and custom build*

284. Since Inspector Dakeyne reported, the facts have changed on this issue. We now have available the statutory register which records the level of interest for self and custom-build in the Borough. The register is appended to JonS's supplementary proof. The register is important evidence of the level and type of interest, to which the NPPG refers.

285. As part of the register compilation process, the Council asks people to state any preferences they have for location and for site size. The register provides scant evidence of demand for self and custom build in Winsford and for such building on larger sites such as the appeal site. Indeed, when those two factors are combined, there is not a single person on the register who wants to self or custom build in Winsford on a larger site. The evidence of the register points unequivocally to the conclusion that the 18 plots on the appeal site would not be taken up for self or custom build housing.

286. The Appellant points to other sources of evidence, but:

- a) The SHMA survey simply records aspirations for self-build. It does nothing to check the realism of those aspirations or the degree of commitment to self or custom build;
- b) AM's report refers to alleged survey evidence "*consistently*" showing<sup>73</sup> that 1 in 50 of the population want to purchase a self or custom-built home, but the footnote designed to support this point refers only to one survey, with no details of its sample size, methodology, questions or degree of checking whether those aspirations are realistic;
- c) The information garnered from the Custom Build register and Plot Search subscription database<sup>74</sup> is useless. Without knowing how one gets to become a subscriber, what, if any steps are taken to keep registrations/subscriptions up to date (by, for example, filleting out people who have lost interest or achieved their aim) and what testing, if any, is done to test the realism of their ambitions, one cannot sensibly ascribe any weight to the information set out in the email;  
  
and
- d) The letters and emails at JonS's Appendix 12, supplemented by him with a further clip of letters/responses when he gave evidence in chief, contain scant evidence of realistic support for self-build in Winsford and certainly not to the level of 18 plots on the appeal site.

287. JonS emphasised his client's commitment to promote self and custom-build housing. If that is so, it is all the more noteworthy that there is such a paucity of

---

<sup>73</sup> JonS at App 13

<sup>74</sup> Email from Tom Connor on 8 November 2018, Appendix 3 to AM's report

evidence of demand for self and custom build on the appeal site, given that the Appellant has had over 3 years to gather such evidence since the self and custom-build offer was first put before the SoS in August 2015.

288. The Appellant points to the absence of registered CIL exemptions as evidence of the lack of delivery of self-build. As JonS accepted, there is nothing to indicate on the face of a planning application whether it is or is not a self or custom-build proposal. It is no surprise that there is an absence of CIL exemptions in Winsford – there is no CIL in Winsford, as parts only of the Borough are levied for CIL for viability reasons. Self-evidently, self and custom-build can never show up in CIL exemption certificates in Winsford.

289. On the evidence, there is little to no prospect of the self and custom-build offer being taken up on the appeal site and no significant weight can be afforded to it in the decision-making process.

*The use of small and medium size builders for the construction of the market housing*

290. This is another point that the Appellant raised in 2015 for the first time. The point is inspired by the outcome of the Lydney appeal [CD 17/2]. However, the facts there were very different. The evidence at Lydney was that the action of a large housebuilder was keeping local small and medium size builders out of the market and the Inspector, saw the ability to develop that site by smaller builders as the key to unlocking housing delivery in Lydney<sup>75</sup>.

291. The only evidence, to support that contention here, are the very late letters from three of the building companies who are apparently interested in developing the site. It was obviously not possible to ask about these letters at the inquiry, but the letters contain short, bald assertions about competition from large builders. Only one of them actually says that the competition causes difficulties, but even then, no details of the alleged difficulties are given. None of them, perhaps for understandable reasons, claims that such competition is threatening their business. Indeed, their earlier letters all boast of their success and track record.

292. There is still, despite those letters, no evidence that the position in Winsford is remotely similar to that in Lydney and no real evidence that local SME builders cannot already access the market in the Borough in general or in Winsford in particular (as opposed to facing competition). The second letter from Cruden, submitted during the inquiry, was said to provide evidence on this issue, but does not.

293. Again, no significant weight can be ascribed to this benefit.

*Training and Employment*

294. There is little evidence to support affording significant weight to this aspect of the Appellant's package of benefits. Winsford does not suffer from levels of deprivation or lack of skills which are close to those in Ellesmere Port, as the

---

<sup>75</sup> See the Appellant's case, reported at paras 2.2(a), 2.9, 2.62, 2.63, 2.64 and 2.70 of the Inspector's report and his conclusion at para 6.87. This was accepted by the Secretary of State at para 22 of the decision letter.

October 2018 claimant count information provided by the Appellant during the Inquiry shows. The weight to be afforded to training in relation to a 2,000-unit scheme in Ellesmere Port is not equivalent or even close to the weight to be afforded to this benefit in the context of a scheme of up to 184 units in Winsford. The condition is necessarily woolly to avoid offending against European Union freedom of movement. That means that the obligation to aim to encourage local employment can be afforded little weight.

#### *Economic Benefits*

295. These have been appropriately weighed by JllS. They are not site specific and do not provide a justification for developing the appeal site. The same benefits would come from developing a site of the same size anywhere in the Borough or in Winsford.

#### *Ecological improvements*

296. There would be minor positive ecological impacts through the creation of new GCN habitat [CD 5/12 at pg 24].

#### *Other matters of mitigation (not benefits)*

297. A number of matters set out by JonS are either statements of mitigation of harm to acceptable levels (such as matters to be dealt with through the planning obligation) or a statement that harm does not arise (such as the site being in flood zone 1, the absence of contamination, the lack of noise or air quality impacts and the lack of impacts upon the significance of heritage assets). These are not properly classified as benefits, as JonS accepted in cross-examination.

### **Scheme harm**

298. The appeal scheme would cause harm. Chief amongst that is the harm caused by the breach of the DP which, of itself, is harm to be afforded significant weight. That is because of the general principle that weight is to be given to the need to determine proposals in accordance with the DP unless material considerations indicate otherwise. But it also has a case specific dimension because of the terms of Policy STRAT 1. Compliance with Policy STRAT 1 of the CW&CLP is a part of the assessment of overall sustainability.
299. In a plan-led system, the DP is not to be lightly set aside. Inspector Dakeyne in his SR at para 283 accepted that to allow the appeal would be to undermine the credibility of the plan-led system, and he weighed that matter in the balance [CD 2/7].
300. The Council also asks the Inspector and SoS to take full account of that part of the breach of the DP that in this case springs from the breach of the WNP. It would be unfortunate, to say the least, if local people were to be encouraged to prepare neighbourhood plans as a means of shaping the places where they live, only to see them not being upheld in an appeal.
301. There is also the harm caused by the loss of greenfield land to development. There does not need to be a specific landscape and visual case to make good that contention because Policy STRAT 9 operates by regulating development types and does not require a specific assessment of a proposal's effect upon the countryside. Additionally, Policy STRAT 1 expressly makes the minimisation of

the loss of greenfield land per se one of the sustainability principles used to determine planning applications.

*The Planning Balance.*

302. The Council's evidence shows why the appeal scheme would cause a serious and damaging breach of the DP, which deserves substantial weight. The benefits of the appeal scheme have been overplayed, especially those relating to local labour and training, self-build and the use of small and medium sized builders.
303. The material considerations in favour of the appeal scheme are insufficient to outweigh the breach of the DP and the identified harm caused by the scheme. It is accepted that the Council is inviting the Inspector and SoS to depart from the ultimate recommendation of Inspector Dakeyne, but the evidence and arguments relating to the scheme benefits are different now to what they were in 2015. There are sound reasons for reaching a different ultimate conclusion.
304. Furthermore, there would be a loss of a greenfield site in a location, beyond the settlement limits and in breach of the DP (both as regards its LP and WNP components). This would be in circumstances where the Council is meeting market housing needs and broadly making the level of contribution to easing affordability. It has also identified a deliverable housing supply which is well in excess of five years. This is a serious matter and weighs heavily against the grant of consent. Development in such circumstances would not be sustainable development overall.
305. If, for some reason, it were thought that the tilted planning balance was engaged in this case, then although the requirements of para 14 of the revised Framework cannot now be met (as the WNP is more than two years old and the transitional arrangement in respect of para 14(a) of the Framework has now ended), that does not mean that the application of the tilted planning balance cannot lead to the dismissal of the appeal. All that para 14 of the Framework does is to indicate that the SoS is likely to conclude that the harm caused by the breach of a NP would significantly and demonstrably outweigh the benefits of providing housing in breach of it. Para 14 does not say that the SoS will only ever find the tilted planning balance determinative against the proposal if the four criteria are met. Further, para 14 only weighs the breach of a NP against a proposal. In this case, the breach is accompanied by a serious breach of the LP.

## **The Case for Interested Parties**

*Councillor Stephen Burns*

306. Councillor Burns represents a part of Winsford on CW&C Council. The WNP was overwhelmingly endorsed in a referendum after being passed by an examiner. It is about meeting the town's employment and leisure needs as well as housing. Local residents decided through consultation where they did and did not want residential and other new development. The site of this appeal was not selected, and it is opposed by Darnhall Parish Council and Winsford Town Council.
307. The WNP has balanced development across the town, including 3,500 residential properties by 2030. This development is therefore not needed. There has already been three major developments in the part of Winsford where the

appeal development is proposed. The local ward (Swanlow and Dene Ward) has already contributed more than its fair share and fulfilled its obligation. However, the application site is outside of the NP area and the development would reduce open countryside around Winsford and unnecessarily reduce biodiversity.

308. In response to questions, he accepted that the WNP had no cap on the amount of residential development, that ground and ownership constraints had meant that development in the Station Quarter had not yet come forward and that Winsford was lagging behind the other three main towns in its rate of housing delivery.

*Robin Wood*

309. Mr Wood lives next to the site and is Chairman of Darnhall Fighting Fund, a local resident's group that opposes the proposal. He pointed out that the proposal would have a disruptive impact on the community of Darnhall which comprises less than 90 dwellings. He considers the application to have been previously rejected on planning grounds and that the three grounds upheld at the Judicial Review were not planning grounds.
310. The application is in conflict with the WNP, which seeks to focus new development close to the centre of the town and within the Station Quarter. The plan is well on track for securing the completion of 3,500 new homes by 2030. Grants from Homes England are enabling at least 30% of the properties on three sites to be provided as affordable homes. The appeal site was considered unsuitable for inclusion in the WNP at various stages during its preparation and also during the preparation of the CW&CLP P1.
311. The Darnhall Neighbourhood Plan is now emerging and approaching draft form. CW&CLP P1 supports the retention of Darnhall as open countryside and the area has exceptional biodiversity. In answering questions, he agreed that WNP set no cap or upper limit for residential development.

*Councillor Brian Clarke*

312. Councillor Clarke represents a part of Winsford on CW&C Council. He was also chairman of the Winsford Neighbourhood Steering Group until the NP referendum. The development sites that emerged from the WNP were the result of a long period of community consultation. The chosen sites were picked because they were central to the plan and had good accessibility to shops, schools, employment and the railway station.
313. The plan also took into account a desire for Winsford not to grow into the neighbouring parishes and for them to maintain their individual identity. Allowing this appeal would be an affront to democracy and the principles of neighbourhood planning. The need for additional affordable housing is already being addressed.

*Councillor Tony Hooton*

314. Councillor Hooton is a member of Winsford Town Council. CW&CLP P1 required Winsford to allocate sites for the development of 3,500 houses by 2030. WNP identified sites upon which this could take place. However, whilst work has started on many of these, a number have not yet started. Government grant has recently been awarded to accelerate the construction of social housing at Winsford.

315. The Town Council welcomes the provision of affordable housing and the use of local builders and training opportunities but in this case, it does not consider that they outweigh the requirements of the WNP. He considers the amount of proposed new dwellings (3,500) to be a guide rather than a definitive number and points to the emergence of windfall sites from time to time to boost numbers.

### **Written Representations**

316. In December 2017 the Council notified seventeen statutory consultees and about ninety local residents that the inquiry was to be reopened and advising them that they could make comments at the Planning Inspectorate's Appeals Casework Portal. A notice was subsequently posted at the site providing the same information and advising members of the public when the inquiry was to be reopened. Three written responses were received, one from the community Fire Protection Officer asking for access and facilities (including water for fire-fighting) on the site, one from Robin Wood who appeared and presented his case to the Inquiry [IR 309-311] and one from John and Gillian Higgs. They reiterated points that had been made in their previous representations, including concerns about wildlife, support for the adopted DP, which does not support the proposal and the continued opposition from local residents to the proposal.

### **Conditions and Obligations**

317. The Appellant submitted a set of conditions shortly before the inquiry reopened [ID 40]. They are based on the conditions discussed at the original inquiry [OR122-126, 164-166] and at the supplementary inquiry [SR 204-208]. The Council was not in full agreement. These conditions were discussed further during this inquiry and further modified [ID 41]. At the conclusion of the inquiry further discussion led to the Appellant agreeing to the removal of the Local Procurement condition and changes to the other three Local Approach conditions. The finally agreed conditions are contained in ID 42 and appended to this report. However, to all intents and purposes they are the same as the conditions recommended in the OR together with the additional conditions recommended in the SR, with the following changes.
- a) The time limits for the submission of reserved matters and the commencement of development in conditions 2 and 3 have been reduced;
  - b) Conditions 4 and 20 have been amended to include a reference to the additional access plan submitted by the Appellant;
  - c) The pre-commencement requirement in conditions 8 and 21 was changed to an occupation requirement;
  - d) Conditions 11, 17, 22, 23 and 24 have been amended to reflect the introduction of phasing into the proposed scheme;
  - e) Condition 12 has been amended to reflect the fact that because of the passage of time, an updated ecological assessment was required. Development should accord with the submitted updated assessment;
  - f) Additional conditions (now 13 and 14) have been inserted to deal with the presence of Great Crested Newts on the site. As a result, former condition 13 is now condition 15, 14 is now 16 etc;

- g) Former condition 19 has been deleted because the highway improvement referred to has already been completed by another developer. As a result, former condition 20 is now condition 21, 21 is now 22 etc.
  - h) Condition 3 to the SR (Self-build Housing) has been extended to allow for the non-commencement of any of the self-build dwellings within five years of the grant of planning permission. In such circumstances the Appellant would now be required to submit a scheme for the construction of affordable dwellings on these plots.
  - i) It is agreed that the use of local builders, in the construction of the market housing, together with self-builders, would be likely to result in the objectives of the former SR condition 5 (Local Procurement) being met without the need for a condition. Former SR condition 5 has therefore been removed.
  - j) A new condition (No. 8) has replaced the provision in the S106 Agreement to secure the provision of on-site open space.
318. The Appellant now considers that the matters addressed by SR additional conditions 2, 3, 4 and 5 could be more appropriately covered in a legal agreement. The Council wished them to remain as conditions only.
319. The Appellant has nevertheless submitted a signed planning obligation by way of a Unilateral Undertaking under S106 to this Inquiry. This obligation commits the Appellant, if planning permission is granted, to restricting the construction of all dwellings that are not affordable housing units or self-build units to a builder or company that:
- a) has its main office or registered office within CW&C, Cheshire East or Warrington Borough
  - and
  - b) has built a total of not more than 500 residential units in any one year within the 5 years prior to development commencing.
320. The owner also undertakes not to commence development until details of a Training Employment Management Plan has been submitted to and approved in writing by the Council. The plan will aim to promote training and employment opportunities during the construction phase for local people. A target of not less than 50% of the workforce being resident within CW&C and 20% in Winsford or adjacent parishes is set.
321. Finally, a scheme for the provision of self-build plots that would be approved under condition 6 is to be submitted to and approved in writing by the Council. The undertaking provides that if any of the 18 self-build plots have not commenced development within five years of the date of the planning permission, those plots that remain will be provided as additional affordable housing units.
322. The S106 obligation referred to in the original report [OR120-121,163] and the supplementary report [SR 203] has been revised. A new agreement covering only financial contributions to off-site leisure facilities has been signed by both parties.

## CONCLUSIONS

323. The numbers in square brackets [IR...] refer back to earlier paragraphs which are relevant to my conclusions.

### Main Considerations

324. The main considerations arising from the reopened inquiry are:

- a) Whether or not the Council can still demonstrate that there is a 5-year supply of deliverable housing sites;
- b) Whether the proposal is in accordance with the DP;
- c) Whether all of the DP's policies for the supply of housing are still up-to-date, having regard to paragraph 213 of the Framework and legal judgements;
- d) Whether the emerging CW&CLP P2 has any implications for the determination of the appeal;
- e) The implications of the consent order for the conditions that related to the revised housing offer;
- and
- f) Whether the proposal would accord with the presumption in favour of sustainable development, having regard to its accordance with the development plan and the economic, social and environmental dimensions of sustainable development.

### Five Year Housing Land Supply

#### *Agreed Matters*

325. The HSoCG agrees the following in relation to housing land supply:

- a) a base date of 1 April 2018;
- b) a 5-year period of 1 April 2018 to 31 March 2023;
- c) an overall housing requirement of a minimum of 22,000 dwellings (net) 2010-30 or 1,100pa;
- d) the buffer to be applied in accordance with paragraph 73 of the Framework is 5%.

326. I see no reason to come to a different view on these matters based on the evidence before me.

#### *Requirement*

327. The adopted CW&CLP sets out the minimum housing requirement per annum as 1,100 dwellings (net) in policy STRAT 2. The Council argues that since there was a surplus amounting to some 2,192ds. between 2010 and 2018 (about 25%), these should be subtracted from the total requirement for the remainder of the plan period. Rounding the figures to the nearest decimal place and including a 5% buffer results in a 5-year requirement of 4,816ds or 963pa [IR 54 & 219].

328. The Appellant disagrees and considers the requirement to be 5,775ds. (1,100x5+5%) [IR 55]. The Appellant also considers that the Council's completion figures are inflated by some 860 units through the inappropriate inclusion of some student self-contained accommodation and some C2 units [IR 60]. I deal with the student accommodation aspect later when considering supply from these sources [IR 350]. The C2 aspect is discussed in the next section [IR 336-338].
329. The Council argues that not to include such an over-provision risks a finding that there is not a five-years supply, even though the Council has created circumstances through which the annual requirement has been repeatedly exceeded since 2014. If the cumulative experience of the past eight years continues, then an overall supply during the plan period, which is noticeably above the minimum requirement (about 25%), is very likely. If the removal of the over-provision results in a finding that there is not a five-year supply, then the tilted balance would be triggered and relevant policies for the supply of housing found out of date in circumstances where such an outcome is not justified [IR 220].
330. The Appellant's response is that the Council's approach has no basis in current Government policy. If it was the Government's intention for past surpluses to be deducted from the requirement then it would have said so in the NPPG. It points out that each proposal should be judged on its merits and that in the context of the current housing crisis, government policy is to boost the supply of housing. It also refers to the Council's different approach in its AMR, which states that the net requirement in that document is 1,100 and that net completions were measured against that target [IR55-57].
331. The Framework is silent on the matter and although one of the Government's priorities is clearly to boost the supply of housing, that is written in the Framework in the context of ensuring that a sufficient amount and variety of land can come forward where it is needed. CW&C has clearly met that objective through its DP and the implementation of its planning management policies, otherwise it would not have significantly exceeded its annual target in all of the years since 2014. This is how the system is intended to work [IR 221 & 222].
332. The Appellant referred me to two appeal decisions at the Inquiry [CDs 17/15 & 17/16] and one subsequently [ID 47], where Inspectors had found that it was not appropriate to discount historic over-provision from the future requirement. The Council referred me to a contrary finding by an Inspector assessing the five-year requirement at a LP Examination [CD 18/10]. In the Doncaster case the surplus only related to the first year of the relevant period, which is hardly an indication of a trend of surpluses and in the Wendover case the over-supply included delivery in the years prior to the requirement's base date. The historic over-provision would have been accounted for when establishing the OAN. Neither of these scenarios reflect the position in CW&C, where there has been a surplus in every year since 2014, resulting in a net surplus of 2,192 (25%) over the first eight years of the plan period, according to the Council's calculation [CD 13/5 pg.15, IR 210 & 223].
333. The Highnam Inspector was referred to the Doncaster and Wendover decisions and noted that they "*did not support an approach whereby an over-supply could be used to reduce the annualised target in later years of the plan*

period”, noting that “this would run counter to the requirement to significantly boost the supply of housing”. His assessment was brief, and no reasons are given so it is not possible to judge the extent to which the situation was similar to the two other appeals referred to or to that at CW&C. Although agreeing with the Inspector’s conclusions on the annual requirement, the SoS is silent on the discounting of past historic over-supply [ID 47].

334. I have already pointed out the problems of comparing the Doncaster and Wendover cases with CW&C [IR 332]. The evidence suggests that CW&C has already significantly boosted the supply of homes such that a sufficient amount and variety of land can come forward where it is needed. If it had not, then the large surplus would not have accumulated. I also note that the HMA, of which Tewkesbury District is a part, contains other local planning authorities and that there was past under delivery in that HMA when considered as a whole. The LP Examining Inspector considered that in the case of CW&C “the HMA corresponds with the Borough boundary” [ID 47, IR 221 & CD 13/3a para24].
335. In the Cotswold case the Inspector pointed out that “an approach that fails to take account of completions during the plan period would result in additional land being made available for development to meet identified needs. This would lead to the unnecessary loss of greenfield sites”. I agree with this conclusion and reject the Appellant’s assertion that the Area of Outstanding Natural Beauty within Cotswold District was a factor. 20% of Cotswold District is a large area of land within which additional dwellings could have been located if the Inspector felt that there was a justifiable case to provide for them. I therefore conclude that the surplus to date should be deducted from the minimum target across the remainder of the plan period when calculating the on-going annual requirement for the five-year land supply [IR 59 & 224].

#### *Communal Establishments*

336. The Appellant alleges that 230 completions in respect of C2 communal care facilities were wrongly included in the Council’s completion figures. As the Appellant points out, in its HLM report 2017-18 at para 3.4, the Council refers to the suggestion in the Framework revisions that communal accommodation be included in the calculation of the housing delivery test. However, it goes on to explain that whilst this type of accommodation will continue to be monitored through the HLM process, it will continue to be excluded from the housing completions figures. At paragraph 4.4 the document lists the sources of completions that the Council uses for the purpose of the five-year land supply. C2 accommodation is not listed [IR 60-64 & 234].
337. Of the two sites completed in 2018 and referred to in BP’s evidence in his table 8.3, only 87 Heath Lane is listed as wholly C2. Without a forensic analysis of the entire completions table it is not possible to conclusively determine whether or not this site and the others listed as completed in previous years, have been inappropriately counted in the completions data, despite what is said in paragraph 4.3. The potential need for such an exercise should have been discussed during the round-table session and if necessary, the parties should have got together to check the arithmetic. That did not happen.
338. In cross examination BF explained that the C2 accommodation was included in the appendix to the HLM for information purposes but was not counted in the overall completions total. I have no reason to disbelieve her. In consequence I

have not discounted any non-student accommodation from the requirement [IR 63 & 234].

339. I have nevertheless found that 630 student units should be removed from the surplus [see IR 350]. Recalculating the figures, this would give a five-year requirement of about 5,150ds or 1018pa.

#### *Supply*

340. At 1 April 2018, the Council considered that it could demonstrate a 5-year supply of 7,277ds, a surplus of 2,462ds, whereas the Appellant claims that the 5-year supply should be no more than 5,423ds, a shortfall of 362ds. on its calculation of the net requirement [HSoCG pg.7]. These numbers translate into supplies of 7.56 years and 4.69 years respectively. The differences in supply stem from the contributions from the following sources – demolitions; communal establishments; student accommodation; sites with outline planning permission; sites allocated in the DP; non-allocated sites without planning permission; lead-in times and build-out rates and the windfall sites allowance. I will deal with each in turn.

#### *Preliminary Points*

341. The Appellant is critical of the consultation process that the Council undertook when assessing the five-year land supply, referring to a number of paragraphs in the Framework and NPPG that discuss consultation. However, the NPPG is only general advice and for the most part the paragraphs referenced are referring to annual position statements (3-051), the formulation of assumptions (3-047) and the demonstration of a five-year supply through the plan examination process (3-030), rather than the annual up-dating of the five-year supply calculation [IR 53, & 225].
342. Nevertheless, para 3-030 does discuss the transparency of judgements about the deliverability of sites and refers to the provision of robust up-to-date evidence and the consideration of the involvement of people with an interest in delivery in the process. Whilst para 3-030 discusses the work undertaken to establish a five-year supply at the plan making stage, it is clearly relevant at the annual review stage and particularly in the context of individual site delivery. Whilst benchmarks concerning delivery at different types of site can be established through consultation at the plan making stage, the assumptions nevertheless require periodic review and not all sites perform to the norm. In this context it is not unreasonable to expect some research, with or without consultation, on the progress of sites where large numbers of dwellings are involved. The recent changes to the definition of "*deliverable*" in the Framework makes such research more important. I refer to this later [IR 53 & 226].
343. In dealing with the various sources of supply I have considered the information and evidence put before me at face value. I note the numerous references by the Appellant to Inspector's assessments of five-year land supplies, when determining appeals in CW&C and elsewhere (CDs 17). However, for the most part the time period is not the same, the Framework and NPPG have both been reviewed and changed, the locational circumstances are mostly different and the evidence before other Inspectors may not have been the same as that before me. The Appellant refers to the Framework's assertion that every case should be determined on its own individual merits and that is what I have done when

assessing the five-year land supply put before this Inquiry. I have considered the 5-year supply evidence on its own merits whilst having due regard to what previous Inspectors have said [IR 56, 120, 212 & 213].

344. There is a dispute about the introduction of post-base date information by the Council in its review of the April 2018 assessment for the purpose of this Inquiry [ID 17]. Whilst I agree that it is not appropriate to introduce new sites at this stage, their insertion should await the next full review, it is nevertheless appropriate to take into account information received after 1 April 2018 if it affects sites that were in the last full assessment. Subsequent information that supports a pre-base date judgement should not normally be ignored [IR 85, 130 & 131].

#### *Demolitions and other losses*

345. The 1,100dpa. requirement in Policy STRAT 2 is a net figure. At the time of the Examination, losses of around 50dpa. were estimated and a gross figure of 1150dpa. established. The estimate was based on trends at the time the LP was prepared. More recent analysis undertaken by the Appellant and using the demolitions in the Council's HLM reports 2011-18 suggests that a figure of 39dpa. is more appropriate. The Council says that the calculations in its supply figures are based on a net assessment, with the actual number of housing losses, be they from housing development sites or other known sources, subtracted from the completions data. However, other than the 28ds. referred to by the Appellant and as identified in Ap.4, there is no evidence in the HLM that the Council actually knows how many losses there are likely to be during the next five years. Unlike Ap.2 Completions, which clearly identifies housing losses on a site by site basis, Ap.4 Housing delivery and forecasting, appears to do no such thing. Indeed, it is far from clear how the Council would know which properties are likely to be lost from residential use going forward unless their demolition was a part of an approved scheme. The Appellant has discounted the 28ds. that it identified in Ap.4 and suggested that the Council's five-year supply figure should be reduced by 167ds. to account for potential future demolitions. For the reasons discussed above I agree. [IR 102-106 & 235-236].

#### *Student Accommodation*

346. CW&CLP P1 assessed the anticipated student population expected to be residing in the District when the FOAHN was established. The accommodation needs of students was included within the overall housing target with the exception of those living in halls of residence (CD13.10). If the number of resident students overall, including those living in halls of residence, has remained approximately the same since 2011, then this is a reasonable approach to take [IR 238].
347. However, this does not appear to have happened. Whilst overall student numbers seem to have changed little (+75), the number of full-time students at the University of Chester appears to have grown (by about 25%), whilst there has been a similar numerical decline in part-time student numbers. It is a well-recognised fact, supported by research on behalf of the University of Chester<sup>8</sup> (pg.8) in this instance, that part-time students are more likely to be from the local area and to live at home than are full-time students, many of which will have moved from other parts of the country and require accommodation. If this has happened on a significant scale (the Appellant suggests an increase of 2,265

full-time students since 2010), then account of it should be taken in the calculations [IR 69, 108-109 & 238-40].

348. To count purpose built self-contained student accommodation, as a part of the supply, when such accommodation is likely to be meeting the needs of a growing number of full-time students, rather than the more constant numbers that were planned for, is not appropriate. In these circumstances, the dedicated student schemes [SR 144], whilst increasing the overall housing stock with self-contained units, would be unlikely to release accommodation into the wider housing market, such as freeing up some of that currently occupied by students in the Garden Quarter of Chester. Most of the units would be soaked up by some of the increasing numbers of students. Other students may also need to occupy open market homes such as HMOs [IR 107-111 & 243].
349. The Council refers to the multiplicity of University sites, some of which are outside of the district and to the opening of a new campus at Shrewsbury but there is no comprehensive assessment of the changes in student numbers and their locations since 2010. Given the attention paid to this at the previous Inquiries into this appeal and also at the Inquiries into the Nether Peover and Tattenhall Appeals and the findings of previous Inspectors against the Council, in this regard, I find this surprising. In the circumstances I agree with the Appellant that all of the 430 student units in the Council's supply should be removed [IR 107-112, 238, 241 & 242].
350. 630 student units are included in the pre-2018 completion figures and have contributed to the surplus. Without a demonstration on the part of the Council that these were adding to overall housing supply, as envisaged in the LP and not simply meeting the needs of a growing student population, then they should also be discounted [IR 60-61 & 244].

#### *Individual sites*

351. In July 2018 the definition of "*deliverable*" contained in Annex 2 Glossary to the Framework was amended<sup>76</sup>. This had the effect of categorising sites from the perspective of demonstrating deliverability. Sites that are not major development and sites with detailed planning permission should be considered deliverable until permission expires, unless there is clear evidence that homes will not be delivered within five years. Other sites, including sites with outline planning permission, should only be considered deliverable where there is clear evidence that housing completions will begin within five years [IR 74, 75, 227, 229 & Framework Pg.66].
352. The implication of this change is to shift the requirement to demonstrate deliverability or not from the Appellant to the Council in the case of the other sites, whilst the onus is now firmly on the Appellant to demonstrate that sites with detailed planning permission will not be delivering houses to the extent advanced by the Council. The Appellant has not challenged the Council's assessment of sites with planning permission, although it does challenge the validity of the windfall allowance, which largely relates to small sites without planning permission. It has however extensively challenged the second category

---

<sup>76</sup> A further updating to assist with clarity was published in February 2019

of sites on the basis that the Council has not submitted sufficient evidence [IR 76-83].

353. The Council considers the Appellant to be too demanding in its search for "*clear evidence*" and points out that the three bullets in the NPPG that set out the types of material, which could contribute towards demonstrating clear evidence, are only examples and that the list is not exhaustive. I tend to agree. Additionally, as the Council pointed out in pre-Inquiry correspondence, there was only a limited amount of time between the publication of the changes in the Framework and the need to submit proofs of evidence. Again, I agree [IR 227 & 228].
354. In an ideal scenario the Appellant may be correct but the circumstances of the Council's review of the 2018 HLM were far from ideal. Whilst the Framework definition of deliverability undoubtedly changed in July, the advice in the PPG as to the sort of information that could be used to demonstrate deliverability was not published until September, a matter of weeks before proofs of evidence had to be submitted at the end of October. Discussions on the SOCG, prior to its submission, should also have been held before then. To expect the Council to have undertaken a comprehensive update of its information base for this appeal is not realistic. There was not sufficient time to undertake a forensic analysis of every site in the supply that does not have a detailed planning permission to the extent of consulting every builder and developer involved. Such an exercise is in any event a matter for the annual review, not a planning appeal. That will have to await the full review in 2019. Despite its case alleging insufficient evidence, the Appellant seems to acknowledge this. I have therefore taken a pragmatic approach to the analysis of the evidence that the Council has been able to assemble in the limited time available [IR 85].
355. The appellant makes the point that developers and builders can inflate the forecast contributions from their existing sites to stymie new development and refers to appeal decisions where this has been given some weight by Inspectors [BP 11.22-11.29]. However, as a corollary the Council argues that the appellant has, more than likely, downplayed the delivery from the sites that it has assessed. Both lines of argument are based on speculation rather than evidence. I therefore give the propositions little weight and deal with the disputed sites on the basis of all of the available factual evidence that is before me [IR232].
356. In considering individual sites, although the evidence about some of the principles at play was tested at the Inquiry, forensic examination of each and every site was not conducted. I have therefore based my findings on the documentary evidence provided to me by the 5-year land supply witnesses, BF and BP, including the tables within the HSoCG, together with some supplementary information contained in the Closing Submissions. However, whilst the Appellant's Closing Submissions do refer specifically to some sites, those from the Council do not [IR 88-93].

#### Sites with outline planning permission or allocated in the DP

357. A discussion between the parties, following the publication of the November 2018 partial HLMR [ID 17], led to a narrowing of the sites in dispute in this category. It was agreed that over 400ds. on ten sites would not be completed during the five-year period. The remaining six disputed sites, amounting to 300ds, are set out in para 3.9 of the HSoCG [IR 86 & 245].

358. The Appellant's complaint about the inclusion of these sites stems from its interpretation of the meaning of "*clear evidence*" of deliverability. In its opinion the Council has not provided sufficient information in relation to any of these sites to demonstrate the "*clear evidence*" that is now required. In effect the Council's case is based on a site-by-site update of the 2017-18 HLM contained in CD 13/5, with additional verbal updates presented to the Inquiry. The Appellant considers that they should all be supported by comprehensive documentary evidence laid before the Inquiry. I discussed the feasibility of the Council providing such evidence in the timescale in para 354 [87, 246].
359. The revisions to the Framework (13/09/2018) suggest that for these sites, evidence to demonstrate that housing completions will begin on site within five-years could include any progress being made towards the submission of an application, site assessment work or relevant information about site viability, ownership constraints or infrastructure provision.
360. In this context, Table 1 in the November 2018 HLM review indicates that all the sites have developers. There is also other information commensurate with that suggested in the NPPG in Appendix one to HLM review. Ledsham Garden Village is an ongoing site with five phases now having full planning permission and where 90 dwellings were completed in an earlier phase in 2017-18<sup>77</sup>. Buildings have been demolished and the sites are being cleared at Rossfield Road and Delamere Forest School; some conditions have been discharged at Lyndale Farm and a full application has been submitted at Wrexham Road [IR 88-93 & 246].
361. Four of the six sites involve the completion of fewer than 30 dwellings. In the circumstances of, a combination of a developer, clearance/site works and/or movement towards detailed planning permissions/discharge of conditions, my experience suggests that it is more than likely that such modest estimations of completions are likely to be achieved in the five-year period. The two larger sites at Rossfield Road and Wrexham Road again seem very likely to be delivered, given the face value of the information submitted. I therefore consider that further changes to this category are not justified.
362. In coming to this conclusion, I am also aware that following the discussion with the Appellant, more than half of the numbers in this category were removed by the Council. I am also aware of the excellent track record achieved by the Council in predicting future housing delivery. Since the CW&CLP base date (2010), with the exception of only one year (2012/13), when there was a small shortfall of completions when compared to the housing delivery forecasts, the Council's forecasts have under-estimated the subsequent completions. This does not suggest that the Council has been traditionally over-optimistic when making its housing completion forecasts [IR 225 & 246].
363. I note the Appellant's point about the timeliness of some conditions and that if reserved matters applications are submitted at the last possible moment and then development does not commence until that time period is about to expire, then there will be few if any completions on such sites where the combined time periods are in the region of four years or more. However, the purpose of time limits in conditions is not to establish a mechanism through which to forecast

---

<sup>77</sup> HLM 2017-18 Appendix Two, Completions Report.

housing delivery. They are a vehicle to enable a review of (the) permission(s) already granted if circumstances have changed. My experience suggests that in situations where land with planning permission has been acquired by a builder/developer, as is the case here, rather than being owned by a land-owner or site promoter then conditions are discharged and works commenced on site at a date that is far sooner than the time limits in conditions [IR 86-93].

364. The Appellant refers to a case at Woolmer Green where an Inspector considered the Council's evidence to be "*well short*" of what was required. However, I do not have the evidence that led to that conclusion before me [IR 87 & 227].

#### Non-allocated sites without planning permission

365. There are six sites remaining that account for 222ds. remaining in dispute in this category. The Appellant's case rests on the contention that such sites can never be included in a five-year land supply calculation. However, nowhere in the definition of "*deliverable*" in the Glossary to the Framework or in the NPPG does it say that the sites referred to are an exclusive list. Nevertheless, I agree with the Appellant, that given the status of such sites in the planning system, there needs to be a credible justification for any such sites to be included. [IR 94, 95, 247 & 250].
366. The sites are contained in table 3 to Appendix 3 of the 2018 HLM review [ID 17]. Although not allocated or having outline planning permission at the time of the 2018 HLM there were applications, which have since been granted or approved subject to a legal agreement, submitted by builders at Trafford Street, Hartford Manor, Knutsford Road and Chester Road. None of these sites will provide more than the 42ds. at Hartford Manor. Given the progress that appears to have been made on all of these sites during the past year it seems to me very likely that they will all deliver dwellings in the five-year period.
367. Winnington Business Park is larger than the others (88d). The site appears to have made good progress since the outline application was received in April 2017, that application being approved, subject to a legal agreement in March 2018 and a decision issued in July 2018. A demolition application has been subsequently submitted and approved, along with an outline application for other parts of the site. Although there is now little more than four years to go, there appears to be no significant obstacles to overcome before housing delivery can commence. In the circumstance a forecast of 88 ds by March 2023 does not appear unattainable. The remaining site at Newhall Road is only expected to deliver 12ds. There is already a resolution to grant planning permission, a builder is driving the scheme and the building on the site is no longer in use. The construction of 12ds on this site in over four years does not seem an unreasonable expectation in my view. The Appellant once again refers to the time periods in conditions for the submission of reserved matters and commencement on site, the latter being potentially after 2023. However, there is no evidence to suggest that after the good progress to date, work to secure the implementation of 88 ds on this site by 2023 is about to stop. I therefore prefer the Council's assessment and consider the inclusion of the six non-allocated sites as of April 2018 to have been justified by the subsequent events [IR 96 & 97].

### Build out rates and lead in time

368. The Appellant challenges the delivery rates applied to five sites (505ds.), based on the interpretation of the Council's standard build-out rates and lead in times [IR 113, 298]. It alleges that the Council has inflated its delivery rate assumptions. A comparison of the assumptions in table 2.9 of the HELAA (2017)<sup>78</sup> with the Council's forecasts (pg.6 of HDoCG) suggests in broad terms that this is correct [114 & 250].
369. Table 7.3 of BF PoE suggests that at Ledsham Garden Village, Station Quarter and Grange Farm the inflated figures are a response to delivery forecasts from developers. However, there are no copies of the correspondence with developers to confirm what they are saying and why. More fundamentally there is no independent assessment by the Council analysing why it should take on board the opinions of developers in preference to its own standard assessment. The delivery rate assumptions are presumably based on historic analysis of the performance at many sites, from which average rates will have been arrived at. Some of the sites that were assessed, will have performed better than the average whilst others will have performed worse than it. Even if the opinions of individual builders are correct and their sites perform better than the average, there will no doubt be other sites that do not. Unless the Council undertakes a forensic analysis of every site, which it has not done, then there is no justification for departing from its overall assumptions unless very special circumstances can be demonstrated.
370. The Appellant claims that the proposed delivery at Ledsham Garden Village is greater than what was actually achieved on an earlier phase. The evidence indicates that 41 dwellings were completed in 2016-2017 and 90 in 2017-18. To add these together and then divide by two to achieve an annual delivery rate of 66dpa as BP has done is far too simplistic. Building work only began in 2016 and there was not a full year's output during 2016-17. 2017-18 is only one year so a judgement as to whether or not the 90 dwellings constructed in that year was typical and likely to be repeated is not easy to make. Output from sites often peak in the first full year, if market conditions remain the same, so that the Council's estimate of that number being sustained for a further five years seems high, especially when it is wishing to count an additional 28d on a later phase into the supply. With two developers, the delivery rate assumptions would suggest an annual output from this site of not much above 70. The evidence does not suggest a different position with regard to Rossfield Road and Roften Works. I therefore accept the Appellant's analysis and reduce the supply by 505ds.

### Small sites windfall allowance

371. The Framework says that an allowance can be made for windfall sites if there is compelling evidence. The Council's historic analysis of completions shows that there has been numerous completions delivered on sites with a capacity below five units on a consistent basis. On the basis of this evidence, the Council therefore makes an allowance for windfall dwellings in years four and five. It recognises that some windfall sites will have been granted planning permission

---

<sup>78</sup> CD 13.6.

before the base date and uses this information to assess the number of windfalls likely to be delivered in the first three years [IR 98, 251 & 252].

372. Whilst the Appellant notes that completions from this source have been steadily increasing since 2010 (as they have from the other sources), it points out that the 122dpa average from past trends would lead to the delivery of 610ds. over a five-year period. It then goes on to point out that the Council has assumed that 620d with planning permission would contribute to this source of supply in years one to three. It claims that the Council has not applied any lapse rate to these permissions. Whilst the Council acknowledges that some planning permissions will not be implemented, it is not clear how this has been discounted in years one to three. The number of dwellings completed on small sites increased from 70 in 2010-11 to 174 in 2017-18. If the 2017-18 output were to be delivered over the five-year period, then 870ds could be delivered from this source. The Council has assumed 830. To achieve this, dwellings on small sites would have to be delivered at a rate so far not experienced other than in 2017-18. I consider this to be too optimistic. There is not the evidence to enable me to make a different assessment and nor should I in any event. I have therefore taken the mid-point (115d) between the two parties' cases and subtracted that from the Council's figure [IR 99-101 & 252].

#### *Housing land supply conclusions*

373. Housing land supply assessment is not an exact science. It relies on objective judgement and some assumptions based on the available evidence. What is certain is that the assessed delivery from individual sites is unlikely to be correct. All one can hope for is that the over-estimations are corrected by under-estimations to a similar amount.
374. The Framework and the NPPGs guidance on this matter were changed some months after the Council undertook its 2018 HLM. The new guidance requires a better demonstration on the part of Councils of the deliverability of certain types of site. Whilst the Council has submitted additional evidence to address the changes, that evidence falls short of what might be expected in a full HLS assessment. However, that is not due to be undertaken before April 2019. Whilst not to the Appellant's satisfaction, I nevertheless consider the evidence that the Council submitted both in written form and verbally at the Inquiry does not lead to a conclusion that its assessment of dwellings to be delivered from sites with outline planning permission or allocated and non-allocated sites is fundamentally wrong. I have therefore not changed these assessments.
375. I have however, accepted the Appellants arguments with regard to demolitions, student accommodation, build-out rates and lead in times and in part the small site allowance. I have deducted 1,217d from the Council's supply. This gives a supply of 6,060 to meet a requirement of 5,150 or a supply of 5.41 years.

#### **Development Plan**

376. Section 38(6) of the Planning and Compulsory Purchase Act 2004 requires that applications for planning permission must be determined in accordance with the DP unless material considerations indicate otherwise. The statutory DP for the area still consists of the CW&CLP P1, adopted on 29 January 2015, the WNP, made on 19 November 2014 and the saved policies of the VRBLP First Review

Alteration, adopted in June 2006 (in the context of this appeal, specifically Policy GS5) [IR 122-124].

377. Para. 5.3 of the SoCG sets out the agreed relevant policies. The parties agree that the proposal breaches both Policies STRAT 9 and GS5, the latter being addressed in the context of STRAT 9. The Council also considers the proposal to be contrary to STRAT 1 of CW&CLP and to Policies H1 and H2 of the WNP. It also considers all of the above policies to be the dominant ones for determining the appeal. Inspector Dakeyne in his SR only considered STRAT 9, GS5 and H1 to be the dominant policies but also agreed with the Council that the proposal was contrary to STRAT 1 [IR 127, 155, 255 & 259, (SR 218)].

#### VRBLP

378. Of the VRBLP policies that have been saved, only GS5 has been referred to in substance. That policy seeks to protect the character and appearance of the countryside and to prevent new building therein, unless provided for through other policies. It also defines open countryside as all parts of the Borough which lie outside of defined settlement boundaries [ID 24]. In the context of this appeal, the countryside protection policies have been superseded by those in CW&CLP P1 Policy STRAT 9. Only the settlement limits are relevant because they define the area within which Policy STRAT 9 applies [IR 34, 149, 255 & 259].

379. However, these settlement limits are out of date but have not been replaced. They were defined in the context of the housing requirements established for the VRBLP before 2006. This plan had an end date in 2016. Not only is the boundary seeking to accommodate development needs from a previous plan period, those development needs have been superseded by new ones and the actual period for which the boundaries were meant to represent the land release requirement has now been over for nearly three years. During this period planning permission has been granted for residential development, outside of the settlement boundaries on a number of occasions. Even as early as 2013 and whilst the VRBLP as a whole was still a part of the DP for the area, the Council's officers gave GS5 reduced weight in the decision-making process. [149, 151, 152, 155 & 257].

380. Nevertheless, the Council still considers Policy GS5 to be one of the dominant policies for determining the appeal. Para. 11d of the Framework says that where policies which are most important for determining the application are out of date, planning permission should be granted, unless any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in this Framework taken as a whole. I therefore conclude that what has become known as the tilted balance applies [IR 155d & 260].

381. Whilst Inspector Dakeyne did not come to this conclusion, indeed he afforded Policy GS5 "*Considerable weight in the context of Winsford*" that decision was arrived at in November 2015 when the VRBLP was still extant and the WNP had recently been made [IR 261, 260 & 261].

382. The Council refers to the findings of the *Daventry BC v Gladman* (2016) Court of Appeal decision to support its contention that GS5, in the context of its settlement boundaries, is up-to-date. However, that decision has been superseded by the *Richborough Estates v Cheshire East DC* (2017) case, where at para. 63 Lord Carnwath said in similar circumstances of an extant LP that "*on*

any view, quite apart from para. 49, the statutory development plan was out of date". He went on to confirm that *"the weight to be given to the restrictive policies was reduced to the extent that they derived from settlement boundaries that in turn reflect out-of-date housing requirements"* [IR 123, 150, 257 & 258].

#### CW&CLP

383. The appeal site is beyond the settlement limits of Winsford as defined by VRBLP Policy GS5. Until the CW&CLP P2 is adopted, these limits define the area to which Policy STRAT 9 applies. The proposal does not comprise one of the types of development that is acceptable in principle in the countryside under Policy STRAT 9 so there is a clear breach of the policy [IR 31, 126 & 255].
384. However, as the Appellant points out, the policy *"aims to protect the intrinsic character and beauty of the Cheshire countryside"* whereas the revised Framework at para. 170. which gives more clarification as to the government's position on this issue, seeks to only protect valued landscapes and only to recognise the intrinsic character and beauty of the countryside, not to protect it. Despite the interpretation of previous Inspectors, in the context of a now revised Framework, Policy STRAT 9 is not fully consistent with the wording of the Framework. Nevertheless, the Framework does recognise the overall intrinsic character and beauty of the countryside and the Cawrey judgement<sup>79</sup> confirms that the loss of undesignated countryside is capable of being harmful and attracting weight in the planning balance. In my judgement Policy STRAT 9 is consequently not out of date and is capable of attracting weight, depending upon the circumstances of the case. However, such weight cannot now be the full weight that Inspector Dakeyne gave to the Policy [IR 128-131, 255, & 256].
385. Whilst arguing that full weight should be given to the breach of STRAT 9, because the proposal is outside of the settlement limits, the Council has breached these same settlement limits on numerous occasions itself, granting planning permissions in order to maintain a five-year supply of housing land. In the context of the current settlement limits, Policy STRAT 9 is a policy for the supply of housing and in the context of a site immediately adjacent to one of the four urban areas where Policy STRAT 2 proposes to locate the majority of new development, it should also be given reduced weight in that context [IR 130].
386. I note that the Council, whilst referring to Inspector Dakeyne's SR, says that CW&CLP P2 will be defining new settlement boundaries and that the WNP allocations will form the main basis for the new boundary around Winsford. It also points out that the proposed boundary does not include the appeal site. However, this aspect of that plan is subject to outstanding objections so, at this point in time, it cannot be used in support of additional weight for the breach of Policy STRAT 9 [IR 36, 255, & 259-261].
387. Furthermore, a comparison of the boundaries shown in the VRBLP [ID 24] and that proposed in CW&CLP P2 [ID 25], with the WNP allocations (CD 5/1 pgs30-31) suggests that other land not allocated through that plan has been included in the proposed amendment to the Winsford settlement area on the Policies Map. There are also examples of development and the settlement boundary extending into adjacent parishes, such as further along School Green Lane from the appeal

<sup>79</sup> Cawrey Limited v SoS and Hinckley and Bosworth BC [2016] EWHC 1198

site. Repeating those at the appeal site would not be a new departure [IR 151 & 260].

388. By virtue of being outside of the settlement envelope the proposal is contrary to STRAT 9. However, the Council has not advanced an argument that the proposal would be harmful to the character and appearance of the countryside itself, only that by being within the Policy STRAT 9 considerations, it must in principle be contrary to that policy. Indeed, the Council's officers, when recommending members to approve the application that is now the subject of this appeal, back in 2013, said that

*"the site is contained on two sides with residential development to the north and a main road along the eastern boundary, with the impact on landscape character not considered to be significant. The site is relatively well contained visually within the local landscape, with the topography and woodland vegetation to the south and west restricting long-distance views"* (CD 2/2 para. 7.32).

389. These observations are as relevant today as they were six years ago. There is also extensive residential development across the main road referred to and some further residential development in the form of individual dwellings and out-buildings on either side of the eastern end of the lane that abuts the southern boundary (SV). The proposed development would undoubtedly result in the loss of open countryside but its impact on the wider countryside and its landscape would be minimal. I therefore give the infringements against Policy SRAT 9 only minor weight [CD 2.2].

390. Policy STRAT 1 requires development to support eight sustainable development principles, following which it will be approved without delay, unless material considerations indicate otherwise. The sixth criterion requires proposals to minimise the loss of greenfield land. The Council quite rightly refers to the proposal's conflict with this but not to any of the others. Inspector Dakeyne found that *"a degree of conflict was involved"*. There is clearly conflict but with regard to the other seven criteria, the proposal is either neutral or contributes towards their requirements [IR 29, 133, 134, 155b, 262].

391. In particular the "Local Approach", which could be secured by conditions or a legal agreement, would help to support regeneration in one of the most deprived areas of the Borough and the parties agree that the new housing would have good accessibility to local shops, community facilities and a primary school. In the context of Winsford it has good connections to public transport. It is agreed that there would be improvements to biodiversity, particularly as a result of the measures proposed to improve the habitat and breeding ponds used by GCNs, a protected species. The proposal would not encourage the use and redevelopment of Pdl but then many of the sites proposed for housing development in the LP or granted planning permission by the Council would not. In the overall circumstances I can only give limited weight to the harm to Policy STRAT 1 [IR 158-170, 184-207 & 284-297].

392. Policy STRAT 2 sets a minimum target of 22,000d for the borough. Policy STRAT 6 Winsford requires provision to be made for at least 3,500 of these new dwellings at Winsford by 2030. The WNP makes provision for 3,362 and I was told that no further sites around Winsford have been identified in the CW&CLP P2. However, I agree with Inspector Dakeyne that the development of Pdl and other

windfalls over the next 11 years would be likely to more than make up for this shortfall of identified numbers. The Appellant refers to issues that are alleged to be undermining the delivery of land within the Station Quarter and suggests that this could lead to an overall under-provision at Winsford. However, the Station Quarter is only meant to deliver 775d during the plan period (about 22%). I have not been referred to any development phasing plan at Winsford and given that more than half the plan period has yet to come, I consider it premature to be suggesting that the requirement from the Station Quarter cannot be delivered over the next eleven years [IR 29, 30, 128, 139, 142, 147, 148, 263, 264 & 308].

393. In my judgement the Policy STRAT 6 requirement is likely to be achieved without the development of the appeal site. Whilst the policy does not offer any support for the appeal proposal, given that it sets a minimum requirement and there is no evidence to suggest that that number is already likely to be unsustainably exceeded, the proposal does not conflict with it either [IR 238 & 264].
394. Policy SOC 1 Delivering affordable housing seeks to maximise the provision of such accommodation on all larger schemes. A target of 30% is set. The proposal would achieve at least 40%, with a further 10% being set aside for self or custom-build housing in the first instance. The scheme clearly accords with this policy, even the Council considering that the benefit deserves substantial weight [IR 32, 175 & 280].

#### *WNP*

395. The Appellant points out that only about 2h of the appeal site (30%) falls within the remit of the WNP and that in any event 70% of the proposal cannot be considered to be in conflict with that plan. However, the development as a whole would be a clear extension to the town of Winsford, even though a part would be within another parish. Indeed, the Appellant put the site forward as a potential allocation for the WNP. The proposal would clearly be meeting the needs of Winsford, rather than the small village of Darnhall, in whose parish some of the site is located. Darnhall village is some distance from the appeal site. In addition, the high proportion of affordable housing and the "Local Approach" benefits are clearly there in a Winsford context and do not relate to Darnhall. I therefore consider the proposal as a whole would respect the objectives and policies of the WNP. [IR 135, 136 & 265].
396. The Council and some of the third parties suggests that the plan has a clear strategy for locating housing development, close to the town centre and the railway station as well as creating positive new "gateways" at key arrival points. However, whilst some of these may be contributing to the underlying themes of the plan, there are a number of sites proposed for development that clearly do not meet these descriptions. The appeal site could be considered to be a gateway, albeit only to a minor extent but nevertheless to a greater extent than some of the sites that are expected to deliver Winsford's contribution to the overall housing requirement [IR 147, 266 & 268].
397. The Council suggests that the proposal conflicts with the themes of the plan. There are seven of these. I agree with the Appellant (Para.s 143 & 144) that it is difficult to see how the proposal actually offends any of them. However, at the same time many other sites proposed for development in Winsford would

contribute towards the delivery of the vision. Consequently, for the most part the Appellant's contribution to the vision through the seven themes is little different to many of the sites that are proposed for development or indeed others that are coming or could come forward. The training and employment proposals would nevertheless create a variety of employment opportunities, including skills training, which is an employment objective [IR 145, 203 & 267].

398. Policy H1 supports residential development on a range of sites at Winsford that in total would achieve the construction of around 3,362d. As discussed above I consider that to comply with the requirements of CW&CLP Policy STRAT 6. The appeal site is not one of the listed sites. Whilst there is no ceiling on development, I agree with Inspector Dakeyne's conclusion that to see Policy H1 other than as a policy that guides and regulates where new development in and around Winsford should be located would be to suggest that it serves no real purpose. The policy makes proposals as to where residential development in Winsford should be located up until 2030. The appeal proposal is not one of these and so it is contrary to the policy and contrary to the WNP. The policy also requires proposals to accord with other policies of the NP and LP. In this context there is clear support from Policy H3, which seeks to secure a sustainable and mixed community with different dwelling types, a range of tenures and including affordable housing. Consequently, in the overall circumstances of the minimal requirement that Policy H1 is expected to meet and the absence of significant conflict with the vision themes and objectives of the plan, I give Policy H1 no more than moderate weight [IR 33, 136, 268 & 269].

#### *Development Plan Conclusions*

399. The proposal would be in compliance with a number of relevant DP policies. These are set out in full in the PSoCG and include those used to assess the proposal against specific matters such as transport (STRAT 10), affordable housing (SOC 1), housing mix (SOC 3) and the environment (ENV 2, ENV 4 and ENV 6). I have found GS5 to be out of date and no real conflict with STRAT 2 because in the context of its minimum 21,000d target, an additional 184d would not be significant [PSoCG & IR 32 & 318].
400. Nevertheless, there would be minor conflict with CW&CLP P1 Policy STRAT 9 and to a limited extent with Policy STRAT 1. There would also be limited conflict with Policy H1 of the WNP, an additional 184d representing about a 6% increase in the context of its target of 3,400d. The housing supply policies STRAT 9 and H1 are the dominant policies for assessing proposals for development inside and immediately outside of the Winsford settlement boundary. The proposal does support Policy SOC1's objective of maximising the provision of affordable housing and given the circumstances, [see IR 408-411] this weighs in the proposal's favour. However, approving proposals that are contrary to dominant policies in the DP, particularly one that is within a NP, should not be undertaken lightly. To do so would undermine the public's trust and confidence in the DP system. I conclude that on balance the proposal would be contrary to the DP overall but only to a minor extent [IR 155 & 271].

#### *CW&CLP P2*

401. Apart from establishing new settlement boundaries, this plan when adopted should have no real bearing on the outcome of this appeal as it does not propose any land allocations at or adjacent to Winsford. The plan was submitted for

examination on 12 March 2018 and hearings closed on 27 September 2018. Agreement to Main Modifications are expected soon, with adoption anticipated later in 2019. There are outstanding objections to Policy W1, which establishes the new Winsford settlement boundary. Other objections relate to the plan's alleged failure to provide sufficient land allocations at Winsford through this policy. There are also outstanding objections to Policy DM 20, which relates to the mix and type of housing [PSoCG paras. 5.6-5.9 & IR 36-38].

402. The Appellant accepts that once this plan has been adopted, its route to the tilted balance will fall away and that in that context CW&CLP Policy STRAT 9 will be up-to-date [IR 151]

## **Sustainable development**

### *Economic*

403. The economic benefits set out in OR147 and SR 261-263 still apply. In addition, the housing offer whereby up to 92 new homes would be built by local SMEs, supports the Government's objective of boosting that sector. It would also add value to the local economy as would the self-build plots and elements of the proposed local training, employment and procurement proposals [SR80 & IR 205 & 295].
404. The weight to be given, to the benefit of the additional market housing, needs to be seen in the context of the Council's response to the need to boost significantly the supply of housing. That is what has been achieved by continuing to provide a 5-year supply of housing land [IR 174] and enabling a significant surplus in housing supply over requirement since 2014 [IR 380, 419]. Such a situation cannot justify giving the provision of more market housing significant weight, especially when the LP Inspector clearly said that an OAN of more than 1,100dpa. would require higher job growth than the forecasts suggest are likely to be achieved and necessitating more population growth from in-migration<sup>80</sup>. If job-growth doesn't match the growth in the economically active population then there would likely be an increase in out-commuting, which is not a sustainable outcome [IR 158, 159, 274 & 290-293].
405. However, the market housing would be delivered by SMEs so that in that context it should attract some weight. As Inspector Dakeyne said:
- "this, along with the other elements of the housing offer, means that the economic benefits of the appeal proposal are likely to be able to be distinguished from many other housing proposals in the Borough or indeed other proposals on non-allocated sites on **the edge of Winsford**"*
- [SR 174, 175, 282 & IR 158-167, 278d & 290-293].
406. The agricultural land position has not changed since the original inquiry and should not weigh against the proposal [OR148].
407. Overall there are significant economic benefits from the proposal [SR 264 & IR 278d].

---

<sup>80</sup> CD 13/3 pgs. 9&10

*Social*

408. The proposal would deliver 40% of the dwellings as affordable housing, 10% more than the requirement. The facts surrounding the extent of the need for affordable housing are again in dispute. Notwithstanding that the Council accepts that the need for affordable housing in CW&C is such that the provision of 40%, which is 10% above the LP target of 30%, should be afforded substantial weight. The dispute is over the attachment of the pronoun "very" [IR 175, 182, 275 & 283].
409. Affordability appears to have got worse in CW&C and the numbers on its housing register have more than doubled since it was reviewed in 2014. At the same time, affordable homes have continually been lost from the stock as a result of the "right to buy". Nevertheless, in the context of the LP target of 30%, on past performance the Council appears to be capable of meeting this and achieving the delivery of 6,600 affordable units over the plan period [169, 172, 173, 188, 276 & 277].
410. The unachieved provision of 714dpa. and the corresponding shortfall of 1,503d, referred to by the Appellant, are in the context of the backlog being resolved within five-years. That was never going to be achieved, without a substantial increase in public funds, because it would involve 65% of all dwellings constructed over the five-year period being affordable. As the LP Inspector observed, the figure would still be reduced if the backlog was cleared over a longer period, such as the plan period. However, meeting all of the existing and future affordable housing needs by 2030 from the private sector contribution even if it were always 30%, is likely to be an impossible task [IR173, 174, 176, 178, 179 & 278-280].
411. Nevertheless, because of public investment, the evidence suggests that provision has fared better in Winsford, over the plan period to date, than in the Borough as a whole. Additionally, and despite this and its overall opposition to the proposal, the Town Council in its evidence considers that there is a need for more affordable homes and would welcome the provision on this site. Furthermore, the backlog represents people in housing need now, some of them acutely and so it should not be easily glossed over. I agree that at least substantial weight should be given to the provision of affordable housing on the site [IR 171, 177, 180, 182, 183, 281-283 & 315].
412. The self-build plots would help meet the government's objective expressed in the Housing White Paper and now included in the revised Framework, to support the growth of self and custom build homes. Whilst maintaining a register of those seeking to acquire serviced plots under Section 1 of the Self-Build and Custom Housebuilding Act 2015, to date there are no specific development permissions in CW&C to meet the identified demand. As identified through the Council's self-build register that amounts to 309 households. In Xx the Council confirmed that it did not know how many self-build plots it had granted planning permission for during the plan period. The extent to which the Council has supplemented this data with secondary information, as recommended by the Framework, was also not clear but despite Build Store's database identifying 443 registrants within ten miles of the appeal site, the Council maintained that there is no demand at all in Winsford for such housing on a large site [IR 184-196 & 284-288].

413. I do not share the Council's pessimism about the need for self and custom-build housing at Winsford. Its stance is largely based on conjecture rather than hard evidence and I also note that despite government advice, emerging Policy DM20 of the CW&CLP P2 sets no targets for self and custom-build housing nor allocates any specific sites. The twenty-six plots on adjacent Peacock Avenue, which were developed in such a way some years ago, suggests that such a development can be achieved at Winsford in the right circumstances. Furthermore, to counter the Council's pessimism during the Inquiry, the Appellant agreed to a fall-back position, whereby, if any of the eighteen self-build plots do not commence development within five years of the date of the planning permission, additional affordable housing plots will be built on those sites. [SR80, IR 197-202 & 289].
414. The self-build element would carry some social benefits in helping to respond to the needs of a particular group, identified by the SHMA [SR80] and the Government, who wish to build their own homes. The proposals do not follow the approach advocated by Policy SOC3 of the CW&CLP as a Community Land Trust is not involved<sup>81</sup>. Therefore, there are questions over the affordability of the plots [SR183]. That said the proposed condition that requires the submission of a scheme for the delivery of the self-build plots, would allow an input by the Council into the open market value of the plots. There would thus be social benefits from this element of the scheme. I consider that the self-build element of the scheme should attract substantial weight [IR 184-186].
415. The local training, employment and procurement elements would bring some social benefits to the Borough as a whole and Winsford in particular. There are relatively high levels of deprivation and joblessness, including in the ward adjacent to the appeal site, at Winsford. These considerations deserve significant weight [OR77 & IR203].
416. Overall there are substantial social benefits from the proposal [SR 273].

#### *Environmental*

417. There would be less than moderate harm from the loss of open fields but at some point in time there will be a requirement for some greenfield land to be developed around Winsford. The Council does not refer to any specific landscape, visual or ecological harm. The discovery of Great Crested Newts, which are a protected species, foraging on the site has resulted in proposals for off-site mitigation. It is agreed that the proposed improvements go beyond what is necessary to mitigate against the potential harm to the protected species on the site and that there would be minor overall benefits to its habitat and breeding opportunities. There is an acceptance that there would be other minor ecological improvements as a result of the scheme [IR 22, 23, 46, 47n, 204j, 296 & 301].
418. About 8,000 sqm of public open space would be landscaped. This is 3,000 sqm more than the revised standard now requires and would be of minor benefit to the wider community [IR22, 45, 47g & 204g].
419. It is agreed that the site is in an accessible location with sustainable access to bus, cycling and walking facilities. However, such advantages could be a part of

---

<sup>81</sup> CD 13/1 pg. 71

the credentials of many sites and attract no weight to support the proposal [IR 47k & 204j].

420. Overall I consider the impact on the environmental dimension of sustainable development, from the loss of three open fields, would be counter balanced by the ecological and recreational benefits that would occur so that the harm would be neutralised.

### *Sustainability Conclusions*

421. The Framework considers the three overarching objectives of sustainability to be interdependent and says that they should be pursued in mutually supportive ways. In this case the proposal would achieve significant economic benefit and substantial social benefits along with having a better than neutral impact upon the environment<sup>82</sup>. However, that is not the end of the matter. The conflict with the up to date development plan is a key component of the final balancing exercise. I deal with this in my overall conclusions. In this respect Policy STRAT 1 of the CW&CLP indicates that sustainable development would not be achieved if a proposal would fundamentally conflict with the LP [IR 298-301].

### **Conditions and obligations**

422. As referred to above, following discussions with the Council, the Appellant submitted a set of agreed conditions shortly before the inquiry reopened. I discussed some of these further during the inquiry when further minor modifications were agreed. Before the inquiry concluded it was further agreed that if a local builder was employed to build the market housing and 10% of the dwellings were constructed through self-build, then it was more than likely that the levels of local procurement sought in the draft condition would be achieved without the need for the condition. The procurement condition was therefore removed. With this exception, to all intents and purposes the conditions are the same as the conditions recommended in the OR together with the additional conditions recommended in the SR, with the changes outlined in IR 317. The finally agreed conditions and the ones that I recommend to the SoS are listed at the end of this report.
423. I have considered the need for these conditions in the context of the six tests contained in paragraph 206 of the Framework and the advice contained in the NPPG. The conditions are necessary in order to ensure that the development is of a high standard, creates acceptable living conditions for existing and future residents within the development and area as a whole, is safe and sustainable, minimises the impact on the environment and complies with the other relevant DP Policies.
424. The SoS previously considered that the Training and Employment, Self-Build Housing and Local Builders conditions did not enable these considerations to outweigh his reasons for dismissing the appeal. The High Court found that the SoS had given inadequate reasoning for the rejection of the Training and Employment Measures and the Local Builders condition. It found that the SoS's reasoning that the Self Build Housing condition should not be attached to any permission was sufficient to support that conclusion.

---

<sup>82</sup> CD 12/1 Pg. 5

425. The Appellant now considers that the matters addressed by the conditions in ID 42 could be more appropriately covered in a legal agreement. It cites an example from Gloucestershire<sup>83</sup> where the SoS has granted planning permission for a residential development with a similar Agreement to secure similar benefits. The Council wished them all to remain as conditions only.
426. I am of the opinion that all of the conditions as now proposed meet the tests in the NPPG and its guidance suggests that that conditions are to be preferred to planning obligations if they meet the tests. Nevertheless, if the SoS agrees with my overall conclusion, it is a matter for him whether or not he imposes conditions to secure the implementation of the "local approach" matters or accepts the Unilateral Undertaking as a substitute means of securing the implementation of the benefits. If the former, then it may be necessary to ask the Appellant to withdraw its Unilateral Undertaking.

### **The Planning Balance**

427. I have found VRBLP Policy GS5, considered to be one of the dominant policies for determining the application, to be out of date. At paragraph 11d the Framework says that where policies, which are the most important for determining the application, are out of date, permission should be granted unless any adverse impacts of doing so would significantly and demonstrably outweigh the benefits when assessed against the policies in the Framework taken as a whole.
428. I have found that the development is sustainable development in the overall context of the Framework, with substantial weight being given to the benefits from the social dimension and significant weight given to the economic dimension. The adverse impacts from the loss of the green fields and on the confidence in the DP are not so great as to demonstrably outweigh the benefits. I consequently find that the adverse impacts of granting planning permission would not significantly and demonstrably outweigh the benefits, when assessed against policies in the Framework taken as a whole and that planning permission should be granted.
429. If the SoS disagrees with my finding and considers that VRBLP Policy GS5 is not out of date and the tilted balance is not applied I would nevertheless, like Inspector Dakeyne, recommend in favour of allowing the appeal. In this instance it is a matter of balancing the harm, conflict with the DP and the adverse impacts through the loss of countryside, against the economic and social benefits arising from the provision of the new homes.
430. To a limited extent, the proposal is contrary to CW&CLP Policy STRAT 1. There is also a degree of conflict with CW&CLP Policy STRAT 9 and Policy H1 of the WNP. Although a number of development plan policies support the proposal, particularly CW&CLP Policy SOC1, overall, I consider the proposal to be contrary to the DP when read as a whole but only to a minor extent. That conflict is by and large a technical one and a number of the relevant policies, particularly those of the WNP are not explicit in forming a basis to resist the development. Other than the loss of three green fields that do not easily relate to the wider

---

<sup>83</sup> Appeal ref: APP/P1615/A/3013622 Land off Driffield Road, Allaston Road and Court Road, Lydney, Gloucestershire (CD 17/2).

landscape, I have only identified minor harm from the development in the context of the principles of sustainability. Nevertheless, the DP is not to be set aside lightly. A failure to comply with the DP, particularly in the context of Policy STRAT 1, could also give an indication that the development would not be sustainable overall.

431. Unless fully justified, permission would undermine the credibility of the planned system and the status of NPs promoted by the Framework, even though paragraph 198 of the Framework should not be interpreted as giving NPs enhanced status over other components of the DP. There are adverse impacts through the loss of open countryside and conflict with the DP overall. Together I conclude that these represent moderate harm. The Council has not alleged any other harm and agrees that the other material impacts could be made acceptable by the use of conditions. In this case there are substantial economic and social benefits arising, particularly the significant proportion of affordable homes and the other "Local Approach" benefits of the housing offer. Whilst this type of offer could be repeated, the circumstances are unlikely to be commonplace because of the position of the Appellant as landowner as set out in detail in the 'Local Approach'.
432. Development that conflicts with the DP should be refused unless other material considerations indicate otherwise. But it does not necessarily follow that a proposal which conflicts with the DP cannot comprise sustainable development as illustrated by many appeal decisions<sup>84</sup>. I conclude that the conflict with the DP, the starting point for decision making, including the relatively minor adverse impacts on the countryside are outweighed by other material considerations, namely the significant economic and very substantial social benefits arising from additional housing, particularly the affordable homes and the self-build housing.
433. In arriving at this conclusion, I have taken into account that the Council, putting to one side the conflict with the DP and including the in-principle objection to the loss of countryside, have not suggested that the grant of planning permission will result in any site specific adverse impacts or that the site is not in a sustainable and accessible location. For these reasons, the proposal would accord with the presumption in favour of sustainable development, having regard to the DP and the economic, social and environmental dimensions of sustainable development considered in the round.

## **Recommendation**

434. I recommend that the appeal be allowed, and outline planning permission be granted subject to the conditions set out in the next section. This recommendation is consistent with that contained in Inspector Dakeyne's two reports [OR168].

---

<sup>84</sup> For example those referred to in IR65 & IR159

## **Recommended conditions in the event that permission is granted**

### *Reserved Matters*

1. Details of the appearance, landscaping, layout, and scale, (hereinafter called "the reserved matters") for each phase of the development shall be submitted to, and approved in writing by, the local planning authority before any development of that relevant phase begins and the development of each phase shall be carried out in accordance with the details approved under that phase.
2. Application for approval of the reserved matters for Phase 1 of the development as approved under condition 6 of this permission shall be made to the local planning authority before the expiration of one year from the date of this permission.  
Application for approval of the reserved matters for the Phase 2 of the development as approved under condition 6 of this permission shall be made to the local planning authority before the expiration of two years from the date of this permission.  
Application(s) for the approval of reserved matters for each subsequent phase of development must be submitted to the local planning authority not later than the expiration of three years beginning with the date of this permission.
3. The development hereby permitted shall be begun either before the expiration of two years from the date of this permission or before the expiration of one year from the date of approval of the last of the reserved matters to be approved, whichever is the later.
4. All reserved matters applications shall accord with principles set out in the following:
  - a) Parameters Plan HP/WIN/PP01 Rev B dated 4 July 2014;
  - b) Boundary Treatment Proposals Plan 1789/P07a dated September 2013;
  - c) Design and Access Statement dated July 2013;
  - d) Access Plan (Drawing No. CBO-0149-006).
5. No more than 184 dwellings shall be erected on the site.

### *Phasing*

6. A Phasing Plan for the whole development shall be submitted to, and approved in writing by, the local planning authority as part of the first application for reserved matters within the application site. Full details of the phasing of the construction of the development hereby approved, including highway and pedestrian routings, shall be submitted as part of the Phasing Plan. The development shall be carried out in accordance with the Phasing Plan approved under this condition.
7. The details for each phase of the development required under condition no 1 of this permission shall include:
  - a) samples or the manufacturer's specification of the external materials to be used in the construction of the dwellings;

- b) soft and hard landscaping works, including details of retained trees and hedges, areas to be landscaped including the numbers, size, locations and species of trees and shrubs to be planted, boundary treatments, hard surfaces, and an implementation programme;
- c) existing levels and proposed finished floor (slab) and site (garden) levels;
- d) street furniture/structures including proposed substations or other utility structures;
- e) external lighting;
- f) on-site open space/play space provision. The total amount of on-site open space shall amount to no less than 5,000 square metres;
- g) parking for cars and cycles;
- h) roads, footways and cycleways;  
and,
- i) provision for waste and recycling in connection with the dwellings.

The details for each phase shall include a implementation programme for the works.

#### *Open Space*

8. No dwelling in any phase of development shall be occupied until details of the management and maintenance regime for the open space within that phase, including any landscaping and planting buffers, shall be submitted to, and approved in writing by, the local planning authority. Following implementation in accordance with condition 7, the open space shall be managed and maintained in accordance with the approved details.

#### *Trees, Hedges and Landscaping*

9. Any trees or shrubs, forming part of the soft landscaping works, which die, become diseased or are damaged within the first five years after planting shall be replaced with a tree or shrub of the same species and size in the following planting season.

10. No trees or hedges shall be cut down, uprooted or destroyed nor shall any retained tree be topped or lopped unless the works are in accordance with the Management Recommendations within the Tree Quality Survey Report dated 9 July 2013 (Report No 1789\_R05b\_JB\_JTF) or have been approved in writing by the local planning authority under condition 7 of this permission. Any lopping or topping shall be carried out in accordance with "British Standard BS3998:2010 recommendations for Tree Work". If any retained tree or hedge is removed, uprooted or destroyed or dies, another tree or hedge shall be planted at the same place and the specification of the replacement tree or hedge shall be approved in writing by the local planning authority.

11. No works in any phase, including ground preparation, shall commence on the site until all existing trees and hedges to be retained in that phase, in accordance with condition 6, are fully safeguarded by protective fencing and ground protection in accordance with specifications to be submitted to, and approved in writing by, the local planning authority, following the provisions of "British Standard 5837: 2012 Trees in relation to design, demolition and construction". Such measures shall be retained for the duration of the construction works.

### *Biodiversity*

12. The development shall be implemented in accordance with the mitigation measures detailed in the Tyler Grange Updated Ecological Assessment Report of 12 October 2018 and Drawing 11391/P09d.

13. Prior to the commencement of development, a detailed method statement of works with regards to Great Crested Newts shall be submitted to and approved in writing by the Local Planning Authority. The works shall be carried out in accordance with the approved method statement.

14. The development shall be delivered in accordance with the Great Crested Newt mitigation and compensation proposals as detailed in Section 5 of the Tyler Grange Updated Ecological Assessment Report of 12h October 2018 and Drawing 11391/P09d hereby approved.

15. Prior to the commencement of development, details of the off-site pond creation, including a methodology and timetable, shall be submitted to, and approved in writing by, the local planning authority. The works shall be carried out in accordance with approved details, methodology and timetable.

16. A habitat creation and management plan shall be submitted to and approved in writing by the local planning authority prior to the commencement of the development. The plan shall include:

- a) Description and evaluation of the features to be created and managed;
- b) Ecological trends and constraints on site that may influence management;
- c) Aims and objectives of management;
- d) Appropriate management options for achieving aims and objectives;
- e) Prescriptions for management actions;
- f) Preparation of a work schedule (including a project register, an annual work plan and the means by which the plan will be rolled forward annually);  
and
- g) Personnel responsible for implementation of the plan.

17. No on-site hedgerow/scrub/tree shall be removed between the 1 March and 31 August inclusive, unless the site is surveyed for breeding birds, and a scheme to protect breeding birds is submitted to and approved in writing by the local planning authority. The development shall thereafter only be carried out in accordance with the approved scheme.

18. Prior to the commencement of each phase of the development a scheme and timetable for the provision of bat and bird boxes, including the numbers and locations for that phase of development, shall be submitted to and approved in writing by the local planning authority. The bat and bird boxes shall be installed in accordance with the approved scheme and timetable. Thereafter the bat and bird boxes shall be retained.

### *Construction Management*

19. No development shall take place in any phase until a Construction Method Statement for that phase has been submitted to, and approved in writing by, the

local planning authority. The approved Statement shall be adhered to throughout the construction period for that phase. The Statement shall provide for:

- a) details of access, including routing of construction traffic, and temporary pedestrian routes;
- b) hours of construction and construction deliveries;
- c) the parking of vehicles of site operatives and visitors;
- d) loading and unloading of plant and materials;
- e) storage of plant and materials used in constructing the development;
- f) the erection and maintenance of security hoarding including decorative displays and facilities for public viewing, where appropriate;
- g) wheel washing facilities;
- h) measures to control the emission of dust and dirt during construction; and
- i) a scheme for recycling/disposing of waste resulting from construction works.

#### *Access and Highways*

20. The proposed vehicular access, footways and dropped crossing on Darnhall School Lane as detailed on the Proposed Access Plan (Drawing Ref CBO-0149-006 dated 26 April 2013) shall be completed to binder-course level prior to the commencement of the construction of any dwellings on the site.

21. No dwelling shall be occupied until the part of the highway or footway which provides access to it has been constructed in accordance with the approved details up to binder-course level. The surface course shall then be completed within the approved timetable for the relevant phase as approved under condition 7.

#### *Travel Plan*

22. Prior to the occupation of each phase of the development, a travel plan for that phase shall be submitted to, and approved in writing by, the local planning authority. The submitted travel plan shall include the objectives, measures and targets set out in the Travel Plan Framework dated 8 July 2013. The approved travel plan shall be operated from first occupation.

#### *Archaeological Work*

23. Prior to the commencement of the development of each phase, a programme of archaeological work in accordance with a written methodology of investigation for that phase shall be submitted to, and approved in writing by, the local planning authority. The work shall be carried out strictly in accordance with the approved scheme.

#### *Drainage*

24. No development shall take place in any phase until a scheme for the disposal of surface water and foul drainage for that phase has been submitted to, and approved in writing by, the local planning authority. The scheme shall be carried out in accordance with the approved details.

### *Affordable Housing*

25. Prior to the commencement of each phase of development a scheme for the provision of affordable housing in that phase shall be submitted to, and approved in writing by, the local planning authority. The affordable housing shall be 40% of the total number of dwellings to be provided on site, be provided in accordance with the approved scheme and shall meet the definition of affordable housing in the National Planning Policy Framework or any future guidance that replaces it. The scheme shall include:

- a) The numbers, tenure and location on the site of the affordable housing provision to be made;
- b) The type and mix of affordable dwellings;
- c) The timing of the construction of the affordable housing and its phasing in relation to the occupancy of the market housing;
- d) The arrangements for the transfer or management of the affordable housing;
- e) The arrangements to ensure that such provision is affordable for both first and subsequent occupiers of the affordable housing;  
and
- f) The occupancy criteria to be used for determining the identity of occupiers of the affordable housing and the means by which such occupancy criteria shall be enforced.

All parts of the approved scheme for the provision of affordable housing shall be implemented in full.

### *Local Approach Conditions*

#### *Training and Employment*

26. The development hereby permitted shall not commence until details of a Training and Employment Management Plan has been submitted to, and approved in writing by, the local planning authority. The plan shall aim to promote training and employment opportunities during the construction phase for local people by undertaking to meet a target of not less than 50% of the total workforce on the site being resident within the Cheshire West and Chester Council area, of which not less than 20% is within the town of Winsford and the adjacent parishes:

#### *Self-Build Housing*

27. Prior to the commencement of the self-build phase of the development, as approved under condition 6, a scheme for the provision of self-build plots shall be submitted to, and approved in writing by the local planning authority. The self-build plots shall be 10% of the total number of the dwellings to be provided on the site and will not be an affordable unit. The self-build plots shall be provided in accordance with the approved scheme. The scheme shall specify:

- (i) The number, location and size of the plots that would be reserved for self-build;
- (ii) That the dwelling that is built is first occupied by the person or family that purchases the plot;

- (iii) The period that the person or family that purchases the plot shall remain in occupation;
- (iv) The roads and services to be provided to service each self-build plot and the phasing thereof;
- and,
- (v) A programme for the marketing of the self-build plots specifying the open market values at which they will be offered.

All parts of the approved scheme for the provision of the self-build plots shall be implemented in full.

28. Details of the self-build units shall be provided to the Council for approval in line with the reserved matters timeframes. In the event that none or any number of the 18 self-build plots are not commencement within 5 years of the date of this planning permission, those plots that remain will be provided as additional affordable housing dwellings over and above the 40% specified in condition 25 above. Within 6 years of the date of this planning permission, a scheme for the provision of these additional affordable housing dwellings shall be submitted to, and approved in writing by, the local planning authority. This affordable housing shall be provided in accordance with the approved scheme and shall meet the definition of affordable housing in the National Planning Policy Framework or any future guidance that replaces it. The scheme shall include:

- a) The numbers, tenure and location on the site of the affordable housing provision to be made;
- b) The type and mix of affordable dwellings;
- c) The timing of the construction of the affordable housing and its phasing in relation to the occupancy of the market housing;
- d) The arrangements for the transfer or management of the affordable housing;
- e) The arrangements to ensure that such provision is affordable for both first and subsequent occupiers of the affordable housing;
- and,
- f) The occupancy criteria to be used for determining the identity of occupiers of the affordable housing and the means by which such occupancy criteria shall be enforced.

#### *Local Builders*

29. No dwelling which is not an affordable or a self-build unit shall be constructed other than by a builder or company that:

- a) Has its main office or registered office within the Cheshire West and Chester, Chester East or Warrington Borough Council's areas at the date of this permission;
- and
- b) Builds a total of not more than 500 residential units in any one year in the last 5 years prior to development commencing.

## APPEARANCES

### FOR THE LOCAL PLANNING AUTHORITY:

Martin Carter of Counsel	instructed by Pamela Chesterman, Solicitor Legal Manager, CW&CC
He called	
Beth Fletcher BSc, MSc	Senior Planning Officer, CW&CC
Jill Stephens BA, Dip TP MRTPI	Senior Planning Officer, CW&CC

### FOR THE APPELLANT:

Christopher Young, Queens Counsel	Instructed by Gary Halman of GVA HOW Planning
He called	
Ben Pycroft BA, Dip TP MRTPI	Emery Planning
James Stacey, BA, Dip TP, MRTPI	Tetlow King Planning
Jon Suckley, MTCP, MRTPI	GVA How Planning

### INTERESTED PERSONS:

Councillor Stephen Burns	Councillor CW&CC
Robin Wood	Chairman Darnhall Fighting Fund and local resident
Brian Clark	Councillor CW&CC, Chair of Winsford Neighbourhood Steering Group
Tony Hooton	Councillor, Winsford Town Council

## DOCUMENTS

### DOCUMENTS SUBMITTED BEFORE THE INQUIRY

- 1 2018 Planning Statement of Common Ground
- 2 Statement of Common Ground on Five Year Housing Land Supply
- 3 Proof of Evidence of Beth Fletcher with Appendices
- 4 Proof of Evidence of Jill Stephens with Appendices
- 5 Proof of Evidence of Ben Pycroft with Appendices
- 6 Supplemental Affordable Housing Evidence of James Stacey with Appendices
- 7 Rebuttal Affordable Housing Evidence of James Stacey
- 8 Proof of Evidence of Jon Suckley
- 9 Appendices to the Proof of Evidence of Jon Suckley
- 10 Rebuttal Proofs of Evidence of Ben Pycroft and Jon Suckley

### DOCUMENTS SUBMITTED AT THE INQUIRY

- 11 Opening Statement of the Appellant
- 12 Opening Statement of the Local Planning Authority
- 13 Statement from Councillor Stephen Burns
- 14 Statement from Robin Wood
- 15 Statement from Councillor Brian Clarke
- 16 Statement from Councillor Tony Hooton

## RIGHT TO CHALLENGE THE DECISION IN THE HIGH COURT

These notes are provided for guidance only and apply only to challenges under the legislation specified. If you require further advice on making any High Court challenge, or making an application for Judicial Review, you should consult a solicitor or other advisor or contact the Crown Office at the Royal Courts of Justice, Queens Bench Division, Strand, London, WC2 2LL (0207 947 6000).

The attached decision is final unless it is successfully challenged in the Courts. The Secretary of State cannot amend or interpret the decision. It may be redetermined by the Secretary of State only if the decision is quashed by the Courts. However, if it is redetermined, it does not necessarily follow that the original decision will be reversed.

### SECTION 1: PLANNING APPEALS AND CALLED-IN PLANNING APPLICATIONS

The decision may be challenged by making an application for permission to the High Court under section 288 of the Town and Country Planning Act 1990 (the TCP Act).

#### Challenges under Section 288 of the TCP Act

With the permission of the High Court under section 288 of the TCP Act, decisions on called-in applications under section 77 of the TCP Act (planning), appeals under section 78 (planning) may be challenged. Any person aggrieved by the decision may question the validity of the decision on the grounds that it is not within the powers of the Act or that any of the relevant requirements have not been complied with in relation to the decision. An application for leave under this section must be made within six weeks from the day after the date of the decision.

### SECTION 2: ENFORCEMENT APPEALS

#### Challenges under Section 289 of the TCP Act

Decisions on recovered enforcement appeals under all grounds can be challenged under section 289 of the TCP Act. To challenge the enforcement decision, permission must first be obtained from the Court. If the Court does not consider that there is an arguable case, it may refuse permission. Application for leave to make a challenge must be received by the Administrative Court within 28 days of the decision, unless the Court extends this period.

### SECTION 3: AWARDS OF COSTS

A challenge to the decision on an application for an award of costs which is connected with a decision under section 77 or 78 of the TCP Act can be made under section 288 of the TCP Act if permission of the High Court is granted.

### SECTION 4: INSPECTION OF DOCUMENTS

Where an inquiry or hearing has been held any person who is entitled to be notified of the decision has a statutory right to view the documents, photographs and plans listed in the appendix to the Inspector's report of the inquiry or hearing within 6 weeks of the day after the date of the decision. If you are such a person and you wish to view the documents you should get in touch with the office at the address from which the decision was issued, as shown on the letterhead on the decision letter, quoting the reference number and stating the day and time you wish to visit. At least 3 days notice should be given, if possible.

8 July 2019

Dear Sir,

**TOWN AND COUNTRY PLANNING ACT 1990 – SECTION 77  
APPLICATION MADE BY DAVID WILSON HOMES EASTERN  
LAND EAST OF GLENEAGLES WAY, HATFIELD PEVEREL, CM3 2JT  
APPLICATION REF: 16/02156/OUT**

1. I am directed by the Secretary of State to say that consideration has been given to the report of Brian Cook BA (Hons) DipTP MRTPI, who held a public local inquiry from 12 December 2017 to 30 January 2018 into your client's application for outline planning permission for residential development of up to 120 dwellings, together with associated open space, landscaping, highways and drainage infrastructure works on land east of Gleneagles Way, Hatfield Peverel in accordance with application ref: 16/02156/OUT, dated 16 December 2016.
2. On 12 July 2017, the Secretary of State directed, in pursuance of Section 77 of the Town and Country Planning Act 1990, that your client's application be referred to him instead of being dealt with by the local planning authority.

**Inspector's recommendation and summary of the decision**

3. The Inspector recommended that that planning permission be granted subject to conditions.
4. For the reasons given below, the Secretary of State agrees with the Inspector's conclusions, except where stated and agrees with his recommendation. He has decided to grant planning permission subject to conditions. A copy of the Inspector's report (IR) is enclosed. All references to paragraph numbers, unless otherwise stated, are to that report.

**Procedural matters**

5. On 21 June 2018 the Secretary of State wrote to the main parties to afford them an opportunity to comment on the implications, if any, of the judgement of the Court of

Ministry of Housing, Communities & Local Government  
Andrew Lynch, Decision Officer  
Planning Casework Unit  
3rd Floor Fry Building  
2 Marsham Street  
London SW1P 4DF

Tel: 0303 444 43594  
Email: [PCC@communities.gov.uk](mailto:PCC@communities.gov.uk)

Justice of the European Union (CJEU) in Case C-323/17 People Over Wind and Sweetman v Coillte Teoranta on the correct application of the Habitats Directive 92/43/EEC, which was handed down on 12 April 2018.

6. On 1 August 2018, the Secretary of State wrote further to the main parties, to afford them an opportunity to make representations on the implications, if any, on the new National Planning Policy Framework, which was published on 24 July 2018.
7. On 2 October 2018, the Secretary of State wrote further to the main parties, to afford them an opportunity to make representations on the implications, if any, on the revised guidance on how councils should assess their housing need, which was published on 13 September 2018, and on new household projections for England published by the Office of National Statistics on 20 September 2018.
8. On 5 March 2019, the Secretary of State wrote to the main parties, to afford them an opportunity to make representations on the implications, if any, on the following documentation:
  - Written Ministerial Statement (WMS) on housing and planning issued on 19 February 2019
  - 2018 Housing Delivery Test measurement data published on 19 February 2019
  - The Government's response to the technical consultation on updates to national planning policy and guidance, dealing with the calculation of Local Housing Need and other matters, including the People Over Wind and Sweetman v Coillte Teoranta issue, published 19 February 2019.
  - Revised National Planning Policy Framework, published on 19 February 2019.
  - Updated guidance for council's on how to assess their housing needs (document).
  - Braintree District Council's latest published 5 year supply statement, January 2019 (see also paragraphs 36 to 43 of this letter).
  - Latest position statement with regard to the emerging Hatfield Peverel Neighbourhood Plan, and weight to be attached to that.
  - Three recent planning casework decisions (brought to the Secretary of State's attention by the Stone Path Meadow Residents Group - SPMRG).
9. A list of representations received in response to these letters, is set out at Annex A. Copies of these letters may be obtained on written request to the address at the foot of the first page of this letter.
10. In addition, a number of representations were received following the close of the inquiry. These raised a variety of issues, and are dealt with under the considerations of main issues below. The Secretary of State is satisfied that the issues raised do not affect his decision, and no other new issues were raised in this correspondence to warrant further investigation or necessitate additional referrals back to parties. A list of representations which have been received since the inquiry is also at Annex A. Copies of these letters may be obtained on written request to the address at the foot of the first page of this letter.

## **Policy and statutory considerations**

11. In reaching his decision, the Secretary of State has had regard to section 38(6) of the Planning and Compulsory Purchase Act 2004 which requires that proposals be determined in accordance with the development plan unless material considerations indicate otherwise.
12. In this case the development plan consists of the saved policies of the Braintree District Local Plan Review (LPR) adopted in 2005 and the Braintree District Core Strategy (CS), adopted in 2011. The Secretary of State considers that the development plan policies of most relevance to this case are those set out at IR25-32.
13. Other material considerations which the Secretary of State has taken into account include the National Planning Policy Framework ('the Framework') and associated planning guidance ('the Guidance'). The revised National Planning Policy Framework was published on 24 July 2018 and further revised in February 2019. Unless otherwise specified, any references to the Framework in this letter are to the revised Framework.

## ***Emerging plan***

14. The emerging plan comprises the Braintree New Local Plan (BNLP) and the Hatfield Peverel Neighbourhood Development Plan (NDP). The Secretary of State considers that the emerging BNLP policies of most relevance to this case include those set out in IR34-38 and the emerging NDP policies of most relevance are HPE1, HPE2 and HPE6 as described at IR41-42.
15. Paragraph 48 of the Framework states that decision makers may give weight to relevant policies in emerging plans according to: (1) the stage of preparation of the emerging plan; (2) the extent to which there are unresolved objections to relevant policies in the emerging plan; and (3) the degree of consistency of relevant policies to the policies in the Framework.
16. At the time of the Inquiry the examination hearings into part 1 of the BNLP were due to commence in January 2018, with Part 2 to follow at a later date. The Secretary of State notes that on 8 June 2018, the Inspector for the emerging Local Plan wrote to the three local planning authority areas covered by the Part 1 Examination, setting out his views as to the further steps he considered necessary in order for the Section 1 Plan to be made sound and legally-compliant, and seeking views on options to pursue these matters. A joint response from the three authorities dated 19 October proposed suspending the Examination until February 2019, with a view to sitting again in June. In the light of these letters, and for the reasons given in IR425-428, the Secretary of State agrees with the Inspector that only limited weight should be given to the BNLP.
17. The Secretary of State notes that while some progress has been made with regard to the NDP since the close of the Inquiry, the further examination of the NDP has not yet concluded. For the above reasons, and for the reasons given in IR429-431, the

Secretary of State agrees with the Inspector that very limited weight can be given to the NDP at this stage.

## **Main issues**

### *Policies in the Framework on delivering a wide choice of high quality homes*

18. For the reasons given in IR420-422, the Secretary of State agrees with the Inspector that the Green Infrastructure Plan and Design and Access Statement set important context and establish important principles at this outline application stage, and that there is no evidence to suggest that the application site will not provide a range of high quality homes.

### *The extent to which the proposed development is consistent with the development plan for the area*

19. For the reasons given in IR435-437, the Secretary of State agrees with the Inspector that although as a policy for the supply of housing policy CS1 should be considered out of date, the spatial strategy within it should still be afforded some weight, and he considers that a moderate weighting is appropriate. The Secretary of State further agrees with the Inspector for the reasons in IR435-437 that the appeal proposals would be in accordance with the spatial strategy. For the reasons given in IR438-446, the Secretary of State further agrees with the Inspector that there is a conflict with adopted development plan policies RLP2 and CS5, concerning development outside of defined boundaries of settlements, where countryside policies apply. The Secretary of State further agrees with the Inspector that the conflict with policies RLP2 and CS5 should attract moderate weight when it comes to the overall planning balance, given that they would act to restrict the supply of housing and frustrate the aim of the Framework paragraph 59. He notes that the local planning authority in their representation of 22 October 2018 share his view as to the weight to be attached to policies RLP2 and CS5 at this time.

### *The effect of the development on the landscape character of the area and the visual impact that the development would have*

20. The Secretary of State agrees with the Inspector's view in IR448 that it is necessary to take into account the context of the appeal site, and notes the historic pattern of growth described in IR 448-449. For the reasons given in IR450-458 the Secretary of State agrees with the Inspector at IR459 that the studies presented set an important context for an assessment of the effect of the development proposed on the character of the landscape, and that none of the studies suggest that suitably designed development could not be accommodated. However, the Secretary of State also acknowledges that the development would have some adverse effect on landscape character by the replacement of a small arable field with a housing development. The impact however would be very localised and limited.
21. In terms of visual impact, for the reasons given in IR461-472, the Secretary of State agrees with the Inspector's assessments of the impact of the development on views

across the site to the landscape beyond and views back towards the settlement edge from distance.

22. For the reasons given in IR473-478 the Secretary of State agrees with the Inspector that the development would not be detrimental to any distinctive landscape features and would integrate successfully into the local landscape, and enhance the settlement edge as it appears as a feature in the landscape. He finds no conflict with the landscape elements of policy RLP 80, or of the third paragraph of policy CS8.
23. For the reasons given in IR479, the Secretary of State agrees with the Inspector that while harm in relation to visual impact has been identified, this can only attract limited weight. In particular, he agrees with the Inspector's view on the very limited weight to be attached to policy HPE6 of the emerging NDP concerning protected views, given concerns around the evidence base supporting that policy as well as the more general point around progress on that plan.

#### *The effect of the development on community infrastructure*

##### *Education*

24. The Secretary of State notes that by virtue of his decision on this case and on the proposals at land off Stone Path Drive, Hatfield Peverel, that the four residential developments listed in the letter attached to the Education Statement of Common Ground (Inquiry Document ID1.8) are now being taken forward. There is therefore a need for additional primary school capacity. While the issue will resolve itself over time through the operation of the admissions policy, there would be a short term impact which is most likely to manifest itself through additional journeys to school, either by bus or private car.

##### *Health*

25. The Secretary of State notes the Inspector's summary of evidence submitted on health matters at IR487-489, and has considered the subsequent closure of the Sydney House and Laurels surgeries to new registrations.
26. The Secretary of State remains of the view, for the reasons set out by the Inspector in IR490-492, that in terms of both health and education, the Appellant has entered into planning obligations to make all the contributions that have been requested to mitigate any effect from the appeal scheme, and that a finding of conflict with policy CS11 in those circumstances would not be appropriate.

#### *Erosion of gap between Hatfield and Witham*

27. For the reasons given in IR493-494, the Secretary of State agrees with the Inspector that this matter has "material planning consideration" status, and that there would be a conflict with emerging NDP policy HPE1. He notes the current position with the emerging BNLP described in IR495, and the matters at IR497-498 which could fall to be addressed by the appointed examiner for the emerging NDP.
28. For the reasons given in IR500-504, the Secretary of State agrees with the Inspector that the loss of the field to residential development would have no perceptible effect on the effective gap between Hatfield Peverel and Witham, and that only very limited weight can be given to the conflict with policy HPE1.

### *Loss of best and most versatile agricultural land*

29. All parties were content to proceed on the basis that the application site should be considered to be best and most versatile agricultural land. For the reasons given in IR505-509, the Secretary of State agrees that the application proposal would not protect best and most versatile agricultural land as required by policy CS8, and also that policy CS8 is inconsistent with paragraphs 170, 171 and footnote 53 of the Framework. In accordance with Framework paragraph 213, the Secretary of State finds that limited weight should be given to the conflict with policy CS8.

### *Other matters*

30. A post-inquiry representation referred to the cancellation of one bus route that served Hatfield Peverel. The Secretary of State has taken this into account, but remains of the view that Hatfield Peverel still demonstrates good public transport links.

### *Appropriate Assessment*

31. Following the reference back to parties exercise described in paragraph 5 of this letter, the Secretary of State has concluded that the screening assessment undertaken for the purposes of this application and presented to the inquiry is no longer legally sound.

32. Therefore, as competent authority for the purposes of the Conservation of Habitats and Species Regulations 2010, the Secretary of State has carried out a new screening. He has concluded on the basis of this screening that an Appropriate Assessment is required, and has carried out that assessment, consulting Natural England as the appropriate nature conservation body. Both the screening and appropriate assessment are attached to this decision letter at Annex C. On the basis of his appropriate assessment, and for the reasons set out in that assessment, the Secretary of State considers that he can safely conclude that the proposed development would not adversely affect the integrity of any European site.

33. The Secretary of State notes that under paragraph 177 of the Framework, the presumption in favour of sustainable development does not apply where a plan or project is likely to have a significant effect on a habitats site (either alone or in combination with other plans or projects), unless an appropriate assessment has concluded that the that the plan or project will not adversely affect the integrity of the habitats site.

### *Five year housing land supply*

34. The Secretary of State has considered the Inspector's findings as regards housing land supply at IR512-516. However, following the publication of the revised Framework, guidance on the calculation of local housing need, and revised household forecasts, he has set out his own conclusions below.

35. Paragraph 73 of the Framework indicates that in the circumstances of this case, local housing need should be applied. The Secretary of State has therefore calculated the local housing need figure based on the methodology published alongside the revised Framework 19 February 2019.

36. On 11 April 2019, the local authority published an Addendum to their Monitoring Report, and a 5 Year Supply Site Trajectory. This reflected the Housing Delivery Test 2018 data

published in February 2019; new affordability ratios published by the Office for National Statistics on 28 March 2019, and additional information relating to supply of sites.

37. In summary, the Addendum set out a 5 year land supply position for the authority of 5.29 years. While the version of the monitoring statement on which the Secretary of State referred back to parties was published on 15 January 2019, given the minor change in the authority's assessment from 5.42 years supply to 5.29 years, and given his conclusions below, the Secretary of State did not consider it necessary to further refer back to parties on this issue.
38. The Secretary of State has reviewed the material published on 11 April 2019, and has also considered the representations of parties made on this issue in response to his letter of 5 March 2019 and, subsequent emails recirculating representations that had been received.
39. Planning Practice Guidance states that in principle an authority will need to be able to demonstrate a 5 year land supply at any point to deal with applications and appeals, unless it is choosing to confirm its 5 year land supply, in which case it need demonstrate it only once per year. *Paragraph: 038 Reference ID: 3-038-20180913*
40. In this case, the authority has not chosen to confirm its 5 year land supply. Paragraph 74 of the National Planning Policy Framework sets out that this can only be carried out through a recently adopted plan (defined in footnote 38 of the Framework) or subsequent annual position statement. In the circumstances, the Secretary of State has therefore considered the latest evidence before him.
41. Having reviewed the housing trajectory published on 11 April 2019, the Secretary of State considers that the evidence provided to support some of the claimed supply in respect of sites with outline planning permission of 10 dwellings or more, and sites without planning permission does not meet the requirement in the Framework Glossary definition of "deliverable" that there be clear evidence that housing completions will begin on site within five years. He has therefore removed 10 sites from the housing trajectory, these are listed at Annex D to this letter.
42. The Secretary of State considers that, bearing this definition in mind, the authority are able to demonstrate around 4.15 years supply.
43. The Secretary of State has therefore concluded that the authority is unable to demonstrate a 5 year housing land supply. Given this finding, and the objective of significantly boosting the supply of new homes, he attaches great weight to the provision of housing.

### **Planning conditions**

44. The Secretary of State has given consideration to the Inspector's analysis at IR394-413, the recommended conditions set out at the end of the IR and the reasons for them, and to national policy in paragraph 55 of the Framework and the relevant Guidance. He is satisfied that the conditions recommended by the Inspector comply with the policy tests set out at paragraph 55 of the Framework and that the conditions set out at Annex B should form part of his decision.

## **Planning obligations**

45. Having had regard to the Inspector's analysis at IR414-417, the planning obligation dated 8 January 2018, paragraph 56 of the Framework, the Guidance and the Community Infrastructure Levy Regulations 2010, as amended, the Secretary of State agrees with the Inspector's conclusion for the reasons given in IR418 that the obligation complies with Regulation 122 of the CIL Regulations and the tests at paragraph 56 of the Framework.
46. The Secretary of State has taken into account the number of planning obligations which have been entered into on or after 6 April 2010 which provide for the funding or provision of a project or type of infrastructure for which an obligation has been proposed in relation to the application. Having had regard to the Inspector's analysis at IR414-417, the Secretary of State concludes that the obligations are compliant with Regulations 123(3), as amended.

## **Planning balance and overall conclusion**

47. For the reasons given above, the Secretary of State considers that the appeal scheme is not in accordance with Policies RLP 2 and CS5 of the development plan, and is not in accordance with the development plan overall. He has gone on to consider whether there are material considerations which indicate that the proposal should be determined other than in accordance with the development plan.
48. The Secretary of State has concluded that the authority is not able to demonstrate a 5-year supply of housing land, therefore the presumption in favour of sustainable development applies because of the effect of paragraph 177 of the revised Framework (as set out in paragraph 33 of this letter above).
49. The Secretary of State considers that the housing benefits of the proposal carry great weight, and the economic benefits in terms of jobs and increased expenditure carry moderate weight. He attaches limited weight to the enhanced biodiversity arising from the new boundary planting.
50. The Secretary of State considers that the conflict with the adopted development plan policies attract moderate weight, and that harm caused in relation to visual impact is limited. He further concludes that only very limited weight can be attached to conflict with policy HPE6 of the emerging NDP. He attaches very limited weight to the conflict with emerging policy HPE1 which seeks to address the coalescence of settlements and limited weight to the conflict with policy CS8 (BMVL).
51. Overall, the Secretary of State concludes that there are material considerations that indicate that the proposal should be determined other than in accordance with the development plan. He therefore concludes that planning permission should be granted.

## **Formal decision**

52. Accordingly, for the reasons given above, the Secretary of State agrees with the Inspector's recommendation. He hereby grants outline planning permission subject to the conditions set out in Annex B of this decision letter for residential development of up to 120 dwellings, together with associated open space, landscaping, highways and drainage infrastructure works on land east of Gleneagles Way, Hatfield Peverel in accordance with application ref: 16/02156/OUT, dated 16 December 2016.

53. This letter does not convey any approval or consent which may be required under any enactment, bye-law, order or regulation other than section 57 of the Town and Country Planning Act 1990.

### **Right to challenge the decision**

54. A separate note is attached setting out the circumstances in which the validity of the Secretary of State's decision may be challenged. This must be done by making an application to the High Court within 6 weeks from the day after the date of this letter for leave to bring a statutory review under section 288 of the Town and Country Planning Act 1990.
55. An applicant for any consent, agreement or approval required by a condition of this permission for agreement of reserved matters has a statutory right of appeal to the Secretary of State if consent, agreement or approval is refused or granted conditionally or if the Local Planning Authority fail to give notice of their decision within the prescribed period.
56. A copy of this letter has been sent to Braintree District Council and notification has been sent to others who asked to be informed of the decision.

Yours faithfully

*Andrew Lynch*

Andrew Lynch  
Authorised by the Secretary of State to sign in that behalf

## **Annex A – Schedule of representations**

### **General representations**

<b>Party</b>	<b>Date</b>
Mr East	14 and 26 March, 23 May and 7 September 2018
Rt Hon Priti Patel MP, encl correspondence from Mr East and Mr Ellison	15 March 2018
Mr Kearns	22 March, 18 April and 5 June 2018
Cllr Derrick	6 April 2018
Mr Simmonds	6 June 2018
Rt Hon Priti Patel MP	2 October 2018
Hatfield Peverel Parish Council	12 November 2018 and 18 February 2019

### **Representations received in response to the Secretary of State's reference back letter of 21 June 2018**

<b>Party</b>	<b>Date</b>
Hatfield Peverel Parish Council	6 August (x3) 2018

### **Representations received in response to the Secretary of State's reference back letter of 1 August 2018**

<b>Party</b>	<b>Date</b>
Hatfield Peverel Parish Council	14 and 29 August (x2) and 5 September 2018
Savills	15 August 2018

### **Representations received in response to the Secretary of State's reference back letter of 2 October 2018**

<b>Party</b>	<b>Date</b>
Hatfield Peverel Parish Council	10 and 22 October 2018
Savills	11 and 19 October 2018
Braintree District Council	22 October 2018

### **Representations received in response to the Secretary of State's reference back letter of 5 March 2019**

<b>Party</b>	<b>Date</b>
Hatfield Peverel Parish Council	25 March, 2 and 18 April 2019
Savills	25 March (x3) and 2 April (x2) 2019
Braintree District Council	26 March 2019

## Annex B List of conditions

- 1) Details of the appearance, landscaping, layout, and scale, (hereinafter called "the reserved matters") shall be submitted to and approved in writing by the local planning authority before any development takes place and the development shall be carried out as approved.
- 2) Application for approval of the reserved matters shall be made to the local planning authority not later than 2 years from the date of this permission.
- 3) The development hereby permitted shall take place not later than 2 years from the date of approval of the last of the reserved matters to be approved.
- 4) The submission of reserved matters applications pursuant to this outline planning permission shall together provide for no more than 120 dwellings, parking, public open space, landscaping, surface water attenuation and associated infrastructure and demonstrate compliance with the approved plans listed below and broad compliance with the approved plans listed below:  
Approved Plans:

Location Plan:	1296/01 FINAL
Access Details:	45604-P-SK205
- 5) Prior to first occupation of the development hereby permitted the provision of the following works shall have been completed, details of which shall have been submitted to and approved in writing by the local planning authority prior to implementation:
  - The access to the application site shown in principle on drawing 45604-P-SK205
  - The cycle/pedestrian access between Gleneagles Way and Glebefield Road as shown in principle on Drawing 45604-P-SK200
  - Improved no entry signage at the end of the A12 southbound off-slip for drivers on The Street, plus improved speed limit signs and road markings for drivers leaving the A12 as show in principle on Drawing 45604-P-SK202
  - Improvements to the visibility splay from Gleneagles Way towards the A12 southbound off-slip shown on Drawing 45604-P-SK20 to include trimming/removal of vegetation/trees, relocation/replacement of signs/street furniture/lamp column(s), regrading/hardening of highway land.
  - A footway and (A12) road signage improvements at The Street/A12 north bound on-slip junction as shown in principle on Drawing 45604-P-SK201.
  - Improvements to the (A12) road signage, kerb alignment and road markings at The Street/Maldon Road as shown in principle on Drawing 45604-P-SK201.
  - The provision of dropped kerbs and associated works where the footway from Hatfield Peverel to Witham crosses the A12 northbound on-slip to the south of the Petrol Filling Station (former Lynfield Motors site), Hatfield Road, Witham.
  - The provision of a zebra crossing on B1019 Maldon Road in the approximate position shown on Drawing 45604-P-SK207
- 6) No building erected on the site shall exceed two storeys in height or have a maximum ridge height of more than 9 metres.
- 7) Any Reserved Matters application relating to scale or layout shall be accompanied by full details of the finished levels, above ordnance datum, of the ground floor(s) of the proposed building(s), in relation to existing ground levels.

The details shall be provided in the form of site plans showing sections across the site at regular intervals with the finished floor levels of all proposed buildings and adjoining buildings. The development shall be carried out in accordance with the approved levels.

- 8) Together with any submission of reserved matters, details of sound insulation measures must be submitted to and approved in writing by the local planning authority. The details must demonstrate that internal noise levels do not exceed 35 dB LAeq 16 hour in living rooms during the daytime (07:00 - 23:00) and also do not exceed 30 dB LAeq 8 hour in bedrooms during the night-time period (23:00 - 07:00) as set out in BS 8233: 2014. In addition, the details must demonstrate that maximum night-time noise levels in bedrooms should not exceed 42 dB L<sub>Amax</sub> more than 10 to 15 times per night. The development must be carried out in accordance with the approved details.
- 9) Together with any submission of reserved matters, details of the proposed boundary mitigation (noise barrier) must be submitted to and approved in writing by the local planning authority. The details must demonstrate that external noise levels will not exceed 55 dB LAeq 16 hour in any of the private residential gardens. The development must be carried out in accordance with the approved details.
- 10) Prior to the commencement of development hereby permitted, a wildlife protection plan shall be submitted and approved by the local planning authority identifying appropriate measures for the safeguarding of protected species and their habitats within that Phase. The plan shall include:

an appropriate scale plan showing protection zones where any construction activities are restricted and where protective measures will be installed or implemented;

details of protective measures (both physical measures and sensitive working practices) to avoid impacts during construction;

details of how development work will be planned to mitigate potential impacts on protected species, as informed by the project ecologist;

a person responsible for:

- a) compliance with legal consents relating to nature conservation;
- b) compliance with planning conditions relating to nature conservation;
- c) installation of physical protection measures during construction;
- d) implementation of sensitive working practices during construction;
- e) regular inspection and maintenance of physical protection measures and monitoring of working practices during construction; and
- f) provision of training and information about the importance of "Wildlife Protection Zones" to all construction personnel on site.

All construction activities shall be implemented in accordance with the approved details and timing of the plan unless otherwise approved in writing by the local planning authority.

- 11) Any Reserved Matters application relating to landscaping as required by Condition 1 of this permission shall incorporate for the written approval of the local planning authority a detailed specification of hard and soft landscaping works for each phase of the development. This shall include plant/tree types and sizes, plant numbers and distances, soil specification, seeding and turfing treatment, colour and type of material for all hard surface areas and method of laying, refuse storage, signs and

lighting. The scheme and details shall be implemented as approved. The scheme and details shall provide for the following:

All areas of hardstanding shall be constructed using porous materials laid on a permeable base.

All planting, seeding or turfing contained in the approved details of the landscaping scheme shall be carried out in phases to be agreed as part of that scheme by the local planning authority.

Prior to the occupation of each dwelling, the hardstanding associated with that dwelling shall be fully laid out.

Any trees or plants which die, are removed, or become seriously damaged or diseased within a period of 5 years from the completion of the development, shall be replaced in the next planting season with others of a similar size and species.

Any Reserved Matters application relating to landscaping shall be accompanied by cross section drawings showing the relative heights of the proposed dwellings in association with landscape features.

12) No development shall commence, including any groundworks, until a Construction Method Statement has been submitted to, and approved in writing by the local planning authority. The Statement shall be implemented as approved. The Statement shall provide for:

- Safe access to/from the site including details of any temporary haul routes and the means by which these will be closed off following the completion of the construction of the development;
- The parking of vehicles of site operatives and visitors;
- The loading and unloading of plant and materials;
- The storage of plant and materials used in constructing the development;
- The erection and maintenance of security hoarding including decorative displays and facilities for public viewing, where appropriate;
- Wheel washing facilities;
- Measures to control the emission of dust and dirt during construction;
- A scheme for recycling/disposing of waste resulting from demolition and construction works.
- A scheme to control noise and vibration during the construction phase
- Provision of a dedicated telephone number(s) for members of the public to raise concerns/complaints, and a strategy for pre-warning residents of noisy activities/sensitive working hours.

- 13) Demolition or construction works, including starting of machinery and delivery to and removal of materials from the site shall take place only between 08.00 hours and 18.00 hours on Monday to Friday; 08.00 hours to 13.00 hours on Saturday; and shall not take place at any time on Sundays or on Bank or Public Holidays.
- 14) Details of any proposed external lighting to the site for each phase of the development shall be submitted to, and approved in writing by, the local planning authority as part of any Reserved Matters application. The details shall include a layout plan with beam orientation and a schedule of equipment in the design (luminaire type, mounting height, aiming angles, luminaire profiles and energy efficiency measures). For the avoidance of doubt the details shall also:
- identify those areas/features on site that are particularly sensitive for bats and that are likely to cause disturbance in or around their breeding sites and resting places or along important routes used to access key areas of their territory, for example, for foraging; and
  - show how and where external lighting will be installed (through the provision of appropriate lighting contour plans and technical specifications) so that it can be clearly demonstrated that areas to be lit will not disturb or prevent the above species using their territory or having access to their breeding sites and resting places.
- All lighting shall be installed, maintained and operated in accordance with the approved details.
- 15) No piling shall be undertaken on the site in connection with the construction of the development until details of a system of piling and resultant noise and vibration levels has been submitted to and approved in writing by the local planning authority. The approved details shall be adhered to throughout the construction process.
- 16) No development or preliminary groundworks shall commence until a programme of archaeological evaluation has been secured and undertaken in accordance with a written scheme of investigation which has been submitted to and approved in writing by the local planning authority.

A mitigation strategy detailing the excavation/preservation strategy shall be submitted to the local planning authority following completion of the programme of archaeological evaluation as approved within the written scheme of investigation.

No development or preliminary groundworks shall commence on those areas containing archaeological deposits until the satisfactory completion of fieldwork, as detailed in the mitigation strategy, and which has been approved in writing by the local planning authority.

Within 6 months of the completion of fieldwork a post-excavation assessment shall be submitted to the local planning authority. This will result in the completion of post-excavation analysis, preparation of a full site archive and report ready for deposition at the local museum and submission of a publication report.

- 17) No development shall commence until a detailed surface water drainage scheme for the site, based on sustainable drainage principles and an assessment of the hydrological and hydro geological context of the development, has been submitted

to and approved in writing by the local planning authority. The approved scheme shall subsequently be implemented prior to occupation.

The scheme shall include but not be limited to:

- Limiting discharge rate to 1.25l/s/ha;
- Providing sufficient storage to manage the 1 in 100 year + 40% climate change storm event on site with no flooding of the formal drainage system during the 1 in 30 year event. Provide sufficient storage so that no flooding will occur during the 1 in 30 year event in the case of pump failure;
- Provide adequate treatment across all elements of the development.

18) No development shall commence until a Maintenance Plan detailing the maintenance arrangements for each phase of the development, including who is responsible for different elements of the surface water drainage system and the maintenance activities/frequencies, has been submitted to and approved in writing by the local planning authority. The Maintenance Plan shall be implemented as approved.

The applicant or any successor in title or adopting authority shall maintain yearly logs of maintenance which shall be carried out in accordance with any approved Maintenance Plan for each phase of the development. These shall be available for inspection upon a request by the local planning authority.

19) No development shall commence until a scheme to minimise the risk of offsite flooding caused by surface water run-off and groundwater during construction works has been submitted to and approved in writing by the local planning authority. The scheme shall be implemented as approved.

20) No development shall commence until a foul water strategy has been submitted to and approved in writing by the local planning authority. No dwellings shall be occupied until the works have been carried out in accordance with the foul water strategy so approved unless otherwise approved in writing by the local planning authority.

21) As part of the submission of the first reserved matters application as detailed within Condition 1, an Arboricultural Method Statement (AMS) shall be submitted and approved in writing by the local planning authority. The AMS will include a Detailed Tree Protection Plan (DTPP) indicating retained trees, trees to be removed, the precise location and design of protective barriers and ground protection, service routing and specifications, areas designated for structural landscaping to be protected and suitable space for access, site storage and other construction related facilities. The AMS and DTPP shall include details of the appointment of a suitably qualified Project Arboricultural Consultant who will be responsible for monitoring the implementation of the approved DTPP, along with details of how they propose to monitor the site (to include frequency of visits; and key works which will need to be monitored) and how they will record their monitoring and supervision of the site.

The development shall be carried out in accordance with the approved details.

Following each site inspection during the construction period the Project Arboricultural Consultant shall submit a short report to the local planning authority.

The approved means of protection shall be installed prior to the commencement of any building, engineering works or other activities within that Phase of the development and shall remain in place until after the completion of the development.

The local planning authority shall be notified in writing at least 5 working days prior to the commencement of development on site.

- 22) No above ground works shall commence in the relevant phase of the development until details of the location of refuse bins, recycling materials storage areas and collection points shall be submitted to and approved in writing by the local planning authority. The development shall be implemented in accordance with the approved details prior to the first occupation of each respective unit of the development and thereafter so retained.
- 23) No clearance of trees, shrubs or hedges in preparation for (or during the course of) development shall take place during the bird nesting season (March - August inclusive) unless a bird nesting survey has been submitted to and approved in writing by the local planning authority to establish whether the site is utilised for bird nesting. Should the survey reveal the presence of any nesting species, then no development shall take place within those areas identified as being used for nesting during the period specified above.
- 24) Prior to the commencement of above ground construction of the relevant phase of the development details of a scheme for the provision of nest and roost sites for birds and bats shall be submitted to and approved in writing by the local planning authority. Development shall be implemented in accordance with the approved details prior to the first occupation of the dwellinghouses and thereafter so retained.
- 25) Prior to submission of the first application for Reserved Matters pursuant to this planning permission an updated survey of the application site will have been carried out by a suitably qualified and experienced ecologist to investigate the potential presence on the application site of badgers, bats, reptiles and Great Crested Newts.  
  
Details of the methodology, findings and conclusions of the survey shall be submitted to the local planning authority for approval as part of the first application for Reserved Matters pursuant to this planning permission.
- 26) In the event that development is not commenced (or, having commenced, is suspended for more than 12 months) within three years of the planning consent, further surveys for Great Crested Newts as necessary shall be undertaken of all suitable ponds within 500 metres of the application site. Details of the methodology, findings and conclusions of the survey shall be submitted to the local planning authority within 8 months of the completion of the survey and a mitigation/compensation scheme, if required shall be provided for approval prior to the commencement of development. Mitigation/compensation works shall be carried out in accordance with the approved scheme.
- 27) Prior to the submission of the first reserved matters application, details must be submitted to demonstrate that ambient concentrations of nitrogen dioxide will not exceed the UK annual mean objective concentration of 40µg/m<sup>3</sup> at any residential property location within the development.
- 28) Prior to first occupation of the development hereby approved, the Developer shall be responsible for the provision and implementation of a Residents' Travel

Information Pack for sustainable transport, approved by the local planning authority, (to include six one day travel vouchers for use with the relevant local public transport operator).

- 29) Prior to the first occupation of the development hereby permitted the overhead electricity cables crossing the site east /west shall be diverted underground.

## **Annex C – Screening & Appropriate Assessment**

### **RECORD OF THE HABITATS REGULATIONS ASSESSMENT UNDERTAKEN UNDER REGULATION 61 OF THE CONSERVATION OF HABITATS AND SPECIES REGULATIONS 2017 AS AMENDED FOR AN APPLICATION UNDER THE TOWN AND COUNTRY PLANNING ACT 1990**

**Project Title and Location: Called-In planning application No. APP/Z1510/V/17/3180729 Land east of Gleneagles Way, Hatfield Peverel CM3 2JT**

**Project description:- erection of 120 dwellings, together with associated public open space, landscaping, highways and drainage infrastructure works. (Planning Application Ref: 16/02156/OUT, dated 16 December 2016.)**

**Completion Date: November 2018**

#### **Project description – further information**

1. The project site and surroundings are described at paragraphs 19 – 24 of the Inspector's report arising from a public inquiry held into this application between 12 December 2017 and 30 January 2018. The project proposal is described at paragraphs 44 – 45 of that report, in the planning application documentation and in the Environmental Statement. A copy of the inspector's report is attached to this assessment.

#### **Competent authority**

2. The above project, having been called-in by the Secretary of State for Housing, Communities and Local Government, is to be determined by him using his powers under section 77 of the Town and Country Planning Act 1990. The Secretary of State is therefore the 'competent authority' for the purposes of the Conservation of Habitats and Species Regulations 2017.

## **Part 1 - Screening**

3. A Screening Opinion provided to the Inquiry (produced by Braintree District Council took account of mitigation measures at the screening stage and concluded that no Appropriate Assessment was required. A judgment in the Court of Justice of the European Union (CJEU) in People Over Wind and Sweetman and Coillte Teoranta (12 April 2018) means this assessment is no longer legally sound.
4. It will now fall to the Secretary of State to take a screening decision for this application, taking into account any relevant information. As part of this process, a reference back to parties was undertaken, to enable further relevant evidence to be addressed by parties to the Inquiry.

## **Screening Assessment**

### *Relevant documentation*

5. The Secretary of State has taken into account the document “Habitats Regulations Assessment Report Land North East of Gleneagles Way, Hatfield Peverel, Essex” (“HRA Report”) dated June 2018. In this Screening, all references to sections, unless otherwise stated, are to that document. He has also taken into account comments made by parties to whom this document was circulated on 12 July 2018, namely the local planning authority, Rule 6 parties to the Inquiry, and the developer in the cases heard at the same Inquiry, Refs: APP/Z1510/W/16/3162004 and APP/Z1510/V/17/3180725: both on Land off Stone Path Drive, Hatfield Peverel, CM3 2LG.
6. The Secretary of State notes and agrees with sections 1 and 2 of the HRA Report, which set out relevant background and context, the legislative and policy background, factual information about the SAC, SPA and RAMSAR site and its relation to the application site, and the conservation status of the SAC, SPA and RAMSAR site.
7. With regard to the issue raised by Hatfield Peverel Parish Council at paragraph 11.c of their response, he has considered the new Zones of Influence set out in the RAMS update provided by SPMRG in their response to the Stone Path Drive cases, and has had particular regard to the methodology used for arriving at these zones. He is content that it is appropriate to consider only the Blackwater Estuary SPA and the relevant part of the Essex Estuaries SAC for the purposes of this Assessment.

### *Consideration and Conclusions*

8. In screening the proposals before him, the Secretary of State needs to conclude whether they would be likely to have a significant effect on the internationally important interest features of the site, either alone, or in combination with other projects.
9. The conservation objectives for the Essex Estuaries Special Area of Conservation are:  
**Ensure that the integrity of the site is maintained or restored as appropriate, and ensure that the site contributes to achieving the Favourable Conservation Status of its Qualifying Features, by maintaining or restoring;**
  - **The extent and distribution of qualifying natural habitats**
  - **The structure and function (including typical species) of qualifying natural habitats, and**
  - **The supporting processes on which qualifying natural habitats rely**
10. The conservation objectives for the Blackwater Estuary (Mid-Essex Coast Phase 4) Special Protection Area are:

**Ensure that the integrity of the site is maintained or restored as appropriate, and ensure that the site contributes to achieving the aims of the Wild Birds Directive, by maintaining or restoring;**

- **The extent and distribution of the habitats of the qualifying features**
- **The structure and function of the habitats of the qualifying features**
- **The supporting processes on which the habitats of the qualifying features rely**
- **The population of each of the qualifying features, and,**
- **The distribution of the qualifying features within the site.**

11. The Secretary of State has carefully considered section 3 of the HRA Report on Potential Adverse Impacts, in particular 3.4 and 3.5. He concludes that the development proposals, with proposed conditions 4, 17, 18 and 19, should have no significant impact on designated sites in respect of urbanisation, atmospheric pollution, water abstraction and water quality.
12. The Secretary of State considers that, in the absence of mitigation or avoidance measures, there would be the potential for the application proposal to give rise to a likely significant effect due to increased disturbance from recreational activities, namely walking and dog-walking. He considers that the distance from the designated sites means that regular visits from new residents would be unlikely, and that the public open space provided as an integral element of the proposals, together with links to the existing public right of way would provide opportunities for informal recreation for both new and existing residents. He therefore concludes that the proposals are not likely to have a significant effect on the interest features of the SAC, SPA, or RAMSAR site, when considered in isolation.
13. The Secretary of State does however find that the proposal, in the absence of avoidance or mitigation measures, would have potential to contribute towards a significant effect on the interest features for which the SAC, SPA and RAMSAR site has been classified, when considered in combination with other plans and projects.
14. He has considered the issues raised by Hatfield Peverel Parish Council at paragraph 11.e of their response, concerning whether a median or worst-case estimate should form the basis of estimates of impact.
15. While he has found potential to contribute towards a significant effect on the interest features for which the SAC, SPA and RAMSAR site has been classified, through walking, dog walking and informal recreation, when considered in combination with other plans and projects, the Secretary of State disagrees that a worst-case scenario should be used for the purposes of this assessment. The test at this screening stage is one of a likely significant effect. In the Secretary of State's opinion, this test requires estimating the most likely impact based on available evidence, rather than the worst potential impact.

#### *Overall conclusions*

16. The Secretary of State has concluded that the proposal, in the absence of avoidance or mitigation measures, would have potential to contribute towards a significant effect on the interest features for which the SAC, SPA and RAMSAR site has been classified, when considered in combination with other plans and projects.
17. In light of that conclusion the Secretary of State considers that, in light of the judgment of the CJEU mentioned above, the correct course of action is to undertake an Appropriate Assessment.
18. As the competent authority in this case, he has gone on to carry out such an assessment in Part 2 of this document.

## **Part 2 – Appropriate Assessment**

19. The Secretary of State has identified at the screening stage potential to contribute towards a significant effect on the interest features for which the SAC, SPA and RAMSAR site has been classified, when considered in combination with other plans and projects, and has determined that an Appropriate Assessment is required.
20. In accordance with the People Over Wind and Sweetman and Coillte Teoranta ruling, avoidance or mitigation measures can only be considered at this Appropriate Assessment stage. This Appropriate Assessment now needs to consider whether it can be concluded that the proposal will not adversely affect the integrity of the site. In the event it is concluded that the mitigated project will adversely affect the integrity of the protected sites considered, the Appropriate Assessment will need to consider whether it can be demonstrated that there are no alternatives and there are imperative reasons of overriding public interest as to why it must proceed.

### *Relevant documentation*

21. The Secretary of State has had regard to the previously mentioned document “Habitats Regulations Assessment Report Land North East of Gleneagles Way, Hatfield Peverel, Essex” dated June 2018, (“the HRA Report”) and the responses received thereto following reference back to parties. In addition, he has also had regard to documents considered at the Public Inquiry, as set out in Annex A of the Inspector’s report, in particular Core Documents Set C, “Documents submitted by David Wilson Homes Eastern” and “Documents submitted during the Inquiry by the parties”.
22. The Secretary of State’s appropriate assessment has not simply relied on and adopted the above information and responses to it. Rather, the Secretary of State has considered the relevant information independently, and reached his own conclusions. He has also sought the views of Natural England as the appropriate nature conservation body on a draft of this assessment, which are summarised at paragraph(s) 31-32 of this Appropriate Assessment.

### *Consideration*

23. At the prior screening stage, the Secretary of State has already concluded that the application proposals would not be likely to have a significant effect on the SAC, SPA and RAMSAR site other than in respect of disturbance effects. In respect of disturbance effects, the Secretary of State has considered the proposed measures to avoid / mitigate the potential for significant impact on the SAC, SPA and RAMSAR site, set out in sections 4.1 and 4.2 of the HRA report.
24. The Secretary of State agrees that the provision of public open space and access to the Public Right of Way (PROW) network will provide opportunities for informal recreation and alleviate both existing and potential increased recreation at the SPA / RAMSAR site. He recognises that this provision is an integral part of the scheme, and not a proposed mitigation measure.
25. The Secretary of State also considers that the provision of information to support the use of the local footpath network, together with a proportionate financial contribution towards improvements to the PROW network will also serve to encourage new residents to utilise existing public rights of way in the vicinity, and support the diversion of visitors away from the designated sites.

26. The Secretary of State further agrees that the financial contribution towards the Essex Recreation Disturbance Avoidance Monitoring Strategy (RAMS) visitor monitoring surveys at the Blackwater Estuary will help to identify any management measures which may be necessary to mitigate and manage for potential impacts at the designated site.
27. He has paid close attention to the case made by Hatfield Peverel Parish Council in their response, in which they cite Case C-142/16 Commission v Germany contending that monitoring is not mitigation. The Secretary of State notes that in paragraph 37 of the report of Case C-142/16, that the impact assessment proposing the mitigation measure in question did not contain definitive data regarding its effectiveness, and merely stated that its effectiveness could only be confirmed following several years of monitoring.
28. The Secretary of State has considered the precise wording of the signed and dated S106 Agreement provided to the Inquiry, which was the subject of discussion at a round table session on the final sitting day of the Inquiry. The Blackwater Estuary Mitigation Contribution Purposes are defined as being used towards:
- “...the provision of visitor management measures (which may include surveys) to raise awareness of the effects of visitor disturbance at the Blackwater Estuary SPA/RAMSAR site”
29. The Secretary of State considers that this envisages that the contribution could be used towards other measures, and has taken into account the note on the RAMS update provided by SPMRG in their response which states at paragraph 4.4.3 that the three most common forms of generic mitigation are: habitat creation, education and communication, all of which would seem to be allowable under the wording of the S106 Agreement. He therefore concludes that in this case, there is sufficient certainty that a robust mitigation will be provided if required.
30. For the above reasons, the Secretary of State considers that the proposed package of on and off-site measures would be sufficient to ensure no likely significant adverse effect on the SAC / SPA / RAMSAR site, either in isolation or in combination with other plans or proposals.

#### *Natural England's advice*

31. Natural England have advised, consistent with their previous comments that a financial contribution towards 'offsite' mitigation measures at the Blackwater Estuary would be required. The mitigation measures that will be funded are consistent with the aims and aspirations of the emerging Essex Coast disturbance Avoidance and Mitigation Strategy (RAMS).
32. Provided the contribution is fully secured, Natural England agree that the proposal would not have an adverse effect on the integrity (AEol) of the Essex Estuaries SAC and Blackwater SPA and Ramsar site, either when considered alone or in combination with other plans or projects.

#### *Consideration and Conclusions*

33. Having concluded that the proposal will not adversely affect the integrity of the SAC / SPA / RAMSAR site, and having given careful consideration to the advice of Natural England the Secretary of State has considered how the proposed mitigation / avoidance measures

needed to ensure the acceptability of the proposal are to be secured should the application be granted.

34. Promoting the local footpath network by supplying all new residents with a map and guide to local (circular) walking routes is secured by Condition 28.
35. The “green infrastructure” package for this development, including public access to the adjacent PROW which will provide a link to a circular walk to the PROW network to be available all year round is an integral part of the proposals. Taken together with a financial contribution towards improvements to the Public Rights of Way (PRoW) network within the vicinity of Hatfield Peverel, secured by Schedule 10 of the s106 agreement dated 8 January 2018, the Secretary of State is satisfied that these will provide an opportunity for dog walkers in close proximity to the development site, thus diverting them away from visiting the Blackwater Estuary (Mid-Essex Coast Phase 4) SPA & Ramsar site.
36. The financial contribution towards the Essex Recreation Disturbance Avoidance Monitoring Strategy (RAMS) is secured by Schedule 9 of the s106 agreement dated 8 January 2018.
37. Accordingly, the Secretary of State is satisfied that if the application were granted outline planning permission, the mitigation and avoidance measures he has deemed necessary to make the application proposal acceptable could be secured. In the light of this conclusion, he has not needed to go on to consider whether it can be demonstrated that there are no alternatives and there are imperative reasons of over-riding public interest as to why it must proceed.
38. Copies of the technical information and correspondence referred to in this Assessment may be obtained by application to the address at the bottom of the first page of the decision letter.

## Annex D - Sites removed from housing trajectory published on 11 April 2019

# Report to the Secretary of State for Housing, Communities and Local Government

by Brian Cook BA (Hons) DipTP MRTPI

an Inspector appointed by the Secretary of State

Date: 20 March 2018

---

THE TOWN AND COUNTRY PLANNING ACT 1990

BRAINTREE DISTRICT COUNCIL

APPLICATION BY

DAVID WILSON HOMES EASTERN

Inquiry Held on 12 December 2017

Land east of Gleneagles Way, Hatfield Peverel CM3 2JT

File Ref(s): APP/Z1510/V/17/3180729

**File Ref: APP/Z1510/V/17/3180729**

**Land east of Gleneagles Way, Hatfield Peverel CM3 2JT**

- The application was called in for decision by the Secretary of State by a direction, made under section 77 of the Town and Country Planning Act 1990, on 12 July 2017.
- The application is made by David Wilson Homes Eastern to Braintree District Council.
- The application Ref 16/02156/OUT is dated 16 December 2016.
- The development proposed is erection of 120 dwellings, together with associated public open space, landscaping, highways and drainage infrastructure works.

**Summary of Recommendation: The application be approved.**

---

**Procedural Matters**

***Matters common to all three schemes considered at the Inquiry***

1. The Inquiry opened on 12 December 2017 and sat for eight days. I carried out an unaccompanied visit to the site and a tour of the surrounding area on 3 January which included viewpoints to which I was directed by the parties. Closing submissions were made in writing in sequence during January. The Inquiry was closed in writing on 30 January 2018 following receipt of all outstanding documents including obligations entered into under s106 of the principal Act.
2. Three schemes were considered at the Inquiry; the application listed in the summary details above; an appeal against the refusal of an application by Gladman Developments Ltd (GDL) for outline planning permission for up to 80 dwellings (including up to 40% affordable housing), introduction of structural planting and landscaping, informal public open space and children's play area, surface water flood mitigation and attenuation, primary vehicular access off Stone Path Drive, and associated ancillary works on Land off Stone Path Drive, Hatfield Peverel, Essex (ref: APP/Z1510/W/16/3162004); and an outline application in the same terms but for up to 140 dwellings at the same address and submitted by the same applicant (ref: APP/Z1510/V/17/3180725).
3. In each case all matters except access are reserved for future determination.
4. The two applications were called in for determination by the Secretary of State on 12 July 2017. In each case the reason given was that he wished to be informed about:
  - i) Policies in the National Planning Policy Framework (Framework) on delivering a wide choice of high quality homes;
  - ii) The extent to which the proposed development is consistent with the development plan for the area; and
  - iii) Any other matters the Inspector considers relevant.
5. The appeal was recovered for determination by the Secretary of State on 12 October 2017. In this case the reason given for the direction under s79 of the principal Act was that, having called in application 16/01813/OUT (file ref: APP/Z1510/V/17/3180725) which affects the same site, the Secretary of State wishes to re-determine the appeal himself so that he can consider both proposals at the same time. The appeal was therefore recovered because of the particular circumstances.

6. No pre-Inquiry meeting was held. Instead, I issued two pre-Inquiry notes on 8 November 2017 (INSP1) and 5 December 2017 (INSP2) and a further email dated 7 December 2017 relating specifically to housing land supply issues (INSP3).
7. In response to these notes three documents were produced on behalf of both GDL and David Wilson Homes Eastern (DWH). These are Cumulative Air Quality Impact Assessment (ID1.4), a Transport/Highways Note (ID1.5) and a Statement of Common Ground (SOCG) with Essex County Council (ECC) on education issues (ID1.8). A further Briefing Note: Clarification of Presentation Provided by Mr John Webb (ID20) was produced following the submissions from interested persons on the first day of the Inquiry.
8. Some evidence was common to all three schemes. This included that on housing land supply which was heard, at the parties' request, by way of a round table discussion. Much of the policy evidence was also common to all three schemes.
9. I issued a further note following the close of the Inquiry sessions (INSP4). This concerned a heritage matter that is not relevant to this application and also sought clarification of the submissions made in respect of Core Strategy policy CS1. In short, I asked whether it was the whole policy that should be considered to be out of date or just that part of it relating to housing numbers and, depending on the answer to that, whether the spatial strategy embedded in the policy could still be considered current if the settlement boundaries predicated upon out of date housing supply numbers could not. The clarifications provided have been taken into account.
10. In a further response before the close of the Inquiry the Parish Council advised that a Habitats Regulation Assessment Screening Report was submitted to Natural England on 18 December 2017 and, further, that Natural England's comments were received by the Council on 25 January 2018. Although the comments have not been made available to the Inquiry, the Parish Council states '...at face value the comments appear positive enabling the Neighbourhood Development Plan to progress.' It further advises that a meeting has been arranged for 5 February with the Council to discuss the way forward and '...to agree how to expedite the Plan.'
11. GDL co-ordinated the core documents listed in Annex A. Although there are three sets, one for each GDL scheme and another for the conjoined Inquiry, all three sets are listed in each report since reference was made throughout to all three sets. DWH prepared its own core documents specific to the scheme that is the subject of this report. The documents listed as being submitted during the Inquiry relate to all three schemes. It is perhaps worth noting that only a limited number of the documents listed was referred to in the written and oral evidence.

### ***Matters specific to this application***

12. Before the Inquiry the Planning Inspectorate agreed to the request made by Hatfield Peverel Parish Council (HPPC) to be a made Rule 6 (6) party.
13. The application was supported by a number of documents which are listed as SAV1 to SAV28 inclusive in Annex A.
14. DWH has prepared and submitted a SOCG with each of the Council and HPPC (SOCG4 and SOCG 5 respectively). Each follows the same format. Among the

matters that are agreed are the relevant policies of the adopted and emerging development plan, the application site and its surroundings, the application proposal and the position on a wide range of detailed considerations that are listed. Although the precise terms of each agreement is different (for example SOCG5 with HPPC does not acknowledge that the scheme would make a substantial contribution to the shortfall in five year housing land supply), each agrees that the Council cannot currently demonstrate a five year supply of housing land.

15. The SOCG between DWH and the Council records DWH's view that the objectively assessed housing need (OAHN) for market and affordable housing is higher than that proposed by the Council in the emerging development plan. In the event, this dispute was not pursued. DWH also records that it expects to contest the conclusions of the Council's updated five year housing land supply assessment when it is published.
16. There are five matters in dispute between DWH and HPPC. These are:
  - a. The weight to be given to relevant policies in the adopted and emerging development plans;
  - b. The weight to be given to the conflict with the spatial strategy of the development plan;
  - c. The degree of harm to the rural character of the area and the landscape setting of the village and the weight to be given to that harm;
  - d. Whether the proposal would result in a loss of part of the significant gap of open countryside between the settlements of Hatfield Peverel and Witham such as to harm the identities of these separate settlements; and
  - e. Whether the adverse impacts of the scheme would significantly and demonstrably outweigh the benefits when assessed against the policies in the Framework as a whole.
17. An Obligation pursuant to s106 of the Act was entered into by DWH and the Council and a completed document (ID59) was submitted before the close of the Inquiry.
18. The Council issued a Screening Opinion on 28 August 2015 to the effect that a development of approximately 140 dwellings was not EIA development (paragraph 4.1 SOCG4). The Secretary of State came to the same view having considered the scheme both on its own and in combination with others.

### **The Site and Surroundings**

19. The application site is about 5.2ha in extent and is situated on the north eastern side of Hatfield Peverel. To the north east again is the town of Witham.
20. The topography of the site, which is currently in use as arable farmland together with associated field margins, is generally flat. To the north east of the site is agricultural land and, beyond that, a fishing lake introduced following mineral extraction.
21. It is thus a greenfield site located outside but adjoining the built-up area of the village. In that respect it is bounded to the west by existing residential

development at Gleneagles Way, Wentworth Close, Birkdale Rise, Ferndown Way, Woodham Drive and Vicarage Crescent with the village beyond. A single private dwelling (Small Acres) lies immediately to the south. To the north is The Street (B1137) and the A12 slip road. The A12 links Ipswich, Colchester and Chelmsford to the M25 and east and central London beyond.

22. Agricultural vehicles use a break in the hedge in the south east corner to access the land. Other vehicular accesses are available from Birkdale Rise and Ferndown Way. A public right of way links Maldon Road to the south west of the application site with agricultural land to the north west. At present this path does not connect to the application site.
23. The site does not contain nor does it form part of any heritage asset or setting of any heritage asset. It lies within Flood Zone 1, the lowest probability of flooding.
24. The site is within the designated Hatfield Peverel Neighbourhood Plan (NDP) Area. The village is a Key Service Village (KSV) identified in the adopted development plan. Although slightly renamed, that status is maintained in the emerging plan. There is a good range of services and facilities in the village centre which is close to the application site. There are four bus stops within 0.5km of the application site used by various bus services. There are frequent services to Witham, Colchester, Chelmsford and other nearby settlements with less frequent services on Sundays. Trains run from the village to London Liverpool Street, Colchester, Braintree and other destinations.

## **Planning Policy**

### ***Adopted development plan***

25. The adopted development plan for the area includes the saved policies of the Braintree District Local Plan Review (LPR) adopted in 2005 and the Braintree District Core Strategy (CS), adopted in 2011. Included in the SOCGs is a lengthy list of what are termed policies relevant to the application. Included in CD11.1, set B and CD10.1, set B are those policies and the supporting text that are of particular relevance to the determination of this application.

### *The LPR*

26. Policy RLP 2 states that new development will be confined to the areas within town development boundaries and village envelopes. Outside these areas countryside policies will apply although exceptions may be made for affordable housing schemes which comply with LPR policy RLP 6. Such considerations do not apply in this case. Policy RLP 3 sets out a number of criteria that all residential development within development boundaries and village envelopes must meet.
27. RLP 80 addresses landscape features and habitats. In essence it requires applicants to assess the impact of a proposed development on wildlife and distinctive landscape features and for proposals in mitigation of any impacts to be put forward. Development that would not integrate successfully into the local landscape will not be permitted.
28. Other LPR policies listed in the SOCG are in a form designed to ensure that the technical requirements of statutory and other consultees are given policy force.

The wording is generally in the form of not allowing development unless required measures are secured.

#### *The CS*

29. Policy CS1 sets out the housing provision that will be made over the period 2009 to 2026. It also sets out where those new dwellings will be located. These include KSVs; Hatfield Peverel is such a village. Policy CS2 sets out the requirement for developments to provide affordable housing with the target percentage being determined by the location of the proposed development. A target of 40% applies on sites in rural areas.

30. The precise wording of policy CS5 is as follows:

*Development outside town development boundaries, village envelopes and industrial development limits will be strictly controlled to uses appropriate to the countryside, in order to protect and enhance the landscape character and biodiversity, geodiversity and amenity of the countryside.*

31. The natural environment and biodiversity is addressed by policy CS8. This is a policy that covers almost two sides of A4. The gist however is that developers are required to have regard to, or to take account of, the impact of the proposed development on a wide range of factors. Of relevance to this proposal are the protection and enhancement of the natural environment in the widest sense, the protection of the best and most versatile agricultural land, the character of the landscape and its sensitivity to change and the minimisation of exposure to flood risk.

32. Policy CS9 is in many respects a general design principles policy. A good provision of high quality and accessible green space including accessible natural green space to meet, among other things, amenity needs is secured by policy CS10. Policy CS11 sets out, in essence, that development contributions towards necessary infrastructure services and facilities will be secured through, among other things, planning obligations.

#### ***Emerging development plan***

##### *Braintree New Local Plan (BNLP)*

33. The BNLP was submitted to the Secretary of State in October 2017. The examination has therefore commenced. It is in two parts. Part 1 (CD12.3 set B) plans strategically across three local planning authority areas. At the time of the Inquiry the examination hearings were due to commence in January 2018. Part 2 (CD12.4 set B) relates to the Council area only. Hearing dates have yet to be arranged. There are a substantial number of representations raising fundamental issues with both parts of the BNLP. Those made by GDL are at CD33.1, set C.

34. Although in Part 1 policy SP 2 continues a spatial strategy for North Essex that seeks to accommodate development within or adjoining settlements according to their scale, sustainability and role, it also proposes three new garden communities one of which would be to the west of Braintree. Policy SP 3 sets out housing needs which for Braintree are 14,320 dwellings over the period 2013 to 2033 on the basis of an OAHN of 716 dwellings per annum.

35. Turning to part 2, the broad spatial strategy for the Council area is to concentrate development on the town of Braintree, planned new garden communities, Witham and the A12/Great Eastern Mainline corridor and Halstead. Hatfield Peverel lies within the A12/Great Eastern Mainline corridor and is identified as a KSV. Policy LPP 1 states:

*Within development boundaries, development will be permitted where it satisfies amenity, design, environmental and highway criteria and where it can take place without material adverse detriment to the existing character and historic interest of the settlement.*

*Development outside development boundaries will be strictly controlled to uses appropriate to the countryside to protect the intrinsic character and beauty of the countryside.*

36. Policy LPP 31 proposes a comprehensive redevelopment area on land between the A12 and the Great Eastern Main Line. This comprises four areas; the former Arla Dairy site; Sorrell's Field; Bury Farm; and a smaller site to the rear of Station Road. Among the list of things that the development will be expected to provide are financial contributions to early years and childcare provision, contributions towards primary and secondary education facilities and contributions to other community facilities including health provision as required by the NHS.
37. Landscape character and features are subject to policy LPP 71. This requires, in broad summary, applications for development to demonstrate an understanding of the landscape character of the area and show how the development proposed would fit in. Development that would not successfully integrate into the local landscape will not be permitted.
38. Green buffers are proposed through policy LPP 72 where it is considered desirable to prevent coalescence of two settlements. No green buffer is proposed between Hatfield Peverel and any other settlement such as Witham.

#### *Hatfield Peverel Neighbourhood Development Plan (NDP)*

39. The NDP (CD15.2, set B) has been submitted for examination and the examiner appointed. At Appendices MR23 to MR 25 of Mr Renow's proof (HPPC1) is the exchange of letters between the examiner and HPPC. On 5 September 2017 the examiner set out the two 'important' matters about which she had 'serious concerns in respect of the progress of the examination and the (HP)NDP meeting the statutory Basic Conditions' (MR23). Having considered the reply dated 13 September 2017 from HPPC (MR24), she wrote again on 20 September declining to continue the examination while the necessary additional work was undertaken (MR25). The reason given was '...the issues raised are sufficiently substantive that I feel to do so runs the risk of undertaking work that could later be found to be abortive and incur unnecessary costs to the local authority.'
40. The NDP is subject to unresolved objections including those from GDL (CD33.2, set C) and DWH (SAV50 and SAV52).
41. Policy HPE1 creates a green wedge along the eastern development boundary of Hatfield Peverel to avoid coalescence with Witham. The policy sets out those types of development that would be permitted within the green wedge provided that the open nature of the area is maintained. The list is very similar to those

listed in Framework paragraph 89. However, the 'very special circumstances' caveat set out in Framework paragraph 87 is not included.

42. The retention of existing trees, hedgerows and habitats, the mitigation of their loss and the retention of natural boundary treatments and the provision of new areas through new development is the subject of policy HPE2. The protection of the landscape setting of the village through the preservation and enhancement of views identified by the community and the Hatfield Peverel Landscape Character Assessment is achieved through policy HPE6.

### **Relevant Planning History**

43. An outline application for the erection of up to 145 dwellings and associated infrastructure was refused planning permission in April 2016.

### **The Proposals**

44. The application has been submitted in outline with all matters except access reserved for future approval. Access would be via Birkdale Rise. Up to 120 dwellings would be provided with 40% being affordable housing.
45. The application was accompanied by a Design and Access statement (SAV7) and a Parameters Plan (SAV4). Both are illustrative only and not therefore for approval. They do however indicate how the development might be implemented.

### **The cases put by the parties**

46. Although three separate developments were being considered at the Inquiry, that was not, in the main, how the evidence was presented and tested. This was inevitable and the most efficient use of Inquiry time as there was a significant degree of commonality in, for example, the evidence given on policy and housing land supply topics. Counsel for GDL adopted the submissions of Mr Tucker in respect of both these matters. Similarly, Mr Tucker adopted the submissions of Ms Osmund-Smith in a limited number of matters and the case made by GDL in that respect is therefore set out below.
47. Although Stone Path Meadow Residents Group (SPMRG) has no interest in this application, Ms Scott did call evidence and make submissions about both policy and housing land supply. Those are included below for completeness since Mr Tucker refers to them in his submissions on these matters. Relevant SPMRG documents are also listed in Annex A.
48. Closing submissions were submitted in the same sequence as they would have been presented at the Inquiry. The usual convention whereby the scheme promoter hears the cases against the proposal before making its case was thus observed. As will be clear, Mr Tucker has responded to points made by other advocates.
49. It is fair to say that he is quite critical of the way in which some arguments have been put by Mr Graham for HPPC and, to a much lesser extent, Ms Scott for SPMRG. In short, the criticisms are that the case has been developed, if not actually changed, from that trailed in the statement of case; evidence from witnesses has been misrepresented and concessions in cross examination ignored.

50. I believe there is some substance to all of those criticisms and I have had regard to that in coming to my conclusions. While I have recorded the flavour of the criticisms in presenting the case set out, the exact, sometimes robust, phrasing used has not been included. Each closing submission is nevertheless listed and available to read in full.

## **The case for David Wilson Homes Eastern**

### ***Introduction***

51. The land use issues raised against the DWH scheme are comparatively modest and are accepted by the Council not to be sufficient to outweigh the benefits of the scheme. This, in the context of a District where there is agreed to be an immediate need for additional housing land. Moreover, whilst HPPC and a handful of residents from the Gleneagles Estate have challenged the DWH case, it is perhaps of note that most of the time at this inquiry has been spent on the merits of the GDL schemes; the site specific merits of the DWH site were discussed and challenged in less than a day.
52. It was stated in opening that this is a comparatively straightforward proposal. In reality nothing which has been presented over the course of the Inquiry to change that position.
53. It is agreed with the Council that there is a significant deficit against the required 5 Year Land Supply (5YHLS) and there therefore is an immediate need for additional housing, which will necessarily have to include land that is presently undeveloped.
54. It is agreed that there is an immediate need for additional affordable housing.
55. There is no statutory consultee who has objected to the application scheme.
56. The only policy objections (albeit not raised by the Council) relating to the DWH proposals relate to:
- i) breach of 'in principle' countryside policies which are based upon settlement boundaries which are agreed by the HPPC's planning witness to be out of date; and
  - ii) breach of policies in respect of a draft and flawed NDP which can only be afforded the most limited weight;
57. Requested contributions to infrastructure etc. are provided for in full in the s106 obligation.
58. The application site is located in a sustainable location (in this respect DWH acknowledges and adopts the case made by GDL) and relates well to the settlement of Hatfield Peverel which it is agreed will need to accommodate additional growth.

### ***5 year housing land supply***

59. Framework paragraph 47 directs that local planning authorities must identify and update a "supply of specific deliverable sites" to provide 5 years' worth of housing against their housing requirements. Deliverable is defined in footnote 11:

*To be considered deliverable, sites should be available now, offer a suitable location for development now, and be achievable with a realistic prospect that housing will be delivered on the site within 5 years and in particular, that development of the site is viable. Sites with planning permission should be considered deliverable until permission expires, unless there is clear evidence that schemes will not be implemented within five years, for example they will not be viable, there is no longer a demand for the type of units or sites have long term phasing plans.*

60. In *St Modwen Developments Ltd v SOSCLG* [2017] EWCA Civ 1643 (paragraph 38, CD32.18 set C) the approach that should be taken to assessing whether a site is "deliverable" in the context of the footnote 11 definition is confirmed. Properly understood the judgment does no more than reiterate the ordinary and natural meaning of the words of the footnote. It does not, as Mr Graham sought to argue for HPPC, reduce the threshold for assessing yield from deliverable sites. In that case the Appellant was contending that only those sites with planning permission should be considered to be deliverable. Self-evidently, whether or not a site is counted into the exercise as "deliverable" is only the first step of the exercise - the crucial issue in this case is what comprises the likely yield of the deliverable sites. Doubtless this important distinction will be clear to the Secretary of State.
61. It appears from his closing submissions that Mr Graham has misinterpreted this important judgment. In response to HPPC's closing submissions, (paragraph 5, ID48) there is no judicial authority that "deliverable" means, as Mr Graham submits, 'non-fanciful'. The judgment of Lindblom LJ is clear that "deliverable" in the context of Framework paragraph 47 is defined solely by footnote 11. Mr Graham's submission in this regard is simply wrong.
62. To the minimum requirement to demonstrate a 5YHLS must be added a buffer of 5% or 20% depending upon whether there has "been a record of persistent under delivery". The courts have clarified what is meant by "persistent under delivery" in *Cotswold DC v SOSCLG* [2013] EWHC 3719 (paragraph 47, ID1.15). Essentially, whether under delivery has been persistent is a matter of planning judgment, considering a reasonable period of time for analysis and against a justifiable housing requirement which can include consideration of what is proposed in an adopted plan and evidence of need. Addressed below is why it is considered that a 20% buffer is appropriate.
63. The starting point for the numerical calculation of the 5YHLS is to identify an appropriate requirement against which to judge the available supply of deliverable sites. In this case the requirement of the adopted CS is based upon a hopelessly out of date figure derived from the "policy on" content of the long defunct Regional Spatial Strategy. In those circumstances it is agreed with all parties that it is appropriate to identify the OAHN based upon the most up to date evidence, without any policy adjustment.
64. What figure comprises the OAHN will be a matter of intense debate at the forthcoming examination in public of the emerging BNLP, to which there is intense dispute. That debate will take place in January 2018. However, given that the decisions of the Secretary of State will be made after this debate has taken place GDL/DWH in this Inquiry have taken the pragmatic decision not to use the Inquiry as a dry run for those arguments, but rather to accept for the

purposes of the Inquiry that the Council's figure is the correct one. Should compelling evidence arise to support a contrary position prior to the decision of the Secretary of State then that will be drawn to his attention in advance of that decision.

65. Thus, for the purposes of the Inquiry, Mr Spry adopts the Council's estimated OAHN of 716 dpa derived from the evidence base from the emerging BNLP. There is no disagreement between any of the parties to this Inquiry that this approach is reasonable and thus, this is the appropriate starting point.

66. The disagreement between the parties relates to the following areas:

- i) Liverpool or Sedgefield approach for addressing the shortfall: - The applicants and the Council have agreed, again for the purpose of this Inquiry, that the correct approach is Sedgefield. It is noted that the Council is pursuing the Liverpool methodology at their Local Plan examination, however it properly accepts, that without specific support from the examining Inspector, it could not reasonably support such an approach for the purpose of this Inquiry;
- ii) 5% or 20% buffer;
- iii) The supply of deliverable sites - There is a dispute between SPMRG and GDL/DWH on the sites that should be considered to be deliverable and therefore included in the supply with SPMRG arguing for the inclusion of draft local plan allocations. That position is expressly rejected by the Council which does not consider that those sites should be afforded sufficient weight to be included, given the stage in the process and the degree of unresolved controversy which relates to them. There is then the more important debate about the likely yield from a handful of disputed sites as between the Council and Mr Spry. This disagreement on yield on those sites is essentially one of judgment based upon agreed facts and is covered in detail in ID1.14 where the difference between the parties is reduced to a yield of 68 dwellings.

67. HPPC lead no evidence on the point. The submissions made in closing on which sites should be included must therefore be given no weight.

#### *Liverpool v Sedgefield*

68. The only parties advocating for a "Liverpool" approach - ie spreading the shortfall over the whole of the local plan period - are the Rule 6 parties. The Council has agreed that this is not the correct method for calculating the 5YHLS position for this Inquiry, whilst arguing for that position through the BNLP examination. Its reasoning is robust - until the examining Inspector endorses a different approach then based upon recent appeal decisions, the "preferred" approach of Planning Practice Guidance (PPG) of the Sedgefield methodology is to be preferred.

69. Notably there was no discernibly logical argument put forward by either of the Rule 6 parties to support a contrary case for the use of Liverpool. The best that was offered was that the Liverpool methodology would be appropriate because when looking back at the record of under delivery it is claimed that the Council cannot meet its requirement in the short term and therefore Liverpool should be used - repeated in the SPMRG closing (paragraph 86(ii), ID49). With the greatest of respect, this is not sound planning. Not only is it in conflict with

guidance to the contrary in PPG, but also it has serious social consequences, given that the shortfall in delivery is not one which arises over the next 15 years but rather it exists right now, at the start of the 5 year period under consideration. Not to do so now means deferring the meeting of needs - which is the antithesis of the tone and content of Framework paragraph 47.

70. The argument is that it is simply not possible to deliver the undersupply in the first 5 years. It is accepted the PPG says that the undersupply should be addressed within 5 years "where possible". However, self-evidently the correct approach to this guidance is to start from a position that it is possible and only change that view where it is shown to be impossible. An impossibility cannot be proven through previous undersupply - the very problem the buffer seeks to address. An impossibility might be proven in cases where the LPA's area is highly constrained e.g. AONB, Green Belt, other designations, or where there is clear market evidence of saturated demand. However, it is strongly submitted that "not possible" is a high bar and one which is not close to being met in this case.
71. The illogic in respect of the DWH site is even more striking since it argues that a site should not be released to a national housebuilder in a sustainable location because there are concerns about the ability of the market to deliver.
72. Thus, if a local planning authority cannot meet its housing requirement, the answer is to release more sites, not to accept that past under delivery represents the benchmark for future delivery and to thereby leave more families without a home.
73. The reality of the Rule 6 parties' position is clear from the SOCG on Additional Housing Supply Sites (ID37). This shows that they need to convince the Secretary of State in respect of all of their points in order to demonstrate a marginal excess against the 5YHLS - i.e. it is only on their flawed analysis of the additional sites together with the use of the Liverpool method and with only a 5% buffer that they can mathematically demonstrate a marginal excess over the 5YHLS. If nothing else this evidences just how dire the position on 5YHLS is in this District. If objectors have to argue for a swathe of implausible assumptions and can still only just show a mathematical exceedance then the clear reality of the land supply position is Braintree falls significantly below what is needed. If there was any doubt to the contrary then no doubt the Council would not have readily conceded the absence of a 5YHLS a matter of weeks before the start of the BNLP examination hearings.
74. In her written evidence, Mrs Jarvis for HPPC attempted to make a somewhat curious secondary argument that even if there was a need for additional housing then development should be distributed evenly within the hierarchy of settlements at the tier within which Hatfield Peverel falls (paragraph 2.15, HPPC2) However, in cross examination that point was rapidly abandoned.
75. First, she accepted that the table within the adopted CS is a minimum figure and therefore one can conclude that the table does not form a basis for a mathematical exercise in allocating the shortfall of housing within the hierarchy. Second, when she was carefully taken through the emerging BNLP she readily accepted that it contained significant changes to the adopted strategy of housing distribution - most obviously in its dependence upon the new Garden Communities - but crucially given the enhanced role of Hatfield Peverel as part of

the A12 corridor of growth. With all due respect to Mrs Jarvis her point went nowhere and it certainly does not support the proposition that she intended that the DWH proposals are out of scale with the settlement, let alone the more radical distribution point made at paragraph 2.15 of her proof.

76. In conclusion, DWH, supported by the Council, strongly submit that the Sedgefield approach must be preferred for this Inquiry. The social dimension of sustainable development must require the shortfall to be delivered within the 5 years - to do otherwise is simply to put off the requirement to boost significantly the supply of housing and results in a failure to meet the requirements of those who want to own a home in this part of the country.

*The Buffer - 20% or 5%*

77. The Council argues for a 5% buffer, GDL/DWH for 20%. The evidential basis for the debate is the update (ID1.11) to table 5.1 in Mr Spry's proof of evidence (4/POE). This updated the completions figures for the early part of the period. The updated table shows:

- i) The Council has not met annual requirement figure since 2011/12;
- ii) There has been persistent and significant under-delivery between 2012-2017;
- iii) There is under-delivery against current half year (April to Sept 2017);
- iv) In combination, there has been under-delivery of housing against the requirement of:
  - 458 - 16.5 yrs
  - 1,002 - 10.5 yrs
  - 1,448 - 9.5 yrs

78. This table compellingly illustrates the inescapable conclusion that there has been persistent under delivery of housing in Braintree. Against this, the Council's unconvincing contention was to argue that it was "unfair" to judge them against an OAHN of 716 from 2013 when the figure was only introduced in November 2016. Rather it was argued that the lower Structure Plan figure should be used. However, the Council will have been well aware that an increased OAHN was likely given the household projections figures (detailed in the updated table 5.1) which were consistently in excess of the Structure Plan figure.

79. It is also clear that the Council was aware of the likely increase in OAHN as evidenced in the minutes of the Council's meeting on 30 June 2014 (1/POE, Appendix 2). Under agenda item 23 the Council decided to withdraw the Site Allocation Development Management Development Plan Document. One of the points noted by the Council was that the Framework would impact on the housing need figures derived from the CS and that under a Framework compliant methodology, those numbers would go up. It is disingenuous by the Council to now say at this Inquiry that they were not aware of the housing numbers going up; plainly they were aware of this from at least 30 June 2014. Therefore not only is it sound planning to backdate the OAHN to 2013, but the Council were also well aware of the requirement to increase their housing figures.

80. The Council's approach is wholly unconvincing. Not only would it be to "reward" tardy plan making but it means judging under-delivery against the wrong metric. The intention of the buffer is not one of "punishing" a local authority which would

then bring in concepts of fairness. Rather it is an objective exercise to determine whether or not there is a need to increase the well of sites from which the development industry can draw in order to achieve the OAHN. In this case it is now known that the target of the adopted plan was substantially below what it ought to have been in order to meet the agreed OAHN and that delivery was also well below the OAHN. It is therefore known that delivery was persistently below what it should have been and more importantly there is no suggestion that the lower Structure Plan target was somehow constraining delivery.

81. The Framework, published in 2012, could not be clearer at Framework paragraph 215: local planning authorities had a period of 12 months to bring policies into line with the Framework and after this date, the weight to be given to any pre-Framework policy would depend on the consistency with it. This includes, as it must, pre-Framework housing requirement figures, such as those used by the Council taken from the now-revoked East of England Plan. The Council ought to have updated their housing requirement in this 12-month period and done so in a way that reflects Framework paragraph 159 which establishes that this should meet "household and population projections" (the figures for which are included in Mr Spry's updated table 5.1 and would have been known to the Council at the time). They could have done so in a Framework compliant way with a partial review. They did not do this and still have not done this. The only Framework compliant way is therefore to back date the OAHN requirement to 2013/14.
82. The Council argue in their closing (paragraph 23 to 24, ID47) that the OAHN figure from 2013/14 was not the "target" at the time as that figure only became known in 2016. Target is the wrong word; it is about meeting housing need. The Framework is clear. Framework paragraph 47 bullet point 2 requires local planning authorities to identify sites to meet their "housing requirements", that means the need at the time. It does not mean the need as it was last identified. To adopt such an approach could result in years of need being unmet simply because a Council has not carried out the necessary work to assess the actual housing need in its area. Mr Cannon's approach would be another reward to the sluggish authority and must be rejected. Mr Spry's must be preferred as an approach that supports the Government's clear objective of boosting the supply of housing by assessing need as it actually is, not as it once was.
83. The appeal decisions cited by SPMRG on this point (paragraphs 90 – 92, ID49) are not on point. The first decision (ID44) was in the context of an authority that had over supplied for an 8 year period. Plainly this Council is a long way from this having undersupplied over a number of years. The second decision (ID43) is also in the context of an authority that had over supplied. The arguments of DWH on this point should be preferred.

#### *Conclusions on 5YHLS*

84. If the Secretary of State accepts that the correct approach to calculating the land supply position in Braintree is Sedgefield/20%, then the supply is 3.3 years against the Council's OAHN figure. It is only if the Secretary of State concludes that all the stars have aligned and that the correct approach is Liverpool/5% with the additional sites put forward by the Rule 6 parties, that the Council could crawl over the line and show a 5YHLS - 5.38 years. It is GDL/DWHs' submissions that such a conclusion, given the weakness of the argument and absence of

supporting evidence, grossly over-stretches the elastic potential of planning judgment.

85. Should the Secretary of State conclude that the correct approach is Sedgefield/20% (or indeed Sedgefield/5, or Liverpool 5/20), then the Council cannot demonstrate a 5YHLS and there is a serious deficit against the minimum policy requirement of Government such that there is an immediate need to redress that deficit. Moreover relevant policy consequences kick in.
86. In the absence of a 5YHLS, Framework paragraph 49 says that "relevant policies for the supply of housing" are not to be considered up to date. The Supreme Court in *Suffolk Coastal DC v Hopkins Homes* [2017] UKSC 37 concluded that decision makers should adopt a narrow approach to identifying which policies should be considered as "relevant policies for the supply of housing" (paragraph 57, CD31.2 set C). However, this may not be the point of the exercise (paragraph 59):

*The important question is not how to define individual policies, but whether the result is a five-year supply in accordance with the objectives set by paragraph 47. If there is a failure in that respect, it matters not whether the failure is because of the inadequacies of the policies specifically concerned with housing provision, or because of the over-restrictive nature of other non-housing policies.*

87. The approach is endorsed at paragraph 83:

*If a planning authority that was in default of the requirement of a five-years supply were to continue to apply its environmental and amenity policies with full rigour, the objective of the Framework could be frustrated.*

88. The weight to be given to particular policies in the adopted and emerging local plans is addressed in due course. However, the point that must be taken from *Suffolk Coastal* is that where it is environmental (or other) policies that have resulted in the failure to demonstrate a 5YHLS, then those policies are as susceptible to having their weight reduced in the balance as those policies that fall within the definition of "relevant policies for the supply of housing".
89. HPPC's closing submissions on the ratio of *Suffolk Coastal* must be rejected (paragraph 36 and 37, ID48). The Supreme Court is not removing the s38(6) test; that is at the heart of decision making. It is a judgment about the weight to be given to policies where the plan is absent, silent or out of date. Mr Graham's approach of dismissing Framework paragraph 14 as "no more than guidance" rather than crucially important national policy which should be afforded substantial weight, is an invitation to the decision maker to fall into serious error.
90. Overall therefore it is firmly submitted:
- i) there is plainly a substantial deficit as against the minimum requirement to demonstrate a 5YHLS;
  - ii) the effect of that is that Framework paragraph 49 is engaged;
  - iii) that alone is sufficient to warrant engaging the presumption in Framework paragraph 14;
  - iv) it is agreed that there is no immediate prospect of the emerging BNLP being adopted and therefore the only means by which the deficit can

be addressed is through the grant of planning permissions in sustainable locations; and

- v) substantial weight should be afforded to the provision of general market housing which contributes to meeting that deficit.

### ***Landscape issues***

91. The Secretary of State is invited to place substantial reliance upon Jeremy Smith's proof of evidence (DWH3) and the landscape and visual impact assessment (LVIA) that underpins it which sets out the landscape considerations in a balanced and compelling way. That is not merely an exercise in advocacy, but for the following compelling reasons:

- i) the LVIA is the only LVIA which has been produced by anyone;
- ii) that LVIA was audited by the Council before it resolved to grant planning permission and was found to be methodologically sound;
- iii) no serious attack has been launched by anyone on the methodology of the LVIA. Whilst in cross examination HPPC sought to "test" some of the elements of the LVIA, HPPC had no comparable evidence to set against it;
- iv) the case in fact put to Mr Smith appeared to be to criticise him because he had taken localised viewpoints where either the application site will be seen in the context of immediately adjacent infrastructure or housing, or where it will be barely seen at all. Rather than making the HPPC's case, such arguments lead to the conclusion that the loss of this ordinary field, which is heavily influenced by adjacent urban development will give rise to no more than highly localised impacts which are readily capable of mitigation. What views will remain will be of housing from within the existing urban area - which is self-evidently characteristic and not harmful.

92. Thus, the reality from the Inquiry is that the totality of HPPC's landscape objections to the DWH scheme, both those put in a couple of pages of Mrs Jarvis's proof as well as the case put in cross examination, are deeply unconvincing. Whilst it is undoubtedly the case that the development of previously undeveloped land on the edge of a settlement gives rise to some inevitable harm, the loss of this otherwise unremarkable and unimportant area of agricultural land gives rise to harm at only the lowest end of the spectrum.

93. HPPC's case prior to the start of the Inquiry was that such a loss was not warranted - in particular because it will impinge upon an important view highlighted in the NDP and secondly that it will result in an unwarranted erosion of the gap between Hatfield Peverel and Witham. It is respectfully submitted that this approach is deeply a misguided one in both landscape and planning policy terms.

### ***Erosion of the Gap***

94. At policy HPE 1, the NDP seeks to prevent coalescence between Hatfield Peverel and Witham. It aims to do this by identifying a "green wedge" (page 24 – 25, CD16.3 set C). The previous version of this policy in an earlier draft of the NDP inappropriately references "Green Belt", rather than the provision of a green wedge as now included in the consultation draft of the NDP. While ostensibly recognising that this was inappropriate, the NDP policy now remarkably attempts

to promote a policy which is even more restrictive than Green Belt, as examined in evidence. Thus, in the Green Belt, planning permission ought to be granted if very special circumstances were evidenced, yet HPE1 provides no such provision. Similarly if a Green Belt were being established then a local planning authority would look to identify safeguarded land for future development to protect the inner boundary of the Green Belt, but here the HPE1 designation comes hard up against the settlement edge.

95. Mr Renow accepted in cross examination that the gap between Hatfield Peverel and Witham would still be almost a kilometre with the development. The assertions in paragraph 191 of HPPC's closing submissions were not put to Mr Smith and were not made by either HPPC witness.
96. The reality of policy HPE 1 is that it is trying to bestow Green Belt-style protection on the land between Hatfield Peverel and Witham, which probably provides an even more constrained policy context, contrary to any reasonable interpretation of the Framework.
97. It is also plain that this NDP policy draws no support from any credible evidence base, nor from adopted or emerging local plan policy. The BNLP (paragraphs 8.31 to 8.36 and policy LPP72, CD16.2 set C) sets out the thinking on green buffers by the Council. Notable by its absence is any protection for the gap between Hatfield Peverel and Witham, in which sits the DWH site.
98. Similarly the underlying landscape evidence base of the NDP does highlight concerns over coalescence, but not in relation to the tract of land within which the application site sits, which makes no mention at all about its supposed role in supporting an important gap.
99. It is noted that HPPC seeks some comfort in its approach from a single sentence email from an officer in the policy team of the Council (ID26), who provides a view which is patently at odds with that of the Council in promoting draft policy LPP72. It is unclear on what possible authority such an email might have been written, but the weight to be afforded to it must be very limited indeed. More importantly, policy HPE1 is subject to substantial and serious objection from both the public and the private sector which seriously diminishes the weight to be afforded to it. Most notably, there is an outstanding objection to this policy by the Essex County Council Spatial Planning Manager. In his objection he notes:

*ECC notes that this [policy HPE 1] is not consistent with Policy LPP 72... The area along the eastern boundary of Hatfield Peverel is subject to a development, which has been approved by BDC, but is subject to a call-in. Consequently, this would infer that BDC does not consider this area as meeting the requirements, which seek to prevent coalescence of settlements.*

100. It is remarkable that HPPC did not seek to draw this to the attention of the Inquiry. With respect however it is the death knell for any contention that any more than the most limited weight should be afforded to policy HPE1.

#### *An Important View?*

101. Policy HPE 6 in the NDP (CD16.3 set C) seeks to:

*protect the landscape setting of the village through the preservation and enhancement of views identified by the community and the Hatfield Peverel Landscape Character Assessment (2015). Any proposed development, or alterations to an area within these views must ensure their key features can continue to be enjoyed including distant buildings, areas of landscape and open agricultural countryside.*

102. There are a whole host of reasons why this policy should be given very little, if any, weight in the final planning balance:

- i) As Mrs Jarvis accepted, it is not consistent with policy LPP72 in the BNLPP.
- ii) In 2015, the Landscape Partnership carried out a Local Landscape Character Assessment for Hatfield Peverel (LLCA) (CD18.4 set C) that forms a fundamental part of the evidence base for the Neighbourhood Plan. The DWH site is within LLCA 4 (page 23 CD18.4). This independent study produced by landscape experts, identifies the key views within the LLCA as shown on the plan on page 23. The blue arrow pointing northeast goes along the public right of way which runs approx. 200m south of the site save for a very thin sliver of land to the extreme south of the site proper which it is intended will provide a landscaped link to the footpath network. When that is compared with the key views that have been included in the NDP (page 33, CD16.3, set C), what is immediately striking is that the view within the proximity of the application site identified by the independent experts is not the one carried forward into viewpoint 5 in the NDP. The experts, undertaking an approach with a recognisable methodology, identify the views out from the start of the public right of way which runs along the southern/eastern boundary of the site and which will be covered by public open space in the application, that view will be entirely unaffected by the appeal proposals. The NDP, at viewpoint 5, dismisses this and instead promotes a view from the end of a residential cul-de-sac, with no entrance to a public right of way that looks directly across the development site.

The reasons given for this change by Mr Renow in cross examination were that these views were voted for by local people and are considered to be the views deserving of policy protection within the NDP although Mr Renow did fairly accept that VP5 in the NDP is clearly inconsistent with the LLCA. More fairly still, he accepted that this was not a proper basis to plan protected views. Therefore HPPC's own evidence given by the person who claims to be at the heart of the neighbourhood planning process, is that the view protected in the NDP has no proper evidential basis. Instead, as Mr Smith made clear in his evidence, the view along the public right of way, that does have landscape value, will have any impacts upon it mitigated through boundary planting and the provision of public open space.

- iii) The Workshop for Important Views document (CD 18.6 set C) which sets out the analysis that supposedly led to the inclusion of viewpoint 5 in the NDP as an important view, exposes the reality of the selection. This document, at page 6, where the potential views within LLCA 4 were considered, states as follows with regard to the view across the

application site that eventually became important view 5 in the NDP - "*Key features - line of tall trees, flat field, hedgerows and trees*", but perhaps most revealing "*Value to the community - not sure if this area has any value but the residents like the view*" (emphasis added). The true purpose of the identification of the important views is finally revealed when examining why some of the sites were removed from the NDP. The view of the River Ter (CD18.6 set C, page 2, row 6), that one might consider to be a quintessential view, was removed as it is "*Not subject to planning*". Likewise that the view over St. Andrews Church was removed despite being the "*Historic core of the settlement*". Thus, if the view in the NDP has any claim to be an important one then it is in the teeth of the evidence and based upon the fact that an unknown number of people seem to "like it". As put in cross examination, it is difficult to escape the inference that those promoting the NDP have sought to promote not the important view recommended by an expert but an unimportant view in order to make a case opposing the DWH site.

- iv) Mr Renow sought to criticise the DWH assessment for not having taken account of the views of the community. A landscape character assessment undertaken by a professional landscape architect is intended to convey the objective judgment of the "assessor" and therefore is very rarely materially influenced by the views of the public, unless representations raise an objectively justifiable concern which had not been previously considered. The point is that it is a professional piece of work, which follows recognised guidance, not an informal local referendum on popularity of views. Indeed, when the Neighbourhood Plan team did attempt to take the view of locals as to which views were "important" it did so in a haphazard and inconsistent way which deviated from its purported evidence base. However even on that approach it is of note that the view from Gleneagles Way (proposed to be protected in the NDP) came 4th out of 5 proposed views. So even on his own argument, it does not suggest that even the local community find the view particularly important.
- v) The final piece of evidence exposing the real intentions of the NDP is set out at CD18.3, set C - Hatfield Peverel Site Assessment 2017. The application site is considered at page 8. It identifies no beneficial opportunities at the site, despite those drafting this document in 2017 being aware of this application to develop the site. Mr Renow accepted in cross-examination that the non-preferred sites were marked in this document with no opportunities in contrast with the preferred sites. It is in short an admitted exercise in advocacy and not evidence worthy of the name. Mr Renow reasonably made the above concession and it must be given significant weight. Paragraph 99 of the HPPC closing submissions which row back from this concession on this point can be afforded no weight at all.
- vi) HPPC note in their closing submissions that policy HPE6 deals with views 'identified by the community and the Hatfield Peverel Landscape Character Assessment'. Those are the words in the policy, but so far as relevant to the appeal site those words are flatly contradicted by the evidence base (see above). Indeed Mr Renow properly accepted in

cross examination that the choice of views was only based upon community views - a process with no recognised methodology.

### *The emerging NP*

103. The reality is that the NDP, insofar as it addresses landscape issues, is a partial document. It is not a balanced piece of planning analysis that looks to meet housing need and protect landscapes meriting protection. The motivation appears to have been in part to stymie development in Hatfield Peverel other than on the Arla Dairy site. Consequently, the landscape policies within the NDP should be given very limited, if any, weight. They lack any balanced and considered evidence base and are subject to detailed and robust objection. Additionally, as will be addressed in more detail below, the NDP is some considerable way from being made and is best described as being "stalled" with no immediate hope of being restarted.

### *Landscape Conclusions*

104. The reality of the landscape evidence with regard to the DWH site as it has emerged to the Inquiry is that Mr Smith's approach and assessment withstood challenge and were essentially not contradicted by contrary evidence. The effects of the development on the wider landscape are assessed as minor. Likewise, the visual effects of the development are properly characterised as highly localised especially once the mitigation has matured. As Mr Smith's photographs readily demonstrate there will then be no intervisibility between Hatfield Peverel and Witham, both as a result of distance, intervening landscaping, proposed landscaping as well as the marked effects of the intervening ridge that Mr Smith described. That position will not alter even if the emerging BNLP allocations are endorsed. No proper challenge was raised to Mr Smith's assessment of the scheme against the Eastleigh test. To be blunt just as with landscape, the issue of an impact upon coalescence of settlement is a makeweight point as far as the Gleneagles site is concerned.

105. Regrettably, Mr Graham has not properly recorded the evidence of Mr Smith on landscape. He did not accept that there would be clear intervisibility between the application site and Witham - evidenced in the photo montages. Mr Smith did state that it would be possible to see Wood End Farm as one leaves Hatfield Peverel on the A12. This is not the same as views from the DWH site and nor would it impact upon coalescence.

106. HPPC seek to draw attention to the view from D's Diner as making a positive contribution to the character of the area (paragraph 193 ID48). As Mr Smith made clear in cross examination, this view includes the A12 on the left, the cycle path, an unsurfaced car park in the foreground and the existing housing and diner to the right. The proportion of the view that is occupied by the application site is relatively small and, most importantly the context of new homes in this view, would be existing urban development and substantial infrastructure to both the left and right. Using the Guidelines for Landscape and Visual Impact Assessment 3rd Edition (GLVIA3) process there is no doubt that this visual effect would be less than significant.

107. Finally, DWH, through Mr Smith, produced a document to the Inquiry (Statement of Landscape Principles, ID46), which should be read alongside the parameters plan (SAV4) and the design and access statement (SAV7). This sets

out in plain terms the approach the developer will take to mitigating the limited landscape harms caused by the development. The conclusion the Secretary of State will be invited to make is that there are no supportable landscape reasons for refusing this scheme. HPPC seem to suggest (paragraph 192 ID48) that a 9 metre high barrier of planting along the eastern edge of the site would "detrimentally change the character of the locality". There is however already a belt of shrubs and trees along this edge of the site and these extend to above 15 metres in height. Some of the existing trees are non-native. The DWH proposals would augment and enhance the existing planting in a manner which is entirely in character with the area.

### ***Planning***

108. DWH's planning case is set out in the proof of evidence from Mr Jonathan Dixon (DWH1), which was subject to only the most limited of challenges.
109. As stated in opening, the site is not in or adjacent to any heritage or landscape related designations and there are no technical reasons put forward to warrant the withholding of consent. The landscape objections put forward by HPPC have been addressed above and do not come close to providing a sound policy and legal basis for withholding consent, let alone comprising a basis to displace the presumption in favour of sustainable development.
110. The relevant policy issues in adopted and emerging local plans are limited to policies of minimum housing provision within the settlement hierarchy (CS1); general protection for the countryside (CS5); emerging policies on development boundaries (LPP 1); and policies in the NDP that have already been considered.
111. Dealing firstly with CS1. As Mrs Jarvis rightly accepted, this policy is presumed to be out of date as a result of the failure to show a 5YHLS. Therefore, it will carry reduced weight in the overall planning balance. However, it is also out of date and therefore of reduced weight, for several other reasons.
112. Had plan preparation proceeded properly, then the settlement boundaries, which were first established in the mid-1990s, would have been reviewed many years ago. However, there is nothing before the Inquiry to suggest that the settlement boundaries in the District have ever been subject to a comprehensive review (as opposed to merely amending settlement boundaries to accommodate strategic allocations), let alone in Hatfield Peverel. On the evidence it appears highly likely, therefore, that twenty year old boundaries have simply been rolled forward from an old (and a now-withdrawn) plan. Without an evidence base to support the policy, it is not enough to simply point at the words on the page and cry refuse - it must have an evidence base.
113. Mrs Jarvis suggested that the emerging BNLP part 2 (CD16.2 set C) had been based upon a review of the boundaries. However, she was only able to provide a short report which appears to have been provided at an early stage of plan preparation to identify what principles would be applied to a future review (HPPC2, Appendix PJ3). It emphatically does not record or detail that any such review has taken place. When Mrs Jarvis was pressed, she readily conceded in cross examination that she had not been able to identify any documentation to support the proposition that the boundaries in the District have been reviewed as part of the emerging BNLP process. It is plain from the evidence of all the

planning witnesses, including HPPC, that Mr Dixon's approach to the out of datedness of settlement boundaries is manifest.

114. What is clear is that the Council readily accepts that in order to meet its immediate needs that greenfield land will need to be released.
115. Hatfield Peverel is a KSV within the adopted and emerging plans. Far from being preclusive of growth, that designation explicitly anticipates that the settlement can accommodate growth. Indeed in the emerging BNLP the settlements on the A12 corridor (including Hatfield Peverel) are identified as being a particular focus for growth - a point noted by HPPC in their closing submission (paragraph 70 ID48). Mrs Jarvis readily accepted that Hatfield Peverel could accommodate additional growth. However her point appeared to be that the development of the appeal site would lead to excessive growth. However the yardstick against which she sought to judge whether that was excessive related to a plan whose period has expired and relating to a table of indicative distribution of growth which is explicitly a minimum. When pressed, she accepted that there was no policy limitation which is breached by the grant of planning permission. Certainly it is untenable to contend that the grant of planning permission in this case would comprise disproportionate growth for Hatfield Peverel.
116. Given the considerable under supply, it is essential that further land comes forward for development in Hatfield Peverel to meet the unmet need. Given the very limited objections to this site (both in substance and number), the DWH site is well placed to help the Council get closer to delivering its housing requirement.
117. Turning now to Policy CS5, this comprises a general blanket countryside protection policy. Mrs Jarvis rightly accepted that the weight to be given to this policy must be interpreted with regard to its consistency with the Framework. This policy imposes a blanket ban upon development in the countryside, which is not included in the Framework. Mrs Jarvis sought to place reliance upon Framework paragraph 17 which sets out the overarching principles. Eventually she conceded that the word "strictly" in CS5 went beyond what is included in the Framework. This policy should be given much reduced weight as it is inconsistent with the Framework and, recalling Lord Gill in *Suffolk Coastal*, such overly restrictive policies that result in less than 5YHLS must be given reduced weight or they would be frustrating the objectives of the Framework (CD31.2 set C).
118. The Council seek to argue that policy CS5 should attract moderate weight because that is what other Inspectors have concluded and it complies with Framework paragraph 17 by recognising the intrinsic character and beauty of the countryside. That submission on Framework paragraph 17 is flawed for the reasons above. Previous Inspectors' conclusions are persuasive but they are not binding, given the strength of argument that this policy carries limited weight the Inspector and ultimately the Secretary of State can, and should, come to a different conclusion.
119. Turning to the emerging BNLP (CD 16.2 set C). This directs substantial growth to the garden villages, however Mrs Jarvis accepted that the emerging plan was still subject to a lot of objections. Despite this (and remembering the terms of Framework paragraph 216) Mrs Jarvis inexplicably concluded that the BNLP

should carry "fairly significant" weight as it was compliant with the Framework. It is not entirely clear what is meant by "fairly significant weight".

120. This is particularly inexplicable as she accepted that the substantial controversy still attached to the BNLP would reduce the weight that could be attached and she finally concluded that the Inspector should "be cautious" about the weight to be attached to the plan. It seems that this conclusion is well founded and accords with the careful analysis of Mr Dixon. Mrs Jarvis agreed with Mr Dixon that the BNLP was not in a position to solve the immediate problems with the 5YHLS and that it will not solve it in the next 18 months. It was further accepted that the plan would not be adopted soon - "It has some way to go". All of these points of agreement support the position of the applicant, as put forward by Mr Dixon, that the BNLP should be given significantly reduced weight.
121. Finally, on the NDP. Despite the misguided optimism of Mr Renow, this is a very long way from being made:
122. Since the NDP proposes to allocate land and does so in a way which is inconsistent with both the adopted and emerging LP (Mr Renow cross examination), then it will need a Strategic Environmental Assessment (SEA) to be carried out. Such an exercise has not been undertaken and as Mr Renow accepted (cross examination), no steps have been taken to complete one. Indeed at times he appeared not to understand what an SEA was. The simple and undeniable fact is that if the NDP wants to allocate sites it must complete an SEA unless it is merely parasitic upon an adopted local plan (which it plainly is not). It does not remotely depend on the outcome of a Habitats Regulation Assessment (HRA) screening assessment as Mr Graham submits (para 84 ID48) which is an important but parallel legal process. The point made by SPMRG (paragraph 122 ID49) should also be rejected. Whilst the lack of the SEA might not directly affect landscape or protected views, it manifestly affects the ability of the plan to move (lawfully) to the next stage. If it cannot move forward in the process, then the weight to all policies in the plan cannot increase. Notwithstanding this, there are the other concerns with landscape and protected view policy in the NDP already explained. Mr Graham is simply wrong on this point.
123. Mr Renow's explanation as to why an SEA was not needed was because the Council has completed a HRA in respect of the planning application upon the Arla site, ie the site that the NDP proposes to allocate. This exercise was undertaken, as is required by Regulation 61 of the Conservation of Habitats and Species Regulations 2010, because a development is proposed on the site for 145 units. To suggest that this HRA would displace the need for an SEA to allocate the site in the NDP is a fundamental misunderstanding of what is required for the NDP to allocate a site in a lawful manner. An HRA for a specific proposal is not an SEA for an allocation in a plan. If the NDP proceeds on the basis advocated by Mr Renow, it will be unlawful.
124. SAV49 is a letter from the independent examiner of the NDP. As of the letter date, 20 September 2017, it was anticipated by the neighbourhood group, as expressed to the examiner, that the SEA and HRA Screening Report would be available within 3 - 4 weeks - i.e. around mid-October 2017. No such reports have been prepared, nor is there any clear indication as to whether they ever will

be. (*note: this submission was written before HPPC notified the parties that the document had in fact been submitted to Natural England [10]*)

125. The basic conditions against which a neighbourhood plan is to be judged include compliance with European requirement and conformity with the adopted development plan. There is very clear authority that whilst there is nothing wrong with a neighbourhood plan being prepared to be consistent with both the emerging and the adopted development plan, it is against the adopted plan that the neighbourhood plan should be tested (paragraph 82 CD31.1 set C). Thus, the NDP cannot avoid meeting the obligation for a development plan which contains allocations as a plan or project to be subject to an SEA simply because it follows the lead of the emerging BNLP. Nor can it simply piggy-back on the back of the SEA for the emerging BNLP since that relates to a different plan with different considerations which will not be adopted until mid-2018 at the earliest.
126. Mr Renow accepted in cross examination that there may be a substantive problem with the SEA, but despite this, he considers that the NDP will be made well before the BNLP is adopted, at the latest June 2018. If that was the case then it would be the source of an allocation which has been untested by an SEA, and inconsistent with the adopted local plan. One reason for this is that CS policy CS4 requires the retention of existing employment sites. Paragraph 6.2 of the CS makes it clear that this also relates to KSVs. A housing allocation is plainly inconsistent with CS4. To allocate a housing site on the Arla site in advance of the emerging BNLP being adopted with such an allocation within it, and without an SEA would plainly not meet the basic conditions for a neighbourhood plan required by law.
127. In any event, it seems highly unlikely that the NDP could be lawfully made by June 2018 as a matter of simple practicalities. If the NDP seeks to allocate sites and proceeds to do so without an appropriate SEA, then it will be unlawful. Of course it could avoid any such problems by not allocating any sites or by waiting to progress further until after the BNLP is adopted, which would thereby abrogate the need for an SEA. If the NDP were modified so that it does not allocate any sites then it would still be fundamentally flawed because of the evidential issues with HPE1 and HPE 6. However if those flaws were also addressed (by deleting HPE1 and removing viewpoint 5 then such an adopted plan would not benefit from the protection of the Written Ministerial Statement on Neighbourhood Planning.
128. Moreover, just promoting the proposed allocation of the Arla Dairy site in the NDP is out of step with the BNLP (policy LLP 31) that identifies the Arla Dairy site for "mixed use of up to 200 dwellings". The NDP has far from a smooth flight path to landing. Indeed, to borrow Mrs Jarvis's words, it is a "hiccapped" plan that has various stages still to complete. She went further and said that she could not be sure whether the NDP was compliant with the Framework.
129. The argument put forward to support the argument for HPPC that the NDP should carry significant weight was because it had the support of the local community, as shown through the poll carried out by the Neighbourhood Plan group. This is wholly unsupportable in planning terms. The informal poll is not a referendum and weight does not depend simply upon popularity. It is also not an official stage in the development of the NDP. The weight to be given to the NDP must be in accordance with the requirements of Framework paragraph 216. It is

plain that Mr Renow's view of how weight is to be ascribed to a neighbourhood plan has absolutely no support in national policy or guidance.

130. The conclusion on the NDP is that the policies that are relevant should only be given very limited weight for the reasons above. Therefore, whilst HPPC seeks to argue that the development is in breach of policies HPE1 and HPE 6, the weight to be afforded to such conflict with policy is substantially reduced.

### ***Education***

131. The applicant relies upon the Education SOCG (ID1.8) to evidence the absence of any education harm requiring mitigation from this development. Whilst some local residents have expressed concern at finding school places, the applicant submits that greater weight must be placed upon the education SOCG. There is no objection from Essex County Council as local education authority and planning permission should not be withheld on this basis.

132. HPPC seek to make submissions that "for many years, primary-age occupants of the Inquiry scheme would be required to travel further afield for schooling". There is simply no evidence of this before the Inquiry, which comprises evidentially unsubstantiated scaremongering and should be rejected. Had Essex County Council considered that the proposed education provision was unacceptable then it would have objected.

### ***Highways***

133. DWH rely upon the Transport Assessment (SAV25) and the highways evidence produced as part of the application to demonstrate that all highways impact can be properly mitigated. The Highways Authority has no objections to the scheme, and there is no basis to come to a different conclusion.

### ***Conclusion***

134. The Council cannot demonstrate a 5 year supply of housing land. Therefore, substantial weight should be afforded to a proposal for general market housing which helps to redress that deficit and, critically, the tilted balance in Framework paragraph14 applies. What is plain from the evidence put before this Inquiry, is that no objections have come close to significantly and demonstrably outweighing the considerable benefits of this scheme - the delivery of much needed market and affordable housing, the provision of public open space and the economic benefits of developing such a scheme. The application proposals comprise sustainable development which should be consented without delay.
135. For the Gleneagles site there can be no issues with regard to deliverability since it is controlled by a national housebuilder who, on instructions, is keen to bring the site forward for development as soon as possible.
136. As such, it is respectfully submitted that the Inspector recommends permission be granted so that development on this site can get underway - contributing meeting the housing requirement in this part of Essex.

**Points from the Case for Gladman Developments Ltd adopted by David Wilson Homes and/or relevant to the determination of this application**

***The sustainability of Hatfield Peverel as a location for development***

137. There is no evidence that Hatfield Peverel is anything other than a sustainable location for new housing growth. There are a range of services, facilities, clubs and activities that could accommodate new residents and to which new population within the village would contribute.
138. Mr Renow seeks to suggest that the village lacks the services and facilities to accommodate new development (paragraph 10 HPPC1). However, he includes at Appendix MR5 a list of clubs, organisations and businesses that exist within the village - they demonstrate the wealth of services and facilities that are available - with Mr Renow confirming that some clubs are so popular, they have had to find other venues outside of the village. Hatfield Peverel is a thriving settlement.
139. What Appendix MR5 confirms is that there are a range of social opportunities for new residents as well as a number of services and facilities that will cater for day to day living. Those include convenience stores that would provide for top up shopping, as well as hairdressers, beauticians, garages, a library, dry cleaner, florists and a number of restaurants, to name just a few. There is also the school and the surgery. Mr Renow accepted that all of those businesses give rise to employment opportunities for people working in the village.
140. Mr Renow's point was that, over time, employment opportunities in the village have reduced. However, despite that, there are no allocations within the emerging NDP for an employment site and the one allocation for housing (the Arla site) does not require a mix of uses to come forward. Mr Renow accepted there were good links for commuters from the village to travel to work either by train or bus and thus residents of Hatfield Peverel can access employment centres in a sustainable way without having to rely on the private car.
141. He also accepted the train service begins around 5am in the morning, with trains to London and runs until after midnight. He accepted that the train station is within walking distance of the site and that other nearby towns and job opportunities can be accessed by sustainable transport modes. Mr Renow accepted that people would not have to commute by car if they were leaving the village to find work.

***Planning policies***

***Policy CS5***

142. It is not GDL's case that policy CS5, or indeed the need to recognise the intrinsic beauty of the countryside can be forgotten about because CS5 is based on out of date boundaries and there is not a 5YHLS. The impact of the scheme on the landscape is an important consideration in this appeal, but CS5 requires all schemes in all open countryside to satisfy a threshold that the Framework requires only in relation to valued landscapes - to "protect and enhance". It is that threshold - a fundamental component of the policy - and what it is seeking to achieve that is inconsistent with the Framework and was exactly the point that was addressed in *Telford and Wrekin* (CD31.3 set C).

143. Mrs Jarvis alleged that the policy was consistent with the aims of the Framework paragraph 17(7) but also agreed in cross examination both that the relevant bullet point of Framework paragraph 17 does not set an absolute threshold for all development and that there is no general duty to enhance the countryside. It will be clear that the part of Framework paragraph 17 relied on provides a broad overarching principle which is to be implemented by more detailed policies within the Framework. It is relevant in that respect that Framework paragraph 6 does not include paragraph 17 within the definition of "sustainable development".
144. Moreover, that particular bullet point directly correlates to Framework Chapter 11 and paragraph 109 where what is required to be enhanced and protected are valued landscapes - not ordinary countryside.
145. Further, the observance of development boundaries is absolutely integral to the policy. If that part of the policy is removed as it must be given the out datedness of the boundary (the Council does not apply rigid boundaries – paragraph 59, CD32.2 set C), it no longer makes any sense. There is no criterion against which to measure the acceptability of development such as those before the Inquiry other than whether it is the right or wrong side of the boundary.
146. The weight to be given to CS5 is of course a matter of planning judgement for the decision-taker but regard should be had to the reasoning in *Telford and Wrekin*. HPPC on *Cawrey Ltd v SSCLG* [2016] EWHC 1198 in response (paragraph 51 ID48). However, the submission also omits a key part of the very paragraph it relies on that makes clear the important distinction in that case - that the Inspector had found the Council could demonstrate a 5YHLS. That finding had a direct bearing on the Judge's findings at paragraph 50 which are reproduced in full below:

*Whether that loss of countryside is important in any particular case is a matter of planning judgment for the decision maker. In any event, extant policies in a Development Plan which are protective of countryside must be had regard to, and in a case such as this a conflict with them could properly determine the s 38(6) PCPA 2004 issue. If the conclusion has been reached that the proposal does conflict with the development plan as a whole, then a conclusion that a development should then be permitted will require a judgment that material considerations justify the grant of permission. If reliance is then placed on NPPF, one must remember always what Lindblom LJ has said in *Suffolk Coastal* about its status. It is not suggested in this case that this is one where the NPPF paragraph [14] test applies, which given the Inspector's findings on the effect on the landscape, and the fact that HBBC is the Borough, and Ratby the settlement, where the policies considered in Bloor applied, is unsurprising. Nor is it suggested that he should have applied NPPF [49] given his findings on housing land. There is in my judgment nothing at all in NPPF which requires an Inspector to give no or little weight to extant policies in the Development Plan. Were it to do so, it would be incompatible with the statutory basis of development control in s 38(6) PCPA 2004 and s 70 TCPA 1990. (emphasis added)*

## *Policy RLP2*

147. GDL agrees with the Council that policy RLP2 can attract only limited weight for the reasons set out in its submissions (paragraph 35 ID47). Both HPPC and SPMRG rely on the policy but do not engage with the weight to be given to it. It is clearly out of date and incapable of delivering housing to meet the needs of the population now.

### **The Case for Hatfield Peverel Parish Council**

148. The three schemes each conflict with the statutory development plan and so the starting-point is that they should be refused permission. In essence, the decisions on the three schemes will come down to whether the potential supply of housing should be given priority over the policy objectives of directing growth to other locations within development boundaries and at higher-order settlements in order to protect the environment (including the character of the settlement and historic assets), avoid excessive pressure on local facilities and infrastructure, and reduce the need to travel. This is a question of weight, which may depend on the extent to which any shortfall in 5 year housing land supply is identified, and on the Secretary of State's confidence that the proposed housing would be delivered on site within the 5 years.

### ***5 year housing land supply: the four step approach***

#### *Step 1: quantify the deliverable sites*

149. The Secretary of State will need to ask for the purpose of applying the Framework whether there is any shortfall in terms of 'supply of specific deliverable sites sufficient to provide five years worth of housing against their housing requirements' (that is, the OAHN) and the extent of any shortfall (Framework paragraph 47, second bullet, emphasis added). This is a matter of planning judgment in terms of assessing whether a particular site is 'deliverable', and the capacity of a particular site to take a given quantity of housing, but it is otherwise a straightforward quantification exercise.
150. The policy test whether housing land is to be included in the 5YHLS is merely whether there is a 'realistic' - that is, non-fanciful - prospect of housing delivery (*St Modwen v SSCLG* [2017] EWCA Civ 1643 paragraphs 35-39, CD32.18 set C). A site does not have to be allocated in any plan, let alone be granted permission, in order to be included in the 5YHLS. Its delivery does not have to be a certainty, nor even more likely than not; the policy requires that it be 'realistic'.
151. Just because a site is outside development boundaries of the current plan does not mean it should be treated as having an unrealistic prospect of development where the planning authority has allocated it in an emerging plan and is currently of the view that it is a suitable and available site, viable and achievable within 5 years for the purpose of footnote 11 of the Framework, so has included it in its 5YHLS trajectory. In the Council's closing submissions, they give the example of the Gimsoms site, and assert that "[u]ntil such time as the draft allocation supersedes the present development plan status, it cannot be considered 'deliverable'."
152. This statement demonstrates that the Council has taken and continues to take a legally erroneous approach to counting sites within its 5YHLS for the purpose of Framework paragraph 47. What the Council has done is to treat sites not

allocated in the current plan as *ipso facto* incapable of being considered suitable, and has not included a single one in its land supply monitoring figures for the next 5 years. It is elementary that the adopted development plan is the starting-point but it does not predetermine the outcome of any planning application where there are good reasons for determining it otherwise than in accordance with that plan. If it were, this Inquiry would have been unnecessary. The Council cannot rationally treat sites as suitable for housing for the purpose of its forward planning but at the same time automatically treat them as unsuitable when determining actual applications just because the emerging plan has not been adopted.

153. Of course there might be other circumstances where a site allocated in an emerging plan would only become realistic for delivery in the 5 years if the plan was adopted (such as a site requiring planned infrastructure and/or a new settlement to be in existence first, if that new infrastructure or settlement would not otherwise come forward in time). No such circumstances apply here; the new settlements proposed in the emerging local plan are not proposed to come forward in the first 5 years of the plan, and are not relied upon in the early part of the housing trajectory. This is the advice in the PPG which states "If there are no significant constraints (eg. infrastructure) to overcome such as infrastructure [sic] sites not allocated within a development plan or without planning permission can be considered capable of being delivered within a 5-year timeframe." (Paragraph: 031 Reference ID: 3-031-20140306).
154. On this analysis, it was wrong to exclude the sites that the Council is satisfied are soundly evidenced for inclusion in the trajectory showing the 'expected rate of housing delivery' for the purpose of promoting its local plan.
155. On that basis, the Secretary of State is entitled to rely on the sites counted in the housing trajectory appended to the Council's letter to the Rt Hon Priti Patel dated 29 November 2017 (ID42). On that basis, there is no, or no material, shortfall for the purpose of Framework paragraph 47. The trajectory table shows delivery in the first 5 years of the plan period as (501 + 577 + 1128 + 1443 + 1329), which is 4978 dwellings. Taking OAHN of 716, multiplying by 1.05 to allow for the 5% buffer gives 751.8 (say 752) dwellings per year, this gives 6.62 years' supply. If the Liverpool approach to adding backlog is adopted ((716 + 107) x 1.05), the annual requirement would need to be 864 which gives 5.76 years' supply (taking the OAHN figures from Alison Hutchinson's proof, (BDC1, table 1 on p.11). If the Sedgefield approach is adopted ((716 + 332) x 1.05 using Ms Hutchinson's figures) an annual requirement of 1,100 and 4.52yrs' supply is the outcome. The text of the letter to Ms Patel quotes figures of 6.24yrs and 4.9 yrs respectively, but the workings for arriving at those are not indicated.
156. Furthermore, the housing land supply position is improving and may have improved further by the time the Secretary of State issues a decision. For example, Mrs Hutchinson's Proof, (BDC1 table 2, page 12) shows improvement from 3.91 to 3.97yrs on the Liverpool approach and 3.1 to 3.9 years on the Sedgefield approach between 31 March 2017 and 30 September 2017, adopting the Council's approach of excluding the emerging allocations.
157. It is appreciated that the prospect of delivery of housing on one or more of the sites before this Inquiry may also be relevant to the determination of these

schemes, if - contrary to HPPC's submissions that these sites are not suitable - the Framework footnote 11 requirements were thought to be met and it were considered that housing on one or both was realistically likely to be delivered within 5 years (whether or not by virtue of these applications). Some addition to the supply might need to be made for that by the Secretary of State depending upon how each appeal or application is to be determined, when determining the others.

*Step 2: take the OAHN*

158. There was uncontested evidence at this Inquiry that the extent of OAHN is 716 dwellings annually.

*Step 3: decision as to whether to add to the requirement to allow for past shortfall and over what period to expect this to be made up*

159. At the Inquiry there was a debate about whether an addition should be made to the housing requirement to make up for previous shortfalls using either the Liverpool or the Sedgfield methods.

160. This exercise is essentially a policy judgment for the decision-maker which, importantly, is not prescribed by Framework paragraph 47. As Lindblom J noted in *Bloor Homes East Midlands Ltd v SSCLG* [2014] EWHC 754 (paragraph 108, ID61) upholding a decision to apply a Liverpool approach:

*Neither method is prescribed, or said to be preferable to the other, in government policy in the NPPF. In my view the inspector was free to come to his own judgment on this question.*

161. Framework paragraph 47 does not say to add previous years' shortfalls to the current OAHN to arrive at an annual requirement figure. This may be of significance when applying Framework paragraph 49 and determining whether the second bullet of the decision-taking limb of Framework paragraph 14 should apply.

162. The closest is the advice in the PPG section dealing with plan-making rather than decision-taking, which says, "Local planning authorities should aim to deal with any undersupply within the first 5 years of the plan period where possible. Where this cannot be met in the first 5 years, local planning authorities will need to work with neighbouring authorities under the duty to cooperate." This guidance is consistent with the plan-led system, and does not dictate whether to add to a current years' annual requirement when taking a particular decision to make up for previous shortfalls, nor dictate a method for doing so.

163. If an allowance to make up for past shortfalls is to be added, the Liverpool method is appropriate here because the emerging local plan contains a strategy shared with partner Essex authorities to accommodate growth in new garden communities and large allocated sites, which can better respond to the requirements for new infrastructure, and will come forward later in the plan period. The evidence of the Council's professional planner Ms Hutchinson was that in her judgment the Liverpool approach was amply justified, but that the Council felt constrained not to advocate such an approach until the examination of its emerging local plan as it had lost other appeals.

164. However, HPPC considers this to be over-timid and inappropriate. The spatial strategy of the emerging BNLP would be undermined if development in less sustainable locations was permitted with the intention to meet a short-term need, to the detriment of what the Council properly consider to be the best long-term plan for the District. At this Inquiry there was no evidence led to contest the soundness of the Council's overall approach in its emerging BNLP. Indeed, Mr Lee sought to argue consistency with it, albeit on the selective basis that some growth was proposed for Hatfield Peverel whilst downplaying the fact that the Stone Path Drive site was located in the countryside for the purpose of the emerging plan (paragraph 13.3.6,1/POE). Although no party would contend that the emerging plan should be treated as if it were already the adopted development plan, the Secretary of State is fully entitled to give weight to it and to apply the Liverpool approach to these applications and appeal.

*Step 4: add buffer*

165. The Framework paragraph 47 provides guidance that an adjustment should be made to the OAHN by the addition of either a 5% or a 20% buffer. This requires a different form of judgment to be made about whether the record of the local planning authority is one of 'persistent under-delivery'.
166. A buffer of 5% is the default for ensuring choice and competition in the market for land. A buffer of 20% should be added 'to provide a realistic prospect of achieving the planned supply' where there is a record of 'persistent under-delivery' (Framework paragraph 47). The point is to make an allowance for proven persistent failures of delivery, to correct for over-optimism about meeting planned-for targets or requirements and to build in a margin for failure to deliver the targets currently planned for.
167. There is no further or different purpose (other than also ensuring choice and competition in the market) for the 20% buffer suggested by the Framework. It is not specified to apply by reference to a particular level of accumulated current shortfall, and is not designed to hasten the delivery of units in response to a particular urgency of need. The purpose of the buffer is not to correct for a particular shortfall, but to address the problem of over-optimism. Any accumulated shortfall in delivery against what is now understood to be the OAHN is reflected automatically in the figure for current housing need.
168. It would be quite wrong to test 'under-delivery' anachronistically against requirements that were not known at the time. HPPC respectfully adopt the archery analogy given by Mr Cannon (paragraphs 22-23, ID47). There is no record of persistent under-delivery here.
169. Even if there were a record of persistent under-delivery, the Framework is only guidance and the purpose of applying the higher 20% buffer is to ensure 'a realistic prospect of achieving the planned supply'. The Secretary of State is entitled to assume that sites in the Council's housing trajectory are 'realistic' (HPPC has not given evidence of its own on suitability and deliverability other than on specific comprehensive development area sites at Hatfield Peverel) and can be counted on as indicating the expected rate of housing delivery.

## Summary

170. Adopting the correct *St Modwen* approach to the meaning of 'deliverable sites', the Liverpool method for apportioning past under-delivery and a 5% buffer, there is no shortfall and the Council has a healthy 5.76 years' housing land supply on the latest figures. Even if one were able to demonstrate that some of the allocated sites were not realistic prospects, one would still have a 5 year supply on the Liverpool approach if there were land sufficient for 4,320, so there is a built-in healthy margin for error.
171. Whilst HPPC do not consider adopting the Sedgefield method to be appropriate, if we include the emerging allocations and a 5% buffer, there would be 4.52 years' supply, even on that basis, which is a very modest shortfall in the context of a rapidly improving supply position.

## **Policy issues in respect of all schemes**

### *Framework paragraph 14 and its application-updatedness*

172. The question of 'updatedness' does not depend on chronological age in itself (Framework paragraph 211) but on changes in circumstances and/or planning policy.
173. By virtue of Framework paragraph 49, shortfall in 5YHLS would usually be treated as a factor indicating policies for the supply of housing were 'out of date', hence the materiality of the 5YHLS question.
174. The term 'policies for the supply of housing' has a narrow meaning, but as the Framework is only guidance it is not appropriate to embark on a legalistic exercise of classifying policies (paragraph 59, CD31.2 set C). Whether policies for the supply of housing (or indeed other policies) are out of date does not determine the weight to be given to them, which remains a matter for the decision-maker (paragraphs 29, 55 to 56 CD32.2 set C).

### *Framework paragraph 14 and its application-silence*

175. Mr Lee –but not Mr Dixon- sought to argue that the development plan was 'silent' in relation to these appeals, because "the Development Plan is now silent in respect of where development should be located outside of the strategic areas identified on the Core Strategy Proposals Map" (paragraphs 6.4.3 to 6.4.4 1/POE).
176. Mr Lee's argument cannot be sustained here. In *Trustees of the Barker Mill Estates v Test Valley BC* [2016] EWHC 3028 (Admin) [2017] PTSR 408 at [100]-[101], Holgate J rejected as a 'fallacy' the analogous argument that 'first, the inspector had to consider whether the plan was "silent on a particular issue" and second, that issue was where land to provide for a shortfall of 6,823 square metres of B8 floorspace should be located'. The learned judge ruled:

*Neither paragraph 14 of the NPPF nor SD1 of the RTVLP [the local plan at issue] enable a party simply to select one of the "issues" relevant to the outcome of a planning application or appeal, so that it may be claimed that the plan is "silent" on that particular issue. Instead, the proper question for the decision-maker is whether there is a sufficient policy content in the plan taken*

*as a whole to enable the planning application to be determined as a matter of principle...*

*... In the Bloor Homes case Lindblom J explicitly stated, at para 59, that the fact that allocations have yet to be put in place in a development plan (in that case for housing), does not mean that the development plan is "silent".'*

177. The policies in the adopted Braintree Core Strategy, taken as a whole, indicate that permission should be refused because the strategy places both the Gleneagles and Stone Path Drive sites outside the village boundary in the countryside and directs growth to brownfield sites and infills within the village. Furthermore, there are emerging plan policies at an advanced stage which maintain both the Stone Path Drive and the Gleneagles sites outside the village boundary, and specifically protect the sites (particularly emerging NDP policies HPE6 on landscape setting and HE1 on coalescence).
178. Mr Lee referred to *South Oxfordshire District Council v Cemex Properties UK Limited* [2016] EWHC 1173, but that case needs to be considered on its peculiar facts. There, a core strategy stated that at least 1154 dwellings would be allocated in certain larger villages including Chinnor, but no allocations had been made. The inspector had regard to the fact that the emerging local plan was at a very early options stage, and there was not even a draft emerging neighbourhood plan to give direction. It was in those circumstances that the Inspector concluded there was a 'policy vacuum on the issue of site allocations in the larger villages' (judgment at paragraphs 43 and 48, citing decision letters). The judge ruled that:

*'91 ...the question for the decision maker is...(1) does this development plan contain a body of policy relevant to the proposal being considered; and (2) is that body of policy sufficient to enable the development to be judged acceptable or unacceptable in principle? The first question involves an identification of the policies in question, and their correct interpretation; the second involves the exercise of planning judgment on the practical effect of that body of policy on the making of the decision in issue.*

*92....It follows also from the fact that the decision maker must make a planning judgment that... what matters is not simply whether the plan contains a policy which can be looked at to determine the question posed in Bloor at [50] and repeated in the last sentence of my [91] above: for its sufficiency at the time the decision is being made is an essential issue, and that involves the making of a qualitative planning judgment. I emphasise that the judgment to be made is at the time of the decision. A Development Plan may not have been "silent" when adopted, but has become so.*

*93... In the case of this Development Plan, the mechanism by which its housing requirement figures were intended to be translated into actual allocations was the DPD, which SODC had since abandoned. The question "how much housing does the Development Plan intend should be allocated in the period x to y" is not the same question as "where does the Plan say that that housing could or should be built?" In some cases, it can be the second question that matters. Whether it does so depends on the circumstances and is a matter for the planning judgment of the decision maker.'*

The judge concluded:

*97 'This was a case where it was her planning judgment that it was the answer to the second question above which mattered... Thus, she found that there was effective silence on the critical issue. That was a planning judgment which she was entitled to form.*

*98 Her conclusion...is a planning judgment that was open to her'*

179. Although in the case before this Inquiry, the initially envisaged site allocations document to follow the CS did not proceed to adoption, there are important distinctions from the situation in the Oxfordshire case. CS policy CS1 states that the dwellings 'will be located...On previously developed land and infill sites in the Key Service Villages and other villages'. Furthermore, unlike the South Oxfordshire case where the development boundaries and countryside protection policies were merely contained in a previous saved plan pre-dating the core strategy, CS5 states as set out above (paragraph 30).
180. This gives a further clear steer that large housing developments in the countryside are not in accordance with the CS. Thus, Braintree's adopted plan is not, in its policies, silent about where it expects the growth to take place. The policies do not require the Site Allocations DPD before being able to say whether in principle development in green open countryside adjacent to Hatfield Peverel is encouraged: the answer is a clear 'no'. By way of further distinction, there are submitted examination drafts of the emerging BNLP, and emerging NDP. Furthermore, the question of how much development is intended in Hatfield Peverel matters as well as where that development is located.
181. In this regard, the situation here is more akin to that in *Bloor Homes East Midlands Ltd v SSCLG* [2014] EWHC 754, where the site lay within a 'green wedge' designated by a policy in the core strategy and the High Court upheld the decision that the plan was not 'silent' even though the core strategy had contemplated that a future site allocations DPD would review that boundary (see judgment at paragraphs 29, 30, 36 and 51-58).
182. The unsustainability of any argument that the development plan is silent is perhaps demonstrated by the subsequent length of Mr Lee's proof where he sets out and considers the relevant policies, and by his eventual acknowledgement (paragraph 13.2.2, 1/POE) that "Having tested the proposals against the material policies contained within the Braintree development plan I accept that the appeal proposals conflict with the Plan". Notwithstanding his subsequent oral equivocation over this point during his cross-examination, that acknowledgement in the Proof was rightly made.

*Framework paragraph 14 and its application-Specific policies in this framework*

183. 'Specific policies in this framework' means policies that, applied here, indicate in the judgment of the decision-taker that permission should be refused. Such policies may include relevant development plan policies within the framework of the Framework.
184. The second bullet-point in the decision-taking limb of Framework paragraph 14 is no more than guidance and only applies where a development plan is absent, silent or out-of-date. It does not displace the statutory presumption in favour of determining applications in accordance with the development plan so that

proposals conflicting with the plan should be refused unless material considerations indicate otherwise (Framework paragraph 12). It has to be read consistently with that presumption. Where, although the plan may be generally or in some particular respects (e.g. in its policies in relation to the supply of housing) out-of-date so as to engage Framework paragraph 14, that does not determine the weight to be given to particular development plan policies. Over-legalistic interpretation of the Framework, drawing fine, unintended distinctions, is to be deprecated. These principles are clear from *Suffolk Coastal* (paragraphs 14, 21, 23, 54-56, 74 and 85 CD32.2 set C).

185. At Framework paragraph 154 it is emphasised that 'Plans should set out the opportunities for development and clear policies on what will or will not be permitted and where'. A decision-maker is fully entitled to conclude that specific policies within the Framework -such as for protection of countryside and favouring greenfield over brownfield development- indicate that permission is to be refused without having always to conclude that benefits are 'significantly and demonstrably' outweighed by harms.

### ***The adopted development plan***

#### *The spatial strategy*

186. The CS is based on a 'hierarchy of place' (paragraphs 2.4-2.14, HPPC2) focusing growth at settlements higher up the hierarchy. In that context, at policy CS1 it identifies a minimum requirement of 600 homes for the period 2009 to 2026 at the six KSVs. The number of dwellings to be provided in these Inquiry schemes (up to 260 across the two Inquiry sites), in combination with the development permitted since 2009 in Hatfield Peverel, would greatly exceed a proportionate distribution across the villages. The proportions are relevant as well as the numbers: six KSVs are to take 12% of the homes between them (paragraphs 2.15-2.18, HPPC2).
187. Policy CS 1 further states:
- These dwellings will be located (as set out in table CS1):  
On previously developed land and infill sites in the Key Service Villages and other villages.*
188. This means that the growth is being directed within the village, and to previously developed land, rather than to greenfield sites outside the village such as those at issue at this Inquiry.
189. The supporting text to the CS (para 9.11) noted that sites would be allocated in a subsequent DPD, and stated, 'There will also be sites, which are not yet identified in the Housing Supply Trajectory or Table 6, which could come forward through minor extensions to town or village development boundaries in the Site Allocations DPD', but this text was not part of the policy and does not cut down or qualify the policy to direct growth outside the settlement boundaries (paragraph 16, *R(Cherkley Campaign Ltd) v Mole Valley DC* [2014] EWCA Civ 567).
190. In that context, policy CS5 is an intrinsic part of the spatial strategy (paragraphs 2.19 to 2.25, HPPC2). It should be given full or substantial weight for the reasons explained by Ms Jarvis in her Proof and later in these

submissions. Saved Policies RLP2 and RLP3 are not merely hangovers but are reflected in the CS.

191. Accordingly, there is a conflict between the spatial strategy of the adopted local plan and the principle of the Inquiry schemes. The strategy has been based on sound planning principles and is consistent with the objectives in the Framework paragraphs 17, 34, 37, 38, 70, 110-111, 112 of being genuinely plan-led, minimising the need to travel, focusing development in locations that are or can be made sustainable, preferring land of lesser environmental value and previously developed land over green field land, taking account of the different roles and character of different areas, protecting the intrinsic character and beauty of the countryside, minimising adverse effects on the local and natural environment, undertaking significant development on agricultural land only when necessary, and planning for the location of housing, economic uses and community facilities and services in an integrated way.
192. Hatfield Peverel is a fairly small village with 1815 households in 2011. It has a limited range of services and little employment potential, having lost employment with loss of the Arla Dairy. For weekly or big-ticket item shopping, employment and indoor leisure facilities, it is already necessary to travel outside the village. The village can only sustainably accommodate housing growth in proportion to its role in the settlement hierarchy.

#### *Boundaries and review*

193. Mr Tucker suggested in cross-examination that the Hatfield Peverel settlement boundaries in the current and emerging local plans were merely holdovers from previous plans and that their maintenance had not been reviewed. This is not a submission supported by the evidence.
194. Both the adopted CS and the emerging BNLP have been subject to sustainability appraisal and the latter exercise specifically considered the question of retention of boundaries, assessing this as environmentally positive to landscapes and townscapes, service centre vitality, sustainable travel, climate change and accessibility compared to relying on the Framework alone; and the question of new allocations was considered (PoE/Jarvis pages 17-20 and paragraph 2.40 and Appendix PJ2, HPPC2). Spatial Strategy Formulation (ID33) refers to review criteria, options, KSVs, countryside and draft allocations. The adopted CS was found sound by the Secretary of State.
195. It is right that the policy was not to alter the boundaries to take the Inquiry sites within the village envelope of Hatfield Peverel. Strategic policy choices were taken to retain the settlement boundaries, subject to specific allocations and to creating new urban areas or extensions, and to focus growth elsewhere. These were legitimate policy choices.
196. Whilst HPPC accepts that the Secretary of State is entitled to consider provision of housing to be a material consideration weighing against applying the development plan at the Inquiry sites, there are no grounds to give less weight to the adopted or emerging development plan just because successive plans have retained the Hatfield Peverel boundary south of the A12.

## *Policies for the protection of the countryside*

197. The suggestion by GDL that the adopted countryside policies and policy CS5 in particular are inconsistent with the Framework is wrong. Two further assertions are also misconceived. First, that the Framework draws a distinction between valued landscapes and the countryside such that 'ordinary' countryside is not subject to general protection. Second, that because the countryside and emerging NDP green wedge policies do not have built-in exceptions for beneficial housing development made them inconsistent with the Framework.

198. The Framework comprises general policy guidance. It is not a statute and must not be read like a statute. In contrast to statutes, which must be obeyed unless there is an express exception, it is an intrinsic feature of policies and guidance that they may be departed from for good reasons, where material considerations indicate otherwise. In *Cawrey Ltd v SSCLG* [2016] EWHC 1198 (Admin) at paragraphs 43 and 45, Gilbert J cited Lindblom LJ's judgment in *Suffolk Coastal*:

*The NPPF is a policy document. It ought not to be treated as if it had the force of statute... It is for the decision-maker to decide what weight should be given to NPPF policies in so far as they are relevant to the proposal. Because this is government policy, it is likely always to merit significant weight. But the court will not intervene unless the weight given to it by the decision-maker can be said to be unreasonable in the Wednesbury sense."*

*... Before Suffolk Coastal it had been striking that NPPF, a policy document, could sometimes have been approached as if it were a statute, and as importantly, as if it did away with the importance of a decision maker taking a properly nuanced decision in the round, having regard to the development plan (and its statutory significance) and to all material considerations. In particular, I would emphasise this passage in Lindblom LJ's judgment at [42]-[43], which restates the role of a policy document, and just as importantly how it is to be interpreted and applied. NPPF is not to be used to obstruct sensible decision making. It is there as policy guidance to be had regard to in that process, not to supplant it.'*

199. In *Bloor Homes East Midlands Ltd v SSCLG* [2014] EWHC 754 at paragraphs 175 and 186, Lindblom J (as he then was) considered the argument that a 'green wedge' policy was inconsistent with the Framework if it restricted all house-building without an exception for a positive cost-benefit analysis, rejecting 'the proposition that every development plan policy restricting development of one kind or another in a particular location will be incompatible with policy for sustainable development in the Framework, and thus out-of-date, if it does not in its own terms qualify that restriction by saying it can be overcome by the benefits of a particular proposal'.

200. Mr Lee cited the case of *Telford and Wrekin BC v SSCLG* [2016] EWHC 3073 (Admin) (CD31.3 set C), where Lang J declined to quash a decision by a planning inspector that a policy which sought to 'strictly control' development in the countryside 'is not up-to-date and in conformity with the more recent planning policy context established by the Framework, where there is no blanket protection of the open countryside and where there is a requirement to boost

significantly the supply of housing,' such that he would give it 'less than full weight'. The *Cawrey* judgment was not cited. Lang J stated at paragraph 47,

*In my judgment, the Inspector did not err in law in concluding that Policy CS7 was not in conformity with the NPPF and so was out-of-date. It is a core planning principle, set out in NPPF 17, that decision-taking should recognise "the intrinsic character and beauty of the countryside and supporting thriving rural communities within it". This principle is reflected throughout the NPPF e.g. policy on the location of rural housing (NPPF 55); designation of Local Green Space (NPPF 76); protection of the Green Belt (NPPF 79 - 92) and Section 11, headed "Conserving and enhancing the natural environment" (NPPF 109- 125). However, NPPF does not include a blanket protection of the countryside for its own sake, such as existed in earlier national guidance (e.g. Planning Policy Guidance 7), and regard must also be had to the other core planning principles favouring sustainable development, as set out in NPPF 17. The Inspector had to exercise his planning judgment to determine whether or not this particular policy was in conformity with the NPPF, and the Council has failed to establish that there was any public law error in his approach, or that his conclusion was irrational. (emphasis added).*

201. At its highest, the *Telford* case was therefore decided on the basis that the weight to give to various principles within the Framework pulling in different directions (supply of housing and other principles versus protecting intrinsic character and beauty) was a matter of planning judgment that Lang J would not interfere with. It is not automatically inconsistent with the Framework, as a matter of law, to have a general policy to protect the countryside by restricting the development that is presumed to be appropriate there. This judgment does not require the Secretary of State to follow the Telford inspector's approach to weight as a matter of planning judgment, which remains a matter for the decision-maker even if a policy is judged to be out of date (per *Suffolk Coastal* cited above).
202. Whether a policy is judged to be inconsistent with the Framework is a matter of planning judgment depending upon the weight to attach to different passages of the document, so long as the wording of the Framework is understood correctly. Clearly, the actual character and attractiveness of particular countryside will be relevant to the weight to place on a policy protecting the countryside, and the merits of making an exception in the particular case. Policies cannot just be applied mechanistically for the sake of it in a 'blanket' way, without regard to features of particular sites. But that is a straw man argument, because HPPC are not contending for such an approach here.
203. HPPC commend the approach taken by the Secretary of State in his decision regarding Land East of Ditchling Road, Wivelsfield, East Sussex (ID25). The relevant part of the decision concerned the question whether a materially indistinguishable general policy to protect the countryside ('CT1') outside development boundaries was inconsistent with the NPPF. In the decision letter, (para 15), the Secretary of State concluded, 'for the reasons set out at IR327-328, the Secretary of State agrees that LP policy CT1 is not out of date (either by operation of paragraph 215 or paragraph 49 of the Framework) and that the conflict with it should be given significant weight in the decision'. The Inspector had concluded as follows:

*[IR 327] With respect to the adopted plan, there is conflict only with one policy, CT1, of the Local Plan, but this leads to an overall conclusion that the proposal is not in accordance with the development plan as a whole.*

*[IR 328] The defined Planning Boundaries as the means through which policy CT1 operates are related to development requirements that no longer apply, with an end date for these of 2011. While policy CT1 gives blanket protection to countryside, the NPPF directs specific protection to valued landscapes. Nevertheless, a core planning principle of the NPPF includes recognising the intrinsic character and beauty of the countryside. Policy CT1 is expressed as the 'key countryside policy' in the Local Plan. The proposal would involve the incursion of development on a greenfield area of countryside. Taking into account also the finding above that a five-year housing land supply is demonstrated, I consider that policy CT1 is not out-of-date for the purposes of paragraph 14 of the NPPF, and that the conflict with it should be given significant weight in the decision'.*

204. It should be noted that unlike Wivelsfield, where the countryside boundaries were merely in a saved out of date policy in a time-expired plan, in this case they are a tool utilised by policy CS5 in the adopted CS which has an end date of 2026.

205. HPPC readily acknowledges that Wivelsfield was a case where there was a 5YHLS and that the weight to give to such a policy may depend on whether there is a 5YHLS, but that is a different point to the question whether it is inherently inconsistent with the Framework, and therefore always to be given low weight by virtue of Framework paragraph 215 regardless of the housing land supply. The clear decision in Wivelsfield (DL para 15) was that there is no such inconsistency. That is a planning judgment which is right and should be followed here.

206. HPPC also draws the Secretary of State's attention to the Finchingfield decision where the Inspector considered CS policy CS5 and likewise determined that it was consistent with the Framework for the purpose of Framework paragraph 215:

*I accept that the policy does not reflect the exact wording of the Framework; its adoption pre-dated the publication of the Framework. For that reason the policy needs to be considered against paragraph 215 of the Framework. It is a policy firmly aimed at protecting the environment, landscape character and biodiversity of the countryside. This accords with recognising the intrinsic character and beauty of the countryside and supporting thriving communities within it given in paragraph 55 of the Framework. I therefore consider that it should be given the greater weight identified in paragraph 215.'*(paragraph 39, CD32.10 set C).

*Paragraph 109 and value to attach to a given area of countryside*

207. Mr Lee in particular was anxious to argue that Framework paragraph 109 did not apply and that this would mean less weight should be given to the policies protecting the countryside (paragraphs 7.1.14 and 8.2.43-48, 1/POE).

208. Paragraph 109 is merely providing sensible general guidance that 'The planning system should contribute to and enhance the natural and local environment by among other things, protecting and enhancing valued landscapes, geological conservation interests and soils'.

209. The countryside is itself a type of landscape. The value to place on protection of any particular part of the countryside is ultimately entirely a matter for the Secretary of State's planning judgment, depending upon the advice in this report concerning the appreciation of the site and its features or attributes. If the Secretary of State considers the current landscape valuable at a particular spot, it is likely to be desirable, other things being equal, to preserve and enhance it. That is all paragraph 109 is getting at.
210. It would be quite inappropriate to treat paragraph 109 like a statute establishing a special category apart of 'valued' landscapes that has to be closely defined and given special status, and implying that the remainder of the countryside is not worth protecting or enhancing generally. That would be quite against the spirit of the Framework and would be just the kind of legalistic exercise that was deprecated in the *Suffolk Coastal* case by the Court of Appeal and Supreme Court.
211. The only cases to consider Framework paragraph 109 in light of argument about its meaning have stressed that a decision-maker must have regard to demonstrable physical attributes and not merely popularity. For instance, in *Stroud DC v SSCLG* [2015] EWHC 488 (CD31.20 set C), where Ouseley J stated:
- [13] It is important to understand what the issue at the Inquiry actually was. It was not primarily about the definition of valued landscape but about the evidential basis upon which this land could be concluded to have demonstrable physical attributes. Nonetheless, it is contended that the Inspector erred in paragraph 18 because he appears to have equated valued landscape with designated landscape. There is no question but that this land has no landscape designation.... The Inspector, if he had concluded, however, that designation was the same as valued landscape, would have fallen into error. The NPPF is clear: that designation is used when designation is meant and valued is used when valued is meant and the two words are not the same.*
- [14] The next question is whether the Inspector did in fact make the error attributed to him. There is some scope for debate, particularly in the light of the last two sentences of paragraph 18. But in the end I am satisfied that the Inspector did not make that error. In particular, the key passage is in the third sentence of paragraph 18, in which he said that the site to be valued had to show some demonstrable physical attribute rather than just popularity. If he had regarded designation as the start and finish of the debate that sentence simply would not have appeared....*
- [16] ...The closing submissions of Miss Wigley referred to a number of features and it is helpful just to pick those up here. The views of the site from the AONB were carefully considered by the Inspector. There can be no doubt but that those aspects were dealt with and he did not regard those as making the land a valued piece of landscape. That is a conclusion to which he was entitled to come.'*
212. What *Stroud* did not do was hold that Framework paragraph 109 creates a rigid category or implies that protection of countryside not within that category was not desirable for the purposes of the Framework.
213. In *Cawrey Ltd v SSCLG* [2016] EWHC 1198, Gilbert J ruled:

*[49] NPPF undoubtedly recognises the intrinsic character of the countryside as a core principle. The fact that paragraph [109] may recognise that some has a value worthy of designation for the quality of its landscape does not thereby imply that the loss of undesignated countryside is not of itself capable of being harmful in the planning balance, and there is nothing in Stroud DC v SSCLG [2015] EWHC 488 per Ouseley J or in Cheshire East BC v SSCLG [2016] EWHC 694 per Patterson J which suggests otherwise. Insofar as Kenneth Parker J in Colman v SSCLG may be interpreted as suggesting that such protection was no longer given by NPPF, I respectfully disagree with him. For it would be very odd indeed if the core principle at paragraph [17] of NPPF of "recognising the intrinsic beauty and character of the countryside" was to be taken as only applying to those areas with a designation. Undesignated areas - "ordinary countryside" as per Ouseley J in Stroud DC - may not justify the same level of protection, but NPPF, properly read, cannot be interpreted as removing it altogether. Of course if paragraph [49] applies (which it did not here) then the situation may be very different in NPPF terms.*

*[50] Whether that loss of countryside is important in any particular case is a matter of planning judgment for the decision maker. In any event, extant policies in a Development Plan which are protective of countryside must be had regard to, and in a case such as this a conflict with them could properly determine the s 38(6) PCPA 2004 issue. If the conclusion has been reached that the proposal does conflict with the development plan as a whole, then a conclusion that a development should then be permitted will require a judgment that material considerations justify the grant of permission... There is in my judgment nothing at all in NPPF which requires an Inspector to give no or little weight to extant policies in the Development Plan. Were it to do so, it would be incompatible with the statutory basis of development control in s 38(6) PCPA 2004 and s 70 TCPA 1990.' (emphasis added).*

214. Accordingly, the fact that no witness or party at this inquiry argued for any special 'valued' status by reference to paragraph 109 does not mean that the Secretary of State cannot or should not give weight to the protection of the countryside at these sites and to the adopted and development plan policies that seek to achieve this, nor that as a matter of law he cannot treat the physical attributes of the sites as favouring their protection. It is simply a subjective question of judgment for the Secretary of State in the particular case what value to place on the sites.
215. This also accords with the GLVIA3 (para 5.26) which advise that the fact that a landscape is not designated 'does not mean that it does not have any value. This is particularly true in the UK where in recent years relevant national planning policy and advice has generally discouraged local designations unless it can be shown that other approaches would be inadequate. The European Landscape Convention promotes the need to take account of all landscapes with less emphasis on the special and more recognition that ordinary landscapes also have their value'.

### ***The emerging BNLP***

216. The emerging BNLP can be given significant weight as it has progressed to examination stage. It properly seeks to meet the identified OAHN with an

additional 10% margin in a strategic way in collaboration with other Essex authorities.

### *Spatial strategy*

217. This is again based upon a hierarchy of place. Part 1 policies SP2 and SP3 which set out the spatial strategy and the number of homes to be planned for across north Essex and in the Council area are summarised above (paragraph 34).
218. The way in which the quantum of new homes to be provided in Braintree District is to be apportioned is explained by Ms Jarvis (paragraphs 2.29-2.53, HPPC2). The order of focus of new development is the town of Braintree, new planned garden communities, then Witham, then the KSVs in the A12 corridor, then other settlements. The principle of garden communities is fully consistent with national policy (e.g. Framework paragraph 52).
219. An allocation of land for 285 homes (2% of the total) is made at the Comprehensive Redevelopment Area (CRA) in Hatfield Peverel by draft Policy LPP31.
220. The District's population is about 150,000 (paragraph 3.3, CD16.3 set C). The populations of Witham and Hatfield Peverel were 25,353 and 4,500 in 2011 (paragraph 2.44, HPPC2). Hatfield Peverel therefore has around 3% of the District's population. Given that about 3,650 (25%) of the new homes in the District are to be located in the 2 new garden communities, it is evident that the emerging BNLPP envisages Hatfield Peverel accommodating the planned housing growth in scale with its share of the population. Development significantly in excess of the 285 homes allocated in the draft plan would not be in keeping with the spatial strategy for distribution of housing.
221. Furthermore, Policy LPP17 makes clear that 'Sites suitable for more than 10 homes are allocated on the Proposals Map and are set out in Appendix 3', and no other site outside the CRA is allocated in or adjacent to Hatfield Peverel. Paragraph 6.63 of the supporting text makes explicit what is already implicit, that 'All sites suitable for delivering ten or more homes are allocated for development on the Proposals Map' (emphasis added). This indicates that the spatial strategy does not envisage either the Stone Path Drive site or the Gleneagles site being suitable for large-scale housing development. The unsubstantiated assertions made in cross-examination by Mr Tucker that the boundaries have not been reviewed and considered is flatly contradicted by paragraph 5.17 of the supporting text in Section 2 to the emerging plan, which states:  
*Development boundaries within this document have been set in accordance with the Development Boundary Review Methodology which can be found in the evidence base.*
222. This is evidently linked to the assessment of constraints. Paragraph 5.7 of Section 2 of the emerging BNLPP supporting text explains that 'Development may be considered sustainable within a KSV, subject to the specific constraints and opportunities of that village' (emphasis added).
223. One such constraint is the surrounding countryside and local character. It is not envisaged that there should be built development outside of the settlement boundaries, nor ribbon development along the A12. That is seen at Policy LPP1,

the full text of which is given at paragraph 35 above. For reasons explained above, it is perfectly consistent with the Framework to have such a general policy that built development is considered not to be appropriate in the countryside, so long as it is always applied in individual cases with the particular characteristics of a particular site in mind.

224. Another constraint is local infrastructure, services and facilities including roads, healthcare and schools. Draft Policy SP 5 states that development 'must be supported by provision of infrastructure, services and facilities that are identified to meet the needs arising from new development', including sufficient school places in the form of expanded or new schools.

225. For reasons already alluded to above in relation to the 'Liverpool method' and the adopted plan, the spatial strategy in the emerging local plan seeks to advance planning objectives underlying the Framework. It should be given significant weight and provides comfort that the District's OAHN will be met sustainably without the Inquiry schemes coming forward and encroaching on the countryside setting of Hatfield Peverel.

### ***The emerging NDP***

226. Mr Renow's evidence has set out in detail why the NDP is supported by written national policy and the political commitments made by the present Secretary of State.

### ***Emerging stage and status of the NDP***

227. The NDP can be given significant weight insofar as it indicates the concerns and aspirations of the local community and their vision for the village of Hatfield Peverel.

228. The NDP can be given at least as much weight, if not more weight, as it was given by Inspector Parker in connection with the 80 dwelling appeal, as it has now progressed to examination.

229. Whilst it is accepted that there are likely to be modifications to the drafting of the NDP before it is put to referendum, in particular to ensure that it allocates no less development than the emerging BNLP, the Secretary of State can be confident that a plan containing the relevant restrictive policies directly in issue at this Inquiry (Policies HPE6 and HPE1) in materially the same form will be passed.

230. The Regulation 14 consultation indicated extremely high (89%) support for the vision and objectives of the draft NDP, support between 77% and 92% for each of the individual draft policies (HPPC1, Appendix MR 18). The survey in September 2017, with 570 respondents, indicated 96% approval of the draft plan at that stage (HPPC1, Appendix MR26). Subject to the question of legal compliance with the 'basic conditions', the Secretary of State can be confident that the NDP would pass a referendum and proceed to adoption.

### ***Basic conditions***

231. Paragraph 8 of Schedule 4B to the Town and Country Planning Act 1990, as modified by section 38C(5) of the Planning and Compulsory Purchase Act 2004, requires the examiner to consider the following:

- i) whether the draft plan 'meets the basic conditions' (defined at sub-paragraph (2));
- ii) whether it complies with the provision made by or under sections 38A and 38B of the 2004 Act; and
- iii) whether the area for any referendum should extend beyond the neighbourhood area to which the draft plan relates; and
- iv) whether the draft plan is compatible with 'the Convention rights', as defined by the Human Rights Act 1998.

232. There can be no suggestion that the NDP is incompatible with anyone's human rights, and there has been no suggestion that the referendum area should be wider than the parish.

233. The Examiner is not considering whether the neighbourhood plan is 'sound' (the test in section 20(5) of the 2004 Act for local plans), and the tests of paragraph 182 of the NPPF do not apply. In other words, unless the strategic environmental assessment procedure applies, the Examiner does not have to consider whether a draft policy is the 'most appropriate strategy' compared against alternatives, nor is it for her to judge whether it is supported by a 'proportionate evidence base' (paragraph 13, *R(Maynard) v Chiltern District Council* [2015] EWHC 3817 (Admin)). The 'basic conditions' only require consideration whether it is 'appropriate' to make the plan having regard to national policy and guidance, whether it is in general conformity with the adopted plan; whether the making of the plan contributes to sustainable development, whether the making of the plan is compatible with EU obligations, and prescribed conditions are met. Regulation 32 of and paragraph 1 of Schedule 2 to the Neighbourhood Planning (General) Regulations 2012 prescribe the condition that: '[the] making of the neighbourhood development plan is not likely to have a significant effect on a European site (as defined in the Conservation of Habitats and Species Regulations 2012 ) or a European offshore marine site (as defined in the Offshore Marine Conservation (Natural Habitats, &c.) Regulations 2007) (either alone or in combination with other plans or projects).'

#### HRA

234. As it is one of the prescribed 'basic conditions' that the plan should not be likely to have a significant effect on a protected European site and as the likelihood of such an effect is also an important, if not determinative, consideration to decide whether SEA is required, it made sense for HPPC to commission a re-screening examining possible effects on European protected sites before it reconsidered the broader question whether SEA was required.

235. As Mr Renow explained in his evidence (pages 12-13, HPPC1), Section 2 of the emerging BNLP which includes an allocation of 285 dwellings at the CRA as well as much larger quantities of other development, has been assessed for compliance with the Habitats Directive and found compliant. No issue is predicted to arise except in combination with other forthcoming district plans envisaged by Section 1.

236. The draft NDP would progress in advance of those other plans and would be for a much smaller quantum of development than the BNLP which proposed at least 14,320 dwellings as well as employment development and other development.

237. In *R (Forest of Dean Friends of the Earth) v Forest of Dean DC* [2015] EWCA Civ 683 at [13] Sales LJ ruled:

*where a series of development projects is in contemplation, the strict precautionary approach required by the Habitats Directive will be complied with in relation to consideration of the first particular proposed development project if that project will not of itself have a detrimental impact on a protected site and there will be an appropriate opportunity to consider measures in relation to a later project which will mean that any possible in-combination effect from the two projects together will not arise (failing which, permission may have to be refused for the later project, when it is applied for: see the Smyth case, paras 87–102. In other words, so long as the relevant assessment of options has been carried out at the level of the relevant development plan (land use plan), as explained in Commission v United Kingdom [2005] ECR I-9017, it will be lawful when planning permission is sought for the first specific development project in the series for the relevant planning authority to assess that that project taken by itself will not have any relevant detrimental impact on the protected site (and then grant planning permission for it), even though it is possible that there might be future in-combination effects on the protected site if planning permission were later granted for the next project in the series.'*

This was based upon opinions of the Advocate General Kokott in the *Commission v United Kingdom* and *Waddenzee* cases, and the need to 'avoid sclerosis of the system' (Sales LJ at paragraphs 15-18).

238. This principle applies by analogy to plans as well as to projects. Where a draft plan (here the NDP) is the first in a possible series of plans that would be promoted separately by other authorities (here, the Local Plans of Braintree District and the other North Essex districts), it is sufficient to assess the draft plan in combination with other existing plans and permitted projects, without attempting to speculatively assess combined future effects of other plans. The impacts of those plans can be assessed when they come forward.

239. Furthermore, a habitats regulations screening assessment in July 2017 found no requirement even for 'appropriate assessment' before grant of planning permission for up to 145 homes at the Arla site (ID14).

240. In the light of the above, the Secretary of State can be confident that the requirements of the Habitats Directive will not prevent adoption of the NDP.

#### SEA

241. The Examiner's concern was that the SEA screening was done when the plan was at an earlier stage of development and premised on no allocation being made in the Draft NDP, when the Arla site was subsequently allocated by draft Policy HO6. If the allocation policy were dropped and allocations left entirely to the emerging local plan, it is unlikely that SEA would be required.

242. As regards SEA, article 3(2) of Directive 2001/42/EC only requires strategic assessment of plans that 'determine the use of small areas at local level and

- minor modifications' to broader town and country planning plans if the Member States 'determine that they are likely to have significant environmental effects'.
243. Whether potential environmental effects are 'significant' is a matter of judgment for the planning authority, subject to review on grounds of reasonableness.
244. It is not anticipated that the NDP is likely to give rise to significant environmental effects, and no evidence has been presented at this Inquiry by any party proving that it would.
245. It is therefore anticipated that the Examiner and the Parish and District Councils would conclude that the NDP determines the use of small areas at local level (the parish) and that it is not likely to have significant environmental effects in combination with existing plans, programmes and projects. This is particularly the case given that the Arla site has already been granted permission for a greater number of homes than contemplated in the current Draft NDP, the project is on brownfield land and that project has been found not to be likely to have significant effects on a protected European site which is one of the important factors relevant to the assessment (ID14). If that is the eventual conclusion, no SEA would be required.
246. SEA has already been conducted for the emerging BNLP. Article 4 of the Directive expressly provides that 'Where plans and programmes form part of a hierarchy, Member States shall, with a view to avoiding duplication of the assessment, take into account the fact that the assessment will be carried out, in accordance with this Directive, at different levels of the hierarchy. For the purpose of, *inter alia*, avoiding duplication of assessment, Member States shall apply Article 5(2) and (3).' Article 5(2) and (3) in turn state that where an environmental assessment report is required, the level of detail should take account of 'the contents and level of detail in the plan or programme, its stage in the decision-making process and the extent to which certain matters are more appropriately assessed at different levels in that process in order to avoid duplication of the assessment', and the report may use 'information obtained at other levels of decision-making or through other Community legislation'. This is reflected in regulation 12(3) and (4) of the Environmental Assessment of Plans and Programmes Regulations 2004.
247. Even if it were considered that NDP does require SEA, then the sustainability appraisal could draw upon the work already carried out in that regard rather than duplicate it. Whilst some additional months would be required to assess the draft plan and the reasonable alternatives, Mr Renow's evidence was that this could be expected to have been completed by summer 2018. The requirements of the SEA Directive are not 'showstoppers'.

*Evidence base for not allocating the Inquiry sites*

248. It was suggested that the Parish Council should have sought to take a more proactive approach to maximise housing delivery and that the exercise was only aiming to allocate sites sufficient to provide 78 homes. However, that criticism does not impinge on the appropriateness of adopting the draft NDP. A neighbourhood plan does not have to make any site allocations. The written and oral evidence of Mr Renow was that HPPC would accept a pre-emptive 'future-proofing' modification of the text to bring the draft into line with the CRA in the

emerging Local Plan. Its policies would be superseded by specific conflicting policies in later development plan documents such as the emerging BNLDP in any event.

249. An attack was made on the ranking assessment when determining which sites to allocate for development in the NDP (CD18.3 set C). It was put to Mr Renow that the exercise unfairly failed to expressly mention in the 'opportunities' column of the table the opportunities afforded by the Gleneagles site to provide housing. This was itself an unfair critique; it was a given, as the whole point of the exercise was to determine which of the sites to allocate for housing and one of the scoring criteria was the number of homes that could be accommodated.
250. In any case, sites HATF313, HATF630 and HATF608 which correspond to the CRA all scored more highly in their ranking than the Inquiry sites. The scoring system was one that was perfectly reasonable and lawful. The choice of policy objectives and the weight to attach to each was a matter for the judgment of the democratically elected Parish Council.
251. Lastly, the criticism was levelled that the site assessment was not considering these particular projects with mitigation measures. Such is almost always the case when engaging in forward planning of this nature and does not invalidate the assessment.

*The evidence base for protected views*

252. The NDP specifically designates views for protection and enhancement in order to protect the landscape setting of the village (Policy HPE6). It is evidence that the specified 'views and open spaces...are valued by the community and form part of the landscape character' (NDP 'objectives' p.32).
253. Extensive evidence was given by Mr Renow of the local engagement that the Parish Council undertook with the local community, including the survey, the 'walkabout' and photographic competition referred to in the supporting text to the policy, as well as public consultation. The reality is that the abovementioned engagement and evidence-gathering programme provided a sufficient evidence base.
254. DWH sought to suggest that the Parish Council had been disingenuously misrepresenting that View 5 in the table accompanying HPE6 had been identified in the Landscape Character Assessment of October 2015 (CD18.4 set C), and consequently that the policy lacked an evidence base. However, this line of attack was misconceived. The text of HPE6 makes very clear that it protected both views 'identified by the community (see pages 33-37) and the Hatfield Peverel Landscape Character Assessment' (emphasis added), and was not purporting to say that all the views were identified in the Landscape Character Assessment.
255. Although the Landscape Character Assessment (CD 18.4 set C) did identify 'key views' and photographs, these were selected to 'reflect the key characteristics of each area' (para 3.12) by an individual professional consultant as part of an exercise to characterise the area and make suggestions for its management. That exercise had not involved public consultation to ascertain the views of the community. Meanwhile, the residents' survey in October 2015 indicated that 'views towards Witham looking from Gleneagles Way' was selected

as one of the 3 views to 'be safeguarded if new development takes place in the parish' by 237 respondents (HPPC1, Appendix MR28). In those circumstances, it was perfectly proper to reflect the wishes of the community.

256. The Table at pages 34-35 of the NDP identifies the key features/physical attributes of the views, and any access by residents. It is not merely about popularity but rather the NDP explains the features of the views that are valued. Views 1 and 5 are attractive open vistas and it is readily understandable why the views are valued by the local community.
257. Criticisms were directed at the Parish Council's reviewer of the feedback from the workshop held in December 2016 (CD 18.6 set C). A comment was made by that individual that in respect of the view from Gleneagles Way (view 16 in that document) they were not personally sure if the view had value but people liked it, and so it had been retained.
258. Insofar as it was suggested for DWH that it was illegitimate for the draft NDP to reflect the views of the community, the whole point of neighbourhood plans is to 'reflect the... priorities of their communities' (Framework paragraph 1), giving 'communities direct power to develop a shared vision for their neighbourhood' (Framework paragraph 183) and to 'shape and direct sustainable development in their area' (Framework paragraph 185). Landscape value and the degree of attractiveness of any view is highly subjective and it is a matter that the Secretary of State will form his own view on, informed by this report, itself informed by the inspection of the site and surrounding area. Any argument that the personal opinions of a particular hired consultant or parish working-group volunteer are privileged over the views of the community reflected in a neighbourhood plan is to be deprecated.
259. It was also suggested that the response to the workshop is evidence that views were chosen merely to stymie development at those locations and not because of the value of the views. However, it is plain as can be that the reviewer in question in December 2016 was engaged in a whittling-down process determining which of the views identified by the community to retain as most valued and meriting protection, not introducing new views of their own. It was perfectly proper to choose to designate and protect only those valued views that might realistically be subject to development. Neighbourhood plans are supposed to be practical documents to shape and direct development. Mr Renow explained in his oral evidence and cross-examination how views identified by the public were then whittled down to retain the most locally valued views that required protection.

#### *Coalescence and the propriety of policy HPE1*

260. Mr Renow's evidence was that maintenance of the distinctive separate character of the village of Hatfield Peverel and prevention of coalescence were identified as objectives that were important to the local community (pages 24-26 HPPC1 and Appendix MR29).
261. Consistently with the purposes of neighbourhood plans, as alluded to in the Framework and the localism agenda, it was therefore entirely proper for this to be reflected in the Vision and in Objective 4 of the NDP and translated into draft policy HPE1.

262. DWH sought to contend that the green wedge policy was 'strategic' and trespassing on the remit of the emerging Local Plan. They argued that it amounted to a green belt which the PPG and the Framework stated should only be designated by a local plan at district level. They also argued that it was somehow inconsistent with the emerging BNLP because draft Policy LPP 72 ('Green Buffers') had not included a green buffer between Witham and Hatfield Peverel.
263. Those arguments are unsustainable. The Prevention of Coalescence Areas that would be designated by draft policy HPE1 in the NDP are small areas on the outskirts of a fairly small village within one parish, aimed purely at preventing intrusion into those wedges to retain separation between Hatfield Peverel and the nearby hamlet of Nounsley and expanding town of Witham. In no sense are they 'strategic' and nor can they credibly be contended to create a 'green belt'.
264. Just because the emerging Local Plan did not include a policy contained in the NDP, that does not mean there is an inconsistency; otherwise no NDP could ever contain a distinct policy. In fact, the additional green wedge is complementary rather than inconsistent.
265. Alan Massow, the Senior Policy Planner at the Council, had liaised with and advised HPPC in the NDP drafting process and had confirmed that the District did not designate a Green Buffer in the Local Plan on the understanding that one would be promoted by the NDP, a decision that it considered to be up to the Parish Council and to be consistent with the emerging BNLP (ID26). This was in full accordance with Framework paragraph 185 which states in terms: 'Local planning authorities should avoid duplicating planning processes for non-strategic policies where a neighbourhood plan is in preparation.'

### ***Housing delivery***

266. Any argument that an exception should be made to allow development conflicting with the statutory development plan on the basis that there is not currently a 5 year supply of housing land has to be premised on the scheme in question being delivered within 5 years, so as to meet that housing need.
267. It is therefore relevant not only what the level of OAHN is (and the extent of any shortfall) but also how likely it is that the housing in any particular scheme will actually be completed and occupied as a home within 5 years. The evidence in relation to delivery is addressed separately in respect of each scheme later.

### ***Health, education and infrastructure/sustainability issues common to all 3 schemes***

268. There would be conflict with Policy SP5 of the emerging BNLP ('Development must be supported by provision of infrastructure, services and facilities that are identified to serve the needs arising from new development.'). Development whose needs are not served should not be considered acceptable in planning terms, and where planning obligations are inadequate to make the development acceptable, permission should be refused (Framework paragraph 176).
269. In both his written and oral evidence Mr Renow explained the existing situation in terms of the lack of employment opportunities for new residents within Hatfield Peverel (pages 26-27, HPPC1); the pressure on health facilities and their lack of space to physically expand (pages 27-28, HPPC1); the requirements for

- additional school places (pages 29-33, HPPC1); the lack of a safe walking route to Witham along the A12 (pages 33-35, HPPC1); and pressures with regard to transport infrastructure and traffic (pages 36-38, HPPC1).
270. No suggestion was made by the applicants that it was safe for children to walk to Witham along the A12, with reliance being placed instead on potential travel by bus (paragraph 7.2.35, 1/POE).
271. As regards healthcare and the physical inability to extend the Sidney House surgery, the factual evidence of Mr Renow was not challenged or rebutted. The developments would generate additional occupiers who would require health services. There was no evidence that mere internal reconfiguration of the surgery would provide the required extra accommodation for an extra doctor; furthermore there is no indication that any such improvement to the Sidney House Surgery is planned or even practicable.
272. As regards current and projected school places, and the number of students generated by the developments, the numerical situation appears to be common ground (ID1.8).
273. The occupiers of the dwellings would require school places. There are currently 484 primary pupils on the roll of schools within Hatfield Peverel, which have a capacity of 525. The number without additional housing is predicted to fall slightly to 470 by 2021/22. The extant Former Arla Dairy and Bury Lane permissions would generate an additional 58 primary school pupils between them (ID1.8, Appendix). This means that any of the Inquiry schemes would result in excess demand that could not be met by existing capacity.
274. Village schools' admissions policies give preference to village children if they become over-subscribed, but this is subject to sibling preference. It would also only apply to children newly entering the school and existing pupils would not be moved. This means that for many years, primary-age occupants of the Inquiry schemes would be required to travel further afield for schooling. This is contrary to the objectives in the Framework of minimising the need to travel and providing schools within walking distance of larger scale housing development (Framework paragraphs 34 and 38).
275. The corollary of that outbound travel phenomenon diminishing in scale would be a diminishing in-school choice for parents living outside the village and the requirement for children residing outside the village who otherwise would have attended the Hatfield Peverel schools having to be found school places elsewhere. As a result, the developments would generate a demand for additional school places whether for the children of occupiers or those children who otherwise would have been accommodated at the village schools. This requirement for additional educational provision is a negative externality of the developments to be weighed in the planning balance.
276. The cost of that externality would not be internalised by means of a Section 106 planning obligation. None was requested by Essex County Council in respect of the costs occasioned by these schemes because it was concerned that the CIL Regulations prohibit pooling of 5 or more contributions in respect of a particular project or type of infrastructure (CD21 set C). In fact, CIL regulation 123(3) prevents pooled planning obligations being relied upon as 'a reason for granting planning permission'. This is not exactly the same as a prohibition upon pooling

such contributions, or against treating absence of such contributions as a reason for refusing permission. There is no CIL charging schedule in place either. As a result, the cost of putting in place the educational provision would be borne by the taxpayer.

277. Moreover, the additional travel costs in terms of bus transport would either fall to be borne by the local authority (to the extent that it is statutorily obliged or agrees as a matter of discretion to pay them) or by parents. This would be a particular burden for parents on low incomes.

278. Framework paragraph 72 states that 'The Government attaches great importance to ensuring that a sufficient choice of school places is available to meet the needs of existing and new communities...local planning authorities should... give great weight to the need to create, expand or alter schools' (emphasis added). This principle is also reflected in Draft Policy SP5 of the emerging BNLPP. The Secretary of State should attach great weight to the failure of these schemes to provide for the necessary school places and the impact on parental choice.

### ***Summary of HPPC's case respecting the DWH scheme***

#### *Conflict with the spatial strategy*

279. The development conflicts with the spatial strategy in the adopted and emerging development plans for the reasons set out above. That means there is a statutory presumption against granting permission by virtue of s.38(6) of the Planning and Compulsory Purchase Act 2004. Specifically, there is conflict with policies CS1, CS5, and RLP2 of the adopted plan; and draft policies LPP1 and LPP17 of the emerging BNLPP. This conflict should be given great weight because the Framework expects the system to be genuinely plan-led.

#### *Harm by reason of Coalescence*

280. Draft anti-coalescence policy HPE1 of the NDP reflects the vision of the community for Hatfield Peverel. The conflict with this policy should be given significant weight given the current status of the NDP as a submitted examination draft for the reasons set out above.

281. Coalescence is a material consideration in this application. The development would result in expansion of the settlement of Hatfield Peverel to the east, narrowing the gap between it and the settlement of Witham (as substantially extended by the Wood End Farm, Lodge Farm and the development to the west of Maltings Lane (ID13) to approximately 1km, down from 1.4km. This would be a relatively small gap, which would be traversed in around 30 seconds travelling at 70mph on the A12.

282. DWH's witness, Mr Smith, stated that in his view the key consideration was whether there would remain a perception of leaving one place and entering another. However, that test could be met even within an urban area. Although there would remain some fields between Witham and Hatfield Peverel, the settlements would begin to feel uncomfortably close and the rural village character of Hatfield Peverel would be eroded as the net effect of the Gleneagles Way development and the new development on the edge of Witham would be that it came to feel more like a southern extension of Witham.

283. In his oral evidence, Mr Smith accepted that there would be clear inter-visibility between the permitted and as-yet-unbuilt development at Witham north of the A12 and the development at the Gleneagles site, particularly from upper floors. The only way to prevent this and screen views would be to significantly strengthen the planting along the eastern edge of the application site to a height of 9m or more, as was indeed proposed. That would fundamentally and detrimentally change the character of the locality by blocking broad open views out across what remained of the countryside. The line of vegetation would only serve as a marker for the built development behind, adding a prominent and abrupt edge to what had been filtered views in to the houses from the footpath

*Landscape, character and visual harm*

284. The development would fundamentally obstruct and mar the pleasant views out across open countryside enjoyed from The Street outside D's Café Diner, (ID13 photographs, Mr Renow's viewpoint 1 for this site), the 3 culs-de-sac of Wentworth Close, Birkdale Rise and Ferndown Way (ID13 viewpoints 2-7), and Gleneagles Way (ID13 viewpoint 8), which make a positive contribution to the character of the area.

285. Although the view protected by the NDP policy HPE6 is not from the same place as the view identified as characteristic by the Local Landscape Character Assessment of October 2015 (CD18.4, set C) which was not based on consultation of residents, that document did highlight the physical attributes of this landscape character area as including large and geometric fields under arable cultivation, with 'broad open views possible across open farmland' which it recommended should 'be safeguarded'. For the reasons explained above, the conflict with draft policy HPE6 by reason of loss of the 'key feature' of 'open arable farmland' should be given significant weight.

286. The Essex Landscape Character Assessment (ELCAA) (pages 94-95, CD14.5, set B) noted that potential residential expansion of settlements... 'would be conspicuous on the surrounding rural landscape' and recommended that any development be 'small-scale'. As explained above, the emerging BNLP allocated all the sites considered suitable for development of more than 10 dwellings, which indicates that development on this scale was rightly judged inappropriate at this location.

287. Currently, the estate off Gleneagles Way has a spacious, open and rural character by reason of the view out across open countryside. Its village character would become more suburban.

288. The character of the application site itself would fundamentally and detrimentally change as the open countryside was lost and replaced by a housing estate.

289. These views out from the village are experienced by pedestrians, very low-speed traffic, and residents of the houses who are moderate and highly sensitive receptors for the purpose of the GLVIA3.

290. These views are more highly valued by the community than the views in from the surrounding footpath as they are more frequently experienced.

291. There would additionally be harm to views from Footpath 40. The views towards the village are already filtered to a degree from this footpath and the

most attractive views from it are to the south and east. Nevertheless, there will undoubtedly be harm to views from Footpath 40 looking towards the village to the west- the worst of which have not been accurately shown in a montage and the users of the footpath will be high-susceptibility receptors as advised by the GVLIA3 passages previously cited.

292. The tall boundary screening would create a strong sense of enclosure, which would be much stronger than that which currently exists and would undermine the character of the area. Rather than integrating the development, the planting would simply block it off from the countryside that currently forms an intrinsic part of the setting of the settlement edge. The future residents of the estate, and the residents of the Gleneagles estate, would be prevented from enjoying the views of the surrounding countryside setting.

293. These changes would harm the character of the area.

294. There are conflicts with Policy RLP80 in that the development would harm the distinctive landscape features of the area and would not integrate successfully into the local landscape. There is also related conflict with Policy CS8 in that it fails to enhance the character of the landscape and results in loss of best and most versatile agricultural land; this point is elaborated upon below.

#### *Evidence regarding delivery*

295. The question of delivery was raised before the opening of the Inquiry in the second pre-inquiry note (INSP2). The only evidence regarding delivery was given orally by Mr Dixon in evidence. It amounted to a statement that DWH are a housebuilder with the intention to develop the site, an assertion that had the application not been called in, they would have submitted a reserved matters application already and an assertion that 'the likelihood is' that the development would be completed within the 5 years. No details as to DWH's track record were given. This is a slender basis indeed for the Secretary of State to give extra weight to provision of housing as a benefit on the strength of any claimed shortage of 5YHLS.

#### *Unsustainability/ demand for services*

296. The development would generate demand for and increased pressure on local public services in conflict with policy as explained above.

297. In relation to schools, the development would generate an estimated 36 additional primary pupils (ID1.8).

298. The healthcare contribution of £378.54 per dwelling (SAV56, schedule 8) would not actually address the problem of insufficient staff for the reasons referred to above.

#### *Loss of BMV agricultural land*

299. DWH's own evidence discloses that this site is best and most versatile agricultural land, although no details as to its quality are given. The site area is 5.2Ha (SAV2, application form). The loss of this land to agriculture is material, particularly in combination with the other consented and planned green-field development in the area (including the emerging BNLP allocations) and conflicts with CS Policy CS8 with Framework paragraph 112.

*5YHLS/weight attaching to provision of housing*

300. HPPC's case is that on the correct approach, there is no shortfall in 5YHLS for the reasons set out above. Even if that be wrong, the shortfall does not justify departure from the development plan. The specific development plan policies and the physical and policy harms referred to (including conflict with the Framework) significantly and demonstrably outweigh the benefits of providing 120 dwellings at this location.

***Conclusion of HPPC case to the Inquiry***

301. For the reasons set out above, the 3 schemes should be refused planning permission; the GDL 140 dwelling and the DWH 120 dwelling applications should be refused and the GDL appeal dismissed.

**The Case for Stone Path Meadow Residents Group on policy and housing land supply**

***Introduction***

302. There are three parts to the case for SPMRG. First, identifying conflict with the Development Plan; second, the application of Limbs 1 and 2 under the fourth bullet point of Framework paragraph 14; and third, a consideration of the planning balance. Only extracts from the first two parts are of relevance to the determination of this application.

303. In very brief summary, SPMRG submit that with respect to part one, there is a conflict with development plan in respect of seven separate policies only some of which are relevant.

304. With respect to part 2, SPMRG submit that there is a five year housing land supply and that as such the fourth bullet point does not, in fact, apply.

***Part one***

305. SPMRG submits that the evidence presented at the Inquiry demonstrates that there is significant conflict with the following adopted development plan policies:

- i) Policy RLP2: Town Development Boundaries and Village Envelopes;
- ii) Policy CS5: in relation to the countryside and development outside village envelopes;

*Development Boundaries: RLP2 and CS5*

306. Both GDL application schemes (and by extension this application scheme) clearly fall outside the adopted development boundaries, and it was accepted by Mr Lee for GDL that both proposals would therefore breach policies RLP2 and CS5 (this is also the position of DWH). Significant weight should be given to these breaches. The relevant policy in the emerging BNLP is LPP1 the wording of which is set out above (paragraph 35).

307. Ms Jarvis was asked in cross-examination about the date when development boundaries were last reviewed. It is submitted that, in the context of this District and this site, this is irrelevant. It is apparent from the emerging Local Plan that the Council's spatial strategy, as discussed by Ms Jarvis in her written and oral evidence, is focused on significant development in other areas of the District and, in particular, on a number of Garden Villages. It is plain from BNLP Inset Map 36

that the development boundaries of Hatfield Peverel are intended to remain exactly the same in relation to this site as they are in the adopted development plan documents. The current intention of the Council as seen through the emerging Local Plan therefore clearly demonstrates that the development boundaries are appropriate in their current location.

308. It is acknowledged that the RLP2 and CS5 date from before the introduction of the Framework and therefore must be judged against Framework paragraph 215. In the very recent appeal decision (CD.32.10 set C, paragraph 39), on the same policies under consideration here, the Inspector discussed Policy CS5:

*I accept that the policy does not reflect the exact wording of the Framework; its adoption pre-dated the publication of the Framework. For that reason the policy needs to be considered against paragraph 215 of the Framework. It is a policy firmly aimed at protecting the environment, landscape character and biodiversity of the countryside. This accords with recognising the intrinsic character and beauty of the countryside and supporting thriving communities within it given in paragraph 55 of the Framework. I therefore consider that it should be given the greater weight identified in paragraph 215. (emphasis added).*

309. Contrary to suggestions made at Inquiry that this Inspector had erred in her analysis, she has clearly identified that it was open to her to attach "due weight... according to [its] degree of consistency with this framework" to CS5 as set out in Framework paragraph 215. It is submitted that the Inspector found that the policy was highly consistent with the Framework, focusing in particular on Framework paragraph 55 and therefore determined that, given its closeness to the Framework, she could accordingly give it greater weight than if it had been inconsistent with the Framework. In accordance with the well-rehearsed principles set out in *Bloor Homes East Midlands Ltd v SSCLG* [2014] EWHC 754 (Admin) in relation to how to read an Inspector's decision letter, it is therefore submitted that the Inspector's analysis is sound, based on an accurate understanding of the Framework and should be adopted here.
310. It is therefore submitted that significant weight should be attributed to the breaches of RLP2 and CS5 that would occur should either proposal be granted planning permission. As set out below when considering the tilted balance, emerging policy LPP1 would also be breached.

**Part two:**

311. This second part addresses the two limbs of the fourth bullet point of Framework paragraph 14: the "tilted balance" in Limb 1 and the "unweighted balance" to be applied to the identified heritage harm in Limb 2.
312. First it is necessary to consider whether the proposals fall within the fourth bullet point at all - is the development plan "absent, silent or [are] relevant policies out of date" - before considering the restrictive heritage policies under Limb 2, followed by the tilted balance under Limb 1, in the event that the Secretary of State disagrees with the first two conclusions.
313. Only the general points relating to 5YHLS set out below are relevant to the determination of this application.

### *Five Year Land Supply*

314. As per the table of the parties' agreed positions (ID1.13), it is SPMRG's case that the Council can demonstrate a 5YLS, such that Framework paragraph 49 does not apply and "relevant policies for the supply of housing" are "up to date", such that there is no access to the tilted balance on this ground.
315. SPMRG's position on the disputed elements of the 5YLS calculation is as set out in Mr Leaf's adopted proof of evidence (RG5) and as per the discussion at Inquiry.

### *The Liverpool approach*

316. The appropriate approach to take in addressing the backlog is the Liverpool approach, spreading the backlog of 1,660 dwellings out over the remaining plan period.
317. As explained by Mrs Hutchinson on behalf of the Council, the Liverpool approach forms the basis of the emerging Local Plan which is currently at examination. SPMRG submits that to adopt the Sedgefield method would be to undermine this approach taken by the Council after considerable consultation and work and, consequently, would be inappropriate in a plan-led system.
318. Paragraph 35 of the PPG provides that undersupply should be addressed "where possible" during the first five years of a plan. SPMRG submit that, here, it is not "possible". Adopting the Sedgefield method plus 5% produces an annual requirement of 1,100 dwellings or 1,258 dwellings with 20%: these targets are far in excess of anything achieved by the Council going back as far as 2001 and it is therefore extremely unlikely that the Council would be able to achieve these targets. There is therefore no practical purpose to adopting this approach: it is simply not possible for the Council to meet these requirements given their historic performance. Similarly, Mrs Hutchinson notes in her first proof that it is unrealistic to expect that the scale of increase in delivery required could be achieved straight away (paragraph 4.16, BDC1).
319. The significant increase in housing requirement from the Core Strategy figure of 272 dwellings per annum to an OAHN figure of 716 also indicates that the Liverpool approach is appropriate. This sudden upsurge in the annual requirement is another reason why it is not possible for the Council to address the existing backlog in the next five years.
320. It is also highly relevant that the Council is bringing forward new Garden Communities in its area as set out in policies SP2 and SP7 of the BNLP, Section 2. The Council has thus deliberately planned its anticipated housing delivery over the Plan Period as a stepped housing trajectory based on the delivery of a strategic site, as opposed to a "standard annualised requirement". The latest 5YLS Statement predicts that 40,000 new homes in North Essex will be delivered by these Garden Communities. This also suggests that the Liverpool approach is appropriate, given the way in which the Council is planning its approach to housing delivery over the whole plan period.
321. SPMRG notes that Planning Inspectors have adopted the Sedgefield approach in the recent decisions at Coggeshall (paragraph 14 to 15, CD32.2 set C), Steeple Bumpstead (paragraph 9, CD32.10 set C). In the first place, the BNLP has now been submitted for examination since these decisions, which is a significant step

forward in terms of the certainty of the Council's approach to Garden Villages (although plainly the Plan has yet to make it through examination). Secondly, neither Inspector's analysis addresses the points raised above in respect of whether it is possible for the Council to make up the backlog in the first five years.

*5% or 20% Buffer*

322. As submitted at Inquiry, SPMRG's case is that the appropriate target against which the Council's record of delivery should be measured for the purposes of applying either a 5% or 20% buffer is the requirement that was in place at the time. SPMRG therefore agrees with the Council's closing submissions on this point.
323. Further support is provided for this use of contemporary targets for measuring delivery by the two planning decisions submitted by SPMRG on the first day of the Inquiry.
324. The first is the Navigator L decision, dated 20th January 2015 (ID44). Here the Council had "oversupplied" against local plan figures from 2006-2014, but had undersupplied against a SHMA figure dating from April 2011. The Council argued that it should have its policy "oversupply" deducted from the requirement figure going forward over the next five years, on the grounds that it could not have known about the SHMA figure until 2014, so the requirement should not be calculated using that figure. The Inspector rejected that argument, noting that "I fully accept that during 2011-2014 the Council could not have been expected to meet a need which it was not aware of at the time, but that is not the point here." In footnote 8 to this paragraph, the Inspector goes on to say that the Council's being unable to meet a need of which it was not aware "might be relevant in other circumstances, such as where the point at issue relates to where there has been "persistent under-delivery" for the purposes of the NPPF-buffer". The issue he was deciding was different but he clearly took the view that the Council should be measured in "persistent under-delivery" terms against the targets which it knew it was aiming for.
325. The second decision is Land North of Cranleigh Road, dated 14th August 2017 (ID43). Here, the Council had a low pre-Framework Core Strategy housing target, on which it sought to rely for establishing a forward requirement (unlike the Council here). The Inspector disagreed and found that the forward requirement should be calculated using much more recent and much higher OAHN figures, even though these were not yet tested or adopted in a development plan document.
326. The developer also argued that "persistent under-delivery" should also be measured against these new figures from 2011, the date from which the requirement was calculated. This argument was rejected by the Inspector, referencing the Navigator decision, on the grounds that "in the period up until 2014 when the then PUSH SHMA identified a OAHN the LPA could not have been expected to meet a need that it was not aware of. On this basis, allowing for peaks and troughs, significant under-delivery in only 3 out of the last 10 years. On this basis, the application of a 20% buffer is not, in my view, justified."

327. Both of these decisions provide support for adopting the targets in place at the time when determining whether the Council has persistently under-delivered. It is plain that there is no under delivery in the present case.

### *Supply*

328. As set out in Mr Leaf's letter (ID21), SPMRG submits that the Council has underestimated its supply by 461 dwellings (including the Sorrell's Field at 50 dwellings), such that there ought to be a 5YLS of 5.35 years using the Liverpool method plus 5%. Individual treatment of these sites is set out in Mr Leaf's letter and is not repeated here.
329. SPMRG has identified these sites on an application of the principles in Framework paragraph 47 and footnote 11 of the Framework and paragraphs 35-9 of *St Modwen Developments Ltd v SSCLG and others* [2016] EWHC 968 (Admin) (CD31.18, set C). It is submitted that it is plain that these sites fall within the definition of "deliverable", which does not require a site either to be allocated or to have planning permission.
330. SPMRG makes the following submissions in response to the Statement of Common Ground between GDL, DWH and the Council (ID39).
331. SPMRG maintains that the identified sites can be considered to be "available now": the fact that steps need to be taken before the site can be developed does not prevent the site from being available any more than GDL's need to sell the site to a housing developer prevents Stone Path Meadow from being available.
332. The figure for Sorrell's Field was adjusted down from 52 dwellings to 50 on the understanding that the application was being revised down to 50 units.
333. Contrary to the penultimate paragraph of the SOCG, the Gimsoms site (WITC 421) is included in the housing trajectory appended to the letter to Priti Patel MP, headed "Copy of full housing trajectory including draft allocations re query". The entry is on the last page, showing 70 dwellings over the next five years and noting that "Planning application expected to be submitted Autumn 2017 by Bellway Homes".
334. Should the Secretary of State find that there is a 5YLS deficit, contrary to the above submissions, this deficit should be given limited weight for the reasons set out in Mr Leaf's adopted proof and applying the principles in the case of *Phides Estates (Overseas) Limited v SSCLG* [2015] EWHC 827 (Admin) (CD31.10 set C) as set out in the Statement of Case (at paragraphs 103-108 and not repeated here).

## **The Case for Braintree District Council**

### ***Introduction***

335. The background to this inquiry is set out in the Procedural Matters at the beginning of this report. The case set out addresses all three schemes before the Secretary of State unless otherwise stated.
336. As was made clear in Opening, the Council's position to this inquiry is that there is no sufficient basis to refuse planning permission for these schemes, notwithstanding that they are in conflict with the adopted development plan. It stands by the assessments that its officers made of the schemes. It recognises

that had the two larger schemes not been called in, it is likely that they would have planning permission by now. It has not sought to challenge the developers' core case that, respectively, their schemes merit planning permission.

337. Equally it is of course primarily for those developers to persuade the Secretary of State that their schemes are worthy of planning permission, and the Council has not, in that same context, sought to attack the case mounted against the schemes by SPMRG and HPPC, even where those parties have been critical of the Council's approach. That does not mean, of course, that the Council accepts those criticisms are well-founded - they are not - but stems from a recognition that the purpose of this Inquiry is to consider the case for granting planning permission for each of the schemes.

338. In that same context, the Council will not descend into the detail of many of the disputes which will govern the ultimate outcome of this process; not because the Council does not have a view on them, but because it recognises that additional submissions from the Council on those points, beyond those made by the party advancing a particular position, are unlikely to assist. Accordingly, the Council's case is relatively brief. It does, however, touch on some of the controversial issues where the Council has taken a particular position on them which may not be mirrored by the relevant other party. The first is in respect of housing land supply.

### ***Housing Land Supply***

339. A key element of the Council's conclusions on the ultimate acceptability of these schemes - all of which are contrary to the adopted development plan - is that it could not then and cannot now demonstrate a 5-year supply of housing land. Efforts were made 'behind the scenes' to reach an agreed position with the two appellants as to housing land supply (including the suggestion of agreeing a 'range') but that did not bear fruit.

340. The Council was pleased to agree a position in respect of OAHN but in the light of Mr Spry's eventual position, remain surprised that further agreement could not be reached. Broadly we accept the Inspector's characterisation of the position when summarising the round table discussion, that it is unlikely that there would be a materially different effect on weight whether there was a c.3.3-year (GDL/DWH high water-mark) or c.3.9-year (Council's best case) deficit. In either scenario, the deficit is considerable and weighs in favour of granting permission for more housing.

341. Nonetheless GDL/DWH maintained that the true position was the lower end of that range, for reasons the Council do not accept are valid. As such a number of points arise for further comment.

342. Before moving to the specific controversies, it is important to be absolutely clear about the Council's approach to its BNLP. It would not have submitted its draft Plan for examination if it was not confident about its soundness. It is not inconsistent with that confidence to recognise that until the examination process has been carried out and expert consideration given to the contents, some uncertainty remains. Confidence in the plan's soundness does not exclude a pragmatic view of the reliance that can be placed on its draft provisions in the development management context until such time as they are confirmed.

343. Indeed such an approach accords with national policy in the Framework, which at paragraph 216 advises that weight should be afforded to emerging policy according to various factors, all of which are referable to the inherent uncertainty about the contents of draft plans until they are adopted.
344. A good example is the inclusion of draft allocations for housing on sites which under the existing adopted plan - which retains its statutory primacy - would be contrary to the development plan. The Gimsons site - identified by SPMRG in this case as one draft allocation that should be included in the five-year supply - makes the point neatly. While the emerging plan allocates it for housing development, the adopted plan has it as a Visually Important Space under Policy RLP4, meaning it is inappropriate for housing. Until such time as the draft allocation supercedes the present development plan status, it cannot be considered 'deliverable'. Of course, there is the additional irony that Priti Patel MP, in whose office Mr Leaf works, has objected to the draft allocation of the Gimsons site in the emerging plan and yet here (by extension) argues that it should be treated as a deliverable site for housing.
345. This general approach is relevant to the Council's position in two respects. First, in terms of the Liverpool/Sedgefield dichotomy in dealing with the shortfall since 2013 and, second, in terms of the additional sites that SPMRG sought to promote as being deliverable in their letter of 12 December 2017 (ID21). The Council turns next to the specific components of the supply debate.

### ***OAHN***

346. There is no challenge in this inquiry to the Council's position that its OAHN is 716 dwellings per annum. That figure has been derived from the latest household projections (in accordance with the PPG), and uplifted by 15% to account for 'market signals' (essentially past unmet need). That means that the ultimate figure of 716 dpa specifically accounts for unmet need in past years, in the way the PPG requires.
347. The figure is one of the key elements of the first Section of the emerging plan, which will be considered at the EiP in January 2018. All parties will be likely to wish to make submissions on the outcome of that EiP on the OAHN, and its ramifications (if any) for the matters before this Inquiry if they remain undetermined at that point.

### ***Shortfall***

348. The quantum of the shortfall against the OAHN of 716 (effectively unmet need) since 2013 is uncontroversial, but the period over which it is sought to be 'recovered' is not. GDL/DWH argue that it should be recovered in the next five years, relying on the PPG, which suggests that this 'Sedgefield' approach is appropriate unless it is unachievable. The Rule 6 parties contend for the shortfall to be recovered over the entire plan period, the so-called 'Liverpool' approach.
349. The Council will contend at the forthcoming EiP into its emerging plan that the examining Inspector should accept, for the purposes of the soundness of the emerging plan, the 'Liverpool' approach. This is in large part because that same plan contains an overall strategy (shared with its partner authorities) of seeking to meet future growth in Braintree (and beyond) by creating new Garden Communities and allocating larger housing sites, which can better respond to the

requirements for new infrastructure to support housing development, a strategy which the Council considers accords with government policy and is a sound approach to meeting future growth needs.

350. That same strategy means, however, that some of the new land for housing will not come forward until the middle of the plan period (and indeed beyond). If it is confirmed by the EiP as a sound strategy, it will provide ample justification for the Liverpool approach. The Council hopes it will be so confirmed. However, it has argued in three recent s.78 appeals that it provides that justification now, even as a draft strategy, and in each case has failed to persuade the Inspector of that. The failure in each case has been broadly on the basis that until there is greater certainty about the emerging plan, the Sedgefield approach should be preferred. That appears to be rooted in Framework paragraph 216.
351. On that basis, and for essentially pragmatic reasons, the Council's position to this Inquiry has been that it accepts that until its strategy is confirmed, it is likely to remain the case that the Sedgefield approach to making up the shortfall is appropriate for development management decisions. It recognises the clear steer in the Framework and PPG towards meeting needs, and doing so for the next five 5 years in particular. It has had regard - entirely properly - to the conclusions on this very issue reached by three recent s.78 appeal Inspectors. Its key justification for the Liverpool approach depends on a strategy within a plan that is still emerging and has yet to be tested. Its approach here is pragmatic but also sound and sensible, and there is no inconsistency with its approach to the emerging local plan.
352. It is also consistent with its position of relying on the other conclusions of those three Inspectors, in respect of (for example) the weight to be attached to policies of the development plan. It is generally unattractive to seek to rely only on those parts of a recent decision that suit one's case, while ignoring other elements which do not. The Council does not fall into this trap.

### **Buffer**

353. This debate was essentially reduced, via the round table session, to a binary disagreement about whether one treats the OAHN of 716 dpa as being the 'appropriate target' from 2013, or only from the time when it became a target at all (i.e. in 2016). Mr Spry says you should 'backdate' it to 2013, Mrs Hutchinson says not.
354. The Council adopts the Inspector's characterisation of Mr Spry's approach as illogical. Unlike the consideration of the shortfall since 2013, this exercise is not one of quantifying unmet need. It is specifically considering how likely it is that the planned supply will be met, using past performance against applicable targets as an indicator of likely future performance. This is clear because the purpose of including a 20% buffer (where there has been 'persistent under-delivery') is 'in order to provide a realistic prospect of achieving the planned supply' (see Framework paragraph 47). A local authority which has persistently, as it were, fired its arrows wide of the target must be moved closer to the target in order to improve its chances of hitting that target in future.
355. It thus follows that the nature of this exercise is considering past performance, not in terms of meeting actual needs but in terms of meeting planned targets. It is not about being 'unfair' to anyone - that was Mr Spry's straw man - but about

the nature of the exercise. The advocates for GDL/DWH were quite correct to say this has nothing to do with 'punishing' anyone and should be carried out in an entirely dispassionate way. It also explains why it is not helpful here to consider whether past targets were themselves likely to be lower than actual needs. The question is how often Braintree's arrows hit the target, not whether those targets ought to have been different. Nothing in the *Cotswold* judgment (ID1.15) indicates otherwise.

356. The simple fact is that 716 was not in any sense a 'target' for this Council prior to 2016 and it makes no sense in this context to consider its performance in hitting a 'target' that it was not aiming for; that would say precisely nothing about the likelihood of 'achieving the planned supply' in the future. The usefulness of the exercise relies upon identifying what the target in fact was at the time. It was not 716 until 2016.

357. For those reasons a 5% buffer is appropriate. Mrs Hutchinson's evidence makes clear that Braintree has not persistently under-delivered.

### ***Supply***

358. There is (now) an immaterial difference, some 68 units, between GDL/DWH and the Council on the quantum of supply.

359. Of more materiality is the SPMRG position that ten further sites should have been included in the supply as set out in Mr Leaf's letter of 12 December (ID21). The question of whether those sites should be included in the supply is the subject of a SOCG between GDL/DWH and the Council (ID37), both as a matter of principle and on a site-by-site basis. The Council does not repeat, but does rely upon, those points here.

360. There is ample justification for the position taken by the Council in respect of those sites, as accepted by GDL/DWH. In short and in general terms the draft allocations may only attract limited weight until the emerging plan within which they appear has progressed further along its journey to adoption. Looking at the sites individually results in the conclusion in each case that they are not yet to be considered 'deliverable' for development management purposes.

361. It is also clear that these sites only make a material difference to the position if the position of the Rule 6 parties (contrary to the case presented by the Council and GDL/DWH) that the Liverpool approach should be adopted now is correct.

### ***Conclusion - housing land supply***

362. The above points lead to the conclusion that the Council is correct to say that it cannot yet demonstrate a five-year supply of housing land. Insofar as it matters, the position is that it can demonstrate something in the region of 3.9 years, at least until its emerging plan attracts greater weight. That means that the proposals fall to be determined having regard to the 'tilted balance' in Framework paragraph 14. There is, therefore, justification for not applying the restrictive policies of the development plan 'with full rigour'; and the delivery of housing attracts greater weight in favour of the proposals than it might if there was a five year supply.

### ***The approach to the development plan***

363. These proposals are all contrary to the adopted development plan. The controversy revolves around how that conflict should be treated within the context of the Framework and the statutory test.
364. GDL/DWH and the Council agree that the ultimate outcome of that exercise is that planning permission should be granted for all three schemes. However, there is some divergence in the way in which the parties arrive at that conclusion. On that basis it may assist to have the Council's position set out clearly.
365. The proper approach to the development plan, where there is no five year supply of housing land, has been considered a number of times recently by Inspectors on s.78 appeals in Braintree District Council. The Council respectfully adopts the reasoning of Inspectors Hill and Gregory in the Coggeshall (CD32.2 set C) and Steeple Bumpstead (CD32.10 set C) Inquiries (respectively), and the consistent decision of Inspector Fagan at Finchingfield (CD32.4 set C). It is of note that both GDL, and its counsel here, appeared at Steeple Bumpstead and advanced the same argument there as here in respect of restrictive policy CS5, and it was roundly rejected. There does not appear to have been any real recognition of that in their position to this inquiry.
366. In short:
- i) There is a sound basis in principle for reducing the weight to be applied to restrictive policies of the development plan on account of the lack of a five year supply of housing land;
  - ii) The quantum of that reduction depends on a number of factors, including the extent of the shortfall, the purpose of the policy, and the consistency of the policy with the Framework;
  - iii) There is no sound basis for reducing the weight to be attached to restrictive policies on account of their age alone (paragraph 40 iii F6f); and
  - iv) In terms of consistency with the Framework, a nuanced approach is required by Framework paragraph 215 which calls for due weight to be attached depending on the degree of consistency with the Framework (paragraph 52, *Daventry DC v SSCLG and Ors* [2015] EWHC Civ 3459).
367. Saved policy RLP2 can be afforded limited weight because it is restrictive of housing and the District has a shortfall in housing land supply. The boundaries on which it relies were set with reference to housing needs for a period that has expired. This is the same conclusion reached by Inspector Fagan in the Finchingfield decision (CD32.4 set C, paragraph 10).
368. Although Saved policy RLP80 is not criteria based and applies a generalised approach in protecting landscape features and habitats, it is generally in conformity with the Framework and the Council maintains that it should be given considerable weight.
369. CS policy CS1 is a 'policy for the supply of housing' and is out of date by virtue of Framework paragraph 49. Insofar as there is a breach of its terms it attracts

limited weight as found by, for example, the Finchingfield Inspector (CD32.4 set C, paragraph 10).

370. By contrast, CS policy CS5 attracts more than the 'very limited weight' argued for by Mr Lee (for GDL) and the 'limited weight' argued for by Mr Dixon (for DWH). For the reasons set out by Inspectors Hill (CD32.2 set C, paragraph 59), Gregory (CD32.10 set C, paragraphs 39 & 65) and Fagan (CD32.4 set C, paragraph 59), policy CS5 should be afforded more than moderate, but not full, weight. It is consistent with the Framework core principle concerned with protecting the countryside from harm. There is some justification for a reduction in weight on account of the lack of a five year supply but no justification for that reduction to be as great as argued for by GDL/DWH here. This has been confirmed three times in s.78 appeal Inquiries since July 2017. It may be that Mr Dixon's evidence is in line with this, following clarification in his evidence in chief that it is the precise position of the boundaries, rather than the protective element, that attracts reduced weight.
371. GDL is correct to say that the Framework provides for a hierarchy of protection; at the top are designated landscapes, then below those come 'valued landscapes' and then the residual category of landscapes within which the Stone Path Drive site sits. It does not follow, however, that those at the bottom of this hierarchy get no protection. The hierarchy simply requires that they attract a lesser degree of protection than might categories above them in the hierarchy. In the Finchingfield and Steeple Bumpstead decisions, both of which concerned 'valued landscapes', it was held that Framework paragraph 109 was a 'footnote 9 policy' indicating that development should be restricted, providing an additional level of protection by disengaging the 'tilted balance'. That alone is sufficient to satisfy the hierarchy argument. Policy CS5 permits this hierarchy of protection to be respected.
372. Lastly, the emerging NDP. This is not yet part of the development plan and attracts only limited weight on that basis. It does not provide any sufficient basis for refusing any of the schemes. In particular, the debate about the wording of policy HPE1 (whether it is or is not restrictive of all - or all large - housing development in the countryside, and thus its consistency with the Framework) is precisely the kind of debate that will be resolved when the NDP is examined. It is an excellent example of why only limited weight attaches to plans at this stage of their development.
373. It would be remiss not to mention the Alan Massow e-mail (ID26). The position vis-à-vis the draft Green Gap between Hatfield Peverel and Witham is a draft policy in an emerging neighbourhood plan, which has some way to go before it is made and becomes part of the development plan. As Mr Massow's e-mail suggests, and as Mrs Hutchinson clarified in her evidence, the District Council considers that the question of whether there should be a green gap in this location to be a non-strategic one and for that reason it is not included as a draft policy in its emerging plan.
374. The question of whether a green gap in this location should be part of the development plan is left to the neighbourhood level, which is entirely proper. This Inquiry is not the place to examine either the emerging local plan or the emerging neighbourhood plan. The debate is sidestepped by acknowledging that the weight to be attributed to the terms of the emerging draft neighbourhood

plan - including the draft Green Gap policy - is limited, pursuant to Framework paragraph 216.

### ***The planning balance***

375. In each case, on the above basis, a balance must be carried out using the 'tilted balance' contained within Framework paragraph 14. A finding that such an exercise points to the proposal being sustainable development (i.e. the harms not outweighing the benefits) will be a weighty material consideration pointing towards a grant of permission notwithstanding the conflict with the development plan. That is, essentially, the conclusion that the Council reached in respect of all three schemes. It is the conclusion the Council suggests should be recommended to the Secretary of State.

376. The crucial benefit here, in each case, is the delivery of much-needed housing in a situation of deficit. Given that the deficit is, on any view, more than a year's worth of housing at this stage, and is unlikely to be eliminated until such time as the new local plan is adopted, the weight to be afforded to that benefit is substantial and is not outweighed by the harms, which are relatively limited.

### ***Conclusion***

377. The conclusions reached by the Officer's Reports in respect of each scheme are sound and should in effect be confirmed.

### ***The Case for Interested Persons***

378. A total of six people made presentations to the Inquiry and answered questions from Mr Tucker. All responded positively to my request for a written statement and these are listed in Annex A. Mr Webb and Mr Hutton gave their statements by way of a PowerPoint presentation, copies of which are included in the documents. Thanks are due to the Council officers for making the necessary equipment available. What follows is a summary of the main points made by each speaker. The full submissions are available to read.

379. **John Webb** is a resident of the Gleneagles Way estate. His evidence focused on the traffic implications arising from the proposed development. He noted that Gleneagles Way is already a cul-de-sac development with a single point of access to the wider highway network. That single point of access would remain; it would however serve triple the number of dwellings if the proposal went ahead.

380. The junction of Gleneagles Way and The Street is inherently dangerous as it requires turning into (to exit the estate) or across (to return home) the off-slip from the A12. Traffic leaves the A12 at speed and has only a short distance to slow to 30mph. He put the distance from the 30mph sign to the junction at some 60m.

381. Local people did not accept the reported results from the speed survey carried out and submitted by DWH. HPPC commissioned another. He included the outcome figures and argued that using the average speeds as DWH had completely distorts the true picture. In fact, the new survey shows that 45% of the vehicles going past the junction do so at speeds in excess of 30mph. Proposed improvements to the visibility splay miss the point entirely. It is the design of the off slip that makes speed difficult to judge combined with the failure to enforce speed restrictions that cause the danger. (*Inspector note: DWH were*

*not aware of this additional survey data until Mr Webb presented it. Document ID20 is its response).*

382. **Michael Hutton** has been resident in the Gleneagles Estate for some 23 years. His presentation contained a number of annotated images. These showed the effect that new developments on the edge of Witham such as Lodge Farm and Woodend Farm were already having on the distance between Witham and Hatfield Peverel. The application scheme would reduce this separation distance further to just under 1km from just over 2km before these developments took place.
383. The application site is beyond the village boundary and previous planning applications have been refused. Photographs of views (which appear several times in the evidence) illustrate views across the application site.
384. The NDP already includes a comprehensive development area which is well-placed in relation to the main line station.
385. **Lesley Moxhay** has been a local resident for 34 years. She spoke about the ecology of the area. She suggested that the field margins provided a rich habitat while the land itself was Grade 2 and therefore best and most versatile agricultural land. Building on it was therefore contrary to Framework paragraphs 111 and 112.
386. In summary, her evidence is that the human activity that will be introduced into the area will have an adverse impact on the many protected species on or near to the site such as bats, badgers, grass snakes and slow worms. Furthermore, the measures put forward and agreed by the Council in mitigation of potential impacts on the Blackwater Estuary Natura 2000 site will be wholly inadequate and potentially counter-productive for local wildlife. The cumulative effect on the ecosystem from all of the developments planned in Hatfield Peverel should be given great weight in the planning process.
387. A resident of Woodham Drive whose property abuts the south western tip of the site, **Ron Elliston** made a number of points all of which are raised by HPPC or others. In summary, these include:
- a. That the site is not allocated in any development plan and lies beyond the settlement boundary;
  - b. The site is best and most versatile agricultural land;
  - c. Previous applications have been refused and this one is opposed by the local MP, County Councillor and District Councillor;
  - d. The green wedge between Hatfield Peverel and Witham will be further eroded;
  - e. The A12 is a source of noise and exhaust emissions which the acoustic barrier proposed will not mitigate even though it will have a landscape impact;
  - f. Similar traffic safety concerns to those expressed by Mr Webb;
  - g. Local schools and the surgery are already at capacity with more pressure to come from planned development;
  - h. Few employment opportunities with the closure of Arla dairy resulting in increased commuting.

388. In a supplementary statement (ID11a), Mr Elliston challenged the proposed provision of a new crossing point on Maldon Road near to the junction with The Street on the basis that it did not and could not comply with current guidance.
389. **Andy Simmonds** has lived in the village for 36 years. His statement was essentially a criticism of the way that the Council had dealt with the application.
390. **Kenneth Earney** spoke with respect to the effect on habitats, the lack of allocation in the development plan, the pressure on local schools and health facilities and traffic; he made similar points to other speakers.

### **Written Representations**

391. At application stage the Council received 94 objections with some residents and households submitting multiple representations. The main material and non-material reasons for objection are summarised in the report to Committee (SAV38). The main headings under which they are grouped are principle of development; layout, design and appearance; landscape and ecology; highways; living conditions; and other matters. Most, if not all, of these issues have been raised by either or both HPPC and the interested persons in their evidence to the Inquiry.
392. A further seven representations were received by the Planning Inspectorate. These generally refer to matters raised in the initial objections to the scheme. Two are from Mr Webb and Mr Elliston and make the same or similar points as recorded above.

### **Conditions and Obligations**

393. These were discussed at a round table session on the final sitting day of the Inquiry.

### **Conditions**

394. Various drafts of the conditions that might be imposed if the Secretary of State decides to grant planning permission were submitted. The wording and need for each was discussed and a consolidated set helpfully provided by the Council following the discussion (ID53). In considering the conditions to recommend to the Secretary of State I have had regard to the advice in the relevant section of the PPG. The conditions that are recommended are set out in Annex C and the following references are to the conditions there.
395. Conditions 1 to 4 inclusive are standard outline planning permission conditions which define the reserved matters that will be subject of further approval. DWH explained that the Statement of Landscape Principles, (ID46) should be read alongside the parameters plan (SAV4) and the design and access statement (SAV7) in order to appreciate the approach the developer will take to mitigating the limited landscape harms caused by the development [107]. However, neither the Council nor DWH suggested that these should be subject to a condition and I consider to do so would go beyond what is normally specified at outline planning permission stage. No doubt the Council will nevertheless have regard to both when considering the reserved matters applications.

396. Condition 2 sets 2 years as the period within which the reserved matters applications must be submitted for approval to ensure that the eventual developer of the land brings forward housing in good time.
397. Condition 5 secures the access arrangements which are for approval now. It also secures a number of improvements to the crossing points and footways in the general vicinity of Gleneagles Way, The Street and A12 overbridge. Included among these is the new zebra crossing on Maldon Road proposed as part of ID1.5 and shown on Drawing 45604-P-SK207. Having walked the area in the afternoon I consider that an additional controlled crossing point is necessary to achieve a safe route to the bus stop for those wishing to travel by bus to Witham and further afield. This is especially important given the expectation that both primary and secondary pupils may have to travel in that direction to secure a school place.
398. Conditions 6 and 7 work together to control the ridge heights of the dwellings on those boundaries of the developable area that affect views of the settlement edge from the countryside. The height specified is that upon which the LVIA is based. The restriction is necessary to integrate the current settlement edge into the setting of the village.
399. Conditions 8 and 9 are necessary to ensure that any air quality issues arising from the proximity of the site to the A12 are addressed in the interests of the health and well-being of the future residents. Condition 10 is necessary to protect wildlife during construction and condition 11 is required to ensure that in bringing forward the reserved matters applications the scheme is landscaped in accordance with the parameters set out and maintained thereafter as specified.
400. In order to ensure that disturbance to the existing residents in the area is minimised as far as is practicable while the development takes place conditions 12 and 13 should be imposed to control the management and operation of the site and the hours during which work can take place and materials can be moved on and off site. The requirement for details of any piling to be approved (condition 15) arises for the same reason.
401. A number of schemes are required before development begins to ensure that any issues not already identified are explored and addressed as appropriate. These include conditions 16 (archaeology), 17 to 19 (surface water drainage) and 20 (foul water drainage). Condition 21 is similar in that it requires the measures to be put in place to protect all the identified existing trees and hedges that are to be retained to be approved prior to construction. I have removed the phrase 'to the complete satisfaction of the local planning authority' from the suggested condition 21 as this is an uncertain specification and therefore unenforceable. It would not therefore meet the tests on the PPG.
402. There are a number of conditions that are required to protect the nature conservation interest of the site and surrounding area. These include no clearance of trees and hedges during the defined nesting season (condition 23), the provision of nest and roost sites as the development becomes occupied (condition 24) and reviews of already submitted surveys prior to the submission of reserved matters (condition 25) or if the development is delayed or suspended such that circumstances might have changed (condition 26). Condition 14 (external lighting) is required primarily to mitigate any disturbance that may be caused by light pollution to roosting and foraging bats. It is my understanding of

the discussion that this is its purpose. It is not intended to provide detailed control over the lighting that individual occupiers might wish to provide for, say, security. It is more to address the lighting of public spaces that will be provided as part of reserved matters applications.

403. Condition 28 is necessary in the interests of promoting sustainable modes of travel. The achievement of a high quality development where people will wish to live will be enhanced by the undergrounding of existing overhead power lines and that will be secured by condition 29.
404. A number of conditions were subject of debate and disagreement in some cases.
405. Condition 22 secures the important provision of space for the necessary materials recycling bins in order to facilitate the more sustainable management of waste materials by the local collection authority.
406. During the discussion of that condition it was suggested that its scope be widened to include the provision of other infrastructure such as high speed broadband. While there was a consensus that this would be desirable, its provision was not in the control of the developer. A condition of that nature would therefore be unenforceable and so would not meet the tests set out in the PPG.
407. While there is no dispute that the condition is required to protect the health of future residents living close to the A12 there is a disagreement about the timing of the submission of details. I agree with the Council that the details need to be approved before reserved matters are submitted rather than together with them. The approved details may well influence the layout if not the appearance and to risk a refusal which meant a review of an already submitted reserved matters application seems to run counter to the objective of expedited housing delivery. It seems though unwise to restrict by condition the mitigation to the boundary even if that is what is ultimately approved. Suggested condition 27 therefore represents compromise wording of the two suggestions put forward.
408. Two other conditions were suggested by the Council and these are included within Annex C as conditions 30 and 31. They are set out there in italics as, in my view, neither is required. The suggested wording is nevertheless included should the Secretary of State take a different view.
409. Condition 30 is a standard materials condition of the type commonly imposed where this is either unclear at application stage or the local planning authority wishes to exercise further control over the matter. However, in this case 'appearance' is a reserved matter. It seems to me that the materials to be used are fundamental to the appearance of the buildings and I fail to understand why this important matter cannot be addressed then.
410. The Council explained that condition 31 is required to ensure that, initially, each plot is provided with some means of enclosure. The condition is not intended to remove the rights available under Schedule 2, Part 2, Class A of the Town and Country Planning (General Permitted Development) (England) Order 2015. That may not be the intention but I consider that it would be the effect. No evidence was put forward to justify such a restriction which the PPG advises

should only be imposed where circumstances require. Those circumstances do not exist here in my judgement.

411. A third condition suggested by the Council related to car parking standards. It was very specific in its requirements and referred to the Essex Parking Standards Design and Good Practice 2009 as the source. During the discussion it was argued that this condition was unnecessary as the reserved matters applications would be determined in accordance with the development plan policy and any supplementary planning document applicable at the time. I agree and do not suggest this condition be imposed.
412. A fourth suggested condition would have required a number of highway works and improvements to bus stops. It seems to me that the former are already secured by condition 5 while the latter relate not to this development but to those proposed at Stone Path Meadow which are the subject of separate reports. The condition is therefore not required in this case.
413. Finally, the Council suggested a condition requiring the submission for approval of a landscape and ecological management plan. From the body of the condition and the non-exhaustive list of matters it should cover it seems to me that it would duplicate a number of other landscape and ecological conditions that are already suggested to the Secretary of State. It is therefore unnecessary in my view.

### ***Obligations***

414. A planning obligation in the form of an agreement between the Council, ECC, the landowners and the developer has been submitted (ID59). It is signed by all parties and dated and is explicitly made pursuant to s106 of the principal Act with the obligations entered into being enforceable by the Council and ECC. The commencement date is defined as being when a material operation for the purposes of s56 of the Act is carried out.
415. The obligations are set out in 11 schedules. These make provision either in the form of financial contributions or other mechanisms for outdoor sport (Schedule 1), allotments (Schedule 2), community building (Schedule 3), highway works (Schedule 4) open space (Schedule 5), affordable housing (Schedule 6), education (Schedule 7), healthcare (Schedule 8), Blackwater Estuary mitigation contribution (Schedule 9), public rights of way contribution (Schedule 10) and housing phasing and landscape strategy (Schedule 11)
416. The Council has submitted a statement of compliance with the CIL Regulations (ID29) setting out the policy justification for each of the obligations provided.
417. In my judgement each of the obligations is necessary to make the development acceptable in planning terms; directly related to the development; and fairly and reasonably related in scale and kind to the development proposed. In my judgement each obligation meets the requirements of CIL Regulation 122 and Framework paragraph 204.

### **Conclusions**

418. Throughout my conclusions, numbers in [] are references to other paragraphs in my report. Those in () are to the parts of the documentary or oral evidence upon which my conclusion or inference is based.

**Policies in the Framework on delivering a wide choice of high quality homes**

419. This is the first reason for the application being called in by the Secretary of State [4]. Little evidence was given about this.
420. Schedule 6 of the s106 obligation (ID59) will secure the provision of a substantial number of affordable homes within the development proposed. A mix of market and affordable housing would be delivered on-site and the policy set out in Framework paragraph 50, bullet 3 would therefore be delivered.
421. All of the other elements that go towards delivering the requirements for good design set out in Framework section 7 will be subject of the reserved matters applications that would need to be submitted. The Statement of Landscape Principles (ID46) sets an important context for the development and the Design and Access Statement (SAV4) also establishes some important principles that will no doubt guide the Council's development management process at reserved matters stage although no condition was suggested in this regard [395].
422. There is no evidence to suggest that the application site which is being promoted by a national housebuilder will not provide a range of high quality homes.

**The extent to which the proposed development is consistent with the development plan for the area**

423. This is the second reason given by the Secretary of State for the call-in [4]. In addressing this I shall also deal with the third reason, namely 'Any other matters the Inspector considers relevant'. These were set out in my first pre-Inquiry note (INSP1) and have been developed in the light of the written and oral evidence given. They encompass what, in my view, are the main considerations upon which the decision should be based.
424. However, before considering the application scheme against the policies of the adopted development plan I shall address the weight that I consider should be given to the emerging BNLP and NDP.
425. Turning first to the BNLP, the SOCG between DWH and the Council records that the weight to be given to the emerging plan policies should be determined in accordance with Framework paragraph 216 (paragraph 6.12, SOCG 4). That is different to the Council's agreement with GDL that limited weight should be given to the BNLP as a whole (paragraph 3.3.10 SOCG1). In closing submissions the Council considers the weight that should be attached to individual policies rather than the plan as a whole [363 to 374].
426. DWH reached the same initial agreement with HPPC (paragraph 6.12 SOCG 5). In closing submissions HPPC has revised its position and argues that the emerging BNLP can be given significant weight as it has progressed to examination stage [216]. That however is only one of the three considerations in Framework paragraph 216 that have to be taken into account.
427. The BNLP is subject to a considerable number of representations that it is unsound. For example, in an extensive representation (CD33.1 set C) GDL argues that policies SP1, SP3, SP5, SP7, SP8, SP9, SP10, LPP 1, LPP 18, LPP 19, LPP 22, LPP 37, LPP 49 and LPP 72 are unsound. Of these, only policy LPP 1 is a

relevant policy. No criticism is made by GDL of the others (such as SP 2 and LPP 71) referred to above [36 and 37].

428. The stage reached remains as set out above [33]. That is an advanced stage in the process to adoption but it is, nevertheless, the first stage at which independent scrutiny of the plan takes place. The Council is best placed to know the full extent of the challenge to the plan and its individual policies and thus the number and nature of the unresolved objections to them. The degree of consistency with the policies in the Framework must therefore be viewed in that context. Taking these three components of Framework paragraph 216 into account, I see no reason to take a different view to that which the Council took in the SOCG with GDL that only limited weight should be given to the BNLP.
429. The weight that should be given to the NDP is a matter of legal dispute between DWH [121 to 130] and HPPC [227 to 247]. I am not legally qualified to resolve that dispute and the Secretary of State may need to take his own legal advice to do so if he considers it necessary.
430. In my view, the position is actually quite straightforward. The NDP has been submitted for examination [39]. The exchange between the examiner and HPPC set out there seems to me conclusive. The examiner's first letter (Appendix MR24, HPPC1) is quite explicit that 'as it stands....the NDP fails to meet the Basic Conditions...'. Her second letter (Appendix MR25) declines to continue the examination because '...the issues raised are sufficiently substantive...' that to do so would risk abortive and unnecessary costs to the Council.
431. Both GDL (CD33.2 set C) and DWH (SAV50 and SAV52) have objected to the submission version of the NDP. Among the policies objected to are HPE1, HPE2, HPE6 and HPE8. Given the nature of the additional work to be done, the uncertainty over the timescale in which it will be completed and the effect that the outcome of that work and indeed the examination itself may have on the form of the NDP put to a referendum I consider that, in line with the guidance in Framework paragraph 216, very limited weight can be given to the NDP at this stage. I do not consider that the late information provided by HPPC [10] alters that conclusion. Although HPPC says the required work has now been done, Natural England's comments have not been made available; the outcome of the meeting with the Council to discuss the way forward is similarly unknown; and the views of the examiner about all of this are unknown in any event.

***Would the proposal be in accordance with the spatial strategy?***

432. The CS spatial strategy is set out in policy CS1 [29]. It promotes development in the KSVs and Hatfield Peverel is so categorised. The emerging BNLP does not alter the spatial strategy in that regard and identifies the A12/Great Eastern Mainline corridor as a location for future development [36]; Hatfield Peverel lies within that corridor.
433. As I explain a little later in this report I agree with GDL, DWH and the Council that the Council cannot show a 5YHLS. Framework paragraph 49 says that in those circumstances relevant policies for the supply of housing should not be considered up to date. Policy CS1 is clearly such a policy.
434. Whether it is the whole of the policy including the spatial strategy or just that part of the policy that sets the housing requirement that should be considered

out of date was the subject of post Inquiry sessions correspondence (INSP4 and ID54 to ID56).

435. Taking those views into account it is my judgement that, although as a policy for the supply of housing policy CS1 should be considered out of date, the spatial strategy within it should still be afforded some weight. The Council is having to address a substantially increased OAHN in the emerging BNLP. How it is doing so is set out in the evidence base (ID33). This confirms that the Settlement Fringes Evaluation (SFE) is part of the evidence base used to develop the strategy. That confirms that to meet the OAHN '...development will need to be accommodated on the periphery of the main towns and larger settlements...' (paragraph 1.4, CD14.4 set B) with Hatfield Peverel being identified as one of the nine settlements studied. Furthermore, ID33 explains why both the 'new settlement only' and 'constrained growth' options were rejected.
436. It seems to me therefore very likely that any strategy coming forward through the BNLP will include development at the KSVs, especially where these are within the A12/Great Eastern Mainline corridor that is identified as a location for future development.
437. I therefore conclude that the development proposed would be in accordance with the spatial strategy. There is no evidence to support the contention by HPPC that development in any settlement needs to be 'proportionate' [186]. Nevertheless, HPPC is correct in my judgement to argue that the spatial strategy does not, of itself, dictate that the boundary in this part of Hatfield Peverel needs to be altered [214 and 215] but that is a different point that relates to policy CS5 which I turn to now.

***Would the proposal conflict with policies RLP2 and CS5?***

438. These two development plan policies are summarised at [26] and [30] respectively with the precise wording of policy CS5 set out. They are worded differently but their effect is the same. Both establish that outside the defined development boundaries of settlements, countryside policies will apply. Policy CS5 goes further explaining that development will be strictly controlled to uses appropriate to the countryside.
439. It is a matter of fact that the application site adjoins, but is nevertheless beyond, the development boundary of Hatfield Peverel. The proposal is therefore in conflict with the development plan in this regard, a fact acknowledged by DWH (paragraphs 6.12 and 6.34 DWH1). The point in issue is the weight that should be given to this conflict in the overall planning balance.
440. There are two aspects to this. First, whether the policy is inconsistent with the Framework; that argument applies only in respect of policy CS5 [142 to 146]. Second, whether the development boundaries that are critical to the application of the policies are out of date because they are based on out of date housing requirements. They have not been subject to review for many years [112 and 113].
441. Dealing first with consistency with the Framework, policy CS5 has three components. The subject of the policy is (of relevance to this appeal) development outside village envelopes. The 'action' of the policy is to strictly control that development to uses appropriate to the countryside. The purpose is

- ‘to protect and enhance the landscape character and biodiversity, geodiversity and amenity of the countryside’.
442. The policy does not, in my view, apply blanket protection to the countryside. It makes clear that uses appropriate to the countryside would be permitted. The policy itself and its supporting text do not explain what those uses might be but it is difficult to imagine that a substantial village expansion housing development would fall into that category. Some guidance is however given elsewhere in the CS (at paragraph 4.24) in the discussion of ‘The Countryside’. Some of the uses there (for example, development necessary to support traditional land-based activities such as agriculture and forestry) are not dissimilar to one of those listed in Framework paragraph 55 (the first bullet).
443. One of the core planning principles set out in Framework paragraph 17 requires local planning authorities in both plan-making and decision-taking to recognise the intrinsic character and beauty of the countryside. To my mind a policy that seeks to ‘protect and enhance’, as policy CS5 does, is not seriously out of kilter with that core principle.
444. Although drafted in advance of the publication of the Framework I therefore do not consider policy CS5 to be inconsistent with it. As the Council notes when arguing that more than moderate but not full weight should be afforded to this policy [370] three previous Inspectors have considered the same policy in relation to appeal proposals submitted by GDL in the District (CDs 32.2, 32.4 and 32.10 all in set C). My conclusion with respect to this aspect of the policy is consistent with each of theirs.
445. Turning to the development boundaries point, there is no evidence before this Inquiry of any review of the development boundaries as part of the preparation of the BNLP [113]. While the methodology for doing so has been approved by Council members (Appendix PJ3, HPPC2), there is no evidence that the review has actually taken place. However, DWH contends [90] and the Council accepts [362] that a 5YHLS cannot be shown. For reasons that I will discuss later, that is also my conclusion. If then the development boundaries are rigidly applied through the operation of both policies they would restrict the supply of housing and frustrate the aim of Framework paragraph 47. The court has held that in those circumstances the weight that can be afforded to them is much reduced [117]. That is also the view of the Council and the reason for it with respect to policy RLP2 [367] and, by inference, policy CS5 [370].
446. That was also the view taken by the three Inspectors in the decisions referred to above [370]. I see no reason to take a different view given that circumstances are more or less unchanged. Therefore, while there is a conflict with the adopted development plan policies, overall those policies can attract only moderate weight when it comes to the overall planning balance.
447. For completeness, the wording of BNLP policy LPP 1 is set out above [35]. It is not materially different from policy CS5. For the reasons set out above [425 to 428] the weight that can be given to that policy is limited.

***The effect of the development on the landscape character of the area and the visual impact that the development would have***

*Landscape character*

448. In my view, it is necessary to take into account the way in which Hatfield Peverel has developed. The historic maps in Mr Handcock's evidence (Appendix A2, 3/APP) shows how Hatfield Peverel has evolved from a linear settlement focused on The Street, shown as the Roman Road on the 1874 map and part of the route linking London with Colchester. By 1955 the land between Church Road and Maldon Road to the south of The Street had begun to be developed as had land to the north of The Street between it and the railway. This pattern continued to 1980 as more and more edge-of-settlement fields and allotments became housing developments. The 1978-80 map shows the Gleneagles Way and Woodham Drive cul-de-sac developments extending the village into the countryside to the east beyond Maldon Road. By 2002, (the next map in the sequence provided) what is now the Stone Path Drive development had breached the Church Road boundary and taken the village onto yet more former allotments on its western flank.
449. Under cross examination by Ms Scott of the case for GDL Mr Holliday confirmed his view that as a result of this pattern of development the character of Hatfield Peverel had changed over the last 50 years or so from a linear settlement to a nucleated form and that the development proposed by GDL would simply continue that pattern and, by inference, be in keeping with what is now the character of the settlement. He rejected Ms Scott's suggestion that the Stone Path Drive development would be a complete departure from the settlement pattern. His view was that each time housing development has taken place on the edge of the village a field has been lost but there has been no further change to the character of the village; the GDL development proposed would be no different.
450. Mr Smith was not present when Mr Holliday gave this evidence. I summarised that evidence as being that the character of Hatfield Peverel was that of a fair-sized settlement in a rural setting and that, while the GDL development would extend the village into the countryside, that fundamental relationship between the village and its setting would not be altered. I asked Mr Smith if he agreed with Mr Holliday's assessment and whether it applied equally to the DWH development. Mr Smith agreed with Mr Holliday's assessment and confirmed that it was relevant to the consideration of the DWH application. In a further answer Mr Smith confirmed his view that the village had evolved over time through edge-of-settlement accretions of similar scale to each of the proposals before the Inquiry. Each would therefore simply continue that evolution.
451. This assessment is supported by Braintree Historic Environment Characterisation Project 2010 (CD28.1 set C). This report has been produced to assist ECC and the Council in the production of their development plans. It studies the historic landscape character, archaeological character and historic urban character and weaves the three strands together to establish the historic environment character. Discussing the Hatfield Peverel area (HLCA 13) it notes the historically dispersed settlement pattern with Hatfield Peverel being the only nucleated settlement of any size (emphasis added). The post-1950s boundary

- loss ‘...can be described as moderate, however the overall grain of the historic landscape is still clearly visible.’
452. Furthermore, there are a number of studies that have had an assessment of the landscape capacity of various areas of land around the settlement edge to absorb further development as their broad purpose.
453. CD14.1 set B focuses on eight key settlements in the District. Its purpose is to assess the sensitivity and capacity around those settlements to accommodate new development. The application site lies within a study area (HP4) to the east of the settlement and to both sides of the A12.
454. From the analysis set out in summary form in Table 4.1 of the document it is clear that of the four study areas encircling the village this was the one that had the highest capacity to accommodate change without significant effects on landscape character. Contributory points in reaching this conclusion include the lack of distinctiveness along the settlement edge; the moderate contribution to the setting of eastern Hatfield Peverel and the wider landscape because of the enclosure provided by landform and peripheral vegetation; and the influence of the A12 which ‘cuts through’ the area and introduces movement and noise within the landscape thus reducing its overall sensitivity to change.
455. The Landscape Partnership prepared CD14.4 set B for the Council. This followed and built upon the earlier Chris Blandford Associates document (CD14.1 set B) and has the same broad objective for Hatfield Peverel but at a finer grain of analysis. As Mr Smith notes (paragraphs 83 and 84 DWH3), it did not investigate area HP4 further since this had already been found to have a higher overall potential to accommodate development than the other three study areas (paragraph 2.2, CD14.4 set B).
456. The Landscape Partnership also prepared the Hatfield Peverel Landscape Character Assessment for HPPC (CD28.3 set C). Its purpose is to assist ‘the village’ in commenting on development proposals coming forward and to support the emerging NDP. One of the aims is to provide an assessment of the landscape character and sensitivity of it around the village building on work undertaken at district level (paragraph 1.4). The application site is within local landscape character area 4 (Wickham Bishops Road – Upper valley slopes with pits/reservoirs). This area is less extensive than study area HP4 being confined to the south of the A12 although it does extend to include a small area of land further to the south east.
457. This study does not assess the capacity of the area to accommodate development. Rather, it sets out a general commentary about the characteristics of the landscape and some landscape guidelines which, on a fair reading, appear to assume development taking place to facilitate them.
458. Of relevance from the general commentary are the sharp transition between the existing residential fringes reflected in the linear garden boundary line of Gleneagles Way and Woodham Drive and the farmland beyond and the broad open views that are possible across the open arable farmland that characterises the area. Guidelines include tree belt planting along the northern boundary to provide a visual break to the A12, enhancement of the ecological value of the area through hedgerow retention and enhancement and safeguarding of open views across arable farmland towards the steep ridge at Wickham Bishops.

459. In my view the above document review demonstrates that the Council has been considering the potential for further edge-of-settlement development at Hatfield Peverel in accordance with the emerging or adopted spatial strategy since at least 2007. Indeed, as set out above [435] this was an explicit purpose of the SFE which states that such development was '...inevitable...' if the OAHN was to be met (paragraph 1.4 CD14.4 set B). The application site would extend the Gleneagles Way cul-de-sac development into what is the next field to the east and, moreover, into a modest part of a larger area that several studies have confirmed has the landscape character capacity to accommodate it subject to development guidelines being met. The Statement of Landscape Principles (ID46) demonstrates that those guidelines can be met. While not subject to a condition [421] it will be for the Council to take these into account at reserved matters stage; this is the expectation of the applicant [107].
460. That is not to say that the development would not have an adverse effect on landscape character. The submitted LVIA acknowledges this (Table D4 SAV16). These effects would however be limited to the loss of the gently sloping landform which would be replaced by a housing estate. That has both a physical effect in that a landscape feature would be lost and aesthetic/ perceptual effects all of which would be negative. They would nevertheless be very localised and largely contained to the site itself, particularly given the mitigation measures that would be put in place. At a wider regional and county level the loss of a small (in context) arable field would have a negligible effect on landscape character.

#### *Visual impact*

461. It seems to me that although the landscape character effects and visual impacts that the development would have are not clearly distinguished from one another, this is the nub of the HPPC case on this consideration [284 to 294].
462. During my visit to the area I walked all of the routes that I was invited to [1]. These are shown on HP 003A in the LVIA (SAV16) and on HP/EJS/01 (Appendix 2 DWH4) and allowed a complete circuit of the application site on public land.
463. The application site itself is an open arable field that is devoid of any feature of significance. Its value, in my judgement, is that it enables views across it. Those views will be interrupted by the development but the effect of that varies greatly depending on the viewpoint.
464. Views to the east in the direction of Witham across the site to the farmland beyond are available from a very limited number of places. Walking through the Gleneagles estate it is only possible to see between the houses to the application site when passing the entrances to the three culs-de-sac. Photograph 8 (ID13) shows the type of view that would be available; it is a glimpse only.
465. Photographs 2 and 4 (ID13) and viewpoint 9 (HP 012 SAV16) show views that are representative of those available towards or at the end of each cul-de-sac. They are not representative of the view obtained by people passing through the estate on foot, cycle or in a vehicle or by the vast majority of residents in their homes. Viewpoint 9A (HP 012 SAV16) appears to represent that view but it would only be available to those living at the very end of a cul-de-sac; that would be about six properties. Photographs 3, 5, 6 and 7 (ID13) may represent the view from the gardens of the properties at the ends of each cul-de-sac but, as they do not seem to have been taken from public land, I cannot be sure.

466. What is beyond dispute is that each of these views would be replaced by a view of housing. DWH correctly assess this effect to be 'major' and 'negative' at all assessment dates (Table E3 SAV16).
467. From all other viewpoints on public paths generally to the north, east and south of the application site the proposed development would not be the dominant feature in the view in my judgement.
468. It is only along a short length of the footpath adjacent to the A12 and the off-slip to the village that the application site adjoins a public path. At this point the development would be largely screened by existing planting as shown by representative viewpoint 10 (HP 013 SAV16).
469. From the other representative viewpoints 1, 2, 4, 5, 6, 7 and 8 (respectively HP004A & B, HP 005, HP 007, HP 08A & B, HP 009, HP010 and HP010 SAV16) one view is to the settlement edge of Gleneagles Way and Woodham Drive across the intervening farmland which would remain undisturbed. At points that view is in any event screened by existing planting as the SAV16 photographs show.
470. That is however only one view. As HP003A & B (SAV16) show, viewpoints 1, 4 and 5 are along a footpath that runs parallel to the application site but is separated from it by a further field. While the settlement edge is visible if the walker turns to look that way, turning the other way or looking in the direction of travel would give a view across open countryside. That is also the case from viewpoints 5, 6 and 7. Indeed, travelling north east is moving away from the application site which would be increasingly to the rear and thus not really in the normal view.
471. No evidence was given about the extent to which these paths are actually used. At the time of my site visit a woman was exercising a dog from the path running parallel to the application site and two lads were riding what looked like a trials bike across the fields around the point where the path turns south west towards the village. It is not clear to me how well used the path would be since the end-point is the path alongside the A12; an unpleasant walking experience in my view.
472. Photomontages have been produced to show how the development might look from certain viewpoints after the mitigation planting has become established (HP004A & B, HP008A & B). Taking those and my own observations into account, I consider the applicant's assessment that the visual effects from all these representative viewpoints would ultimately be minor/moderate at worst is fair.

### *Conclusion*

473. There would be a localised adverse effect on the character of the landscape which DWH acknowledge [460]. That harm must, however, be seen in context.
474. Several studies have considered the capacity of the settlement-edge landscape to accommodate the additional development that would be 'inevitable' if the OAHN is to be delivered. The application site is part of an area that independent landscape professionals consider capable of accommodating that development subject to guidelines to mitigate the effects being put in place. At least one of those studies has been prepared for HPPC [456 and 457]; no alternative LVIA has been put in evidence by HPPC.

475. The application site is an arable field with no distinctive features. There is no reason in my view why the landscape principles set out in ID46 could not be achieved at reserved matters stage. While a new settlement edge would be created as a result of extending the existing residential edge the width of a field further into the countryside, all existing boundary trees and hedgerows would be retained and enhanced as appropriate. To the extent that these are distinctive landscape features there would be no detrimental impact upon them. As the new planting matures over time the development would, in my judgement, be successfully integrated into what is a settlement-edge landscape.
476. There would therefore be no conflict with the landscape elements of policy RLP 80.
477. It is only the third paragraph of policy CS8 that is relevant to this consideration. It is clear from the submitted LVIA and the evidence presented to the Inquiry that the applicant has had regard to the character of the landscape and its sensitivity to change. That is what the policy requires and that part is therefore satisfied. Whether the development would enhance the locally distinctive character of the landscape in accordance with the Landscape Character Assessment is a matter of judgement. Appendix 5 of the CS confirms that it is the 2007 study (CD14.1 set B) that is being referred to. In detail, that has been developed or superseded by later studies. In my view, the development would enhance the settlement edge as it appears as a feature in the landscape and thus this part of the policy would be complied with too.
478. Neither of these policies deals explicitly with the visual impact of proposed developments although these are the only two development plan policies that are referred to by HPPC as being breached in respect of this overall consideration [294]. I have found that there would be harm caused by the development with respect to visual impact although that would be limited to the occupiers of the properties along the three culs-de-sac off Gleneagles Way and, even then, mainly to those living at the end of each.
479. To the extent that weight can be attached to the policies of the emerging NDP [431] there would be conflict with policy HPE6 in this regard. However, in addition to the general point concerning progress on the NDP there are specific concerns about the evidence base that underpins the views to be protected and enhanced under policy HPE6 [101 to 103]. Mr Graham addresses this [252 to 259] but in my judgement there is some strength to Mr Tucker's case that this policy has been developed to frustrate development coming forward on the settlement edge [103]. This is nevertheless a matter properly for resolution through the NDP examination and, in any event, the impact and thus the conflict would be limited to a small number of adjoining residents and to users of certain footpaths pending the mitigation planting maturing. While this harm needs to be weighed in the overall balance, it attracts very limited weight in my view.

### ***The effect of the development on community infrastructure***

#### ***Education facilities***

480. The concern relates only to primary school places and has been something of a moving feast as ECC, as education authority, has come to appreciate the full impact of planned and speculative development in Hatfield Peverel and the changing position over time with respect to school rolls (series of letters in CD21

set C). In my view, the SOCG (ID1.8) does not take things much further although the letter dated 1 September 2017 to Priti Patel MP from the ECC chief executive attached to it does. So does the helpful report from EFM that was prepared for GDL/DWH in response to my pre-Inquiry note (INSP1) and is appended to the proof of Mr Dixon (Appendix 8, DWH2).

481. The EFM report explains that estimating the numbers likely to be demanding a place at any particular school in future years is an inexact science. It is compounded, in the author's view, by the inherent contradiction between the duty placed upon education authorities to promote choice and variety of schools on the one hand and the Framework paragraph 38 requirement to locate, where practical, primary schools within walking distance of most properties on the other hand (report paragraph 27). The position in Hatfield Peverel is further complicated as the Council does not have a CIL charging schedule in place.
482. The letter is slightly opaque but, as I understand it, any one of the four residential developments listed in the letter could, in isolation, be accommodated without the need for additional primary school capacity. As two of the potential developments are allocated in the BNLP and the other two are this application scheme and whichever of the schemes put forward by GDL that is implemented (both cannot be), it is unlikely that only one scheme in isolation will come forward. Depending on the decisions made by the Secretary of State, all four could come forward.
483. Both the letter and the EFM report say that in that circumstance it is necessary to look more closely at where the children attending the Braintree Group 10 schools (Hatfield Peverel Infant, St Andrew's Junior and Terling CE Primary) actually live. It appears that some 35% live in the priority admissions areas of other schools but choose to be educated at one of those three named schools.
484. Given that the education authority has a duty to secure sufficient school places (and there is no evidence that it will not do so) the assumption is that this issue will resolve itself over time through the operation of the admissions policy. In short, in-catchment applications will always trump out-of-catchment applications (report paragraph 42) and, while no pupils will be displaced, over time more and more pupils in the Braintree Group 10 schools will come from Hatfield Peverel if that is their choice.
485. In evidence in chief Mr Dixon confirmed that his position on this matter did not differ from that of Mr Lee for GDL whose evidence he had heard. Mr Tucker further sets out the position in his closing submissions [131 and 132]. Mr Lee's position can perhaps be summarised best by his answer to my question when he confirmed that had ECC asked for a contribution to primary school provision it would have been paid. There is therefore no resistance from either GDL or DWH to addressing the issue. Although Mr Graham believes that ECC may have misdirected itself in respect of CIL Regulation 123(3) [276] the fact remains that its understanding of the pooling restriction prevented it from seeking any contributions from the applicant.
486. Nevertheless, while the situation settles down, and there is no indication as to how long that may take, Mr Lee accepted during cross examination by Ms Scott for SPMRG that there would be a short term impact which neither developer would be able to mitigate. That impact is most likely to manifest itself through additional journeys to school, either by bus or private car. In my judgement it is

very unlikely that any pupils would walk to schools in Witham. The walk is by the A12 and unpleasant in my view and likely to be perceived as dangerous even if, in fact, it is not.

### *Health facilities*

487. On this topic too DWH effectively adopts the position of GDL since, once again, in evidence in chief Mr Dixon confirmed that his position did not differ from that of Mr Lee. The consultation response from NHS England is not available but its contents are summarised in the report to Committee (SAV38). The consultation responses by NHS England to the GDL schemes have been submitted in evidence and have the 'feel' of a template letter (CD3.16 set A and CD4.11 set B). At paragraph 5.1 of the response to the 80 dwelling scheme it says that the development would give rise to a need for improvements to capacity by way of 'extension, refurbishment or reconfiguration at the Laurels surgery'. The terms used in the definition of the 'healthcare contribution' in the s106 Obligation [415] are 'extension or reconfiguration of the Sydney House surgery'.
488. It is clear in my view that the impact of the development and the contribution sought to mitigate it is established purely in terms of the need for additional floor space generated. Unchallenged evidence was given by Mr Renow to the effect that Sydney House could not be physically expanded [272]. GDL's response, which has been adopted by DWH, was that capacity can be increased without necessarily having to physically expand the building and could be achieved by, for example, internal alterations.
489. However, a letter from the Practice Manager is somewhat confusing as to what is meant by 'capacity' (CD20.1 set C). One reading is that it is the number of medical staff available that is the issue, not the physical space available. Not only is the concern expressed that the contribution would not be spent by NHS England at that surgery (clearly wrong given the terms of the Obligation) but that it was not recurrent funding. That is suggestive of the concern locally not being one of space constraints.

### *Conclusion*

490. CS policy CS11 says, in essence, that the Council will work with partners, service delivery organisations and developers to provide required infrastructure services and facilities in a variety of functional and service areas that include education and health. Provision is to be funded through among other things, planning obligations and CIL. In the absence of the latter, the Council is reliant in this case on planning obligations.
491. The evidence suggests that there may be some short term harm in terms of additional journeys to schools while a new equilibrium is established in the primary education sector. It may well be that what appear to be current capacity issues at the surgery may be exacerbated if, as HPPC contend (and SPMRG made the same point), the surgery cannot be physically expanded and that is, as NHS England would appear to believe, actually the issue.
492. However, having identified those concerns it must be acknowledged that DWH has obligated to make all the contributions that have been requested to mitigate any effect from the application scheme. In my view, a finding of conflict with policy CS11 in those circumstances would not be appropriate.

***Whether the development would erode the gap between Hatfield Peverel and Witham***

493. Coalescence of settlements is not a matter that is addressed by any adopted development plan policy. It is addressed by emerging BNLP policy LPP 72 [38] and emerging NDP policy HPE1 [41]. Strictly therefore, this matter has 'material planning consideration' status.
494. The straightforward answer to the question is 'yes' because, as a matter of fact, the development proposed would extend the built development of the village into the open countryside between the two settlements by the width of a field. As a matter of fact there would therefore be a conflict with emerging NDP policy HPE1 as the application site is within the area designated as a green wedge.
495. The key issue that this policy is drafted to address is to prevent the encroachment of the nearest town, Witham and the merging of Hatfield Peverel and Nounsley to protect the uniqueness and separation of these settlements (page 24 CD16.3 set C) (emphasis added). The objectives are to prevent coalescence between Hatfield Peverel and each of the others.
496. However, it is again a matter of fact that Witham is being extended on its southern/south eastern boundary as a result of planned development. Development of the town is therefore eroding the gap. BNLP policy LPP 71 does propose a green buffer for Witham but not between Witham and Hatfield Peverel (CD16.2 set C). As a matter of policy therefore it would appear that the Council does not agree with HPPC that this is a matter of concern that should be addressed through the development plan. I give very little weight to the views of an officer of the Council in this respect [99, 373 and 374].
497. The key issue that policy HPE1 is drafted to address emerged from the October 2015 Residents Survey (paragraph 9.2 HPPC1) with the outcome being shown graphically in Appendix MR29 (HPPC1). In my view there is a significant issue with the way the question that prompted this outcome is framed and the response rate is therefore hardly a surprise.
498. There is a further issue in my view with the extent of the green wedge identified. It falls far short of the NDP Designated Area Boundary (page 5 CD16.3 set C) and, in fact, leaves most of the area between Hatfield Peverel and Witham unprotected by the policy. That can be contrasted with the green wedge between Hatfield Peverel and Nounsley which seems to include almost the whole of the gap. If confirmed in the NDP as now drafted and illustrated on the map, it is not clear to me how the policy will achieve the retention of the kind of gap that HPPC considered to be required to maintain adequate separation [281].
499. However, both of these points will be for the appointed examiner if she considers them to be material.
500. In that context, I have already noted that this policy is subject to objection [431]. The weight that can be given to the policy is again a matter of dispute between DWH [94 to 100] and HPPC [260 to 265]. My view on the weight that can be given to the NDP and therefore the 'in principle' conflict with policy HPE1 is set out above [431]; it is very limited weight (also broadly the view of the Council [374]) but it remains a material consideration.

501. Mr Smith addressed this issue by reference to what have become known as the Eastleigh principles (section 5 DWH3). His analysis was not subject to substantive challenge [104]. My note simply records an agreement by Mr Smith that physically the gap would be eroded slightly and a further answer on the sense of leaving a place in which he disagreed with Mr Graham's example of moving within the urban area of London but nevertheless leaving one distinctive area and arriving in another.
502. In my judgement the A12 is a very significant factor in the sense of leaving Hatfield Peverel and arriving in Witham. I do not believe that it is possible to walk between the two on the shorter route without travelling alongside the A12 for some distance. The quickest route by road both ways requires travel actually along the A12 albeit for a short distance. Therefore in my judgement the A12 would remain a very significant physical and psychological barrier between the two settlements and would continue to give a sense of separation even if the actual separation was less than it is now.
503. Furthermore, there is no inter-visibility between the two settlements because of the intervening ridge (sections 5.3 and 5.8 DWH3). This can be seen on HP/EJS/03 (Appendix 2 DWH4) and is, as I saw for myself, even clearer on the ground.
504. In my judgement, the loss of the field to residential development would have no perceptible effect on the effective gap between Hatfield Peverel and Witham. That was also the view of the Council when considering the application (page 87 SAV38).

#### ***Loss of best and most versatile agricultural land***

505. Although Mr Dixon confirmed in evidence that no invasive survey had been undertaken to establish the agricultural land classification of the application site he was content to proceed on the basis that it was grade 2 and thus best and most versatile agricultural land. This was because '...in North Essex you don't bother to look because it all is.'
506. That, in essence, was the advice given by the Council's officers in the report to members on the application (page 85 SAV38).
507. The relevant part of policy CS8 simply states that development should protect the best and most versatile agricultural land; the application proposal would not do so. Mr Dixon considers that this part of the policy is inconsistent with Framework paragraph 112 (paragraph 6.45 DWH1) and that would also appear to be the view of the Council officers as they quote the Framework paragraph in full before reminding Members that since most of this part of Essex is land of that quality the loss of the application site to development would not be a sufficient basis for resisting the application.
508. Whether or not the application proposal amounts to significant development of agricultural land is a matter for debate since the term 'significant' in this context is not defined in the Framework. However, what does seem clear is that if development is to take place in accordance with the spatial strategy to direct future development to the A12/Great Eastern Mainline corridor (among other places), there would be little opportunity to use areas of poorer quality

agricultural land since it is not widely present. In my judgement, the application would not conflict with Framework paragraph 112.

509. In my judgement policy CS8 is inconsistent with the Framework in this respect since it does not permit the more considered analysis inherent in the Framework to be undertaken. Applying Framework paragraph 215, I consider limited weight should be given to the conflict with policy CS8.

***Conclusion - The extent to which the proposed development is consistent with the development plan for the area***

510. I have concluded that the development would accord with the spatial strategy [437]; would not conflict with policy RLP 80 [476] or policy CS8 [477]; and would not conflict with policy CS11 [492]. There would be some visual impact from the development [478]. However, the harm would be limited and very localised in effect. Moreover, this matter does not appear to be subject of a relevant adopted development plan policy. With respect to best and most versatile agricultural land take I do not consider there to be any conflict with Framework paragraph 112 which has greater weight than CS policy CS8 which is inconsistent with its provisions [508 and 509]
511. The sole conflict that I have identified with the development plan is that with policies RLP 2 and CS5. The conflict arises because the application site lies adjacent to but beyond the development boundary of the village. For the reasons set out the weight that should be attributed to this conflict is moderate [438 to 446].

**Five year housing land supply**

**Background**

512. For the purposes of the Inquiry there is no challenge to the Council's assessed OAHN of 716 dwellings per annum [64]. The requirement side of the equation is therefore accepted and the focus of the debate is on the extent to which that requirement can be met over the five year period by the supply of specific deliverable sites.
513. Again, for the purposes of this Inquiry only, the Council accepts the 'Sedgefield' method to deal with the shortfall [351 and 352]. It does not agree with GDL/DWH that there has been persistent past under delivery of housing and does not therefore agree that a 20% buffer should be applied [353 to 357]. On supply there is an immaterial difference between the Council and GDL/DWH of 68 dwellings [358].
514. The final and agreed position is that there would be a 3.4 years' supply (GDL/DWH – Sedgefield+20%) or 3.9 years' (Council – Sedgefield+5%) (Appendix 3 ID37). It was agreed during the Inquiry when I summarised my understanding of the position that this was not close enough to 5 years for the Secretary of State to give anything other than substantial weight to the shortfall. However, as it was not possible on even the most favourable assumptions to get below 3 years, GDL/DWH accepted the implications of the Written Ministerial Statement on Neighbourhood Planning if the NDP passed a referendum before the Secretary of State determined the application.

515. In those circumstances it is not necessary to resolve the small difference between the Council and GDL/DWH.

516. HPPC [170] and SPMRG do not agree with this and suggest that there is a 5YHLS. They contend that the 'Liverpool' approach should be used to deal with the shortfall and that the buffer should be 5%. However, as is clear from the SOCG (Appendix 3, ID 37) that alone is not enough to show a 5YHLS. It also requires most, if not all, of the additional supply sites first mentioned by SPMRG during the round table discussion and then confirmed in writing (ID21) to be 'deliverable' within the meaning of Framework footnote 11.

### ***Supply of deliverable sites***

517. Except for Mr Tucker's criticism of Mr Graham's specific interpretation of *St Modwen* regarding the term 'realistic' [61], it appears to be agreed between the parties that whether a site is deliverable or not is determined by the ordinary and everyday meaning of the words in Framework footnote 11 and not on the planning status of the site in question. It is in that context that GDL/DWH/the Council have reviewed and commented upon (ID 37) the sites put forward by SPMRG (ID21). ID37 is dated 21 December 2017, the final day of the Inquiry sessions. Ms Scott's first and only opportunity to respond was through her closing submissions although what she says [332 and 333] is, in fact, taken into account in ID37.

518. Appendix 1 to ID37 sets out in detail the positions of both GDL/DWH and the Council in respect of each site. None has planning permission and only three are subject of planning applications. A number are subject of objections and until these are resolved through the BNLP examination they must be considered uncertain notwithstanding their allocation in the draft BNLP. Furthermore, some are owned or part owned by the Council. The mechanism by which they will be developed has yet to be confirmed by the Council and they cannot be considered as available now.

519. Ms Scott puts the additional sites suggested by SPMRG as adding a further 461 dwellings to the supply [328]. In only challenging ID37 in respect of two sites (Sorrell's Field and Gimsoms), it must be assumed that SPMRG accept the case made on the others. Even if the SPMRG response to ID37 is agreed, GDL/DWH/the Council say that it adds only about 25 units net to the supply. They further contend that this additional supply makes no material difference to the 5YHLS position.

520. In my view that must be correct. However, the extent of the shortfall below 5 years may still be material and it is therefore necessary to consider the next most significant factor which is whether 'Sedgefield' or 'Liverpool' is the appropriate approach to take to dealing with the shortfall.

### ***Sedgefield or Liverpool?***

521. The shortfall arises because the OAHN has been applied, as it should be, from the start of the plan period in 2013 but the plan itself, the strategy and the allocations to deliver it are not yet approved and planned delivery is thus delayed. I appreciate that some of the developments that may come forward as a result of the adoption of the submitted BNLP may do so towards the latter part of the period. That may well be an argument for the Liverpool approach and is

likely to be put by the Council to the examining Inspector. However, that is all for the future and the shortfall exists now. Although Ms Scott argues that the BNLP is now far more advanced than when Inspectors Hill and Gregory considered their respective appeals [321], in practice that is not so as she implicitly acknowledges ('although plainly the Plan has yet to make it through examination').

522. The PPG is quite clear that Sedgefield should be preferred unless there are sound reasons for not doing so. The case made by SPMRG that the Council is simply not able to deliver housing in the numbers required following the Sedgefield approach [318] is attractive at first sight. However, there is no analysis as to why that has not been the case in the past (is it lack of market demand, lack of available sites, lack of planning permissions being granted against a former development plan requirement?) so the past is not necessarily a guide to the future performance. In any event, even an under-shoot would still make up some of the shortfall.
523. The approach advocated by HPPC [159 to 164] makes the plan strategy point referred to above and, referring to *Bloor Homes* (ID61), argues that it is a matter of judgement for the decision taker.
524. In my judgement there has been no material change in circumstances since my colleagues determined the Coggeshall and Steeple Bumpstead appeals. They both concluded that Sedgefield was the appropriate approach to adopt and this has influenced the Council's acceptance of that for the purposes of this Inquiry [350]. There is no cogent evidence before this Inquiry to take a different view.

### **Conclusion**

525. As Mr Tucker put it [84], in order for HPPC and SPMRG to get the 5YHLS 'over the line' all the stars must align. The evidence shows that when the assessed supply of deliverable sites is taken into account and the Sedgefield approach is applied it makes no material difference whether it is 5% or 20% that is applied as the buffer. On either, the best that can be achieved is still less than 4 years' supply.

### **Framework Paragraphs 49, 14 and the 'tilted balance'**

526. In the circumstances that I have just found Framework paragraph 49 is clear that relevant policies for the supply of housing should not be considered up to date. In turn, that means Framework paragraph 14 is engaged. Planning permission should be granted unless either of the limbs of Framework paragraph bullet 4 indicates that the tilted balance should be dis-applied.
527. It is not part of HPPC's case as I understand it that there is any conflict with a policy in either the development plan or the Framework that can be construed as falling within the scope of Framework footnote 9. The tilted balance is not therefore dis-applied by virtue of the second limb of Framework paragraph 14 bullet 4.
528. Turning now to the first limb, the harms that I have identified are set out above [510 and 511] with the conflict with development plan policies identified where appropriate. The totality of the harm or adverse impacts is limited and localised and restricted to visual impact and an 'in principle' conflict with the two development boundary policies. The benefits are set out by Mr Dixon under the

'economic', 'social' and 'environmental' headings found in Framework paragraph 7 (section 8 DWH1). In fairness, Mrs Jarvis for HPPC acknowledges many of these benefits and confirms that appropriate weight should be given to many, including significant weight to the provision of market and affordable housing and economic benefits (paragraphs 6.33 to 6.38 HPPC2). In my judgement that is correct. The limited adverse impacts of the proposal are some distance from significantly and demonstrably outweighing those benefits. Accordingly, I do not consider the first limb dis-applies the tilted balance either.

529. To conclude on this consideration, the tilted balance set out in Framework paragraph 14 applies in this case and is a material consideration that should be given substantial weight in the planning balance.

### **The planning balance**

#### ***The development plan***

530. The application proposal would conflict with the policies of the development plan. The application site is beyond the development boundary of Hatfield Peverel and it is not a use appropriate to the countryside. There is a conflict therefore with policies RLP 2 and CS5 which attracts moderate weight in the balance [511]. I do not consider there to be any other conflict with the development plan.

531. The application should therefore be determined in accordance with the development plan unless material considerations indicate otherwise. In this case there are a significant number of material considerations to take into account.

#### ***Material considerations against the development***

##### ***Visual impact***

532. In my understanding, the effect on landscape character and visual impact are two separate, but related, issues although they are usually considered in a single LVIA. My conclusion on landscape character is part of my assessment of the development against the policies of the development plan.

533. In relation to visual impact, I conclude that there would be some harm caused [478 to 479]. However, that would be limited, affecting very few residential occupiers and users of certain public paths only pending the maturing of mitigation planting. Although I agree with DWH's categorisation of the scale of adverse effect, the harm caused is limited and localised. Given my conclusions on the weight that should be given to the emerging NDP [431] any conflict with emerging policy HPE6 on this consideration can only be given very limited weight, particularly as this is a policy that is subject to objection from GDL and possibly others although there is no evidence about that.

#### ***Material considerations in favour of the development***

##### ***Tilted balance***

534. I have concluded that the Council cannot show a 5YHLS [525]. Moreover, at less than 4 years' supply, the shortfall is of some significance. In these circumstances Framework paragraph 14 is engaged by virtue of Framework paragraph 49. There is no reason why the tilted balance should be dis-applied [527 and 528] and I consider that it should attract substantial weight [529].

### *Housing delivery*

535. There is no reason to suppose that the proposal would not deliver a high quality development that includes a mix of market and affordable housing [420 and 422].
536. Mr Graham has raised a concern about housing delivery [295]. What he says accords with my note of Mr Dixon's evidence in chief which Mr Tucker draws upon [135]. This is a dispute between the parties with little firm evidence before the Inquiry to allow a resolution. However, Framework footnote 11 is clear that sites with planning permission (which, as not excluded, must include outline planning permission) should be considered deliverable unless there is clear evidence (examples are set out) to the contrary. In this case at this point in time there is no such evidence. It must be assumed therefore that the whole site could be developed within five years. It is also noteworthy in this context that suggested condition 2 reduces to two years the period within which the reserved matters applications must be submitted. There is no reason therefore not to afford some weight to the delivery of housing over the five year period.

### *Spatial strategy*

537. Notwithstanding any conflict with the development plan arising from the position of the village development boundary, the application proposal would accord with the longstanding and continuing spatial strategy for the area [437]. That attracts some weight in the balance.

### *Economic, social and environmental benefits*

538. These are the three dimensions of sustainable development set out in Framework paragraph 7. The applicant's assessment of each is set out by Mr Dixon (section 8, DWH1).
539. Although not quantified, a range of positive economic benefits are claimed which include an enlarged labour force of economically active residents; extra household spending in the local area and thus improved viability and vitality of local services and facilities; direct support for additional employment in the local area arising from that additional demand; investment in construction and support for construction jobs; New Homes Bonus for local investment; and increased council tax revenues.
540. While it is reasonable to assume that 120 homes will generate additional spending power, there is no evidence in my view to support the contention that this will be spent to the benefit of local businesses and services. However, there is nothing in the Framework to suggest that the economic benefit of a development must be enjoyed by the area in which the development is located to meet this objective. I therefore consider that some weight should be attributed to this set of benefits.
541. I have already accounted for the delivery of a mix of affordable and market housing in the planning balance. The other social benefits claimed are social infrastructure and transport.
542. Under social infrastructure the applicant includes provisions to mitigate the impact of the development on community facilities. First, I do not believe that providing mitigation of a harm that would be caused can be counted as a benefit;

at best it has a neutral effect in the balance. Second, in this case, I do not consider the harm to education and health infrastructure will be mitigated [491]. Nevertheless, I do not consider that there can be a conflict with the development plan policy since DWH has obligated to provide all the contributions sought by the service providers [492].

543. Also included under this heading is the provision of safe access routes to the application site. I accept that some of these measures will be of wider benefit but they arise principally to mitigate what the applicant sees as a potential harm arising from the development taking place.

544. I therefore conclude that very little weight should be attributed to the social benefits claimed.

545. Most of the paragraphs set out under the environmental benefits heading by the applicant in fact explain how the proposal would accord with the policies of the development plan. Such considerations do not amount to benefits in my view.

546. Also claimed are new tree and hedge planting and the creation of additional ecological habitat. I note that in reporting to members on the application, Council officers recognised the potential to add to the ecological value of the site (page 89 SAV38). However, most of the required schemes still need to be worked up and approved [402]. I therefore afford limited weight to this benefit.

### ***Conclusion***

547. In my view the conflict with the development plan, which attracts moderate weight applying Framework paragraph 216, and the single material consideration that weighs in favour of determining the application in accordance with it are significantly outweighed by those that indicate it should be determined other than in accordance with the development plan. In my judgement the application represents sustainable development as defined in the Framework and planning permission should be granted.

### **Recommendation**

**File Ref: APP/Z1510/V/17/3180729**

548. I recommend that planning permission be granted subject to conditions.

*Brian Cook*

Inspector

## APPEARANCES

### FOR THE LOCAL PLANNING AUTHORITY:

Josef Cannon of Counsel	Instructed by Ian Hunt Legal Services Braintree District Council
He called	
Alison Hutchinson BA MRTPI	Partner, Hutchinsons Planning & Development Consultants

### FOR THE APPELLANT:

Paul Tucker QC and Philip Robson of Counsel	Instructed by Jonathan Dixon BA MA MRTPI Associate Director Savills (UK) Ltd
They called	
Matthew Spry BSc (Hons), DipTP (Dist) MRTPI MIED FRSA	Senior Director Nathaniel Lichfield and Partners
Jeremy Smith BA CMLI	Director SLR Consulting Limited
Jonathan Dixon BA MA MRTPI	Associate Director Savills (UK) Ltd

### FOR HATFIELD PEVEREL PARISH COUNCIL:

David Graham of Counsel	Instructed by direct access
He called	
Mike Renow	Parish Councillor
Philippa Jarvis BSc DipTP(Hons) MRTPI	Principal PJPC Ltd (Planning Consultancy)

### INTERESTED PERSONS:

## Annex C

### Suggested Conditions

- 1) Details of the appearance, landscaping, layout, and scale, (hereinafter called "the reserved matters") shall be submitted to and approved in writing by the local planning authority before any development takes place and the development shall be carried out as approved.
- 2) Application for approval of the reserved matters shall be made to the local planning authority not later than 2 years from the date of this permission.
- 3) The development hereby permitted shall take place not later than 2 years from the date of approval of the last of the reserved matters to be approved.
- 4) The submission of reserved matters applications pursuant to this outline planning permission shall together provide for no more than 120 dwellings, parking, public open space, landscaping, surface water attenuation and associated infrastructure and demonstrate compliance with the approved plans listed below and broad compliance with the approved plans listed below:  
 Approved Plans:  
 Location Plan: 1296/01 FINAL  
 Access Details: 45604-P-SK205
- 5) Prior to first occupation of the development hereby permitted the provision of the following works shall have been completed, details of which shall have been submitted to and approved in writing by the local planning authority prior to implementation:
  - The access to the application site shown in principle on drawing 45604-P-SK205
  - The cycle/pedestrian access between Gleneagles Way and Glebefield Road as shown in principle on Drawing 45604-P-SK200
  - Improved no entry signage at the end of the A12 southbound off-slip for drivers on The Street, plus improved speed limit signs and road markings for drivers leaving the A12 as show in principle on Drawing 45604-P-SK202
  - Improvements to the visibility splay from Gleneagles Way towards the A12 southbound off-slip shown on Drawing 45604-P-SK20 to include trimming/removal of vegetation/trees, relocation/replacement of signs/street furniture/lamp column(s), regrading/hardening of highway land.
  - A footway and (A12) road signage improvements at The Street/A12 north bound on-slip junction as shown in principle on Drawing 45604-P-SK201.
  - Improvements to the (A12) road signage, kerb alignment and road markings at The Street/Maldon Road as shown in principle on Drawing 45604-P-SK201.
  - The provision of dropped kerbs and associated works where the footway from Hatfield Peverel to Witham crosses the A12 northbound on-slip to the south of the Petrol Filling Station (former Lynfield Motors site), Hatfield Road, Witham.
  - The provision of a zebra crossing on B1019 Maldon Road in the approximate position shown on Drawing 45604-P-SK207

- 6) No building erected on the site shall exceed two storeys in height or have a maximum ridge height of more than 9 metres.
- 7) Any Reserved Matters application relating to scale or layout shall be accompanied by full details of the finished levels, above ordnance datum, of the ground floor(s) of the proposed building(s), in relation to existing ground levels.

The details shall be provided in the form of site plans showing sections across the site at regular intervals with the finished floor levels of all proposed buildings and adjoining buildings. The development shall be carried out in accordance with the approved levels.

- 8) Together with any submission of reserved matters, details of sound insulation measures must be submitted to and approved in writing by the local planning authority. The details must demonstrate that internal noise levels do not exceed 35 dB LAeq 16 hour in living rooms during the daytime (07:00 - 23:00) and also do not exceed 30 dB LAeq 8 hour in bedrooms during the night-time period (23:00 - 07:00) as set out in BS 8233: 2014. In addition, the details must demonstrate that maximum night-time noise levels in bedrooms should not exceed 42 dB LAmax more than 10 to 15 times per night. The development must be carried out in accordance with the approved details.
- 9) Together with any submission of reserved matters, details of the proposed boundary mitigation (noise barrier) must be submitted to and approved in writing by the local planning authority. The details must demonstrate that external noise levels will not exceed 55 dB LAeq 16 hour in any of the private residential gardens. The development must be carried out in accordance with the approved details.
- 10) Prior to the commencement of development hereby permitted, a wildlife protection plan shall be submitted and approved by the local planning authority identifying appropriate measures for the safeguarding of protected species and their habitats within that Phase. The plan shall include:
  - i) an appropriate scale plan showing protection zones where any construction activities are restricted and where protective measures will be installed or implemented;
  - ii) details of protective measures (both physical measures and sensitive working practices) to avoid impacts during construction;
  - iii) details of how development work will be planned to mitigate potential impacts on protected species, as informed by the project ecologist;
  - iv) a person responsible for:
    - a) compliance with legal consents relating to nature conservation;
    - b) compliance with planning conditions relating to nature conservation;
    - c) installation of physical protection measures during construction;
    - d) implementation of sensitive working practices during construction;

- e) regular inspection and maintenance of physical protection measures and monitoring of working practices during construction; and
- f) provision of training and information about the importance of "Wildlife Protection Zones" to all construction personnel on site.

All construction activities shall be implemented in accordance with the approved details and timing of the plan unless otherwise approved in writing by the local planning authority.

- 11) Any Reserved Matters application relating to landscaping as required by Condition 1 of this permission shall incorporate for the written approval of the local planning authority a detailed specification of hard and soft landscaping works for each phase of the development. This shall include plant/tree types and sizes, plant numbers and distances, soil specification, seeding and turfing treatment, colour and type of material for all hard surface areas and method of laying, refuse storage, signs and lighting. The scheme and details shall be implemented as approved. The scheme and details shall provide for the following:

All areas of hardstanding shall be constructed using porous materials laid on a permeable base.

All planting, seeding or turfing contained in the approved details of the landscaping scheme shall be carried out in phases to be agreed as part of that scheme by the local planning authority.

Prior to the occupation of each dwelling, the hardstanding associated with that dwelling shall be fully laid out.

Any trees or plants which die, are removed, or become seriously damaged or diseased within a period of 5 years from the completion of the development, shall be replaced in the next planting season with others of a similar size and species.

Any Reserved Matters application relating to landscaping shall be accompanied by cross section drawings showing the relative heights of the proposed dwellings in association with landscape features.

- 12) No development shall commence, including any groundworks, until a Construction Method Statement has been submitted to, and approved in writing by the local planning authority. The Statement shall be implemented as approved. The Statement shall provide for:

- Safe access to/from the site including details of any temporary haul routes and the means by which these will be closed off following the completion of the construction of the development;
- The parking of vehicles of site operatives and visitors;
- The loading and unloading of plant and materials;

- The storage of plant and materials used in constructing the development;
  - The erection and maintenance of security hoarding including decorative displays and facilities for public viewing, where appropriate;
  - Wheel washing facilities;
  - Measures to control the emission of dust and dirt during construction;
  - A scheme for recycling/disposing of waste resulting from demolition and construction works.
  - A scheme to control noise and vibration during the construction phase
  - Provision of a dedicated telephone number(s) for members of the public to raise concerns/complaints, and a strategy for pre-warning residents of noisy activities/sensitive working hours.
- 13) Demolition or construction works, including starting of machinery and delivery to and removal of materials from the site shall take place only between 08.00 hours and 18.00 hours on Monday to Friday; 08.00 hours to 13.00 hours on Saturday; and shall not take place at any time on Sundays or on Bank or Public Holidays.
- 14) Details of any proposed external lighting to the site for each phase of the development shall be submitted to, and approved in writing by, the local planning authority as part of any Reserved Matters application. The details shall include a layout plan with beam orientation and a schedule of equipment in the design (luminaire type, mounting height, aiming angles, luminaire profiles and energy efficiency measures). For the avoidance of doubt the details shall also:
- identify those areas/features on site that are particularly sensitive for bats and that are likely to cause disturbance in or around their breeding sites and resting places or along important routes used to access key areas of their territory, for example, for foraging; and
  - show how and where external lighting will be installed (through the provision of appropriate lighting contour plans and technical specifications) so that it can be clearly demonstrated that areas to be lit will not disturb or prevent the above species using their territory or having access to their breeding sites and resting places.
- All lighting shall be installed, maintained and operated in accordance with the approved details.
- 15) No piling shall be undertaken on the site in connection with the construction of the development until details of a system of piling and resultant noise and vibration levels has been submitted to and approved in writing by the local planning authority. The approved details shall be adhered to throughout the construction process.

- 16) No development or preliminary groundworks shall commence until a programme of archaeological evaluation has been secured and undertaken in accordance with a written scheme of investigation which has been submitted to and approved in writing by the local planning authority.

A mitigation strategy detailing the excavation/preservation strategy shall be submitted to the local planning authority following completion of the programme of archaeological evaluation as approved within the written scheme of investigation.

No development or preliminary groundworks shall commence on those areas containing archaeological deposits until the satisfactory completion of fieldwork, as detailed in the mitigation strategy, and which has been approved in writing by the local planning authority.

Within 6 months of the completion of fieldwork a post-excavation assessment shall be submitted to the local planning authority. . This will result in the completion of post-excavation analysis, preparation of a full site archive and report ready for deposition at the local museum and submission of a publication report.

- 17) No development shall commence until a detailed surface water drainage scheme for the site, based on sustainable drainage principles and an assessment of the hydrological and hydro geological context of the development, has been submitted to and approved in writing by the local planning authority. The approved scheme shall subsequently be implemented prior to occupation.

The scheme shall include but not be limited to:

- Limiting discharge rate to 1.25l/s/ha;
- Providing sufficient storage to manage the 1 in 100 year + 40% climate change storm event on site with no flooding of the formal drainage system during the 1 in 30 year event. Provide sufficient storage so that no flooding will occur during the 1 in 30 year event in the case of pump failure;
- Provide adequate treatment across all elements of the development.

- 18) No development shall commence until a Maintenance Plan detailing the maintenance arrangements for each phase of the development, including who is responsible for different elements of the surface water drainage system and the maintenance activities/frequencies, has been submitted to and approved in writing by the local planning authority. The Maintenance Plan shall be implemented as approved.

The applicant or any successor in title or adopting authority shall maintain yearly logs of maintenance which shall be carried out in accordance with any approved Maintenance Plan for each phase of the development. These shall be available for inspection upon a request by the local planning authority.

- 19) No development shall commence until a scheme to minimise the risk of offsite flooding caused by surface water run-off and groundwater during construction works has been submitted to and approved in writing by the local planning authority. The scheme shall be implemented as approved.
- 20) No development shall commence until a foul water strategy has been submitted to and approved in writing by the local planning authority. No dwellings shall be occupied until the works have been carried out in accordance with the foul water strategy so approved unless otherwise approved in writing by the local planning authority.
- 21) As part of the submission of the first reserved matters application as detailed within Condition 1, an Arboricultural Method Statement (AMS) shall be submitted and approved in writing by the local planning authority. The AMS will include a Detailed Tree Protection Plan (DTPP) indicating retained trees, trees to be removed, the precise location and design of protective barriers and ground protection, service routing and specifications, areas designated for structural landscaping to be protected and suitable space for access, site storage and other construction related facilities. The AMS and DTPP shall include details of the appointment of a suitably qualified Project Arboricultural Consultant who will be responsible for monitoring the implementation of the approved DTPP, along with details of how they propose to monitor the site (to include frequency of visits; and key works which will need to be monitored) and how they will record their monitoring and supervision of the site.

The development shall be carried out in accordance with the approved details.

Following each site inspection during the construction period the Project Arboricultural Consultant shall submit a short report to the local planning authority.

The approved means of protection shall be installed prior to the commencement of any building, engineering works or other activities within that Phase of the development and shall remain in place until after the completion of the development.

The local planning authority shall be notified in writing at least 5 working days prior to the commencement of development on site.

- 22) No above ground works shall commence in the relevant phase of the development until details of the location of refuse bins, recycling materials storage areas and collection points shall be submitted to and approved in writing by the local planning authority. The development shall be implemented in accordance with the approved details prior to the first occupation of each respective unit of the development and thereafter so retained.
- 23) No clearance of trees, shrubs or hedges in preparation for (or during the course of) development shall take place during the bird nesting season (March - August inclusive) unless a bird nesting survey has been submitted to and approved in writing by the local planning authority to establish whether the site is utilised for bird nesting. Should the survey reveal the

presence of any nesting species, then no development shall take place within those areas identified as being used for nesting during the period specified above.

- 24) Prior to the commencement of above ground construction of the relevant phase of the development details of a scheme for the provision of nest and roost sites for birds and bats shall be submitted to and approved in writing by the local planning authority. Development shall be implemented in accordance with the approved details prior to the first occupation of the dwellinghouses and thereafter so retained.
- 25) Prior to submission of the first application for Reserved Matters pursuant to this planning permission an updated survey of the application site will have been carried out by a suitably qualified and experienced ecologist to investigate the potential presence on the application site of badgers, bats, reptiles and Great Crested Newts.

Details of the methodology, findings and conclusions of the survey shall be submitted to the local planning authority for approval as part of the first application for Reserved Matters pursuant to this planning permission.

- 26) In the event that development is not commenced (or, having commenced, is suspended for more than 12 months) within three years of the planning consent, further surveys for Great Crested Newts as necessary shall be undertaken of all suitable ponds within 500 metres of the application site. Details of the methodology, findings and conclusions of the survey shall be submitted to the local planning authority within 8 months of the completion of the survey and a mitigation/compensation scheme, if required shall be provided for approval prior to the commencement of development. Mitigation/compensation works shall be carried out in accordance with the approved scheme.
- 27) Prior to the submission of the first reserved matters application, details must be submitted to demonstrate that ambient concentrations of nitrogen dioxide will not exceed the UK annual mean objective concentration of 40µg/m<sup>3</sup> at any residential property location within the development.
- 28) Prior to first occupation of the development hereby approved, the Developer shall be responsible for the provision and implementation of a Residents' Travel Information Pack for sustainable transport, approved by the local planning authority, (to include six one day travel vouchers for use with the relevant local public transport operator).
- 29) Prior to the first occupation of the development hereby permitted the overhead electricity cables crossing the site east /west shall be diverted underground.
- 30) *No above ground development shall commence in the relevant phase of the development until a schedule and samples of the materials to be used on the external finishes have been submitted to and approved in writing by the local planning authority. The development shall only be implemented in accordance with the approved details.*
- 31) *Prior to first occupation of the relevant phase of the development, details of all gates / fences / walls or other means of enclosure within the relevant phase of the development shall be submitted to and approved in writing by the local planning authority. The details shall include position, design,*

*height and materials of the enclosures. The enclosures as approved shall be provided prior to the occupation of the relevant plot.*

## RIGHT TO CHALLENGE THE DECISION IN THE HIGH COURT

These notes are provided for guidance only and apply only to challenges under the legislation specified. If you require further advice on making any High Court challenge, or making an application for Judicial Review, you should consult a solicitor or other advisor or contact the Crown Office at the Royal Courts of Justice, Queens Bench Division, Strand, London, WC2 2LL (0207 947 6000).

The attached decision is final unless it is successfully challenged in the Courts. The Secretary of State cannot amend or interpret the decision. It may be redetermined by the Secretary of State only if the decision is quashed by the Courts. However, if it is redetermined, it does not necessarily follow that the original decision will be reversed.

### SECTION 1: PLANNING APPEALS AND CALLED-IN PLANNING APPLICATIONS

The decision may be challenged by making an application for permission to the High Court under section 288 of the Town and Country Planning Act 1990 (the TCP Act).

#### Challenges under Section 288 of the TCP Act

With the permission of the High Court under section 288 of the TCP Act, decisions on called-in applications under section 77 of the TCP Act (planning), appeals under section 78 (planning) may be challenged. Any person aggrieved by the decision may question the validity of the decision on the grounds that it is not within the powers of the Act or that any of the relevant requirements have not been complied with in relation to the decision. An application for leave under this section must be made within six weeks from the day after the date of the decision.

### SECTION 2: ENFORCEMENT APPEALS

#### Challenges under Section 289 of the TCP Act

Decisions on recovered enforcement appeals under all grounds can be challenged under section 289 of the TCP Act. To challenge the enforcement decision, permission must first be obtained from the Court. If the Court does not consider that there is an arguable case, it may refuse permission. Application for leave to make a challenge must be received by the Administrative Court within 28 days of the decision, unless the Court extends this period.

### SECTION 3: AWARDS OF COSTS

A challenge to the decision on an application for an award of costs which is connected with a decision under section 77 or 78 of the TCP Act can be made under section 288 of the TCP Act if permission of the High Court is granted.

### SECTION 4: INSPECTION OF DOCUMENTS

Where an inquiry or hearing has been held any person who is entitled to be notified of the decision has a statutory right to view the documents, photographs and plans listed in the appendix to the Inspector's report of the inquiry or hearing within 6 weeks of the day after the date of the decision. If you are such a person and you wish to view the documents you should get in touch with the office at the address from which the decision was issued, as shown on the letterhead on the decision letter, quoting the reference number and stating the day and time you wish to visit. At least 3 days notice should be given, if possible.

EP5N

## Appeal Decision

Inquiry Held between 30 July and 7 August 2019

Site visits made on 29 July and 2 August 2019

**by John Felgate BA(Hons) MA MRTPI**

an Inspector appointed by the Secretary of State

**Decision date: 3<sup>rd</sup> September 2019**

---

**Appeal Ref: APP/J2210/W/18/3216104**

**Land off Popes Lane, Sturry, Kent CT2 0JZ**

- The appeal is made under section 78 of the Town and Country Planning Act 1990 against a refusal to grant outline planning permission.
  - The appeal is made by Gladman Developments Limited against the decision of Canterbury City Council.
  - The application Ref 18/01305, dated 22 June 2018, was refused by notice dated 24 September 2018.
  - The development proposed is the erection of up to 140 Dwellings, with public open space, landscaping, sustainable drainage system, and vehicular access.
- 

### Decision

1. The appeal is dismissed.

### Preliminary Matters

#### *General*

2. The appeal proposal is for outline permission with all details reserved except for access. In so far as the submitted Framework Plan includes details of other elements, including the type and disposition of the proposed open space and planting, it is agreed that these details are illustrative.
3. During the inquiry, a Section 106 planning agreement was completed. The agreement secures the provision of affordable housing and the proposed on-site open space and sustainable urban drainage (SUDs) system, and a system of travel vouchers for future house purchasers. It also provides for financial contributions to schools, libraries, community learning, healthcare, adult social care, youth services, highways, cycle routes, public rights of way, traffic regulation orders (TROs), and ecological mitigation.
4. In the light of these provisions in the S.106 agreement, the Council withdrew Refusal Reasons (RRs) Nos 6, 7 and 8, relating to housing tenure, infrastructure, and the effects on a designated Special Protection Area (SPA). In addition, the Council withdrew RR5, relating to air quality, in the light of further information submitted prior to the inquiry.

#### *Matters relating to internationally designated sites*

5. The SPA contribution provided for in the S.106 agreement relates to mitigation measures for recreational disturbance to the Thanet Coast and Sandwich Bay SPA, for which the Council has established a mitigation scheme in consultation

with Natural England (NE). NE was consulted on the original application and raised no objection subject to this contribution. Subsequently, the appellants prepared a Shadow Appropriate Assessment. The Council has expressed itself to be satisfied with that Assessment.

6. At the inquiry, a copy was produced of a letter from NE regarding certain other proposed developments within the Sturry area. In that letter, NE raised issues relating to possible impacts on water quality at another protected site, the Stodmarsh Special Area of Conservation (SAC), which is also a Ramsar Site and a Site of Special Scientific Interest (SSSI). In the light of this letter, the Council wrote to NE, inviting any further comments regarding the present appeal proposal. NE's reply, dated 16 August 2019 and therefore received after the inquiry had finished sitting, indicates that similar concerns are now considered applicable to this appeal site.
7. In the circumstances, it seems to me that, without further information as to the potential impacts on the Stodmarsh site, planning permission for the appeal proposal could not be granted without contravening the relevant provisions of the Conservation of Habitats and Species Regulations 2017. This is because, in the light of NE's stated position, I cannot be certain that the development could be carried out, either individually or cumulatively, without adversely affecting the protected site's integrity. If in other respects the balance of the evidence had pointed towards granting permission, I would have been minded to allow the appellants some further time to address this new issue before making my decision. However, having fully reviewed all the evidence, I find that is not the case. I have therefore proceeded to my decision, on the evidence that is already before me.

### **Relevant Development Plan Policies**

8. The development plan policies relevant to the appeal are contained in the Canterbury District Local Plan (the CDLP), adopted in July 2017. Policy SP2 sets out the overall housing requirement for the District, of 16,000 dwellings over the period 2011-31.
9. Policy SP3 identifies twelve strategic housing site allocations. One of these comprises land at Sturry and Broad Oak, which is allocated for 1,000 dwellings, business floorspace, local shopping and community facilities. The allocation is also intended to help deliver a new Sturry Relief Road, by-passing the centre of the village. The present appeal site is not included in any of the strategic allocations.
10. Policy SP4 sets out the overall spatial strategy, including the settlement hierarchy. Sturry is identified as a rural service centre, within the hierarchy's second tier.
11. Policy SP1 broadly reflects the presumption in favour of sustainable development in the National Planning Policy Framework (the NPPF). Where other relevant policies are out of date, planning permission is to be granted, unless material considerations indicate otherwise, taking account of whether the adverse impacts would significantly and demonstrably outweigh the benefits, and whether specific NPPF policies indicate that development should be restricted.
12. Other policies relating to particular issues in the appeal are identified elsewhere in this decision, where relevant.

## Main Issues

13. Having regard to all the submissions before me, I consider the main issues in the appeal to be as follows:
- whether the district has an adequate supply of deliverable land for housing;
  - the effects of the proposed development on the highway network and safety;
  - the effects on the character and appearance of the area and its landscape;
  - the effects on the setting of nearby listed buildings;
  - the effects on 'best and most versatile' agricultural land;
  - and whether the appeal site is a suitable location for the proposed development, having regard for the CDLP's policies for the location of housing.

## Reasons for Decision

### *Housing land supply*

#### *Base data*

14. The evidence prepared for the inquiry by both parties, including the agreed Statement of Common Ground (SCG), was based on the Council's 'Housing Land Supply Statement 2017/18'. That document has a base date of 1 April 2018, and looks to a 5-year period of 2018-23 (the 2018 HLSS). Shortly before the inquiry, the Council produced a draft version of the annual update, with a base date of 1 April 2019, and a 5-year period of 2019-24 (the 2019 HLSS). The 2018 HLSS identifies a requirement for 4,611 dwellings, including a 5% buffer, and a supply of 6,059 dwellings, giving a surplus of 1,448. In the 2019 version the requirement, based on the same method, is 4,801 units, whilst the supply is 6,455 units, and the surplus 1,654.
15. The 2019 document has some limitations, in that it has not yet been subject to final checking and internal approval, and is not yet publicly available. Nor did the appellants have a great deal of time to appraise the contents, before the inquiry. But nonetheless, the information within it is more up to date, and provides a basis for a forward view spanning almost five full years from now. In the circumstances, whilst I have had regard to both of the HLSSs, I have based my calculations principally on the 2019 version.

#### *The housing requirement*

16. In both versions of the HLSS, the 5-year housing requirement figures are based on the broad phasing indicated in CDLP Policy SP2, which shows a stepped annual requirement, starting from 500 dwellings per annum (dpa) in 2011-16, and then 900 dpa in each of the subsequent phases of the plan period. I accept that elsewhere in the Local Plan, and in the Examining Inspector's report, there are statements or other indications which appear to support a flat rate of 800 dpa across the plan period. But in the event of any contradiction, it is the policies that must prevail over the supporting material. In the present case, that means using the phasing set out in Policy SP2.

17. I acknowledge that in another appeal<sup>1</sup> (in which I was the inspector), in February 2018, the land supply calculations were based on a flat rate approach. But each decision must be based on the evidence given at the time. In the present appeal, the Council's approach differs from that advanced in the earlier case. But this inconsistency does not change my view as to the merits of the two approaches, as set out above.
18. The Council's approach to the housing requirement in the present appeal is based on the 'Liverpool' method, whereby any past shortfall in delivery is to be made up over the remainder of the plan period. I accept that, in general, the advice in the Planning Practice Guidance (PPG) favours the alternative 'Sedgefield' method, of seeking to make up the deficit within the next five years. But the PPG also advises that a Liverpool-type approach may be acceptable, provided that approach is put forward and accepted through the Local Plan examination process. In the case of the CDLP, the Liverpool method was expressly endorsed by the Examining Inspector in 2017. I agree that this does not mean that the methodology can never be reviewed, but having regard to the reasons given by the Inspector at that time, I see no compelling argument for departing from the approach that was agreed only two years ago.
19. For my calculations therefore, I have primarily addressed the requirement figure of 4,801 dwellings, and the period 2019-2024, which are contained in the 2019 HLSS.

#### *Deliverability*

20. The NPPF requires that sites which are to be included in the 5-year supply should be deliverable, within the terms of definition set out in the Glossary. To come within that definition, amongst other things, sites should be available now, and be achievable, with a realistic prospect that housing will be delivered on the site within five years. Sites for major development, without detailed planning permission, will only be counted as deliverable where there is clear evidence that completions will begin within that period. In addition, the PPG gives examples of some types of evidence which may be relevant.
21. In the present case, the Council's 5-year supply relies heavily on sites in this category, having only outline permission or no permission at all. In the 2019 HLSS, sites of this kind account for 3,923 units, representing some 60% of the claimed supply for the 5-year period. The evidence before me, in so far as it relates to the 2019 supply schedules, focuses on eleven such sites which are disputed by the appellants<sup>2</sup>. In considering this evidence, I am keenly aware that part of the reason that the Council is reliant on sites of this type is because the CDLP seeks to achieve a rapid increase in the rate of housing delivery, and that process is still in the early stages. However, the NPPF makes it clear that the planning system should aim to ensure continuity in the housing supply in the short term, as well as planning for the longer-term future, and it seems to me implicit that this is what the 5-year supply test is primarily designed to achieve.

---

<sup>1</sup> Land at Old Thanet Way, Whitstable

<sup>2</sup> In the Table in the Housing SCG, the disputed sites that are relevant to the 2019 supply are Nos 1-7, 9, 11, 12 and 17. Sites Nos 8 and 13-16 are not forecast in the 2019 HLSS to produce any completions in the relevant period, so are no longer relevant to my consideration. Site No 10 is now under construction, and is no longer disputed.

22. In the light of these considerations, I have given close attention to the nature of the evidence which the Council has produced to demonstrate the disputed sites' deliverability. In this regard, I fully appreciate the efforts that Officers have gone to, to introduce new systems for liaising with developers and landowners, and monitoring progress, particularly through the establishment of the Housing Delivery Group, and the preparation of the Phasing Methodology. I have no doubt that these systems are designed to enable housing delivery forecasts to be accurate, robust, flexible and up to date. But nevertheless, it is clear from the NPPF and PPG that, until sites achieve detailed planning permission, they should not be treated as deliverable, unless the evidence clearly demonstrates that this status is justified.
23. For a number of the disputed sites, the Council's evidence is founded on site-specific SCGs which have been agreed with the developer or landowner of the site in question. I appreciate that the PPG refers to SCGs as an admissible type of evidence, and I have had full regard to that advice. But nevertheless, the evidential value of any particular SCG in this context is dependent on its content. In a number of cases, the SCGs produced by the Council primarily record the developer's or landowner's stated intentions. Without any further detail, as to the means by which infrastructure requirements or other likely obstacles are to be overcome, and the timescales involved, this type of SCG does not seem to me to demonstrate that the development prospect is realistic. In addition, most of the site-specific SCGs are undated, thus leaving some uncertainty as to whether they represent the most up-to-date position.

#### *Disputed sites*

24. Only one of the disputed sites has any kind of planning permission. That site is Strode Farm (Site No 4 on the disputed sites list), which has outline permission for 800 dwellings. In the 2019 HLSS, the Council forecasts 190 dwelling completions within the relevant 5-year delivery period, 2019-24. A legal challenge to the outline permission has only recently been resolved, and to that extent it is not surprising that there has been no apparent progress towards an application for reserved matters. But even so, there is no clear evidence of any other kind to show deliverability. An SCG has been agreed with the site's promoter, but it appears that a development partner is to be appointed, and there is no indication that that party has been involved in the SCG. The timings and build rates suggested are not supported by any detailed programme, or explanation of how the timing would be achievable. The development is apparently to include major road infrastructure, both on-site and offsite (albeit now reduced from what was originally sought), and there is no evidence as to how this may affect the timing or viability. The evidence therefore does not demonstrate that the site is deliverable within the terms of the NPPF definition.
25. Five of the disputed sites are the subject of current outline or hybrid applications or appeals. One of these is the site known as South Canterbury (Site No 1). The overall outline scheme, supported by an allocation in the CDLP, is for 4,000 dwellings. The Council resolved in 2016 to grant a hybrid permission, including full permission for the first 140 dwellings, and outline for the remainder. In the 2019 HLSS, the site is forecast to produce 550 completions in the relevant delivery period. However, the permission has not yet been granted. Since 2016, further environmental information has been submitted, which has not been the subject of any further resolution. In

addition, Kent County Council (KCC) has requested an increase of over £7m in the education contribution. There is no information as to what effect this will have. The development also requires major infrastructure works, including on- and off-site highway works, sewer diversions, and the removal of pylons. Conditions relating to archaeology and contamination, amongst others, are proposed. The SCG from the site promoter contains no programme to show how the timescales for all the necessary approvals, advance works and site preparation can be accommodated. At the inquiry, the Council's witness admitted that the Council does not have this information. Without that kind of detail, on a site of such a scale and complexity, the SCG is unconvincing. I have little doubt that the necessary permission is likely to be granted at some point, but the critical factor is likely to be the lead-in time after that occurs, and on this the evidence is entirely lacking. On the evidence submitted therefore, the South Canterbury site cannot realistically be counted as deliverable at this stage.

26. In the same category is the allocated site known as Sturry/Broad Oak (Site No 2). This site is currently the subject of two planning applications, by different developers, totalling 1,106 dwellings. One of these is a hybrid, which seeks full permission for some of the dwellings. The Council forecasts 440 dwellings in the 5-year period. However, no decisions have yet been made on the current applications. As noted earlier, Natural England has raised an objection relating to the effects on the Stodmarsh SAC. The development as a whole is bound up with the proposed Sturry Relief Road, and although contributions to this have been agreed in principle, further funding is needed and is yet to be fully secured. KCC is said to be considering the phasing of the housing in relation to the new road, but this has not yet been agreed. The potential effects of this phasing on the scheme's overall viability are not yet known. From the evidence available, it is not clear how this may affect the scheme. The development also involves the provision of other local infrastructure, but there is no evidence of any binding agreement between the various parties as to how the costs are to be apportioned. Nor is there evidence of any detailed programme for the necessary approvals, site works and other works necessary prior to any house completions. In the face of so many unresolved issues, it seems to me that the prospect of any housing completions on the Sturry/Broad Oak site within the relevant 5-year period is far from certain. The site therefore cannot be classed as deliverable.
27. The next site in this category is Land at Hillborough (Site No 3), which is allocated in the CDLP for 1,300 dwellings, and is in three parcels. Two of the are the subject of current applications totalling 1,080 units. In the 2019 HLSS, the site is forecast to deliver 195 dwellings in the relevant 5-year period. However, the applications are undetermined. The Council's evidence highlights the complex nature of the issues relating to access and road infrastructure, and the apportionment of costs between the owners or developers of the different land parcels. In addition, it appears that these costs may now rise as a result of recent decisions which have reduced the amount that will be contributed by the Strode Farm site. It is said that discussions about viability and costs are continuing. However, there is no evidence as to how the admitted complexities can be overcome, or within what timescale. None of the evidence produced amounts to clear and realistic evidence that the site will deliver housing completions within five years.

28. The site known as Greenhill (Site No 5) has no planning permission, but is the subject of a current outline application. The site is said to have no major infrastructure requirements, and the Council expects it to produce 150 dwellings in the relevant 5-year period. However, the current planning application is for 450 dwellings, which exceeds the CDLP allocation for 300 units, by some 50 per cent. The principle of the site being developed on this scale is therefore unsupported by the Local Plan, and it cannot be regarded as certain that the current application will be found acceptable. Nor can it be assumed that an alternative, policy-compliant scheme would necessarily come forward within the relevant timescale. There is therefore no certainty as to whether any permission will be forthcoming to allow the development to proceed in its present form. As such, the development cannot currently be regarded as deliverable.
29. The only other site with a current proposal awaiting determination is the site known as Grassmere (Site No 9), where there is a current appeal for a hybrid scheme of 300 dwellings. The site is allocated in the CDLP, and is expected by the Council to produce 70 completions, in the 2019 HLSS. At the time of the present inquiry, the Council hoped to be able to withdraw its opposition to the appeal scheme, but had not done so yet. As long as the appeal is contested by the Council, there is clearly no certainty as to the outcome. If the appeal is dismissed, it may still be possible for an acceptable alternative scheme to come forward within the relevant five-year period, but there is no evidence to show that this would be likely, let alone that such a scheme would qualify as a realistic prospect. Consequently, while the appeal remains undetermined, the site cannot be treated as deliverable.
30. None of the other disputed sites is the subject of any current planning application. The largest of these other sites is Land North of Hersden (Site No 7), which is allocated in the CDLP for 800 dwellings, and has been the subject of pre-application discussions. The Council sees it as delivering 160 completions in the relevant 5-year period. But there is no evidence of any firm progress towards a planning application, or any site assessment work. Contractual negotiations between the landowners and the prospective developer appear to be still on-going. The site is likely to be required to make a contribution in excess of £5m to the Sturry Relief Road. The SCG, although involving the developer, contains no details of how the development would be delivered within the relevant timescales, or whether the required contribution would be viable. The evidence does not demonstrate a realistic prospect of completions being achieved within the five years, and the site therefore does not come within the definition of deliverable.
31. The disputed sites at Canterbury West Station (Site No 11), and Rosemary Lane car park (Site No 12), have been allocated for housing since the previous Local Plan, in 2006. Between them, these two small sites are forecast in the HLSSs to deliver a total of 40 dwellings in the relevant 5-year period. But both are currently in active use as Council car parks. Although they may be freed up from that use in February 2020, when a new multi-storey park is completed, this means that they are not available now. From the evidence presented, it also seems that no formal decision has yet been taken by the Council regarding any future development. The sites are therefore not currently deliverable.
32. The site known as Land at Rough Common Road (Site No 17) was likewise allocated in the 2006 CDLP, and is now forecast to produce 16 dwellings in the

relevant period. Pre-application discussions have been held. But there is no evidence of any further progress towards the submission of an application. The site therefore does not qualify as deliverable.

33. The final disputed site is Land North of Thanet Way (Site No 6), which has outline permission for 400 dwellings, and a current reserved matters application for 138 of these units. In the 2019 HLSS the site is forecast to deliver 297 completions in the relevant five years. The site is not challenged by the appellants on grounds of deliverability, but on timing and build rates. Given the involvement of a Registered Provider as lead developer, I consider the forecast in the 2019 document reasonable. I therefore make no further adjustment in respect of this site.

#### *Conclusion on housing land supply*

34. In the light of the above, I conclude that the disputed sites numbered 1, 2, 3, 4, 5, 7, 9, 11, 12 and 17 should all be excluded from my assessment of the deliverable supply. In all these cases, this is because there is insufficient clear evidence to show that they meet the NPPF's definition of deliverable. Sites which are not deliverable cannot be counted as part of the supply for the purposes of meeting the 5-year requirement.
35. In total, these 10 non-deliverable sites are relied on in the 2019 HLSS to deliver 1,811 housing completions in the period 2019-24. The effect of excluding these sites is that the supply for that period is reduced to 4,644 units, which represents a shortfall of 157 against the Council's requirement figure of 4,801 units. On this basis, the deliverable supply is 4.8 years.
36. For completeness, if the calculations were instead based on the 2018 HLSS, the effect of deleting the same sites from the Council's supply figures for 2018-23 would be to reduce the supply for that period by 1,760 units. The result in terms of the years' supply would then be very slightly lower, at just under 4.7 years. However, for the reasons that I have explained, I consider the use of the 2019-based figures to be more appropriate. In any event, the difference in the outcome is not significant.
37. For the reasons set out above, I conclude that the Council has been unable to demonstrate a 5-year supply of deliverable housing land. In the circumstances, the provision of up to 140 dwellings in the appeal proposal, including 30% affordable, would be a substantial benefit of the scheme.

#### *Traffic and highway safety*

##### *Existing traffic conditions*

38. Even though the inquiry took place during the summer holiday period, I was able to see on my visits to Sturry that the village suffers from a combination of factors that make it particularly prone to traffic problems. The coming together of the A28 and A291, at the centre of the village, funnels traffic from two main routes into one. The sharp bend, and the lack of signal controls, makes it difficult for traffic from the A291 to emerge at the uncontrolled junction. The gated railway crossing, directly adjacent, causes extensive queuing on the A28, which blocks the road junction and compounds the problems. The only practical alternative route involves a network of minor roads and narrow lanes, which are unsuited to through traffic.

39. The evidence of both parties confirms the scale of the existing problems. On the A28, the appellants' traffic counts show average 24-hour weekday flows of around 19,000 vehicles. In the morning and afternoon peaks, the average 2-way flow is over 1,400 vehicles an hour, with one-way flows in the busier direction of around 850 and 780 vehicles respectively. These latter figures exceed the link capacity for a road of this type, as advised in the DMRB<sup>3</sup>, even without taking account of the level crossing, which further restricts that capacity.
40. The Sturry level crossing is said to be amongst the 'top ten' busiest crossings in Network Rail's national database. On average, the barriers close five times per hour, halting traffic flows for a total of about 12 minutes out of every hour, thus losing about 20% of the total time available. Some of the individual closure periods last for 4-5 minutes or more. The appellants' surveys show queue lengths during the barrier closures averaging 79 vehicles on the southbound side in the AM peak, and 115 vehicles northbound in the PM peak. The maximum lengths during the longer closures reached 144 vehicles and 215 vehicles respectively. Even on the less busy side of the crossing in each case, average queues were around 30-33 vehicles, with maxima of up to twice these numbers. Further queuing also takes place on the southbound A291, where the exit onto the A28 becomes blocked during these periods.
41. There is no disagreement that this congestion in the village centre is responsible for large numbers of vehicles diverting onto minor roads. To the west of the A291, on the rat-running route via Sweechgate, Shalloak Road and Broad Oak Road, the evidence indicates 2-way flows of over 700 vehicles an hour in the AM peak and only slightly less in the PM period. Over a full day, the Sturry and Herne Highway Capacity Study (the SHHCS) reports traffic flows of 7,000 vehicles on Shalloak Road. To the east of the A291, it is clear that some traffic from the A28 connects to this route, via Babs Oak Hill, Hawe Lane and Popes Lane. For much of their length, these circuitous rat-runs comprise narrow, winding lanes, with sharp bends and poor forward visibility. Their use by high volumes of through traffic is a cause for justified concern.
42. Some of the junctions along these routes, under existing conditions, are at or approaching their practical capacity. At the A291/Sweechgate junction (Junction SJ8), on the appellants' figures, the current RFC<sup>4</sup> value for the right-turn movement into Sweechgate in the AM period is 0.97, with a queue length of 16 vehicles. At this point the A291 is only wide enough for one lane in each direction, so all southbound traffic is held behind the vehicles that are waiting to turn. In the PM period, the RFCs on Sweechgate are 0.90 for the left-turn and 0.83 for the right-turn, and again in practice most of the turning vehicles on this arm are combined into a single queue, with the Council's survey showing that this can reach 150m. At the Broad Oak/Vauxhall Road roundabout (SJ 10), the RFCs on all three arms are between 0.92 - 0.95 in either one or both of the peaks. At SJ9, Shalloak Road/Mayton Lane, the RFC in the PM peak reaches 1.08. All of these RFCs indicate that these junctions are operating at, or very close to, their limits. Given the range of daily variation which is evidenced in the traffic counts, it seems likely that on some days their capacities will be exceeded.

---

<sup>3</sup> Design Manual for Roads and Bridges (Mr Finch's Appendix C)

<sup>4</sup> Ratio of flow-to-capacity

43. The evidence identifies a high number of accidents in the Sturry area, with 108 recorded in a 5-year period in the village as a whole. Although the A291 has been downgraded from the highest risk category in the 'EuroRAP' system, it is apparently still classified as medium-high risk, and the A28 as medium risk.
44. The difficulties of the existing traffic conditions in Sturry, together with those at Herne village, a little further along the A291, are recognised and indeed highlighted in the CDLP. Moreover, it is the need to address the traffic problems of these two villages that has clearly dictated a large part of the plan's spatial strategy, as a significant number of the largest housing allocations have been chosen at least partly for their ability to contribute to a comprehensive highway solution for the A291 corridor.
45. Overall, it seems to me that the evidence adds up to a picture of a local road network in and around Sturry that is under considerable strain, and where delays, inconvenience, unnecessary extra mileage, and potential safety hazards are evidently part of the everyday experience of local residents and other road users. Clearly, none of these problems are of the appellants' making, and refusing permission for the present proposal will not in itself bring any improvement. But nonetheless, the development does have the potential to make the situation worse. The extreme difficulty of the existing traffic conditions in Sturry is a material consideration to which I attach considerable weight in this case.

*Committed developments and the Sturry Relief Road*

46. The appellants' Transport Assessment (TA) models the impact of the appeal proposal in relation to two scenarios, relating to 2018 and 2031 respectively. The 2018 assessment is based on the observed traffic flows at that date, with no changes to the network, and no other new developments apart from the appeal proposal. The 2031 scenario takes account of known housing commitments, and also assumes the completion of the Sturry Relief Road. The modelled scenarios therefore do not include any assessment of the appeal scheme in a situation where some or all of the other committed developments may have been completed, but not the Relief Road.
47. From the evidence of Mr Finch, on behalf of Kent County Council (KCC) as the Highway Authority, the earliest date envisaged for the completion of the southern section of the Relief Road is in the year 2023/24, and the time lag between this and the northern section is expected to be around four years. The earliest date for the completion of the whole Relief Road is therefore likely to be about 2027/28. These dates have not been challenged. Although the road is designed to be constructed in these two phases, it is self-evident that it can only start to serve its main purpose of bringing traffic relief to the village, when the whole route is complete.
48. KCC is evidently keen to start work on the southern section as soon as possible, and the above programme reflects this aim. Nevertheless, it is equally clear that the Authority is unlikely to start any part of the construction work until they can be confident that the whole of the road can be delivered. As a minimum, this is likely to mean having all the necessary approvals in place, and full funding secured. As things stand, that position seems some way off. Neither of the two planning applications for the road itself have yet been approved, and objections are said to remain outstanding, including that from

Natural England. Planning permission for the northern section is also bound up with the applications for housing on the Sturry/Broad Oak site. Discussions regarding some aspects of these, and the terms of the permissions that might be granted, are evidently still on-going. With regard to funding, contributions are required not only from these two developments, but also from the North of Hersden site. None of these contributions can be regarded as certain until the relevant planning permissions have been granted. Partial funding is said to have been secured from the LEP<sup>5</sup>, but this appears to be to some extent conditional on the timing. Ultimately, it seems more likely than not that all the necessary approvals and funding arrangements will fall into place. But nonetheless, substantial hurdles remain. At the present time therefore, neither the timing nor indeed the actual delivery of the Relief Road are yet assured. Having regard to the terms of the judgement in *Manor Oak Homes*<sup>6</sup>, the delivery of the road in this case is not beyond sensible doubt.

49. The seven committed housing developments identified in the TA amount to a total of over 5,200 dwellings. The assessment carried out for the SHHCS in 2016 estimated that the traffic generation from five of these sites, those that were known at that time, would add 1,084 additional peak-hour trips to the road network through Sturry. Since that assessment, some 150 or so of the dwellings at the Herne Bay Golf Course site have now been built and occupied, and thus may be accounted for in the appellants' traffic counts. But these are partly balanced out by the Sturry/Broad Oak scheme, where the overall number of proposed dwellings has now grown by about 100, with the current applications totalling 1,106 dwellings compared to the 1,000 units originally allocated. The other sites identified in the SHHCS, at Strode Farm, Hillborough and North of Hersden, are all unchanged. The two additional sites identified in the TA, at Hoplands Farm and Chislet Colliery, amount to 620 dwellings. The traffic from these two sites will therefore be over and above that which was anticipated in the SHHCS.
50. The developments at Herne Bay Golf Course, Strode Farm, Hoplands Farm and Chislet Colliery all have planning permission and are unrestricted in terms of their timing or phasing in relation to the Sturry Relief Road. Although the allocated sites at Hillborough and North of Hersden are not yet permitted, the Council made it clear at the inquiry that it does not anticipate imposing any such restrictions. In the case of the Sturry/Broad Oak applications, the Council will be seeking to agree limits on the number of dwellings to be occupied before the Relief Road is completed, but those numbers have not yet been decided. KCC is currently testing a phasing limit of 350 units for the Sturry part of the scheme, and is also to consider a separate allowance for the Broad Oak part. It is fairly clear from this that the combined limit for the site as a whole is likely to exceed 350 dwellings. Indeed, given that this is the development that will have to contribute the most to the new road, not only financially but also in physically delivering part of it, it would not be surprising if the number of dwellings allowed in advance were to increase further.
51. In any event therefore, the Sturry/Broad Oak development is the only one of the committed sites that is likely to be subject to any timing or phasing restrictions in relation to the Relief Road, and even there a significant part is

---

<sup>5</sup> Local Enterprise Partnership

<sup>6</sup> *Manor Oak Homes v SoS & Aylesbury Vale DC* [2019] EWHC 1736 (Admin)

likely to be unrestricted. All of the other dwellings in the TA's list of commitments are free to come forward ahead of the new road. Although a number of these developments are not yet far enough advanced to be classed as deliverable for the purposes of the 5-year housing supply, they are all potentially capable of being developed, either wholly or largely, prior to the opening of the Relief Road, even if the road is delivered by its earliest date of 2028. If this timing were to slip by as little as two or three years, then the evidence suggests that all of the unrestricted dwellings could be completed in full.

52. All of these committed developments are expected to have an impact on traffic in Sturry. This is evident from the fact that they are identified in the TA and taken account of in its 2031 scenario, albeit that this is the scenario that includes the completed Relief Road. Having regard to the traffic generation figures identified previously in the SHHCS, it seems probable that the numbers of dwellings at Sturry/Broad Oak which will be subject to phasing restrictions will roughly balance the number of units added in the new sites at Hoplands and Chislet Colliery, which were not included in the SHHCS assessment. In round figures therefore, the SHHCS's estimate of about 1,000 additional vehicles through Sturry, from committed developments, probably remains broadly applicable.
53. To my mind it seems likely that the addition of these extra 1,000 traffic movements to the 2018 base model, without the benefit of the Relief Road, is likely to result in some further deterioration in the performance of the network, especially given the number of key junctions which have been shown to be already at or close to capacity. In my view, this likely further deterioration forms part of the context within which the impact of the appeal scheme should be viewed. In the TA however, none of the committed developments is taken into account in any modelled scenario except that which also includes the Sturry Relief Road. Consequently, in so far as the existing network is concerned, the cumulative effect of the appeal scheme together with these other relevant developments is untested.
54. I appreciate that there is a high degree of optimism that the Relief Road will be achieved, but the prospect remains of a lengthy period before it is completed, and indeed there is as yet no certainty about the road at all. This latter scenario is not so remote that it can be disregarded. I appreciate that the scoping for the TA was agreed in advance with the Highway Authority, but this does not change the fact that the necessary testing and modelling, of what in my view is a critical alternative scenario, is conspicuously lacking. To my mind, this flaw significantly weakens the case now advanced by the appellants with regard to traffic impact.

*Traffic impact of the appeal scheme*

55. The proposed development is forecast to generate 79 traffic movements in the AM peak hour, and 72 in the PM peak. These are not large numbers. But in a situation where some junctions are already under pressure, a relatively small increase may be significant, especially where the effect would be to push some junctions closer to their capacity, or beyond. And in any event, the NPPF makes it clear that traffic impacts should be considered on a cumulative basis, and that a severe cumulative impact may amount to grounds for refusal of permission.

56. At the junction of Popes Lane with the A291 (Junction SJ2), on the appellants' 2018-based figures, the appeal scheme is forecast to add 71 vehicles to the existing AM peak traffic flow on the Popes Lane approach, an increase of 8.7%. As shown in the TA, the effect of this would be to increase the RFC value significantly, from 0.81 to 0.94, with queue lengths and delay times approximately doubled. This sharp increase in the RFC indicates that the junction would, within the space of 4-5 years, come to within a few vehicles of the 'absolute' capacity level of 1.0, and significantly in excess of the 0.85 threshold which is often cited as 'practical' capacity. Furthermore, in so far as these figures indicate that the junction would still have any reserve capacity left at all, the TA records a daily variation of 41, indicating that on some days this reserve would be further reduced by that number of additional vehicles. And in any event, as already noted, these figures exclude any traffic from the other committed developments that are expected. It is common ground that when and if the Sturry Relief Road is built, the level of through traffic on Popes Lane will fall, and the junction's performance will improve. But without the new road, the evidence of the TA indicates that it will be overloaded.
57. A large proportion of the traffic at Junction SJ2 currently turns right onto the A291, heading for the rat-run route via Sweechgate, and in the absence of the Relief Road, this is likely to continue. At this point the A291 has a speed limit of 40mph, and the daily flow is said in the SHHCS to be around 7,500 vehicles. The junction has some recent history of accidents, albeit not a large number. In this type of situation, there seems a strong possibility that the increase in queuing time would result in drivers exiting from Popes Lane taking more risks. I accept that the installation of a toucan crossing on the A291 could potentially help, by creating gaps in the traffic flow. But this would depend on the amount of use. Apart from the Broad Oak Village Stores, there is nothing to attract pedestrian trips to this semi-rural section of the road. I am therefore not convinced that the toucan crossing would improve the safety of the junction to any significant degree.
58. To my mind, the development's potential impact on Junction SJ2, without the Relief Road, gives justified cause for concern. Even without any other development, the effect of the appeal scheme alone would be to significantly increase pressure on the junction, pushing it towards the limits of safe operation. Cumulatively with the other planned developments, the development would be likely to go beyond those limits.
59. Elsewhere on the network, at the already overloaded junctions identified in the TA, the proposed development would lead to further significant deterioration. At SJ8 (A291/Sweechgate), in the AM peak, the RFC on the A291 southbound would be elevated to 0.99. The queue of right-turning vehicles on the main carriageway would extend to over 19 vehicles. In the PM period the Sweechgate arm would reach 0.96 and 0.93, for the left and right turns respectively, with a further lengthening of queues and delay times. This junction has a significant accident history, and this record combined with the high RFC levels suggests that the risk of further accidents would be increased. At SJ9 (Shalloak Road/Mayton Lane), in the PM peak period the queue length would extend to 30 vehicles, with an RFC of 1.13, indicating a junction significantly beyond its capacity. Again, there is no dispute as to the fact that both of these junctions are expected to improve considerably if and when the Sturry Relief Road is available, but for the reasons already given, I consider that the interim situation must also be taken into account.

60. At all of these locations, the RFC values presented in the TA show that the proposed development would depend on these junctions being able to continue to operate under the pressure of congestion levels even worse than those suffered now. And in all cases, when the development is considered cumulatively with the other developments already committed, the RFCs, queue lengths and delay times associated with these junctions would be likely to be higher than those shown in the TA. Even though the TA does not quantify the impacts of those other commitments, the other evidence before me indicates that they would be significant. Where the network is already under strain, it seems to me that these cumulative effects, taking account of the appeal scheme and the other committed developments, would amount to a severe impact on the highway network.
61. The appellants point to the fact that in some cases the incremental effect of the appeal scheme would be less than the existing daily variation in flows. But the scheme's impact would be additional to that daily variation, not in place of it. Just like the base flows, the cumulative impact would vary from day to day. This means that there would be some days when the impact would be less than indicated in the TA, but equally there would be others when it was worse. The argument therefore has little merit.

#### *Mitigation*

62. The highways contribution in the S.106 agreement would cover part of the cost of converting Junction SJ10 (Broad Oak Road/Vauxhall Road) to a full-size roundabout. If this improvement were carried out, then Junction SJ10 would function better with the proposed development than it does currently without it. But the proposed contribution would not cover the full cost of the improvement; indeed it would leave something in the order of £1m still to be raised from other sources. There is no evidence as to where this balance could be found, and therefore no apparent prospect at present that the improvement could be realised. And even if it were, an improvement to this single junction, well away from the appeal site, would not remove the adverse effects on the three others that I have identified, which are all closer to it.
63. Various other transport-related mitigation measures are proposed by the appellants, including the toucan crossing, improvements to pedestrian routes and cycleways, and a travel plan which would include a travel voucher scheme. But although these measures would be potentially beneficial in their own ways, there is no evidence to suggest they would reduce traffic impacts that have been identified. Indeed the TA makes it clear that measures of these kinds were taken into account when the trip generation and distribution rates for the development were decided.
64. During the inquiry, the possibility was mooted of a 'Grampian' condition, restricting the development until the Sturry Relief Road is in place. But neither party appears to support such a condition. In any event, given the degree of uncertainty over the road, and the likelihood that it will not become available within the normal 3-year life of an outline planning permission, I consider that a condition along these lines would not be reasonable.

#### *Conclusion on traffic impact*

65. For the reasons explained above, I conclude that the proposed development would have an unacceptably severe cumulative impact on traffic flows, and on

the operation of the highway network, and on highway safety. In all these respects, the scheme would be contrary to paragraph 109 of the NPPF, which provides for permission to be refused in these circumstances. It would also conflict with CDLP Policy T1, which amongst other things seeks to control the level of vehicular traffic and its impacts.

*Effects on the character and appearance of the area and the landscape*

66. The appeal site is essentially a flat, rectangular arable field. Although the trees and woodland on two of its boundaries provide a pleasant backdrop to outward views, the site itself is featureless. These trees separate the appeal site from the surrounding countryside, so that the site is seen only as a discrete compartment rather than as part of any wider landscape context.
67. If the site were developed with housing and open space as now proposed, the main change would be the loss of its openness. With that loss would go the close-range views from Popes Lane, and from the two public footpaths which cross the site. The medium-range views across the site from a short section of the A291 would also be altered, although to a lesser extent. The site itself would change in character from semi-rural to suburban. These impacts would result in some harm to the area's appearance and visual amenity, but the degree of that harm would be no more than minor. The change to the wider landscape would be insignificant.
68. In order to accommodate 140 dwellings, given the constraints of the gas pipeline that crosses the site, the density would be higher than that of most of the other nearby housing. But those existing areas are not necessarily an appropriate guide for new development. And in any event, the site has ample space for structural planting and open space, to create a strong landscape framework. The height of the buildings could also be controlled by condition, if thought necessary.
69. Overall, I conclude that the harm that the development would cause to the area's character and appearance, including any effects on the landscape, would be so minor as to be insignificant. In the light of this conclusion, I find no conflict in this respect, either with Policy DBE3 or with any other policy in the CDLP, nor with the relevant provisions of the NPPF.

*Effects on nearby listed buildings*

70. The significance of the Grade II listed Sweech Farmhouse lies primarily in its evidential and illustrative value as a 15<sup>th</sup> century hall house. Some value also derives from its later use as a farmhouse, at the centre of a farmstead with a group of ancillary buildings, including the listed stables and the former listed barn. The stables has some evidential and illustrative value derived from this functional relationship. Although the barn is no longer standing, there is apparently permission for its reinstatement, and although there seems some uncertainty as to what its status would then be, it is likely that it would retain some heritage value, as part of this group.
71. It is an agreed matter that the appeal site lies within the setting of at least the Farmhouse, and in my view it must therefore also form part of the setting of the whole group. But to my mind, its role in the setting is a limited one. The site is separated from the building group by trees and vegetation. There is

little intervisibility. Although the roof and chimneys of the Farmhouse can be made out from the appeal site, the views from this direction are not important ones, and do not assist in the appreciation of any of the buildings. It is believed that the appeal site can be seen from the Farmhouse's upper windows, but such views would be heavily filtered by the trees. In views from further south on the A291, the buildings and the appeal site can be seen as part of the same panorama, but only at some distance. In the more important views, facing the front of the house and the group as a whole, the appeal site cannot be either seen or sensed. There is no evidence of any historic functional relationship between any of the buildings and the appeal site.

72. The site's contribution to the buildings' setting is therefore confined to its role in illustrating the relative isolation that the farmstead would once have had from any nearby settlements. But in so far as that quality may have been important to the buildings' significance at one time, it has now been eroded by other developments, particularly the 20<sup>th</sup> century housing at Broad Oak, and the modern A291 which runs immediately in front of the building group. In addition, although there are differing accounts of the various planning applications within the Sweech Farm site, it appears that permissions have been granted for up to three new dwellings, as well as for the residential conversion of the Stables. Whilst the details of these developments are not before me, it seems likely that they would have the effect of further emphasising the former farmstead's continuing evolution, away from its one-time agricultural role, and back to its original purely residential function. Having regard to this historical and present day context as a whole, it seems to me that the appeal site makes a very limited contribution to the buildings' significance as heritage assets.
73. If the appeal site were developed as now proposed, the glimpsed views of the Farmhouse from within the site would either be lost or would be seen from within a much-changed context. The same change of context would also be evident in the sideways view from the A291. Housing sited as shown in the Development Framework plan would be well away from the boundary of the listed buildings. Although lighting within this area might be discernible from the Farmhouse and parts of the former farmyard, at night this would not be readily distinguishable from that associated with the existing development in Popes Lane. Any lighting or built development in the part of the site closest to the listed buildings could be adequately controlled by conditions. If a mini sports pitch was located in this part of the site as suggested, there could be some noise, but the development could take place without this facility if required.
74. Overall therefore, I consider that the harm to the setting of the listed buildings would be minor. Given also the limited role that this part of the setting plays in contributing to the buildings' significance, it follows that the harm to their significance would also be minor. To my mind, the characterisation of this by the appellants' heritage witness as being 'at the lower end of less than substantial' is a reasonable way of describing the extent of the harm in this case. Notwithstanding that the effect is agreed to amount to harm, in these circumstances it seems to me that the harm identified would be so minor that, to all intents and purposes, it would be inconsequential.
75. In coming to my conclusion on this issue, I have had full regard to the desirability of preserving listed buildings' settings, and the need to give due

weight to any harm in that respect. I have also taken account of the NPPF's advice that great weight is to be given to the conservation of heritage assets, and that less than substantial harm is to be weighed against any public benefits. In this case, I have found only minor harm to the setting, and to the assets' significance. Given the low level of this harm, even when great weight is attached to it, I consider that in the present case the harm would be outweighed by the benefit of providing the proposed housing, as well as the other benefits identified elsewhere in this decision.

76. In the light of the above, I conclude that the harm identified would be so minor as to involve no significant conflict with CDLP Policy HE1, which seeks to protect, conserve and enhance all historic assets, or with Policy HE4, which has similar aims and is targeted specifically at listed buildings.

*Effects on best and most versatile land*

77. The appeal site is said to comprise 9.36 ha of agricultural land, of which about 5.06 ha is classed as best and most versatile (BMV) land. CDLP Policy EMP12 states that BMV land will be protected, but permission for significant development on agricultural land may be granted, including BMV land, where the development is shown to be necessary, and where no sites within the urban area or on poorer quality agricultural land are available.
78. I accept that the amount of BMV land in the appeal proposal would be significant. But in view of my findings with regard to the housing land supply, it is evident that some additional housing development is necessary, and also that the available sites on urban and poorer quality land are insufficient to meet the need.
79. As part of its aim to contribute to and enhance the natural and local environment, NPPF paragraph 170 advocates recognising the economic and other benefits of BMV land. But this aim seems to me to be reflected in Policy EMP12, and thus needs no further response beyond compliance with that policy.
80. In the circumstances, I find no conflict with Policy EMP12, and no conflict with NPPF paragraph 170. I conclude that the loss of BMV land in this case would not be unacceptable.

*Whether the scheme would accord with **the CDLP's** locational policies*

81. The principal CDLP policy relevant to the location of housing on unallocated sites is Policy SP4. The policy states that the main focus for development is to be at the three larger urban areas, together with development at the rural service centres, of which Sturry is one, and also at the local centres. In relation to Sturry and the local centres, paragraph 2 of the policy goes on to say that, in addition to the plan's allocations, the provision of new housing of a size, design, scale, character and location appropriate to these villages' character and built form will be supported, provided the proposal is not in conflict with certain other policies. Under paragraph 5 of SP4, development in the open countryside will be permitted for agriculture and forestry. In addition, Policy HD4 sets out in more detail the circumstances in which new dwellings in the countryside may be permitted, none of which apply to the appeal scheme.

82. Policy SP4 therefore gives some encouragement to development at Sturry and the local centre villages, as settlements where development is to be focussed, and also allows for some sites to come forward over and above those already allocated. Nothing in this part of the policy requires sites to be within the existing built confines, and in the absence of a defined boundary, it seems to me that the policy permits some flexibility with regard to sites on the village edge. In this context, I note that 'flexibility' was the term used by the Examining Inspector in explaining the need for the modifications that he recommended to the policy<sup>7</sup>, and I consider that his comments in this regard are helpful in understanding the way the policy is designed to operate.
83. In the present case, the appeal site is adjacent to Sturry's main built-up area, and relates reasonably well to the existing development pattern. Although its size would be substantial, the settlement itself is a large village, and the development would not be out of scale with it. Design is a reserved matter, and the final criterion, character, is largely a function of the others. None of these criteria therefore seem to rule out the proposed scheme from being supported within the terms of SP4's second paragraph.
84. With regard to Policy SP4's fifth paragraph, I agree that there is a clear inference that development in open countryside that is not for the specified purposes will not normally be permitted, and this approach is reinforced by Policy HD4. In the case of Sturry, with its lack of a defined boundary, this leaves unanswered the question of whether a particular site falls within open countryside, or within the ambit of SP4's second paragraph. But to my mind this is part and parcel of the same flexible approach that is inherent in that paragraph as a whole. I therefore find nothing in either Policy SP4 or Policy HD4 that specifically requires the appeal site to be treated as countryside.
85. In coming to this view, I accept that the CDLP is to be read as a whole, and I have had regard to all the various paragraphs that I have been directed to, including the explanatory text supporting Policies SP4 and HD4, and Policy HD3 relating to exception sites, and also page 237 which refers to the plan's objectives for the countryside. However, nothing in these seems to me to be conclusive, and I have therefore drawn my interpretation of Policy SP4 from the words of the policy itself. I have also noted the Inspector's reasoning in the recent appeal relating to a site in Westbere. But Westbere is defined as a hamlet, in the lowest tier of the settlement hierarchy, where a different policy approach applies, under another part of Policy SP4.
86. I fully agree with the Council that Policy SP4 cannot have been intended to permit development on each and every site around the fringes of Sturry, or the other paragraph 2 villages. Rather, it seems to me, the policy allows decisions on proposals at these settlements to be made on a case-by-case basis, having regard to the policy's own criteria, together with the nature of the particular site, and the circumstances at the time. Different and more restrictive approaches for the lower tiers of the settlement hierarchy are set out in Policy SP4's other paragraphs, and it seems to me that the greater flexibility given to Sturry and the local centres is clearly intended to complement that approach.
87. For completeness, I note that the final proviso in Policy SP4's second paragraph, regarding compliance with other CDLP policies, is relevant to the

---

<sup>7</sup> Inspector's Report on the CDLP Examination, paras 55 and 97

appeal, as I have already found the proposal to conflict with Policy T1 with regard to traffic impact. However, that matter is taken into account elsewhere in this decision, and does not affect my conclusion as to the policy's locational aspects.

88. In the circumstances of this case, I find that the appeal proposal falls within the type and scale of development that could be accepted within the terms of the second paragraph of Policy SP4. As a result, it follows that Policy HD4 is not relevant in this case. The proposal is therefore not in conflict with either of these policies.

## **Other Matters**

### *The Section 106 agreement*

89. The provisions of the S.106 agreement relating to the provision of 30% affordable housing are needed for compliance with CDLP Policy HD2. This provision, amounting to up to 42 affordable units, has no mitigatory role and would therefore represent a substantial public benefit.
90. The provisions relating to the proposed on-site open space, including an equipped play area, a proposed mini pitch and a trim trail, and also the SUDs drainage system, are all needed to ensure a high standard of development and future maintenance. The quantity of the proposed open space exceeds policy requirements, but is necessary because of the large amount of land within the site that is sterilised by the pipeline. The open space would be available to the public and would therefore be a general benefit, to which I give some weight.
91. The agreed contributions to the Canterbury-Herne Bay cycle route, surfacing and improvements to public footpath CB59, and the provision of travel vouchers for new residents, are all necessary to manage travel demand and mitigate the development's transport impacts to the levels assumed in the TA, in accordance with relevant policies. The first two of these items would also have benefits for the general public, carrying a small amount of weight.
92. The contributions to primary and secondary education, community learning, healthcare, adult social care, libraries, youth services, and the SPA, are all needed to mitigate the development's impacts on these services, in accordance with the relevant CDLP policies. The contribution for TROs is needed, to allow for the introduction of waiting restrictions on Popes Lane, in order to mitigate any impact on safety in connection with the proposed site access.
93. All of the above obligations have been demonstrated to be necessary to make the development acceptable, and to be relevant to the development and reasonably related in scale and kind. I have therefore taken these into account, and where I have identified that these would involve public benefits, I have given weight to those benefits accordingly.
94. The proposed contribution to highway works at Junction SJ10, Broad Oak Road/Vauxhall Road, would help to relieve congestion at that junction. It would thus have potential benefits for the general public, assuming that the balance of the cost could be raised from another source, and the improvement scheme could then be implemented. However, the junction is remote from the appeal site, and is not one of those where the impact of the proposed development would be most severe. Nor would the improvement to this junction, if carried out, make the development acceptable, in terms of its

overall traffic impact. In the circumstances, the proposed contribution does not meet the necessary legal tests, and I have therefore not taken the potential benefit of this obligation into account.

*Other benefits of the development*

95. In addition to the benefits already identified above, the development would have significant benefits for the local and national economy. The overall construction spend is estimated by the appellants at £16.3m. Over the construction period, it is estimated that 140 full-time equivalent direct jobs, and 152 indirect jobs, would be created. The gross value added is put at £5.4m. The development's future residents are estimated to generate a total household expenditure of £4.17m, and the Council would benefit from Council Tax receipts and New Homes Bonus payments totalling around £3.2m. The appellants' figures for these items have not been challenged. These beneficial economic effects would be additional to the District's other committed housing sites. I consider that the economic benefits carry moderate weight.
96. In addition to the contributions in the S.106 agreement, improvements are also proposed by the appellants to existing pedestrian routes between the site and the village centre<sup>8</sup>. These improvements could be secured by condition. Although minor in nature, they would have some benefits for existing residents as well as future occupiers at the development itself. These carry modest weight.
97. The creation of new and enhanced wildlife habitats, and other biodiversity gains, could also be secured through conditions, likewise attracting some modest weight.
98. Although new public parking bays are proposed in Popes Lane, these would merely replace the on-street spaces lost due to the necessary TROs. As such, this would represent mitigation rather than a net benefit.

### **Planning Balance and Overall Conclusions**

99. For the reasons set out in this decision, I find that the proposed development would fit acceptably well with the CDLP's spatial strategy, embodied in Policy SP4. I also find no serious adverse consequences for the area's character and appearance, or for the nearby listed buildings, or for agriculture. Having regard to all of the above matters, I find no significant conflict with the development plan in respect of any of these matters.
100. However, in the light of the development's impact on the road network and highway safety, there would be a serious conflict with Policy T1. Numerically, this conflict is with only one policy compared to the larger number where I have found no such conflict in relation to other issues. But nevertheless, the conflict with Policy T1 is in my view so substantial that it is not outweighed merely by causing no harm in those other respects. In the context of this particular scheme therefore, I find Policy T1 to be the most important development plan policy in the appeal. The proposal before me is in clear conflict with that policy.

---

<sup>8</sup> Shown on Plan no. 1592/13, Revision A

101. Weighing against this conflict with Policy T1, and in favour of the appeal, are the benefits that I have identified. Given the Council's failure to demonstrate a 5-year supply of housing land, the most significant of these benefits is the provision of up to 140 dwellings, and especially the 30% which would be affordable. I have therefore given the benefits of providing housing substantial weight. The other benefits, in order of weight, are firstly the economic effects, particularly the construction jobs and investment; then the on-site public open space, including the proposed play and leisure facilities; the improvements to pedestrian and cycle routes; and also the opportunity for gains to biodiversity. But in my view, given the seriousness of the traffic impacts that I have identified, even when these benefits are all added together, they do not outweigh the harm to the road network and safety.
102. I have had regard to Policy SP1, and paragraph 11 of the NPPF, which both embody a presumption in favour of sustainable development, including a 'tilted balance' to be applied where relevant policies are out of date. But in this case the most relevant policy, T1, is not out of date. Nor is it made out of date simply by the shortfall in the housing supply. The NPPF's policy towards developments which would have a severe impact on the road network, or an unacceptable impact on highway safety, is very clear. Policy T1 supports that aim and is consistent with it. Consequently, despite the need that I have found for additional short-term housing land in the District, I do not see any basis for reducing the weight given to these important national and local transport policies.
103. I therefore do not consider that the tilted balance provisions of either the NPPF or Policy SP1 should be applied in this case. But in any event, even if the tilted balance were to be applied, I consider that the harm that I have identified, due to the scheme's impacts on traffic and safety, significantly and demonstrably outweighs the benefits. In these circumstances, the appeal scheme does not constitute sustainable development, and should be refused.
104. I have had regard to all the other matters raised, but none alters or outweighs these conclusions. The appeal is therefore dismissed.

*J Felgate*

INSPECTOR

## APPEARANCES

### FOR THE LOCAL PLANNING AUTHORITY:

Ms Isabella Tafur	Of Counsel (instructed by the Principal Solicitor to the Council)
She called:	
Ms Shelley Rouse MA MRTPI	Principal Planner
Mr John Etchells MA BPhil CMLI	Consultant Landscape Architect
Ms Elizabeth Johnson BA MSc IHBC(Affiliate)	Senior Heritage Officer
Mr Colin Finch BTech MIPROW	Principal Transport and Development Officer, Kent County Council
Mr Chris Pragnell LLB	Principal Planning Officer

### FOR THE APPELLANT:

Mr John Barrett	Of Counsel (instructed by Ms Richardson of the appellants)
He called:	
Mr Desmond Dunlop BA(Hons) MRTPI	D2 Planning
Ms Silke Gruner Ba(Hons) LArch CMLI	CSA Environmental
Ms Gail Stoten BA(Hons) MCIFA FSA	Pegasus Group
Mr Benjamin Jackson BEng(Hons) MSc MCIHT	Ashley Helme Associates
Ms Diana Richardson BA(Hons) MA MRTPI	Gladman Developments Ltd

### INTERESTED PERSONS:

Ms Ann Davies	Local resident and Sturry Parish Councillor

## Appeal Decision

Inquiry held on 5 – 8 July 2022

Site visits made on 5, 6 and 7 July 2022

**by H Porter BA(Hons) MSc Dip IHBC**

an Inspector appointed by the Secretary of State

Decision date: 25<sup>th</sup> August 2022

---

**Appeal Ref: APP/Y1110/W/22/3292721**

**Land off Spruce Close, Exeter, EX4 9DR**

- The appeal is made under section 78 of the Town and Country Planning Act 1990 against a refusal to grant outline planning permission.
  - The appeal is made by Salter Property Investments Ltd. against the decision of Exeter City Council.
  - The application Ref 20/0538/OUT, dated 22 May 2020, was refused by notice dated 12 October 2021.
  - The development proposed is for up to 93 residential dwellings (approval sought for details of access only, with scale, layout, appearance and landscaping all reserved for future consideration).
- 

### Decision

1. The appeal is allowed and planning permission is granted for up to 93 residential dwellings (approval sought for details of access only, with scale, layout, appearance and landscaping all reserved for future consideration) at Land off Spruce Close, Exeter, EX4 9DR in accordance with the terms of the application, Ref 20/0538/OUT, dated 22 May 2020, subject to the conditions set out in the schedule at the end of this decision.

### Application for costs

2. An application for costs was made by Salter Property Investments Ltd. against Exeter City Council. This application will be the subject of a separate decision.

### Preliminary Matters

3. Exeter Greenspace Group (EGG) sought and was granted Rule 6 status under the Inquiry Procedure rules. In addition to a general planning Statement of Common Ground (SoCG), a Transportation and Highway SoCG; Housing Land Supply SoCG; and Character and Appearance SoCG were agreed by the Appellant and Council; a further SoCG was agreed between the Appellant and EGG. The Inquiry sat for four days between 5 and 8 July 2022. I undertook unaccompanied site visits at the end of the first and second sitting days and an accompanied site visit before the end of the third. Documents that were submitted during the Inquiry are listed at Annex 2 (referred to as ID1, ID2 etc).
4. A certified Planning Obligation by Unilateral Undertaking dated 25 July 2022 (UU) and a Planning Obligation by Agreement dated 25 July 2022 (S106 Agreement), made pursuant to S106 of the Town and Country Planning Act 1990 (as amended), were submitted after the Inquiry had closed and in

accordance with agreed timescales. The UU contains various planning obligations securing provision of affordable housing; the management and maintenance of the New Valley Park and formal and informal Open Space including a local area of play (LAP) and local equipped area of play (LEAP); sustainable urban drainage systems; and a Travel Plan. It also secures financial contributions for GP surgeries; secondary education provision; implementing Traffic Regulation Orders (TROs) and a Travel Plan; the Valley Park; E4 Cycle Route Phase 4; upgrading facilities at local multi-use games areas (MUGAs); and Royal Devon University Healthcare NHS Foundation Trust (NHS Foundation Trust) healthcare services. The S106 Agreement secures a financial contribution for the creation and maintenance of a landscape buffer along the proposed access route on land owned by the Council.

5. The extent to which the provisions within the UU and S106 Agreement meet the tests set out in the National Planning Policy Framework (the Framework) and Regulations 122 of the Community Infrastructure Regulations 2010 (as amended), and the weight I attach to any necessary provisions they contain, are dealt with later in this decision.
6. The outline application was submitted with all matters reserved except for access. Notwithstanding the need for reserved matters approvals, it was confirmed at the Inquiry that the Land Use Parameter Plan, Density Parameter Plan, Scale Parameter Plan, Access and Movement Parameter Plan, Open Space Parameter Plan, and Landscape Strategy Parameter Plan have been submitted for approval at the outline stage. I have considered the appeal on this basis and on the basis that up to 93 dwellings could be provided.

### **Background and Main Issues**

7. The development plan comprises saved policies from the Exeter Local Plan First Review, 2005 (ELP) and the Exeter City Council Core Strategy, 2012 (CS). The Council's single reason for refusing to grant outline planning permission cites conflict with its spatial approach and ELP Policy H1 and CS Policy CP16, through development on an area identified for protection<sup>1</sup>. The Appellant and Council are in agreement that: there would be no actual harm in respect of landscape; that the site is in a sustainable location; and that the proposals meet the Council's policy requirements for the provision of open space<sup>2</sup>. Nevertheless, EGG has submitted evidence and maintains harm in respect of these matters.
8. With all this in mind, I consider the Main Issues in this appeal to be:
  - Whether the appeal site offers an appropriate location for the proposed development, having regard to the development plan and whether services and facilities could be accessed by sustainable modes;
  - The effect of the proposed development on the character and local distinctiveness of the area, including Exeter's 'Landscape Setting'; and
  - Whether loss of open space would be replaced by equivalent or better provision.

---

<sup>1</sup> CD-DD8

<sup>2</sup> CD-ID4 paras 6.9, 6.16, 6.17

## Reasons

9. Comprised of two fields laid to semi-improved grassland, the site has a developed edge to the west (Celia Crescent) and south (Spruce Close); an area of open space (Juniper Green) lies just beyond the site's southern boundary. In addition to the two fields within the appeal site's 'red line' boundary (Fields 1 and 2), three further sloping fields with mature tree and hedgerow boundaries (Fields 3, 4 and 5) extend beyond it and are within the 'blue line' boundary. Collectively these fields form part of the rolling open countryside that unfolds at the northern outskirts of Exeter, within the 'hills to the north and northwest' that are designated 'Landscape Setting'<sup>3</sup>.
10. The appeal scheme proposes the development of up to 93 residential dwellings and associated infrastructure, as well as formal and informal open space within the appeal site. One vehicular access point is proposed from the south, via a new road through Juniper Green and a realignment to Spruce Close. A second would be at the site's western boundary where an extant field entrance opens on to a short road fronted by garages leading to Celia Crescent. Although part of the 'blue line' boundary area carries Valley Park status, it is not publicly accessible. The appeal proposal would also involve the designation of Fields 3, 4 and 5 as New Valley Park and allow formal public access to it.

### *Policy principle of the location*

11. The appeal site is undeveloped agricultural land and adjacent to but outside the 20<sup>th</sup> century residential suburb of Beacon Heath and outside the city's urban boundary. It is neither previously developed nor brownfield land and is not covered by any strategic allocation for housing.
12. Saved Policy LS1 of the ELP concerns development within Exeter's Landscape Setting and lists a limited number of development types<sup>4</sup>. None of these include housing development on greenfield land that lies within the hills to the north and northwest. Purely as a matter of straight-forward policy reading, there is clearly a conflict between the appeal proposal and this aspect of saved Policy LS1. However, the Council does not rely on saved Policy LS1 within its reasons for refusal and it is common ground that it is inconsistent with the Framework and should carry very little weight.
13. Saved Policy H1 of the ELP establishes a search sequence by which the Council identifies locational priorities, with development on greenfield land through urban extensions within public transport corridors the last in that sequence<sup>5</sup>. The explanatory text makes clear that potential sites have been assessed against criteria set out in PPG3, which has long-since been superseded. Criterion (iii) of saved Policy H1 refers to housing development on greenfield land through 'sustainable urban extensions within public transport corridors', which are not referenced in the Framework.
14. While there is no definition of either within the ELP, and the wording differs with the Framework, insofar as saved Policy H1 is prioritising development on previously developed land first and lastly on greenfield land last, but where reliance on accessibility to jobs and services by means other than by car exists, it broadly aligns with the Framework. Saved Policy H1 does not require an

---

<sup>3</sup> CD-DP9

<sup>4</sup> CD-DP5

<sup>5</sup> CD-DP5

applicant undertake a sequential test, nor does it preclude development on greenfield land per se. Rather, my reading of saved Policy H1 is that housing development on green fields is least preferable and only acceptable where extending an existing urban area that is in a sustainable location, through being well served by public transport.

15. The appeal site is situated a little over 2.5 miles from central Exeter and immediately adjacent to the existing urban area of Beacon Heath, which is predominantly residential and where the local topography is steep. The Appellant's Design and Access Statement (DAS) indicates there are various local facilities and services within walking distance of the appeal site<sup>6</sup>, although EGG contend that the assessment of the site's separation and connectivity fails to reflect the 'facts on the ground' accurately.
16. To get a sense of the site's locational circumstances, I followed two suggested routes, recording times to reach various services and facilities on the way. One journey took me from the Celia Crescent site access, past the Spar store on Beacon Lane, to the entrance of Morrisons supermarket, and back. I also walked from the Spruce Close/Juniper Green access, crossing Beacon Lane to walk along Summer Lane as far as the entrance to Exeter Arena, and back.
17. In certain parts, the gradients along the routes from the appeal site are in excess of the 5% figure recommended in Manual for Streets and the hilly characteristics of the Beacon Heath surroundings do not fit with guidance for 'walkable neighbourhoods'. Personally, I found the distances, steepness and walking environs experience to be manageable, resulting in recorded timings fairly similar to those put forward by the Appellant. I accept, however, there are many factors that could influence different timings, impede or disincentivise 'active travel', particularly for those less mobile, carrying heavy shopping, accompanied by very small children, or walking or cycling during inclement weather.
18. That said, the area is also served by a local bus service (F1), which stops a short walk from the appeal site's proposed western access. A little further downhill along Beacon Lane are additional bus services with sheltered stops, travelling westwards towards the city centre, and eastwards, to Pinhoe train station, which has onward connections to Exeter St David's.
19. It has been put to me that few local residents currently use the bus service. On the other hand, EGG's evidence indicates 35% of those surveyed do use the bus, despite finding it expensive, irregular, and unreliable for onward connections<sup>7</sup>. The appeal scheme proposes to loop the F1 service directly through the site, providing an extension within the existing street network<sup>8</sup>. Consequently, not only would the appeal site be close to existing bus stops, but the public transport route would also run directly through it. There is no reason to doubt that, as the EGG survey confirms, at least some future residents of the proposed development would choose to utilise the extended bus service. It is also evident that the looping of the F1 service through the site would improve the choice, operating conditions, and availability of sustainable travel more widely.

---

<sup>6</sup> CD-PA4

<sup>7</sup> CD-GB1 para 1.4.3

<sup>8</sup> CD-ID3 para 2.2.1

20. I consider that the location of the appeal site affords a genuine choice of sustainable ways to access services and facilities. Even if such choices might involve limitations, the proposed development would ensure safe and suitable access to services and facilities by a range of transport modes. Therefore, the appeal proposal would be a sustainable urban extension of Beacon Heath in an area well-served by public transport, thereby offering choice of travel modes other than just the private car and is therefore in a sustainable location. Drawing all of this together, I do not find the appeal proposal would conflict with saved Policy H1 of the ELP.

*Landscape setting, character and local distinctiveness*

21. Saved Policy LS1 seeks to avoid development that would harm Exeter's Landscape Setting, requiring proposals maintain local distinctiveness and character. The Council's reason for refusal relies not on saved Policy LS1 but CS Policy CP16, which likewise seeks, amongst other things, to ensure that the character and local distinctiveness of the hills to the north and northwest will be protected. This Policy aligns with the Framework, notably paragraph 174, which requires decisions contribute to and enhance natural and local environment by, amongst other things, protecting and enhancing valued landscapes and recognising the intrinsic character and beauty of the countryside.
22. For the purposes of the Exeter Fringes Landscape Sensitivity and Capacity Study, 2007 (LSCS) <sup>9</sup>, the appeal site straddles the southern corners of Zones 4 and 6, which cover much larger swathes of land, each assessed as having high landscape sensitivity. The capacity for housing in Zone 4 is low, indicating it is unable to accommodate development without significant adverse effects. Zone 6 has a medium-low capacity, with development accommodated only in limited situations. The LSCS provides a valuable, broad-brush, starting point by which to judge the sensitivity and capacity of Zones for housing. However, while the characteristics of the landscape described within the LSCS Zones have not obviously changed since its writing, it does not preclude development per se, nor establish degrees of sensitivity or capacity for housing at a site-specific level.
23. The Appellant's Landscape and Visual Impact Assessment<sup>10</sup> (LVIA) has been subject to review by the Council's officers, and subsequently updated and reviewed by an independent chartered landscape architect<sup>11</sup>. These assessments align with my own observations of the appeal site and its context. Indeed, I saw that the green and undeveloped nature of the appeal site fits in with the network of undulating fields, interspersed with woodland and mature vegetation, that characterise the wider rural landscape. Views to the site, and more apparently Fields 3, 4 and 5, are gained from various vantages, including country lanes, highways, residential developments, and other areas designated as Valley Park further afield.
24. Even where the green and undeveloped nature of the appeal site is perceptible from nearby and longer distances, it is read in the context of the extant urban fringe and the transition of the settlement edge into the open countryside. The appeal scheme would occupy the land that slopes alongside the settlement

---

<sup>9</sup> CD-SPD14

<sup>10</sup> CD-PA9

<sup>11</sup> CD-DD7

edge, where development already exists on two sides of the site, and where the local topography and mature vegetation offer relative containment. As the ground level rises beyond the upper part of the appeal site, above the 115m AOD contour, the change from the urban fringe becomes more evident. In my judgement, the value and sensitivity of this part of the Landscape Setting increase as the City's green landscape backcloth becomes more obvious, beyond the 115m contour and into Fields 3, 4 and 5.

25. At this stage there are various Parameters Plans for approval, which would contain the developable area to below the apex of the urban fringe and the 115m AOD contour. Building in the upper portion of that developable area would be lower density, detached, and not higher than 9.5m. A landscape 'buffer' would be retained, and stretches of undeveloped green space, and existing mature tree and hedgerow planting supplemented. Jointly, the proposals would concentrate development on parts of the appeal site that are already influenced by built form and would retain and supplement natural boundaries and a landscape 'buffer'.
26. In my judgement, all of this, plus the detail that would come through reserved matters, would ensure the development would not appear as piecemeal but relative to the urban fringe, low on the hillside, and well contained and softened by mature vegetation. Additionally, the sensitive and visually prominent tracts of open land within Fields 3, 4 and 5 would now be secured as New Valley Park<sup>12</sup> in perpetuity, preventing their future development.
27. And yet, the development of up to 93 dwellings and associated infrastructure would inescapably cause an urban intrusion onto the appeal site, weakening its open, verdant and undeveloped character. There are factors that would mitigate the impact of the development, facilitating a successful assimilation in views from further afield, and increasingly so over the years. Inevitably, however, the scheme would push the city's urban fringe into the open countryside that is part of Exeter's Landscape Setting. The urban intrusion onto the appeal site would be unmistakable from nearby, as for example residential dwellings, Juniper Green, and Fields 3, 4 and 5.
28. I note the findings of the independent landscape architect in respect of CP16, and the Council's endorsement of that assessment. However, even if extremely localised and affecting a very small proportion of the area identified for protection, for the forgoing reasons I find some harm to the character and local distinctiveness of the hills to the north and north west would arise. I judge there would be conflict with CS Policy CP16 as a consequence. While not relied on by the Council, conflict with the spatial element of saved Policy LS1 also arises. Such policy conflicts must be considered against consistency with the Framework and other material considerations.

### *Open Space*

29. Juniper Green lies immediately to the south of the appeal site and is designated an Open Space within the ELP Proposals Map. Saved Policy L3 of the ELP only permits development on open space in certain circumstances, including when the loss of open space is outweighed by its replacement in the area by open space of at least equivalent recreational, community, ecological or amenity value (including, in particular, the provision and enhancement of equipped play

---

<sup>12</sup> CD-PA22, CD-PA23, CD-PA24, CD-PA26

space). Similarly, paragraph 99 of the Framework seeks to ensure the loss [of existing open space] resulting from the proposed development would be replaced by equivalent or better provision in terms of quantity and quality in a suitable location<sup>13</sup>.

30. The latest design iteration has sought to reduce the impact of the site's southern access road on Juniper Green, realigning it further to the north-east away from the widest portion of the open space. Nevertheless, the road itself would bisect the currently uninterrupted and undeveloped Juniper Green, causing a quantitative loss of that open space. Moreover, the introduction of a vehicular route through the space would change the way it is currently enjoyed by residents, including necessitating extra vigilance for playing children and dog walkers, thereby having a qualitative as well as quantitative impact. However, the proposals would provide informal open spaces within the appeal site, including at its southern edge immediately adjacent to Juniper Green that would more than make up for the quantitative loss at Juniper Green due to the access road.
31. I accept the point that the additional open space within the site would be bisected by the new road. I also recognise that the proposals would change the nature of Juniper Green and the way the space is used by some residents. And it would be reasonable to expect existing users of Juniper Green to take some time to adapt to the new open space. However, I consider the proposals will ensure a large area of open space with separation from the road and passing vehicles and a logical physical linkage between Juniper Green and the compensatory open space. Furthermore, while landscaping is a reserved matter, the S106 Agreement would secure additional landscaping along the proposed new access road that, in my judgement, would reduce its visual impact and create a natural barrier to influence play and activities away from it.
32. Saved Policy L3 supports proposals, such as in this appeal scheme, which would include provision of equipped play space. The proposal would enable existing residents to access the proposed LAP and LEAP. Although it has been used by some residents for their recreation and enjoyment, the appeal site is private land with no formal rights of way across it and is not public open space. I do not consider that those currently using Juniper Green would be either unwilling or unable to use the open spaces within the appeal site. Even if they were, the open space provision at Juniper Green, with the supplementary space to the south of the appeal site, would be equal in a qualitative, as well as quantitative, sense to the existing provision. The appeal scheme would also offer enhanced access to open space provision for residents who live further up the hill and would enter off Celia Crescent. I therefore see no conflict between the proposals and saved Policy L3 of the ELP, nor paragraph 99 of the Framework.

### **Housing Land Supply (HLS) and The Planning Balance**

33. The proposal would not be in accordance with the development plan's location aspect of Saved Policy LS1 insofar as it seeks to avoid housing development within Exeter's Landscape Setting. However, this policy is not up-to-date and carries very little weight. Even if the proposed development would not be in accordance with the development plan, a significant material consideration is

---

<sup>13</sup> Framework para 99 b)

the Framework's presumption in favour of sustainable development. The Council is unable to demonstrate a 5-yr supply of housing land. While the extent of the shortfall does not affect the operation of footnote 8<sup>14</sup> and the HLS agreed matters, a sizable gulf exists between the Council and Appellant's respective shortfall positions. The Council contends its HLS is 4.69 years, a shortfall of 213 homes; the Appellant, however, argues HLS is just 3.17 years<sup>15</sup>.

34. A number of disputed sites were discussed at the Inquiry, including sites with planning permission, where the onus is on the Appellant to provide clear evidence that homes will not be delivered within five years (Category A sites), as well as various sites with outline planning permission, where the onus is on the Council to provide clear evidence that housing completions will begin on site within five years (Category B sites). Additionally, two sites for 'co-living' units were discussed. I turn to these first.

#### *Co-living sites*

35. Ostensibly, co-living is a relatively new development model and a sui-generis use. Anecdotally, large metropolitan cities such as Manchester and Liverpool count co-living units on a one-for-one basis. However, there is no apparent national or local policy guidance, nor obvious local authority consensus on how co-living units should be counted in HLS figures.
36. The Harlequin Centre and the Ambulance Station are co-living developments in which co-living studios (271 and 133 respectively) have been counted towards the Council's HLS on a one-to-one basis. 107 bed-spaces in cluster flats at the Harlequin Centre are counted as 59 dwellings. Owing to the short-term nature of the accommodation they offer, the Appellant contends all dwellings from these sites should be discounted from the Council's supply; a reduction of 463. An alternative position is that a 1.8 ratio be applied to the co-living studios.
37. My impression is that the co-living studios at the Harlequin Centre and Ambulance Station would comprise small private living spaces with their own front door, kitchen and bathroom. Taking them to be similar to the co-living examples provided, the studio units would be supplemented with shared and fully equipped social and living areas<sup>16</sup>. It seems to me that the co-living studios at the Harlequin Centre and the Ambulance Station would provide smaller individual living quarters and less autonomy than more standard rented accommodation.
38. To my mind, the co-living offer could attract a range of persons beyond students, and for tenancy rates longer than three months. I therefore do not consider they warrant wholesale deduction from HLS figures. Yet, even if future occupiers were liable to pay Council Tax, the specific nature of the accommodation type makes co-living studios, unlike standard rented studio apartments, more akin to other communal living accommodation, such as provided by a House in Multiple Occupation (HMO). On this basis, it seems logical and reasonable that a similar ratio be applied. By my calculation, this equates to a reduction by 120 units at the Harlequin Centre and 59 at the Ambulance Station.

---

<sup>14</sup> That the policies which are most important for determining the application should be considered as out-of-date

<sup>15</sup> CD-R1 p. 7

<sup>16</sup> CD-R3 Appendix E pp. 21 - 25

*Category B sites*

39. The Planning Practice Guidance (PPG) gives examples of what evidence may demonstrate deliverability. The PPG is also clear that this should be done using the latest available evidence. The Council's approach has been to rely on responses to a standard pro-forma. The exercise may not be intended to obtain 'cast-iron certainty, but to take a realistic view'<sup>17</sup> and I accept the 'draft' watermark may be an error. However, more crucially, where pro-formas are undated, it casts doubt over whether the information is up-to-date. In the absence of a clear indication of who completed the form or their relationship to the development, I find the pro-formas deficient as evidence of a written agreement between Council and site developer confirming delivery intentions and timescales.
40. Land east of Cumberland Way gained outline consent for 80 dwellings. The site has been sold to a housing association and the Council has recently received a reserved matters pre-application and held a meeting. However, the Council had been assured that a reserved matters application would be submitted in 2022 and, by the time of the Inquiry mid-way through that year, one had not been submitted. Nor, as far as I understand, have pre-commencement or other conditions attached to the outline permission been discharged. This site may be similar to other greenfield developments where housing schemes have been delivered successfully, but the evidence available to me falls short of the requisite 'clear evidence' established in the PPG. Thus those 80 dwellings should be removed from the HLS figures.
41. A similar scenario applies at Land at Redhills, where no reserved applications have been made, no developer identified, and no written agreement exists between them and the Council. Indeed, the Council was unable to gain any response to its pro-forma. I do not agree that a Statement of Case for an appeal satisfies the test of clear evidence. Thus the 62 dwellings counted towards the Council's HLS should be deducted.
42. Although a reserved matters application for the site at Aldens Farm West was submitted in early 2022, there are outstanding objections, including in respect of flood risk and drainage. The Council suggested amended plans were expected to resolve these issues, but none were in at the time of the Inquiry and, once submitted, would be subject to consultation. I understand none of the pre-commencement or other conditions attached to the outline consent have been discharged. All of this, plus the absence of a written agreement with the developer, casts doubt over whether there is a realistic prospect that housing will be delivered on the site within five years. On this basis, I agree with the appellant that 96 dwellings be removed from the HLS figures.
43. Phase 2 at the Old Coal Yard site is yet to have reserved matters application approval, and timescales given by an agent in September 2021 are out of date. There is no written agreement between the Council and the developer, and while the site could be developed rapidly if modular homes were to be built, but I have seen no evidence of this. Phase 3 is subject to a full planning application for 89 dwellings, to be decided under delegated powers. However, at the time of the Inquiry, no planning officer report nor completed S106 agreement was available to support the Council's indication that there is an officer's resolution to grant permission, and the Appellant indicates the proposal is subject to

---

<sup>17</sup> ID18 para 12

objection. I therefore find the Council's evidence does not reach the high bar of 'clear evidence' and so the 62 dwellings for each phase (124 in total) should not be counted.

44. The tilted balance is already in play, and the land supply circumstances before me are not comparable to those when the Pennsylvania Road Appeal<sup>18</sup> was decided. I am also not required to pinpoint a precise HLS figure. But, even if I were to accept the Council's position in respect of the 57 dwellings at Bricknell's Bungalow as well as all 376 Category A dwellings, it pushes the Appellant's figure up by some 433 dwellings but the Council's down by at least 541. Crucially, the above indicates that the shortfall is not as 'modest' as purported by the Council, but materially worse.

*Planning balance*

45. The Council's HLS position confirms that relevant policies for determination should be considered out-of-date in accordance with paragraph 11d) and footnote 8 of the Framework. I have noted conflict with the spatial element of saved Policy LS1, and localised harm to character and local distinctiveness would be contrary to CS Policy CP16. In light of this, I must consider the weight attributed to these conflicts and against material considerations, including the presumption in favour of sustainable development in the Framework.
46. There are key social and economic benefits associated with the provision of up to 93 dwellings. I attribute significant weight to the delivery of market housing in the context of a national policy objective to significantly boost the supply of homes and a less-than-modest HLS shortfall in Exeter, even if it is capable of being rectified in the short term. The proposal would also provide affordable dwellings at a full policy-compliant level and with a mix of dwellings that would contribute to the choice of homes in the City. Given the context of a demonstrably acute and persistent under-delivery of affordable housing<sup>19</sup>, the affordable housing the appeal scheme would realise carries substantial weight in its favour.
47. The provision of open space within the appeal site would be in mitigation and necessary to make the proposal acceptable in planning terms. However, the proposal would also secure Fields 3-5 in their entirety as Valley Park, formalising public access to them. This is a benefit that carries moderate weight in the scheme's favour.
48. In economic terms, jobs and spending would arise during the development's construction, and its future residents would contribute to the local economy. Furthermore, an existing bus service would be extended and enhanced, offering an improved choice of sustainable modes of travel, not just to future occupiers of the proposal, but also to existing local residents. This aspect of the proposal goes above and beyond the provision of opportunities to access a range of services and facilities by a range of sustainable modes and is a benefit to which I attribute moderate weight.
49. Highway works would also involve relocating on-street parking from the inside of a bend. However, as the volume of traffic on the existing road network would be increased, I attribute very little weight to this specific element of the

---

<sup>18</sup> CD-A14

<sup>19</sup> Indicating just 6 affordable homes were provided in Exeter last year

scheme in the balance in its favour. The absence of harm otherwise in respect of highways or flood risk is a neutral factor that carries no weight either for or against the proposals. Landscaping, open space provision within the site, and financial contributions for off-site infrastructure would not carry any weight as benefits, rather I consider them to be necessary mitigation and neutral in the overall planning balance.

50. I am acutely aware of the strong opposition to the appeal scheme and have carefully considered any parallels with the Pennsylvania Road appeal decision<sup>20</sup>. However, there are significant differences in terms of my findings on HLS and the quantum of market and affordable housing being delivered against the shortfall.
51. I appreciate that the local community and EGG may be dismayed and frustrated by the outcome of this appeal, especially given their investment of time and personal effort in presenting evidence to the Inquiry. Ultimately, the thrust of government policy is to significantly boost the supply of homes and in this appeal a balance must be struck between the need for housing, the preservation of undeveloped green fields, the prevailing development plan and other material considerations. In this light, and notwithstanding development plan conflict, the adverse impacts of granting planning permission would not be of such magnitude that they significantly and demonstrably outweigh the benefits.

#### *UU and S106 Agreement*

52. Regulation 122 of the Community Infrastructure Levy (CIL) Regulations 2010 requires that, if planning obligations contained in s106 Agreements and UUs are to be taken into account in the granting of planning permission, those obligations must be necessary, directly related, and fairly and reasonably related in scale and kind to the development in question.
53. The Royal Devon University Healthcare NHS Foundation Trust (NHS Foundation Trust) has submitted evidence in support of a request for financial contributions to provide additional healthcare services to meet patient demand in light of increasingly severe funding and capacity issues. However, the evidence before me does not indicate the Council agrees in respect of the methodology and policy support, nor precisely what those contributions will be spent on and how they will relate to the development specifically, nor that the methodology avoids the potential lag between consent and occupation. The evidence before me does not provide sufficient justification that the health care service contributions meet the Regulation 122 tests. Accordingly, I have afforded no weight to this element of the UU and take no account of them in the overall planning balance.
54. Other than in respect of the NHS Foundation Trust contributions, the UU planning obligations and financial contributions are supported by the CIL compliance statement<sup>21</sup>. I am satisfied those obligations would secure 35% of the proposed dwellings as affordable housing units, 70% of which would be Social Rented and the remainder Intermediate; provision of open space (LEP and LEAP) and the Valley Park, their management and maintenance of the Valley Park; formal and informal Open Space including SUDS; a Travel Plan as

---

<sup>20</sup> CD-A14

<sup>21</sup> CD-ID14

necessary to render the proposal acceptable in planning terms. I am also satisfied that the financial contributions towards youth facilities, GP Surgery, secondary education, walking and cycling, bus service, travel plan and TRO are proportional to the scale of the development and justified in terms of mitigating the potential effects of the development on local services and facilities. I have taken these into account in reaching my decision.

55. The s106 Agreement would secure £15,000 to enable ECC to create a 'landscaped buffer' on land outside that within the appellant's control along Juniper Green. I consider such a contribution necessary to ensure suitable mitigation for loss of open space and creation of a safe and attractive environment at Juniper Green. The contribution would therefore be proportionate, directly related, and fairly and reasonably related in scale and kind to the development in question. I have taken it into account in reaching my decision.

### **Other Matters**

56. Interested parties have raised concerns relating to additional vehicular movements, increased pressures on the local road network and parking. Concerns over the potential impact on living conditions, through loss of privacy and outlook, have been put to me, as have the potential for a legal covenant to restrict any development on Juniper Green. Points were also made regarding wider environmental and biodiversity impacts associated with the provision of housing on green fields in the context of a global climate crisis.
57. Interested parties have raised additional concerns, including in respect of highway safety, the practicalities of the new bus route and the impacts on the highway network and parking; biodiversity and ecological impacts; and harm to local residents' living conditions through disturbance and loss of privacy. However, these matters have been assessed by the Council's officers, the Highway Authority, and independent professionals, none of whom have raised any objection. Consequently, I see no reason to doubt or deviate from their professional judgement. In the absence of any written evidence, the potential for a covenant is a matter of conjecture. Even if one did exist, it would be a legal matter that sits outside of my consideration of the planning merits of the appeal.
58. Part of the appeal site, notably the vegetation north west of Spruce Close and to the field to the north west of Celia Crescent, is covered by a local nature conservation designation, and the latter is also designated as a Valley Park. The parameters plan shows movement by way of public foot access through Fields 3, 4 and 5 as part of the New Valley Park. However, it is supposition that any formal hard-surfaced routes would be created or that they would make any material harm to Landscape Setting. Rather, the proposals would be formalising public accessibility to those fields, which I understand has historically been assumed without express landowner consent.
59. I do not wish to minimize the threat of climate change, including through unsustainable housing development and the loss of green fields. However, I have found the appeal site is located where future occupiers would have a choice of travel by sustainable modes, and there would be improved choice through the extension of the bus service to existing streets. Additionally, the detailed energy performance and construction of the proposed dwellings would be dealt with as part of the reserved matters. Detailed considerations relating

to landscape, layout, scale and appearance will also be considered at the reserved matters stage. Subject to these, along with the executed legal agreements and conditions I have imposed, there is no reason to doubt that a high-quality, safe and sustainable scheme would be delivered. I therefore find no reason to refuse the development on the basis of these other matters raised. My decision stems from the planning merits and site-specific circumstances before me. Allowing this appeal therefore does not offer a precedent for further housing development at Exeter's Landscape Setting, nor would it apply further development pressure on green fields.

### **Conditions**

60. Various suggested conditions were discussed at the Inquiry and subsequently refined and agreed (with three exceptions) with the Appellant. I have considered these against the six tests set out in paragraph 55 of the Framework. In some instances, while I have adopted the suggested conditions, I have made minor changes to wording to add clarity as appropriate.
61. Conditions setting out the reserved matters details, timescales for their approval and the commencement of the development, and the list of approved plans, are all required in the interests of providing planning certainty and clarity.
62. The appeal site falls within an area identified by Exeter Airport as requiring assessment of a development proposal to potentially conflict with its Instrument Flight Procedure (IFP). While the assessment extends beyond just building heights, matters of landscaping and layout, as well as scale, are part of the reserved matters. Therefore, the detailed plans that come forward with the reserved matters will be consulted on, subject to Exeter Airport's own IFP as required. I therefore do not find it would be reasonable or necessary to impose an IFP condition.
63. A condition requiring a written scheme of archaeological investigation is necessary to identify the site's archaeological potential and record/publish results in the interests of the historic environment. Matters of drainage and contamination are outside the scope of the reserved matters and so conditions requiring details of surface water drainage and contamination are required in the interests of managing flood risk and pollution.
64. Conditions requiring a Tree Protection Plan and Arboricultural Method Statement, as well as details in respect of nesting birds and bat boxes and dark skies, Ecological Mitigation and Enhancement, as well as a Landscape and Ecology management Plan are all required in the interests of biodiversity and ecology. A condition requiring the details of rapid charge electric vehicle charging points and cycle parking provision, as well as requiring dwellings be constructed in accordance with Energy Performance Standards, are necessary in the interests of mitigating climate change and contributing to sustainable development.
65. The conditions requiring details of a 'wearing course', a vehicle/pedestrian/cycle route, as well as implementation of access arrangements, link roads and car parking within the site are all required in the interests of highway safety and the efficient operation of the local highway network. Safeguarding the living conditions of future residents in respect of air quality, noise and the disturbance associated with the development, as well as

ensuring waste and pollution arising from the development are appropriately dealt with justifies the condition for a Construction and Environmental Management Plan.

### **Conclusion**

66. In view of the absence of a 5-year housing land supply and the engagement of the 'tilted balance', in my judgement, the adverse impacts of granting planning permission would not significantly and demonstrably outweigh the benefits of the proposed development.
67. For the reasons given above and having regard to all other matters raised, I conclude that the appeal should be allowed.

### **SCHEDULE OF CONDITIONS**

- 1) Details of the appearance, landscaping, layout, and scale (hereinafter called "the reserved matters") shall be submitted to and approved in writing by the local planning authority before any development takes place and the development shall be carried out as approved.
- 2) Application for approval of the reserved matters shall be made to the local planning authority not later than 3 years from the date of this permission.
- 3) The development hereby permitted shall take place not later than 2 years from the date of approval of the last of the reserved matters to be approved.
- 4) The development hereby permitted shall be carried out in accordance with the following approved plans: Site Location Plan (1000 Rev E); Parameter Plan Land Use (1150 Rev F); Parameter Plan Density (1151 Rev F); Parameter Plan Scale (1152 Rev F); Parameter Plan Access and Movement (1153 Rev F); Parameter Plan Open Space Provision (1154 Rev G) Parameter Plan Landscape Strategy (1155 Rev A); Preliminary Road Design Celia Crescent Access (04268-A-SK110-P4); Spruce Close Access and Parking (04268- A-SK124-P4 ); Spruce Close Bus Stop Locations (04268-A-SK125-P4).
- 5) Concurrent with the submission of the reserved matters, a Lighting Design Strategy shall have been submitted to and approved in writing by the Local Planning Authority. The Lighting Design Strategy shall include the following details:
  - a) A plan indicating where 'dark areas' will be maintained on the development site;
  - b) Assessment of light levels arising from the development (including from building, vehicles, street lighting and any other external lighting sources)
  - c) Plans annotated with isolines to show predicted illuminance and light spill in relation to the 'dark areas';
  - d) Evidence to demonstrate light spillage arising from the development shall not exceed 0.5lux within 'dark areas' and be maintained in perpetuity.

The development shall be carried out and maintained in accordance with the Lighting Design Strategy, and thereafter be retained as approved.

- 6) No demolition/development shall take place within the site until a Written Scheme of Archaeological Investigation has been submitted to and approved in writing by the local planning authority. The scheme shall include an assessment of significance and research questions and:
  - a) the programme and methodology of site investigation and recording;
  - b) the programme for post investigation assessment;
  - c) the provision to be made for analysis of the site investigation and recording;

- d) the provision to be made for publication and dissemination of the analysis and records of the site investigation;
  - e) the provision to be made for archive deposition of the analysis and records of the site investigation;
  - f) the nomination of a competent person or persons/organization to undertake the works set out within the Written Scheme of Investigation.
- 7) Concurrent with the submission of the reserved matters, details of surface water drainage system shall be submitted to and approved in writing by the local planning authority. The details shall include:
- a) a programme of soakaway and groundwater tests that have been carried out in accordance with BRE 365, and the results submitted to and approved in writing by the local planning authority;
  - b) a detailed drainage design based upon the Flood Risk Assessment (Land off Spruce Close Exeter O777 Rev C, 18 June 2021) and the soakaway and groundwater test submitted in relation to a);
  - c) a management and maintenance plan for the lifetime of the development, which shall include the arrangements for adoption by the relevant public authority or statutory undertaker (South West Water) and any other arrangements to secure the operation of the scheme throughout its lifetime;
  - d) the method employed to delay and control the surface water discharged from the site and the measures taken to prevent pollution of the receiving groundwater and/or surface waters;

No dwelling hereby permitted shall be occupied until the works associated with the surface water drainage system have been implemented in accordance with the approved details and shall thereafter be managed and maintained in accordance with those approved details.

- 8) No development shall take place, including any works of demolition, until a Construction and Environmental Management Plan (CEMP) has been submitted to, and approved in writing by the local planning authority. The CEMP shall provide for:
- a) the provision of site accesses haul routes, parking of vehicles for site operatives and visitors;
  - b) loading and unloading of plant and materials;
  - c) storage of plant, materials or other equipment used in constructing the development;
  - d) the erection and maintenance of security hoarding;
  - e) the supply of water for damping down and wheel washing;
  - f) wheel washing protocols and facilities;
  - g) a timetable of dust generating activities and details of measures to control the emission of dust and dirt during construction (include prohibiting burning of any materials or vegetation on site);

- h) a Waste Audit Statement for recycling/disposing of waste resulting from demolition and construction works in accordance with the waste audit template in Devon County Council's Waste Management and Infrastructure SPD
- i) measures to minimise noise/vibration disturbance to nearby residents from plant and machinery
- j) delivery, site clearance, piling and construction working hours;
- k) Detailed proposals for the management of surface water and silt run-off from the site during construction
- l) Air quality monitoring objectives and protocols, including site log book and procedure by which to notify the Environment and Safety Services Department of any air quality objectives being exceeded or other exceptional incidents;
- m) the name, role and contact details of the authorised personnel responsible on site for fulfilling the CEMP including the Air Quality Monitoring Log Book during the course of construction works

The approved CEMP shall be adhered to throughout the construction period for the development.

- 9) No development shall commence until an assessment of the risks posed by any contamination shall have been submitted to and approved in writing by the local planning authority. This assessment must be undertaken by a suitably qualified contaminated land practitioner, in accordance with British Standard BS 10175: Investigation of potentially contaminated sites - Code of Practice and the Environment Agency - Model Procedures for the Management of Land Contamination (CLR 11) (or equivalent British Standard and Model Procedures if replaced), and shall assess any contamination on the site, whether or not it originates on the site.
- 10) In the event of there being evidence of contamination as the development proceeds, the development shall cease pending the carrying out of an investigation of the extent and nature of contamination, the risks that it poses, together with the preparation of a remediation strategy, that shall be submitted to and approved in writing by the local planning authority. The development shall subsequently be carried out in accordance with the approved details.
- 11) No site vegetation clearance or works to trees or hedgerows on site shall take place until a scheme for the protection of trees and hedgerows has been submitted to and approved in writing by the local planning authority. The scheme shall include:
  - a) A Tree Protection Plan showing the position of every tree or hedgerow on the site and on land adjacent to the site that could influence or be affected by the development, indicating which trees are to be removed; any proposed pruning, felling or other work;
  - b) An Arboricultural Method Statement in relation to every existing tree or hedgerow identified to be retained on the plan referred to in a) above, details of any proposed alterations to existing ground levels, and of the position of any proposed excavation,

that might affect the root protection area; and, all appropriate tree or hedgerow protection measures required before and during the course of development (in accordance with paragraph 5.5 and 6.1 of British Standard BS 5837) (or in an equivalent British Standard if replaced);

- c) A Nesting Bird Method Statement that shall include timetable for carrying out works to trees outside bird nesting season, protocols in the event nesting birds are found or suspected during works, and the name and contact details of a suitably qualified ecologist overseeing those works.

The vegetation clearance or works to trees or hedgerows shall subsequently be carried out in accordance with the approved details.

- 12) The application for approval of landscaping as a reserved matter shall include the following details:
  - a) A full specification of all proposed tree and hedgerow planting to be approved in writing by the local planning authority. The specification shall include the quantity, size, species, and positions or density of all trees to be planted, how they will be planted and protected and the proposed time of planting. The tree planting shall be carried out in accordance with the approved specification;
  - b) Details of soft landscape works shall include planting plans; written specifications (including cultivation and other operations associated with plant and grass establishment); schedules of plants noting species, plant supply sizes and proposed numbers/densities where appropriate;
  - c) An Ecological Mitigation and Enhancement Strategy (EMES) for the operational phase of the development that shall have been prepared in accordance with BS 42020:2013 ('Biodiversity – Code of practice for planning and development'), or any superseding British Standard, and take into account the mitigation and enhancement measures in section 5.0 of the submitted Ecological Impact Assessment.

The EMES and landscaping works shall be implemented as approved.

- 13) No development shall take place on any phase of the development until a Landscape and Ecology Implementation and Management Plan (LEMP) for that phase has been submitted to and approved in writing by the local planning authority. The LEMP shall include a timetable for implementation of the landscaping and ecology work and details of the management regime. The LEMP shall be implemented in accordance with the approved details.
- 14) Concurrent with the reserved matters application details of a Standard Assessment Procedure (SAP) calculation of the dwellings hereby approved, which demonstrates that a reduction in CO<sub>2</sub> emissions necessary to meet the requirements of Part L of the 2013 or Part L of the 2022 Building Regulations as appropriate. The measures necessary to achieve the CO<sub>2</sub> emissions saving shall thereafter be implemented on site and within 3 months of completion of any dwelling hereby approved, an

'as-built' SAP calculation report from a suitably qualified consultant submitted to an approved in writing by the local planning authority.

- 15) Concurrent with the reserved matters application details of provisions for nesting birds and roosting bats within the development hereby approved shall be submitted to and approved in writing by the local planning authority. Those details shall show locations of built-in next/roost sites across the appeal site and demonstrate a minimum overall average ratio of 1 built-in next/roost site per dwelling. The provisions for nesting birds and roosting bats shall be implemented in accordance with the approved details and maintained thereafter.  
  
The provisions for nesting birds and roosting bats shall subsequently be carried out in accordance with the approved details and retained thereafter.
- 16) Concurrent with the reserved matters application details and specification of a vehicular/pedestrian/cycle route from Celia Crescent to Spruce Close/Pinwood Meadow Drive shall have been submitted to and approved in writing by the local planning authority.
- 17) Concurrent with the reserved matters application, details, specification and a timetable for application of the 'wearing course' to be applied to the estate roads and access arrangements as per the Preliminary Road Design Celia Crescent Access (04268-A-SK110-P4) shall be submitted to and approved in writing by the local planning authority. The 'wearing course' shall be constructed in accordance with the approved timings and details and maintained thereafter.
- 18) Concurrent with the reserved matters application, details of rapid charge electric vehicle charging points specification within the development hereby approved shall be submitted to and approved in writing by the local planning authority. Those details shall show locations of rapid charge points and demonstrate a provision of 1 per 10 spaces of unallocated parking and 1 per 10 dwellings with allocated parking (subject to network capacity). The rapid charge points shall be provided in accordance with the approved details and maintained (or subsequently upgraded) thereafter.
- 19) Concurrent with the reserved matters application, details of cycle parking provision within the development hereby approved shall be submitted to and approved in writing by the local planning authority. Those details shall demonstrate the cycle parking provision satisfies the design and minimum parking standards guidance set out in the Sustainable Transport SPD. The cycle parking provision shall be provided in accordance with the approved details and maintained thereafter.
- 20) The application for approval of layout as a reserved matter shall include details of car parking provision within the site. No dwelling hereby approved shall be occupied until the carparking for the dwelling and access to it has been provided and made available for use in accordance with the approved details and maintained thereafter available for the purpose of carparking.
- 21) Notwithstanding condition 4, not more than 50 of the dwellings hereby approved shall be occupied until the access arrangements on Spruce Close/Pinwood Meadow Drive and link road through Juniper Green open

space as per Spruce Close Access and Parking (04268- A-SK124-P4) shall have been provided and laid out. The access arrangements and link road shall be maintained thereafter.

- 22) Notwithstanding condition 4, not more than 50 of the dwellings hereby approved shall be occupied until the vehicular/pedestrian/cycle route from Celia Crescent to Spruce Close/Pinwood Meadow Drive has been provided and laid out in accordance with the details required by Condition 16 and 17. The vehicular/pedestrian/cycle route shall be maintained thereafter.

## Appeal Decision

Inquiry Held on 27-30 April, 4-7, 11 and 12 May 2021

Site visit made on 10 May 2021

**by Harold Stephens BA MPhil Dip TP MRTPI FRSA**

an Inspector appointed by the Secretary of State

Decision date: 25 June 2021

---

**Appeal Ref: APP/Q3115/W/20/3265861**

**Little Sparrows, Sonning Common, Oxfordshire RG4 9NY**

- The appeal is made under section 78 of the Town and Country Planning Act 1990 against a refusal to grant planning permission.
  - The appeal is made by Senior Living (Sonning Common) Limited and Investfront Ltd against the decision of South Oxfordshire District Council.
  - The application Ref P19/S4576/O, dated 12 December 2019, was refused by notice dated 30 June 2020.
  - The development proposed is a hybrid planning application for the development of a continuing care retirement community care village (Use Class C2) of up to 133 units with ancillary communal and care facilities and green space consisting of (i) A full planning application for 73 assisted living units within a "village core" building with ancillary communal and care facilities, gardens, green space, landscaping and car parking areas and residential blocks B1-B4; and (ii) An outline application (all matters reserved except access) for up to 60 assisted living units with ancillary community space, gardens, green space and landscaping and car parking areas.
- 

### Decision

1. The appeal is allowed and planning permission is granted for a hybrid planning application for the development of a continuing care retirement community care village (Use Class C2) of up to 133 units with ancillary communal and care facilities and green space consisting of (i) A full planning application for 73 assisted living units within a "village core" building with ancillary communal and care facilities, gardens, green space, landscaping and car parking areas and residential blocks B1-B4; and (ii) An outline application (all matters reserved except access) for up to 60 assisted living units with ancillary community space, gardens, green space and landscaping and car parking areas at Little Sparrows, Sonning Common, in accordance with the terms of the application, Ref P19/S4576/O, dated 12 December 2019, and the plans submitted with it, subject to the conditions set out in the Schedule attached to this decision.

### Procedural Matters

2. At the Inquiry an application for a partial award of costs was made by South Oxfordshire District Council (the Council) against the Appellant. This is the subject of a separate Decision.
3. The appeal follows the refusal of the Council to grant planning permission to a hybrid planning application for development at Blounts Court Road, Sonning Common. The planning application was determined under delegated powers

on 30 June 2020 and there were seven reasons for refusal (RfR) set out in the decision notice.<sup>1</sup>

4. The application was supported by a number of plans, reports, and technical information. A full list of the plans on which the appeal is to be determined is set out at Appendix 4 of SoCG 4 Planning<sup>2</sup> which was agreed by the main parties. A full list of all documents forming part of the consideration of this appeal is set out at Appendix 3 of SoCG 4 which was agreed by the parties.<sup>3</sup>
5. I held a Case Management Conference (CMC) on 4 March 2021. At the CMC the main issues were identified, how the evidence would be dealt with at the Inquiry and timings. In the weeks following the CMC the main parties continued discussions on the appeal to ensure that matters of dispute were clear and that all matters of agreement were documented in either Statements of Common Ground or in draft Planning Conditions such that time on these matters was minimised at the Inquiry. The following Statements of Common Ground were submitted: SoCG 1 Landscape; SoCG 2 Transport; SoCG 3 Viability; SoCG 4 Planning and SoCG 5 Five Year Land Supply.
6. At the Inquiry a Planning Obligation was submitted.<sup>4</sup> The Planning Obligation is made by an Agreement between Investfront Limited, Lloyds Bank PLC, Senior Living (Sonning Common) Limited, South Oxfordshire District Council and Oxfordshire County Council under s106 of the TCPA 1990. The Planning Obligation secures, amongst other matters, an off-site financial contribution in lieu of on-site affordable housing provision of £7,510,350. The s106 Agreement is signed and dated 26 May 2021 and is a material consideration in this case. A Community Infrastructure Levy (CIL) Compliance Statement<sup>5</sup> and an Addendum to the CIL Statement<sup>6</sup> were also submitted in support of the Planning Obligation. I return to the Planning Obligation later in this decision.
7. In relation to RfR7 (affordable housing), following discussions on viability, the Appellant reached agreement with the Council on the payment of an off-site financial contribution towards affordable housing that is secured through a s106 Agreement. Therefore, it is agreed that having regard to development viability, the appeal proposal would provide an adequate level of affordable housing provision and this matter is no longer in dispute.
8. The application was screened for Environmental Impact Assessment (EIA) prior to submission of the application and the Council determined that EIA was not required on 6 November 2019. I agree with the negative screening that was undertaken by the Council.

## Main Issues

9. In the light of the above I consider the main issues are:

(i) *Whether the proposed development would be in accordance with the Council's strategy for the delivery of older persons accommodation throughout the district as set out in the development plan;*

---

<sup>1</sup> See Appendix A in CD H.1

<sup>2</sup> CD H.5

<sup>3</sup> Ibid

<sup>4</sup> INQ APP11

<sup>5</sup> INQ LPA7

<sup>6</sup> INQ LPA8

- (ii) *The impact of the proposed development on the landscape character of the AONB and the landscape setting of Sonning Common;*
- (iii) *The effect of the design of the proposed development on the character and appearance of the village;*
- (iv) *Whether the proposed development makes adequate provision for any additional infrastructure and services that are necessary, including affordable housing, arising from the development.*
- (v) *Whether, in the light of the criteria set out in paragraph 172 of the NPPF, there are exceptional circumstances to justify the proposed development within the AONB.*

## Reasons

### *Planning Policy context*

10. Section 38(6) of the Planning and Compulsory Purchase Act 2004 requires that the appeal must be determined in accordance with the development plan unless material considerations indicate otherwise. For the purposes of this appeal, the development plan comprises the following documents:
  - The South Oxfordshire Local Plan 2035 (Adopted 2020) (SOLP); and
  - The Sonning Common Neighbourhood Plan (2016) (SCNP).
11. The determination of the planning application, the subject of this appeal, took place against the background of a different development plan framework to that now in place. Although the SOLP has been subsequently adopted, the SCNP was based upon the Core Strategy which has been withdrawn, including the out of date housing requirements derived from the old Regional Strategy, significantly reducing the weight that can be afforded to it.
12. The development plan policies that are relevant to this appeal are agreed by the main parties and are set out in SoCG 4<sup>7</sup> and INQ LPA6 provides an agreed schedule of the replacement policies for those cited in the decision notice.
13. The SCNP is currently under review. An initial public consultation was held between 29 February - 23 March 2020 but the Plan has not at this stage progressed further and there is as yet no agreed timetable. No weight can be given to that review.
14. SoCG 4 sets out the sections of the NPPF which are relevant in this case.<sup>8</sup> It also sets out a list of Supplementary Planning Documents and Guidance<sup>9</sup> which should be considered in this appeal and specific parts of the National Planning Practice Guidance (PPG)<sup>10</sup> which are considered relevant.
15. The appeal site is located within the Chilterns Area of Outstanding Natural Beauty (AONB). The Chilterns AONB is a 'valued landscape' in respect of paragraph 170 of the NPPF. AONBs, along with National Parks and the Broads, benefit from the highest status of protection in relation to conserving and

---

<sup>7</sup> Paragraph 3.3

<sup>8</sup> Paragraph 3.5

<sup>9</sup> Paragraph 3.6

<sup>10</sup> Paragraph 3.7

enhancing landscape and scenic beauty. Section 85 of the Countryside and Rights of Way Act 2000 (CROW) places a duty on relevant authorities to have regard to the purpose of conserving and enhancing the natural beauty of an AONB. Paragraph 172 of the NPPF requires “great weight” to be given to those matters in decision making. It is common ground that the appeal proposal involves major development within the AONB and as such should be refused other than in exceptional circumstances and where it can be demonstrated that the development is in the public interest.

16. Paragraph 172 of the NPPF requires particular consideration to be given to:  
(a) the need for the development, including in terms of any national considerations, and the impact of permitting it, or refusing it, upon the local economy; (b) the cost of, and scope for, developing outside the designated area, or meeting the need for it in some other way; and (c) any detrimental effects on the environment, the landscape and recreational opportunities, and the extent to which that could be moderated. I deal with these matters under the main issues but at the outset it is important to address whether or not the Council has a five year supply of housing.

#### *Five Year Housing Land Supply*

17. Paragraph 73 of the NPPF sets the requirement for Local Planning Authorities to identify and update annually a supply of specific deliverable sites sufficient to provide a minimum of five years’ worth of housing against their housing requirement set out in adopted strategic policies or against their local housing need where the strategic policies are more than five years old.
18. Since 2018, Oxfordshire only needed to demonstrate a three-year supply of housing. However, on 25 March 2021 the Minister of State for Housing confirmed that a five-year housing land supply was again required. The Council produced a Housing Land Supply Interim Statement (IHLS)<sup>11</sup> setting out their initial position for the period 1 April 2020 to the 1 April 2025 which asserts a 5.35-year supply. However, at the Inquiry, the Council conceded that the supply had fallen on its own case to 5.08 years. The five-year supply requirement is a minimum requirement and it needs to be deliverable. The definition of deliverable is contained in Annex 2 to the NPPF.
19. The most up-to-date position as regards the difference between the main parties is summarised in the agreed SoCG 5. There is no disagreement as to the housing need (900 dpa) or the time period for the assessment (2020/21 to 2024/25). The five-year requirement including an agreed shortfall of 922 dwellings and 5% buffer is 5,693. The difference between the main parties comes down to the Council’s position that there is a 5.08 year supply of deliverable housing sites and the Appellant’s assertion that it is instead a 4.21-year supply. Table 3 of SoCG 5 contains a schedule of 15 disputed sites. I have assessed these disputed sites in the context of the test of deliverability set out in Annex 2 of the NPPF. This specific guidance indicates which sites should be included within the five-year supply.
20. I have also had regard to the PPG advice published on 22 July 2019 on ‘Housing supply and delivery’ including the section that provides guidance on

---

<sup>11</sup> CD: K.32 South Oxfordshire Local Plan Housing Land Supply Interim Statement 2021

‘What constitutes a ‘deliverable’ housing site in the context of plan-making and decision-taking.’ The PPG is clear on what is required:

*"In order to demonstrate 5 years' worth of deliverable housing sites, robust, up to date evidence needs to be available to support the preparation of strategic policies and planning decisions."*

This advice indicates to me the expectation that ‘clear evidence’ must be something cogent, as opposed to simply mere assertions. There must be strong evidence that a given site will in reality deliver housing in the timescale and in the numbers contended by the party concerned.

21. Clear evidence requires more than just being informed by landowners, agents or developers that sites will come forward, rather, that a realistic assessment of the factors concerning the delivery has been considered. This means not only are there planning matters that need to be considered but also the technical, legal and commercial/financial aspects of delivery assessed. Securing an email or completed pro-forma from a developer or agent does not in itself constitute ‘clear evidence’. Developers are financially incentivised to reduce competition (supply) and this can be achieved by optimistically forecasting delivery of housing from their own site and consequentially remove the need for other sites to come forward.
22. It is not necessary for me to go through all of the disputed sites in Table 3 of SoCG 5. In my view, the Council was not able to provide clear evidence of delivery on most of the disputed sites which significantly undermines its position. For example, the Council suggests that 100 dwellings would be delivered at Site 1561: Land to the south of Newham Manor, Crowmarsh Gifford whereas the Appellant says 100 dwellings should be deducted. The comments set out by the Appellant for this site in Table 3 are compelling. Similarly, at Site 1009: Land to the north east of Didcot, the Council suggests 152 dwellings would be delivered whereas the Appellant says 152 dwellings should be deducted. The Appellant provides cogent evidence to support its case. Furthermore, at Site 1418: Land at Wheatley Campus, the Council agrees a deduction but only of 62 dwellings whereas the Appellant says the deduction should be 230. There is no clear evidence before me that would suggest that these sites or indeed most of the disputed sites would deliver the completions suggested by the Council in the next five years.
23. Overall, I consider that the Appellant’s assessment of supply set out in Table 2 of SoCG 5 is more realistic taking into account the test of deliverability set out in Appendix 2 to the NPPF and the PPG advice published on 22 July 2019. I am satisfied that the Appellant’s approach is consistent with national policy, case law, appeal decisions and informed by current housebuilder sales rates, assessment of the technical complexities of delivering development sites and experience of the housebuilding industry including lead-in times.
24. My conclusion on housing land supply is that there are a number of sites that together significantly reduce the Council’s five-year housing land supply. Many of the sites that the Council includes within the supply cannot be justified applying the current definition of deliverable. Following discussions between the main parties, deductions from the IHLS figure of 6,093 dwellings, have been identified and summarised at Table 1 of SoCG 5 and the impact which this has on the five year housing land supply is summarised at Table 2.

25. I consider that the Council's supply figure should be reduced to reflect the Appellant's position set out in Table 2 of SoCG 5. The Council's supply figure of 5,785 dwellings in Table 2 should be reduced to give a more robust total supply figure of 4,789 dwellings for the five year period. Although the Council maintains there is a 5.08 year supply, the evidence that is before me indicates a housing land supply equivalent to **4.21** years. The implications of not having a five-year housing land supply are significant. Not only is there a shortfall, but it also means most important policies for determining the application are automatically out-of-date. The Council accepts that means all the policies in the SOLP and the SCNP are out-of-date. It also means if the paragraph 172 tests in the NPPF are satisfied then the tilted balance applies.

*First Issue - whether the proposed development would be in accordance with the Council's strategy for the delivery of older persons accommodation throughout the district as set out in the development plan;*

*The Need for Extra Care*

26. The Council argues that the appeal proposal would be contrary to Policies H1 and H13 of the SOLP and due to its location in the AONB, outside but next to Sonning Common, brings into play Policies ENV1 and Policy H4 of the SOLP, and Policies ENV1, ENV2, H1, H2 and H2a of the SCNP. It is also claimed that the provision of 133 units of specialist housing for the elderly would be inconsistent with the proportionate growth in general housing planned for Sonning Common at both levels of the development plan.
27. Clearly the need for specialist accommodation for older people is recognised in the SOLP, which promotes the identification of suitable sites in the neighbourhood planning process and the inclusion of specialist accommodation on strategic sites,<sup>12</sup> and favours specialist housing for the elderly over conventional housing on unallocated sites.<sup>13</sup> Although extra care housing is referred to in the supporting text,<sup>14</sup> the SOLP does not prescribe particular levels of provision by type of accommodation, which allows flexibility in provision, adapting to what is an evolving sector. I note that no attempt is made to differentiate between types and tenure of specialist housing for older people, nor to address the need for each. No quantum for extra care accommodation is set out in the SOLP. Although Table 4f of the SOLP shows an outstanding requirement for 96 units over the plan period for Sonning Common it makes no reference to the needs arising from within existing households arising from their ageing.
28. Quantification of the need for open market extra care housing is not straightforward, in part because whether an owner-occupier moves to extra care housing is ultimately a matter of choice, in part because there is no prescribed or generally accepted methodology. The Government very clearly supports the identification and provision of extra care accommodation as a recognised form of specialist accommodation for the elderly.<sup>15</sup> Moreover, it is important to bear in mind that the NPPF definition<sup>16</sup> of 'older people' does not

<sup>12</sup> See CD: C.4 Policy H13(2), (3)

<sup>13</sup> See CD: C.4 Policy H1(3)(ii)

<sup>14</sup> See CD: C.4 paragraph 4.70

<sup>15</sup> See paragraphs 59 and 61 of the NPPF

<sup>16</sup> See Annex 2

exclusively mean the very frail elderly rather it embraces a wide range of people in that category both in terms of a very wide age range and significant variation in issues surrounding matters like mobility and general health.

29. Within the PPG on 'Housing for older and disabled people' it states that:<sup>17</sup>

*"The need to provide housing for older people is critical. People are living longer lives and the proportion of older people in the population is increasing. In mid-2016 there were 1.6 million people aged 85 and over; by mid-2041 this is projected to double to 3.2 million. Offering older people a better choice of accommodation to suit their changing needs can help them live independently for longer, feel more connected to their communities and help reduce costs to the social care and health systems. Therefore, an understanding of how the ageing population affects housing needs is something to be considered from the early stages of plan-making through to decision-taking"*

30. The Government plainly recognises that the need is 'critical' and the importance of 'choice' and addressing 'changing needs'. Offering greater choice means a greater range of options being offered to people in later life and that the range of options should at the very least include the categories the Government recognises in its guidance. This includes extra care. The PPG also advises what 'range of needs should be addressed'. It recognises the diverse range of needs that exists and states that:<sup>18</sup>

*"For plan-making purposes, strategic policy-making authorities will need to determine the needs of people who will be approaching or reaching retirement over the plan period, as well as the existing population of older people".*

31. Plainly, when compared with Government guidance, the development plan is left wanting in terms of addressing a need for extra care. There is no reference in Policy STRAT 1 to the PPG insofar as assessing the needs of older people. There is no reference in Policy STRAT 2 to the accommodation needs of those local residents who will make up more than a quarter of the total population of South Oxfordshire by 2035. Policy H13 in the SOLP expressly deals with specialist housing for older people. It covers all forms of specialist housing for older people, but it is completely generic as to provision. No attempt is made to differentiate between types and tenure of specialist housing for older people, nor to address the need for each. The needs of all older people are simply lumped together. Nor is there any engagement with the market constraints and viability considerations relating to specialist accommodation for older people evidenced by Mr Garside during the Inquiry.
32. Paragraph 3 of Policy H13 suggests that provision be made within strategic allocations. The strategic sites are mostly focused around Oxford or in the more northern part of the District. Only one such strategic site has planning permission – Wheatley Campus but no extra care is proposed. The Council want to see it on Ladygrove East. That is not a strategic allocation in the SOLP. But in any event the Council is seeking affordable extra care there and the developer (Bloor Homes) is resisting it. The Council conceded that the strategic sites do not really feature at all in its five-year housing land supply calculations. The Council also accepted that landowners and developers would achieve a better return if they build market houses.

---

<sup>17</sup> See paragraph 001 Reference ID: 63-001-20190626

<sup>18</sup> See paragraph 003 Reference ID: 63-003-20190626

33. Reference is made to encouraging provision through the neighbourhood planning process.<sup>19</sup> However, without a more definitive district wide requirement it would be difficult for neighbourhood plan groups to assess the levels of provision required, which will vary; and neighbourhood plan groups generally lack the expertise to fully appreciate the requirements and the different housing models available and their viability and practicality.<sup>20</sup>
34. The Appellant's primary evidence on need is given by Mr Appleton, the principal author of two key publications in this area: *More Choice: Greater Voice* (2008)<sup>21</sup> and *Housing in Later Life* (2012).<sup>22</sup> Both of these publications seek to address how best to quantify the need for specialist housing for the elderly. They advocate a method which is based on the population and other nationally available data to look at the characteristics of an LPA area.
35. The PPG highlights the need to begin with the age profile of the population. I note that the proportions of people aged 65 and over within South Oxfordshire District currently sits above the national average.<sup>23</sup> Furthermore, there is presently a population of 15,000 in South Oxfordshire District, who are aged 75 years or older which is forecast to increase to 21,100 by 2035.<sup>24</sup>
36. In terms of care needs, 4,019 people in this population have difficulty managing at least one mobility activity on their own at present, set to rise to 6,046 by 2035.<sup>25</sup> They are overwhelmingly owner occupiers, with 81.23% of people aged 75-84 and 75.25% aged 85 and over owning their own home compared with 13.74% and 17.42% respectively Council or social rented.<sup>26</sup> Importantly, South Oxfordshire sits significantly above the national trend toward owner occupation as the dominant tenure for older people.
37. For the Appellant it is argued that there is a significant under-supply of retirement housing for leasehold sale to respond to the levels of owner-occupation among older people in the District.<sup>27</sup> There is a total of approximately 1,641 units of specialist accommodation for older people. However, there is a very marked disparity in the availability of specialised housing for older homeowners compared with the supply available to older people in other tenures.<sup>28</sup> The current rate of provision favours those in tenures other than home ownership with nearly four times as many units available to them in sheltered, retirement and extra care housing than are currently available for their peers who are homeowners.<sup>29</sup> At present, it is submitted that there are 120 units of affordable extra care housing and 113 units of market extra care housing.<sup>30</sup>
38. Mr Appleton sets out a provision rate for private extra care of 30 per 1,000 of the 75 and over population in the District based on a total provision of 45 extra care units per 1,000 (4.5%) across both the affordable and private sectors, but split on a ratio of one third for social rented and two thirds for

<sup>19</sup> See CD: C.4 Policy H13 paragraph 2

<sup>30</sup> See APP 2.3 Nigel Appleton Table Fourteen

sale. This takes into consideration the research in "*More Choice: Greater Voice*" and revisions in "*Housing in Later Life*". I note that the 45 units per 1,000 is to be divided as suggested in order to bring supply into closer alignment with tenure choice among older people.<sup>31</sup> That is 450 units now. Projecting forward, an indicative provision of 633 units of market extra care would be required by 2035.<sup>32</sup> The Council refers to the Oxfordshire's Market Position Statement<sup>33</sup> which assumes a lower need figure for extra care housing but the focus there appears to be on social rented extra care housing. The Council also suggests that the SHMA<sup>34</sup> evidence is to be preferred. However, I note that it does not identify figures for extra care, nor does it relate to the present PPG.<sup>35</sup> In my view, Mr Appleton's provision rate is preferred and the need for more private extra care is overwhelming.

39. At present even a very modest level of provision of 30 units per 1,000 in the 75 and over population seems unlikely in South Oxfordshire District, especially as the SOLP now requires affordable housing to be provided, when previously it was not required. No other extra care market proposals are coming forward. The Rectory Homes proposal at Thame, refused on appeal for not providing an affordable contribution has been resubmitted but the s106 Agreement is not signed. Nor is Rectory Homes Ltd a provider of care.
40. In my view, there is a strong case that Mr Appleton's 45 per 1,000 overall, with 30 per 1,000 to market extra care, should be far more ambitious given not only the true tenure split in the District but also what it could mean for the ability to contribute towards addressing the housing crisis. Mrs Smith conceded that the figure of 30 per 1,000 was hardly ambitious and, if anything, was underplaying the scale of the potential need.
41. Turning to supply, with only 113 units of market extra care units of extra care housing existing in South Oxfordshire and a current need of 450 units this leaves a shortfall of 337. As to the existing pipeline, Mr Appleton analysed the same at Figure Two of his Needs Report, which was updated at INQ APP12. The total 'pipeline' supply of extra care not already included in Mr Appleton's tabulation of current supply are the proposed 110 units in Didcot and Wallingford, and the 65 units proposed at Lower Shiplake. This gives a total gain of 175 units. However, both Wallingford and Didcot sites have been confirmed as affordable extra care. The Council did not dispute the 175 figure and Mrs Smith accepted that she did not know if the 110 units in Didcot and Wallingford would be affordable or market. I consider that only 65 units can reasonably be considered as pipeline.
42. The pipeline needs to be set against the current shortfall of 337 which still leaves 162 units even if Didcot and Wallingford are included and 272 if they are not. That is a substantial unmet need now which will only further climb and in respect of which there is nothing in the pipeline and no prospect of any strategic allocated site delivering in the five year housing land supply.
43. There is plainly a very limited supply of extra care housing for market sale (leasehold) in South Oxfordshire. Adding further concern, it is of note that

<sup>31</sup> See APP 2.3 Nigel Appleton paragraph 11.6

<sup>32</sup> See APP 2.3 Nigel Appleton Table Seventeen

<sup>33</sup> See CD: K.27 Market Position Statement for Oxfordshire in relation to Care Provision and Extra Care Housing Supplement assumes a need for 25 units of extra care housing for every 1,000 of the population aged 75+ page 9

<sup>34</sup> See CD: 14 HOUS5 Oxfordshire Strategic Housing Market Assessment April 2014

<sup>35</sup> Ibid

from 2012 to date just 133 units have been delivered despite there being in the same period permissions for a net gain of 447 additional Care Home beds. This runs completely contrary to the policy set out in the Market Position Statement of reducing reliance on Care Home beds and increasing capacity in extra care. The case for more market extra care provision now is very clear. Furthermore, the need is set only to grow.

44. The Council sought to undermine the Appellant's need case with reference to earlier data from Housing LIN and the @SHOP tool. This on-line tool is highlighted in the PPG as a basis for calculating need. But the fact is it only provides a figure based on existing prevalence and then seeks to project that forward with a proportion increase based on the increase in the 75+ age group in the District. This is not a measure of need.
45. The Council provided a list of specialist accommodation for older people<sup>36</sup> most of which is not market extra care, but mostly affordable extra care. Oxfordshire County Council has two sites with market extra care, but those schemes are in Banbury and Witney and not in the District.<sup>37</sup> In short, the pipeline adds up to very little. I consider there is hardly any market extra care housing in the District. The stark fact is that choice is largely unavailable.

#### *Policy Compliance*

46. Plainly the proposed development would make a substantial contribution toward the provision of a more adequate level of provision for older homeowners looking for an environment in which their changing needs could be met. The fact that the need is proposed to be met at Sonning Common seems entirely appropriate. Sonning Common is one of just 12 larger villages where a need for extra care provision has been identified in the SCNP, and where there is the oldest 65 and over population in the County. The SCNP expresses support for a small scale development of extra care housing in Policy H2a but no site is allocated for such use. The Sonning Common Parish Council (SCPC) accepted that SCNP policies referred to in the RfR are out of date due to a lack of five year housing land supply. That includes Policies ENV1, ENV2 and H1, which is only expressed as a minimum.
47. Policy H13 (1) in the SOLP gives support to extra care on unallocated sites. This adds to the weight that can be given to the need case. Policy H13 is the key policy in respect of specialist accommodation for older people. Though the appeal site is not a strategic site, nor allocated in the SCNP, Policy H13 does not itself require it to be. I have already discussed the difficulties associated with any of the strategic sites coming forward with market extra care either within the five year housing land supply period or at all.
48. Policy H13 (1) is clear that encouragement will be given to developments in locations "with good access to public transport and local facilities." The Council accepted that public transport for staff on the site would be more likely to take the form of bus services and they would perhaps have no difficulty walking. For residents there is a choice and it depends on their mobility. I saw that most of the site is flat. It does have a gradual gradient to the west then a steeper gradient close to Widmore Lane. The presence of a hairpin in the proposed design is to deal with the gradient which requires a

---

<sup>36</sup> See Nicola Smith's Appendix 1

<sup>37</sup> CD: K.27 page 5

longer path to accommodate people with disabilities. I note that a minibus service is proposed which would take residents to the local supermarket. With regard to other trips, for example to the post office or to other facilities, residents could walk or take the minibus. Importantly, the core building has all facilities centrally. Residents could cook in their premises and meals would be provided on site. There would also be a small convenience shop on site and staff would be on hand to not only care for but also to assist people. Garden maintenance would be provided and there would be a wellbeing centre to help people's health and fitness. Overall, the facilities would take care of a considerable amount of day-to-day needs. In my view all of this would comprise "good access to public transport and local facilities."

49. With regard to matters of principle I accept that Policies ENV1 and STRAT 1 (ix) of the SOLP affords protection to the AONB and in the case of major development, it will only be permitted in exceptional circumstances and where it can be demonstrated to be in the public interest. I give these matters detailed consideration in other issues. The proposal fully accords with Policy H1 3ii) of the SOLP. With regard to Policy H4 of the SOLP, although the timeframe for review of the SCNP does not run out until December 2021 that does not bring the SCNP back into date. Whilst the review of the SCNP has commenced, it is at its earliest stage and no weight can be given to it. I conclude on the first issue that the appeal proposal would conflict with some but would comply with other elements of the Council's strategy for the delivery of older persons accommodation throughout the district.

*Second issue - the impact of the proposed development on the landscape character of the AONB and the landscape setting of Sonning Common*

50. SoCG 1 Landscape has been agreed between the parties and addresses landscape and visual matters. The appeal site is within the Chilterns AONB which is a 'valued landscape' in respect of paragraph 170 of the NPPF. The Chilterns AONB Management Plan 2019-2024<sup>38</sup> defines the 'special qualities' of the AONB and the most relevant to the appeal site and its context are summarised at paragraph 3.5 of SoCG 1.
51. In essence, the Council, supported by the SCPC, the Chilterns Conservation Board and others, consider that the proposed development would create a prominent and incongruous intrusion into Sonning Common's valued rural setting, relate poorly to the village, and cause material harm to the landscape character of the AONB. It is also claimed that the proposal would not conserve or enhance the landscape and scenic beauty of the AONB and would fail to protect its special qualities.<sup>39</sup> The policy context at the time of the decision notice referenced policies in the South Oxfordshire Local Plan 2011 which is now superseded by the adopted policies in the SOLP.<sup>40</sup> Policies ENV1 and ENV2 of the SCNP are also relevant. I note the illustrative Masterplan,<sup>41</sup> the LVIA and the Landscape Appendix<sup>42</sup> submitted by the Appellant.

<sup>38</sup> CD: F4 pages 10 and 11

<sup>39</sup> See RfR 2

<sup>40</sup> See LPA INQ6 which sets out the relevant SOLP policies including STRAT1 (ix), ENV1 and ENV5 and Design policies DES1, DES2, DES3 and DES5

<sup>41</sup> See Appendix 4.3.1 of James Atkin Drawing reference 1618\_L\_01\_01 Rev3

<sup>42</sup> CD: A.9 and CD A.10 Landscape and Visual Impact Assessment and Landscape Appendix

52. To address these points, it is necessary to understand what the special qualities of the Chilterns AONB are and the extent to which those special qualities relate to the appeal site and its context. From the evidence that is before me and from my site visit, I do not consider the appeal site or its local landscape context to be representative of the special qualities as set out in the Chilterns AONB Management Plan. Where the appeal site does exhibit some such qualities, they are generic. In all other respects, they are entirely absent.
53. Planning policy and statute give equal protection to all parts of the AONB. However, it would be unrealistic to expect the appeal site and its immediate context to share all or even most of these special qualities. It is important to have a balanced interpretation of how such special qualities relate. To that end, Mr Atkin's Table 1<sup>43</sup> summarises that relationship, drawing together judgements on the landscape and the extent to which the appeal site is characteristic, or otherwise, of the AONB. In summary, Mr Atkin's analysis demonstrates that the appeal site does not reflect the majority of the special qualities and, where there is a connection, the association is limited. It seems to me that the appeal site is more typical of an agricultural landscape that is commonplace around many settlement fringes. Plainly the appeal site and its local landscape context is less sensitive than other parts of the AONB.
54. The core characteristic of the appeal site and its context, and the most relevant of the special qualities to it, is the extensive mosaic of farmland with tree and woodland cover. However, this is probably the broadest and most generic of the special qualities acting as a 'catch all' for the extensive areas of farmland across the area. Other parts of the AONB are more distinct. The ancient woodland of Slade's Wood is located off site, outside of the AONB designation, though it does form part of its setting. As to extensive common land, this is not representative of the appeal site. In its local landscape context, Widmore Pond is designated as common land but is not an 'extensive' area contrasting with other parts of the AONB.
55. At my site visit I saw that the appeal site, being directly adjacent to the relatively modern settlement fringe of Sonning Common, detracts from any potential tranquillity. This is particularly so due to the neighbouring JMTC complex and associated car parking. It is common ground that the JMTC is 'institutional in scale'. In terms of ancient routes, there is no formal access to the appeal site. In the local landscape context, the closest rights of way are the public footpaths to the north-west and east both of which give access to the wider landscape to the north and east of Sonning Common where the characteristics of the AONB are more readily apparent.
56. The Council agreed that new development can be accommodated in the AONB and as a matter of principle can be an integral component. Indeed, the SCNP allocates development within its boundaries. I saw that the AONB in this location already contains a significant amount of built development. That contrasts significantly with the deep, rural area of countryside within the AONB some of which is located to the north east of the appeal site where the road turns east down the valley bottom heading to Henley-on-Thames. There, there is no settlement or village, no industrial buildings or surface car parks

---

<sup>43</sup> See James Atkin's Appendix 4.1 pages 18-20

with 100 plus spaces. It is simply deep countryside with very limited urban development and is very attractive. That cannot be said about the appeal site.

57. Having considered how the special qualities of the AONB relate to the appeal site, I now consider the landscape character of it. The appeal site is partly located on an area of plateau between two valleys, within a landscape identified in the South Oxfordshire Landscape Character Assessment (2017)<sup>44</sup> as semi-enclosed dip slope, which in turn forms part of the broader Chilterns Plateau with Valleys Landscape Character Area (LCA10). The eastern part of the site is located above the 95m contour on the plateau area.<sup>45</sup> The southern and western parts of the site fall towards a shallow valley which contains neighbouring parts of Sonning Common. At a further distance to the north is a deeper valley which separates Sonning Common from Rotherfield Peppard.

58. The Landscape Assessment for the Local Plan 2033 for the semi enclosed dip slope LCT states:

*"...this part of the Chilterns dip slope has a surprisingly uniform character, despite its irregular pattern of plateaux and valleys and its mosaic of farmland and woodland. This complexity is a consistent and distinctive feature of the area, and the most obvious differences in landscape character are between the very intimate, enclosed wooded landscapes and those which have a more open structure and character."*

It is clear to me that there is a difference between the parts of the AONB in the dry valley and those on the plateaus.

59. What is distinctive about this part of the landscape and relevant to the landscape of the appeal site and its context is the uniformity across a larger scale area of the landscape characterised by a complex mosaic of farmland and woodland. It is this complex mosaic at the larger scale which is more closely aligned with the special qualities of the Chilterns AONB and not the appeal site itself. It isn't the loss of a part of this mosaic that is important, which in the case of the appeal site would be a relatively small agricultural piece of the mosaic; rather, it is the implications for the wider mosaic and whether that would be disrupted in terms of a reduction of its scale, or would result in the creation of a disbalance between particular parts of the mosaic.

60. SCPC referred to the Sonning Common Character Assessment and Design Statement 2013.<sup>46</sup> I accept that this formed part of the evidence base to the SCNP, but it appears to still be in draft form only many years later. Its main purpose was to provide comparative comment on sites identified for potential future development limited to only the shortlisted sites. It does not address the wider appeal site. I have also taken into account the Oxfordshire Historic Landscape Characterisation Project<sup>47</sup> and the various landscape capacity assessments cited by Mr Jeffcock that have looked at the appeal site.

61. As I perceive it, Sonning Common is very much part of the local landscape context, just as much as the adjacent agricultural land and the wider mosaic of the AONB. The appeal site performs a role of a brief transition and gateway between the suburban and rural environments. In its local context, the settlement fringes of Sonning Common, including the residential areas across the valley and on the plateau to the west and south are influential in terms of

---

<sup>44</sup> CD: D.23, section 15.

<sup>45</sup> See John Jeffcock's Appendix 1, Figs 2, 7, 8

<sup>46</sup> CD: C.7

<sup>47</sup> CD: I.5

the local landscape character, as is the prominent built form of the JMTC to the north. Adjacent to the appeal site is the JMTC car park which further erodes the sense of more 'remote' or rural countryside. To the south the settlement extends some distance along Peppard Road and there is a clear experience of entering the suburban character of the village, long before the appeal site is perceptible. There are specific locations where the settlement edge is less apparent notably along Blounts Court Road from the east and in this direction the more rural aspect of the site is more dominant.

62. The Council's LCA draws a very clear distinction between the character of development on the plateau and the character found in the dry valleys.<sup>48</sup> The landscape strategy set out there suggests that development on the plateau is in keeping whereas into the valley is a negative thing. It seems clear to me that Sonning Common has grown up developmentally on two plateaus either side of the dry valley.
63. It is common ground that, like any development anywhere, physical impacts on the landscape fabric will be limited to those which occur within the appeal site itself. However, landscape character impacts and the consequent effects would not be limited to the appeal site. It is agreed that there are not likely to be significant effects on the wider landscape or visual effects further afield than a localised area set out in the SoCG 1.<sup>49</sup>
64. Although there would be localised losses of vegetation due to the access off Blounts Court Road and the proposed pedestrian connection to Widmore Lane, the proposed development would largely involve the loss of open agricultural land and the construction in its place the built development of the appeal proposals. On the most elevated part of the site, there would be a substantial, cruciform core building, 2.5 storeys (about 11.2m)<sup>50</sup> in height, with a footprint of approximately 3,900m<sup>2</sup>, and four apartment blocks with ridge heights of between 10.3m and 11.2m, the largest two of which would have footprints of about 550m<sup>2</sup> each. However, the recent application submitted for the JMTC shows that the present buildings making up the complex are between 8.7m and 10.6m depending on ground levels with block 4 up to nearly 11m in height. I accept that there would be a physical loss to the mosaic, but in character terms, the appeal site is not essential to its character and the built elements of the scheme would be consistent with the settlement fringe.
65. There would be potential impacts arising from the 15m woodland belt along the southern and eastern edges of the appeal site. This would be beneficial in terms of moderating the effect of the development. It would also provide a green infrastructure link between Slade's Wood and the green infrastructure network in the surrounding landscape. This would have a positive impact on the 'wooded' aspects of the mosaic. The woodland belt would create a further 'layer' in the landscape which would physically and visually contain the site.
66. The overall consequence of this is that there will be a highly localised impact on the 'mosaic' in terms of agricultural land use, but not to a point where, given the scale of what makes this distinct, the mosaic is disrupted or undermined. At a local and wider scale, this would not constitute 'harm' to the Chilterns AONB. Only a small part of the mosaic would be impacted, and this

<sup>48</sup> CD: D18 page 572 which deals with Sonning Common at 9.10

<sup>49</sup> CD: H.02 SoCG 1 Landscape paragraphs 3.21-3.22

<sup>50</sup> See John Jeffcock's POE paragraph 4.3.3.

would not alter the overall character of the wider mosaic or the LCT. Plainly such limited impacts would not cause 'material harm' to the landscape character of the AONB, nor would it conflict with the aims of protecting its special qualities. The appeal site would, in being development on a plateau, be in keeping with the landscape character.

67. I accept that the appeal site and the immediate landscape context within the Chilterns AONB form part of a valued landscape<sup>51</sup> this is primarily on the basis of the landscape designation and related less to the demonstrable physical attributes of the appeal site.<sup>52</sup> Although the Appellant's LVIA determines landscape value to be 'high' with some localised variations, I consider that the appeal site in its local landscape context is of 'medium to high' value taking into consideration that it is in the AONB but also the site's own merits. There is, frankly, a considerable difference between this area and more typical, characteristic parts of the AONB.
68. As to landscape susceptibility, this can be appropriately described as 'low to medium' in the appeal site's local landscape. This is a medium scale enclosure that has capacity to accommodate some form of development across the majority of the site. The settlement of Sonning Common provides some reference and context for development and the presence of the JMTC in this part of the AONB reduces landscape susceptibility to new development. The landscape sensitivity is appropriately judged as 'medium' with the AONB designation having a high sensitivity. Mr Jeffcock considers that the appeal site has a high landscape value and high sensitivity to change. However, his assessment is overstated. In my view the appeal site has a medium to high value, and low to medium susceptibility with medium sensitivity overall.
69. The appeal site is located on the very fringe of the AONB, and Sonning Common is excluded from it. This is not a core part of the Chilterns AONB and its special qualities are largely absent. Of relevance is the mosaic of wooded farmland that characterises much of the plateau and dip slope. The appeal proposals would result in a change to this characteristic at a very localised level, with the loss of an open agricultural field to built development but balanced with the introduction of further woodland and green infrastructure. This would not disrupt, or unduly influence, the mosaic. I agree that the 'slight to moderate adverse' effect on landscape character would not represent a significant impact in respect of the Chilterns AONB.<sup>53</sup>
70. As for visual effects, these would differ depending on the viewer and the viewpoint. The landscape witnesses provided a number of example viewpoints and I carried out an extensive site visit with the parties to see these and other views for myself. I have also taken into account the ZTV<sup>54</sup> and LVIA information provided by the Appellant.
71. SoCG 1 Landscape records that the physical impacts of the proposed development would be limited to the appeal site, and that consequent impacts on landscape character would be limited to a relatively small number of areas including viewpoints to the south (the route of the B481 Peppard Road); to the south west (Sonning Common village e.g. Grove Road); to the north

---

<sup>51</sup> Within the meaning of paragraph 170(a) of the NPPF

<sup>52</sup> See James Atkin's Table 2 POE pages 27-28

<sup>53</sup> See James Atkin's POE page 33 paragraph 6.48

<sup>54</sup> Zone of theoretical visibility

(footpath 331/16/20) close to the southern edge of Rotherfield Peppard); to the west (the settlement edge of Sonning Common) and to the east and north east (the routes of public right of way 350/11/20 and 350/10/10). Outside of these areas it was agreed there would not likely be any significant effects on the wider landscape or on visual receptors further afield.<sup>55</sup>

72. In terms of visual amenity, the evidence demonstrates that potential views of the appeal proposals would be limited to a small envelope, largely related to the immediate context of the appeal site and not extending further into the Chilterns AONB landscape. This limited visibility reduces the perception of change to landscape character. The ZTV demonstrates that, aside from some locations very close to, or immediately adjacent to the appeal site, potential visibility from the wider landscape (and AONB) is limited. In my view this accords with the landscape character guidance which refers to the 'semi-enclosed dip slope' as having a 'strong structure of woods and hedgerows' which provide 'visual containment and results in moderate to low intervisibility'. This strong structure of woods and hedgerows provides containment in the landscape.
73. What is clear, is that only a small number of nearby locations would have direct views of the appeal proposals. This includes a very short section of Peppard Road, short sections of public footpaths to the east (350/11/20 and 350/11/40) and the approach to the settlement along Blounts Court Road. In each of these instances, impacts could be moderated by appropriate landscape works and particularly the inclusion of the woodland belt. The contained nature of the appeal site and the limited extent of landscape effects mean that the overall character of the semi-enclosed dip slope LCT would not be fundamentally altered and the effects on landscape character at this scale would not be significant. Plainly, the appeal proposals would not give rise to significant visual effects overall; either in the local landscape context of Sonning Common or in respect of the scenic quality of the Chilterns AONB.
74. The most relevant assessment is that of 'Year 15' once the tree planting proposals have had the opportunity to thrive. Those proposals are a specific and positive part of the proposed development which would deliver additional environmental functions to that of visual screening. It is common ground that the planting would be significant. It is reasonable to expect that the growth of native species would reach good heights in the medium term and mature heights that are comparable to the existing trees and woodland in the area. There would be glimpses of the built development through the perimeter planting. However, it would provide a substantial screen in the long term and help to integrate the appeal proposals into the landscape particularly when viewed from the east and from the south.
75. For the above reasons I conclude on this issue that the proposed development would have some localised landscape and visual effects, but these would not result in unacceptable impacts on the AONB or the landscape setting of Sonning Common. As such, in respect of this issue I consider the appeal proposal would conflict with Policies STRAT 1 (ix) and ENV1 of the SOLP together with Policy ENV1 of the SCNP. However, for the reasons set out above those adverse effects would be limited. I shall consider this further in the planning balance.

<sup>55</sup> CD: H.2 SoCG 1 Landscape paragraphs 3.21-3.22

*Third Issue - the effect of the design of the proposed development on the character and appearance of the village*

76. The Council's concerns about the design of the proposed development are based on RfR4 and are supported by the SCPC. In summary these are: (i) the development would not integrate with the village by reason of scale, massing, layout and character; (ii) it would result in a dominant and intrusive form of development having a significant urbanising effect on the settlement edge; and (iii) the layout and design would result in poor amenity for residents by virtue of the lack of access to private amenity space and publicly accessible green space, an overdominance of car parking and limited space for tree planting. I address each of these concerns in turn.
77. The main parties agreed a section on design within SoCG 4 Planning.<sup>56</sup> Amongst other matters it is agreed that: the detailed layout (Phase 1) is the proposed layout for that part of the site; the proposed masterplan is provided to demonstrate how the development could be laid out to respond to the physical and technical constraints and opportunities of the site; the layout for Phase 2 will be subject to future reserved matters (appearance, landscaping, layout and scale) and remain in the Council's control; the Council has no objection to the choice of building materials, detailing and hard landscape materials proposed; and the extent of existing tree retention and the selection of proposed plant species, grass, hedge and shrub planting is agreed.
78. It is also noteworthy that policies within RfR4 relate in the main to the previous South Oxfordshire Core Strategy 2012 and South Oxfordshire Local Plan 2011. The corresponding policies are set out at INQ LPA6. Policy D1 of the SCNP 2016, the South Oxfordshire Design Guide<sup>57</sup> and the NPPF (in particular paragraphs 127, 130 and 131) also apply.
79. I turn first to integration with the village in terms of scale, massing, layout and character. The Council and the SCPC are concerned that the scale and layout of the proposed development are being driven by operational requirements and the business model of the Appellant. Reference is made to the large apartment blocks and the village core which it is claimed are at odds with the more modest scale of development in Sonning Common. However, I consider it is important at the outset to understand the existing context and character of Sonning Common. At my site visit I saw that Sonning Common is not the archetypal Chilterns Village, and it clearly lies outside the AONB. It was developed in a more planned manner with the character being 'plotlands' and later infill housing termed 'estates'.
80. The local vernacular consists of a mix of building types, but the immediate neighbouring existing development is comprised of the estates typology - Churchill Crescent, Pond End Road and the northern edge of Widmore Lane. The existing context has a range of design components that help create its character. In particular, I note that Sonning Common: is primarily 2 storeys but with elements of 2.5 storeys; is primarily domestic in scale; has predominantly traditional architecture; is relatively verdant with trees and landscaping being visible within and as a backdrop to the streetscape; and has occasional larger built form such as the school or JMTC. Furthermore,

---

<sup>56</sup> CD: H.5 SoCG 4 Planning Section 6

<sup>57</sup> CD: C.8

Sonning Common has: brick walls; painted rendering on walls; clay roof tiles; chimneys; and a mix of gables, hipped roofs and porches.

81. The Design and Access Statement (DAS)<sup>58</sup> describes the appeal proposals as domestic in scale and character. I accept that the scheme is largely domestic in form and with detailing consistent with residential houses in the area.
82. In terms of *height*, the proposed buildings would reflect the heights of buildings within Sonning Common. Both plotlands and estate buildings include two storey buildings and two storey buildings with roof rooms. The proposed apartment buildings would be two storeys with the Village Core rising to two and a half storeys in places. The Village Core has accommodation in the roof space to keep the overall ridge height low. The height to the ridgeline from ground level of the Village Core Centre building is up to 2.5 storeys dropping to single storey on the eastern side. This must be seen in the context of the height of the adjacent JMTC, typically equivalent to 3 storeys, and groups of 2.5 storey dwellings on the northern side of Blounts Court Road to the west of the site. Most of the proposed development would be two storeys in height as is the overwhelming majority of built development in Sonning Common.
83. As to *massing*, the initial indicative sketch elevation demonstrates that the apartments and the Village Core would have the appearance of semi-detached buildings or groups of buildings combined into short terraces with a varying roofline which are reflective of the existing residential buildings in Sonning Common.<sup>59</sup> The massing of the apartments is derived from a variety of footprint depths which, when formed into larger blocks, allows for the scale and mass to be broken down into roof elements with simple breaks in the roofline. Appropriate equal roof pitches would give each apartment building an elegant scale. There would be elements of hipped roofs, and chimneys incorporated into the roof plane. The apartment buildings would have balconies, single and double gables further breaking down the overall mass. The Village Core would have accommodation in the roof space and the roof planes would be broken down with larger single gables, smaller double gables with a central gutter and small dormer windows.
84. In my view the *layout* of the proposed development would reflect the way existing 'plotlands' and 'estates' buildings in Sonning Common are orientated, with the arrangement of buildings fronting the main vehicular route with active frontages. A number of apartments would be arranged around the Village Core. Buildings fronting Blounts Court Road would be positioned so that they would replicate the linear street scenes typical of development within Sonning Common.<sup>60</sup> I note that the proposed building line would be setback some 15m-20m from the road edge to retain an element of openness along the streetscape allowing boundaries to be defined by planting and hard landscaping. This would reflect the layout of the 'plotlands' buildings within Sonning Common. Buildings along the main access route and internal streets would similarly front the street with setbacks from 6m-15m allowing boundaries to be defined by planting and hard landscaping. The setback for 'estate' residential buildings ranges from about 4m-14m. In my view, the proposals would be in a similar range.

---

<sup>58</sup> CD: A.31

<sup>59</sup> See Mr Carr's Appendix UD4

<sup>60</sup> See CD: C7 Sonning Common Character Assessment and Design Statement

85. The Council and SCPC argued that the appeal proposal could be smaller in scale. However, it was accepted that greater economies in scale could be achieved with larger retirement village developments with extensive communal facilities. It is noteworthy that the Appellant is proposing a development which is half the size of the optimum.<sup>61</sup>
86. With regard to *character* it is clear that the Council has no objection to the choice of building materials, detailing and hard landscape materials proposed, as recorded in the SoCG 4. In any event, the proposed development would accord with the local vernacular which consists of a mix of building types found within the key character areas. In summary, Sonning Common has predominantly traditional architecture and the proposed development would have traditional architectural detailing; it is relatively verdant with trees and landscaping being visible within and as a backdrop to the streetscape and the proposed development would have similarly substantial planting in the streetscape as well as proposed and existing large scale tree planting creating a tree lined backdrop. Sonning Common has also occasional larger built form such as the school or JMTC and the proposed development has a Village Core.
87. It is fair to say that Sonning Common has an eclectic architecture which is quite conventionally suburban. There is a significant amount of 1970s housing. It has a fairly bland architecture, evidenced by the images in the Sonning Common Character Assessment and Design Statement.<sup>62</sup> Given that the site is within the Chilterns AONB, the design should not just duplicate Sonning Common, but use materials such as flint panels and dark stained boarding and design components that respond to the AONB setting.
88. In my view, the architecture would reflect a varied composition with gables, projections and porches. The proposed elevations would respect the traditional patterns, style and scale of buildings and the fenestration would be inspired by traditional Chiltern building with a solid wall area balanced with the window and door openings, relatively pitched roofs with a ridgeline, use of 'L' and 'T' building shapes, chimneys and prominent flint panels.
89. It is clear to me that the proposed new buildings would plainly add to the sense of place and local character and would 'belong' to the Chilterns. The proposed development would also create a soft edge to the countryside<sup>63</sup> and would not 'turn its back' on it; particularly given the lack of any rear garden fences defining the edge of the settlement.
90. I recognise that this is a hybrid application and there is therefore an outline element to the proposals. However, to demonstrate their commitment to provide the same level of detailing and materials as presently indicated, the Appellant has produced a Design Commitment Statement.<sup>64</sup> Importantly, this could be conditioned to provide reassurance and an additional way of ensuring that the future reserved matters keep to the quality required in this setting.
91. The Council contended that the proposal would be a dominant and intrusive form of development and it would have an urbanising effect on the settlement edge. I disagree. The apartments and cottages proposed as part of the appeal scheme would be largely consistent with a domestic form and would be very

---

<sup>61</sup> See INQ LPA 2 page 13.

<sup>62</sup> See CD: C7 page 16

<sup>63</sup> See CD: K4 Chilterns Building Design Guide principle item 3.16 page 25

<sup>64</sup> See Mr Carr's Appendix UD7

similar in size and form to houses in Sonning Common and the wider AONB. It is logical to site the Village Core building where it is, on a predominately level area, avoiding any large man-made cuttings and embankments to facilitate it. Plainly having the core building on a level area is appropriate for residents in their later years of life who would want facilities to be very easy to access.

92. The NPPF emphasises the importance of making efficient use of land.<sup>65</sup> Clearly where there is an existing or anticipated shortage of land for meeting identified housing needs, it is especially important that planning policies and decisions avoid homes being built at low densities, and ensure that developments make optimal use of the potential of each site. I accept that it is imperative that sites such as the appeal site are optimised when developed. However, optimising does not mean fitting in as much as you can regardless, but it does mean using land efficiently. As this would be an apartment based development then I accept that it would have a greater density than a conventional residential scheme.
93. The Council argued that the proposal would have an urbanising effect. However, the proposed development would be very different to an urban character. There would be a significant landscape setting breaking up the built form and the countryside edge, when read in the context of the proposed planting, would be assimilated in townscape terms. Much has been made of the AONB designation in which the appeal site falls; but this does not mean preservation without any change. The proposed development would in many ways be read as part of the evolution of the area's character.<sup>66</sup> In my view the proposed development would create an appropriate designed edge to the settlement and an appropriate robust transition with a managed landscape that is a better edge than the back gardens adjoining the settlement boundary that can be found at the settlement edge around parts of Sonning Common.
94. I turn now to the Council's concerns that the layout and design would result in poor amenity for residents by virtue of a lack of access to private amenity space. It is common ground that in policy terms, there is no private amenity requirement prescribed for a retirement community care village. Nonetheless, the proposed development would provide a total of 1,300 msq of private amenity space<sup>67</sup> comprising: private balconies totalling 0.03 hectare; and directly accessible private landscape and terraces totalling 0.1 hectare.
95. Over and above the private amenity space there would be an extensive amount of publicly accessible green space provided. Again, I note that there is no policy requirement for a retirement community care village yet there would be: landscaped space amongst and between the built form (including foot and cycleways) totalling 1.7 hectares; and a native tree belt and woodland buffer totalling 1 hectare. Combined with the private amenity space there would be 2.83 hectares of amenity land which would be ample given that the site totals 4.5 hectares. That is 62.8% of the appeal site and equivalent to 212.78 msq for each of the 133 units.
96. All of the above is in the context of extra care developments being very different to general housing. I accept that residents do not want the work of managing their own garden. In my view, the layout of the development would

---

<sup>65</sup> NPPF paragraph 123.

<sup>66</sup> See Michael Carr's POE paragraph 7.20

<sup>67</sup> See Appendix UD5 of Michael Carr's POE

be safe, attractive and inclusive with plenty of natural surveillance of the landscaped spaces which is important given the age restriction of the development and why people would choose to live there.

97. The appeal proposals include access to landscaped spaces and woodland opening up an area that would otherwise be inaccessible private land. This maximises the public benefit of the scheme and would positively contribute to the health and well-being of both residents and the community, to which weight is given in the NPPF as part of the social objective. The Council agreed that there may well be community integration and intergenerational activity through the facilities on site.
98. With regard to car parking, the appeal proposals have been designed to avoid what would otherwise be unplanned 'ad hoc' parking through a formal provision. This is not in one place, rather the design would disperse the necessary parking across the proposed development in a series of clusters. These would be set back and visibly screened from the main routes through the development and would avoid harsh urban parking courts. The proposed 15m woodland belt is a relevant consideration. The proposed planting would buffer and screen views of parked cars and both soften and integrate the parking areas so that they are read as designed landscaped courts. The Council raised concerns about the space available for tree planting. However, in my view there would be ample space on site to accommodate the tree planting the final details of which would be under the Council's control.
99. Overall, I consider the proposal would be in broad accordance with the SOLP policies including DES1, DES2, DES3, DES4 and DES5, SCNP policies D1 and D1a and other design guidance and the NPPF. I conclude on the third issue there would be no reason to dismiss the appeal due to the effect of the design of the proposed development on the character and appearance of the village.

*Fourth Issue - whether the proposed development makes adequate provision for any additional infrastructure and services that are necessary, including affordable housing, arising from the development*

100. This issue relates to the absence of a completed s106 Agreement to secure infrastructure to meet the needs of the development. At the time of the decision, agreement could not be reached with the Council on the requirements for a planning obligation. Since then, agreement has been reached and a s106 Agreement was submitted at the Inquiry. I have considered the s106 Agreement in the light of the CIL Regulations 2010, as amended, the advice in the NPPF and the PPG.
101. The NPPF indicates that LPAs should consider whether otherwise unacceptable development could be made acceptable through the use of conditions or planning obligations.<sup>68</sup> Regulation 122 of the CIL Regulations, as amended by the 2011 and 2019 Regulations, and paragraph 56 of the NPPF make clear that Planning Obligations should only be sought where they meet all of the following three tests: (i) necessary to make the development acceptable in planning terms; (ii) directly related to the development; and (iii) fairly and reasonably related in scale and kind to the development.

---

<sup>68</sup> NPPF paragraph 54

102. The Council's need for additional infrastructure and services is set out in relevant SOLP policies which include H9 Affordable housing; INF1 Infrastructure; DES 1 Delivering High Quality Development; TRANS2 Promoting Sustainable Transport and Accessibility; TRANS4: Transport Assessments, Transport Statements and Travel Plans; and TRANS5: Consideration of Development Proposals. The Council's SPD (2016) is also relevant. Based on the SPD and the relevant policies, the appeal proposal should provide: (i) a financial contribution towards local primary health care (£73,735); (ii) a recycling and waste contribution (£24,738); (iii) a street naming contribution (£2,977); (iv) a District S106 monitoring fee (£2,686); (v) an affordable housing contribution (£7,510,350); (vi) a public transport services contribution (£117,000); (vii) a travel plan monitoring contribution (£2,040); and (viii) a County S106 monitoring fee (£1,500).
103. The primary care contribution is directly related to the development because it results from the additional pressure on local health services as a result of the future residents. It is fair and reasonable as the amount has been calculated based on the number of future residents. The recycling and waste contribution is necessary for the development to be served by waste infrastructure and the calculation is directly related to the bins needed for this development. It is necessary for the development to be served by street naming plates and the calculation is directly related to the name plates needed for this development. The completion of a planning obligation requires the Council to administer and monitor those obligations. The monitoring fee contribution is necessary to cover the Council's costs and is directly related to the nature of the obligation.
104. The proposal will deliver affordable housing which is required under Policy H9 of the SOLP. It will do so via a contribution in lieu of on-site provision. The s106 Agreement secures the payment of £7,510,350 to be paid by the owners. A financial contribution towards off-site affordable housing is necessary to equate with a 40% affordable housing provision under Policy H9. It is directly related to the development and fairly and reasonably related in scale and kind. The financial contribution has been calculated based on the open market value of a unit to be delivered on the site.<sup>69</sup> The s106 Agreement requires the total affordable housing contribution to be used towards the provision of off-site affordable housing within the District.
105. The relevant policies which support the transport contributions are set out in the CIL Compliance Statement.<sup>70</sup> A contribution is required to provide an improved bus service (service 25) for residents, visitors and staff associated with the proposed development as an appropriate and viable alternative to the use of private cars and to promote travel by public transport. The contribution required would be used towards increasing the frequency of the existing service operating between Sonning Common and Reading to every 30 minutes between 0600 - 2030, Monday to Saturday and an hourly service in the evenings (up to 2300) and on Sundays (0800-1800). The contribution is directly related to the number of residential units but excludes the proposed 16 high care units, as these residents are unlikely to use public transport. A

---

<sup>69</sup> INQ LPA7 provides the methodology for the calculation of the commuted sums based on the open market value of a unit to be delivered on the site.

<sup>70</sup> INQ LPA7 NPPF paragraphs 102, 103, 108 and 111; Connecting Oxfordshire: Oxfordshire County Council's Fourth Local Transport Plan (LTP4) 2015-2031 Volume 1 Policy and Overall Strategy Updated 2016 Policy 3 and Policy 34; Connecting Oxfordshire: Oxfordshire County Council's Fourth Local Transport Plan (LTP4) 2015-2031 Volume 2 Bus & Rapid Transit Strategy (2016) paragraphs 91, 93-95.

travel plan monitoring fee is required to monitor the implementation of the travel plan and an administration and monitoring fee is required to monitor the planning obligation.

106. In my view, all of the obligations in the Planning Obligation are necessary to make the development acceptable in planning terms; directly related to the development; and fairly and reasonably related in scale and kind to the development. Therefore, they all meet the tests within Regulation 122 of the CIL Regulations and should be taken into account in the decision. I conclude on the fourth issue that the proposed development makes adequate provision for any additional infrastructure and services that are necessary, including affordable housing, arising from the development.

*Fifth Issue - whether, in the light of the criteria set out in paragraph 172 of the NPPF, there are exceptional circumstances to justify the proposed development within the AONB*

107. There is no dispute that the appeal scheme would be a major development in the AONB. The tests relating to allowing such development are set out clearly in paragraph 172 of the NPPF. The relevant factors which must be considered are then listed in paragraph 172 a) to c) but it is not an exhaustive list. Great weight must be given to conserving and enhancing landscape and scenic beauty in AONBs and planning permission should be refused for major development other than in exceptional circumstances and where it can be demonstrated that the development is in the public interest.

*The need for the development and the impact on the local economy*

108. I have already discussed the need for the development in detail under the first issue. That discussion is not repeated in detail here, but it is plainly relevant to paragraph 172 a) of the NPPF. There is an immediate unmet need for extra care market housing. This arises not from some ambitious target for extra care. The target for need suggested by Mr Appleton is in fact very modest. It is just 4.5% of the District's population of people 75 years of age and over. It arises because there is hardly any of it available. There are only two schemes which have been built offering 113 units. The only future supply which is available is the market extra care that would be provided at Lower Shiplake for 65 units. Retirement Villages has now sold that site and want a larger site. Whether the Lower Shiplake scheme gets built is therefore uncertain. But even with it the supply of extra care that is available is only 178 units.
109. This against a need, based on a modest aspiration of 4.5% - that is 450 units across the whole District for an overall population of 15,000 in this age category, gives rise to an immediate shortfall of 272. The figure is 337 if the Lower Shiplake proposal is excluded. The stark fact is there is hardly any choice or to put it another way choice is largely unavailable.
110. I am in no doubt that the development of 133 units is needed. Firstly, it is needed to address the immediate shortfall in the five year housing land supply in the District which is only equivalent to some 4.21 years. Secondly, it is needed in this District where at present a population of 15,000 who are aged 75 years or older is forecast to increase to 21,100 by 2035. The demographic evidence indicates a 'critical' need for extra care housing in the District. In this case, the proposed development should be of sufficient size to support the communal facilities that are necessary to ensure an effective operation.

111. Thirdly, it is important to recognise the fact that extra care accommodation, together with all other forms of specialist housing for older people can assist in 'freeing up' existing family and other housing by allowing them to 'right size' by moving to more appropriate accommodation. This type of specialist housing could significantly contribute towards the easing of the present housing crisis in this District where under occupancy amongst older households is greater than for England as a whole. The sale of the 133 units in the appeal proposals would release 133 family houses of three bedrooms or more.<sup>71</sup> The appeal scheme would be likely to free up 39 family dwellings locally but it could be as high as 64.<sup>72</sup> Significant weight can be given to this.
112. Fourthly, the health and well-being benefits of the appeal proposal should also be recognised and given significant weight. Such benefits to elderly people are entirely obvious. I accept that such health and care benefits apply and also that they are separate from housing delivery. The benefits specialist housing for older people can bring include addressing concerns about suitable supervision, frailty, care, assistance, recreation, loneliness and isolation.
113. I do not consider the impact of refusing the proposed development would be seriously damaging to the local economy, there is no clear evidence to that effect. There is no requirement that has to be demonstrated. However, I do accept that the proposal would deliver economic benefits to the local economy and jobs as well.<sup>73</sup> The Appellant has also proposed a local employment and procurement condition which I accept is plainly relevant.<sup>74</sup> I am satisfied that there is a need for the development and that it is in the public interest.

*The cost and scope of developing elsewhere or meeting the need in another way*

114. With regard to paragraph 172 b) of the NPPF, the Council's case is that with Policy H1 and H13 the need for specialised housing for the elderly can be met outside of the AONB. The Council refers to the Oxford County Council's Market Position Statement Extra Care Housing Supplement 2019-2022 and to the SHMA. However, the Council does not quantify a need for extra care, albeit the SHMA does recognize it as a category of need and distinguishes between market and affordable extra care housing.<sup>75</sup> The Council also suggests that the need can be met in people's homes and that needs can be met by 2035. In my view, there is a specific need for extra care provision and market extra care housing. The needs which have been identified are modest and the idea that they be met at home is misplaced. The most relevant need is the immediate need and Mr Appleton's evidence demonstrates what this is.
115. I note that at both the application and appeal stages the Appellant relied upon a sequential assessment of alternative sites to show a lack of suitable sites. The Council questioned this assessment but never really suggested any alternative sites. At the Inquiry reference was made to 8 extra care sites in Mrs Smith's Appendix 1. However, all of those sites have been addressed by Mr Appleton and that information was updated during the Inquiry to reveal that there were no sites with planning permission in the pipeline other than

---

<sup>71</sup> Paragraph 6.24 of Roland Bolton's POE

<sup>72</sup> Paragraph 6.27 of Roland Bolton's POE

<sup>73</sup> See CD: A.6 Economic Benefits Assessment Report, it is calculated that operation of the site would provide up to circa 70 jobs (FTE). This does not include construction jobs, which are assessed to be of the order of 108 over a period of 4 years, although in practice this maybe higher dependent upon individual project needs.

<sup>74</sup> See *Verdin v SSCLG* [2016] EWHC

<sup>75</sup> See CD: D.14 Table 6 page 25

Lower Shiplake which is now uncertain. Therefore, it seems to me that the Council's own evidence supports the Appellant on the lack of alternatives.

116. Moreover, when the Appellant persuaded the landowner to agree to pay the full affordable housing contribution, that significantly strengthened the Appellant's case in respect of paragraph 172 b). That is because the appeal site stands alone as the only site in the whole of the District which can deliver extra care market housing and deliver the affordable housing contribution which the SOLP now requires for C2 uses. Mrs Smith accepted that there are no other sites in the District with planning permission for extra care market housing. The problem is a combination of land economics and SOLP Policy H9 which requires affordable housing on extra care housing schemes. Given this context the appeal proposal does connote rarity and uniqueness.
117. Extra care housing undoubtedly operates in a very different market. Mr Garside provided detailed evidence to the Inquiry how the market for land operates to the detriment of extra care operators. Extra care housing providers cannot compete with house builders or with other providers of specialist housing for older people because of the build costs, the level of the communal facilities and the additional sale costs including vacant property costs. The communal facilities must be provided before any units can be sold and sales tend to be slower.<sup>76</sup> However, I accept that extra care schemes can charge a premium for the specialist accommodation provided and also benefit from an income from deferred management fees.
118. It seems to me that these factors, all mean that age restricted developments and in particular extra care communities are less viable than traditional housing schemes. Ultimately, age restricted developers are less able to pay the same price for land as residential developers and it is much harder for age restricted developers, and in particular those seeking to deliver extra care, to secure sites for development and meet the housing needs they aim to supply.<sup>77</sup> Viability is clearly a relevant factor which supports the case under paragraph 172 b) of the NPPF. There is also a strong case for the appeal scheme given the lack of alternative sites in the light of Policy H9 of the SOLP.
119. I note that the SOLP does not allocate any sites for extra care housing, unlike for example in Central Bedfordshire. I also note that the need for extra care housing is recognised in the SCNP, which supports, as was agreed, extra care housing on unallocated sites due to Policy H2a. I am satisfied that the Appellant's need could not be met elsewhere or in any other way and that it would be in the public interest for this to happen on the appeal site.

*Detrimental effect on Environmental, Landscape and Recreation opportunities, and the extent to which they could be moderated.*

120. This factor has been considered in the second issue above. That discussion is not repeated here but it is plainly relevant to paragraph 172 c). Suffice it to say that I have concluded that there would only be localised landscape and visual effects on the AONB. These limited impacts would not cause material harm to the landscape character of the AONB, nor would they conflict with the aims of protecting its special qualities. I have concluded there would be localised landscape and visual effects on the AONB that could be moderated.

---

<sup>76</sup> See section 4 of Richard Garside's POE

<sup>77</sup> See paragraph 4.65 of Richard Garside's POE

### *Other Benefits*

121. The scheme would deliver other benefits. In my view, these can also form part of the exceptional circumstances and public interest. It is the collective benefits and harms which are relevant to paragraph 172 of the NPPF. Both Mr James and Mr Garnett gave evidence as to numerous other significant benefits, individually and cumulatively, which should be weighed in favour of the proposals. These include contributing to the overall supply of housing which is under five-years; savings in public expenditure (NHS and adult care);<sup>78</sup> creating new employment and other economic investment (construction and operation);<sup>79</sup> providing new facilities and services further reinforcing the role and function of Sonning Common; and additional net revenues from Council tax and new homes bonus receipt. Mrs Smith accepted the economic benefits and that bringing facilities to the area, particularly for the older population would be a benefit. It was also accepted that there could be benefits in supporting existing facilities in that residents of Inspired Village sites having the option to support those businesses if they wanted to. No good reason was provided by the Council for discounting the benefits evidence by Mr James or Mr Garnett. The social and economic benefits are matters to which I attribute significant weight. There is a very strong case on exceptional circumstances and public benefits here.

### *Conclusion*

122. Section 85 of the CROW Act 2000 seeks to conserve and enhance the natural beauty of an AONB and paragraph 172 of the NPPF states that great weight should be given to conserving and enhancing landscape and scenic beauty of the AONB. This is not the same as requiring that every development proposal engenders enhancement. Indeed, if that were the case it is difficult to see how major development in an AONB could ever be permitted. It is clearly a matter of balance, but in undertaking that exercise the NPPF makes clear that conserving and enhancing the designated resource is a matter of great weight. In this case I have given great weight to conserving and enhancing landscape and natural beauty of the AONB. The need for the development and the conclusion that there are presently no alternatives outside the designated area are also matters of substantial importance in the public interest. The social and economic benefits attract significant weight. Overall, the benefits would outweigh the localised landscape and visual effects to the AONB. For these reasons I conclude on this issue that exceptional circumstances are demonstrated and that the development would be in the public interest.

### **Other Matters**

123. I have taken into account all other matters raised including the concerns raised by the SCPC, the Rotherfield Peppard Parish Council, the representations made by interested persons including those who gave evidence at the Inquiry and those who provided written submissions. I have already dealt with many of the points raised in the main issues.

124. The SCPC and others objected to the proposed development in the context of the neighbourhood planning process. However, the review of the SCNP has

---

<sup>78</sup> See paragraphs 6.16 to 6.33, PoE of Stuart Garnett. See also CD: K7, CD: K8 (Appendix 1 at page 20 onwards), CD: K12 (pages 2-3), and CD: K30 (pages 6, 12, 13, 20 and 24-26 in particular).

<sup>79</sup> See paragraphs 6.10 to 6.15, PoE of Stuart Garnett

been ongoing since around 2018 but there are no concrete proposals. It is suggested that the proposal is not small scale. However, site SON2 is in fact 3.3 hectares and broadly of the same scale.<sup>80</sup> The SCNP expressly supports extra care housing at Policy H2a albeit no site is allocated. The SCNP policies are now out of date because of the lack of a five year housing land supply to which I attach significant weight. The concerns about the neighbouring planning process are not sufficient to warrant dismissing this appeal.

125. A number of interested persons cited concerns over impacts on local services in particular the doctor's surgery and parking capacity within the centre of Sonning Common. With respect to impacts on local health services, Mr Garnett's evidence provides details of both operational efficiencies and associated social benefits of extra care, which includes the financial benefits arising from savings to the NHS and social care. I consider that extra care housing benefits elderly people in terms of health and wellbeing. The secure community environment and sense of independence can reduce social isolation and encourage greater fitness and healthy lifestyles. It is reasonable to assume that these factors would likely result in a lower number of visits to the GP, reduced hospital admissions and overall savings to the NHS. This is borne out in the research submitted to the Inquiry.
126. A number of objectors raised concerns over parking capacity within the centre of Sonning Common. However, the appeal site lies within an acceptable walking distance of a number of the facilities within the village centre. Trip generation associated with the proposals would not have a materially negative impact on the road network. I note also that a Travel Plan has been submitted in relation to the proposals.<sup>81</sup> I consider that this matter is capable of being secured by means of an appropriately worded planning condition. In addition to the 'supported transport provision' that would be provided for residents, it would be reasonable to expect that a number of residents would use the existing footpath links to access the village centre.
127. A number of objectors also raised concerns over transport safety and the sufficiency of parking on the appeal site. I note that a number of matters are agreed between the Council and the highway authority in SoCG2 Transport. A new vehicular access would be constructed to the east of the existing access on Blounts Court Road. The proposed scheme would provide for off-site highway improvements comprising works associated with the proposed site access, proposed works to pedestrian facilities along the site frontage either side of the site access, widening of the carriageway and a gateway feature along Blounts Court Road, and provision of a zebra crossing on Widmore Lane. Provision would also be made within the scheme for 93 car and 58 cycle parking spaces (12 visitor, 10 staff and 36 resident) that would be provided in relation to the full aspect of the development. Notwithstanding the original RfR5 the highway authority raises no objection to the proposal subject to the agreed conditions and the contributions contained within the s106 Agreement. In my view the concerns raised about transport issues would not provide a reason for rejection of this appeal.
128. A number of objections relate to the impact on local ecology. The appeal site contains habitats of a lower biodiversity value, which are common and

---

<sup>80</sup> See CD: K.18 page 580

<sup>81</sup> See CD: A.8

widespread throughout the District. The appeal scheme provides for a net increase in biodiversity across the site, specifically an increase of 51% for the detailed element. The Ecological Impact Assessment<sup>82</sup> was accepted by the Council as demonstrating net benefit<sup>83</sup> and I attach significant weight to this.

129. At the Inquiry reference was made to numerous appeal decisions. I have taken these into account as appropriate in coming to my decision in this case.

### **Planning Balance**

130. I have concluded that the appeal proposals would be a major development in the AONB where exceptional circumstances apply, and which would be in the public interest. I have given great weight to conserving and enhancing landscape and scenic beauty in the AONB. In terms of paragraph 172 a) of the NPPF I am in no doubt that there is a need this development of 133 units to address the immediate shortfall in the five year housing land supply; to address the critical need for extra care housing in the District; to assist in the freeing up of family housing within South Oxfordshire and to provide the health and well-being benefits to elderly people.
131. The Council argued that with Policy H1 and Policy H13 the need for specialist housing for older people could be met outside the AONB; could be met in people's homes and that needs could be met by 2035. However, I have concluded that there is a specific and immediate need for extra care provision and market extra care housing. From the up-to-date evidence provided at the Inquiry it is clear to me that there are no sites with planning permission in the pipeline other than the Lower Shiplake site which is now uncertain. The case under paragraph 172 b) has been met. That is because the appeal site stands alone as the only site in the whole of the District which can deliver extra care market housing and deliver the affordable housing contribution which the SOLP Policy H9 now requires for C2 uses. In my view extra care housing cannot compete with housebuilders or even other forms of specialist housing for older people because of the build cost, the level of communal facilities and additional sale costs including vacant property costs.
132. In terms of paragraph 172 c) I have concluded there would be localised landscape and visual effects, but these would be relatively small. Only a limited part of the mosaic would be impacted, and this would not alter the overall character of the wider mosaic of the LCT. Plainly such limited impacts would not cause material harm to the landscape character of the AONB, nor would it conflict with the aims of protecting its special qualities. In terms of visual impact, only a small number of nearby locations would have direct views of the appeal proposals where glimpses of the development would be filtered and moderated by perimeter planting and particularly by the woodland belt. Overall, I have concluded under paragraph 172 of the NPPF that the circumstances in this case are exceptional and that the grant of planning permission would be in the public interest.
133. Planning law requires that applications for planning permission be determined in accordance with the development plan unless material considerations indicate otherwise. In this case where the test in paragraph 172 of the NPPF

---

<sup>82</sup> See CD: A32

<sup>83</sup> See PoE of Simon James Appendix 11

has been met it is difficult to see how a decision maker could nonetheless refuse to grant planning permission applying paragraph 11 of the NPPF. However, in terms of the development plan I accept that the proposal conflicts with some elements of the development plan, but it also complies with others. Policies in the SOLP are up-to-date and can be given full weight. The appeal proposal conflicts in part with the SOLP, in particular in terms of the overall strategy (STRAT1) and with relevant policies relating to the AONB (ENV1) However, there is partial accord with Policy H13 and full accordance with Policies H1 3ii, H4, H9, H11, DES1, DES2, DES3, DES4 and DES5.

134. With regard to the SCNP, this was made in 2016, against a different housing requirement albeit it is still within the grace period allowed by Policy H4(2) of the SOLP. The SCNP policies can only be given limited weight in the context of the NPPF as it was based on a Core Strategy which is now withdrawn, and it is out of date for that reason. Its policies reliant on the AONB are also out of date given the lack of a five year housing land supply. The proposal would conflict with Policy H1 in so far as the limitation of development is concerned but the policy is expressed as a minimum and the base target has been increased through the SOLP quantum of housing so the appeal scheme would contribute to that. There would be conflict with Policy ENV1 which aims to protect the AONB but there are exceptional circumstances here. There would be broad accordance with Policy H2a, D1 and D1a and ENV2 albeit that three storey development is an exception and must be justified. I conclude that the appeal proposal is in overall accordance with the development plan and there are no material considerations which indicate otherwise.
135. Even if I had decided that the proposal was in overall conflict with the development plan this is a case where there is no five year housing land supply and therefore the most important policies for determining the appeal are out of date.<sup>84</sup> As to which policies are out of date, it is agreed that the most important for determining the appeal are set out in the RfR. Thus, the tilted balance would be triggered by way of footnote 7 of the NPPF unless paragraph 11 d) i. is satisfied. In this case under paragraph 11 d) i. the adverse effects would not provide a clear reason for refusing the proposed development. It follows therefore that even if the appeal proposal was contrary to the development plan and the tilted balance under paragraph 11 d) ii. of the NPPF applied then the many and varied benefits of the proposals set out above would significantly and demonstrably outweigh any adverse effects. There is no reason to withhold planning permission in this case and I conclude that the appeal should be allowed.

## Planning Conditions

136. The Council submitted a list of conditions which I have considered in the light of the advice in paragraphs 54 and 55 of the NPPF and the Government's PPG on the Use of Planning Conditions. The Appellant has agreed to all of the suggested conditions except for Condition 27 which relates to a Procurement and Employment Strategy. The Appellant has also given consent in writing that Conditions 7-27 may be applied as pre-commencement conditions.<sup>85</sup> Conditions 1, 4 and 5 relate to required time limits and Conditions 2 and 3 are necessary to determine the scope of the application and for the avoidance of

---

<sup>84</sup> NPPF paragraph 11 d) footnote 7

<sup>85</sup> See INQ APP14

doubt. Conditions 6, 7 and 29 are necessary to secure net gains for biodiversity and Condition 8 is required to minimise the impacts of the development on biodiversity. Condition 9 is necessary to limit the local impact of construction work and Condition 10 is required to ensure that electric vehicle charging is provided. Condition 11 is required in the interests of highway safety and Condition 12 is necessary to ensure adequate car parking.

137. Condition 13 is required in the interests of sustainability and to encourage the use of cycling. Condition 14 on sample materials and Condition 15 on ground levels are required in the interests of visual amenity. Condition 16 is required to ensure adequate provision for the management of waste. Condition 17 is necessary to ensure high standards of sustainable design and construction. Condition 18 is necessary to protect the appearance of the area, the environment and wildlife from light pollution. Conditions 19 and 20 are necessary to ensure that the development is assimilated into its surroundings. Condition 21 is necessary to safeguard the trees which are visually important on the site. Condition 22 is required to safeguard heritage assets of archaeological interest. Condition 23 is necessary to prevent pollution and flooding. Condition 24 is required to ensure the proper provision of foul water drainage. Condition 25 is required to prevent pollution and flooding. Condition 26 is necessary to ensure that the development is not unneighbourly.
138. Condition 27 relates to a procurement and employment strategy. The Council considers that the condition would fail the test of necessity as there is no policy support for this requirement and there would be problems about enforcement. However, it seems to me that a local employment and procurement condition is plainly relevant following the Verdin judgment.<sup>86</sup> Employing local people and using local produce, to save miles travelled seems to epitomize the principle of sustainable development. Moreover, the strategy would put in place arrangements to ensure that the information was regularly provided to the Council to demonstrate the performance and effectiveness of the initiatives. The condition would not impose unreasonable or unjustified demands on the Council. The condition would meet the tests in the NPPF.
139. Condition 28 is required to ensure the provision of adequate pedestrian and cycle access to the site in the interests of highway safety. Condition 30 is necessary to ensure that sustainable transport modes are taken up. Condition 31 is necessary to avoid sewage flooding and potential pollution incidents. Condition 32 is necessary to ensure that the development is not unneighbourly or detrimental to highway safety. Condition 33 is required to protect the occupants of nearby residential properties from noise disturbance. Condition 34 is required to mitigate any impacts on air pollution.

### **Overall conclusion**

140. Having considered these and all other matters raised I find nothing of sufficient materiality to lead me to a different conclusion. The appeal is therefore allowed subject to the conditions set out in the attached Schedule.

*Harold Stephens*

INSPECTOR

<sup>86</sup> See INQ APP15 Verdin v SSCLG [2016] EWHC

## **SCHEDULE OF PLANNING CONDITIONS (1-34)**

### Time limit and approved plans relating to the full planning permission

#### **Commencement – Full**

- 1) The development subject to full planning permission, comprising the areas shown as shaded red and green on Drawing No. URB SC[08]00 01 D02 (Site Location Plan), [Phase 1] must be begun not later than the expiration of three years beginning with the date of this permission.

#### **Approved Plans**

- 2) That the element of the development hereby approved full planning permission, as shown within the areas shaded red and green on Drawing No. URB SC[08]00 01 D02 (Site Location Plan), [Phase 1] shall be carried out in accordance with the details shown on the following approved plans, except as controlled or modified by conditions of this permission:

URB SC [08] 00 01 Rev D02 (Site Location Plan)  
URB SC [08] 00 03 Rev D04 (Proposed Block Plan)  
02 Rev 03 (Landscape Plan)  
03 Rev 03 (Hard Landscaping)  
04 Rev 03 (Soft Landscaping)  
URB VC [08] 70 01 Rev D02 (Village Core Elevations)  
URB VC [08] 70 02 Rev D01 (Village Core Elevations)  
URB VC [08] 70 03 Rev D01 (Village Core Elevations)  
URB VC [08] 70 04 Rev D01 (Village Core Elevations)  
URB VC [08] 00 01 Rev D02 (Village Core Ground Floor Plan)  
URB B01 [08] 70 01 Rev D01 (Block 1 Elevations)  
URB B02 [08] 70 01 Rev D01 (Block 2 Elevations)  
URB B03 [08] 70 01 Rev D01 (Block 3 Elevations)  
URB B04 [08] 70 01 Rev D01 (Block 4 Elevations)  
URB B01 [08] 00 01 Rev D00 (Block 1 Floor Plans)  
URB B01 [08] 20 01 Rev D00 (Block 1 Roof Plan)  
URB B02 [08] 00 01 Rev D00 (Block 2 Floor Plans and Roof Plan)  
URB B03 [08] 10 01 Rev D00 (Block 3 Floor Plan)  
URB B03 [08] 00 01 Rev D00 (Block 3 Floor Plan)  
URB B03 [08] 20 01 Rev D00 (Block 3 Roof Plan)  
URB B04 [08] 00 01 Rev D00 (block 4 Floor Plans)  
URB B04 [08] 20 01 Rev D00 (block 4 Roof Plan)  
URB SS [08] 00 01 Rev D00 (Substation)  
OX5025-11PD-004 Rev H – Road Carriageway Widening  
OX5025-16PD-006 Rev A - Cross Sections of Proposed Widening along Blounts Court Road  
OX5025-16PD-004 Rev C - Proposed Off-Site Improvements  
OX5025-16PD-002 Rev C - Proposed Site Access Arrangements  
OX5025-16PD-003 Rev D - Proposed Internal Layout  
OX5025-11PD-007 Rev F - Review of Revised Masterplan (6 Metres Internal Carriageway)  
OX5025-11PD-009 Rev F Proposed Zebra Crossing at Widmore Lane

## Outline Plans

- 3) That the element of the development hereby approved outline planning permission, as shown within the areas shaded blue on Drawing No. URB SC [08] 00 01 D02 (Site Location Plan) shall be carried out in general accordance with the details shown on the following documents:

Illustrative Masterplan PW.1618.L.01 Rev 03  
Design and Access Statement May 2020  
Design Commitment Statement URB-SC A3 90 02-D00 April 21

### Reserved matters and time limit relating to the outline planning permission

## Reserved Matters

- 4) Within a period of three years from the date of this permission all of the reserved matters shall have been submitted for approval in writing by the Local Planning Authority. The reserved matters shall comprise: details of the layout, scale, appearance and landscaping of the development. All reserved matters for any one phase shall be submitted concurrently. No development shall commence within any one phase until there is written approval of all of the reserved matters for that phase and the development shall be carried out in accordance with all of the approved reserved matters.

## Commencement – Outline

- 5) The site subject to outline planning permission, comprising the area shown as shaded blue on Drawing No. URB SC [08]00 01 D02 (Site Location Plan) [Phase 2], shall be begun not later than whichever is the later of the following dates:
- (i) 3 years from the date of this permission: or
  - (ii) 2 years from the approval of the final reserved matters application.

## Biodiversity Enhancement Plan – Outline

- 6) Concurrent with the submission of any reserved matters application related to this outline planning permission, a Biodiversity Enhancement Plan (BEP) shall be submitted to and approved in writing by the Local Planning Authority. The BEP should be broadly in accordance with the outline details of habitat enhancements illustrated in Appendix 13 of the supporting Ecological Impact Assessment (Southern Ecological Solutions, 26/06/2020, Rev E). The BEP should include:
- (a) Details of habitat creation or enhancements (this could cross reference relevant landscape plans) and include suitably detailed drawings and cross sections as required.
  - (b) Details of species enhancements including relevant scale plans and drawings showing the location, elevation and type of features such as bat and bird boxes as appropriate.
  - (c) Selection of appropriate strategies for creating/restoring target habitats or introducing target species.

- (d) Selection of specific techniques and practices for establishing vegetation.
- (e) Sources of habitat materials (e.g. plant stock) or species individuals.
- (f) Method statement for site preparation and establishment of target features.
- (g) Extent and location of proposed works.
- (h) Details of a biodiversity metric assessment

Thereafter, the biodiversity enhancement measures shall be developed on site and retained in accordance with the approved details. All enhancements should be delivered prior to the final occupation of the relevant phase.

#### Pre-commencement conditions

#### **Biodiversity Enhancement Plan – Full**

- 7) Prior to the commencement of the development subject of full planning permission, a Biodiversity Enhancement Plan (BEP) shall be submitted to and approved in writing by the Local Planning Authority. The BEP should be broadly in accordance with the details of habitat enhancements illustrated in Appendix 13 of the supporting Ecological Impact Assessment (Southern Ecological Solutions, 26/06/2020, Rev E). The BEP should include:
- (a) Details of habitat creation or enhancements (this could cross reference relevant landscape plans) and include suitably detailed drawings and cross sections as required.
  - (b) Details of species enhancements including relevant scale plans and drawings showing the location, elevation and type of features such as bat and bird boxes as appropriate.
  - (c) Selection of appropriate strategies for creating/restoring target habitats or introducing target species.
  - (d) Selection of specific techniques and practices for establishing vegetation.
  - (e) Sources of habitat materials (e.g. plant stock) or species individuals.
  - (f) Method statement for site preparation and establishment of target features.
  - (g) Extent and location of proposed works.

Thereafter, the biodiversity enhancement measures shall be developed on site and retained in accordance with the approved details. All enhancements should be delivered prior to the final occupation of the relevant phase.

#### **Construction Environmental Management Plan for Biodiversity**

- 8) Prior to the commencement of any development (including vegetation clearance) a Construction Environmental Management Plan for Biodiversity (CEMP: Biodiversity) shall be submitted to and approved in writing by the Local Planning Authority. The CEMP (Biodiversity) shall include the following:
- (a) Update ecological surveys for relevant habitats and species, update surveys shall follow national good practice guidelines (badgers surveys shall be no older than 6 months).
  - (b) Risk assessment of potentially damaging construction activities.

- (c) Identification of biodiversity protection zones.
- (d) Practical measures (both physical measures and sensitive working practices) to avoid, reduce or mitigate the impacts on important habitats and protected species during construction.
- (e) The location and timing of sensitive works to avoid harm to biodiversity features.
- (f) The times during construction when specialist ecologists need to be present on site to oversee works.
- (g) Responsible persons and lines of communication.
- (h) Use of protective fences, exclusion barriers and warning signs.

Thereafter the approved CEMP (Biodiversity) shall be adhered to and implemented throughout the construction period strictly in accordance with the approved details.

### **Phasing**

- 9) Prior to the commencement of any development subject to full planning permission or submission of the first Reserved Matters for the development subject to outline planning permission, a phasing plan shall be submitted to and approved in writing by the Local Planning Authority. The development of the site shall thereafter be carried out in accordance with the approved phasing plan.

### **Electric Vehicle Charging**

- 10) Prior to the commencement of each phase of development a scheme to provide that phase with Electric Vehicle Charging Points shall be submitted to and approved in writing by the Local Planning Authority. Thereafter, the approved Electric Vehicle Charging Points shall be implemented prior to the first occupation of that phase.

### **Estate Roads and Footpaths**

- 11) Prior to the commencement of each phase of development, details of the estate roads and footpaths within that phase shall be submitted to and approved in writing by the Local Planning Authority. Thereafter, before first occupation of any unit within that phase, the whole of the estate roads and footpaths (except for the final surfacing thereof) shall be laid out, constructed, lit and drained.

### **Car Parking Plan**

- 12) Prior to the commencement of the reserved matters phase of the development plans showing car parking within that phase shall be submitted to and approved in writing by the Local Planning Authority. Thereafter, the agreed car parking provision shall be provided before first occupation of that part of the site and be retained as such thereafter.

### **Cycle Parking**

- 13) Prior to the commencement of each phase of development, details of cycle storage, for that phase shall be submitted to and approved in writing by the

Local Planning Authority. The agreed cycle parking shall be provided before first occupation of that part of the site and be retained as such thereafter.

### **Materials**

- 14) Prior to the commencement of each phase of development, details of all materials, including samples where required, to be used in the external construction and finishes of the development within that phase shall be submitted to and approved in writing by the Local Planning Authority. The development of the site shall thereafter be carried out in accordance with the approved details.

### **Site Levels**

- 15) Prior to the commencement of any development, detailed plans showing the existing and proposed ground levels of that phase, together with the slab and ridge levels of the proposed development, relative to a fixed datum point on adjoining land outside of the application site, shall be submitted to and approved in writing by the Local Planning Authority. Thereafter the development shall be carried out in accordance with the approved details.

### **Refuse and Recycling**

- 16) Prior to the commencement of each phase of development, details of refuse and recycling storage for that phase shall be submitted to and approved in writing by the Local Planning Authority. The refuse and recycling storage shall be implemented in accordance with the approved details prior to the occupation of the development in each phase and retained thereafter.

### **Energy Statement**

- 17) Prior to the commencement of each phase of development, an Energy Statement demonstrating how the development within that phase will achieve at least a 40% reduction in carbon emissions compared with code 2013 Building Regulations, and details of how this will be monitored, shall be submitted to and approved in writing by the Local Planning Authority. Thereafter the development shall be carried out in accordance with the approved details.

### **External Lighting**

- 18) Prior to the commencement of each phase of the development approved in full, and accompanying the first Reserved Matters application for the development approved in outline, a detailed lighting scheme (including street and pathway lighting) for that phase, including a programme for its delivery, shall be submitted to and approved in writing by the Local Planning Authority. The development shall be implemented in accordance with the approved scheme.

### **Landscaping**

- 19) Prior to the commencement of each phase of development, a scheme for the landscaping of that phase including the planting of trees and shrubs, the

treatment of the access road and hard standings, and the provision of boundary treatment shall be submitted to and approved in writing by the Local Planning Authority.

The details shall include schedules of new trees and shrubs to be planted (noting species, plant sizes and numbers/densities), the identification of the existing trees and shrubs on the site to be retained (noting species, location and spread), any earth moving operations and finished levels/contours, and an implementation programme.

The scheme shall be implemented prior to the first occupation or use of that phase of development and thereafter be maintained in accordance with the approved scheme.

In the event of any of the trees or shrubs so planted dying or being seriously damaged or destroyed within 5 years of the completion of the development, a new tree or shrub or equivalent number of trees or shrubs, as the case may be, of a species first approved by the Local Planning Authority, shall be planted and properly maintained in a position or positions first approved in writing by the Local Planning Authority.

### **Landscape Management Plan**

- 20) Prior to the commencement of the first phase of development, a maintenance schedule and a long term management plan for the soft landscaping works for that phase shall be submitted to and approved in writing by the Local Planning Authority. The scheme shall include those areas of the site which are to be available for communal use as open space. The schedule and plan shall be implemented in accordance with the agreed programme.

### **Tree Protection**

- 21) Prior to the commencement of any site works or operations (including the removal of any vegetation or trees) required in relation with the full or outline planning permission, an arboricultural method statement to ensure the satisfactory protection of retained trees during the construction period shall be submitted to and approved in writing by the Local Planning Authority. The matters to be encompassed within the arboricultural method statement shall include the following:
- (a) A specification for the pruning of, or tree surgery to, trees to be retained in order to prevent accidental damage by construction activities.
  - (b) The specification of the location, materials and means of construction of temporary protective fencing and/or ground protection in the vicinity of trees to be retained, in accordance with the recommendations of BS 5837 'Trees in relation to design, demolition and construction' and details of the timing and duration of its erection.
  - (c) The definition of areas for the storage or stockpiling of materials, temporary on-site parking, site offices and huts, mixing of cement or concrete, and fuel storage.
  - (d) The means of demolition of any existing site structures, and of the re-instatement of the area currently occupied thereby.

- (e) The specification of the routing and means of installation of drainage or any underground services in the vicinity of retained trees.
- (f) The details and method of construction of any other structures such as boundary walls in the vicinity of retained trees and how these relate to existing ground levels.
- (g) The details of the materials and method of construction of any roadway, parking, pathway or other surfacing within the root protection area, which is to be of a 'no dig' construction method in accordance with the principles of Arboricultural Practice Note 12 "Through the Trees to Development", and in accordance with current industry best practice; and as appropriate for the type of roadway required in relation to its usage.
- (h) Provision for the supervision of any works within the root protection areas of trees to be retained, and for the monitoring of continuing compliance with the protective measures specified, by an appropriately qualified arboricultural consultant, to be appointed at the developer's expense and notified to the Local Planning Authority, prior to the commencement of development; and provision for the regular reporting of continued compliance or any departure there from to the Local Planning Authority.
- (i) The details of the materials and method of construction of the pedestrian and cycle access to Widmore Lane, which is to in part be of a 'no dig' construction method in accordance with the principles of Arboricultural Practice Note 12 "Through the Trees to Development", and in accordance with current industry best practice; and as appropriate for the type of surface required in relation to its usage.
- (j) A specification of the foundation design for the pedestrian and cycle access to Widmore Lane demonstrating absolute minimal soil excavation, soil compaction or soil contamination within the root protection area of the adjacent trees.

Thereafter the development shall be carried out in accordance with the approved details with the agreed measures being kept in place during the entire course of development.

### **Implementation of Archaeological work**

- 22) Prior to any earth works forming part of the development or the commencement of the development (other than in accordance with the agreed Written Scheme of Investigation), a programme of archaeological mitigation shall be carried out by the commissioned archaeological organisation in accordance with the approved Written Scheme of Investigation. The programme of work shall include all processing, research and analysis necessary to produce an accessible and useable archive and a full report for publication which shall be submitted to the Local Planning Authority.

### **Ground Investigation**

- 23) Prior to the commencement of each phase of development the results of an intrusive ground investigation, analysing the potential for dissolution features and mitigation measures shall be submitted to and approved in writing by the Local Planning Authority. The results shall then be implemented in accordance

with the approved programme and used to inform the surface water drainage design.

### **Foul Drainage**

- 24) Prior to the commencement of each phase of development, a detailed foul water drainage scheme for that phase shall be submitted to and approved in writing by the Local Planning Authority. The development shall be carried out in accordance with the approved details and no part of the development in the phase to which the scheme relates shall be occupied or used until the foul water drainage works to serve that phase have been completed.

### **Surface Water Drainage**

- 25) Prior to the commencement of each phase of development, a detailed surface water drainage scheme relating to that phase shall be submitted to and approved in writing by the Local Planning Authority. This should be based on the principles contained within Flood Risk Assessment and Drainage Strategy reference 3424 Dec 2019 by Scott Hughes Design, sustainable drainage principles and an assessment of the hydrological and hydrogeological context of the development.

The scheme shall include:

- (a) Discharge rates.
- (b) Discharge volumes.
- (c) Catchment plans.
- (d) Maintenance and management of SUDS features.
- (e) Sizing of features – attenuation volume.
- (f) Site wide infiltration tests to be undertaken in accordance with BRE365.
- (g) Ground Investigation Report.
- (h) Detailed drainage layout with pipe/chamber/soakaway numbers & sizes.
- (i) Proposed site levels, floor levels and an exceedance plan.
- (j) Detailed network calculations to include the worst case 1:100 + 40% event.
- (k) SUDS features and sections.
- (l) Details of proposed Primary, Secondary and Tertiary treatment stages to ensure sufficient treatment of surface water prior to discharge.
- (m) Drainage construction details.
- (n) A compliance report to demonstrate how the scheme complies with the "Local Standards and Guidance for Surface Water Drainage on Major Development in Oxfordshire."
- (o) A range of SuDS techniques throughout the site to manage water quantity and maintain water quality.

The development shall be carried out in accordance with the approved details and no part of the development in the phase to which the scheme relates shall be occupied or used until the surface water drainage works to serve that phase have been completed.

## **Construction Method Statement**

- 26) No development shall commence on site (including any works of demolition), until a Construction Method Statement, which shall include the following:
- (a) the parking of vehicles of site operatives and visitors;
  - (b) loading and unloading of plant and materials;
  - (c) storage of plant and materials used in constructing the development;
  - (d) the erection and maintenance of security hoarding including decorative displays and facilities for public viewing, where appropriate;
  - (e) wheel washing facilities;
  - (f) measures to control the emission of dust and dirt during construction;
  - (g) a scheme for recycling/disposing of waste resulting from demolition and construction works;
  - (h) details of measures for the control of noise during construction works;

has been submitted to, and approved in writing by, the Local Planning Authority. The approved Statement shall be adhered to throughout the construction period. The development shall not be carried out otherwise than in accordance with the approved construction methods.

## **Procurement and Employment Strategy**

- 27) Prior to the commencement of development, a Local Employment and Procurement Strategy shall be submitted to, and approved in writing by, the Local Planning Authority. The Strategy shall include:
- (i) Details of recruitment within the development to achieve a minimum of 25% of village staff from within a 5 mile radius of Sonning Common;
  - (ii) Details of the use of local businesses, including purchase of food, beverage and other items to achieve a minimum of 50% of fresh produce (meat, bakery, dairy, fruit and vegetables) from within a 5 mile radius of Sonning Common;
  - (iii) The timing and arrangements for the implementation of these initiatives; and
  - (iv) Suitable mechanisms for monitoring the effectiveness of these initiatives.

All parts of the approved Local Employment and Procurement Strategy shall be implemented in full and retained thereafter.

### Pre-occupancy conditions

## **Pedestrian and Cycle Access**

- 28) Prior to occupation of any development subject to full or outline planning permission, details of the pedestrian/cycle access to the site from Widmore Lane, including a 3.5m wide combined pedestrian/cycle path through the site, associated street lighting facilities and a zebra crossing along Widmore Lane shall be submitted to and approved in writing by the Local Planning Authority. The details shall be based on those shown on plan OX5025-11PD-009 Rev F, subject to the tree protection measure shown in condition 21. The works shall

be carried out and completed in accordance with the approved details before occupation of any part of the site, and permanently retained as such thereafter.

### **Landscape and Ecology Management Plan**

29) Prior to the first occupation of the development hereby approved, a Landscape and Ecology Management Plan (LEMP) for the whole site shall be submitted to and approved in writing by the Local Planning Authority. The content of the LEMP shall include the following:

- (a) Description and evaluation of features to be managed.
- (b) Ecological trends and constraints on site that might influence management.
- (c) Proposals for ecological enhancements for habitats and species as agreed in the Biodiversity Enhancement Plan.
- (d) Aims and objectives of management.
- (e) Appropriate management options for achieving aims and objectives.
- (f) Prescriptions for management actions.
- (g) Preparation of a work schedule (including an annual work plan capable of being rolled forward over a five-year period).
- (h) Details of the body or organization responsible for implementation of the plan.
- (i) Ongoing monitoring and remedial measures.

The LEMP shall include details of the legal and funding mechanism by which the long-term implementation of the plan will be secured by the developer with the management bodies responsible for its delivery. The plan shall also set out (where the results from monitoring show that conservation aims and objectives of the LEMP are not being met) how contingencies and/or remedial action will be identified, agreed and implemented so that the development still delivers the fully functioning biodiversity objectives of the originally approved scheme.

The development shall be implemented in accordance with the approved details and management prescriptions implemented across the site for a timeframe to be agreed within the LEMP.

### **Green Travel Plans**

30) Prior to the occupation of the first phase of the development hereby approved a full and detailed Travel Plan and Travel Information Packs shall be submitted to and approved in writing by the Local Planning Authority. These documents will be updated upon the submission of subsequent phases of the development. Thereafter, that part of the development shall be implemented in accordance with the approved documents and the associated Travel Information Packs issued to each resident upon first occupation.

### **Wastewater**

31) No properties shall be occupied in any phase until confirmation has been provided that either:

- (i) All wastewater network upgrades required to accommodate the additional flows from the development have been completed; or-
- (ii) A housing and infrastructure phasing plan has been agreed with Thames Water to allow additional properties to be occupied.

Where a housing and infrastructure phasing plan is agreed, no occupation shall take place other than in accordance with the agreed housing and infrastructure phasing plan.

### **Service and Delivery Management Plan**

- 32) No building shall be occupied until details of a comprehensive servicing and delivery management plan has been submitted to and approved in writing by the Local Planning Authority in consultation with the Highway Authority. Deliveries and service areas shall be managed in accordance with the agreed scheme.

### Compliance conditions

#### **Construction Hours**

- 33) The hours of operation for construction and demolition works shall be restricted to 08:00-18:00 Monday to Friday and 08:00-13:00 on a Saturday. No work is permitted to take place on Sundays or Public Holidays without the prior written permission of the Local Planning Authority.

#### **Air Quality**

- 34) The air quality mitigation measures outlined in the Air Quality Assessment (Ref REP-10111755A-20191212) shall be carried out in accordance with the recommendations and specifications in the report and implemented prior to occupation of each unit. Thereafter, the mitigation measures shall be retained as approved and in accordance with manufacturer's instructions.

## **APPEARANCES**

### **FOR THE LOCAL PLANNING AUTHORITY:**

Mr Robin Green of Counsel

Instructed by the Solicitor to South  
Oxfordshire District Council

*He called:*

Mr John Jeffcock

## Appeal Decision

Inquiry held on 8 - 11 November 2022

Site visit made on 11 November 2022

**by H Porter BA(Hons), MSc PGDip, IHBC**

**an Inspector appointed by the Secretary of State**

**Decision date: 18<sup>th</sup> January 2023**

---

**Appeal Ref: APP/D3125/W/22/3301202**

**Land West of Wroslyn Road, Freeland, Oxon, OX29 8AQ**

- The appeal is made under section 78 of the Town and Country Planning Act 1990 against a refusal to grant outline planning permission.
  - The appeal is made by Senior Living (Freelands) Ltd against the decision of West Oxfordshire District Council.
  - The application Ref 21/02627/OUT, dated 2 August 2021, was refused by notice dated 31 May 2022.
  - The development proposed is outline planning application for the erection of a retirement community of up to 160 extra care units (C2 use class) with associated communal facilities and open space, with access from Wroslyn Road, (all matters reserved except access) and retention of veterinary practice in the coach house.
- 

### Decision

1. The appeal is dismissed.

### Preliminary Matters

2. The application was submitted in outline with all matters, other than access, reserved for future consideration. I have dealt with the appeal on the basis that plans showing landscaping, site layout, building heights and detailed design are indicative and that up to 160 extra care units could be provided. During the appeal process, a discrepancy in the site's 'red line' boundary was identified and revised plans submitted. I am content to determine the appeal on the basis of the updated plans since the revisions have not materially altered the scheme and no prejudice would result.
3. Under the Inquiry Procedure Rules, Freeland Parish Council and Freeland Friends (the Rule 6 party) were granted Rule 6 status. A General Statement of Common Ground (SoCG) along with additional SoCGs covering Landscape and Visual Matters, Urban Design Matters, and Housing Land Supply (HLS), plus HLS Addendum, were agreed by the Appellant and the Council.
4. I undertook an accompanied Inquiry site visit on 11 November 2022. I also saw the site and general surroundings on three occasions during the Inquiry week, on an unaccompanied basis and from vantages suggested by the parties. This includes one early evening visit when it was dark.
5. A number of non-designated heritage assets (NDHAs) are located within or adjacent to the appeal site, while listed buildings and a Registered Park and Garden (RPG) are proximate to it. Mindful of the provisions within the National Planning Policy Framework, July 2021 (the Framework) that seek to conserve and enhance the historic environment, during the Inquiry, and at my request, the parties made written submissions clarifying their positions in respect of

various designated and non-designated heritage assets and their significance, including any contribution made by their settings. I have taken the parties' heritage responses into account in my decision.

6. On 22 November 2022, the Council published its HLS Position Statement (PS) for the period 1 April 2022 to 31 March 2027, which indicates a 5-year supply of 4,400 dwellings equating to 4.1 years. I deal with this in more detail below.
7. A completed agreement made under s106 of the Town and County Planning Act 1990 (the s106 Agreement) was submitted on 9 December 2022. The submission of the s106 Agreement means the Council's second reason for refusal of the scheme<sup>1</sup> has fallen away. The various provisions and contributions within the s106 Agreement are set out in my reasoning and planning balance. Consideration of the tests set out in the Framework and Regulation 122 of the Community Infrastructure Regulations 2010 (as amended) (the 122 Regs), would only be relevant if I had been minded to allow the appeal.

## Main Issues

8. The main issues in this appeal are:
  - The effect of the proposed development on the character and local distinctiveness of Freeland, including its effect on the local landscape and relevant heritage assets; and,
  - Whether the appeal site offers an appropriate location for the proposed development, having regard to whether it would offer suitable access to a good range of services and facilities and where the need to travel by private car can be minimised.

## Reasons

### *The site, proposals and policy background*

9. The appeal site occupies around 4.3 hectares of land on the west side of Wroslyn Road, towards the southern end of Freeland. The site is part of the grounds associated with Freeland House, which is in use as a care home and within the ownership of the Eynsham Park Estate. The appeal site has matured vegetal boundaries and is accessed via a tree-lined driveway off Wroslyn Road. The same driveway leads to Freeland House, which is outside the appeal site and identified as a non-designated heritage asset (NDHA)<sup>2</sup>. A cluster of agricultural-type buildings, a former coach house and stables, are within the north-west corner of the appeal site, and also identified as NDHAs<sup>3</sup>. Just outside the site's red line and north of the driveway are two estate cottages<sup>4</sup> and a red brick walled garden<sup>5</sup>, also identified as NDHAs associated with the Freeland House estate. A little way to the west, beyond Cuckoo Lane lies the Grade II listed Eynsham Hall Park and Garden (List Entry Number: 1001288), a designated heritage asset.
10. The largest portion of the appeal site is occupied undeveloped grazing paddocks populated by occasional mature trees, including a central Corsican pine. A band of established woodland marks the site's western boundary and

---

<sup>1</sup> CD AD18

<sup>2</sup> CD E2 para 2.16

<sup>3</sup> CD SD21 para 4.11

<sup>4</sup> Freeland Garden Cottage and Stables House

<sup>5</sup> Freeland Nurseries

offers a green buffer between the paddocks and Freeland House. The local landform falls gradually away down towards four detached dwellings that stand between the site's south-eastern boundary and Wroslyn Road.

11. The outline scheme proposes the erection of a retirement community, comprising up to 160 Extra Care units within a series of cottages and apartment buildings, as well as a 'Village Centre' containing communal facilities including a wellbeing centre, shop, cafe, and restaurant. An extant veterinary practice housed in the former coach house would be retained and served by six parking spaces, and the adjacent stables would be converted for residential use. The remaining agricultural-type buildings would be demolished. Access to the site would be via the existing driveway off Wroslyn Road, with improved visibility splays and a new secondary access for pedestrian, cycle and emergency use.
12. The development plan includes the West Oxfordshire Local Plan (2011 – 2031), adopted September 2018 (the LP)<sup>6</sup>, which sets out an overall strategy for accommodating future growth including the most suitable locations for development in the District. Table 4b lists Freeland under the category of 'villages'<sup>7</sup>, which LP Policy OS2 identifies as being suitable for 'limited development' that, amongst other things, respects village character, local distinctiveness, and maintains community vitality. The same policy also lists 'general principles' for all development, including that it is of proportionate and appropriate scale to its context; forms a logical complement to the character of the area; and conserves and enhances the natural, historic, and built environments. LP Policy H2 indicates new dwellings will be permitted in villages in certain circumstances, whilst also requiring accordance with the Policy OS2 general principles.
13. LP Policy OS4 relates to high quality design and establishes that new development should respect the historic, architectural and landscape character of the locality, and contribute to local distinctiveness including through conserving or enhancing areas, buildings, and features of historic, architectural, and environmental significance. The site also falls within the Wychwood Project Area (WPA), to which LP Policy EH2 requires special attention and protection be given to the landscape and biodiversity. LP Policy EH9 requires all development proposals conserve and/or enhance the special character, appearance and distinctiveness of West Oxfordshire's historic environment, including the significance of the District's heritage assets.
14. LP Policy T1 gives priority to locating new development in areas with convenient access to a good range of services and facilities and where the need to travel by private car can be minimised, due to opportunities for walking, cycling and the use of public transport. LP Policy T3 establishes that all new development will be located and designed to maximise opportunities for walking, cycling and the use of public transport and where such opportunities are more limited, other measures will be sought to help reduce car use as appropriate.

*Character, local distinctiveness, landscape and heritage assets*

15. Freeland is a modestly sized, traditional rural village, identified in the West Oxfordshire Design Guide<sup>8</sup> as having a 'Linear' and 'Dispersed' settlement

---

<sup>6</sup> The West Oxfordshire Local Plan (2011 – 2031), adopted September 2018 (the LP) CD C1

<sup>7</sup> CD C1

<sup>8</sup> CD C2

pattern. I observed Freeland to be comprised of two distinct portions. The area known as The Green unfolds where the open countryside that characterises the route along Wroslyn Road from the south meets a loose-knit collection of detached properties in generous plots that are principally grouped around a small triangular green. Moving northwards along Wroslyn Road away from The Green there is a verdant punctuation where the instances of built form decrease, and the route is framed by the tree and hedgerow boundaries of undeveloped fields either side. Just past the driveway to Freeland House and north of Pigeon House Lane there is a transition to the main body of the settlement, distinguished by a more regular concentration of built form and a ribbon-like development pattern.

16. The discernible separation between the two distinct portions of Freeland is aided by undeveloped areas, numerous impressive trees, intermittent views towards the wider undeveloped countryside. The notable absence of street lighting at night reinforces a sense of tranquillity and rurality, which, together with an overall sense of spaciousness, underpins the form and local character of Freeland as a modestly-sized, distinctively rural village.
17. Typical of many traditional settlements, the built form in Freeland has evolved incrementally and is reflected in the mix of older vernacular buildings, small pockets of infill, and later housing-estate type developments at its edges. Yet, while noting some range in the age and architectural styles in Freeland, the majority of domestic buildings are one-and-a-half to two storeys, of stone or masonry construction, with slate or tile pitched roofs, some featuring dormers or gables. Notwithstanding occasional short terraces, dwellings also tend to be detached, or semi-detached, standing in good-sized gardens, many with independent driveway forecourts and pedestrian gateways. The overall consistency of scale and form of domestic buildings offers a sense of spaciousness, which contributes positively to the character and local distinctiveness of the settlement.
18. Against the prevailing backcloth of domestic buildings are occasional larger structures, atypical in terms of their use, height, footprint and architectural detailing. Rather than being representative of the dominant local character of the settlement, such buildings convey a sense of its historic, religious or community status and evolution, and play a defining role in establishing the unique character and distinctiveness of Freeland.
19. One such structure is Freeland House, an imposing late Victorian building, conspicuous for its scale, footprint and ornate detailing. In addition to the principal building are its historic estate grounds. Whether or not in the same use, today the various components including ornamental gardens, parkland, tree-lined avenues, productive gardens and plantations, farmland, and 19<sup>th</sup>-century ancillary estate buildings, collectively reveal the origins and functioning of Freeland House and its grounds as a consciously and holistically planned mid-to-high-status country house estate. Thus, they are all elements that contribute to the significance of Freeland House as a NDHA. The cluster of agricultural-type ancillary estate buildings are ostensibly contemporary with Freeland House and exhibit a similarity in material treatment and historic authenticity in their use and features, which underpins their significance as NDHAs of local importance.
20. Whether or not it satisfies the criteria for statutory listing, Freeland House and its wider estate contribute greatly to the local distinctiveness of Freeland and to

the historic, architectural and landscape character of the locality. There are designed landscape elements within the appeal site itself, including avenues, and undulating designed parkland, containing distinctive 'isolated parkland trees'<sup>9</sup>, which form a part of the historic estate and setting for Freeland House NDHA and the other NDHA estate buildings.

21. The presence of new buildings, timber fencing, and a lit horse menage do not diminish from either the estate parkland qualities of the appeal site nor from the overall intactness of the wider Freeland House estate landscape, which are consistent with the 'Parkland landscapes' type and Eynsham Vale character area described in the West Oxfordshire Landscape Assessment (WOLA)<sup>10</sup>. There is also a correlation between the estate parkland characteristics of the appeal site and the Wooded Estatelands landscape type and landscape character of Freeland described in the Oxfordshire Wildlife & Landscape Study (OWLS)<sup>11</sup>.
22. The local topography and dense bands of established woodland provide relative containment to the appeal site. Yet, despite the natural screening, the appeal site provides a discernible degree of separation between Freeland House and the settlement; its undeveloped nature enabling legibility of Freeland House as a salient and historically high-status structure within the local context. The appeal site encompasses elements that are integral to the designed landscape character of a seemingly authentic and intact historic country estate. Of note are the mature trees creating an avenue along the driveway and significant mature trees within the open grassland portion of the site. The undeveloped paddocks reflect a functional link with the stables that has endured to this day, while the non-native trees, such as the central Corsican pine denote a planned and imposed 'picturesque-style' landscape design, consistent with historic country house estates.
23. The same family responsible for the late 19<sup>th</sup> century development of the Freeland House also owned the Eynsham Hall estate further west, employing the same architect for some of its outbuildings<sup>12</sup>. Today, an avenue of Lime trees links Freeland House with the Eynsham Hall estate RPG although woodlands prevent intervisibility between it and appeal site. Even so, the historic associations and the physical landscape links with the adjacent RPG denote that Freeland House estate is part of the RPG setting and contributes, in a modest but meaningful way, to its significance as a designated heritage asset.
24. Although the appeal site and wider Freeland House estate landscape are not covered by any national or local designation, this does not negate landscape value. Rather, I consider the characteristics of the appeal site and wider Freeland House estate landscape to exemplify aesthetic attraction, visual interest, historic authenticity, and strong sense of place. The opportunities to experience the landscape are offered by a permissive route along the driveway, which is well used by walkers, horse riders and cyclists, conveying a recreational value.
25. The contention that the historic grounds of Freeland House should be considered a 'valued landscape'<sup>13</sup> was first advanced in the Council's PoE<sup>14</sup>.

---

<sup>9</sup> As referred to in the Appellant's Design and Access Statement (DAS) CD SD6 Site Context p. 7

<sup>10</sup> CD C6 p. 12

<sup>11</sup> ID 9 pdf p. 9 and p.12

<sup>12</sup> ID 13 para. 35

<sup>13</sup> For the purposes of paragraph 174a) of the Framework

<sup>14</sup> CD E41 p.54 para 5.33

Nevertheless, a full discussion on this took place during the Inquiry, including in reference to the GLVIA3 guidelines and Landscape Institute's recent technical guidance note<sup>15</sup>. On this basis of the evidence I have seen, heard, and read, I judge the Freeland House estate landscape to embody attributes that elevate it beyond that of generic or ordinary countryside. It follows that the appeal site comprises a part of a valued landscape for the purposes of para 170a) of the Framework. Furthermore, my observations bear out the landscape as having a particularly strong unspoilt character which intensifies its sensitivity to development; warranting its 'conserve' categorisation in the WOLA<sup>16</sup>; and the aim to realise the safeguarding and enhancement of landscape character of parklands set out in the OWLS<sup>17</sup>.

*The effect of the proposals on character and local distinctiveness, local landscape and heritage assets*

26. The site layout and key masterplan principles established within the DAS denote that the Village Centre building would be positioned at the heart of the development, with other buildings located away from the surrounding residential properties, with limitation of development to the southern area of the site<sup>18</sup>. Bearing in mind the constraints identified in the DAS and the minimum quantum of development required to realise a viable scheme and the consequential amount and concentration of built form across the site, there would unquestionably be a significant urban intrusion onto it.
27. Even if vegetal boundaries and additional planting would succeed in partially screening the development from some vantages along Wroslyn Road, I consider there would be a serious undermining of the distinctive local settlement pattern of Freeland. Indeed, the characteristically green and undeveloped nature of the appeal site and the intrinsic verdant punctuation it provides between The Green and the main body of the settlement would be virtually eradicated. Thus, the scheme would advance the coalescence of the distinctively disparate portions that make up the local settlement pattern, harming local character and distinctiveness.
28. Although the precise nature of the layout, scale, appearance and landscaping are all reserved matters, the illustrative Regulating Plan<sup>19</sup> provides an indication of how the proposal could be accommodated on the site. This shows the Village Centre would occupy a footprint compatible with that of Freeland House, with the other seven apartment occupying smaller but nonetheless very large footprints. In between buildings would be a series of parking areas and landscaped courtyards. Collectively, there would be inevitable density of development would be wholly out of keeping with the spacious and more loose-knit characteristics that define the existing local context.
29. Matters of design and scale were discussed in detail during the Inquiry. Usually, a half-storey in building height would be indicative of restricted head room within roof-level accommodation. The indicative typology sections<sup>20</sup>, however, show the proposed 2.5 storey village apartments and Village Centre building as having a 2.4 metre floor-to-ceiling height on the top floor, the same as the two floors below. Irrespective of whether the proposed apartments would constitute

---

<sup>15</sup> CD H33 and CD H32 Table 1

<sup>16</sup> CD C6 p. 15

<sup>17</sup> ID 9 pdf p. 17 and p. 18

<sup>18</sup> CD SD6 pp. 16 - 17

<sup>19</sup> ID 10

<sup>20</sup> CD E25 p. 20

2.5 or 3-storey buildings, and allowing for the indicative nature of the proposals, apartment blocks reaching over 11.5 metres to the roof, the apartments would be of much greater height than the prevailing buildings that characterise the Freeland context. Rather than being of 'domestic scale and appearance', I consider the proposed blocks would be wholly out of keeping with the typical domestic buildings found in Freeland.

30. The only buildings of similar scale in the locality are Freeland House and St Mary's Church. To meet the ambitions of this outline scheme the introduction of numerous blocks over 11 metres high occupying extremely large footprints would, in my judgement, severely diminish legibility of these as important salient structures, to the detriment of the character and local distinctiveness of the settlement. The blocks may not exceed the height of Freeland House but through sheer bulk and number, visual subservience would not be achieved. While the blocks located close to the Wroslyn Road boundary would be lower than those further into the site, there would be a tiering of built form that would be atypical of the domestic built form in Freeland, even where it has developed in depth. To my mind, no matter the details submitted in reserved matters, the necessary scale and form of the buildings across the site would dominate and be wholly uncharacteristic of the local context.
31. I take further issue with the indicative roof design of the proposed blocks, which the same typology section reveal would essentially comprise an expanse of flat roofs concealed by 'dummy' frontage pitches. Detailed design elements could provide some degree of articulation and material variation to the apartment blocks, with the effect of breaking the visual impact of their bulk and mass, yet proportionally, the proposed apartment blocks and Village Centre building would, in reality, be of a height, bulk and form that would be wholly disproportionate and of a scale inappropriate to its context.
32. The constituent parts that make up the Freeland House estate are integral to its overall landscape value and its sensitivity to change. The appeal scheme would severely erode a significant portion of the open undulating parkland area that separates Freeland House from Wroslyn Road. While the central Corsican pine would be retained and a channelled view between it and the spire of St Mary's Church created, the proximity of development would eclipse it as a characteristic feature tree within the site and component of the parkland. The DAS refers to the scheme 'allowing the return of a large proportion of the site to a parkland landscape' and 'setting a balance between the built form and green open space'. By contrast, I consider the urbanising impact of the proposals would be overwhelming and particularly noticeable from the permissive path access driveway. Not only would intactness and historic authenticity of the Freeland House landscape be compromised, but the landscape qualities particular to the appeal site also severely eroded.
33. The settings of Freeland House and of the ancillary estate buildings as NDHAs would be compromised, weakening their significance. Not least two NDHAs would be demolished wholly, while residential conversion of the former stables NDHA would bring about the loss of their intact stalls and internal features, causing complete loss of or serious harm to their significance respectively. The Council has not identified any harm to the significance of the Eynsham Hall RPG<sup>21</sup>. Nevertheless, irrespective of a lack of intervisibility, I judge the appeal scheme would have an adverse impact on lands that are intrinsically linked and

---

<sup>21</sup> ID13 para. 38

- thereby form part of the setting of this designated heritage asset, resulting in some small residual harm to its significance. I deal with the degree of harm and public benefits later in the final heritage and planning balance.
34. Concerns in respect of light-spill and the implications for bat foraging corridors are not shared by the Council's officers and there is nothing substantive to cause me to deviate from their professional judgement. Nonetheless, even if lighting could be carefully designed, at low level to ensure no upward light spill, it seems inevitable that the proposal would create at least some lit intrusion, to the detriment of Freeland's dark skies and tranquil character at night.
35. The Appellant's willingness to work constructively with the Council on the production of a Design Code is laudable. At a more detailed level, the elevation treatments to the buildings, as well as hard and soft landscaping, might offer a sense of material quality to the scheme. Additionally, boundary planting could limit views into the site especially along Wroslyn Road and create attractive external spaces for future occupiers. However, the fundamental objectives of good design go beyond what the scheme may look like on the surface or whether views to it are restricted. Although conditions could ensure certain controls such as natural screening and a production of a design code, the fundamental issues relating to the bulk, massing and sheer size of the development would remain.
36. I am also mindful of the comments made at the Inquiry. On the one hand, that reducing building heights or the quantum of available accommodation at roof level would cause a reduction in unit numbers. Secondly, that the precise nature of the retirement village offer requires a certain level of development. This causes me to doubt there is scope for a material reduction in the scale, layout or quantum of development that could meaningfully come forward at the reserved matters stage. Rather, I judge the proposal has intrinsic and fundamental issues inherent to the need to balance the specific offer with commercial viability and affordable service charges.
37. The Appellant contends that a population increase of around 13% to the settlement would be 'limited'<sup>22</sup>. I cannot agree. While there is no definition of 'limited development' in the LP, in my judgement, a population increase of 13% seen in the context of up to 160 units plus a fully equipped leisure facility with swimming pool, spa, gym and treatment room, restaurant, café, shop and community spaces; around 150 car parking spaces distributed across the site; and 500 or so daily traffic movements generated, and landscaped attenuation pond, cannot sensibly be considered 'limited'.
38. The proposal would not fit with the overall form and layout of its surroundings but cause serious harm to the intrinsic character and quality of the appeal site, as well as wider harm the historic, architectural and landscape character of the locality. Such harms, though localised, would be both severe and permanent. The proposal would not realise 'limited development' in a village, nor would it respect village character or local distinctiveness.
39. Whilst community vitality would be maintained, overall, conflict arises with the strategic element of LP Policy OS2 as well as with its general principles, notably those that require development conserves and enhances the natural, historic and built environment; avoids the loss of an area of open space which makes an important contribution to the character or appearance of the area; protects

---

<sup>22</sup> CD E30 para 8.6 p. 16

or enhances of the local landscape and the setting of the settlement; complements the existing pattern of development and/or the character of the area; and be of a proportionate and appropriate scale to its context. The conflict with the Policy OS2 general principles generates conflict with Policy H2 and the circumstances under which development in villages is supported. Conflict also arises with LP Policies EH2 and OS4. Notwithstanding the Council's case does not advance an objection in respect of heritage asset, my findings in respect of the harm to the significance of NDHA's indicates conflict with LP Policy EH9 would also arise, given that it seeks to conserve and/or enhance the special character, appearance, and distinctiveness of West Oxfordshire's historic environment.

#### *Locational sustainability*

40. In the context of the District's settlement sustainability, Freeland ranks at 28<sup>th</sup> or 29<sup>th</sup> out of the 41 settlements considered for their key services. Indeed, the services and facilities in Freeland include a horticultural nursery, public house, church, village hall, and chapel. While the range is limited, and a primary school might have little bearing for a retirement village community, these facilities are a short, level distance from the appeal site. Opportunities for using public transport to access a wider range of services further afield are offered by a limited local bus service, with additional stops proposed close to the appeal site's entrance.
41. In a usual housing development, it would be reasonable to expect that the day-to-day needs of future residents would have to be met by travel to larger settlements by private car. But the appeal scheme retirement village offer provides a range of additional communal and wellbeing facilities<sup>23</sup>. Even noting some restrictions to access to general public membership, the range of facilities on offer would reduce the necessity to undertake certain journeys by car.
42. The scheme would also provide a Village Transport Service (VTS), consisting of at least one vehicle with at least six seats to facilitate social outings, shopping trips and access to hospital appointments, with priority given to residents of the development and any nominated family member acting as carer<sup>24</sup>. Pragmatically, the VTS would not feasibly offer the type of transport option that could replace private car journeys for staff, visitors or indeed the majority of future occupiers. The quantum of indicative parking provision and anticipated additional trips are testament to this. That said, the LP gives endorsement to 'other measures' to help reduce car use as appropriate where opportunities to use public transport are more limited, such as in Freeland. Furthermore, there is recognition under paragraph 105 of the Framework that opportunities to maximise sustainable transport solutions will vary between urban and rural areas.
43. It would not be reasonable to expect the same level of bus service in a settlement the size of Freeland as in a larger urban area and the frequency of the bus services might suggest its use for occasional leisure trips. The proximity of the site to the facilities in Freeland along with the offer that some of the on-site facilities would be open to the extant community to access, leads me to the view that the proposal would not advance a wholly self-contained,

<sup>23</sup> Those parts of the development comprising the café and shop, restaurant, treatment room, hair salon and open space PID2 p. 3; the swimming pool, gym and fitness studio to be provided within the village Centre Building PID2 p. 9

<sup>24</sup> PID2 p. 8

'inward-looking' development, nor would it disrupt community vitality in Freeland. On balance, I consider the specific nature of the proposal would ensure use of the private car can be minimised, and offer convenient access to a good range of services and facilities. Therefore, I find no conflict arises with LP Policies T1 and T3.

## Other Considerations

### *Need*

44. The PPG recognises there are different types of specialist housing designed to meet the diverse needs of older people, and that there is a significant amount of variability in the types of specialist housing available<sup>25</sup>. The level of need and supply for specialist housing for older people within the District was discussed, including in relation to whether specific developments satisfy that of Extra Care. So too, the most appropriate methodology for measuring the need for specialist accommodation within the District. Considering the scope of the definition of Extra Care housing, including in the PPG and Housing LIN<sup>26</sup>, the shortfall may not be as acute as suggested by the Appellant.
45. Yet, even if the Council's provision of Extra Care housing may be improving and the LP policies performing in securing its provision, there remains compelling evidence of a growing population of older persons in the District, and that the proportion of older people in the Eynsham-Woodstock Sub-Area is even greater, and expected to increase substantially over the plan period and beyond<sup>27</sup>. It is also acknowledged that West Oxfordshire has higher than average rates of owner occupancy and there is an undersupply of provision for older persons within the Eynsham-Woodstock Sub-Area and a lack of future supply in the pipeline<sup>28</sup>.
46. The Framework recognises the importance that a sufficient amount and variety of land comes forward where it is needed, and that the needs of groups with specific housing requirements are addressed. I understand that there are challenges in competing for sites with a traditional volume housebuilder, especially bearing in mind the significant up-front costs involved with this type of development and the provision of facilities it offers. However, other developments providing Extra Care units in the District do appear to be in the existing supply and of a similar overall offer, even if the nature of the facilities may differ.
47. The challenges facing adult health and social care and the need to provide housing for older and disabled people are not to be underestimated. The Council contends the need for extra care housing is lower than suggested by the Appellant. Even if it were, the need for more extra care units, including private ones is clear given the pressures of the local demographic trends in West Oxfordshire that has a higher-than-average proportion of older people, and the Eynsham sub-area greater still. There is also recognition that the health and lifestyles of older people will differ greatly, along with their housing needs, which can range from accessible and adaptable general needs housing to specialist housing with high level care and support<sup>29</sup>.

<sup>25</sup> PPG Paragraph: 010 Reference ID:63-010-20190626

<sup>26</sup> CD H27

<sup>27</sup> CD E18 para 5.1 p. 3

<sup>28</sup> CD AD17 para 5.15

<sup>29</sup> PPG Paragraph: 003 Reference ID: 63-003-20190626

48. The retirement village offer that the appeal scheme proposes would add choice to the provision of specialist accommodation available in the District. The Framework recognises the need for specialist accommodation for the elderly, and the extra care accommodation proposed would help to meet the need to provide housing for older people, which the PPG identifies as critical<sup>30</sup>. While I recognise that there may be a relatively small shortfall, if not a surplus, in the current supply I nonetheless see a significant benefit in meeting the need for older persons' accommodation and broadening the choice of such accommodation on offer in the District.

#### *Housing Land Supply (HLS)*

49. LP Policy H1 relates to the amount and distribution of housing in the District, making provision for at least 15,950 homes over the plan period. It is not in dispute that the Council cannot demonstrate a five-year HLS and that the shortfall against the requirement is 'significant'. Although there are a number of points of agreement between the parties on HLS<sup>31</sup>, they disagree significantly on the extent of the shortfall. The Council's latest position is that it can demonstrate a supply of 4,400 dwellings, equating to 4.1 years; the Appellant considers the supply to be 2,709 dwellings and just 2.5 years<sup>32</sup>. The difference in the parties' positions stems from nine disputed sites.

50. The Council counts 298 dwellings for site Ref CA1, where detailed planning permission was granted for 200 dwellings in 2013 and 23 dwellings are under construction. While a scheme for 275 dwellings is now being pursued, the 200 consented should be considered deliverable unless there is clear evidence that they will not be delivered within five years. The Appellant raises the matter of funding difficulties, and that the Council's 2021 position statement indicates there is potentially no longer an intention to implement the original consent<sup>33</sup>. However, I have seen no clear evidence that the 200 dwellings would not be viable nor anything confirming that if permission for the 275 dwelling scheme is not forthcoming, the 200 homes that have planning permission will not be delivered within five years. Therefore, I consider these 200 dwellings should be counted.

51. For sites to be 'deliverable' as per paragraph 74 of the Framework, there must be *clear evidence* that housing completions will begin on site within five years<sup>34</sup>. That said, in respect of the larger 275 dwelling scheme at site CA1, a planning application has not yet been submitted, consultations on the uplift undertaken, or timescales for resolution of 'other issues' provided. The evidence available does not in my judgement qualify as 'clear evidence' and cannot yet be considered deliverable. Those anticipated 275 dwellings should not be counted.

52. An application for outline planning permission for 200 dwellings at site WIT 2 was submitted in 2014 and is still pending determination. In 2019, an additional full planning application for 110 dwellings was submitted and is also

---

<sup>30</sup> Planning Practice Guidance (PPG) Paragraphs: 001 Reference ID:63-001-20190626 and 016 Reference ID 63-016-20190626

<sup>31</sup> Including that the base date is 31 March 2022 and 5yr period is to 31 March 2027; the HLS should be measured against the "stepped" housing requirement; there is no past shortfall to address; the 5% buffer applies ID23 (paras 1.1 – 1.5)

<sup>32</sup> ID23 (Table 2)

<sup>33</sup> CDE15 para 11.34

<sup>34</sup> To be considered deliverable, sites for housing should be available now, offer a suitable location for development now, and be achievable with a realistic prospect that housing will be delivered on the site within five years (Framework Glossary)

still to be determined. The Council explained that a masterplan is expected in the next three months and an active developer with a proven track record is now involved. The prospects for progress on submission of reserved matters, resolutions on land ownership, and advancement of a masterplan may well seem encouraging to the Council. As it currently stands, I consider the evidence provided relies on speculation and hope, which falls short of what might constitute 'clear evidence'. Therefore, I agree with the Appellant that the 306 dwellings included in the Council's HLS PS should not be counted.

53. For site CN1, evidence provided by the Council is an email from a planning consultant, the anticipated development trajectories and timescales within which indicate the site will not be sold until January 2024 and reserved matters submitted the following month<sup>35</sup>. At the Inquiry, the Council's witness accepted there was a 'broad brush aspect' to the evidence and speculated that a reserved matters application would be 'ready to go' to inform the process of buying the land. While the site may be unconstrained, the purported timescales appear optimistic and lacking robust evidence such as clear progress being made towards approving reserved matters. Consequently, I consider that 235 dwellings at site CN1 cannot be considered 'deliverable' and should be discounted.
54. At site EW1, 50 dwellings of a site with a net capacity of 2,200 are in dispute. While progress on a masterplan may be advancing, it remains outstanding; and while the Council anticipates a hybrid application being forthcoming, it has not been submitted and its precise nature is not yet known. Therefore, while 50 dwellings may seem a conservative figure for such a large, allocated site, there is no 'clear evidence' of their deliverability within 5 years and so they should not currently be counted.
55. The Council identifies 377 dwellings at site EW2, of which 300 are in dispute. The LPA's evidence is an email from Blenheim Strategic Partners<sup>36</sup>, which includes a trajectory up to 2027, accounting for only 70 dwellings at site EW2. Even accepting the Council's evidence relating to these 70 dwellings, the evidence for the other 230 dwellings is lacking and should not be considered deliverable. These 230 dwellings should therefore be discounted.
56. Applications were submitted in January 2021 for sites EW4 and EW5. The same email referred to above refers to consent being granted at the October planning committee, which, when HLS discussions were had at the Inquiry at the end of November, had not happened. I understand that officer illness has caused delays in progressing the applications to committee. However, without an officer report, a recommendation, or even a confirmed committee date, there is currently no clear evidence to indicate that the dwellings at sites EW4 and EW5 included in the Council's PS should be considered deliverable in 5 years. The 156 and 120 dwellings should not, as yet, be included in HLS figures.
57. There remains a dispute over the outline elements at sites 12/0084/P/OP and 14/0091/P/OP. There may be longstanding relationships between the developers and planning officers. However, as no reserved matters applications have been submitted, nor any written agreements or build rates provided, it is doubtful whether there is a realistic prospect that housing will be delivered on the site within five years. On this basis, I agree with the Appellant that 85 and 164 dwellings from these two sites be removed from the HLS figures.

---

<sup>35</sup> CDE43 p. 90

<sup>36</sup> CDE43 pp. 69-70

58. The agreed existence of an undersupply triggers paragraph 11d) of the Framework, and I am not required to identify a precise HLS figure. It was put to me that adopting a 'purist approach' would remove all the units from site, and even if there is some slippage in timescales it doesn't necessarily follow that no housing will come forward within 5 years. However, while there is no express definition of 'clear evidence', the PPG gives examples of far more robust and convincing evidence than that offered by the Council for some of the sites in this case.
59. Pragmatically, some, if not all the housing may be delivered on the discounted sites but the evidence available to me suggests the HLS figure to be worse than suggested by the Council. On my reading of the HLS evidence, and while the actual HLS figure may not be quite as low as purported by the Appellant, the figure is closer to the lower end figure of 2.5 years rather than the Council's upper end figure of 4.1 years.

### **The Heritage and Planning Balance**

60. The absence of a five-year supply of deliverable housing sites triggers application of paragraph 11 d) of the Framework. Firstly, the Framework requires an assessment of whether the application of policies within it that protect areas or assets of particular importance provides a clear reason for refusing the development proposed<sup>37</sup>. Of particular relevance are the policies relating to designated heritage assets.
61. Bearing in mind the scale and nature of the proposals, the degree of harm to the significance of the RPG as a designated heritage asset would be less than substantial, and at the lower end of that scale. In these circumstances, paragraph 202 of the Framework requires the harm be weighed against the public benefits of the proposal. The public benefits the proposal include the provision of Extra Care housing and economic benefits associated with job creation and the construction phases. In my judgement, these would be sufficient to outweigh the scale of harm identified to the significance Eynsham Hall RPG as a designated heritage asset.
62. On this basis, the application of policies in the Framework that protect assets of particular importance does not provide a clear reason for refusing the development. Thus, the proposal benefits from the presumption in favour of sustainable development, indicating permission should be granted unless the adverse impacts of doing so would significantly and demonstrably outweigh the benefits. An important material consideration.
63. A development of the size and use proposed would realise economic benefits associated with the construction phase and proposed use, realising in the region of 30 jobs and ongoing employment, potentially within Freeland. I consider there would be clear economic benefits that carry significant weight.
64. I have born in mind the arguments that no feasible alternative sites exist and the consequences of my dismissing the appeal. Even if the apparent shortfall in Extra Care accommodation is not to the degree claimed by the Appellant, the provision of Extra Care housing carries social benefits associated with enabling older people to live more independently, while also saving on health and social costs in the future and potentially freeing up family homes. Up to 160 extra care units would count against the LPA's housing requirement and against a

---

<sup>37</sup> Framework paragraph 11 d i. as defined in footnote 7

backdrop of a clear and pressing need. It is accepted that there is a HLS shortfall and one more severe than set out by the Council in their evidence. In accordance with the Framework, this leads to a conclusion that the policies which are most important for determining the application area out-of-date. These are material considerations that carry significant weight in favour of the proposal.

65. The proposal would provide the VTS and financial contributions towards provision of bus stops and the existing village bus service. However, these would be of benefit to a very small proportion of the future residents of the proposal, and less so to the wider community. As it would largely be in mitigation of the site's rural location, I attribute very little weight to the benefits associated with the VTS. Some of the proposed facilities would be available for use by local community, albeit some on an age-restricted basis. While Freeland does not benefit from a shop, the size, range and offer of the proposed shop is not yet known. I consider the provision of access to the scheme's facilities would be of moderate benefit to the wider Freeland community, which carries moderate weight in its favour.
66. Healthcare contributions secured under the s106 Agreement for enhancing and improving capacity and facilities at Eynsham Medical Centre would also be as mitigation, which is neutral in the overall planning balance. The proposals would accord with LP policies relating to locational sustainability, highway safety, biodiversity net gains, drainage, affordable housing, flood risk and ecology; therefore, these are also neutral factors. The other environmental credentials mooted, such as the delivery of net zero carbon, are not guaranteed or secured and so I attribute them very little weight.
67. The out-of-datedness of the most important policies, however, does not alter the statutory primacy of the development plan nor indicate they carry no weight. The policies that seek to ensure development protect character and local distinctiveness are central to this decision. I attribute substantial weight to the degree to which the development conflicts with LP policies OS2, H2, EH2, OS4 and H9, which insofar as they are pursuing good design and development that respects the intrinsic character, quality of an area, including local landscape and historic environment, hold a considerable degree of conformity with the Framework's policies.
68. Crucially, the Framework seeks to achieve well-designed and beautiful places as part of the overarching social and environmental objectives of the planning system. Notably, paragraph 130 of the Framework establishes that planning decisions should ensure that developments will add to the overall quality of the area; are sympathetic to local character and history including the surrounding built environment and landscape setting.
69. Other than the low-level of less than substantial harm I have identified to the RPG as a designated heritage asset, which would be outweighed by public benefits, there would be no other harm to nearby listed buildings or their settings (see Other Matters). Yet, in respect of NDHAs on the appeal site, I have identified serious harm would be caused by demolishing the ancillary outbuildings, resulting in a total loss of their significance. There would be also considerable harm to the significance of the stables through their conversion. There would also be harm to the ability to appreciate Freeland House and the complex of estate buildings through development within their settings, causing harm to their significance. Paragraph 203 of the Framework requires the effect

on the significance of a NDHA be taken into account and a balance judgement be required having regard to the scale and harm or loss and the significance of the asset. The NDHAs in this case are of local significance, and the harm and loss of them would add emphasis to the detrimental impact of the proposals on the unique character and local distinctiveness of Freeland.

70. The site is not constrained by designations such as being in a conservation area, the AONB, Green Belt or a flood plain. The absence of such constraints does not diminish the particular sensitivities of the site, nor absolve the severe, irreparable, and permanent impact the proposals would have on the character and local distinctiveness of Freeland. While putting development in the right places can help to reduce development pressures on sensitive locations, I consider that the appeal site is not the right place for the proposed development.
71. The Government's objective to significantly boost the supply of homes and to create high quality, well-located development are not mutually exclusive. Indeed, balancing the need for homes without compromising the safeguarding and improving of the environment is fundamental to what the planning and development process hope to achieve. Embedded within the Framework and the achievement of sustainable development are social objectives that, amongst other things, foster well-designed, beautiful places and environmental objectives that protect and enhance our natural, built, and historic environment. Paragraph 134 of the Framework is also clear that development that is not well designed should be refused, especially where, such as in this case, it fails to reflect local design policies and government guidance on design.
72. There is a serious HLS shortfall and demonstrable need for extra care housing in the District. I see no reason to doubt that the proposal would not be deliverable, nor any reason to question the security of its funding moving forward. Even in the face of this, and the suite of benefits that weigh in favour the proposal, and even were I to take the Appellant's full assessment of the scale of that shortfall, it is my judgement that the adverse impacts of granting planning permission would significantly and demonstrably outweigh the benefits when assessed against the policies in the Framework taken as a whole.

### **Other Matters**

73. The appeal site is located proximate to two listed buildings, the Grade II\* listed Church of St Mary (List Entry Number: 1367941) and the Grade II listed Chapel, Wroslyn Road (List Entry Number: 1053018). Mindful of the statutory duty set out in s66(1) of the Planning (Listed Building and Conservation Areas) Act, 1990 (the Act), I have had special regard to the desirability of preserving their settings. The immediate yard confines, historic built backdrop along Wroslyn Road and wider verdant surroundings of these buildings form part of their settings. These settings, along with the historic, physical, and functional relationship with the settlement of Freeland contribute to the significance and special interest of these listed buildings. Nevertheless, given the location and extent of the proposed development, it would still be possible to appreciate the building's special interest. Therefore, the appeal scheme would preserve the settings and special interest, causing no harm to their significance. I note the Council had no concerns in this regard either<sup>38</sup>.

---

<sup>38</sup> ID13 paras. 43 and 49

74. Interested parties have raised additional concerns with the proposals that sit outside the main issues. I do not wish to diminish the importance of matters relating to highway safety, sewerage in the surrounding river network, ecology and biodiversity. However, these matters have been subject to assessment by independent professionals, none of whom has raised objection (subject to conditions) and I have no compelling evidence to warrant doubting or deviating from their professional judgement. In any event, as I am dismissing the appeal for other reasons, these other potential harms associated with the proposals will not materialise.
75. The Appellant chose to field witnesses who offer extensive professional experience on individual topic areas. I have taken note of the arguments in respect of the absence of comparative professional qualifications from certain witnesses, and the impartiality of others. Where elements of the evidence were evidently speculative, including in respect of testimonies from residents of other Inspired villages, in error, or unsubstantiated, I either reduced or attributed it no weight. However, I found the crux of the arguments and evidence being put, both by the Council and the Rule 6, to be capable of substantiating their respective standpoints on the principal issues at play. Nothing causes me to doubt the particular influence or any professional competence of any witness that would cause me to disregard their evidence wholesale.

### **Conclusion**

76. I consider that the proposal conflicts with the development plan as a whole, taking in account policies that both oppose and support the proposed development. As required by s38(6) of the Planning and Compulsory Purchase Act 2004, determination of this appeal must be made in accordance with the development plan unless material considerations indicate otherwise. The Framework, including its presumption in favour of sustainable development, is an important material consideration. However, I have judged the adverse impacts of granting planning permission would significantly and demonstrably outweigh the benefits assessed against the policies in the Framework taken as a whole. In the circumstances in this case, I do not find material considerations indicate that my decision should be taken otherwise than in accordance with the development plan.
77. For the reasons given above, I conclude that the appeal should be dismissed.

## Non-Technical Summary

This report concludes that the Cherwell Local Plan 2011 – 2031 (Part 1) Partial Review – Oxford’s Unmet Housing Need (the Plan) provides an appropriate basis for the District to meet its commitment to dealing with the unmet housing need of the City of Oxford, provided that a number of main modifications (MMs) are made to it. Cherwell District Council has specifically requested that I recommend any MMs necessary to enable the Plan to be adopted.

Following the hearings, the Council prepared a schedule of proposed modifications and carried out sustainability appraisal (SA) of them, alongside a series of other assessments, including an addendum Habitats Regulations Assessment (HRA), and a second Addendum to the Green Belt Study. The MMs were subject to public consultation over a six-week period. I have recommended their inclusion in the Plan after considering the SA and associated assessments and studies, and all the representations made in response to consultation on them.

The Main Modifications can be summarised as follows:

- MMs to address the deletion of the Policy PR10 (Woodstock) allocation;
- MMs required to address the resulting shortfall in housing;
- MMs to ensure the allocation policies function effectively;
- MMs to make effective the supporting policies; and
- A number of other modifications to ensure that the plan is positively prepared, justified, effective and consistent with national policy.

## Introduction

1. This report contains my assessment of the Cherwell Local Plan 2011 – 2031 (Part 1) – Oxford's Unmet Housing Need (the Plan) in terms of Section 20(5) of the Planning & Compulsory Purchase Act 2004 (as amended). It considers first whether the Plan's preparation has complied with the duty to co-operate (DtC). It then considers whether the Plan is compliant with the legal requirements and whether it is sound. The National Planning Policy Framework 2012 (paragraph 182) (the Framework) makes it clear that in order to be sound, a Local Plan should be positively prepared, justified, effective and consistent with national policy.
2. The revised National Planning Policy Framework was published in July 2018 and further revised in February 2019. It includes a transitional arrangement in paragraph 214 which indicates that, for the purpose of examining this Plan, the policies in the 2012 Framework will apply. Similarly, where the Planning Practice Guidance (PPG) has been updated to reflect the revised Framework, the previous versions of the PPG apply for the purposes of this examination under the transitional arrangement. Therefore, unless stated otherwise, references in this report are to the 2012 Framework and the versions of the PPG which were extant prior to the publication of the 2018 Framework.

## Main Modifications

3. In accordance with section 20(7C) of the 2004 Act the Council requested that I should recommend any MMs necessary to rectify matters that make the Plan unsound and thus incapable of being adopted. My report explains why the recommended MMs are necessary. The MMs are referenced in bold in the report in the form **MM 1**, **MM 2** etc, and are set out in full in the attached Appendix with my (very minor) changes in ~~strike through~~ for deletions and red for additions.
4. Following the examination hearings, the Council prepared a schedule of proposed MMs and alongside that produced a Cherwell Green Belt Study (Second Addendum); a Cherwell Water Cycle Study Addendum; Ecological Advice Cumulative Impacts Addendum; HRA Stage 1 and Stage 2 Addendum; a Landscape Analysis for Policy PR9; a Transport Assessment Addendum; a Site Capacity Sense Check; a Local Plan Viability Assessment Addendum; a Policy PR7b Highways Update; a SA Addendum (including a non-technical summary); a Statement of Consultation Addendum; additional information on the significance of trees; an Equality Impact Assessment; and a DtC Addendum. The MM schedule and its attendant documentation was subject to public consultation for six weeks. I have taken account of the consultation responses in coming to my conclusions in this report.

## Policies Map

5. The Council must maintain an adopted policies map which illustrates geographically the application of the policies in the adopted development plan. When submitting a local plan for examination, the Council is required to provide a submission policies map showing the changes to the adopted policies map that would result from the proposals in the submitted local plan. In this case, the submission policies map comprises the annotated map in Appendix 1

to the Plan, along with various, larger scale, policy-specific Policies Maps inserted in the text.

6. The policies map is not defined in statute as a development plan document and so I do not have the power to recommend main modifications to it. However, a number of the published MMs to the Plan's policies require further corresponding changes to be made to the policies map. These further changes to the policies map were published for consultation alongside the MMs and given a MM number. I have included them, in the interests of clarity, in the Schedule of Main Modifications in the Appendix to this report, but I have amplified their wording to reflect the fact that revised versions of the various Policies Maps are not attached to this report, but can be found in the submitted modifications.
7. When the Plan is adopted, in order to comply with the legislation and give effect to the Plan's policies, the Council will need to update the adopted policies map to include all the changes published alongside the MMs. I have referred to these in what follows below.

## **Context of the Plan**

8. In the Cherwell Local Plan, adopted in 2015 (Local Plan 2015), the Council undertook to continue working with all other Oxfordshire authorities as part of the DtC to address the need for housing across the Housing Market Area (HMA). The authorities concerned had all understood that the City of Oxford might not be able to accommodate all of its housing requirement for the 2011-2031 period within its own boundaries.
9. The Local Plan 2015 made clear that if joint work revealed that the Council, and other neighbouring authorities, needed to meet additional need for Oxford, then this would trigger a 'Partial Review' of the Local Plan 2015. As set out below, that joint work has revealed just such a requirement. The resulting 'Partial Review' is the Plan under examination here.
10. It is useful to recognise too the challenges faced by the City of Oxford. It is the driver of the County's economy and makes a significant contribution to the national economy. Alongside other constraints, the tightness of the Green Belt boundary around the city leads to intense development pressure because of the demand for market housing, the need for more affordable housing, and the parallel economic priority that must be given to key employment sectors.

## **Public Sector Equality Duty**

11. I have had due regard to the aims expressed in S149(1) of the Equality Act 2010. This has included my consideration of several matters during the examination, notably the provision of affordable housing.

## **Assessment of Duty to Co-operate**

12. Section 20(5)(c) of the 2004 Act requires that I consider whether the Council complied with any duty imposed on it by section 33A in respect of the Plan's preparation.

13. In March 2014, prior to the publication of the Strategic Housing Market Assessment (SHMA 2014), the Oxfordshire Councils agreed a process, through a Statement of Cooperation, to address the SHMA's conclusions on housing need, anticipating that there would be unmet need arising from Oxford. Prior to that date, the Councils concerned had been working together as the Spatial Planning and Infrastructure Partnership. This became the Oxfordshire Growth Board (OGB) – a joint committee of six Oxfordshire Councils alongside other bodies including Oxford Universities, the Environment Agency, Network Rail, and the Highways Agency.
14. In November 2014, the OGB agreed that there was limited capacity in Oxford to accommodate the homes required and the resulting shortfall would have to be provided for in neighbouring Districts. A joint work programme was agreed through the OGB for considering the level of that unmet housing need, and the manner in which it could be divided between neighbouring authorities.
15. Oxford City's Strategic Housing Land Availability Assessment (SHLAA) set out the potential sources of supply in Oxford. After testing, the OGB agreed, in November 2015, that Oxford's overall need was 28,000 homes and that 13,000 could be provided within the confines of Oxford itself. That left an unmet housing need for Oxford of 15,000 homes.
16. The OGB then went on to consider how that figure of 15,000 should be apportioned. This was informed by, amongst other things, a review of the urban capacity of Oxford, a Green Belt Study to assess the performance of the Oxford Green Belt against Green Belt purposes, and sustainability testing of spatial options. This led to a decision by the OGB that the final unmet need figure was 14,850 homes and of that total, Cherwell District should accommodate 4,400 homes. That figure forms the basis of the Plan before me.
17. I deal with the provenance of the figures below because they are a separate matter. In pure DtC terms, it is abundantly clear from the process set out above that the Council has engaged through the OGB, constructively, actively and on an on-going basis, in the preparation of the Plan. The duty has therefore been met.

## **Assessment of Other Aspects of Legal Compliance**

18. The Plan has been prepared in accordance with the Council's Local Development Scheme.
19. Consultation on the Plan and the MMs was carried out in compliance with the Council's Statement of Community Involvement.
20. Sustainability Appraisal has been carried out and is adequate.
21. The HRA Stage 1 and Stage 2 Addendum, viewed alongside the original HRA sets out that a full assessment has been undertaken and that while the plan may have some negative impact which requires mitigation, that this mitigation has been secured through the Plan, as modified.

22. The Development Plan, that is this Partial Review viewed alongside the adopted Cherwell Local Plan 2015, includes policies to address the strategic priorities for the development and use of land in the area.
23. The Development Plan, taken as a whole, includes policies designed to ensure that the development and use of land in the local planning authority's area contribute to the mitigation of, and adaptation to, climate change.
24. The Plan complies with all other relevant legal requirements, including in the 2004 Act (as amended) and the 2012 Regulations.

## **Assessment of Soundness**

### **Main Issues**

25. Taking account of all the representations, the written evidence and the discussions that took place at the examination hearings, I have identified seven main issues upon which the soundness of this plan depends.
26. This report deals with these main issues. It does not respond to every point or issue raised by representors. Nor does it refer to every policy, or policy criterion in the Plan.

### **Issue 1: Have the figures for Oxford's unmet need, and the apportionment for Cherwell been justified?**

27. As outlined above, informed by the SHMA 2014 and the SHLAA, the OGB concluded that Oxford has an unmet need of 14,850 homes between 2011 and 2031, and that of that total, Cherwell should accommodate 4,400 homes in the period to 2031.
28. It is relevant to note too that the OGB decided that of that 14,850 figure, alongside Cherwell's apportionment, Oxford itself should accommodate 550, South Oxfordshire 4,950, the Vale of White Horse 2,220, and West Oxfordshire 2,750. I say this is relevant because Inspectors conducting examinations in West Oxfordshire and the Vale of White Horse in relatively recent times have accepted the figures set out above, concluding that the process by which they were produced was a robust and reasonably transparent one.
29. However, at the hearings I conducted, informed in part by a critical review of the SHMA 2014 and the Oxford City SHMA Update 2018 carried out by Opinion Research Services, there was much criticism of the way Oxford City Council had calculated their overall housing need, and their unmet need, with the suggestion being that if the city concentrated more on providing housing rather than employment sites, then they could reduce the pressures on neighbouring authorities. It is not for me to examine Oxford's calculations but I am able to observe that the Inspectors who examined the Oxford Local Plan 2036, that was adopted on 8 June 2020, accepted Oxford's overall housing figures, the extent of unmet need, and the balance between housing and employment sites the city had struck.

30. In that overall context, I find no fault in the way the OGB have approached the difficult problem of identifying Oxford's unmet housing needs and apportioning them between the different authorities involved.
31. I am aware of the 2018-based household projections that were released by the Office for National Statistics on 29 June 2020. However, as I have outlined above, the 4,400 figure that the Plan seeks to address is derived from the inputs into and the approach adopted in the preparation of the Oxford Local Plan 2036. Those inputs, and the approach, have been found sound and the Oxford Local Plan 2036 has now been adopted. The 2018-based projections do not alter the validity of the approach taken by the OGB, or the fact that plans in Oxford, and other neighbouring Districts, have now been adopted. This represents significant progress in meeting Oxford's housing needs, and the adoption of the Plan before me will ensure that another piece of the jigsaw is put in place.

### *Conclusion*

32. As a result, I conclude that the figure for Oxford's unmet need, and the apportionment for Cherwell, have been justified and form a robust basis for the Plan.

### **Issue 2: Have the vision and spatial strategy of the Plan been positively prepared and are they justified and effective?**

33. It is useful to start by looking at the way the Council considered the options available to meet their commitment to meeting their portion of Oxford's unmet need through the SA process. Nine areas of search were identified as potential locations for the housing required: Option A: Kidlington and the surrounding area; Option B: North and East of Kidlington; Option C: Junction 9 of the M40 motorway; Option D: Arncott; Option E: Bicester and the surrounding area; Option F: RAF Upper Heyford and the surrounding area; Option G: Junction 10 of the M40 motorway; Option H: Banbury and the surrounding area; and Option I: Remainder of District/Rural dispersal.
34. Informed by the evidence base, including the SA, and a consultation process, Options C to I (inclusive) were ruled out on the basis that they are too remote from Oxford to accommodate communities associated with the city; they are too far away from Oxford to be well-connected by public transport or walking or cycling, and therefore likely to result in increased use of the private car; more dispersed options provide less potential for infrastructure investment in terms, for example, of transport and education; and significant additional housing could not be built at Bicester, Banbury and RAF Upper Heyford before 2031 alongside major commitments already made in the adopted Local Plan 2015. On top of that, it was concluded that Options C to I (inclusive) would have a greater detrimental impact on the development strategy for the District set out in the Local Plan 2015.
35. Notwithstanding that they are largely located in the Oxford Green Belt, Options A and B were considered by the Council to be much better solutions to meeting the unmet need. They were identified as such largely because of their proximity to Oxford with public transport links already available and ready potential to maximise its use, alongside cycling and walking, thereby creating

travel patterns that are not reliant on the private car. Moreover, these areas already have a social and economic relationship with the city that can be bolstered. Importantly too, these options would allow affordable homes to be provided to meet Oxford's needs close to the source of that need. Finally, the proximity to Oxford and separation from other centres of population in Cherwell means that Options A and B would be unlikely to significantly undermine the development strategy in the Local Plan 2015.

36. That selection process, underpinned by the SA, which has fed into the vision and spatial strategy of the Plan, is logically based, and robust.
37. The Plan's vision is to meet Oxford's unmet housing need through the creation of balanced and sustainable communities that are well-connected to Oxford. The developments are intended to attain a high standard of contextually-appropriate design that is supported by infrastructure. A range of housing types is to be provided to cater for a range of incomes, reflecting Oxford's diversity. Development must contribute to health and well-being and respond well to the natural environment.
38. That vision is augmented by a series of four Strategic Objectives intended to be read alongside those in the Local Plan 2015. SO16 commits the Council to work with Oxford City, and Oxfordshire County Councils and others, to deliver Cherwell's contribution to meeting Oxford's unmet housing need along with the associated infrastructure by 2031. In SO17 the Council undertakes to provide Cherwell's contribution to meeting Oxford's unmet housing need so that it supports the projected economic growth envisaged in the SHMA 2014 and the local economies of Oxford and Cherwell. SO18 ties the Council to providing well-designed housing for Oxford that provides ready access to homes for those in need of affordable housing, new entrants to the housing market, key workers, and those requiring access to the main employment centres in the city. Finally, SO19 seeks to ensure that the housing is provided in a way that complements the County Council's Local Transport Plan, including the Oxford Transport Strategy, and facilitates improvements to the availability of sustainable transport options for gaining access to Oxford
39. In seeking to address the pressing needs of a neighbouring authority in such a transparent and cooperative way, this vision is obviously positively prepared. On top of that, it results from a robust process and is thereby justified.
40. The vision and strategic objectives are then fed into a spatial strategy. In simple terms, the idea behind the spatial strategy is to locate development along the A44/A4260 corridor on a range of sites around North Oxford on land west and east of the Oxford Road (Policies PR6a and PR6b), with land at Frieze Farm reserved for a replacement golf course, if required (Policy PR6c); near Kidlington, on land south east of the settlement (Policy PR7a) and at Stratfield Farm (Policy PR7b); near Begbroke (Policy PR8); near Yarnton (Policy PR9); and near Woodstock (Policy PR10).
41. Leaving aside site-specific matters, especially around the site proposed adjacent to Woodstock, that I move on to below, the spatial strategy follows closely the cogent vision outlined by the Council. In particular, the proximity of (most of) the sites to Oxford itself, and the A44, takes advantage of existing social and economic relationships between these areas and the city and

maximises the potential to create travel patterns that obviate the need for the use of the private car. Further, (most of) the sites would place affordable housing designed to meet Oxford's needs as close as practicable to the city, along a line of communication (the A44) that would facilitate easily accessible means of travelling into the city by bus or cycling.

42. It is important too that, separated from the centres of development in the Cherwell Local Plan 2015 and Banbury, Bicester and RAF Upper Heyford in particular, these sites are unlikely to have a significant impact on the delivery of housing designed to meet Cherwell's own needs.

### *Conclusion*

43. Taking all these points together, the vision and spatial strategy of the Plan have been positively prepared; they are justified; and likely to be effective. That said, most of the sites identified lie within the Oxford Green Belt and if adopted, the Plan will result in areas of land being removed from the Green Belt. I turn to that issue next.

### **Issue 3: Are the exceptional circumstances necessary to justify the alterations to Green Belt boundaries proposed in the Plan in place so that the Plan is consistent with national policy?**

44. Paragraph 83 of the Framework says that once established, Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. Evidently, in preparing a Plan that proposes changes to the boundaries of the Oxford Green Belt, the Council has met the second part of that requirement.
45. In relation to the first part, there a number of factors in play that combined, lead me to the firm conclusion that the exceptional circumstances necessary to justify the alterations proposed to Green Belt boundaries have been demonstrated.
46. Chief amongst these is the obvious and pressing need to provide open-market and affordable homes for Oxford; a need that Oxford cannot meet itself. On top of that, in seeking to accommodate their part of Oxford's unmet need, the Council has undertaken a particularly rigorous approach to exploring various options. That process has produced a vision and a spatial strategy that is very clearly far superior to other options. There is a simple and inescapable logic behind meeting Oxford's open market and affordable needs in locations as close as possible to the city, on the existing A44/A4260 transport corridor, with resulting travel patterns that would minimise the length of journeys into the city, and not be reliant on the private car. On top of that, existing relationships with the city would be nurtured. Finally, this approach is least likely to interfere with Cherwell's own significant housing commitments set out in the Local Plan 2015.
47. It is important to note too the scale of what is proposed. The Oxford Green Belt in the District of Cherwell covers 8,409 Ha. As submitted, and I come on to further removals below, the Plan makes provision in Policy PR3 for the removal of 253 Ha, a reduction of 3%. That is a relatively small reduction that

must be seen in the context of the regional and indeed national benefits that would flow from meeting Oxford's unmet need in such a rational manner.

48. On top of that, as the evidence base, and notably the Green Belt Studies, show that while existing built-up areas of Oxford, Kidlington, Begbroke and Yarnton would be extended into the surrounding countryside, there would be clear, defensible boundaries, both existing ones that could be strengthened further as part of development proposals, and new ones, and whilst the release of some land parcels would result in harm, the overall sense of separation between Kidlington and Oxford in particular, would not be harmfully reduced. Further, the setting and special character of Oxford would not be adversely affected. In that context, the purposes of the Green Belt, as set out in paragraph 80 of the Framework, would not be undermined to any significant degree.

#### *Conclusion*

49. Overall, it is my judgment that the exceptional circumstances necessary to justify the alterations to Green Belt boundaries proposed in the Plan are in place. The Plan is therefore consistent with national policy.

#### **Issue 4: Are the sites proposed for allocation appropriately located in accordance with the Plan's spatial strategy and thereby justified?**

50. The sites proposed for housing in North Oxford (Policies PR6a – Land East of Oxford Road and PR6b – Land West of Oxford Road); Kidlington (Policy PR7a – Land South East of Kidlington and Policy PR7b – Land at Stratfield Farm); Begbroke (Policy PR8 – Land East of the A44); and Yarnton (Policy PR9 – Land West of Yarnton) are relatively close to the boundaries of Oxford itself, adjacent to the A44/A4260, and in the case of the North Oxford sites, very close to Oxford Parkway Railway Station. All would have easy access to modes of travelling into the city that need not involve the private car and would provide opportunities to improve those facilities. Moreover, they would site housing and affordable housing close to where the need is located.
51. As such, this group of sites sit comfortably with the Plan's spatial strategy and their allocation to meet Oxford's unmet housing need has been justified.
52. That leaves the site proposed for housing adjacent to Woodstock (Policy PR10 – Land South East of Woodstock), a settlement that is in the district of West Oxfordshire. Lying outside the Oxford Green Belt, this site lies well beyond Begbroke and Yarnton. It would be identified more as a part of Woodstock than Oxford.
53. Moreover, while it would bound the A44 and benefit from its proximity to London Oxford Airport and the potential Park and Ride service between it and Oxford, and existing bus services, it is too far away from Oxford to make travelling into the city by means other than the private car sufficiently attractive. Walking would be out of the question, and cycling would only be a reasonable proposition for those who are particularly keen.
54. On top of that, the site itself has difficulties in that as a result of recently approved housing that is under construction, the south east boundary of

Woodstock is well-defined. Its further extension in a south-easterly direction would appear incongruous and damage the character and appearance of the area. While not on its own a significant issue, this incongruity would cause some harm to the setting, and thereby the significance of the Blenheim Palace World Heritage Site that lies to the west of the proposed allocation. The challenges of developing the site in an acceptable way are evident in the rather contorted way in which housing on the site would be arranged in relation to green space and the need for screening woodland as shown on the Policy PR10 Policies Map.

55. All these latter points add weight to my fundamental concern about the separation between the proposed allocation and Oxford itself. This, considered alongside the difficulties around gaining access to the city by modes other than the private car, means that the site does not accord with the spatial strategy set out in the Plan. It is not, therefore, justified and Policy PR10 that allocates the site for housing, along with its supporting text must be removed **[MM124 and MM 126]**. The Policy PR10 Policies Map will need to be removed too [advertised by the Council as **MM 125**].
56. There are consequential changes required throughout the Plan **[MM 1, MM 2, MM 8, MM 9, MM 11, MM 22, MM 23, MM 24, MM 25, MM 26, MM 27, MM 28, MM 36, MM 37, MM 40, MM 128, MM 129, and MM 130]**.

#### *Conclusion*

57. The group of proposed allocations closest to Oxford (at North Oxford, Kidlington, Begbroke, and Yarnton) are fully in accord with the Plan's spatial strategy and have therefore been justified. The site proposed for allocation adjacent to Woodstock is not in accord with that spatial strategy, has not been justified, and must therefore be removed from the Plan.
58. That removal has consequences, not least the fact that it leaves the Plan 410 dwellings short of meeting Cherwell's apportionment of Oxford's unmet need. That leads me on to Issue 5.

#### **Issue 5: Have the ramifications of the deletion of the proposed Policy PR10 allocation been dealt with in a manner that is justified and effective?**

59. In setting out to the Council my reasons why the proposed Policy PR10 allocation should be deleted I also made some suggestions as to how the Council might approach the 410 dwelling shortfall that would result. Following on from discussions around residential densities and land take, I made the point that to best accord with the spatial strategy, these 410 dwellings could potentially be spread around the other allocations, with increased densities, and perhaps a western extension of developed area of the Policy PR9 site, with the possibility of housing on the Policy PR6c site (Land at Frieze Farm) reserved for a replacement golf course, if required, but left it to the Council to explore options.
60. To inform that process, the Council carried out further work, notably the Cherwell Green Belt Study (Second Addendum); a Site Capacity Sense Check; a Landscape Analysis for Policy PR9; and a SA Addendum (including a non-technical summary). Having done that, the conclusion drawn was that the

shortfall caused by the deletion of the Policy PR10 allocation could best be accommodated by increasing the amount of housing on five of the remaining six sites, with, in some cases, adjustments to developable areas, site boundaries, and the extent of land to be removed from the Green Belt. Having regard to the additional work the Council carried out, I am satisfied that as a principle, that is the approach that best reflects the spatial strategy.

#### *Policy PR6a*

61. In the form submitted, Policy PR6a – Land East of Oxford Road allocated 48 Ha of land for the construction of 650 dwellings (50% affordable housing) as an urban extension to Oxford at an approximate net density of 40 dwellings per Ha. Also included were a three-form entry primary school (3.2 Ha), a local centre (0.5 Ha), on land to be removed from the Green Belt, alongside sports facilities, play areas, allotments and public open green space as an extension to Cutteslowe Park (11 Ha). The allocation also referred to the creation of a green infrastructure (GI) corridor (8 Ha) connecting Cutteslowe Park with Oxford Parkway Railway Station and the Water Eaton Park and Ride facility and the retention of 3 Ha of the site as agricultural land.
62. At this point it is relevant to deal with the reference to 'approximate net density' in Policy PR6a, and in the other allocation policies. Clearly, much well-informed work has gone into the analysis of what this site, and other sites, can accommodate and the policy, along with others, is crystal clear about the number of dwellings to be provided. In that context, the reference to 'approximate net density' is superfluous. The same point can be made about the other allocations.
63. Further analysis has demonstrated that the density proposed for the residential element of the allocation is reasonable. Having said that, the Education Authority has confirmed that the required primary school need only be two- rather than three-form entry. This reduces the land take for the school from 3.2 Ha to 2.2 Ha. There is no good reason why the 1 Ha gained should not be given over to housing. This increases the housing capacity of the allocation from 650 dwellings to 690 dwellings. Changes to the Plan [**MM 3**, **MM 17**, the change advertised as **MM 45** but amended in the interests of clarity, **MM 46**, and **MM 47**] are required to reflect this increase, and the reasons behind it, and to make the policy, and the Plan, effective.

#### *Policy PR6b*

64. As submitted, Policy PR6b – Land West of Oxford Road proposed an urban extension to the city of Oxford on 32 hectares of land currently occupied by the North Oxford Golf Club with 530 dwellings (50% affordable housing) on 32 Ha of land at an approximate average net density of 25 dwellings per Ha. Land was also reserved within the site to allow for improvements to the existing footbridge over the railway on the western boundary of the site to improve links to the 'Northern Gateway' site which is an allocation in the recently adopted Oxford Local Plan 2036. The intention is to remove the entire site from the Green Belt.
65. Following the main hearings, I made plain that notwithstanding the value placed on the North Oxford Golf Club, the site it occupies is an excellent one for the sort of housing the Plan proposes, given its location so close to Oxford

Parkway, with its Park & Ride, and its proximity to the centre of Oxford. The principle of the allocation is sound, therefore.

66. Moreover, Policy PR6c – Land at Frieze Farm allocates land for a replacement golf course and from what I saw of the existing course, it could, if necessary, provide equivalent or better provision in terms of quantity and quality, on a site very close to the existing facility.
67. The relatively low density of housing proposed reflected the presence of many mature trees on the golf course. Further and closer inspections of the trees have revealed that the low density proposed was unnecessarily cautious and that the density of development could be increased without having to remove any important individual specimens or groups of trees. Moreover, reflective of the position of the site as a 'gateway' to the city, the site could accommodate higher density housing types, not just detached or semi-detached dwellings. All this would allow the overall density to be increased to 30 dwellings per hectare which would mean that the allocation could provide for 670 dwellings, an increase of 140, overall.
68. Changes to the Plan **[MM 4, MM 18, and MM 59]** are required to reflect this uplift, the reasons behind it, and as outlined above, to remove the reference to approximate average net density, to make it function effectively.

#### *Policy PR7a*

69. Policy PR7a – Land South East of Kidlington, as submitted, proposed an extension to Kidlington on 32 Ha on land with 230 dwellings (50% affordable housing) on the northern portion (proposed for removal from the Green Belt) at an approximate average net density of 35 dwellings per Ha, with play areas and allotments, and 0.7 Ha of land reserved for an extension to the existing Kidlington Cemetery. The southern part of the allocation (that would remain within the Green Belt) was to provide around 21 Ha of formal sports facilities.
70. Bearing in mind the way that the settlement of Kidlington approaches the Kidlington roundabout, and the proposed Policy PR7b allocation, that I move on to below, the southern boundary of the area proposed for housing and to be removed from the Green Belt appears arbitrary. Further exploration has shown that extending it southward to follow an historic field boundary would give the site a more logical relationship with development on the opposite side of Bicester Road (a Sainsbury's supermarket complex), and the allocation proposed in Policy PR7b, and allow the allocation to make provision for an additional 200 dwellings, applying the same density metric allowed for the rest of the site. The parallel reduction in formal sports provision is in line with the Council's Playing Pitch Strategy (2018).
71. There would need to be additional land removed from the Green Belt but the boundary so formed would be much more likely to endure, and the sense of separation between Kidlington and Oxford would be largely maintained. As a result, the purposes of the Green Belt would not be harmed to any significant, additional degree. On that basis, bearing in mind the conclusions I have drawn above about the principle of removing land from the Green Belt to meet Oxford's unmet need, I am satisfied that the exceptional circumstances necessary to justify this additional removal are in place.

72. To make it effective, the Plan needs to be updated [**MM 5, MM 19, MM 74 and MM 75**] to reflect that additional housing coming forward as part of the allocation, and to remove the reference to approximate average net density. There is a change needed too [**MM 69**] to paragraph 5.90 of the supporting text to reflect properly the situation in relation to the relationship between the allocation and existing field boundaries. This correction is needed in order to ensure the supporting text accurately and effectively supports the policy itself.
73. There will be consequential changes required to the Policies Map [advertised by the Council as **MM 72** but amended in the interests of clarity] and to clear up some confusion with the policy text that refers to GI [advertised by the Council as **MM 73** but amended in the interests of clarity].

*Policy PR7b*

74. In its submitted form, Policy PR7b – Land at Stratfield Farm allocated 10.5 Ha of land as an extension to Kidlington with 100 dwellings (50% affordable housing) proposed on 4 Ha (an approximate average net density of 25 dwellings per Ha) with associated play areas and allotments (all to be removed from the Green Belt). Also included was the improvement, extension and protection of an existing orchard linked to Stratfield Farmhouse (a Grade II listed building), the creation of a nature conservation area on 6.3 Ha of land, and links to other allocated sites (Policy PR8 across the Oxford Canal and sporting facilities that form part of Policy PR7a) and Oxford Parkway.
75. The allocation has significant constraints, notably capacity at the Kidlington Roundabout, the need to protect as far as possible the farm complex, and its setting, the presence of trees and woodlands, and the relationship with the Stratfield Brake. However, further analysis of capacity at the Kidlington Roundabout, potential layouts, and reducing the size of the nature conservation area by 1 Ha, alongside expansion of the developable area of the site which will ensure that the revised Green Belt Boundary follows a physical feature, in this case an established field boundary, without any significant increase in harm, has shown that 120 dwellings could be accommodated on 5 Ha earmarked for residential development without threatening any of the identified constraints.
76. As with Policy PR7a that I refer to above, there would need to be additional land removed from the Green Belt but this would not result in a significant increase in harm, and the Green Belt boundary so formed would follow a physical feature likely to endure, the sense of separation between Kidlington and Oxford would be maintained, and the relationship between the Policy PR7b allocation, the Policy PR7a allocation, and the Sainsbury's Supermarket between them would be a logical one. As a consequence, the purposes of the Green Belt would not be harmed to any significant, additional degree.
77. On that basis, bearing in mind the conclusions I have drawn above about the principle of removing land from the Green Belt to meet Oxford's unmet need, I am satisfied that the exceptional circumstances necessary to justify this additional removal are in place.
78. Changes are needed to take account of this increase in housing provision and to make Policy PR7b, and thereby the Plan, effective [**MM 6, MM 20, MM83,**

**and MM 84]**. Amendments relating to Stratfield Farmhouse in paragraphs 5.95 and 5.96 of the supporting text are also necessary to properly reflect its aspect and position in relation to the associated orchard **[MM 70]** and to ensure it is one of the parameters for development **[MM 71]**. These changes are required in order to ensure the supporting text accurately and effectively supports the policy itself. There are associated changes required to the Policies Map too [advertised by the Council as **MM 82** but amended in the interests of clarity].

#### *Policy PR8*

79. Policy PR8 – Land East of the A44 as proposed in the Plan proposes a new urban neighbourhood on 190 Ha of land to the north of Begbroke and east of Kidlington. The allocation makes provision for 1,950 dwellings (50% affordable housing) on approximately 66 Ha of land (an approximate average net density of 45 dwellings per Ha), alongside a secondary school on 8.2 Ha of land, a three form entry Primary School on 3.2 Ha of land, a two form entry Primary School on 2.2 Ha, a Local Centre on 1 Ha of land as well as sports facilities and play areas. That area is to be removed from the Green Belt. Also included are a Local Nature Reserve on 29.2 Ha of land based around the Rowel Brook, a nature conservation area on 12.2 Ha of land to the east of the railway line, south of the Oxford Canal and north of Sandy Lane, public open space as informal canalside parkland on 23.4 Ha of land and 12 Ha of land retained in agricultural use.
80. There are to be new public bridleways connecting with existing rights of way and provision for a pedestrian, cycle, and wheelchair bridge over the Oxford Canal and public bridleways to allow connection with the allocation at Stratfield Farm (Policy PR7b) and beyond. Land within the allocation is to be reserved for a future railway station (0.5 Ha) and to allow for the future expansion of the Begbroke Science Park (14.7 Ha).
81. Bearing in mind the relatively high density proposed for the dwellings as part of the allocation, there is no capacity for any increase in housing numbers. That said, as set out, the reference to approximate average net density is superfluous, given that the number of houses to be provided, and details of other requirements are explicitly set out, and needs to be removed **[MM 95]** to make the policy and the Plan effective.

#### *Policy PR9*

82. In the Plan as submitted, Policy PR9 – Land West of Yarnton proposes the development of an extension to Yarnton on 99 Ha of land to include 530 dwellings (50% affordable housing) on 16 Ha (an approximate average net density of 35 dwellings per Ha). On top of the 16 Ha, 1.6 Ha of land is set aside for use by the William Fletcher Primary School to enable expansion and replacement of playing pitches and amenity space. The developable area and land reserved for the primary school is proposed for removal from the Green Belt. Provision for formal sports, play areas and allotments within the developable area (unless shared or part shared with the school) is required along with public access to 74 Ha of land to the west of the residential area and a new Local Nature reserve accessible to the school. There is to be a community woodland in 7.8 Ha of land to the north west of the developable area, to the east of Dolton Lane.

83. Further discussions have shown that the area set aside for the school should be 1.8 Ha. Alongside that, analysis following the hearings has shown that while it would entail further removal of land from the Green Belt, extending the developable area to the west up to the 75m contour, which is approximately the lower end of this topography, would still avoid the greater harm associated with the release of the higher slopes.
84. However, the site does have significant constraints, not least the need to relate properly to the nature of the existing settlement, and it appears that the residential density originally proposed was optimistic. The upshot of an extended developable area, with additional land take from the Green Belt, and a reduced density is that the site can reasonably accommodate 540 dwellings.
85. Changes are required to the policy to address the increase in developable area to 25 Ha, the number of houses to 540, and to delete the reference to approximate average net density [MM 7, MM21, MM 113], and the change relating to the school [MM 114]. Balancing changes need to be made to the area of accessible land (redefined as public open green space) which reduces to 24.8 Ha [MM 115] with the balance of 39.2 Ha being retained in agricultural use [MM 116]. The nature of the access to the countryside that will result needs to be properly explained in paragraph 5.121 of the supporting text [MM 111]. There will need to be corresponding changes to the Policies Map to take account of all that [advertised by the Council as MM 112 but amended in the interests of clarity].
86. There would need to be additional land removed from the Green Belt but as stated above the Green Belt boundary so formed would correspond to the lower end of the topography and a new Green Belt edge could be established. Moreover, it would have no undue impact in landscape terms, and the impact of the change on the purposes of Green Belt would be marginal, in the light of the original deletion proposed. On that basis, bearing in mind the conclusions I have drawn above about the principle of removing land from the Green Belt to meet Oxford's unmet need, I am satisfied that the exceptional circumstances necessary to justify this additional removal are in place.

### *Conclusion*

87. The result of these changes to Policies PR6a, PR6b, PR7a, PR7b, PR8 and PR9, alongside others that I move on to below, is to reinstate the 410 dwellings lost from the overall requirement of 4,400 as a result of the deletion of the Policy PR10 allocation.
88. While I acknowledge that this involves further Green Belt releases, exceptional circumstances have been made out for them. Overall, I consider that the ramifications of the deletion of the Policy PR10 allocation been dealt with in a manner that is justified and effective.

### **Issue 6: Are the remaining elements of the allocation policies, including Policy PR6c, justified, effective and compliant with national policy?**

89. While I acknowledge the need to cover a lot of ground in them, it is fair to say that what remains of the individual allocation Policies PR6a, 6b, 7a, 7b, 8 and 9 after their adjustment to account for the deletion of the PR10 allocation is

lengthy, and broad in its compass. I make no criticism but would observe that the scrutiny through the examination process has resulted in a myriad of changes that as part of the policies themselves, need to be dealt with as MMs.

90. Some of these changes, required to make the policies effective, are common to all of them. Each allocation policy contains a criterion directed towards the production of Development Briefs. In each case, it needs to be made clear that minor variations in the location of specific uses from what is shown on the Policies Maps (as revised) will be permitted, where shown to be justified **[MM 49, MM 60, MM 76, MM 86, MM 99, and MM 117]**.
91. In a similar way, each of the allocation policies outlines the need for a Phase I Habitat Survey. To explain what is required fully, it needs to be made plain that this must include surveys for protected and other notable species, as appropriate **[MM 52, MM 62, MM 77, MM 89, MM 103 and MM 119]**.
92. On top of that, all the allocation policies as drafted contain a criterion that deals with foul drainage and the need for the developer to demonstrate that Thames Water have agreed that it can be accepted into its network. To function effectively, these criteria need to be broadened out to include reference to the Environment Agency as well as Thames Water, and to be more specific about the agreement reached to allow foul drainage to be accepted into the existing network **[MM 54, MM 64, MM 78, MM 90 MM 106 and MM 120]**.
93. None of the allocation policies include a criterion designed to deal with issues around the re-use and improvement of soils. All the sites are green field, or in the case of the Policy PR6b site, cultivated to function as a golf course, and it is evident that there will be a need for soil to be removed. It is an important part of mitigation to ensure that this is re-used in an environmentally effective manner and this needs to be secured in the individual policies to ensure effectiveness **[MM 56, MM 65, MM 80, MM 93, MM 109 and MM 122]**.
94. Each of the allocation policies refers to the need for a Delivery Plan including a start date, and a demonstration to show how the development would be completed by 2031. As drafted, the policies set out the need for a programme showing how a five-year supply of housing (for the site) will be maintained year on year. The inclusion of the term (for the site) introduces a rather inflexible element. The important point is that all sites designed to meet Oxford's unmet need should act in concert to maintain a five-year supply. To be effective, and comply with national policy, the relevant criterion in each allocation policy must be changed to reflect that by the deletion of (for the site) in each case **[MM 57, MM 67, MM 81, MM 94, MM 110, and MM 123]**.
95. Archaeology is the subject of a criterion in each of the allocation policies with reference to the need for desk-based archaeological investigations and subsequent mitigation measures, if found to be necessary. However, to be properly effective, the relevant criterion needs to be more specific and explain that the outcomes of those investigations need to be incorporated or reflected, as appropriate, in any development scheme **[MM 55, MM 63, MM 79, MM 92, MM 108, and MM 121]**.

96. There are then a series of changes required that are individual to the various allocations.

*Policy PR6a*

97. As set out above, Policy PR6a allocates land east of Oxford Road, to the immediate north of the city, and south of the Oxford Parkway complex. In the supporting text that acts as a preamble to the policy itself, paragraph 5.85 refers to the emerging Cherwell Design Guide. The reference to 'emerging' needs to be removed as the document has now been adopted. Moreover, reference to Oxfordshire County Council's Cycling and Walking Design Guides should be included. These changes **[MM 44]** are needed to ensure the context for Policy PR6a is set out effectively.
98. Criterion 7 deals with the GI corridor and, as drafted, requires a pedestrian, wheelchair and all-weather cycle route along the site's eastern boundary as shown. To be consistent, and thereby effective, this needs to be more specific, and must make clear that the route is 'within the area of green space shown on the policies map' **[MM 48]**.
99. Criterion 10 sets out the details of the Development Brief required by criterion 9. Point (b) must be clear that two points of access will be required with primary access/egress from/to the Oxford Road. Point (c) deals with connectivity within the site itself, and with locations further afield but must make plain that access to existing property through the site should be maintained. These changes to criterion 10 **[MM 50, MM 51]** are required to make it effective.
100. The site contains heritage assets including St Frideswide Farmhouse, a Grade II\* listed building, and criterion 15 sets out the need for a Heritage Impacts Assessment. This needs to identify rather than include measures to avoid or minimise conflict with them and further, the criterion needs to make plain that these measures need to be incorporated in any scheme that comes forward for the site. These changes are needed to ensure effectiveness **[MM 53]**.
101. I have referred to archaeology in general terms above but there is a point specific to the site too. As drafted, criterion 28 refers to archaeological features, including the tumuli to the east of the Oxford Road, and the need to make them evident in the landscape design. To be effective, that requirement needs to be strengthened to make the point that the tumuli need to be incorporated into the landscape design as well as made evident **[MM 58]**.

*Policy PR6b*

102. Policy PR6b allocates the site currently occupied by the North Oxford Golf Club, on the opposite side of the Oxford Road from the Policy PR6a site. There are some specific points to deal with here too.
103. Under the requirement for a Development Brief in criterion 8, point (b) talks of 'points of vehicular access and egress from and to existing highways'. To act as an effective pointer for development, this needs to make clear that two points of vehicular access and egress from and to existing highways are envisaged, with the primary access and egress being from and to Oxford Road **[MM 61]**.

104. Criterion 17 requires any planning application that flows from the allocation to be supported by sufficient information to demonstrate that the tests contained in paragraph 74 of the Framework are met, so as to enable the redevelopment of the golf course.
105. I expressed my concerns about this criterion during the hearings and afterwards because it is difficult to see how the allocation could be justified if there remain questions about compliance with paragraph 74. I do understand that the existing golf course is well-appreciated by its users but those that propose its replacement with housing have shown that it is underused, and that there are lots of other facilities where golf can be played nearby. Even if they are wrong on those points, the Plan includes in Policy PR6c that I deal with below, provision for a replacement golf course and, given the requirements of that policy (as proposed to be modified) I see no good reason why it need be inferior in quality or quantity to the existing course.
106. The essential point about paragraph 74 is that to pass the tests therein, the proposal only has to accord with one of the criteria. On that basis, given that criterion 21 of the policy requires a programme for the submission of proposals and the development of a replacement golf course on the Policy PR6c site, if it is needed, before work on the housing on the existing golf course commences, then the requirements of paragraph 74 have been passed already. Criterion 17 serves no purpose, therefore. On that basis, to make the policy effective, the criterion needs to be removed **[MM 66]**.

#### *Policy PR6c*

107. While it is not an allocation that includes housing, it is as well to deal with Policy PR6c at this juncture. In the form submitted, the policy allocates land at Frieze Farm for the potential construction of a golf course, should this be required as a result of the development of the site of the Policy PR6b allocation. It goes on to explain that the application for development of the golf course will need to be supported by a Development Brief prepared jointly, in advance, by representatives of the landowner(s) and the Council, in consultation with Oxfordshire County Council. It is then explained that the intention is that the Development Brief will incorporate design principles that respond to the landscape and Green Belt setting (the site is intended to remain part of the Green Belt) and the historic context of Oxford.
108. As I have explained above, I consider that the extent of the site is such that it could provide a facility that would be similar, or superior, in quality and quantity to the existing course so there is no difficulty in principle here. Nevertheless, the examination showed the policy as drafted to be rather lacking in coverage and detail. There are constraints that will influence any provision of a golf course and associated facilities on the site that need to be addressed. These need to be identified as requirements for the Development Brief referred to above and, as a result, the policy requires significant expansion.
109. The Development Brief will have to include a scheme and outline layout of the golf course and associated infrastructure, and points of vehicular access/egress will need to be identified. Alongside that, connectivity within the site for vehicular, cycle, pedestrian and wheelchair traffic, and their

connections to off-site infrastructure and public transport will need to be set out, as will details of the protection of, and linkage to, existing rights of way. Using some of the language of the policy as submitted, it will need to be made clear that design principles that respond to the landscape, canal-side, and Green Belt setting, and the historic context of Oxford, will be expected. Moreover, the Development Brief will need to address biodiversity gains informed by a Biodiversity Impact Assessment, something I move on to below, and details will be needed of the provision for access by emergency services.

110. Aside from a Development Brief, in line with the other allocations, any application will need to be supported by a Biodiversity Impact Assessment and a Biodiversity Improvement and Management Plan. The latter would need to cover measures for securing net biodiversity gain, and for the protection of biodiversity during the construction process; measures for retaining and securing any notable and/or protected species; a demonstration that designated environmental assets on the site will not be harmed; measures for the protection and enhancement of existing wildlife corridors, hedgerows, and trees; the creation of a GI network with connected wildlife corridors; measures to control any spillage of artificial light, and noise; the provision of bird and bat boxes and for the provision of green walls and roofs; farmland bird compensation; and proposals for long-term wildlife management and maintenance.
111. The policy will also need to address the presence of Frieze Farmhouse, a Grade II listed building, and its environs, as part of the site. This will require a Heritage Impact Assessment which should identify measures to avoid or minimise conflict with designated heritage assets within and adjacent to the site, with these measures then incorporated in any development proposals. There is a need to ensure too that the issue of archaeology is dealt with.
112. A golf course on the site is clearly going to generate trips so there is a need to clarify that any application should include a Transport Assessment and a Travel Plan aimed at maximising access by means other than the private car. The site is well located, close to the northern boundary of Oxford itself, and adjacent to transport corridors, which ought to ensure that is not too onerous a requirement.
113. There will need to be a Flood Risk Assessment, informed by ground investigations and detailed modelling of existing watercourses, with an allowance for climate change. It will also need to be made clear that landforms should not be raised, or new buildings located, in the modelled flood zone.
114. Of course, any application will need to be supported by a detailed landscaping scheme, which should include measures for the appropriate re-use and management of soils. It will also need to be demonstrated that foul drainage can be accepted into the existing network.
115. Finally, the expectation that a single, comprehensive scheme is required for the whole site will need to be made plain in the policy. In parallel to that, there will need to be a Delivery Plan that co-ordinates development with any taking place on the Policy PR6b allocation; the idea being that, if deemed necessary, there will be no period when golfing facilities are unavailable.

116. These additions and alterations to Policy PR6c **[MM 68]** are necessary to ensure it functions in an effective manner.

*Policy PR7b*

117. Policy PR7b allocates land for housing, amongst other things at Stratfield Farm. In the form submitted, criterion 9 refers to the need for a Development Brief for the site, to be prepared in consultation with Oxfordshire County Council and Oxford City Council. To be properly effective, given the nature of the requirements in the policy, and in particular the need for a link across the Oxford Canal, there also needs to be consultation with the Canal and River Trust **[MM 85]**.
118. Criterion 10 sets out the requirements for the Development Brief. Point (b) deals with access and egress and identifies two specific points – the Kidlington Roundabout junction and from Croxford Gardens. This is rather inflexible and to permit other possible solutions using a single access/egress, point (b) needs to include the phrase 'unless otherwise approved'. This addition **[MM87]** is needed to make the policy effective. Linked to that, point (c) refers amongst other things, to an access road from the Kidlington Roundabout to the easternmost parcels of development and the Stratfield Farm building complex only, as shown on the inset Policies Map. Again, to provide flexibility and the potential for alternative solutions, the word 'only' needs to be deleted as does the reference to the inset Policies Map. This change is needed to make the policy effective **[MM 88]**.
119. The need for a Heritage Impact Assessment is set out in criterion 17 with particular reference to Stratfield Farmhouse. This criterion needs to be made more specific in that it should 'identify' rather than 'include' measures to avoid or minimise conflict with identified heritage assets. It also needs to be clarified that heritage assets might well be found adjacent to the site as well as within it. Finally, it needs to be made plain that identified measures should be incorporated or reflected in any development scheme that might come forward. These changes **[MM 91]** are necessary in order to ensure that criterion 17 operates in an effective way.

*Policy PR8*

120. As set out above, Policy PR8 allocates land east of the A44 at Begbroke. Criteria 4 and 5 relate to the Primary Schools and as drafted, the policy sets out that these should be at least three form entry and at least two form entry. It is clear though that no capacity beyond three form entry, and two form entry, will be necessary. On that basis, to ensure the policy is justified, the term 'at least' needs to be removed in each criterion **[MM 96 and MM 97]**.
121. Criterion 17 refers to the need for a Development Brief and lists the need for consultation with the County Council and Oxford City Council. Given the requirements of the policy, and in particular the potential for a railway station/halt, alongside linkages to and over the Oxford Canal, this list needs to include the Network Rail and the Canal and River Trust. These additions are needed to make the policy effective **[MM 98]**.
122. Policy criterion 18 deals with the extent of coverage of the Development Brief. Point (b) refers to access and egress from and to existing highways. The

criterion needs to be clear that two separate 'connecting' points from and to the A44 are needed, to include the use of the existing access road to the Science Park. These changes **[MM 100]** are needed to make the criterion and thereby the policy function effectively.

123. Point (f) of criterion 18 covers the proposed closure/unadoption of Sandy Lane and talks of the need to consult with the County Council. Given that Sandy Lane crosses the railway by way of a level crossing, consultation should also take place with Network Rail. An addition to point (f) is needed **[MM 101]** to make this clear and to make the criterion and the policy effective.

124. Criterion 19 outlines the requirements of the policy in relation to a Biodiversity Impact Assessment. As drafted, the criterion says that there should be investigation of any connectivity, above or below ground, between Rowel Brook and Rushy Meadows Site of Special Scientific Interest (SSSI). Following on from the Rushy Meadows Hydrological and Hydrogeological Desk Study, this requirement for investigation can be made more specific. To reflect the study, the requirement needs to make clear that the Biodiversity Impact Assessment should be informed by a hydrogeological risk assessment to determine whether there would be any material change in ground water levels as a result of the development and any associated impact, particularly on Rushy Meadows SSSI, requiring mitigation. This addition **[MM 102]** is necessary to ensure the criterion and thereby the policy is effective.

125. The need for a Transport Assessment and Travel Plan is covered in criterion 22. Given the proximity to the railway, it needs to be made plain that the Transport Assessment should address the effect of vehicular and non-vehicular traffic resulting from the development on use of the level crossings on Sandy Lane, Yarnton Lane and Roundham. This further clarification **[MM 104]** is needed to make the criterion and the policy effective.

126. Criterion 23 sets out the need for a Flood Risk Assessment (FRA) but the expectation that residential development must be located outside the modelled Flood Zones 2 and 3 envelopes needs to be made explicit. This change **[MM 105]** is required to make the criterion effective.

127. The required Heritage Impact Assessment is the subject of criterion 25. This criterion needs to be made more specific in that it should 'identify' rather than 'include' measures to avoid or minimise conflict with identified heritage assets. Moreover, it needs to be explained that identified measures should be incorporated or reflected in any development scheme that might come forward. These changes **[MM 107]** are necessary in order to ensure that criterion 25 and the policy overall, operate in an effective way.

#### *Policy PR9*

128. As set out above, Policy PR9 allocates land for housing, amongst other things, to the west of Yarnton. Criterion 8 deals with the Development Brief and point (b) refers to vehicular access and egress to and from the A44. This needs expansion to set out the expectation that there will be at least two separate points of access and egress with a connecting road in-between. This change **[MM 118]** is needed to make requirements plain and to ensure the criterion and the policy work in an effective manner.

## *Conclusion*

129. With those MMs, the elements of allocation policies that remain and Policy PR6c will be justified, effective and compliant with national policy.

### **Issue 7: Are the other policies in the Plan, aimed at supporting the allocation policies, and the appendices, justified, effective and consistent with national policy?**

130. The Plan presages the allocation policies discussed above with a series of policies that set the context for what follows.

131. Policy PR1: Achieving Sustainable Development for Oxford's Needs sets out the parameters and general principles of the Plan. The primary aim is to deliver 4,400 homes to help meet Oxford's unmet housing needs by 2031. However, this is a rather narrow definition because the housing needs to come forward alongside supporting facilities. To be absolutely clear, there needs to be a reference in this primary aim to the necessary supporting infrastructure. This addition **[MM 29]** is required to ensure the policy is effective.

132. Following on from that, Policy PR2 deals with housing mix, tenure and size. This covers a range of matters including the provision of 80% of the affordable housing (each allocation envisages it coming forward as 50% of overall house numbers) as affordable rent/social rented dwellings and 20% as other forms of intermediate affordable homes. That is justified by the evidence base but to be properly transparent there needs to be a confirmation in the policy that references to 'affordable housing' mean 'affordable housing as defined by the Framework'. This change **[MM 30]** is necessary to allow the policy to operate effectively. The precise wording of MM 30 says (as defined by the NPPF). I have proceeded on the basis that this means the current (2019) version of that document.

133. In Policy PR3, the Plan deals with the implications of its policies for the Oxford Green Belt. I have dealt above with the issue of 'exceptional circumstances' in relation to the original allocations and their extended forms. Paragraph 5.38 of the supporting text deals with the extent of the removals proposed in order to meet Oxford's unmet housing needs. The extension of some of the allocations through the examination process means that the 253 Ha originally identified for removal needs to be amended to read 275 Ha, alongside a corresponding change to the removal in percentage terms – 3.3% from 3%, and the percentage area of Cherwell that lies within the Green Belt – 13.8% rather than 13.9%, falling from 14.3%. These changes **[MM 31]** are required to ensure transparency and to make the Plan effective. Consequent changes will also be required to the Policies Maps [advertised by the Council as **MM 148** but amended in the interests of clarity].

134. Paragraph 5.39 of the supporting text makes reference under PR3(e) to the potential extension of the Begbroke Science Park. Obviously, this is not a matter for the Plan at issue but to give some context, a reference to Policy Kidlington 1 of the Local Plan 2015 that makes provision for that extension is

needed. This addition **[MM 32]** is necessary to make the Plan accurate and thereby effective.

135. Unsurprisingly, Policy PR3 in the Plan as submitted reflects the allocations as originally promulgated. There have been changes to the areas to be removed from the Green Belt in Policies PR7a (from 10.8 to 21 Ha), PR7b (from 4.3 to 5 Ha) and PR9 (from 17.7 to 27 Ha). I have dealt with the reasoning behind these changes and the question of whether the exceptional circumstances necessary to justify the additional removals are in place above. Policy PR3 needs to be updated **[MM 33, MM 34 and MM 35]** to reflect the revised position post MMs and to be properly effective.
136. GI is dealt with in Policy PR5. Paragraph 5.67 of the supporting text explains that a connected network of GI is an integral part of the vision behind the Plan. It then goes on to list what the provision of GI involves. Point 5 deals with the need to integrate with other planning requirements. Amongst these, sub-point (v) refers to creating high-quality built and natural environments. To give further clarity, this needs to make clear that such environments must be sustainable in the long term. Moreover, the list needs to be expanded to include reference to the construction of sustainable urban drainage systems. These additions **[MM 38]** are required to ensure the explanation in paragraph 5.67 is an effective one.
137. Further, paragraph 5.69 of the supporting text, as drafted, sets out ten reasons why the delivery of GI is so important to the Plan. There is a need to add an eleventh – a reference to the enhancement GI would bring to health and well-being. This addition **[MM 39]** to the text is required in order to put the reasoning behind Policy PR5 on an effective footing.
138. Policy PR5 itself explains the presumption that GI will come forward as part of the strategic allocations with provision made on site except in exceptional circumstances, when financial contributions might be accepted in lieu. The policy then lists nine expectations of applications for development on the allocated sites.
139. The first requires the identification of existing GI and a demonstration of how this will, as far as possible, be protected and incorporated into the layout design and appearance of the proposed development. The 'as far as possible' offers an unreasonable amount of leeway to potential developers. Its removal **[MM 41]** is necessary to ensure the policy protects existing GI effectively.
140. The eighth expectation is for any application to demonstrate where multi-functioning GI can be achieved. This needs to be expanded to take in the ability of GI to address climate change impacts, and for applicants to follow best practice guidance. This addition **[MM 42]** is needed to ensure effectiveness.
141. Expectation 9 addresses the important point that details will be required of how the GI that comes forward will be maintained and managed. It is necessary to make clear that the intention is that GI coming forward will need to be maintained and managed in the long term. This addition **[MM 43]** is required in order that the policy functions in an effective way.

142. Policy PR11 is concerned with the important question of infrastructure delivery. Paragraph 5.143 of the supporting text is part of the preamble to the policy and sets the scene for the way it is intended to operate. There is a reference to the Council's emerging Supplementary Planning Document on Developer Contributions; the descriptor 'emerging' needs to be removed to reflect current circumstances along with the final sentence that refers to an announcement being expected from the Government (about the Community Infrastructure Levy) in the 2017 budget. These changes **[MM 127]** are required in order to ensure the supporting text offers effective support to the policy itself.
143. Policy PR11 itself is concerned with the Council's approach to securing the delivery of infrastructure associated with the housing needed to address Oxford's unmet needs and sets out three ways in which this will be achieved.
144. The first way relates to the way in which the Council will work in partnership with others to address various infrastructure requirements. Of these various requirements, the first relates to the provision of physical, community and GI. However, to work as intended, this should cover not only provision but also maintenance. This change **[MM 131]** is required to ensure the policy functions effectively.
145. The second way refers to the completion and subsequent updating of a Development Contributions Supplementary Planning Document. As this has been completed, that reference needs to be removed **[MM 132]** to ensure effective operation.
146. The third way requires developers to demonstrate through their proposals that infrastructure requirements in a series of areas can be met and with developer contributions in line with adopted requirements. This series of areas needs an addition to cover sport while the reference to adopted requirements needs to refer to the Council's Supplementary Planning Document on Developer Contributions. Alongside another to better articulate what is expected of developers in this regard, these changes **[MM 133]** are needed to make the policy effective.
147. The three ways set out in the policy fail to have regard to the situation where forward funding for infrastructure has been provided by bodies such as the OGB as part of the Oxfordshire Housing and Growth Deal, which needs to be recovered from developers. A new criterion 4 is necessary to secure this **[MM 134]** and make the policy effective.
148. Policy PR12a is concerned with delivery and the maintenance of housing supply. I can see the sense of the Council wanting to separate out their commitment to meeting Oxford's unmet needs from their own commitments in the Local Plan 2015, as set out in the first paragraph of the policy. That would avoid the situation where meeting Oxford's unmet needs could be disregarded because of better than expected performance on the Local Plan 2015 Cherwell commitments, or vice versa. Paragraph 5.165 of the supporting text deals with the trajectory envisaged and sets out three principles. The second refers to the phased delivery of two sites which could be brought forward earlier if required. The passage of time means that phased delivery in this way is no

longer possible and this criterion needs to be removed **[MM 135]** to ensure that the policy itself is supported in an effective way.

149. The third principle, as drafted, refers to the requirement that developers maintain a five-year supply for their own sites. As set out above in dealing with the individual allocations, this requirement is not necessary because it is supply overall that matters. The third principle needs to be amended to explain that what is required is that individual sites operate in concert to maintain a five-year supply. This change **[MM 136]** is necessary to make the policy effective and compliant with national policy.
150. The third paragraph of the policy refers to the phased delivery of the Policy PR7a site, and the Policy PR10 site. As dealt with above, this is now unnecessary, and the third paragraph must be removed **[MM 137]** to ensure effective policy operation.
151. The fifth paragraph of the policy as drafted says that permission will only be granted for any of the allocated sites if it can be demonstrated at application stage that they will deliver a continuous five-year supply on a site-specific basis. This needs to be amended to reflect the fact that, as set out in national policy, it is maintaining a five-year supply overall that matters. This change **[MM 138]** is required to make the policy comply with the national approach, and effective.
152. Policy PR12b is included in order to deal with applications that may be submitted to address Oxford's needs but not on sites allocated in the Plan. In principle, this seems to me a reasonable precaution but the policy in the form submitted has issues that need to be addressed. There are five qualifications that a site that came forward in this way must meet. The first is that the Council must have accepted in a formal way that sites beyond those allocated in the Plan are necessary to ensure a continuous five-year supply and the second requires compliance with Policy PR1. Both are reasonable requirements.
153. The third requires the site that is proposed to have been identified in the Council's Housing and Economic Land Availability Assessment as a potentially developable site. Given the wide compass of that assessment, that is reasonable too but to ensure this requirement is effective the word 'potentially' needs to be removed **[MM 139]**.
154. The fifth qualification sets out the material that will be required to support any application that comes forward. The first of these (a) is a Development Brief. To be effective, this needs to be expanded to include 'place shaping principles for the entire site'. It also needs to be confirmed that the Development Brief needs to be agreed in advance of any application. These changes **[MM 140]** are needed to ensure that this part of the policy is effective.
155. Point (b) refers to a delivery plan to show that the site itself will deliver a five-year supply of housing. As rehearsed above, it is the contribution of the site to supply overall that is important so (b) needs to be amended to reflect that. This amendment **[MM 141]** is needed to make the policy compliant with national policy, and effective.

156. Point (h) covers any Heritage Impact Assessment that might be required. This requirement needs to be amended to reflect modifications made in this regard to the allocation policies that is to require measures to be identified and for them to be included in any subsequent scheme that might come forward. These changes **[MM 142]** are required to make the policy effective.
157. Archaeology is the subject of point (i). This needs to be altered to bring it into line with the corresponding point in the allocation policies – requiring outcomes of any investigation to be incorporated or reflected in any scheme that comes forward. This change **[MM 143]** is required to make the policy effective.
158. There is a significant omission in the policy as submitted in that affordable housing is not mentioned. A new qualification is required to set out the requirement for 50% affordable housing as defined in the Framework (2019) in line with the allocation policies. This addition **[MM 144]** is required to ensure the policy is compliant with the national approach, and effective.
159. Policy PR13 deals with monitoring and securing delivery. It is largely effective in its approach but the last sentence of the third paragraph needs to acknowledge that any cooperative work to identify strategic requirements arising from cumulative growth in the County must take account not only of the Local Transport Plan and the Oxfordshire Infrastructure Strategy but also associated monitoring. This addition **[MM 145]** is necessary to make the policy and thereby the Plan effective.
160. Appendix 3 to the Plan sets out a housing trajectory. This needs to be updated to reflect the deletion of the Policy PR10 site, and the changes to the other allocations. This amendment **[MM 146 with my deletion and addition for the purposes of clarity]**, is needed to ensure the Plan is consistent and therefore effective. A similar update **[MM 147 with my deletion and addition in the interests of clarity]** is needed to Appendix 4 to the Plan which sets out the Infrastructure Schedule, for the same reasons.
161. There are parts of the Plan that relate to the manner in which the Plan was prepared, and its Oxford, and wider context. Changes are required to the text **[MM 10, MM 12, MM 13, MM 14, MM 15, and MM 16]** to ensure these parts of the Plan are up to date and thereby effective.

### *Conclusion*

162. With those MMs, the policies of the Plan aimed at supporting the allocation policies, and the appendices, will be effective.

## Overall Conclusion and Recommendation

163. The Plan has several deficiencies in respect of soundness for the reasons set out above, which mean that I recommend non-adoption of it as submitted, in accordance with Section 20(7A) of the 2004 Act. These deficiencies have been explained in the main issues set out above.
164. The Council has requested that I recommend MMs to make the Plan sound and capable of adoption. I conclude that the DtC has been met and that with the recommended MMs set out in the attached Appendix, the Cherwell Local Plan 2011 - 2031 (Part 1) Partial Review – Oxford’s Unmet Housing Need satisfies the requirements referred to in Section 20(5)(a) of the 2004 Act and is sound.

*Paul Griffiths*

INSPECTOR

This report is accompanied by an Appendix containing the Main Modifications.

## Appendix – Main Modifications

The modifications below are expressed either in the conventional form of ~~striketrough~~ for deletions and underlining for additions of text, or by specifying the modification in words in *italics*.

The page numbers and paragraph numbering below refer to the submission local plan, and do not take account of the deletion or addition of text.

Ref	Page	Policy/ Paragraph	Main Modification

## Executive Summary

---

- Cambridge Econometrics and SQW were commissioned by Vale of White Horse District Council and partners to prepare a set of economic forecasts for Oxfordshire, to be used in the county's Strategic Housing Market Assessment (SHMA) and the Local Enterprise Partnership's (LEP) Strategic Economic Plan (SEP).
- The forecasts developed for the study, using Cambridge Econometrics' Local Economy Forecasting Model (LEFM) were developed in three stages:
  - **Baseline** projections, assuming that historical trends in relative growth in Oxfordshire compared with the wider South East (or UK) economy (on an industry-by-industry basis) seen over the past 15 years or so continue into the future.
  - **Alternative Population-based** projections, in which the Baseline population projections (ONS 2011-based SNPP) for Oxfordshire are replaced with an alternative set that correct particular anomalies (relating to the student population) in the ONS projections.
  - a final, **Planned Economic Growth** forecast, which reflects policy influences on economic growth such as proposals relating to the Science Vale Enterprise Zone, Oxfordshire City Deal, NW Bicester Eco Town and other planned infrastructure investment.
- The Baseline projections suggest that if historical trends in the relative growth performance of the Oxfordshire economy were to continue, employment in the county would increase by 36,400 (approximately 1,800 jobs per annum, or 0.4-0.5% pa) between 2011 and 2031. This is, on average, considerably slower than seen over 2001-11 (about 2,900 jobs pa, or 0.8% pa).
- The Alternative Population-based projections, which better reflect likely population growth in the county, suggest that employment growth in the county could actually average 0.6% pa over 2011-31, before the impact of above-trend policy impacts are added.
- The Planned Economic Growth forecasts suggest that a further (above trend) 27,750 direct jobs and 10,500 indirect jobs could be created in the county by 2031, due to proposals relating to the Science Vale Enterprise Zone, Oxfordshire City Deal, NW Bicester Eco Town and other planned infrastructure investment. This would mean a total increase in employment of around 88,000 over 2011-31, or 4,400 pa (1% pa). This compares with growth of around 3,000 pa (0.8% pa) seen over 2001-11. Sustained employment growth of 1% pa over a 20 year period would be an achievement, especially in the current economic environment, but is by no means unprecedented.
- When the jobs growth by district, based on the Planned Economic Growth forecasts, is compared with land allocated for development by district (taking into account that not all jobs locate on B Class land), it appears that there is sufficient land allocated in all districts except South Oxfordshire, where there could be a shortfall in relation to the requirement indicated under the Planned Economic Growth forecasts.

# 1 Introduction

---

In September 2013 Cambridge Econometrics and SQW were commissioned by Vale of White Horse District Council and partners (Oxfordshire Local Enterprise Partnership, Oxford City Council, Oxfordshire County Council, Cherwell District Council, South Oxfordshire District Council, West Oxfordshire District Council) to prepare a set of economic forecasts for Oxfordshire, to be used in the county's Strategic Housing Market Assessment (SHMA) and the Local Enterprise Partnership's (LEP) Strategic Economic Plan (SEP).

A Planned Economic Growth forecast was developed for the study, using Cambridge Econometrics' Local Economy Forecasting Model (LEFM), in three stages:

- **Baseline** projections, effectively assuming that historical trends in relative growth in Oxfordshire compared with the wider South East (or UK) economy (on an industry-by-industry basis) seen over the past 15 years or so continue into the future. The projections are consistent with CE's baseline economic forecasts for the nations and regions of the UK. Growth in some sectors (public administration, education, health, residential & social care, and retailing) is also influenced by population growth. The input assumptions for population growth in Oxfordshire in the Baseline projections are the ONS 2011-based interim subnational population projections (SNPP).
- **Alternative Population-based** projections, in which the input population projections for Oxfordshire are replaced with an alternative set that correct particular anomalies (relating to the student population) in the ONS projections.
- a **Planned Economic Growth** forecast which reflects policy influences on economic growth such as proposals relating to the Science Vale Enterprise Zone, Oxfordshire City Deal, NW Bicester Eco Town and other planned infrastructure investment

This report describes the methodology and development of the assumptions and forecasts, provides a description and comparison of the results, and draws out the policy implications for Oxfordshire and its districts.

Chapter 2 describes the methodology and results for the Baseline projections. Chapter 3 provides the same information for the Alternative Population-based projections. Chapter 4 provides a narrative and sets out the assumptions for the direct 'above trend' impact on employment for the Planned Economic Growth forecasts, and the results (including indirect and induced jobs) are described in Chapter 5. Finally, Chapter 6 considers the risks that need to be considered in delivering this scale of jobs growth, and how they should be factored into the overall forecasting work.

## 2 Baseline Projections

### 2.1 Introduction

This chapter presents the Baseline projections developed for each of the local authorities and Oxfordshire as a whole. Section 2.2 discusses the modelling framework and key assumptions underlying the Baseline projections, while the remaining sections describe the projections themselves.

### 2.2 LEFM and the Baseline projections

#### **The Baseline projections were developed in LEFM**

The Baseline employment projections presented in this chapter are developed using Cambridge Econometrics' Local Economy Forecasting Model (LEFM) tailored to the economy of Oxfordshire and its component districts (Cherwell, Oxford, South Oxfordshire, Vale of White Horse, West Oxfordshire).

LEFM is a demand-led model that models the relationships between firms, households, government and the rest of the world in a highly disaggregated framework (eg 45 industries), which enables the impact on the economy (employment and value added) of demand-side factors (such as an increase in demand due to stronger world growth) to be analysed. The disaggregated nature of the model is important because it allows the model to distinguish the very different relationships that exist between particular industries. For example, electronics is distinguished from other, more basic, manufacturing sectors that operate in completely different markets.

#### **Only demand-side impacts are modelled**

In LEFM, the impact on a local economy of faster population growth, say, is shown through the increased demand for goods or services in industries that are particularly dependent on population growth (eg retailing, public administration, health, education, leisure services, construction), which would feed through into higher output and employment (and into household incomes and spending) in those sectors.

The demand-side impact of a faster-growing population will not typically impact on firms in the electronics sector in the local area, say, as demand for goods from this sector will come almost entirely from the rest of the UK or world. The impact of supply-side factors, such as an increasingly-skilled workforce in the area attracting firms in particular sectors, is, as in other similar models, not modelled in LEFM.

#### **Population is an input to LEFM...**

In common with most sub-national economic models, population in LEFM is one of a number of inputs to the model – that is, population in LEFM is taken as given and does not change if economic growth in the local area changes.

#### **...and the Baseline uses the ONS 2011-based interim SNPP**

The population projections used for the Baseline projections are based on the ONS' 2011-based interim Sub-National Population Projections (SNPP) made consistent with the latest mid-year estimates (to 2011). As they are interim projections, the 2011-based SNPP only provide projections to 2021. For 2022 onwards the projected trends in the 2010-based SNPP are assumed to continue and so growth rates from the 2010-based SNPP have been applied.

**The Baseline projections assume the continuation of past relationships**

The Baseline projections are based on the assumption that historical relationships between growth in the local area relative to the South East or UK (depending on which area that industry has the strongest relationship with), on an industry-by-industry basis, continue into the future. Thus, if growth in an industry in the local area outperformed the same industry in the region (or UK) as a whole in the past, then it will be assumed to do so in the forecast period. Similarly, if it underperformed the South East (or UK) in the past then it will be assumed to underperform the region (or UK) in the future.

**The projections are consistent with CE's regional forecast, from May 2013**

The projections are consistent with CE's forecast for the regions and nations of the UK, as developed using the Multi-Sectoral Dynamic Model (MDM-E3) of the UK economy and published in May 2013.

The results for Oxfordshire and its districts are projections rather than forecasts. They represent the results of model-based analysis, but have not been refined in the light of qualitative information, legislative changes or other 'soft' information.

**Adjustments were made to the Baseline projections for education**

After reviewing the initial model-based Baseline projections, and following discussion with Oxfordshire County Council and the local authorities, the pure model-based projections for the education sector in Oxfordshire *have* been adjusted. This is because the education sector in Oxfordshire is thought to have particular characteristics that mean that benchmarking all its growth against the South East or UK is not appropriate going forward.

For example, prospects for growth in the education sector in Oxfordshire (particularly Oxford), is dependent to a large degree on demand for university-based research and demand from students throughout the UK and rest of the world (for university places), rather than demand from the school-age population in the county catchment area. With this in mind, the model-based Baseline projection for employment, which takes account of relative population growth in the county (and cuts in government education budgets at the UK level), was thought to be too low, and so adjustments were made to reflect the expectation that the education sector in Oxfordshire will suffer less of a downturn in employment growth in the short and medium term than the model-based projections would suggest.

According to the ONS' Business Register and Employment Survey (BRES), almost half of all employment in education in Oxfordshire is in higher education, compared with only around one-fifth in the South East as a whole. The adjustment made is to assume that the half of employment in higher education in Oxfordshire remains constant over the forecast period (rather than falling, in the short term, in line with CE's assumptions for education as a whole). The other half (pre-school, primary, secondary and 'other') is assumed to move in line with CE's general assumptions for education, reflecting government spending cuts, as in the model-based Baseline projection. The adjustment is made to better reflect the particular drivers behind the education sector in Oxfordshire compared with the standard method for developing baseline projections in LEFM for other areas. The adjusted projection should still be seen as a 'business-as-usual' projection (ie what would happen if past relative

trends continued into the future) rather than any sort of policy adjusted forecast (as described in Chapters 4 and 5).

The result of the adjustment is presented in Figure 2.1, which shows that in the adjusted Baseline projection employment in education in Oxfordshire is around 11,000 higher than in the purely model-based (ie unadjusted) Baseline, in 2031.

The adjustments to the Baseline employment projection for education, by district, are shown in Table 2.1. The adjustment to the projection for employment in education in Oxfordshire as a whole was allocated to the districts based on the relative size of the education sector in each district. Thus, the impact of the adjustment is largest (7,800 in 2031) for Oxford city.

**Figure 2.1: Baseline projection of employment in education, before and after adjustment**

**Table 2.1: Impact of adjustments to Baseline projection of employment in education**

	2011 (000s)	2021 (000s)	2031 (000s)

### The projections are neutral to new policy at local level

Except insofar as particular policies were in force during the period over which the historical relationships have been estimated (around 15 years), and insofar as new policies are taken into account in CE's forecasts at a national and regional level (which drive the local area projections), the Baseline projections by local authority are policy neutral. For example, they would not take into account a new policy that favours a particular sector in the local area, or a decision to release land for economic development at a different rate than in the

past. As mentioned above, the UK regional forecasts underlying the Baseline projections were published by Cambridge Econometrics in May 2013. They take into account analysis of government spending plans as published in HM Treasury's Public Expenditure Statistical Analysis in July 2012 and Autumn Statement in December 2012.

**There are no constraints on labour supply**

In the forecasts developed for this study, it is assumed that employment growth is not restricted by labour market constraints, except insofar as such constraints have existed in the recent past (which would be reflected in the historical relationships that are estimated). If, in the forecast period, the labour supply in the local area is not sufficient to satisfy the level of employment projected, then the shortfall is assumed to be made up by increased net in-commuting.

**Employment in LEFM is measured as 'jobs'**

The measure of employment in LEFM and throughout this report is *jobs*, some of which are part time; the metric is not full time equivalent jobs. This means that the actual number of *people* employed in each area can be less than this figure, if, for example, someone has more than one part-time job. Estimates from the Annual Population Survey suggest that less than 4% of workers hold more than one job. The measure includes self-employment, whether on a full-time or part-time basis.

## 2.3 Headline findings for the Baseline projections

As discussed above, the Baseline projections are model-based projections in which historical relationships between growth in Oxfordshire and growth in the South East or UK, on an industry-by-industry basis, are expected to continue into the future. Rather than being a forecast of what we expect to happen in the future, it is a projection of what the Oxfordshire economy could look like if past trends (in terms of relative growth relationships, rather than trends in growth per se) were to continue into the future, with no change in policy. It should therefore be seen as a starting point, from which to build the further stages in which alternative population projections and changes in policy (be that government policy or changing business investment patterns, say) are taken into account. The further stages are described in subsequent chapters.

**Overall growth in employment in for Oxfordshire**

Figure 2.2 shows the Baseline projection for total employment in Oxfordshire, compared with CE's forecast for the South East. The data are indexed to 2011=100, so that they can be presented and compared in the same chart. The chart shows that employment in Oxfordshire is projected to grow at a slightly slower rate than the South East average in the medium term, and then at about the same rate in the longer term.

Table 2.3 shows levels, changes in levels, and growth rates, for employment in Oxfordshire, the districts and the South East and UK. It shows that over 2011-31 (2011 is the last year for which official ONS employment data were available for Oxfordshire and the districts at the time the forecast was developed) employment in Oxfordshire is projected to increase by 36,400 (approximately 1,800 jobs per annum, or 0.4-0.5% pa). This is, on average, considerably slower than seen over 2001-11 (about 2,900 jobs pa, or 0.8% pa). This result reflects the industry mix in Oxfordshire and CE's UK Regional forecast for prospects in particular sectors (especially education, health and residential & social care).

Figure 2.2: Employment projections in the Baseline

Slightly slower projected growth in employment in Oxfordshire compared to the South East over the whole period means that Oxfordshire's share of South East employment is projected to fall very slightly, from 8.7% in 2011 to 8.6% in 2031.

### Growth projections by sector

Table 2.2 and Figure 2.3 show the Baseline projections for Oxfordshire, by sector. They show that by far the biggest generator of jobs over the forecast period is expected to be financial & business services. The sector is projected to account for almost two thirds of the total increase in employment in Oxfordshire over 2011-31, even though it only accounted for around one fifth of total employment in 2011. By 2031 it is projected to account for just over 24% of employment in the county.

Growth in employment in accommodation & food services is also projected to be quite strong over the forecast period, with growth of 1.5% pa over 2011-21 and 0.9% pa over 2021-31.

Employment in government services is projected to see a slight fall overall (even with the adjustments made to education) between 2011 and 2021, due to the impact of the government's austerity measures on employment in the short and medium term. In the longer term, growth is projected to pick up once again.

Manufacturing employment is projected to see some growth over 2011-21, but to see a fall over 2021-31.

**Figure 2.3: Employment (000s) in 2011 and projected change in jobs 2011-21 and 2021-31 in the Baseline– broad sectors in Oxfordshire**

### Growth projections by district

The Baseline projections for the districts of Oxfordshire are based on the assumption that historical relationships between the relative growth in each district and Oxfordshire as a whole, on an industry-by-industry basis, continue into the future. In a similar way to the projections for Oxfordshire as a whole, therefore, the projections for overall growth in each district will depend on these historical relationships, industry mix, and the projections for growth by industry in Oxfordshire.

The Baseline projections (see Table 2.3) show employment growth picking up in *Cherwell*, following a fall between 2001 and 2011 (-0.4% pa), to grow faster (0.6% pa) than the South East (0.5% pa) as a whole over 2011-21 and at about the same rate (0.5%pa) over 2021-31. In absolute terms, Cherwell is projected to see the greatest increase in job numbers (4,800) among the Oxfordshire districts over 2011-21.

Employment growth in *Oxford*, on the other hand, is projected to slow from the rapid growth of 2% pa seen over 2001-11, to see no overall increase over 2011-21 and then grow slightly more slowly than the South East as a whole, at 0.4% pa, over 2021-31. The rapid growth in employment in Oxford over 2001-11 was driven mainly by very rapid (7.8% pa) growth in employment in education: 16,000 of the 22,000 additional jobs in the city during that period were in education. The Baseline projection (even after the adjustment described in Section 2.2 above) projects an overall decline in employment in education in Oxford in the short and medium term (reflecting the impact of the government's austerity measures on some parts of the sector), and even by 2031 employment in the sector in the city is projected to be slightly below that in 2011.

Despite this, and due to its relative size, Oxford is still projected to see one of the largest absolute increases in jobs (5,000) among the Oxfordshire districts over 2021-31 (see Figure 2.4).

**Table 2.3: Employment projections in the Baseline**

	2001-11		2011	2021	2031	2011-21		2021-31	
	(000s)	(% pa)	(000s)	(000s)	(000s)	(000s)	(% pa)	(000s)	(% pa)
Oxfordshire	29.6	0.8	380.6	397.3	417.0	16.7	0.4	19.7	0.5
Cherwell	-3.6	-0.4	79.4	84.6	89.2	5.2	0.6	4.7	0.5
Oxford	22.0	2.0	123.2	123.2	127.8	0.0	0.0	4.6	0.4
South Oxfordshire	2.5	0.4	65.1	69.4	72.8	4.3	0.6	3.4	0.5
Vale of White Horse	5.7	0.9	67.2	71.7	76.4	4.4	0.6	4.7	0.6
West Oxfordshire	3.0	0.7	45.7	48.4	50.8	2.7	0.6	2.4	0.5
South East	166.6	0.4	4387.2	4601.0	4834.9	213.8	0.5	234.0	0.5
UK	1281.0	0.4	31175.0	33460.5	35075.7	2285.5	0.7	1615.2	0.5
Oxfordshire as % of South East	17.8	0.4*	8.7	8.6	8.6	7.8	0.0*	8.4	0.0*
Notes: * percentage point per annum difference from South East growth.									
Figures are rounded to the nearest 100 jobs.									
Source: Cambridge Econometrics, January 2014.									

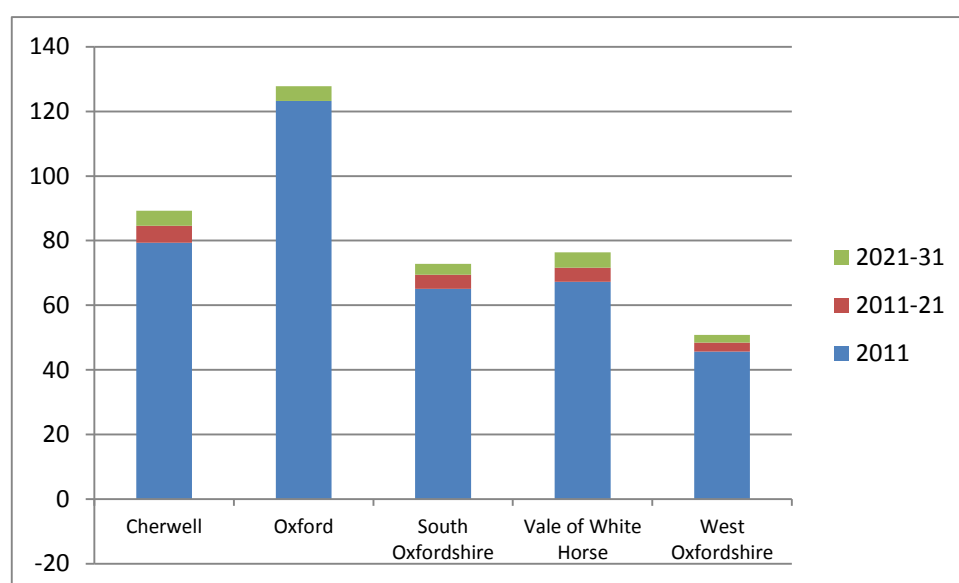

Employment growth in *South Oxfordshire* is projected to accelerate from 0.4% pa seen over 2001-11, to grow faster (0.6% pa) than the South East over 2011-21 and at the same rate as the South East (0.5% pa) over 2021-31.

*Vale of White Horse* is projected to continue to see employment grow faster than the South East as a whole, at 0.6% pa over the whole period 2011-31.

Similarly, *West Oxfordshire*, is projected to see employment growth of 0.6% pa over 2011-21 and 0.5% pa over 2021-31.

Growth in all the districts is projected to be largely driven by the Accommodation & food services and Financial & business services sectors. Financial & business services is projected to grow by 1.9% pa in Cherwell over 2011-31 and Accommodation & food services is projected to grow by 1.8% pa in South Oxfordshire over 2011-31.

**Figure 2.4: Employment (000s) in 2011 and projected change in jobs 2011-21 and 2021-31 in the Baseline– Oxfordshire districts**

## 3 Alternative Population-based Projections

### 3.1 Introduction

The Baseline projections presented in Chapter 2 use as their population assumptions the ONS 2011-based interim Sub-National Population Projections (SNPP) (and 2010-based SNPP from 2022 onwards). These inputs to the Local Economy Forecasting Model (LEFM) have an impact on projected growth in population-related industries such as retailing, public administration, health, education, residential & social care, as well as on other services through household spending.

The 2011-based SNPP have been found to under-report population in Oxfordshire due to under-reporting of the student population. The Steering group for the Strategic Housing Market Assessment (SHMA) therefore commissioned JG Consulting to produce a set of alternative population projections for the county and districts.

This approach incorporates the population projections for Oxfordshire developed as part of the SHMA. These projections were adjusted to take account of more recent data from the Office of National Statistics (ONS). The main adjustments are summarised below but this is explained more fully in the SHMA report.

In the four districts outside Oxford City the alternative population projection used the 2011- and 2010-based Sub-National Population Projections as a base position and made relatively small adjustments to take account of more recent data from ONS about levels of migration (in 2010/11 and 2011/12) and population growth in the 2001-11 period (informed by Census data). This saw population growth being higher in South Oxfordshire and Vale of White Horse and lower in Cherwell and West Oxfordshire when compared with the published ONS projections (i.e. the 2011-based projections rolled forward with reference to the 2010-based figure).

In Oxford, however, it was clear that population growth in the 2011- and 2010-based projections was far too low in comparison with past trends. After closer inspection of the data underpinning the official projections and in consultation with the City Council, it was concluded that this was most probably due to an over-recording of international out-migration. To develop an alternative population projection for Oxford a bespoke approach was therefore taken linking age/sex specific population growth over the 2001-11 decade and using this to prepare a migration matrix. An additional adjustment was made to the fertility rates used in the model to reflect actual number of births compared with the female population of child-bearing ages. Overall, this projection produced outputs which were more closely aligned to observe past trends in respect of both overall population growth and the age structure of the population.

After incorporating the alternative population projections, the forecast for employment in education in Oxford continued to look low compared to historical growth, particularly due to the on-going growth of the University of Oxford and

the importance of private education in the district. Historic data and trends were analysed, and a further adjustment was made so that the increase in employment in education over 2011-31 better reflects trend-based growth in employment in education in Oxford, without double counting the increase in jobs anticipated in the Planned Economic Growth forecast described in Chapter 4.

As with all models of this type, there are no supply-side linkages in the model such that an increased supply of a labour force with particular skills, say, would lead to expansion in a sector that requires those skills.

This chapter presents the results of the Alternative Population-based projections developed using the Local Economy Forecasting Model (LEFM), in which the Baseline population projections were replaced with the alternative population projections from JG Consulting, and in which the additional employment adjustments in education in Oxford were also included.

The alternative population projections are thought by Oxfordshire County Council to give a more likely picture of population growth in the future, and so these projections will effectively become the 'Baseline' on which the Planned Economic Growth forecasts will be constructed.

### 3.2 Headline findings for the Alternative Population-based projections

**The alternative population projections show much faster growth than the Baseline over 2011-31**

Figure 3.1 and Table 3.1 show the alternative population projections and Baseline (based on 2011-based and 2010-based SNPP) population projections for Oxfordshire. They show that the alternative projections have much faster growth over the whole forecast period, to 2031, than the Baseline population projections (SNPP). Population in Oxfordshire is projected to be 45,000 (6%) higher in 2031 under the alternative projections than in the SNPP.

Overall, population in Oxfordshire is projected to increase by 62,000 (9%) over 2011-31 in the Baseline projections and by 107,000 (16%) over the same period in the Alternative Population-based projections. For comparison, in the ten year period over 2001-11, population in Oxfordshire increased by 48,000 (8%).

**Population in Oxford is projected to grow much faster than the Baseline in alternative projections**

Within Oxfordshire, the differences between the two sets of population projections are varied. For Cherwell, the alternative population projections project a slightly lower increase (2,000 less) than the Baseline projections, and in West Oxfordshire project a slightly greater increase (1,100 more). For both South Oxfordshire and Vale of White Horse, the alternative population projections show population in 2031 about 5,000 higher than in the Baseline. The greatest variation in the projections is for Oxford, where the assumptions for the student population differ most from the SNPP Baseline. Total population in Oxford is projected to see only a very small increase (400) over 2011-31 in the Baseline projections, but to increase by almost 37,000 in the alternative population projections.

In terms of population growth, the annual average growth rates (% pa) in the alternative population projections for Oxfordshire as a whole, and for Oxford in particular, match more closely the rates seen over 2001-11.

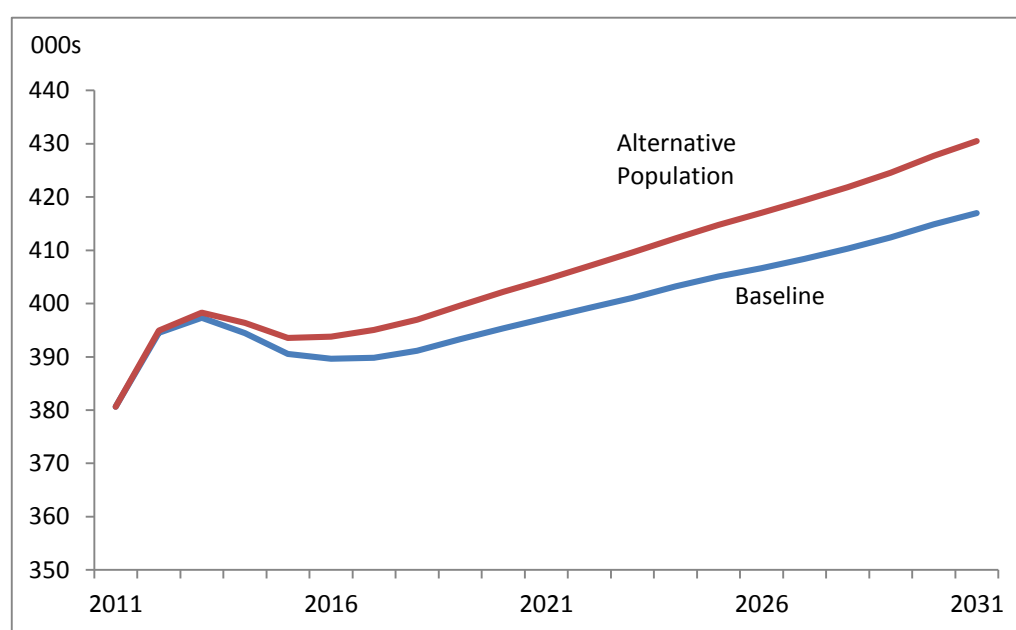

**Table 3.1: Population in the Baseline and Alternative Population-based projections**

	2011 (000s)	2001-11		Baseline			Alternative Population		
		(000s)	(% pa)	2031 (000s)	2011-31		2031 (000s)	2011-31

### Overall growth in employment in Oxfordshire

Figure 3.1 and Table 3.2 show the employment projections in the Alternative Population-based and Baseline projections. The impact on employment of the alternative population projections has a similar profile to the difference between the two sets of population projections, as expected, with the employment impact widening throughout the forecast period. The impact on employment is less than proportionate. We wouldn't expect a 10% increase in population, say, to lead to a 10% increase in employment in the county. By 2031, total population in the alternative projections is 6% (45,500 people) higher than in the Baseline projections, while employment is only 3% (13,500 jobs) higher in the same period.

**Figure 3.1: Employment in the Baseline and Alternative Population-based projections - Oxfordshire**

**Table 3.2: Employment in the Baseline and Alternative Population-based projections**

	2011	2001-11		Baseline			Alternative Population

### Growth projections by sector

Table 3.3 and Figure 3.2 compare the employment projections, by sector, for Oxfordshire. They show that the biggest impact on employment is in Government Services (8,900 jobs), as this includes public administration, health, and education, for which growth prospects are closely linked to population growth in LEFM (and for which further adjustments were made to education in Oxford as part of this stage). At a more disaggregated level, the impact is greatest in education and health. There is also an increase of 1,300 jobs compared to the Baseline in Distribution, which includes retailing, due to higher household spending from the higher population. Similarly, higher household spending leads to higher employment (about 800 jobs) in Accommodation and food services, which includes bars, cafes and restaurants. There are also impacts in some other services, such as Financial & business services, as a result of higher demand from the higher population, but also through the knock-on effects from the businesses directly impacted by higher population (eg retailers requiring business services).

Although the increased population is specifically designed to represent higher student numbers, rather than a higher general population, the impacts described above are consistent with this: increased student numbers will create higher employment in education, more demand for health services (even if students remain registered outside Oxfordshire they will still use health services within the county), and increased retail spending and spending at bars and restaurants.

**Figure 3.2: Projected change in employment by sector over 2011-31 in the Baseline and Alternative Population-based projections, Oxfordshire (000s)**

**Table 3.3: Employment by sector in the Baseline and Alternative Population-based projections**

	Baseline			Alternative Population

### Growth projections by district

Table 3.2 shows how the employment projections in the Alternative Population-based projections compare to the Baseline across the local authorities. The pattern of differences in employment projections broadly follows the pattern of differences in population projections. The impacts across the districts within a particular sector are proportional to the relative size of that sector in each of the districts. For example, the impact on employment in education in Oxford is greatest because it accounts for the greatest share of employment in that sector in the county. Thus, districts that do not see a particularly large increase in

population in the alternative population projections compared to the Baseline may still see a relatively large impact on employment. This will happen if they have a relatively large number of businesses in a sector that is impacted by higher overall population (because the districts are assumed to serve a county-wide catchment in the model).

The biggest positive difference (Alternative Population-based versus Baseline) in employment terms is in Oxford, with 8,800 extra jobs projected by 2031 in the Alternative Population-based projections. South Oxfordshire and Vale of White Horse each see employment in 2031 higher by around 1,400-1,500 jobs. Employment in Cherwell also increases slightly, despite its population in the alternative projections being lower than in the Baseline, as a result of businesses in the district being able to benefit from opportunities offered by a larger population in Oxfordshire as a whole.

Table 3.4 shows the impact of the alternative population projections on employment by broad sector in each district. The table shows that in the sectors that are directly impacted by population (Government services) the biggest impact is seen in Oxford. This is expected given where the biggest change to the population projections has been made, and the share of those sectors that are in Oxford, as well as the adjustment made to employment in education. Similarly, the greatest increase in retail jobs (Distribution) is also seen in Oxford. For the other services (eg Financial & business services, and Accommodation and food services) the impacts are more evenly spread across the districts, due to the proportion of employment in those sectors in each district.

**Table 3.4: Impact of Alternative Population-based projections on employment by district and sector – 2031 (000s)**

	Oxfordshire	Cherwell	Oxford	South Oxfordshire	Vale of White Horse	West Oxfordshire

## 4 Developing the Assumptions for the Planned Economic Growth Forecasts

### 4.1 Introduction

The Brief for this study requests the production of a Planned Economic Growth forecast to reflect policy influences on economic growth such as proposals relating to the Science Vale Enterprise Zone, Oxfordshire City Deal, and planned infrastructure investment. The Brief requests that the assessment of planned economic growth includes a geographical dimension for areas within Oxfordshire, and also potential cross boundary influences.

The Planned Economic Growth forecast avoids double counting. Trend forecasts are based in part on the patterns of growth in Oxfordshire in the past, and they therefore incorporate the influence of policies applied at that time. The point of the Planned Economic Growth forecast is to consider what effects recent changes - such as those mentioned above, and which would not be reflected in the trend forecasts - are likely to have on jobs growth to 2031.

It is also important to focus on net change. Most of the Planned Economic Growth job impacts considered in this section are unlikely to involve displacement within Oxfordshire: for example, an increase in research funding, and related jobs, at Oxford University could possibly result in displacement of research funding from elsewhere in the UK, but not from elsewhere in the county. However, there are examples where local displacement could occur: for example, in considering the effects on jobs of the designation of the Science Vale Enterprise Zone we have used the net additional jobs figure that was included in the EZ submission document rather than the gross additional employment expected within the EZ area. This is because the EZ could potentially attract firms to relocate from surrounding areas, due to the fiscal incentives available.

Therefore, the Planned Economic Growth forecasts only take account of the net change in jobs (ie excluding displacement) resulting from planned economic growth over and above what could be expected on the basis of past trends.

The approach we have taken involved the following process:

- A review of the relevant policy documents and any jobs forecasts they contain<sup>1</sup>

---

<sup>1</sup> The principal policy and other documents reviewed include the latest versions of the district council local plans and employment land reviews, the submitted Oxfordshire City Deal submission 2013; the draft NW Bicester Eco Development Economic Strategy 2013; the Oxfordshire Innovation Engine report 2013; Invest Oxfordshire information sheets on various sectors; Oxford Economic Growth Strategy; the Oxford Bioescalator Business Plan 2013; the Science Vale Enterprise Zone Bid document; OBN Biocluster report (2011) and UK Biofinancing Overview (2012); Study into the UK Motorsport and Performance Engineering Cluster (2003); press release from the Department for Business Innovation and Skills, "UK space industry set to rocket with £240 million of investment (2012).

- Interviews with all the local authorities, and a selection of other organisations (eg Oxford Airport)
- A meeting with the client group to calibrate and adjust initial thinking
- Internal team discussions to decide how expectations for above trend growth should be factored into a Planned Economic Growth forecast. This is mainly a question of deciding which sectors to allocate the additional jobs to.

We also drew extensively on our knowledge of the Oxfordshire economy and business community derived from recent consultancy commissions, including the Oxfordshire Innovation Engine, the Bioescalator Business Plan and the NW Bicester eco development economic strategy. The first of these involved in-depth interviews with over 100 businesses and other relevant organisations in Oxfordshire. The other two studies also involved substantial consultations.

It is important to note that the forecasting model has multiplier effects built in. Therefore we have not tried to assess these separately.

The following sections summarise views on potential policy led employment growth which were input into the Planned Economic Growth forecast.

## 4.2 Factors likely to stimulate growth above trend

### Research activities - Oxford

#### University of Oxford

The University employs over 4,000 staff, including post doctorates, in the STEM (science, technology, engineering and mathematics) and medical fields and there are over 3,000 postgraduate students working in these disciplines. Over the last five years, the University has secured more external grant income for STEM and medical research than any other UK university, rising by an average of 9% per year to over £400m in 2011/12<sup>2</sup>. There are particular strengths in biological sciences, medicine, mathematics and statistics, for which it is ranked first in UK. It was also placed in the top five in general engineering, materials science and computer science.

These strengths result in significant growth. For example, the number of post-doctoral students in computer science has doubled during the last five years. The Medical Sciences Division is one of the largest in Europe with 2,500 staff and 800 postgraduate students involved in medical research. Over £1.2 billion has been invested in biomedical academic research in Oxford over the past five years, which has underpinned the area's profile in the commercialisation of bioscience.

The University is undertaking a staged redevelopment of the whole of its Science Area, based on a masterplan which, when fully implemented over the next 5-10 years, will add 33% to existing floorspace. In addition, the former Radcliffe Hospital site is currently being redeveloped to accommodate an additional 122,500 sqm of educational and research floorspace. Recruitment of 1,000 new post doc researchers is planned, which in turn will lead to a requirement for more supporting staff. Additional research space is also likely

---

<sup>2</sup>HESA Planning Plus 2013

to be required for the Medical Science Division due to its success in attracting research funding.

The University has also been purchasing individual sites on the Osney Mead industrial estate (Botley Road), which over recent years has been under-utilised. The estate comprises 18.3 hectares, and in the region of 51,600 sqm of principally Class B floorspace. It is likely that the site will be more actively used by the University and will create new jobs, which could include a mix of research and development, office and educational activities.

The significant increase in floorspace for research and teaching provided by these developments will enable a step change in growth over and above past trends. The demonstrated capability of the University to attract increasing research funding means that these opportunities for growth are likely to be realised.

### **Oxford Brookes University**

Oxford Brookes University is one of the strongest new universities in the UK and has distinctive expertise in the life sciences, computer science, engineering and the built environment. It has strong local business linkages, including with the motorsport and auto engineering sectors.

Oxford Brookes is also implementing a masterplan for its main Headington campus, which will lead to a slight reduction in total floorspace but much more efficient usage. This will give scope for some increase in student numbers, resulting in an increase in employment on the site. However, this may be offset by reductions of employment on other sites.

### **Implications for employment forecasts**

Most of the employment growth is likely to occur in the University of Oxford, primarily as a result of the substantial increase in space for research and teaching in the Science area, the former Radcliffe Hospital site, and the Churchill site (which accommodates most of the research activities undertaken by the Medical Sciences Division). Currently there are 4,000 staff and 3,000 post graduate students in the STEM and Medical Sciences areas combined. Assuming that floorspace available for these subjects will increase by 30% (i.e. the same as in the Science Area) as a result of developments already in the pipeline, and that employment increases proportionately, this would result in another 1,200 employees and 1,000 post graduates. However, these figures relate only to the plans already being implemented. The availability of further space at Osney Mead, and the likely continued growth of STEM and medical science research throughout the period to 2031, suggest that new jobs could substantially exceed this figure.

None of the above estimates take account of growth in the arts and social sciences, and in central university and college administration, which we assume will continue but in line with past trends.

We therefore consider that expansion of the University of Oxford to 2031 could result in **2,000 additional jobs** in the education sector, over and above the adjusted trend based forecasts.

### **Research activities – Harwell, Science Vale EZ and Culham**

### **Harwell and Science Vale EZ**

Harwell Oxford hosts two major facilities - the Diamond Light Source synchrotron and the ISIS neutron source - the Science and Technology Facilities Council's (STFC) Rutherford Appleton Laboratory (RAL), which

includes the Central Laser Facility, and other smaller research and innovation infrastructure. This includes the MRC Mammalian Genetics Unit Biological Solid State NMR Protein Laboratory, the Satellite Applications Catapult Centre and the European Space Agency Business Incubation Centre. STFC and the Diamond Light Source together employ nearly 2,000 people. We do not have figures for the other facilities, although the whole Harwell site currently accommodates 4,500 people.

There are strengthening research links with Oxford University, which could have a significant impact on Harwell's international profile and attractiveness. There is also an increasing number of researchers from other UK universities, major corporates and international organisations who spend periods of time at Harwell using the various facilities.

The increasing interest in attracting other R&D based activities to Harwell is demonstrated by the decision by UKAEA to enter into a joint venture with Goodman and the successful bid for Enterprise Zone (EZ) status. Take up of employment space within the EZ is already factored into Local Plans and their provision for housing. However, there is scope for considerable further development at Harwell beyond the EZ, including both intensification of the publicly funded research activities and additional business space. The total area available for development amounts to 99ha, of which 64ha is within the EZ. There is scope, therefore, for employment on site well in excess of that envisaged in the EZ proposals.

The UK Science Vale Enterprise Zone, which includes 64ha at Harwell and 28ha at Milton Park, is expected to accommodate 8,400 jobs, of which 5,040 are net additional (source: bid submitted by Oxfordshire Local Enterprise Partnership to the Department for Communities and Local Government, pp 52-53). If these are distributed proportionately to land, then 5,800 jobs would be at Harwell (net 3,500). At the same density, the whole Harwell site would accommodate nearly 9,000 jobs (5,400 net), in addition to the 4,500 already based there. Table 4.1 summarises the current and prospective employment situation on the Enterprise Zone and the rest of the Harwell site.

**Table 4.1: Jobs potential on the UKSV Enterprise Zone and the rest of Harwell**

	SVUK Enterprise Zone		Rest of Harwell – already developed	Rest of Harwell – to be developed	Total Harwell
	Harwell	Milton Park			
Land (ha)	64	28	n/a	35	n/a
Existing employment			4,500		4,500
Potential (gross) new employment	5,800	2,600		3,200	9,000
Net new employment (allowing for displacement)	3,500	1,600		1,900	5,400
Note: gross to net based on estimates in EZ submission					

**Culham** Culham Science Centre has 2,000 jobs currently, and has capacity to accommodate another 1,000 jobs. The Joint European Torus (JET) facility will be moving to France within the next few years, but employment growth on the site seems assured due to its strong and distinctive science base.

Jobs growth beyond 3,000 is constrained currently by significant traffic issues in the local road network, but if the rail improvements between Oxford and Didcot are implemented as proposed in the City Deal submission (which would include a new station at Culham), this cap could be lifted in the longer term.

### **Implications for employment forecasts**

The UKSV enterprise zone (EZ) status was awarded in 2011 on the basis that the designated areas would be fully developed by 2016. In practice, this was always an ambitious timescale, and the prolonged downturn in economic activity has made it impossible. However, on the Milton Park part of the EZ, MEPC has undertaken some speculative office development (see <http://www.mepc.com/miltonpark/101and102ParkDrive/Home.aspx>) and on the Harwell site, STFC are in the process of changing their JV partner in order to ensure development is brought forward more quickly. Both sites and the strategic location are attractive to the market, and the economy is recovering. Take up of land is therefore likely to accelerate, although the scale of the EZ suggests that it will take 10 years or more for it to be fully developed and occupied.

We assume these jobs will be classified to a mix of R&D (within 'Other Professional Services'), IT services, electronics and pharmaceuticals.

Some growth of employment in the 'big science' research facilities at Harwell (which are not within the designated EZ) is likely, due to increased demand from academic and corporate researchers to use the facilities and the strengthening links with the University of Oxford.

The potential for strengthening of the links between Harwell and the University of Oxford were highlighted in the Oxford Innovation Engine report (paragraphs 7.8), and although there are already informal links (for example, Oxford University researchers are the most numerous users of the Diamond Synchrotron at Harwell), in the past the institutions have not actively promoted the relationship. However, there is recent evidence of increasing activity in this direction: for example, a joint publication entitled "University of Oxford & Harwell Oxford: A partnership for discovery and innovation" (September 2013) described and promoted collaboration opportunities, and included a quote from Dr Tim Bestwick, Executive Director of Business and Innovation at STFC, stating that "Working together there is tremendous opportunity for the University of Oxford and Harwell Oxford to stimulate and support the growth of high technology companies." ([http://www.admin.ox.ac.uk/media/global/wwwadminoxacuk/localsites/researchsupport/documents/impactandke/Harwell&Oxford\\_8pp.pdf](http://www.admin.ox.ac.uk/media/global/wwwadminoxacuk/localsites/researchsupport/documents/impactandke/Harwell&Oxford_8pp.pdf)). In addition, a Google search identified various job advertisements at Harwell that refer to close links with Oxford University. These factors suggest that some above trend growth is also likely in employment in the research facilities at Harwell.

We also assume that by 2031 Culham will accommodate 1,000 additional jobs, part of which is likely to be above trend.

In total therefore, we estimate the increase in jobs above trend could be as follows:

- **5,400 (net) at Harwell and Milton Park**, primarily in the EZ but also on other land at Harwell, including some relatively small scale above trend growth in the research facilities linked in particular to greater University of Oxford involvement there. These jobs should be classified to a mix of Other Professional Services, IT services, electronics and pharmaceuticals
- **500 at Culham**, in a mix of Other Professional Services, IT services, electronics, and pharmaceuticals.

The geographical split would be 500 in South Oxfordshire and 5,400 in Vale of White Horse.

### Space Science and Satellite technologies

As discussed above, expectations regarding the growth of research and related business activity at Harwell are covered by land allocations, both within and beyond the Enterprise Zone. However, the growing importance of Oxfordshire vis-à-vis space science could have particularly significant implications for jobs growth above and beyond existing commitments. The UK Space Agency, the European Space Agency (ESA), the International Space Innovation Centre and the new Satellite Applications Catapult are all based at Harwell.

The Government estimates that space science will grow from a £9bn industry now to one worth £40bn by 2031, generating 100,000 new jobs<sup>3</sup>. Harwell has a unique concentration of nationally significant research and commercialisation facilities in this sector, which will undoubtedly attract firms and jobs to the area. A reasonable assumption is that one tenth of the national growth in space science jobs by 2031 will be based in and around Harwell.

### Implications for employment forecasts

This means that there may be approximately 10,000 new jobs in space science and satellite technologies located in and around Harwell by 2031. A proportion of those jobs (say 4,000) will be located on the existing sites at Harwell and Culham and are therefore included in the figures above. Of the remainder, some (say 2,000) will be located outside Oxfordshire (e.g. at Reading Science Park, since the University of Reading hosts the NERC National Centre for Earth Observation which has links with Harwell). That leaves another **4,000 jobs within the county**, most of which are likely to cluster around Harwell in Vale of White Horse, with the remainder located further north where business space is lower cost and expected to be in plentiful supply, and there are relevant manufacturing and engineering skills (eg around Bicester and Banbury). These jobs will be additional to those already in the local economy since they relate to the commercialisation of new technologies, and therefore there is unlikely to be a displacement effect. They are likely to be classified to a mix of 'Other transport equipment' (which includes manufacture of satellites and related equipment),

<sup>3</sup> "UK space industry set to rocket with £240 million of investment": press release from the Department for Business Innovation and Skills, 9 November 2012

R&D and IT services. We suggest the assumption should be that 2,500 will locate in Vale of White Horse and 1,500 in Cherwell.

### Bioscience sector

The Biocluster Report 2011: Transition, published by OBN, identified 163 bioscience firms across Oxfordshire. This represented an increase of 14% between 2008 and 2010 (i.e. through the financial crisis and recession) with most of the growth in stock resulting from new start-ups and spin-outs (rather than company relocations). The report also notes that between 2008 and 2010, the ten largest Oxfordshire-based fundraisers received some \$313 million – approximately one sixth of the total investment in the UK bioscience over the same period and indicative of the potential within the sector for further growth.

One company, Oxford Nanopore Technologies, accounted for approximately one third of the investment. A case study on the firm which is included in the recently published Oxfordshire Innovation Engine report by SQW<sup>4</sup> states that “at an appropriate time in the company’s development, Oxford Nanopore Technologies is likely to open a manufacturing facility in Oxfordshire which may start by employing 50-100 people.”

The local development of manufacturing may not be an appropriate option for the growth of all bioscience firms (e.g. some will remain focused on R&D and licence their technologies to be manufactured elsewhere, some are purely service organisations), but it is reasonable to assume that other firms in Oxfordshire will follow the growth path sketched out by Oxford Nanopore (the OBN report classifies 24 other bioscience firms in Oxfordshire to the same sub sector as Oxford Nanopore). If one other bioscience firm every two to three years follows this path over the period to 2031, and these facilities continue to grow after initial establishment, then this would create at least 1,500 new jobs over the period, and possibly considerably more. The most likely location for such manufacturing facilities is the north of the county, where property costs are lower and there are strong manufacturing skills in the workforce.

In addition, the Medical Science Division of the University of Oxford has attracted a substantial amount of investment by corporates and charities in Oxford (mainly co-located with the Medical Sciences Division at the Churchill site), and this is likely to continue. The proposed bioescalator alone could create around 500 new jobs, and this facility should accelerate the formation and growth of bioscience firms linked to the research base. Development of the Northern Gateway will provide business space to accommodate larger bioscience and other technology based firms, which will complement existing provision at Oxford Science Park and Oxford Business Park. The Northern gateway alone is able to accommodate up to 7,000 jobs when fully developed and occupied.

### Implications for employment forecasts

Based on the growth potential of the bioscience sector in Oxfordshire, we estimate that **1,000 new jobs (above trend) could be created in Cherwell, and 1,500 new jobs (also above trend) in Oxford**. There will also be new job creation in the south of the county, but we assume this is already accounted for

<sup>4</sup> <http://www.sqw.co.uk/news#david-willetts-launches-sqw-report-the-oxfordshire-innovation-engine-realising-the-growth-potential>

in the above figures for the Harwell, Milton Park and Culham. These jobs are most likely to be categorised to R&D or pharmaceuticals.

### Health sector

The NHS is investing in centres of excellence, of which Oxford is one. Oxford is a leading global centre for cancer research, and Nuffield Orthopaedic does a lot of international work. The scale of research at the University Medical Science Division and the investment it has attracted has already been mentioned. These factors suggest further expansion of health sector employment in Oxford is likely, in contrast to expectations for the NHS in general which are relatively flat due to constraints on government spending. Healthcare is labour intensive, and generates jobs at all skill levels, hence the jobs impact of additional growth is likely to be considerable. It should also be noted that the health sector is already experiencing difficulty recruiting for lower paid positions due to housing costs.

### Implications for employment forecasts

The concentration of NHS investment on centres of excellence, and the attractions of Oxford for the private and charitable health sector, could result in an additional **2,500 jobs in Oxford** to 2031 above trend, which would amount to growth of just over 10% in employment in the sector over this period. The trend growth is largely related to the growth and ageing of the population, whereas the above trend growth is related to an increased focus of research and specialist healthcare on the health facilities in Oxford. Therefore these additional jobs would be most likely be classified to a mix of R&D and healthcare.

### Advanced engineering

Within the advanced engineering sector in Oxfordshire, auto engineering is particularly important. BMW in Oxford has been a major success story, although employment has remained constant at about 4,000 for the last 10 years, despite increased production. However, BMW announced in December 2013 that they will increase employment by 1,000 in their UK manufacturing plants over the next three years, with the majority of that increase at Cowley. We understand that the increase at Cowley is expected to be 700 permanent jobs. BMW are also developing plans to expand onto the former Rover sports ground to create additional manufacturing jobs, and are talking to major suppliers regarding the possibility of consolidating some activities at the Cowley site, although the outcome of these talks is uncertain.

In the motorsport sector, some of the firms within Oxfordshire have major expansion potential. For example:

- Caterham F1, located in West Oxfordshire, has 200 employees at present and is likely to grow to 400 assuming it retains the F1 team. It is also possible that it will move Caterham Cars to Oxfordshire from Kent. The site has plenty of room for employment growth
- Williams already employ 500 people at Grove and are expanding into other business areas, such as energy efficiency, exploiting the technologies and expertise developed through their motorsport activities. They also have substantial space for expansion
- Prodrive employ 360 people at their Banbury HQ, and 500 in total in the UK. They are in the process of moving to a new site in Banbury which

will provide 50% more floorspace and a much more efficient layout, enabling a substantial expansion of employment.

Growth can also be expected in some other areas of advanced engineering. Oxfordshire has long established expertise in instrument engineering, magnet technology and cryogenics, and if the automotive and motorsport sectors grow there will be a corresponding increase in demand in specialist supply chains such as in composites and aerodynamics (expertise which is also in demand in other sectors such as aerospace). Begbroke Science Park (in Cherwell District) is likely to be a focus for R&D activities in advanced engineering, but manufacturing and service activities are likely to be more widely dispersed around the county.

### Implications for employment forecasts

Nationally, employment in the engineering sector is expected to continue to decline. However, Oxfordshire has specialisms which are likely to lead to growth locally. In some areas, the pattern of future growth may be no different from past trends, but the expansion plans of some existing firms in the advanced engineering sector, and the knock-on impact in the supply chain for the motorsport and automotive sectors (including a wide range of firms based in Oxfordshire), suggests that there is likely to be an additional 3,000 jobs in these industries (SICs for engineering services, motor vehicles and electronics) to 2031, including **1,000 in Oxford, 1,000 in Cherwell, 500 in West Oxfordshire, and 500 in Vale of White Horse**, where the major firms are located.

### Environmental technologies and green construction

The NW Bicester Eco Development is expected to support the creation of one job per dwelling. When fully developed it is likely to comprise up to 6,000 dwellings, although the draft Cherwell Local Plan expects at least 1,800 homes and jobs to be delivered in the period to 2031. A significant proportion of the jobs are expected to be in eco construction and environmental goods and services, to exploit the opportunities relating to the Eco Development itself and also the consequent branding of 'Eco Bicester' (which has, for example, stimulated a large energy efficiency retrofit programme for the existing housing stock in Bicester). For example, at least 150 construction jobs are expected to be created to build the development over a 30 year period, many involving training (including apprenticeships) in sustainable construction methods. Currently there are 400 people employed in construction in Bicester, so this would involve a significant increase.

There will also be opportunities to supply specialist products and services to construct the Eco Development (in areas such as ground source heating, solar photovoltaics, water recycling, etc), and an Eco Business Centre (part funded by Government grant, and likely to accommodate around 100 jobs) is expected to stimulate jobs in the sustainable construction and environmental goods and services sectors.

All construction in the county (and elsewhere in the country) will be affected by changes to building regulations which will introduce tougher standards regarding energy efficiency, etc. Hence the market for new methods and materials will grow, but the Eco Development at Bicester is likely to attract particular attention as the first designated ecotown in the country.

## Implications for employment forecasts

There are firms in these sectors in the county already that can supply some of the required goods and services, but the Eco Development is expected to stimulate a step change in jobs growth, particularly in and around Bicester. Cherwell Council's assumptions regarding the speed of development of eco homes and jobs on the development are conservative (largely because of other housing sites in Bicester which are likely to be developed over the same period). The assumed rate is 100 per year, although it could easily be twice that rate, particularly as demand for housing is likely to increase in response to economic growth. It would therefore be reasonable to assume an additional **150 jobs in construction** and **1,000 in environmental goods and services** over the period to 2031. Whilst many of these additional jobs will be in Cherwell, some are likely to be distributed more widely across the county.

### Retail

Despite the general downturn in the High Street retailing sector in recent years as a consequence of both the squeeze on incomes and a shift towards on-line retailing, there is a significant amount of development activity underway and planned in Oxfordshire which suggests that the sector will continue to experience employment growth in future ahead of national trends.

In Oxford, a planning application for redevelopment and expansion of the Westgate Centre has been received. The timescale is for construction to start in 2015 and completion by 2017. John Lewis has committed to the new scheme. The net additional retail is between 54,500 sqm and 81,900 sqm (compared with the current 34,000 sqm). It also includes associated services (Class A2-A5 uses), which range from 6,200 sqm to 27,000 sqm new additional floorspace, and a new cinema (D2) of 5,990 sqm. The redevelopment is expected to create 3,400 net new jobs, although it could also result in some short term displacement. This would result in an increase in retail employment in Oxford of over 40%.

Elsewhere in Oxford, district retail centres have remained buoyant. Templar Square in the south of the city is due to be refurbished: this will not increase floorspace but it will make the existing space more secure.

Elsewhere in the county there are schemes underway or planned at:

- Abingdon - completion of the town centre retail development
- Banbury – various sites around the town centre are identified in the local plan for redevelopment/regeneration for town centre uses including retail
- Bicester - including further expansion of retail and other services in the town centre which is expected to create 1,000 new jobs, as well as proposed expansion of Bicester Village Outlet Centre
- Didcot - phase 2 of the town centre retail development will comprise 26,600 sqm and, together with other schemes proposed in South Oxfordshire totalling 32,800sqm is expected to generate 1,500 new jobs
- Witney - at least two national supermarket chains are seeking to establish in the town.
- Botley – the West Way shopping centre development is expected to create about 700 new jobs, the majority of which will be in retail.

## Implications for employment forecasts

Of these developments, the only three which can be argued to be above trend, at least in part, are the West Way development in Botley, and the major expansions of the Westgate Centre in Oxford and of the Bicester Village Outlet Centre.

The Westgate Centre development will lead to a major, one-off employment increase in the city, but it could be argued that over the period to 2031 a large proportion of this reflects trend growth in response to growing demand – it is simply all concentrated into one major development. However, the scale of the development (which is likely to treble or quadruple the size of the existing centre) suggests that a proportion will be above trend, and act to increase the draw of Oxford to a wider retail catchment population.

The Outlet Centre at Bicester Village is likely to undergo a major expansion, taking over the adjacent site currently occupied by Tesco (in turn, Tesco plans to move to a larger site nearby which should enable the planning permission for Bicester Business Park to be implemented). The outlet centre draws on a national and international market, as evidenced by the regular Bicester Village coach service from London and the highly international composition of the visitor population.

Many of the jobs created by the West Way shopping centre development are expected to be within the trend growth of service provision related to population increase over the next 20 years, and some will also displace jobs from other areas. However, the retail sector, where the majority of employment is to be created, is likely to have some above trend impact on growth in employment.

These three retail developments in Oxfordshire could result in an additional (i.e. above trend) **1,000 jobs in Oxford, 1,000 in Cherwell and 200 in Vale of White Horse** to 2031.

## Warehousing and distribution

Oxfordshire is also benefitting from investment in retail distribution, with demand for large distribution centres in Didcot from the likes of Amazon and Tesco. There are currently planning applications or pre-application discussions underway for around 300,000 sqm of B8 space on several sites linked to Didcot Power Station in Vale of White Horse which, based on the applicants' jobs estimates, would create around 4,500 jobs, compared with the 'uplift' of 1,500 jobs assumed by Vale of White Horse Council in relation to local plan land allocations. The applicant's jobs estimates appear unduly optimistic, perhaps driven by a desire to secure planning permission, but nevertheless, significant jobs growth seems likely.

Expansion of warehousing and distribution in Cherwell is also likely when Graven Hill in Bicester comes forward for development. The draft Local Plan states that at least 2,470 jobs are expected to be created on the site, including a mix of B1, B2 and B8 (warehousing) uses. However, the site is particularly well suited to logistics, more so than most other employment sites in Bicester: it is already a logistics base for the army, and has a direct rail link as well as excellent access to the M40. This scale of growth of logistics jobs in Bicester is well in excess of what would be expected based on recent trends.

## Implications for employment forecasts

Existing development proposals suggest that there is potential for growth of employment in warehousing and distribution in the order of **1,000 jobs in Cherwell, and 1,500 in Vale of White Horse**.

### Major infrastructure investment

The investment in a new station at Water Eaton, the new owners' intentions to expand business air traffic at Oxford Airport, and the University's ambition for further development at Begbroke, all suggest that the area immediately to the north of Oxford is likely to be subject to development pressure in the period to 2031. The draft Cherwell Local Plan makes most provision for employment and housing growth in the district to 2031 at Bicester, but does also refer to a minor Green Belt review to accommodate a small technology park of 6.5ha (23,000 sqm) at Langford Lane adjacent to Oxford Airport. At B1 employment densities<sup>5</sup>, this could accommodate around 2,000 employees.

In addition, at Oxford Airport operations-related development has permitted development rights. The owners have plans for it to expand to provide daily flights to various UK and European destinations as well as an increase in maintenance and other aerospace related activities on the site. There are 800 employees in 20 companies on the airport at present, and further growth of these organisations is expected, but over and above this, employment could increase by another 1,000 in the next 10 years if the plan to introduce scheduled flights is implemented.

The recent and on-going improvements to rail links through Oxfordshire, including the fast service from Banbury and Bicester to London Marylebone, the Oxford to Bicester link, improvements to Oxford station, and further ahead progress with east west rail and on improving capacity between Oxford and Didcot, will all act to stimulate economic activity and demand for housing.

The latter will originate from both local people and commuters. For example, the draft Cherwell local plan proposes 7,000 new homes in Bicester between 2011 and 2031, and a similar scale of jobs growth. The plan notes the high level of commuting both into and out of Bicester and seeks a better balance in future between the scale and type of jobs and housing growth. However, the huge improvements in accessibility that Bicester will experience through completion of the above rail improvements may well, in practice, increase commuting which may in turn fuel demand for more housing than is currently planned. Equally, however, it should also make Bicester more attractive to firms, leading to more jobs growth and enabling more residents to find jobs locally

## Implications for employment forecasts

The infrastructure improvements identified above are likely to affect demand for housing irrespective of employment growth. However, specifically in relation to employment forecasts, it could be argued that most of the investment is needed to support the growth already factored into local plans. The main exception to this could be the potential for both employment and housing to the north of Oxford in Cherwell District linked to Water Eaton station, investment in Oxford Airport, the proposed Oxford Technology Park and the potential for further employment at Begbroke Science Park. **Plans for Oxford airport and the**

<sup>5</sup> HCA/Offpat Employment Densities Guide, 2nd Edition (2010) suggest that typical B1 office densities range between 10 and 12 sq m per employee (full time equivalent).

**nearby technology park could add 2,000 jobs** in the next 10 years, over and above trend. This allows for the fact that some jobs at the technology park will already be included in the sector specific comments above. The additional 1,000 jobs at the airport would be mainly in aerospace but including some in retail and catering. The technology park would be likely to accommodate a mix of R&D, engineering services, electronics and aerospace.

In addition, the longer term, larger scale development opportunities in the area could result in further jobs growth, but this is speculative and could not currently be considered to be part of a 'Planned Economic Growth' forecast.

### 4.3 Factors which could depress growth below trend

#### Public sector spending reductions

The Government's spending plans envisage a continued squeeze on public sector jobs. The forecasts therefore indicate lower growth in public sector employment than would be expected from past trends, except in Oxford where the composition of public sector employment is unusual, with a high proportion of employment in the universities and the health sector, both of which (as explained elsewhere in this section) are likely to grow.

The other area of public sector jobs where declines are expected is in the Defence sector. There is substantial defence related employment in Oxfordshire, but the trend is to replace MOD jobs with private sector jobs in locations such as Brize Norton and Graven Hill (Bicester). Therefore although the sector classification may change, the number of jobs is unlikely to be very different.

#### Publishing

Oxfordshire has some very large employers and a high proportion of jobs in publishing. There is an increasing trend to move some publishing functions offshore, due to pressure to reduce costs combined with fact that market growth is overseas, particularly in Asia. However, interviews with two major Oxfordshire based publishing companies for the Oxford Innovation Engine report suggest that local employment is likely to remain stable, with all of the growth taking place overseas.

#### Implications for employment forecasts

The trends for employment in publishing in Oxfordshire suggest that little overall change is likely to 2031. We suggest that this should remain the assumption in the Planned Economic Growth forecasts.

#### Competition from major surrounding areas

There are various major development proposals in surrounding areas which could affect business growth in Oxfordshire, due to competition for scarce skills. These include:

- In Cherwell, competition for auto engineers from Jaguar Land Rover (JLR) and from the expansion of motorsport related employment in south Northamptonshire, particularly at Silverstone where a major technology and business park development is proposed. Interviews with Oxfordshire firms such as Prodrive in Banbury have identified intense competition for scarce skills, with JLR and F1 teams apparently willing and able to pay

higher salaries. Competition is also likely from a proposed 18ha business park as part of the proposed new settlement at Gaydon/Lighthorne at M40 Junction 12 in Stratford on Avon District.

- In Science Vale, competition from employers in Thames Valley for labour supply generally, and IT and engineering skills in particular. The major employers in the Thames Valley are multinationals with strong strategic reasons for retaining their presence in the area (assuming the role of Heathrow as major hub airport is not threatened) and in many cases an ability to pay high salaries to attract and retain good quality staff. The demographics of South Oxfordshire and Vale of White Horse show an ageing workforce with limited growth in working age population, which suggests that competition for staff will increase significantly as the EZ is developed. Competition will also be provided by the proposed University of Reading Science Park, which will eventually provide around 80,000 sqm of business space, and for which an access road is expected to be completed in 2016.
- In Oxford, competition from Reading and London for the growth of business, financial and professional services. Many such firms have a twin presence in Oxford and Reading, but regard Reading as the main business centre (possibly partly because of the lack of modern office accommodation in central Oxford). Increasingly, high tech firms look to London for funding and specialist professional services, thereby bypassing local service providers.

### Implications for employment forecasts

The above factors are risks which could impact on employment growth in Oxfordshire. However, the strength of the Oxfordshire economy, the potential for commercial exploitation of R&D undertaken in the county by both private and public sectors, and the growth potential of firms in some key sectors, all suggest that competition from surrounding areas will not adversely affect employment growth. The exception may be if infrastructure or labour market constraints in Oxfordshire are significantly worse than in surrounding areas, particularly those to the south and east which offer a strategic location which is at least as good, if not better (i.e. closer to London and Heathrow). Currently there is no indication that this is likely: other areas have similar constraints. Therefore we do not propose any changes to the Planned Economic Growth employment forecasts as a result of competition from surrounding areas.

## 4.4 Conclusions

Table 4.2 indicates that there could be growth of 27,750 net direct jobs (i.e. allowing for displacement but excluding multiplier effects) due to the impact of growth oriented economic policies and known investment plans. Table 4.2 breaks this total down by time period, district and sector. It should be noted that these figures are estimates based on the best available information, which comprises a mixture of primary and secondary data, and professional judgement based on a thorough knowledge of the Oxfordshire economy and key institutions.

Two thirds of the additional growth is expected to be in the period to 2021, largely because this reflects the impact of investments that are currently at

planning or implementation stages. It would be reasonable to assume that other investments will come forward over the following 10 years which may boost expectations for growth in the period 2021-31, but in the main these cannot be anticipated.

The areas where employment growth based on past trends may be underestimated include:

- Oxford, where it seems likely that there will be significant growth of employment in education (university related), bioscience and healthcare (also partly university related), and retail. There is also likely to be an increase in corporate R&D linked to the Universities, the most likely areas including biomedical, engineering and computing. This may be slightly offset by some decline in publishing, though the expectation from firms in this sector is no net growth. We estimate additional growth of 8,100 jobs, all of which would be accommodated within existing employment-generating sites (though most not on B Class land)
- Science Vale, where there is strong potential for both inward investment and growth of existing businesses in the specialist technology areas relating to the area's research and companies base: space science and satellite communications, the physical sciences, and biomedical. There is also scope for significant growth of distribution in this area. We estimate additional growth of around 10,000 jobs is likely to occur in Vale of White Horse, and 600 in South Oxfordshire. Most of these jobs are likely to be located on existing employment sites, particularly within the EZ and on other land at Harwell
- Cherwell, including in particular Bicester and possibly the area around Kidlington and Water Eaton. In Bicester there is the potential for employment growth, based on the availability of relatively cheap accommodation and a growing labour supply, in the bioscience, advanced engineering and warehousing and distribution sectors, and also in environmental technologies and construction relating to the Eco Development. At Oxford Airport and nearby (Oxford Technology Park and Begbroke) there are plans for significant jobs growth. In the wider area north of Oxford, including Water Eaton, there is long term potential for growth of R&D activities, although this is not currently part of approved policy. We therefore estimate additional growth of over 8,000 jobs in Cherwell to 2031, all of which could be accommodated on land identified for development in the draft local plan.
- In West Oxfordshire there is potential for rapid growth of existing firms, particularly in engineering, motorsport and food production. However, it seems very unlikely that growth will exceed local plan allocations for B uses. We estimate additional growth of around 600 jobs, although this could be greatly affected by the investment decisions of a few firms. Employment land allocations can accommodate this scale of additional growth.

Table 4.2: Summary of above trend jobs growth in Oxfordshire to 2031

Type of jobs	Total	2011-21	2021-31	Cherwell	Oxford	South Oxfordshire	Vale of White Horse	West Oxfordshire	Sector
University	2,000	1,000	1,000		2,000				Education
Culham research	500	250	250			500			R&D, IT services, electronics, pharmaceuticals
Enterprise Zone	5,400	5,400					5,400		R&D, IT services, electronics, pharmaceuticals

## 5 Planned Economic Growth Forecasts

### 5.1 Introduction

The assumptions described in Chapter 4 represent the *direct* impact on employment (over and above what would be expected in a business-as-usual projection) that we might expect due to new policy and planned investment. As well as the direct impacts, we would also expect there to be: *indirect* impacts through local supply chain activity (for example, increased activity in most sectors is likely to lead to increased purchases of financial or business services, say, some of which will be supplied by local firms), and; *induced* impacts through increases in household spending (eg on retailing), due to increased local employment and household income.

The Local Economy Forecasting Model (LEFM) incorporates: an input-output framework, so that the indirect impacts through supply chain activity can be estimated, and; linkages between wages, household incomes, spending and demand for local services so that induced impacts can be estimated.

The direct additional employment by sector in Oxfordshire, from Chapter 4, are added to the employment from the Adjusted Population-based projections in LEFM and the model run to create the Planned Economic Growth forecast with direct and indirect impacts. The results are presented below.

### 5.2 Headline findings for the Planned Economic Growth forecasts

#### Overall growth in employment in Oxfordshire

Figure 5.1 shows total employment in Oxfordshire under the Baseline and Alternative Population-based projections and Planned Economic Growth forecast. The chart shows that the Planned Economic Growth forecast is significantly higher than the Alternative Population-based projections, from which it was developed.

**Figure 5.1: Employment in the Baseline and Alternative Population-based projections and Planned Economic Growth forecasts - Oxfordshire**

**Table 5.1: Employment by sector in the Alternative Population-based projections and Planned Economic Growth forecasts in Oxfordshire**

	Alternative Population				Planned Economic Growth			
	2011 (000s)	2031 (000s)	2011-31 (000s)	(% pa)	2011 (000s)	2031 (000s)	2011-31 (000s)	(% pa)
Agriculture etc	2.3	5.2	2.9	4.2	2.3	5.2	2.9	4.2
Mining & quarrying	0.2	0.1	-0.1	-1.7	0.2	0.1	-0.1	-1.7
Manufacturing	26.9	24.7	-2.2	-0.4	26.9	32.8	5.9	1.0
Electricity, gas & water	4.3	4.2	-0.1	-0.1	4.3	4.2	-0.1	-0.1
Construction	22.2	25.9	3.7	0.8	22.2	26.5	4.3	0.9
Distribution	52.0	58.1	6.1	0.6	52.0	61.7	9.7	0.9
Transport & storage	11.8	14.9	3.1	1.2	11.8	19.1	7.3	2.4
Accommodation & food services	23.4	30.6	7.3	1.4	23.4	31.2	7.8	1.5

Government services	114.7	119.1	4.4	0.2	114.7	123.5	8.9	0.4
Other services	23.0	22.8	-0.2	-0.1	23.0	23.2	0.2	0.0
<b>Total</b>	<b>380.6</b>	<b>430.5</b>	<b>49.9</b>	<b>0.6</b>	<b>380.6</b>	<b>468.8</b>	<b>88.2</b>	<b>1.0</b>

Notes: Figures are rounded to the nearest 100 jobs.  
Source: Cambridge Econometrics and SQW, January 2014.

Table 5.1 shows that total employment in Oxfordshire in this stage is forecast to increase by around 88,000 over 2011-31, or 4,400 pa (1% pa). This compares with growth of around 3,000 pa (0.8% pa) seen over 2001-11. Sustained employment growth of 1% pa over a 20 year period would be an achievement, especially in the current economic environment, but is by no means unprecedented.

Compared to the Alternative Population-based projections, employment in the county in the Planned Economic Growth forecast increases by an additional 38,000 jobs. This consists of the 27,750 jobs described in Chapter 4, and 10,500 additional indirect and induced jobs (in sectors such as business support services) stimulated by these activities.

### **Growth projections by sector**

Table 5.1 and Figure 5.2 compare employment growth by sector in Oxfordshire in the two stages of the forecast. The sectors with the greatest additional employment in the Planned Economic Growth forecasts are those in which the additional direct jobs described in Chapter 4 were allocated: manufacturing, distribution, transport & storage, information & communications, financial & business services and government services.

The additional indirect (supply chain) and induced (household spending) jobs associated with the direct jobs are mainly in business support services: financial & business services. While many of the direct jobs in the sectors described in Chapter 4 will be in R&D, the majority of the other jobs that are stimulated will be in distribution, transport & storage and government services.

**Figure 5.2: Projected change in employment (000s) 2011-31 in the Alternative Population-based projections and Planned Economic Growth forecast – broad sectors in Oxfordshire**

### Growth projections by district

Figure 5.3 shows the distribution of the additional jobs in the Planned Economic Growth forecasts within Oxfordshire.

Vale of White Horse is projected to have the biggest increase in jobs over the increase projected in the Alternative Population-based projections, with 12,400 extra jobs projected by 2031 in the Planned Economic Growth forecast. 10,200 of these additional jobs are jobs directly associated with the development assumptions described in Chapter 4, including 5,400 in the Enterprise Zone in Harwell. In contrast, only 1,800 additional jobs would occur in West Oxfordshire (600 direct, with the rest indirect due to the Planned Economic Growth direct jobs across the county).

**Figure 5.3: Projected change in jobs (000s) 2011-31 in the Alternative Population-based projections and Planned Economic Growth forecasts – Oxfordshire districts**

**Table 5.2: Employment in the Alternative Population-based projections and Planned Economic Growth forecasts**

	Alternative Population				Planned Economic Growth		
	2011 (000s)	2031 (000s)	2011-31 (000s) (% pa)		2031 (000s)	2011-31 (000s) (% pa)	
Oxfordshire	380.6	430.5	49.9	0.6	468.8	88.2	1.0
Cherwell	79.4	90.1	10.8	0.6	100.9	21.6	1.2
Oxford	123.2	136.6	13.4	0.5	147.6	24.3	0.9
South Oxfordshire	65.1	74.2	9.1	0.7	76.5	11.5	0.8
Vale of White Horse	67.2	77.9	10.6	0.7	90.2	23.0	1.5
West Oxfordshire	45.7	51.7	6.1	0.6	53.5	7.9	0.8
South East*	4,387.2	4,834.9	447.7	0.5			
UK*	31,175.0	5,075.7	3,900.7	0.6			

Notes: \* Figures for South East and UK are for CE's baseline forecast.  
Figures are rounded to the nearest 100 jobs.

Source: Cambridge Econometrics and SQW, January 2014.

The Planned Economic Growth forecasts have greater disparity in employment growth across Oxfordshire than is the case in the Alternative Population-based projections. The additional jobs located in the Vale of White Horse results in the district having the strongest employment growth of 1½% pa over 2011-31. In contrast, the growth in South Oxfordshire and West Oxfordshire will be just ¾% pa. Nevertheless growth in all other districts would be almost double the rate projected for them in the Alternative Population-based projections.

Table 5.3 shows the direct and indirect impact of the Planned Economic Growth forecasts over and above the Alternative Population-based projections, by district. The table shows that the indirect jobs impact in a district can be greater than the direct jobs impact in that district (South Oxfordshire and West Oxfordshire). This is because the indirect impacts (mainly Financial & business services) are not necessarily generated in the same district as the direct impacts, and are related to the proportion of the relevant sector in each district.

**Table 5.3: Direct and indirect employment impacts in the Planned Economic Growth forecasts - 2031 (000s)**

	Direct	Indirect	Total
Oxfordshire	27.7	10.5	38.3
Cherwell	8.2	2.6	10.8
Oxford	8.1	2.9	11.0
South Oxfordshire	0.6	1.7	2.3
Vale of White Horse	10.2	2.2	12.4
West Oxfordshire	0.6	1.2	1.8

Notes: Figures are rounded to the nearest 100 jobs.

Source: Cambridge Econometrics and SQW, January 2014.

## 6 Risk Assessment of the Planned Economic Growth Forecasts

---

### 6.1 Introduction

Section 5 on the Planned Economic Growth forecasts concluded that there could be an additional 88,200 jobs in Oxfordshire between 2011 and 2031, compared with 49,900 additional jobs in the adjusted population forecast. This section considers the risks that need to be considered in delivering this scale of jobs growth, and how they should be factored into the overall forecasting work.

The risks considered include market conditions, labour market competition from neighbouring areas, delays in the delivery of strategic infrastructure, access to housing and the capacity of existing employment sites (including those allocated, or proposed to be allocated, in local plans) to accommodate this scale of growth.

### 6.2 Market conditions

Market conditions are clearly crucial to the speed of economic growth and the scale of private investment. The country is currently emerging from a prolonged economic downturn which has depressed business investment and growth since 2008. All the economic indicators currently point to recovery: for example, the Markit/CIPS UK services survey for November 2013 recorded the fastest rate of growth in the UK services sector for the last 16 years, and the PwC Economic Outlook report (also for November 2013) notes that UK manufacturers have benefited from somewhat stronger trends recently in key European export markets, and that the UK construction sector has also picked up from a low base in the past six months.

These indicators of growth are of course short term, whereas the forecasts look ahead to 2031. Over the next 18 years there are bound to be further economic cycles, including periods of growth and downturn. In addition, the government is still committed to further reductions in public spending, and this will directly affect employment in some sectors, and indirectly in others.

As far as possible, the econometric forecasts take account of factors such as the Government's policy to reduce public spending, but they cannot anticipate the timing of economic cycles. If the economic recovery continues, it is quite possible that growth over the next five years will be above that in the forecasts, but over the next 20 years it is reasonable to assume that the 'booms and busts' will even out and that the forecasts are the best indication currently of the scale of growth over the period as a whole.

### 6.3 Labour market competition

Oxfordshire is surrounded by strong economies which are also growing, and the jobs market in London is an increasing draw for residents in the county. This means that employers in Oxfordshire wishing to expand their workforce will be competing for labour with firms across a much wider geography than Oxfordshire. In the south of the county, where growth is expected to be fastest,

competition is also likely to be greatest due to the strength of the Thames Valley and London economies.

However, it is also the case that Oxfordshire has some very strong economic assets and attractions. The Universities and research institutes in the county are outstanding internationally, not just within UK, and the Science Vale Enterprise Zone provides incentives to firms which are not available to firms in nearby areas. Many of the additional jobs that are expected to be stimulated by policy interventions will be in high value activities, and are likely to pay well. This will make them attractive to a labour force which has a choice of where to work.

The Oxfordshire Innovation Engine report noted that “shortages of scientific and technical skills were identified by most respondents to our business survey as a constraint to growth....However, these concerns reflect national, and in some cases global shortages.” (paragraph 3.20). In other words, there are labour market constraints, but no worse than in other areas. And in some respects, Oxfordshire’s situation close to the Thames Valley and London to the south, and the West Midlands conurbation to the north, is regarded as an advantage in labour market terms, because firms based in Oxfordshire can draw on the specialist management and marketing skills available in those areas (paragraph 3.21).

## **6.4 Infrastructure delivery**

Delays in the delivery of key infrastructure may constrain growth. For example, the Oxfordshire Innovation Engine report identifies congestion on the A34 and in and around Oxford, and broadband access in some of Oxfordshire’s rural areas, as significant concerns for firms. There are also local access issues for some employment sites: for example, around the Peartree site in north Oxford, and access to Harwell remains poor.

In addition, there has been very little business space constructed over the last five years, except to order for specific end users. There has been almost no supply of business space on a speculative basis, even in the Science Vale Enterprise Zone. However, the property market is recovering, along with the rest of the economy, and therefore an increase in construction of commercial premises over the next few years is likely. For example, at Harwell STFC are in the process of changing their commercial joint venture partner in order to speed up development in the EZ, at Milton Park some speculative development has started, and market research for the economic strategy for NW Bicester indicates demand for business space there and a willingness to construct as soon as land is made available through the planning system.

Over the next 20 years it is certainly possible that failure to improve some key elements of Oxfordshire’s infrastructure could frustrate firms and persuade them to invest elsewhere – and continued reductions in public expenditure are likely to increase the probability of delays to improving key infrastructure.

However, the jobs growth potential identified in Chapter 4 is, generally, not dependent on specific infrastructure improvements which could be delayed. In addition, there are investments underway or planned by the private sector – for example by the University in the Science Area in Oxford, at Oxford Airport, and the NW Bicester Eco Development – which will stimulate jobs growth.

Furthermore, firms' frustration with low levels of infrastructure investment, identified in the Oxfordshire Innovation Engine report, is not a problem that is unique to Oxfordshire: it is at least as bad in most surrounding areas.

## **6.5 Inter-relationship between employment forecasts and housing requirements**

There is a possibility that the housing requirements linked to a high rate of economic growth may be impossible to satisfy due to practical limitations on housebuilding rates. If housing requirements are not met, the consequence would be rising housing costs which could in turn constrain the ability of firms to recruit, and therefore to grow. This would introduce an element of circularity in the forecasts – economic growth forecasts are used to determine housing requirements, but undeliverable housing requirements impact on economic growth potential and therefore lead to a downward revision of the economic growth forecasts.

We have considered this possibility by comparing the forecast rates of economic growth in the Planned Economic Growth forecasts contained in this paper with those produced by Experian in their High Economic Growth scenario for the SHMA, and with past rates of economic growth in Oxfordshire and also those in some comparator high growth areas in Cambridgeshire and Buckinghamshire. These comparisons are shown in Table 6.1.

The overall conclusion is that the rates of employment growth forecast under the Planned Economic Growth forecast are modest in comparison with past rates of growth in Oxfordshire or in the comparator areas.

The Planned Economic Growth forecast shows growth of 1% per annum 2011-31 for Oxfordshire, and by district forecast annual growth rates range from a high of 1½% (Vale of White Horse) to a low of ¾% (South Oxfordshire and West Oxfordshire). The fact that Vale of White Horse is highest is not surprising given the concentration of employment generating assets in the district – in particular, the research facilities at Harwell and the Enterprise Zone.

The average annual employment growth rate in the Planned Economic Growth forecast is 0.4 percentage points (pp) above the rate for the adjusted population forecast (0.6%), but 0.5 pp below (ie two thirds of) the rate for the Experian high economic forecast.

In comparison, between 1981 and 2000 Table 6.1 shows that employment in Oxfordshire grew by an average annual rate of 1.7% pa. By district, growth rates ranged between 3.5% pa (West Oxfordshire) and 0% pa (Oxford City). For the period 1990 to 2011 (which includes the impact of the recent recession) the average annual growth rate dropped to 0.7% pa for Oxfordshire, and ranged between 1.1% pa (West Oxfordshire) and 0.4% pa (Oxford City) in the districts. For the period 2000-2011 Oxfordshire's employment growth dropped further to 0.4% pa.

Considering comparator areas, employment growth in Cambridgeshire averaged 2.3% pa over the period 1981-2000, and 1.2% pa 1990-2011. The highest average annual employment growth in the comparators was in Milton Keynes, where it averaged 4% pa 1981-2000 and 1.5% pa over 1990-2011.

Table 6.1: Housing completions and employment growth in Oxfordshire and selected other local authorities

Period	Oxfordshire	Cherwell	Oxford	South Oxfordshire	Vale of White Horse	West Oxfordshire	Cambridgeshire	South Cambridgeshire	Huntingdon	Buckinghamshire	Aylesbury Vale	Milton Keynes
Dwellings completed (pa)												
2003/04-2012/13	1811	347	436	242	378	402	1860	705	665	1490	720	1602
Employment growth (% pa)												
Actual 1981-2000	1.7	2.6	0.0	2.7	2.1	3.5	2.3	4.0	3.1	1.4	0.8	4.0
Actual 1990-2011	0.7	0.8	0.4	0.9	0.7	1.1	1.2	2.5	1.2	0.2	-0.3	1.5
Actual 2000-2011	0.4	-0.7	1.4	0.4	0.5	0.1	1.2	2.1	0.2	0.2	0.6	1.1
Forecast 2011-31 Experian High Economic Growth	1.5	1.6	1.7	1.2	1.9	1.2						
Forecast 2011-31 CE Alternative Population	0.6	0.6	0.5	0.7	0.7	0.6						
Forecast 2011-31 CE Planned Economic Growth	1.0	1.2	0.9	0.8	1.5	0.8						
Sources: CLG - dwelling completions. ONS and Cambridge Econometrics (CE) – historical employment growth. CE – forecast employment growth. Experian – forecast employment growth.												

From Table 6.1 it is also possible to make some observations about the relationship between employment growth and dwellings completions and requirements – albeit the two sets of figures are for slightly different periods.

In Oxfordshire, over the ten years 2003/4-2012/13, annual dwelling completions averaged just over 1,800. This was during a period when employment growth rates were averaging around 0.4%. In Cambridgeshire over the same period annual housing completions were very similar, whereas employment growth averaged 1.2% per annum. In Buckinghamshire, both housing completions and employment growth were lower than in Oxfordshire.

Therefore, based on past rates of employment and housing growth there is no evidence that one constrained the other. In some places employment growth was faster despite comparable rates of housing provision, and in Oxfordshire since 1981 there have been periods of faster and slower employment growth than are forecast by the Planned Economic Growth forecasts for the period to 2031.

## 6.6 Capacity of allocated sites

Table 6.2 compares the Planned Economic Growth forecasts by district with the jobs capacity on sites that are allocated or proposed to be allocated for development within the period of the relevant local plans (the end points vary somewhat between plans, but all are close to 2031 and therefore the variation does not invalidate this analysis). The capacity information in Table 6.2 is based on estimates provided by the District Councils, and shown in full in the Appendices.

Table 6.2 also shows the Planned Economic Growth forecasts adjusted to include only those likely to locate on B Class land, to make the figures comparable with the capacity of allocated sites. This involves assumptions about the proportion of jobs in each main sector locating on B Class land, which are shown in Table 6.3.

**Table 6.2: Jobs growth compared with capacities on allocated sites (000s)**

	Planned Economic Growth jobs growth	Jobs likely to be located on B Class land	Capacity of allocated sites
Oxfordshire	88.2	47.0	63.1
Cherwell	21.6	12.7	17.3
Oxford	24.3	11.0	18.5
South Oxfordshire	11.5	5.4	5.0
Vale of White Horse	23.0	13.8	14.3
West Oxfordshire	7.9	4.0	6.5
Source(s): SQW and District Councils.			
Notes: the capacity in South Oxfordshire includes 500 jobs on 6.5ha at Didcot in Vale of White Horse, which has been agreed to be part of South Oxfordshire's employment land allocations.			

**Table 6.3: Assumptions regarding the proportion of jobs in each sector occupying B Class land**

<b>Sector</b>	<b>% of jobs on B Class land</b>	<b>% of total employment growth in Oxfordshire (2011-31)</b>
Agriculture	0	3.3%
Mining & quarrying	0	-0.1%
Manufacturing	100	6.7%
Electricity, gas & water	0	-0.1%
Construction	0	4.9%
Distribution	50	11.0%
Transport & storage	50	8.3%
Accommodation & food services	0	8.9%
Information & comms.	50	3.7%
Fin. & business services	75	43.1%
Government services.	25	10.0%
Other services	75	0.2%

Based on these assumptions, Table 6.2 shows that overall in Oxfordshire there is plenty of capacity on allocated sites to accommodate the forecast jobs growth. There is also sufficient land in all of the districts except South Oxfordshire. However, there is enough additional capacity in the immediately adjacent area of Vale of White Horse to compensate for the small shortfall in South Oxfordshire.

The Planned Economic Growth forecasts show that most employment growth in Oxfordshire over 2011-31 is likely to occur in financial and business services (43%), with another 10% in Government services and 11% in distribution. The assumptions in Table 6.3 about the proportion of jobs in these sectors that occupy B Class land are obviously crucial to the land requirement. For example, if it is assumed that only 50% of jobs in financial and business services will locate on B Class land, rather than 75%, then there is sufficient land in all districts including South Oxfordshire.

The conclusions also depend on the density of jobs on sites. District Councils are best placed to decide what the appropriate jobs densities are on their employment sites, hence we have used their own estimates contained in the appendices.

## **6.7 Conclusions**

The purpose of this Chapter has been to identify key risks that could affect the profiling of jobs growth over time and act as a constraint on their delivery. Key findings include:

- Market conditions are improving, and there is no indication that they will constrain employment growth to 2031. In fact, it is possible that short term market conditions could lead to faster growth than forecast over the next few years.
- Labour market constraints are a problem for many firms, but the main problems are skills which are in short supply nationally, and in some cases

internationally, not competition from surrounding areas. The juxtaposition to areas with a good supply of management and marketing skills, which complement the strong technology skills in Oxfordshire's workforce, is a benefit to firms. The quality of jobs likely to be created in Oxfordshire will help ensure that firms are able to recruit by paying competitive salaries.

- Infrastructure constraints are a concern to firms, but there is no evidence that they will be a constraint to growth in the short term. Longer term, they could deter investment, and this is clearly a risk to sustaining the pace of economic and employment growth in the county to 2031
- The rates of employment growth in Oxfordshire and the five districts generated by the Planned Economic Growth forecasts are not particularly high by historical standards, or in comparison to some other areas. Based on past rates of employment and housing growth there is no evidence that one constrained the other
- Employment land requirements resulting from the forecasts are well within the total allocated across the county, and in all districts except South Oxfordshire. Here the conclusion is sensitive to the assumptions about the proportion of financial and business services that will locate on B Class land.

In order to take account of these risks, a "sensitivity adjustment" could be applied, on the assumption that all or any of them could result in employment growing more slowly than forecast. Given the improving economic conditions currently, and the absence of immediate constraints on growth, any slowdown in employment growth is more likely in the second half of the period to 2031 rather than between now and 2021.

However, firms and people will always adapt to conditions as they evolve, and it is unlikely that Oxfordshire will be particularly disadvantaged – for example, in relation to infrastructure investment or housing growth – compared with its neighbours. Market adjustments may include an increase in commuting between north and south of the county (to address housing shortages or high prices in the south), or increased working from home and more flexible working hours (to address transport congestion).

We would therefore not recommend that the Planned Economic Growth forecasts are reduced to account for the risks discussed in this Chapter, because they do not appear to us to be particularly likely to reduce employment growth below that forecast.

## **7 APPENDICES**

---

## Appendix A: The Local Economy Forecasting Model (LEFM)

---

LEFM has been developed by CE in collaboration with the Institute for Employment Research at the University of Warwick. It is, to our knowledge, the only software package in Europe tailored to model regional and local economies and designed to conventional commercial software standards. It has been commercially available since the early 1990s (since when it has been continually developed) and is designed to empower organisations to undertake detailed economic analysis in-house. It is used extensively by local agencies, including local authorities, and by CE for more specialised analysis often commissioned by development agencies.

LEFM has been designed to project economic indicators for a local area by explaining the output of local industries through an explicit representation of expenditure flows in the area and their links with the world outside the local area. In this it differs from other methods of local economy modelling which typically link local output or employment (by sector) directly to national or regional output or employment. Such methods include shift-share or econometrically estimated equations. While these methods allow a user to derive projections for local output or employment growth from national or regional projections, they offer little scope for introducing an explanation of local performance relative to these higher levels, and they are typically not suitable for analysing the indirect effects on the local economy arising from the opening of a new enterprise or the closure of an existing one.

LEFM is also distinguished from other approaches by its sectoral detail. It identifies 45 sectors (defined on SIC07), allowing (for example) electronics to be distinguished from electrical equipment, and IT services from other business support services. Detailed disaggregation by sector is usually valuable because different sectors have different prospects (eg technological change is driving much faster growth in electronics and computing than in the other sectors with which they are commonly combined), because they have different employment characteristics, and also because it allows local knowledge about specific firms to be more easily incorporated in the forecast. There is, however, a cost to working in such detail: most variables in the model have to be disaggregated by sector (or a similar classification: see below for more details).

LEFM's structure draws heavily on that of MDM, Cambridge Econometrics' multi-sectoral model of the UK economy and its regions, and it shares the same software.

### LEFM's Main Inputs and Outputs

The main input assumptions used in LEFM are:

- forecasts for the UK and region in which the local economy lies for selected variables, including
  - the components of domestic final expenditure, disaggregated into spending by function as published in the UK National Accounts

- components of personal incomes
  - gross output, value-added and employment by 45 sectors
  - matrices to convert the components of domestic final expenditure into commodity demand for 45 sectors
  - input-output coefficients and projected changes
  - projected changes in occupational structure and gender forecasts for the local economy
  - population by 5-year age band and gender
  - participation rate by gender for a constant level of unemployment (these are then adjusted by the model in response to actual changes in unemployment)
- Outputs for the local economy include:
    - value-added and employment by sector (45)
    - employment by gender and status (full-time, part-time, self-employed)
    - employment by occupation (25 occupations, SOC2010)
    - disposable income and consumer spending
    - population and labour force by age (7 age bands) and gender
    - net commuting
    - implications for qualifications

### LEFM's Main Relationships

#### Accounting structure

Figure A.1 summarises the model's accounting structure, which follows the social accounting matrix approach adopted in MDM. In most cases, the variables shown in the diagram are disaggregated (eg by sector for output and employment).

Each industry's gross output is determined as the difference between commodity demand (the sum of demand coming from the final expenditure components together with intermediate demand coming from production in the local economy) and imports to the local area. Each industry's value-added is assumed to be in the same proportion to its gross output as is the case for the region as a whole.

#### How the main variables are determined

Employment in the local area generates incomes. Assumptions are made for net commuting, which determines the extent to which incomes from local employment accrue to non-residents. Similarly, some incomes in the local area are derived from employment outside the area, or from non-employment sources (eg unemployment benefit). Aggregate household expenditure by residents in the local area is determined by real household disposable incomes (deflated by the national household expenditure deflator) and projections for the household saving ratio (derived from changes in the regional household saving ratio). Household expenditure is then disaggregated into spending by function according to the proportions forecast for the region.

Government final expenditure (disaggregated by type) in the local economy is projected on the basis of changes in the local area's share of the region's population.

Investment by sector is determined by a simple relationship with output. Projections for social investment (eg education, health) and investment in social services (eg roads), which are treated as assumptions at the UK level in MDM, are allocated to the local area according to population changes.

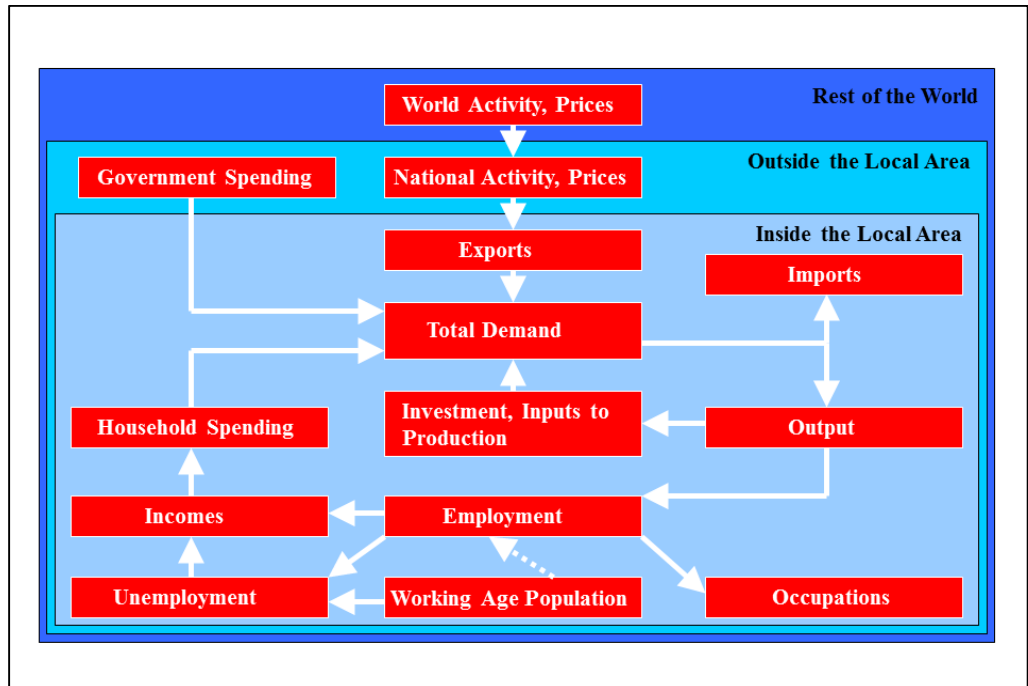

Intermediate expenditure by sector and commodity is determined by applying the national input-output coefficients to local economy gross output by sector.

Exports by sector from the local economy are linked to national gross commodity output in each sector. In effect, local firms are treated as competing in the national pool. Export projections then depend upon UK gross commodity output in each sector, and on assumptions for trends in the local economy's share of this output. In some cases, simple methods have been tried to model these export shares (eg to represent the effects of policies to promote inward investment). Imports by sector to the local economy depend on the demand for commodities in the local economy and on assumptions for import shares.

Employment by sector is determined by gross output and trends in productivity per person employed derived from regional projections (which in turn are derived from econometric estimates). Employment by gender and type is determined by the sectoral composition of employment and local information on the representation of genders and types of employment in each industry. The default projections for trends in this representation are based on historical data for the local area, with the user given the option to change these default values. A similar procedure is followed for employment by occupation.

Projections for the resident workforce are derived from assumptions for the population for working age (by gender) and projected participation rates which vary with the unemployment rate. Unemployment is the difference between the workforce, local employment and 'net commuting'.

9	Information & communications	58-63
10	Financial & business services	64-82
11	Government services	84-88
12	Other services	90-96

## **Appendix K: Employment sites and job capacities for Oxfordshire Districts**

---

Table K.1: Employment sites and jobs in Cherwell

Site Name	Total land for employment (ha)	Total number of jobs in Local Plan period	Jobs by Use Class (%)			Comments
			B1	B2	B8	
Cherwell						
Bicester 1 - North West Bicester	37 (25.5 up to 2031)	1,800 within plan period	60%	20%	20%	Based on draft NW Bicester masterplan which includes approx 35,000sqm of mixed B1/B2/B8 space, plus 20,000 sqm of B1 space. Likely build out and take up of business space more rapid than indicated in local plan - assume 2,500 jobs created on site by 2030, rather than 1,800
Bicester 2 - Graven Hill	26	2,070	10%	20%	70%	Mix of B uses guesstimated, based on indications that site is most favoured in Bicester for large scale B8 uses.
Bicester 4 - Bicester Business Park	17.5	3,850	100%			B1 Offices/business uses. Some of land likely to go for retail (relocation of Tesco to site to enable Bicester Village to expand) and hotel use.
Bicester 5 - Strengthening Bicester Town Centre		1000				Retail with some ancillary offices. Sainsbury expansion - 870 jobs - plus some office jobs.
Bicester 8 - RAF Bicester	17 (Bicester Masterplan)	2,244 (Bicester Masterplan)	50%	50%		Proposals for the site include a museum for RAF Bomber Command, the development of hotel and conference facilities, and a range of workshop, storage and service activities related to classic aircraft and road vehicles. Balance of different uses may in practice be more B8 and less B1.
Bicester 10 - Bicester Gateway	7.5	990	100%			The site is closest to the M40 and the best located in Bicester to attract hightech knowledge intensive B1 uses. However, the amount of office/R&D space proposed for Bicester Gateway (990 jobs), Bicester Business Park (3,850 jobs) and NE Bicester Business Park (1,090 jobs) combined is ambitious compared with the nature of demand for high tech uses in this area,

Site Name	Total land for employment (ha)	Total number of jobs in Local Plan period	Jobs by Use Class (%)			Comments
			B1	B2	B8	
Cherwell						
						which is more oriented towards manufacturing with some office space, rather than exclusively office/R&D space.
Bicester 11 - North East Bicester Business Park	2.7	1,092	100%			B1 Office/Business uses only - see comment above. Of the three sites, this is probably the least attractive due to its greater distance from the M40/A34 and Bicester Town rail station.
Bicester 12 - East Bicester	18	3241 (some beyond plan period)	20%	30%	50%	Mixed B Use classes. The draft Local Plan expects this site to come forward for development towards the end of the plan period, therefore only part of the site is likely to be developed by 2030.
Banbury 1 - Canalside						The draft local plan indicates 15,000sqm of retail/commercial use and some live work uses but no B uses.
Banbury 6 - Land west of M40	6.3 (net remaining area)		15%	35%	50%	Mixed Use site, excellent strategic location with good access, though some remediation work will be necessary as part of the development. Includes over 500 jobs on part of the site already constructed and another 1,000 jobs on the remainder of the site
Banbury 7 - Strengthening Banbury town centre						Retail

Site Name	Total land for employment (ha)	Total number of jobs in Local Plan period	Jobs by Use Class (%)			Comments
			B1	B2	B8	
Cherwell						
Banbury 8 - Land at Bolton Road	2					Identified for a mix of town centre uses in the draft Local Plan - retail, leisure, hotel. No B uses proposed
Banbury 9 - Spiceball	4.5					Identified for a mix of town centre uses in the draft Local Plan - retail, leisure, hotel. No B uses proposed

Oxford City																		

Osney Mead					The estate comprises some 18.3 hectares, and in 2006 when the Employment Land Study for Oxford was undertaken it was estimated that there was in the region of 51,600 sqm of principally Class B floorspace on the estate. This includes a mix of general industrial, warehousing and some office units. There is a very real prospect that during the forecasting period the site would be more actively used by the University and will create new jobs, which could include a mix of research and development, office	7740	Assume some redevelopment and a net increase of 15%	General office	12	645	Osney Mead is an older industrial estate that over recent years has been under-utilised. The only significant new development has been for Newsquest who have redeveloped their site for a larger printing / publishing building to produce and prepare their newspapers (Oxford Times and Oxford Mail). The rest of the estate whilst experiencing some new development has in the main been rather run-down and in need of revitalisation and presents a real opportunity for modernisation and an intensification of uses and development on the site. The University have been purchasing individual sites on the estate as they have come on the market and are now a key landowner.						
------------	--	--	--	--	--	------	---	----------------	----	-----	---	--	--	--	--	--	--

					and educational activities.												
--	--	--	--	--	-----------------------------	--	--	--	--	--	--	--	--	--	--	--	--

Westgate						54500				A1 High Street Retail	19	2,868	The outline planning application for the redevelopment of the Westgate Shopping Centre has just been submitted. The attachment sets out the expected 'net' increase in new additional floorspace which has increased from the previous permission but as you will see has figures for the minimum and maximum amount of new retail accommodation, ranging from 54,500 sqm to 81,900 sqm. It also sets out figures for associated services which include Class A2-A5 uses, which again ranges from 6,200 sqm to 27,000 sqm new additional floorspace. The cinema will have a new additional floorspace of some 5,990 sqm.						
----------	--	--	--	--	--	-------	--	--	--	-----------------------	----	-------	--	--	--	--	--	--	--

Science Area					The Master-plan for the Science Area doesn't appear to include any detailed figures as such however it does suggest that the mix of accommodation / floorspace on site will comprise 40% laboratory floorspace, 40% offices and 20% ancillary / other floorspace. The site area is approximately <b>30</b> acres.	96000				Science Park	32	3,000	In discussions with the Development Management Case Officer for the site his view is that the University does not know entirely what the future floorspace will be other than it would <u>increase considerably</u> over the years ahead as older buildings are replaced with new ones on 4 or 5 levels plus basements, eg recent permissions for Biochemistry, Earth Sciences, New Chemistry, Physics etc. This is evident by the work that has already taken place which has comprised the demolition of existing older buildings usually about 3 floors and their replacement with these new buildings of 4 to 5 levels plus basements.

				B1	B2	B8	Other		
South Oxfordshire (2006-2026/27)									
Culham Science Centre	5.3		1,000					Culham Science Centre has 2,000 jobs currently and could accommodate another 1,000. Beyond that there is access constraints which are extremely difficult to overcome (new Thames crossing required). As JET is moving to France, could free up space and allow for jobs growth to replace existing.	
Employment land at Thame (TBC)	2		3,500						
Employment land at Wallingford (TBC)	2								
Employment land at larger villages (TBC)	4.2								
Southmead Industrial Estate, Didcot (existing site)	2.9							The adopted plan identifies 6.5 ha of the employment land (and 500 jobs) to be accommodated in the EZ in VoWH District which is regarded as part of S Oxon's allocation.	
Hithercroft Industrial Estate (existing site)	3.12								
Howbery Park (existing site)	2.4			100					
Siarey's Timber Yard, Chinnor (existing site)	1.05								
Chinnor Cement Works (existing site)	1						Employment land at Thame could amount to 11ha as two existing firms may move locally but from outside Sth Oxon district in to Thame.		
Watlington Industrial Estate (existing site)	3								
Employment land at Didcot / VoWH	6.5		500					Part of the employment land at Wallingford is under pressure for alternative use as a supermarket.	
	33.47		5,000					The remaining sites relate to completion or redevelopment of existing sites. Howbery Park is Environment Agency, part of the Wallingford research	

									<p>facility, which is expected to be developed for related commercial research</p> <p>Pages 17-21 of the ELR update<sup>1</sup> provide employment densities and plot ratios used in the evidence base.</p> <p>The ELR estimates includes an additional 50% of floorspace to allow for market churn and choice (p.23).</p> <p>In addition to employment on B use land, the adopted plan has identified a need for 32,800 sqm (gross) (of which 26,600sqm will be at Didcot) of retail and leisure floorspace (A1 - A5) between 2007 and 2016. The retail and leisure needs forecast figures beyond 2016 were acknowledged to be less reliable and need to be reviewed. No breakdown is given by B use type as the employment allocations have been increased beyond those recommended in the ELR breakdown. A breakdown is available for the 18.1 ha recommended in the ELR on page 23 of the ELR 2008 update.</p>

Table K.4: Employment sites and jobs in Vale of White Horse

Site Name	Total employment site size (ha), net of any existing on site	Net additional jobs in Local Plan/Core Strategy	Jobs/floorspace density	Total employment floorspace (sqm) attributed in Local Plan/Core Strategy (if applicable)	Percentage of land in each Use Class				
					B1	B2	B8	Other	
Vale of White Horse (2012-2029)									
C16 Harwell Campus	85	5400 (8400 gross)	24	200,000		100			EZ will not be completed by 2016 as originally proposed but is very likely to be completed by 2031 - there are no infrastructure constraints to development, the owner developers are committed and have the capacity to complete, and both schemes are likely to be attractive to end users.
C14 Milton Park	28		24			100			
EZ total	113								
C1 Abingdon Business Park at Wyndyke Furlong	0.67	5,940	70	416,000	100				Current supply comprises completions of existing schemes - no reason to suppose these will not be completed within the plan period.
C2 Abingdon Science Park at Barton Lane	0.74				100				
C9f Faringdon – land adj to A420 – “4&20” site	4.2				33	33	34		Future supply comprises three sites: Didcot A is surplus to requirements and is subject to remediation which will take three years, following which it should be available for development. Total site likely to be a mix of housing and employment, with current estimate of 29ha for employment, although conceivably a higher proportion could go for housing. N Power want the site used for B8, VoWH want a mixed use
C8 Cumnor Hill	0.3				100				
C20 Wootton Business Park	1.48				100				

Site Name	Total employment site size (ha), net of any existing on site	Net additional jobs in Local Plan/Core Strategy	Jobs/floorspace density	Total employment floorspace (sqm) attributed in Local Plan/Core Strategy (if applicable)	Percentage of land in each Use Class					
					B1	B2	B8	Other		
Vale of White Horse (2012-2029)										
C10 Grove Technology Park	5.4					50	50		employment scheme. Has existing access and owner which wants reuse to go ahead. Railhead on site could support B8/B2 use. <b>North Grove Monks Farm</b> adjoins Williams and would accommodate an extension. This seems likely as Williams is diversifying into related product areas.	
C9b Faringdon – HCA business centre	0.18				100					
Total current supply	12.97									<b>Retail</b> - new retail development at Abingdon, Botley, Faringdon, etc, all likely to come forward. Net additional floorspace of 22,940 sqm: 1,500 jobs is a bit high by standard floorspace assumptions but not excessive.
C29 Didcot A	29				59	7	34			
C32 North Grove Monks Farm	6				67	17	16			
C33 Faringdon South Park Road	3							33	67	
Total future supply	38									
Total supply	163.97				38	35	14			

Site Name	Total employment site size (ha), net of any existing on site	Net additional jobs in Local Plan/Core Strategy	Jobs/floorspace density	Total employment floorspace (sqm) attributed in Local Plan/Core Strategy (if applicable)	Percentage of land in each Use Class				
					B1	B2	B8	Other	
Vale of White Horse (2012-2029)									
Other - potential uplift	n/a	1,500		n/a					for 59,000sqm of B8. There is evidence of demand from the likes of Amazon and Tesco for large scale B8 at Didcot. Total jobs from these schemes in pipeline could be 4,500. There is also scope for substantial additional development at Harwell - at least 20ha should be available for development in the short term over and above the EZ area, and more long term.
Other - retail schemes	n/a	1,500		n/a					

Table K.5: Employment sites and jobs in West Oxfordshire

Site Name	Total site size (ha)	Total land for employment (if a mixed use site) (ha)	Total number of jobs in Local Plan/Core Strategy	Total employment floorspace attributed in Local Plan/Core Strategy (if applicable)	Jobs by Use Class (%) if given in ELR or Local Plan				Comments
					B1	B2	B8	Other	
West Oxfordshire 2011-2029									
West Witney Strategic Development Area (SDA)	10		1,500				No more than 25% B8		West Witney SDA is part of urban extension. Site is well located and has planning permission S106.
West Witney Existing Commitments	10		3,500						West Witney existing commitments are largely undeveloped land within the existing business area. They are in multiple ownerships and depend on willingness of existing owners to sell or develop.
Carterton (West Oxfordshire Business Park and Land at Ventura Park)	5								Carterton - strong interest from potential major end user is likely to lead to development in near future. If housing goes ahead at East Carterton there may be an additional 2ha of employment land made available. The lack of high speed broadband needs to be addressed to make the site more attractive.
Chipping Norton (former Highways Depot, former Parker Knoll Factory site, land north of London Road)	5								Chipping Norton - former industrial sites, owners want to sell for higher value uses. Part likely to go for supermarket, then

Site Name	Total site size (ha)	Total land for employment (if a mixed use site) (ha)	Total number of jobs in Local Plan/Core Strategy	Total employment floorspace attributed in Local Plan/Core Strategy (if applicable)	Jobs by Use Class (%) if given in ELR or Local Plan				Comments
					B1	B2	B8	Other	
West Oxfordshire 2011-2029									
									remainder more likely to be developed for B uses.
Other Towns, Villages and Rural Areas (including Lakeside, Standlake)	5								Other towns and villages - there are some strong firms in West Oxon rural areas looking to expand, therefore available sites in villages are likely to be taken up over time.
Other small scale schemes and business extensions (not allocated)	25		1,500						Past monitoring data indicates that about 25% of employment floorspace has come forward on unallocated sites. Assuming this is to continue, this has the potential to generate around 1,500 additional jobs over the Local Plan period.
Total	60		6,500						Assumptions - 1 job per 20sqm of office floorspace (B1a and B1b use classes), 1 job per 30sqm of industrial floorspace (B1c and B2 use classes, also applied where use class not specified) and 1 job per of 40sqm (B8 use class). Average plot density of 0.41 assumed such that 1ha yields 4,100sqm of floorspace.

Site Name	Total site size (ha)	Total land for employment (if a mixed use site) (ha)	Total number of jobs in Local Plan/Core Strategy	Total employment floorspace attributed in Local Plan/Core Strategy (if applicable)	Jobs by Use Class (%) if given in ELR or Local Plan				Comments
					B1	B2	B8	Other	
West Oxfordshire 2011-2029									
Note: the total number of jobs excludes retail, tourism, education and health and RAF Brize Norton which could generate an additional 3,500 jobs i.e. 10,000 in total.									Assumptions are: 500 additional jobs in tourism, which looks reasonable given attractions of cotswolds; retail/town centre growth possible though may be questionable. RAF Brize Norton - privatisation of support services means that RAF jobs are likely to be replaced by private sector jobs over time - little net employment increase in total.

# Housing and Economic Needs Assessment

Cherwell District and Oxford City  
Councils

FINAL REPORT

December 2022

Cambridge Econometrics' mission is to provide clear insights, based on rigorous and independent economic analysis, to support policy-makers and strategic planners in government, civil society and business in addressing the complex challenges facing society.

Cambridge Econometrics Limited is owned by a charitable body,  
the Cambridge Trust for New Thinking in Economics.

# 1 Introduction and Purpose

**1.1.1** This study was commissioned by Cherwell District Council and Oxford City Council to prepare a Housing and Economic Needs Assessment (HENA) to inform their individual Local Plans. This follows work originally intended to inform the Oxfordshire Plan, which is no longer being prepared, although the Oxfordshire Growth Needs Assessment (OGNA), was published in 2021.

**1.1.2** This HENA is intended to provide an integrated evidence base to help identify the appropriate level and distributions of housing and employment over the period to 2040. The core objectives of the Study are to:

- Refresh the methodology and the growth scenarios in the original OGNA to update Oxfordshire's housing needs over the 20-year Local Plan period of 2020 to 2040
- To provide a detailed, up to date commentary (including the baseline position) on Oxfordshire's housing and employment market, including demographic and economic dynamics and any other key drivers of housing need and how this may change in the period to 2040.
- To identify a range of credible and robust housing need scenarios for Oxfordshire.
- To establish an informed understanding of affordable and specialist housing needs in Oxfordshire.
- To provide an updated assessment of employment land needs.
- To advise on how Local Plans should respond to the uncertainty associated with long-term planning for strategic housing and employment provision.

## 1.2 Context and nature of the Assessment

**1.2.1** The Oxfordshire Plan was to be a joint statutory spatial plan which covers a 30-year plan period from 2020 to 2050. As the individual Local Plans for Cherwell and Oxford City cover a 20-year plan period, the HENA largely considers this period between 2020 and 2040.

## 1.3 This report

**1.3.1** The principal objectives of this housing and economic needs assessment report (HENA) are to:

- Update housing and economic baselines and provide updated demographic and policy reviews.
- Update, and remodel economic scenarios from the original report, including accounting for new economic baselines and post pandemic working from home patterns.

- Bring together the evidence to draw conclusions on the appropriate housing need in Cherwell and Oxford City.
- Update affordable housing needs including the consideration of the need for different types of affordable housing including First Homes.
- Update employment land needs and draw strategic conclusions on the need for employment land in Cherwell and Oxford City.

**1.3.2** The HENA is a single report providing overall growth need figures for housing and employment. It profiles local housing market, demographic, economic and commercial property market dynamics, all within the strategic policy environment. These factors are then brought together to provide trajectories for future housing and employment land needs, and resultant high-level implications for commuting and affordability.

## 1.4 Report structure

**1.4.1** The remainder of this report is structured as follows into 3 main sections.

### **Part A: and Markets Review**

- Oxfordshire's current strategic policy environment
- Demographic trends and review
- Housing market review
- Commercial market review and assessment of employment land requirements

### **Part B: Reviewing and Refreshing Oxfordshire's Growth Scenarios**

- Reassessing the original Growth scenario specifications
- Updating the scenario specifications for 2022
- Consideration of commuting and homeworking
- Housing market impacts
- Distribution of housing need in the districts
- Conclusions on overall housing need

### **Part C: Affordable and Specialist Housing Need, Mix and Tenure**

- Need for social and affordable housing
- Newly forming households
- Net need for social and affordable housing
- Establishing the need for affordable home ownership
- The cost of affordable home ownership
- Housing mix and household composition
- Targets of different sizes and properties by tenure

- Characteristics of older person households
- Housing for need for older people and people with disabilities
- Build to rent, self-build and custom-build housing

Appendix B: CE 2022 Baseline Projection Update Overview

Appendix C: Understanding Affordability Implications

# **PART A: Policy, Demographics, Housing and Commerical Markets Review**

---

## 2 Strategic Policy Review

### 2.1 Introduction

**2.1.1** This chapter addresses some of the strategic policy influences on planning for housing and economic development needs.

**2.1.2** Government has set out national planning policies in the National Planning Policy Framework (NPPF). The latest version of the NPPF was published in July 2021 and is relevant to the preparation of local plans as one of the ‘soundness’ tests, against which the Plan in due course, will be assessed is one of the consistency with policies in the Framework.<sup>1</sup>

**2.1.3** The NPPF is clear that the purpose of the planning system is to contribute to the achievement of sustainable development (Para 7) within which there are economic, social and environmental components. It sets out a presumption in favour of sustainable development which, for plan making, means that plans should promote a sustainable pattern of development that seeks to: meet the development needs of their areas; align growth and infrastructure; mitigate climate change (including by making effective use of land in urban areas) and adapt to its effects. It outlines that strategic policies should, as a minimum, provide for objectively assessed needs for housing and other uses, as well as needs that cannot be met within neighbouring areas, unless the application of policies that protect areas or assets of particular importance provide a strong reason for restricting the scale, type or distribution of development<sup>2</sup>; or the adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in the Framework taken as a whole (Para 11).

**2.1.4** The NPPF is clear that the planning system is intended to be ‘plan-led’ with plans providing the basis for the determination of planning applications. It expects plans to set out strategic policies which articulate the overall strategy for the pattern, scale and quality of development, and make sufficient provision for housing, employment and other forms of commercial development, infrastructure, community facilities and the enhancement of the natural, built and historic environment.

**2.1.5** This HENA report seeks to consider the need for housing and employment development. In developing local plans, the Councils will draw this together with consideration of wider sustainability issues including the need to conserve and enhance the natural, built and historic environment, and ensure that new development is supported by necessary infrastructure.

<sup>1</sup> NPPF Paragraph 35.

<sup>2</sup> Areas or assets of particular importance within this context in Oxfordshire include the Cotswolds Area of Outstanding Natural Beauty, the Chilterns Area of Outstanding Natural Beauty, the North Wessex Downs Area of Outstanding Natural Beauty, SSSI, SACs, local green space, Green Belt, areas at risk of flooding, irreplaceable habitats and designated heritage assets including Oxfordshire’s only World Heritage Site at Blenheim Palace.

## Assessing Housing Needs

**2.1.6** The 2021 NPPF sets out that to determine the minimum number of homes needed, strategic policies should be informed by a local housing needs assessment, conducted using the ‘Standard Method’ in national planning guidance – unless exceptional circumstances justify an alternative approach which also reflects current and future demographic trends and market signals (Para 60).

**2.1.7** The ‘Standard Method’ was introduced by Government in 2018 and uses a formulaic approach to calculate a minimum level of housing need. Government’s Planning Practice Guidance sets out that housing need is an unconstrained assessment of the number of homes needed in an area, and is the first step in the process of deciding how many homes to be planned for. It should be assessed separately from assessing land availability, establishing a housing requirement figure (i.e. how many homes to plan for) and preparing policies to address this.<sup>3</sup> In this context, this report considers unconstrained ‘housing need’ – it does not set a housing target, but is an important input to doing so.

**2.1.8** The Standard Method uses Government’s 2014-based Household Projections to calculate the average annual household growth over the next 10 years, then applies a percentage uplift to this based on the extent to which an area’s median house price-to-earnings ratio is above 4 to calculate a minimum annual housing need figure. A cap is applied to the affordability uplift in generating the minimum figure in some circumstances to ensure the figures derived are deliverable. For some cities and larger urban centres, a further uplift is now applied – but this does not affect authorities in Oxfordshire. The methodology is considered in greater detail in *Chapter 7*.

**Figure 2.1: Overview of the Standard Method for calculating local housing need**

**2.1.9** The Standard Method provides what the guidance states should be a minimum starting point for calculating housing need. However, paragraph 60 in the NPPF and the associated Planning Practice Guidance<sup>4</sup> indicate that use of the Standard Method is not mandatory. Exceptional circumstances must be demonstrated to justify a housing need figure *lower* than that identified using the Standard Method, and such figures must be based on realistic assumptions on demographic growth and market

<sup>3</sup> Planning Practice Guidance Para ID: 2a-001-20190220

<sup>4</sup> Planning Practice Guidance Para ID 2a-015-20190220

signals. The Planning Practice Guidance outlines that more recent household projections (such as the 2016- and 2018-based projections) do not provide an appropriate basis for use in the Standard Method.<sup>5</sup>

**2.1.10** In contrast, the guidance notes that where planning authorities can show an alternative approach, identifying a need *higher* than indicated by the Standard Method, this can be considered sound if it adequately reflects current and future demographic trends and market signals.

**2.1.11** Specifically, Planning Practice Guidance in Para 2a-010<sup>6</sup> sets out that there will be circumstances when it is appropriate to consider if housing need is higher than the Standard Method indicates, stating that:

*“The government is committed to ensuring that more homes are built and supports ambitious authorities who want to plan for growth. The Standard Method for assessing local housing need provides a minimum starting point in determining the number of homes needed in an area. It does not attempt to predict the impact that future government policies, changing economic circumstances or other factors might have on demographic behaviour. Therefore, there will be circumstances where it is appropriate to consider whether actual housing need is higher than the Standard Method indicates.*

*This will need to be assessed prior to, and separate from, considering how much of the overall need can be accommodated (and then translated into a housing requirement figure for the strategic policies in the plan). Circumstances where this may be appropriate include, but are not limited to situations where increases in housing need are likely to exceed past trends because of:*

- *growth strategies for the area that are likely to be deliverable, for example where funding is in place to promote and facilitate additional growth (e.g. Housing Deals);*
- *strategic infrastructure improvements that are likely to drive an increase in the homes needed locally; or*
- *an authority agreeing to take on unmet need from neighbouring authorities, as set out in a statement of common ground.*

*There may, occasionally, also be situations where previous levels of housing delivery in an area, or previous assessments of need (such as a recently produced Strategic Housing Market Assessment) are significantly greater than the outcome from the Standard Method. Authorities will need to take this into account when considering whether it is appropriate to plan for a higher level of need than the Standard Method suggests.”*

**2.1.12** Housing provision in the current round of local plans in Oxfordshire is based on evidence showing that Oxfordshire’s economic dynamism and its economic growth performance are particular drivers of housing need. Recent Local Plans in Oxfordshire, including those in Oxford City and South Oxfordshire, which have

<sup>5</sup> Planning Practice Guidance Para ID 2a-015-20190220

<sup>6</sup> Planning Practice Guidance, Para ID: 2a-010-20190220

assessed housing need as being above the Standard Method have been found to be sound at independent examination.

**2.1.13** The inter-relationship between economic growth potential and housing need are recognised in the PPG through reference to changing economic circumstances; whilst equally the NPPF emphasises in Para 82 that plans should set a clear economic vision and strategy which positively and proactively encourages sustainable economic growth. This HENA explores the inter-relationships between housing need and economic performance.

## **2.2 Assessing economic development needs**

**2.2.1** The NPPF is clear that planning policies and decisions should help create the conditions in which businesses can invest, expand and adapt; and that significant weight should be placed on the need to support economic growth and productivity, taking into account local business needs and wider opportunities for development (Para 80). It is clear that this is particularly important where Britain can be a global leader in driving innovation and in areas with high levels of productivity, which would include Oxford and other parts of Oxfordshire.

**2.2.2** Planning policies are expected to set out an economic vision and strategy which positively and proactively encourages sustainable economic growth, having regard to Local Industrial Strategies and other local policies; which identifies strategic sites for local and inward investment; addresses barriers to investment and is sufficiently flexible to accommodate needs not anticipated in the plan (Para 81).

**2.2.3** Planning Practice Guidance outlines that assessments of employment land needs may need to be undertaken on a cross-boundary basis where functional economic market areas cross administrative boundaries, as the OGNA showed is the case in Oxfordshire. This report however should be considered alongside local employment land reviews which further consider local circumstances and employment land supply.

## **2.3 Oxfordshire Local Industrial Strategy (LIS) and Local Investment Plan (LIP)**

**2.3.1** The Oxfordshire Local Industrial Strategy (LIS) was agreed with Government and published in September 2019, responding to the UK Industrial Strategy. The NPPF states in Para 81 that plan-making should have regard to local industrial strategies in setting out an economic vision and strategy for the area.

**2.3.2** The LIS builds upon the significant business investment over recent years through the Oxfordshire Local Enterprise Partnership. Over £600m worth of government and European funds have been secured through Growth Deals, a City Deal, European Structural Investment Funds and Infrastructure Funds – all part of an overall investment programme in Oxfordshire worth £2.2bn.

**2.3.3** The LIS sets out an ambitious economic strategy up to 2040 with the aim of positioning Oxfordshire as one of the top three innovation ecosystems in the world and as a leading science and technology cluster. The important economic sectors, assets and growth opportunities identified in the strategy are spread across the whole of Oxfordshire with the main towns forming important parts of the economy. These

include motorsport technologies around Banbury, Bicester and Grove; life sciences and creative industries around Milton Park and Didcot; and smart living technologies at the Oxfordshire Cotswolds Garden Village.

**2.3.4** The Oxfordshire LIS presents a long-term framework against which private and public sector investment decisions can be assessed, grouped around the five foundations of productivity:

- Places - Develop Oxfordshire as a living laboratory to help solve the UK's grand challenges
- Business environment - Become a powerhouse for commercialising transformative technologies
- Infrastructure - Enable greater connectivity and accessibility especially across key growth locations
- Ideas - Establish a globally connected innovation economy
- People - Develop a more responsive skill system creating better opportunities for all

**2.3.5** The Oxfordshire LIS will also partly inform future local authority-level industrial strategies to facilitate a supportive business environment, help encourage enterprise and continued economic prosperity.

**2.3.6** Since the publication of the LIS and the 2021 OGNA, the Local Enterprise Partnership has produced a Local Investment Plan that identifies a range of investments in key sectors in Oxfordshire. These investments are quantified in terms of likely employment and GVA impacts. This has been taken into account in this report and provides a useful basis for an investment led growth plan.

## 2.4 Conclusions

**2.4.1** There are important national and sub-regional policy influences which are relevant in considering housing and economic development needs in Oxfordshire.

**2.4.2** National policy sets out that the Standard Method set out in Planning Practice Guidance is the starting point for considering housing needs.

**2.4.3** Wider influences on considering the need for housing and employment land include Oxfordshire's economic dynamics and growth potential and the Local Industrial Strategy that has been agreed with Government.

## 3 Demographic Review

### 3.1 Reviewing Population Trends

**3.1.1** The analysis in this chapter looks at key demographic trend data in Oxfordshire, particularly focussing on past population growth and the components of population change. This is used to consider the appropriateness of previous ONS demographic projections for Oxfordshire, including the 2014-based population and household projections which inform the standard method.

**3.1.2** Initial 2021 Census data was published in June 2022 which provides an update of the current population size and age structure in different areas. However, when developing population projections, ONS uses its mid-year population estimates (MYE) - the latest running to 2020.

#### Population

**3.1.3** Table 3.1 below shows ONS estimates for the population by authority in 2020. The population of Oxfordshire was estimated to be around 697,000 with a fairly even split across different administrative areas.

**Table 3.1** Estimated Population by Local Authority (2020) – Oxfordshire

	Estimated population	% of population
Cherwell	151,846	21.8%
Oxford	151,584	21.8%
South Oxon	143,782	20.6%
VoWH	137,910	19.8%
West Oxon	111,758	16.0%
Oxfordshire	696,880	100.0%

Source: ONS MYE

**3.1.4** The data above can be contrasted with more recent information from the 2021 Census in Table 3.2. The ONS released initial 2021 Census data on the size and structure of the population in June 2022. The Census shows a higher population in the County than previously estimated with the biggest differences being seen in Cherwell and Oxford.

**Table 3.2** Estimated Population by Local Authority (2021) – Oxfordshire

	Estimated population	% of population
Cherwell	161,000	22.2%
Oxford	162,100	22.3%
South Oxon	149,100	20.6%
VoWH	138,900	19.2%
West Oxon	114,200	15.7%
Oxfordshire	725,300	100.0%

Source: 2021 Census

**3.1.5** Table 3.3 shows estimated population change between the 2011 and 2021 Census. Oxfordshire's population is shown to have increased by around 11%, with higher changes seen in Vale of White Horse and to a lesser extent Cherwell. Oxford City saw the lowest population growth, at less than 7%.

**Table 3.3** Change in Population by Local Authority (2011-21)

	2011	2021	Change	% Change
Cherwell	141,900	161,000	19,100	13.5%
Oxford	151,900	162,100	10,200	6.7%
South Oxon	134,300	149,100	14,800	11.0%
VoWH	121,000	138,900	17,900	14.8%
West Oxon	104,800	114,200	9,400	9.0%
Oxfordshire	653,800	725,300	71,500	10.9%

Source: 2011 and 2021 Census

### Estimated Population Size and Structure in 2021

**3.1.6** Table 3.4 shows a comparison between the 2018-based subnational population projections (SNPP), the latest official projections prepared by ONS, and the 2021 Census. Data has been taken from the SNPP as this allows an ONS figure for 2021 to be included – it should be noted that the SNPP figure will be based on ONS estimates of trends up to mid-2018.

**3.1.7** The Census shows stronger population growth and a higher population in 2021 than previous ONS projections across all Oxfordshire authorities, but particularly in Cherwell, Oxford and South Oxfordshire. This illustrates the extent to which ONS' previous estimates/projections have been inaccurate, but this does need to be understood alongside the relative population growth in different areas shown in Table 3.3.

**Table 3.4** Comparing Population estimates and projections for 2021 – Oxfordshire

	SNPP (2021)	Census (2021)	Census difference from SNPP
Cherwell	151,700	161,000	9,300
Oxford	152,900	162,100	9,200
South Oxon	142,500	149,100	6,600
VoWH	138,800	138,900	100
West Oxon	110,700	114,200	3,500
Oxfordshire	696,500	725,300	28,800

Source: ONS

**3.1.8** Table 3.5 shows a comparison between these sources of age structure estimates in 2021. There are notable differences in the population across a range of age groups, particularly those aged between 25-39.

**Table 3.5 Comparing age structure population estimates and projections for 2021 – Oxfordshire**

	SNPP (2021)	Census (2021)	Census difference from SNPP
0-4	37,100	38,000	900
5-9	41,900	41,000	-900
10-14	43,400	43,000	-400
15-19	41,800	45,000	3,200
20-24	48,500	47,900	-600
25-29	44,400	49,400	5,000
30-34	41,900	51,400	9,500
35-39	44,500	49,000	4,500
40-44	43,200	46,400	3,200
45-49	43,300	46,300	3,000
50-54	47,200	49,700	2,500
55-59	47,100	48,300	1,200
60-64	39,600	40,000	400
65-69	33,200	33,600	400
70-74	34,500	34,000	-500
75-79	26,800	25,800	-1,000
80-84	18,600	18,100	-500
85+	19,400	18,300	-1,100
<b>TOTAL</b>	<b>696,500</b>	<b>725,300</b>	<b>28,800</b>

Source: ONS

**3.1.9** It is however ONS 2014-based demographic projections which are used in the standard method and it is therefore also relevant to consider how the Census 2021 data contrasts to the population predicted in the ONS 2014-based SNPP.

**3.1.10** Across Oxfordshire the data shows the Census population at a higher level than was projected in the 2014-SNPP, and for a number of areas (Cherwell, South Oxfordshire and Vale of White Horse) the differences are fairly sizable. In Oxford the Census shows a lower population than was predicted in the 2014-based SNPP, whereas West Oxfordshire is the only location where the difference between the sources is modest (virtually no difference).

**3.1.11** This data does suggest the 2014-SNPP no longer reflects a reasonable view about demographic trends and an alternative projection based on demographic trends could be developed. Arguably, West Oxfordshire is an exception to this, however given the inter-connectedness of the authorities it is considered reasonable for any analysis to be undertaken in a consistent manner.

**Table 3.6 Estimated Population by Local Authority (2021) – 2014-based projections and 2021 Census**

	2014-based SNPP	2021 Census	Difference
Cherwell	151,700	161,000	9,300
Oxford	166,400	162,100	-4,300
South Oxon	142,000	149,100	7,100
VoWH	132,200	138,900	6,700
West Oxon	114,300	114,200	-100
Oxfordshire	706,600	725,300	18,700

Source: ONS

**3.1.12** When looking at households, the two sources show fairly similar estimates for 2021 and arguably this would point to the 2014-SNHP as still having a degree of validity. However, given the large differences in population it is clear the data points to there having been some fundamental changes in household formation rates. In addition, for individual authorities there are some notable differences between figures from the two sources – in particular, the Census puts the number of households in Oxford at nearly 7,000 fewer than had been projected in the 2014-SNHP. Overall, this again suggests that the 2014-SNHP may not be the best source to use when looking at housing need based on demographic trends.

**Table 3.7 Estimated Households by Local Authority (2021) – 2014-based projections and 2021 Census**

	2014-based SNHP	2021 Census	Difference
Cherwell	62,700	65,900	3,200
Oxford	62,100	55,200	-6,900
South Oxon	58,700	61,500	2,800
VoWH	55,200	57,500	2,300
West Oxon	47,900	48,000	100
Oxfordshire	286,500	288,100	1,600

Source: ONS

## 3.2 Students in the 2021 Census

**3.2.1** One age group where the population was smaller than projected is the 20-24 age group which is one in which a high proportion of students would be expected to be found. We have sought to consider the possibility that some students who would normally be recorded as living in those local authorities were excluded from the Census. The timing of the Census was also a relevant factor with data having been collected during the pandemic – Census day (21<sup>st</sup> March 2021) was during a phased exit from lockdown.

**3.2.2** The specific concern is that students who would normally be recorded as resident at their place of study were only recorded at their place of residence at the time (often back at family home) and this has had an impact on the Census estimates.

**3.2.3** It can be seen that the number of people aged 20-24 was lower in the Census than previous ONS estimates (see table 3.6) which could point to some students

having been missed out. It should however also be noted that the 20-24 age group does still show a spike in population (it is the largest 5-year age group), reflecting the inclusion of students.

**3.2.4** Overall, it is difficult to be certain if and the extent to which students may have been missed by the Census from the information available at the current time. For the purposes of analysis in this report, it has therefore been assumed that the Census is as accurate as it reasonably can be – and taken forward as a base position for analysis of current and future demographic trends.

**Table 3.8** Comparing population estimates and projections for 2021 – Oxford

	SNPP (2021)	Census (2021)	Census difference from SNPP
0-4	7,600	7,100	-500
5-9	8,600	7,800	-800
10-14	8,900	8,600	-300
15-19	12,700	15,900	3,200
20-24	26,000	22,000	-4,000
25-29	15,100	15,400	300
30-34	9,000	13,300	4,300
35-39	8,800	11,000	2,200
40-44	8,100	9,600	1,500
45-49	7,100	8,800	1,700
50-54	7,600	8,800	1,200
55-59	7,600	8,200	600
60-64	6,300	6,400	100
65-69	5,200	5,200	0
70-74	5,000	4,900	-100
75-79	3,700	3,600	-100
80-84	2,600	2,600	0
85+	3,000	2,800	-200
TOTAL	152,900	162,100	9,200

Source: ONS

**3.2.5** The evidence indicates that there have been some notable changes in demographic trends for most of the County since the 2014-based projections were released and it is therefore reasonable to look at a revised projection which takes account of recent trends.

### 3.3 Developing a Trend-based Population Projection in Oxfordshire

**3.3.1** This section next moves on to develop trend-based population projections for the five local authorities in Oxfordshire. A key driver of this is due to publication of new (2021) Census data which has essentially reset estimates of population (size and age structure) compared with previous mid-year population estimates (MYE) from ONS.

#### Overview of Methodology

**3.3.2** The start point of the projection was the population age and sex structure in 2021, based on Census data – this was slightly adjusted to take account of the fact that the Census was carried out in March, while demographic data typically looks at mid-year estimates.

**3.3.3** For births (fertility) the analysis drew on birth data up to 2020 and used this to estimate a fertility rate in each local authority. This was projected forward on the basis of projected changes within the most recent (2018-based) SNPP. It was considered important to provide an up-to-date estimate of births as (at a national level and locally) it is evident that fertility rates have been dropping and are currently some way below where they were projected to be in the 2014-SNPP.

**3.3.4** For deaths (mortality) a similar approach was taken (using data on actual deaths up to 2020). As with the birth data it was considered important to look at up-to-date death rates as mortality has generally been higher in the recent past than was projected by the 2014-SNPP (i.e. a greater number of deaths than had been projected). Combining birth and death data provides information on natural change, which was projected to be lower than previously projected.

**3.3.5** For migration two main analyses were undertaken to initially establish a base trend-level of migration. Firstly, the projections looked at how ONS had recorded migration in the past 5-years for which data is available (2015-20). The use of a 5-year period is consistent with projections typically developed by ONS (although in more recent releases they have also looked at different time periods, e.g. 10-year trend). A five-year period is however consistent with the trend period used in the 2014-SNPP.

**3.3.6** The second part of the analysis sought to use the Census data to look at the extent to which migration over the decade to 2021 might have been higher or lower than previously estimated. For example, if the Census showed a population of 50,000 people but previous estimates were only at 49,000, then the modelling assumes that 1,000 net migrants have been missed from population estimates – this would be 100 per annum which is used as an adjustment to the 5-year trend as recorded.

**3.3.7** The two analyses of migration were used to estimate a base (starting point) for migration (taken to be the 2021/22 year). Moving forward the analysis modelled that migration might change as populations change. For example, as the population of an area increases there will be more people who could be out-migrants.

## 3.4 Detailed Modelling Assumptions

### Fertility

**3.4.1** For fertility it is the case that underestimating population will mean that fertility rates in the SNPP are too high (as ONS is essentially assuming a number of births to fewer people). To make an adjustment, the number of births for 2021/22 in the SNPP is used and then an estimate made of how many births the ONS rates would imply if the population age structure for 2021 is replaced as the base against which births are calculated.

**3.4.2** There is however some more recent data about births from the 2020 MYE which can be used to compare recorded births over the 2018-20 period with that projected in the 2018-based SNPP.

**3.4.3** The two adjustments are then multiplied to give a change to base fertility rates. This results in a downward adjustment to fertility rates, reflecting the general trend

(including up to 2020) for birth rates to be falling as well as adjustments made for Census population estimates.

## Mortality

**3.4.4** The same issue arises with mortality, in that deaths recorded by MYE are applied to a different population than is now shown. Generally, for mortality any adjustments are far more minor than for fertility, this is because most deaths occur in older age, and generally the MYE is fairly good at estimating the size of the older person population (in part due to them being less likely to be migrants).

**3.4.5** A similar adjustment to fertility is made to take account of death data to 2020 again by comparing projected deaths in the 2018-based SNPP to actual data for the 2018-20 period. Again, the two adjustments are multiplied to give a change to base mortality rates.

**3.4.6** Overall mortality is adjusted in an upward direction, as death rates have not been improving at the rate previously projected (as well as adjustments made for Census population estimates). So for instance deaths have been higher than was projected in the ONS 2014-based SNPP.

## Migration

**3.4.7** When looking at migration our starting point is to consider how different migration has been over the 2011-21 period than was previously estimated (and projected) by ONS. **Essentially the difference in population growth between the 2011 and 2021 Censuses is likely to be attributable to migration, as generally births and deaths are likely to have been accurately recorded by ONS.**

**3.4.8** Analysis is slightly complicated by MYE data only being available to 2020 but the Census having a clear data point of 2021. The MYE to 2020 has initially been used and the incremental change in the SNPP for 2020-21 added on to get to a 2021 population estimate from the MYE/SNPP data series. This is then compared to the Census data.

**3.4.9** Table 3.7 shows the same figures for all authorities in the County. This clearly shows in all areas that population figures shown by the Census are above previous estimates/projections (albeit to a lesser extent in VoWH). It should also be noted from the table that the two 2011 figures are slightly different: this is due to one being a mid-year figure and the other dated as of the Census (which was March). The main difference is seen in Oxford, which looks to be due to ONS removing some people of student-age between the two dates (presumably as students start to return home). To provide a mid-year figure for 2021 based on the Census an adjustment to relate the March 2021 Census position to mid-2021 position has been made based on adjustments seen in 2011.

**Table 3.9** MYE and Census population estimates – Oxfordshire authorities

		2011	2021	Change
Cherwell	MYE/SNPP	142,252	152,682	10,430
	Census	141,868	161,100	19,232
Oxford	MYE/SNPP	150,245	150,919	674
	Census	151,906	161,800	9,894
South Oxon	MYE/SNPP	134,961	144,431	9,470
	Census	134,257	149,300	15,043
VoWH	MYE/SNPP	121,891	139,489	17,598
	Census	120,988	138,900	17,912
West Oxon	MYE/SNPP	105,442	112,029	6,587
	Census	104,779	114,200	9,421
Oxfordshire	MYE/SNPP	654,791	699,549	44,758
	Census	653,798	725,300	71,502

Source: Derived from ONS data

**3.4.10** It is not known if this difference in population growth (attributed to migration) is due to an under-estimate of in-migration or an over-estimate of out-migration and in reality it is likely to be a combination of the two. For the purposes of modelling it has been assumed that the difference is split equally between these two components.

**3.4.11** The projections developed are modelled on 5 year migration trends. Information about migration estimates is shown in the table below with average figures provided for 2015-20 (latest 5-years), 2013-18 (the 5-year period prior to the last published SNPP) and 2009-14 (the 5-year period relevant to 2014-based projections, as used in the Standard Method. These figures shown are all as published by ONS (i.e. excluding any adjustments to take account of differences between the MYE and Census).

**3.4.12** The analysis shows net migration to be generally increasing, from an average of around 2,000 people per annum in the 5-years to 2014, up to 2,400 for the 2013-18 period and then approaching 2,800 per annum over the last 5-years for which data is available.

**Table 3.10** Past trends in net migration – Oxfordshire

	Oxfordshire
2009/10	2,512
2010/11	2,281
2011/12	616
2012/13	1,438
2013/14	3,318
2014/15	1,455
2015/16	2,057
2016/17	1,802
2017/18	3,529
2018/19	2,235
2019/20	4,135
Average (2009-14)	2,033
Average (2013-18)	2,432
Average (2015-20)	2,752

Source: ONS MYE

**3.4.13** Based on recalibrating population trends to take account of the 2021 Census data, the starting point net migration is estimated to be around 5,400 people per annum across Oxfordshire – this is roughly double the migration recorded by ONS and is due to the Census showing a notably higher population in the County than had previously been estimated.

**Table 3.11 Base estimate of migration – Oxfordshire**

		In-migration	Out-migration	Net migration
Oxfordshire	Average (2015-20)	-	-	2,752
	Adjustment	-	-	2,674
	Base position	-	-	5,426

Source: Derived from ONS data

**3.4.14** It is however not a simple process to just apply this for each year of the projection as migration can vary over time. In- and out-migration need to be considered separately.

### In-migration

**3.4.15** Levels of in-migration will to some extent vary depending on the size of the population from which migrants will be drawn. If, for example, typically 10% of people in Area A move to Area B in any given year then the size of the population in Area A will impact on the actual numbers moving. If in year 1 there are 10,000 people in Area A then 1,000 would be expected to move to Area B, but if in year 2 the population is only 9,000 there would only be 900 movers.

**3.4.16** The age structure will also have an influence on the number of moves as typically older people are less likely to be migrant and so an ageing population might see in-migration reduce over time, although an increasing population generally might be expected to see migration increase.

**3.4.17** For the purposes of the modelling we have considered the relationship between the national population and the projected number of in-migrants. The latest national projection is a 2020-based ONS publication.

**3.4.18** Over time, population growth rates nationally are projected to fall (remaining positive but at a reducing rate) and this is in part (in early years) due to reducing levels of in-migration – although reductions in natural change have the greatest impact over the longer term. It is considered with an increasing population that levels of in-migration will increase over time but at a reducing rate. For the purposes of modelling it has been assumed that future in-migration will broadly track the midpoint between rates remaining in-line with national population change and the rates estimated for the 10-year period to 2020.

### Out-migration

**3.4.19** With a growing population, out-migration would typically be expected to increase over time. However, it is also noted that at a national level, out-migration in the early years of the projection is projected to fall, whilst a changing age structure (increasing older person population) will to some extent moderate any changes, as older people are less likely to be migrant.

**3.4.20** Therefore, a consistent method to that used for in-migration has been applied for out-migration, that is the estimated level of out-migration is set at the midpoint between estimated past levels of out-migration and the level that would be expected if the ratio between population growth and out-migration were maintained.

### 3.5 Projection Outputs

**3.5.1** The above estimates of fertility, mortality and migration (including changes over time) have been modelled to develop a projection for the period to 2032. The charts below (Figure 3.1 to 3.3) show key components of population change and overall population change. The projection is compared with that from the 2018-based SNPP, that being the most recent projection released by ONS.

**Figure 3.1: Past trends and projected natural change – Oxfordshire**

Source: ONS and demographic projections

**Figure 3.2: Past trends and projected net migration – Oxfordshire**

Source: ONS and demographic projections

**Figure 3.3: Past trends and projected population – Oxfordshire**

Source: ONS and demographic projections

The Census evidence indicates that past population in Oxfordshire has been under-estimated. An updated demographic projection has therefore been developed. Relative to the latest ONS projections (2018-based), this updated projection generally assumes higher death and lower birth rates but also higher net migration to Oxfordshire over the previous 5 year period. The analysis below sets out the results of this updated projection.

**3.5.2** Table 3.12 shows estimated population growth across the County split into 3 broad age bands (which can generally be described as a) children, b) working-age and c) pensionable age). This analysis shows population being projected to increase by around 55,600 people – this is a 7.6% increase over the 10-year period. The population aged 65 and over is projected to see the highest proportionate increase, but in actual number terms the population aged 16-64 is also projected to see a notable level of growth. The increases in population can be compared with the change shown by the Census (for 2011-21) of 10.9%.

**Table 3.12 Projected change in population by broad age group (2022-32) – Oxfordshire**

	2022	2032	Change	% change
Under 16	130,584	126,611	-3,972	-3.0%
16-64	468,117	491,462	23,346	5.0%
65+	133,496	169,716	36,221	27.1%
TOTAL	732,196	787,790	55,594	7.6%

Source: Demographic projections

## 3.6 Household Projections

**3.6.1** The final part of the projection is to convert population estimates into households by discounting the communal population (to give a household population) and then applying household representative rates (HRR). The first analysis is

however to estimate the number of households as of 2021. Table 3.13 shows household estimates from the Census and also dwelling counts from DLUHC live tables. Modelling has been undertaken to provide estimated households in 2021 based on looking at the relationship between households and dwellings in 2011 and applying a similar relationship to 2021 dwellings. The number of households is lower than the number of dwellings as some households at any time are vacant to allow for their repair/ renovations and for turnover of properties in a functioning market.

**Table 3.13** Change in the number of households and dwellings (2011-21)

		2011	2021	Change
Oxfordshire	Households	258,800	288,100	29,300
	Dwellings	269,400	305,100	35,700

Source: ONS (Census) and DLUHC (Table 125)

**3.6.2** In projecting forward, data about household representative rates (HRRs) has been drawn from the 2014-based subnational household projections (SNHP). HRRs can be described in their most simple terms as the number of people who are counted as heads of households (or in this case the more widely used Household Reference Person (HRP)). The 2014-based figures are used as these underpin the Standard Method and generally have attracted less criticism in terms of building in a suppression of household formation than more recent projections.

**3.6.3** Recent SNHP (since the 2014-based release) have come under some criticism. This is largely as they are based on data in the 2001-11 Census period and project forward trends in household formation in this period to 2021 – one in which housing affordability deteriorated significantly – with age/sex-specific household formation rates held constant thereafter. In Oxfordshire, this suppression is particularly evident for the 25-34 age group where there was a notable drop in formation rates from 2001 to 2011, and ONS are projecting some continuation of this moving forward to 2021, after which the (lower) rate is held broadly stable. These issues inform why the latest household projections are not used in the standard method; and we agree that the household formation rates in the 2014-based Household Projections are preferable for planning purposes.

**3.6.4** Data about the communal population has also been drawn from the 2014-SNHP. For all areas, the 2014-HRRs have been adjusted to match the estimated number of households shown above with future (projected) years using the same incremental changes as in the base source.

The remodelled demographic projection used in this report therefore adopts consistent assumptions on household formation to the 2014-based Household Projections. The difference arises as the population inputs are different – the population projection developed takes account of more recent migration trends as well as Census data.

**3.6.5** The analysis projects an increase of around 3,300 households per annum over the 2022-32 period, as shown in Table 3.14.

**Table 3.14** Projected change in households – remodelled projection

	Households 2022	Households 2032	Change in households	Per annum
Oxfordshire	296,596	329,339	32,743	3,274

## 4 Housing Market Review

### Introduction

This section provides an analysis of housing market dynamics. It addresses both the sales and private rental markets. It is prepared taking account of the latest data at the time of writing but is prepared at a time of flux in housing market conditions and market uncertainty. It provides an overview of housing costs and affordability issues in Oxfordshire, using the latest data, which feed through to consideration of scenarios for overall housing growth.

### 4.1 Sales Market

**4.1.1** House prices have an important influence on the affordability of market housing to buy. House price changes over time are influenced by inflation and the balance of supply and demand in the market. The ability for house prices to grow is influenced by what households can afford, which in turn is influenced by other factors such as growth in earnings, taxation, interest rates and the availability of mortgage finance.

**4.1.2** The long-term trend in house prices is shown below. House prices have grown significantly, increasing in value by a factor of 2.6, influenced by a sustained under-supply of homes. A stronger supply/demand imbalance is evident in the South East region than is the case nationally and this has been borne out in Oxfordshire as well looking over the 20 year period.

**Figure 4.1: House Price Trends, 2002-22**

Source: Icen analysis of ONS HPSSA Dataset 9

**4.1.3** A major factor in house purchase decisions is access to mortgage finance. Prior to the credit crunch in 2008, ready access to credit facilitated house purchases and generally supported a strong period of housing demand. An increase in interest rates in 2005 had an evident cooling affect on house prices.

**4.1.4** Mortgage availability was then much more restricted between 2008-14 as banks tightened loan-to-value ratios and reviewed lending criteria. As can be seen below, the 2008-14 period was characterised by negative or low house price inflation.

**4.1.5** From 2013/14 access to mortgage finance then began to improve, supported by the Bank of England's Funding for Lending Scheme; whilst since 2013 the market has also been supported by the Government's Help-to-Buy scheme which has both reduced risks to lenders and reduced deposit requirements for many First-time Buyers.

**Figure 4.2: House Price Growth, Oxfordshire and South East**

Source: Icen analysis of HMLR/ONS Median House Prices (ONS Dataset 9)

**4.1.6** The graph above however shows that the more recent trend has been of some divergence in price inflation in Oxfordshire, relative to the wider region. In Oxfordshire, house prices have increased by 2.1% pa over the 5 year period since 2016. This is around a third lower than the price growth trend across the region (3.3%) and below that nationally (3.7%). The recent growth in house prices is also notably more modest than the long-term 20 year trend – indeed recent house price growth in Oxfordshire has been less than half of this longer-term trend. This correlates with stronger housing supply across the County.

**4.1.7** The 2020-21 period saw stronger house price growth driven by the combined effect of Covid resulting in a spike in demand as households re-evaluated their living circumstances (with buyers particularly seeking greater indoor and external space), combined with the temporary cuts to Stamp Duty (the 'Stamp Duty Holiday') the effect of which was to reduce the transactional costs of moving, which in a high value market such as this can be significant. But once again, house price inflation was weaker in Oxfordshire than across the wider South East.

**Figure 4.3: Annual House Price Inflation relative to South East Region**

Source: Icen analysis of HMLR/ONS Median House Prices (ONS Dataset 9)

The evidence shows a positive correlation between a notable increase in housing delivery over the last 5 years in Oxfordshire relative to many other parts of the region and weaker house price growth, despite the county's relatively strong economic performance.

**4.1.8** At a district level, the higher relative house prices are in Oxford and South Oxfordshire; with Cherwell being the only authority in which prices are to any significant degree below the South East average.

**Figure 4.5: Median House Prices in Oxfordshire Districts, Year to March 2022**

Source: Icen analysis of HMLR/ONS Median House Prices (ONS Dataset 9)

**4.1.9** The price premium associated with properties in the City comes out more clearly if relative prices for different products are considered. Relative to the County average, prices in Oxford are 24% higher for semi-detached properties, 35% higher for flats, and 43% and 46% higher for terraced and detached properties. There is an evident and notable price premium across property types. This reflects a combination of the City's economic strength (which influences both demand and earnings) and its more limited supply (particularly for larger homes). Detached prices have seen the strongest price growth through the pandemic.

**Figure 4.6: Median House Price by Property Type, Year to March 2022**

Source: Icenis analysis of HMLR/ONS Median House Prices (ONS Dataset 9)

**4.1.10** Oxford and South Oxfordshire stand out as having seen notably stronger recent house price growth.

**Table 4.1: Annual House Price Growth**

	2 Yr Growth pa	5 Yr Growth pa	10 Year Growth pa
Cherwell	£8,925	£5,000	£11,500
Oxford	£17,500	£10,000	£18,000
South Oxfordshire	£20,000	£11,000	£16,000
Vale of White Horse	£10,000	£5,700	£12,000
West Oxfordshire	£1,250	£5,500	£11,200
Oxfordshire	£11,000	£7,400	£12,700
South East	£15,000	£10,610	£13,400

Source: Icenis analysis of HMLR/ONS Median House Prices (ONS Dataset 9)

## 4.2 Sales Trends

**4.2.1** Sales volumes over the past decade have been more modest than those pre-2008 influenced by the low inflation environment (meaning that the value of debt has not been reducing to the same extent in real terms as in previous decades); longer mortgage terms; together with an ageing population who move less frequently with a public policy focus on caring for older people in their own homes (resulting in fewer moves). Added to this, increasing house prices have increased the transactional costs of moving and since 2016 the 3% additional Stamp Duty applicable to investment purchases (together with changes to mortgage interest rate relief) have moderated investment purchases (such as from buy-to-let landlords). These influences have particularly affected higher-value markets such as Oxfordshire.

**4.2.2** Sales volumes benchmarked relative to trend prior to the 2008 recession are shown below. Whilst there are clearly macro-economic influences on the trend year-on-year (shown through the similarity between trends at an Oxfordshire to those at a regional and national scale). The upturn in demand from 2013 resulting from increased mortgage availability (and Help-to-Buy support) is evident; as well as the cooling effect of Brexit-related uncertainty from 2016/17. The Covid induced burst of activity in 2020/21 is also clear, with the evidence showing that there was a greater positive uptick in sales seen in Oxfordshire than across the wider region.

**Figure 4.7: Comparative Sales Trends**

Source: Icen analysis of ONS HPSSA Datasets 7&8

**4.2.3** The evidence indicates that it is the scale of new-build development in Oxfordshire which has particularly supported stronger comparative sales over the period since 2015 relative to wider geographies.

**4.2.4** Typically around 10% of total sales are of new-build properties. The Help-to-Buy scheme has helped this to rise to 11% nationally over the most recent 5 year period (2017-22). Over the pre-2012 decade this held true in Oxfordshire as well; but more recently new-build sales volumes have risen – to 12% of sales in the 2012-17 period and to a notable 18% of sales over the five years to March 2022.

**Figure 4.8: New-Build Sales – Oxfordshire**

Source: Icen analysis of ONS HPSSA Datasets 7&8

**4.2.5** The stronger new-build development thus correlates to stronger overall sales in Oxfordshire in relative terms; and to weaker house price growth relative to the region.

**4.2.6** The District level evidence is relatively consistent outside of Oxford City, with a higher proportion of new-build sales evident in each area in the most recent five year period as local plans supporting higher growth have been put in place. The highest proportion of new-build sales have been in Cherwell and Vale of White Horse. Oxford's lower new-build sales is influenced by its constrained land supply.

**Table 4.2: % New-Build Sales – Oxfordshire Districts**

	2002-7	2007-12	2012-17	2017-22
Cherwell	10%	6%	15%	21%
Oxford	13%	7%	3%	3%
South Oxfordshire	4%	5%	14%	17%
Vale of White Horse	9%	9%	19%	23%
West Oxfordshire	20%	11%	8%	16%
Oxfordshire	11%	8%	12%	18%

Source: Icen analysis of ONS HPSSA Datasets 7&8

### Affordability of Homes to Buy

**4.2.7** The standard 'planning measure' of housing affordability is the house price-to-workplace earnings ratio. The latest data, for 2021, points to median house prices of 11x earnings across Oxfordshire with the highest ratio being in Oxford (12.0) and South Oxfordshire (13.1). The ratio in all Oxfordshire authorities is above the South East average. These ratios have a direct bearing on housing need as they influence the 'affordability adjustment' which is applied through the standard method.

**Table 4.3: Median Affordability Ratios (2003-2021)**

	2003	2008	2013	2018	2021	Increase 2003-2021
England	5.93	6.97	6.76	8.04	9.05	+3.12
South East	7.22	8.22	8.26	10.37	11.12	+3.90
<b>Oxfordshire</b>	<b>7.85</b>	<b>9.1</b>	<b>8.61</b>	<b>10.44</b>	<b>11.08</b>	<b>+3.23</b>
<i>Cherwell</i>	7.02	8.54	8.46	9.77	10.28	+3.26
<i>Oxford</i>	8.87	9.7	9.69	11.08	12.05	+3.18
<i>South Oxon</i>	7.86	9.71	10.49	12.37	13.07	+5.21
<i>VoWH</i>	7.55	8.35	7.5	9.87	9.96	+2.41
<i>West Oxon</i>	8.34	9.35	9.36	11.55	11.4	+3.06

Source: ONS Workplace-based Affordability Ratios, Icen Projects

**4.2.8** Nationwide's House Price Earnings Ratio (HPER) is an alternative measure which takes Nationwide's data on first-time buyer house prices and compares this with earnings for full-time workers. Their most recent report identifies Oxford as having a ratio of 10.1 for 2021, which is the highest affordability ratio in the region; with the ratio having increased from 9.2 the previous year. As the analysis below shows, this is notably above levels in other Oxfordshire authorities; but the broad trends over recent years have been of relative stability on this ratio.

**Figure 4.9: Nationwide First-time Buyer Affordability Ratio**

Source: Nationwide House Price Index

**4.2.9** However, if mortgage payments relative to take-home pay is considered, the pandemic effect on house prices has clearly resulted in affordability for first-time buyers being increasingly stretched.

**Figure 4.10: Mortgage payments for 1<sup>st</sup> Time Buyers as % of Mean Take-Home Pay**

Source: Nationwide, Icen Projects

### 4.3 Market Outlook

**4.3.1** Even before the ‘mini budget’ of September 2022 the residential market appeared to be cooling. Hometrack’s September 2022 publication describes a market which was transitioning to a ‘buyers market’ with recent house price growth and rising interest rates further pressurising affordability for first-time buyers.

**4.3.2** Hometrack’s September report indicated that new-build sales appeared to be holding up but with buyer interest weaker than a year previously and sellers beginning to adjust to a more price-sensitive market. It predicted rising interest rates would impact on buying power and refocusing the market more towards smaller properties and cheaper areas – with Hometrack suggesting a particular impact on higher value markets such as Oxfordshire.

**4.3.3** Stamp Duty changes introduced by Government in September 2022<sup>7</sup> will have some effect, particularly in Oxfordshire and the greater South East more widely where the Stamp Duty costs of moving home are significant. Whilst this will support First-time Buyers, these transactional costs could well be offset by the ongoing higher costs of servicing mortgages driven by growing interest rates. Market expectations are of rising interest rates as the Bank of England seeks to curb inflationary pressures in the wider economy (driven by energy prices). The recent effects of the September 2022 ‘mini budget’ appear to have compounded with recent weeks seeing 2 year fixed rate mortgage rates increase to over 6%. Some short-term impacts on the housing market appear highly likely with higher interest rates expected to moderate price growth.

**4.3.4** Whilst these issues may have a short-term effect on the balance of supply and demand for housing for sale, there remains a long-term structural imbalance between supply and demand in the housing market nationally. It is important that plan-making

<sup>7</sup> Increasing the threshold from which SDLT is payable from £125k to £250k, with a £425k threshold for First-time Buyers; with discounted Stamp Duty costs for First-time Buyers purchasing properties of up to £625,000 in value (up from £500k).

activities take account of these long-term dynamics as they are looking 15-20 years into the future.

## 4.4 Rental Market

**4.4.1** The Private Rental Sector forms an important part of the housing market in Oxfordshire. Median rental costs in Oxfordshire overall, as well as all local authorities, within it are higher than both the South East and England averages. Cherwell sees the lowest median rental costs overall with Oxford City the highest, following the trends seen in the sales market. Prices in Oxford City are exceptionally high with median rents for even one bedroom properties exceeding the overall median monthly rent for the whole South East region.

**Table 4.4: Median Rents, Oxfordshire Local Authorities (Year to March 2022)**

	Room	Studio	1-bed	2-beds	3-beds	4-beds+	Overall
Cherwell	£450	£650	£780	£950	£1,200	£1,688	£975
Oxford	£600	£800	£1,050	£1,250	£1,500	£2,288	£1,275
South Oxfordshire	£513	£627	£825	£1,025	£1,350	£2,200	£1,100
Vale of White Horse	£650	£715	£825	£1,025	£1,250	£1,795	£1,025
West Oxfordshire	£430	£625	£775	£940	£1,295	£1,895	£1,000
<b>Oxfordshire</b>	<b>£550</b>	<b>£695</b>	<b>£875</b>	<b>£1,090</b>	<b>£1,325</b>	<b>£2,000</b>	<b>£1,100</b>
<b>South East</b>	<b>£450</b>	<b>£625</b>	<b>£775</b>	<b>£950</b>	<b>£1,200</b>	<b>£1,733</b>	<b>£950</b>

Source: Icen analysis of ONS Private Rental Market Statistics

**4.4.2** Since 2019 median rents have increased by £100 in Oxfordshire (10%). This growth rate is higher than that of the South East in that period (8.6%) albeit it is below the England benchmark (14.4%).

**Figure 4.11: Median Rental Costs (2014-2022)**

Source: ONS, Icen Projects

**4.4.3** Rental costs appear to have grown more strongly in the Districts outside of Oxford City (2%), with the highest growth in South Oxfordshire (17.6%). In Cherwell, rents have increased by 11.4%.

**Figure 4.12: Median rental cost (all property types, 2019 and 2022)**

Source: ONS, Icen Projects

**4.4.4** Finders<sup>8</sup> report a continuing chronic shortage of properties to let across Oxfordshire and across all parts of the lettings market. This is consistent with the position nationally. With multiple interested parties, properties are letting rapidly and demand is such that Finders report properties being listed only for a matter of hours; tenants offering on properties which are unseen or bidding higher rents to secure a home. The chart below indicates the profile of applicant demand over recent years, drawn from Finders' website.

<sup>8</sup> <https://www.finders.co.uk/news/2022/10/a-busy-summer-with-continuing-demand/#more-9162>

**Figure 4.13: Applicant Demand for Rental Properties in Oxfordshire**

Source: Finders

**4.4.5** Increased hybrid working is resulting in higher professional couples now competing with small families for two- and three-bedroom properties. With rising energy costs, tenants are increasingly seeking energy efficient properties and, as with the sales market, the short-term outlook is of growing demand for smaller properties in particular which are more affordable. Hometrack expect that as cost-of-living pressures build in the short-term, renters will be looking to balance the combined impact of rental and running costs as they make home-moving decisions; and Hometrack expect this to support growing appeal for apartments and energy-efficient homes.

**4.4.6** In the short-term interest rates rises could restrict First-time Buyer numbers, with households renting for longer and placing further demand pressure on the rental market; albeit that affordability pressures could moderate the scope for further rental growth.

**4.4.7** Set against this is supply, which is traditionally difficult to quantify, and has been affected by legislative changes affecting the attractiveness of Buy-to-let Investments. With withdrawal of mortgage interest relief from 2016 together with higher Stamp Duty costs for BTL purchases, the buy-to-let sector has become less attractive. The upcoming Rental Reform Bill will improve the standards of homes but will also increase costs further for landlords. These issues are impacting on the supply and influence the trend in rental growth.

**4.4.8** Hometrack expect limited prospect of significantly improved rental supply (probably particularly for smaller landlords) in the short-term, with private landlords continuing to sell off homes. Higher mortgage costs can be expected to compound demand pressures within the PRS. Together the short-term prospects are therefore for further rental growth.

**4.4.9** Market conditions are clearly attractive for institutional investment in the sector through Build-to-Rent development, particularly within Oxford City and the larger

towns where there is a concentration of potential tenants. The dynamics of this market, and that for CoLiving, are considered further in Section 8.

## 4.5 Local Letting Agents View

**4.5.1** In the last 18 months the rental market has changed dramatically. This is principally due to a lack of supply but also increased demand.

**4.5.2** The lack of supply has come from higher house prices resulting in many smaller (single home) landlords seeing it as a good time to sell up. On the rare occasions some properties have come back on the market having failed to sell but overall there has been a reduction in supply.

**4.5.3** A number of agents note that tenants are staying in their homes for longer, thus the turnover of rental properties is slowing. This was due to uncertainty in the jobs market and rising house/rental costs making people less inclined to move.

**4.5.4** Previously the average length of stay would be 18 months but it is now well in excess of two years. One agent noted that only around 10% of tenants now live in a home for less than 18 months.

**4.5.5** Rising house prices have also meant that people are selling their home at what they see as the peak and moving out before they find a new home of their own. As a result, the short term letting market for family housing has boomed.

**4.5.6** All the agents noted that rents have increased significantly. Landlords are seeking the most money they can get for their property. This has resulted in bidding for rental accommodation which was relatively uncommon in the City before now. Examples of how this drives up the market include:

- A home that was advertised as £2,500 pcm is going for £3,000 pcm
- A 1-bed flat that was advertised at £850 pcm is going for £1025 pcm.

**4.5.7** Such is the demand, new properties are regularly seeing 50-60 enquiries the day they are advertised. They are also frequently let on the same day.

**4.5.8** In relation to the built to rent market, the agents agreed that there will always be demand for rental accommodation. Once agent suggested that co-living would work with visiting academics and those on sabbatical at the University. Often these people are working long hours on their research and just want a place to rest their heads.

**4.5.9** Another agent noted that the teaching hospitals also provide a steady stream of professionals looking for rental accommodation. They are contracted for reasonably short terms and as a result may seek short term lets in a professional setting. The hospitals in Oxford do have some accommodation of their own on site.

**4.5.10** Demand for rental accommodation would likely to be from young professionals and recent graduates. Younger people on a higher wages are still looking for apartments or flats and in areas where there is good nightlife.

**4.5.11** One agent noted a distinct lack of smaller studios and one-bedroom flats in the region of £900 pcm. This would also feed into the narrative of an unmet demand for co-living and other build to rent products.

## 5 Office and R&D Market Review

### Introduction

Sections 5 and 6 consider commercial property market dynamics. They address dynamics in the office, lab/R&D, industrial and warehousing sectors based on information at the time of writing in Autumn 2022. They provide an understanding of commercial property market dynamics for office & research and development floorspace (Use Classes E(g)(i) and E(g)(ii), which is set out in Section 5; and for industrial floorspace (Use Classes E(g)(iii), B2 and B8), as set out in Section 6, which then feeds into the consideration of future employment land needs in Section 8 of the report. The understanding of commercial market dynamics also informed the consideration of economic growth scenarios in Section 7. Whilst the analysis focuses on these commercial property sectors as this feeds into the employment land forecasting in Section 8; the economic forecast scenarios considered in Section 7 also consider other types of employment including in education, retail, health and other consumer-related services, beyond those typically associated with the B-class sectors.

### 5.1 Office Stock

**5.1.1** At the end of FY 2020/21, there was 1,121,000 sqm of office floorspace across Oxfordshire accounting for 9% of the South East's stock. The pie chart below breaks this down by local authority area. Oxford accounts for a third of office floorspace in the County and is the largest market. The stock in Cherwell is more modest (17%).

**Figure 5.1: Office Floorspace (sq.m End FY 2020/21) by Local Authority**

Source: Icen analysis of VOA data

**5.1.2** CoStar suggests that Oxfordshire had 1.4 million sqm of office floorspace at the end of FY 2020/21 which is 25% higher than the VOA data suggests. This difference

is due to a number of reasons including that the definition of office space used by CoStar differs to that used by the VOA (which for instance treats labs as “other” floorspace) and the fact that data is collected in a different manner by each organisation.

**5.1.3** The VOA dataset indicates that the amount of floorspace remained relatively constant between 2010/11 and 2017/18 before a sharp rise to a peak in 2019/20. In 2020/21 floorspace then dropped back, by c. 1.5%, to 2010/11 – 2017/18 levels.

**Figure 5.2: Trends in Office Floorspace across Oxfordshire**

Source: IcenI analysis of VOA data

**5.1.4** At a district level, office floorspace in Oxford and the Vale of White Horse has grown over the last 10 years; whereas it has fallen in other authorities, similarly to what can be seen across the South East and England as a whole. The trend over the last decade has typically been ‘spaceless growth’ in office-based activities as space is used more intensely (with hot-desking / agile working) and growth in home working.

**Figure 5.3: Indexed Office Floorspace Change, 2011-21**

Source: Icen analysis of VOA data

**5.1.5** The quality of office stock varies spatially. Oxford has the highest percentage of good quality floorspace (3 star and above, based on CoStar ratings) at 85%, followed by the Vale of White Horse (75%). In Cherwell, 60% is good quality.

**Table 5.1: Office Floorspace by CoStar Grade**

	Stock Grade			
	1	2	3	4
<b>Cherwell</b>	2%	39%	59%	1%
<b>Oxford</b>	0%	15%	72%	13%
<b>South Oxfordshire</b>	2%	39%	57%	2%
<b>Vale of White Horse</b>	0%	24%	59%	16%
<b>West Oxfordshire</b>	2%	40%	56%	1%
<b>Oxfordshire</b>	1%	27%	63%	10%

Source: Icen analysis of CoStar data

**5.1.6** The table below shows the split of Oxfordshire's office floorspace by age (built or renovated – the later of the two). Overall, 62% of floorspace was built before the year 2000. The highest percentages of floorspace built since the year 2000 are in Oxford and Vale of White Horse (at 38% and 50% respectively) which reflects the fact that these areas have concentrations of modern science and technology parks.

**Table 5.2: Age of Office Floorspace**

	Pre 1940	1940-1979	1980-1999	2000-2009	2010-2019	2020-2022
<b>Cherwell</b>	21%	21%	27%	22%	7%	2%
<b>Oxford</b>	20%	16%	26%	27%	11%	0%
<b>South Oxfordshire</b>	24%	8%	35%	25%	4%	3%
<b>Vale of White Horse</b>	5%	11%	34%	28%	15%	7%

<b>West Oxfordshire</b>	13%	8%	55%	20%	4%	0%
<b>Oxfordshire</b>	16%	14%	32%	26%	10%	3%

Source: Icenis analysis of CoStar data

Overall, Oxfordshire's office market is relatively large, with a third of stock concentrated in Oxford. Office stock was growing pre-pandemic but this trend has since been reversed. The quality of office stock in Oxfordshire is decent although this varies between authorities. However, 62% of office floorspace was built before the year 2000.

## 5.2 Office Market

**5.2.1** Whilst many office markets were hit hard by Covid-19 and the changes to working patterns induced by this, Oxfordshire's market has fared better. Indeed, Oxfordshire has been at the forefront of the fight against Covid-19 including in the development of vaccines; and demand from the life sciences sector in particular has significantly influenced sub-regional market dynamics.

**5.2.2** The strength and growth potential of the life sciences sector is supporting significant investment and development interest. VSL report aggregate office/lab take-up of 384,700 sq.ft in 2021 which was approximately 10% above the 5 year average implying that this was around 350,000 sq.ft (32,500 sq.m).

**Figure 5.4: Office Take-Up and Supply – A34 Corridor**

Source: VSL Oxfordshire Commercial Property Market Update 2021

**5.2.3** Take-up in 2021 was particularly focused on Oxford, which in 2021 accounted for 75% of office take-up across the sub-region/A34 market. Over a 5-year period it has been around 50% of the total. Bidwells however report a strong period of leasing activity at Harwell Campus in H1 2022.

**5.2.4** Demand for lab space in Oxfordshire is reported as strong with requirements for incubator space, grow on space and HQ facilities and companies expand. The wider office market has however not been immune to the effects of increasing use of modern telecoms technologies and growth in home and hybrid working. Whilst there remains some uncertainty and the market has not fully 'settled down', the trend is one of occupiers seeking to consolidate (and reduce) their office space on lease events as home working reduces the scale of physical space needs.

**5.2.5** What results is an office market which is increasingly orientated towards lab and other R&D space; and away from traditional offices. This is illustrated most clearly in the chart below, drawn from the VSL 2021 Market Report. Lab lettings have risen notably since 2019 and in 2021 accounted for 50% of all office space take-up based on VSL’s analysis. Figures from commercial agents differ slightly, with Savills reporting that 64% of office take-up in 2021 could be attributed to the bioscience sector (with 10% technology and 10% professional services).

**Figure 5.5: Composition of Office Floorspace Take-Up – A34 Corridor**

Source: VSL Oxfordshire Commercial Property Market Update 2021

**5.2.6** Bidwell’s Arc Databook (Summer 2022) equally provides separate data on offices compared to labs. It indicates five year office take-up of around 250,000 sq.ft (23,200 sq.m) per annum of which c. 100,000 sq.ft is for Grade A space. Lab take-up has averaged 135,000 sq.ft pa (over half of the office total), but with over 200,000 sq.ft taken in 2021 and the evidence for 2022 pointing to a further strong year. Bidwells report demand for lab space having “sharply risen” over the last 18 months.

**5.2.7** Given this somewhat “two speed” market, we have segmented our analysis to consider the lab/R&D market separately from more traditional commercial office space where the data allows. Some commercial information is however presented for office and labs together.

### **Net Absorption and Vacancy Trends**

**5.2.8** CoStar provides data on net absorption and net deliveries. Net absorption is the balance between the amount of space moved into and moved out of (i.e. net absorption = move ins – move outs). It provides an indicator of the strength of demand. Net deliveries are the difference between floorspace delivered (i.e. constructed and brought onto the market) and demolished (or otherwise taken out of use and removed from the market). When net absorption is greater than net delivery this leads to a falling vacancy rate and vice versa.

**5.2.9** The figure below shows net absorption, net deliveries and their resulting impact on vacancy rates across Oxfordshire. Vacancy rates fell between 2012 and 2016 due

to strong net absorption and weaker net deliveries. Between 2016 and 2021, the vacancy rate has remained relatively stable at between 3-4%, meaning net absorption and net deliveries were roughly in balance. The relatively low vacancy rate however will have helped to spur further development.

**5.2.10** However more recently the vacancy rate has started to climb, driven in particular by negative net absorption; and CoStar forecast it to rise further to around 7% at year end due to a strong peak in net deliveries of office floorspace. The vacancy rate is then forecast to settle at around 6%.

**Figure 5.6: Net Absorption, Net Deliveries and Vacancy Rates, Oxfordshire**

Source: CoStar

### Vacancy Rates and Availability by Authority Area

**5.2.11** CoStar reports that the current office vacancy rate in Oxfordshire is 4.7%. However it should be noted that whilst Oxford's vacancy rate is 6.2% it should be noted that the City Centre (termed the 'Oxford Central' market by CoStar) has a vacancy rate of 2% and the rest of the area (termed the 'Oxford Fringe by CoStar) has a vacancy rate of 9.3%.

**Table 5.3: Vacancy Rates by Authority Area, Sept 2022**

Authority Area	Vacancy Rate
<b>Cherwell</b>	2.6%
<b>Oxford</b>	6.2%
<b>South Oxfordshire</b>	1.8%
<b>Vale of White Horse</b>	4.4%
<b>West Oxfordshire</b>	8.7%
<b>Overall</b>	4.7%

Source: Icen analysis of CoStar data

**5.2.12** Bidwell's Arc Databook records 733,800 sq.ft of office floorspace available as at Summer 2022. Whilst availability of office space (as separate for labs) increased between 2019 and 2021 to peak at over 10%; the evidence suggests that this has now started to fall and currently stands at 9.9%. The evidence also points to a growth of availability of Grade A space.

**5.2.13** The reported office floorspace availability would equate to around 3 years' supply based on five year take-up trends. However the supply position is one of limited supply of office floorspace in central locations, in particular with the loss of office stock to a growing number of lab repurposing schemes; with agents expecting that this will result in further rental growth in the short-term.

**5.2.14** The availability of office and lab space in the Oxford market grew by 18% in 2021, based on Savills figures, predominantly as Grade B space came onto the market; resulting in availability rising to c. 740,000 sq.ft at the end of the year. This is expected to recede in 2022.

**5.2.15** The table below summarises current levels of availability across Oxfordshire and its constituent authorities recorded on CoStar, taking into account existing floorspace and floorspace which is under construction. The evidence points to:

- Relatively low office floorspace availability in Central Oxford, but offset by the greatest concentration of available space being in the 'Oxford Fringe' business/science park locations;
- Reasonable level of available space in Cherwell and Vale of White Horse, but focused towards units of < 5,000 sq.m.

**5.2.16** Overall, it can be seen that around a third of available floorspace is in the 500 – 2,000 sqm size band. The only available space above 5,000 sqm is in Oxford (Fringe).

**Table 5.4: Availability by Authority Area, Sept 2022<sup>9</sup>**

	0-100 sqm	100 - 500 sqm	500 - 2,000 sqm	2,000 - 5,000 sqm	5,000 - 10,000 sqm	10,000 + sqm	Total
<b>Cherwell</b>	341	4,860	6,456	33,615			45,273
<b>Oxford Central</b>	311	2,082	4,473	3,019			9,885
<b>Oxford Fringe</b>	231	3,990	20,007	5,943	21,133	15,282	66,585
<b>South Oxfordshire</b>	304	2,469	4,092				6,865
<b>Vale of White Horse</b>	396	6,533	14,808	6,214			27,951
<b>West Oxfordshire</b>	451	3,345	5,289				9,085
<b>Oxfordshire</b>	2,034	23,279	55,125	48,791	21,133	15,282	165,644

Source: IcenI analysis of CoStar data

**5.2.17** The only site with over 10,000 sqm of available space is at Plot 16, Robert Robinson Avenue in Oxford Science Park. The building will be 15,300 sqm when completed in 2023 and will provide flexible office/lab space. There is also one property with 5,000 – 10,000 sqm of available space which is currently under construction at Edmund Halley Road on Oxford Science Park in Oxford. The building will be 7,400 sqm when complete in 2023 and will again provide flexible office/lab space.

**5.2.18** Bicester has traditionally struggled as an office location and has limited stock; but there is potential for this to grow influenced by its relative affordable housing stock, housing and workforce growth, and its good communications. It has seen some recent investment by tech companies, particularly in the engineering/motorsports sectors.

#### **Demand by Size and Authority Area**

**5.2.19** The amount of leasing activity which has occurred in various size bands has been assessed to provide an indication of office demand by size band. Leasing activity differs from absorption in that it refers to the amount of space which is leased (i.e. signed for rather than physically moved in to). However, it should be kept in mind that leasing activity is constrained by the size of available stock.

**5.2.20** Office leasing activity evidently fell significantly during the pandemic, in particular with no deals of over 5,000 sqm. These large deals have since returned (in 2022). Indeed leasing activity since 2020 has been notably weaker than in the years prior to this.

<sup>9</sup> Including existing stock and stock under construction

**Figure 5.7: Leasing Activity by Size Band and Year, Oxfordshire**

Source: Icen analysis of CoStar data

**5.2.21** The chart below shows the split of leasing activity by size band for each authority area and across Oxfordshire as a whole from 2016 onwards. There has been a relatively even split between the amount of floorspace leased in the middle three size bands with less at the extremes. West Oxfordshire is a prominent outlier in that 79% of floorspace leased was in deals of under 500 sqm.

**Figure 5.8: Leasing Activity by Size Band, 2016-2022 YTD, Oxfordshire**

Source: Icen analysis of CoStar data

**5.2.22** The market is however seeing a number of larger corporate occupiers downsize, including Oxfam, British Gas, and a number of solicitors and accountancy firms, influenced by the shift towards more flexible working patterns. The mainstream market is therefore seeing a “flight to quality.” VSL’s 2021 Market Report identifies 4 major professional service occupiers that reduced their floorspace by 40-60% in 2021. This has driven a significant increase in the supply of office floorspace on the market, which increases 24% in 2021 to 796,000 sq.ft (VSL data).

### Rental Trends

**5.2.23** VSL’s Market Report identified headline office rents in 2021 in Oxford City Centre of c. £47 psf; as against £38 psf on the Ring Road and £35 psf at Botley. Rents at Milton Park have been more steady at around £32 psf. Rents have been supported by a number of factors, including a low level of available supply in the City Centre; and the loss of stock to lab conversions.

**Figure 5.9: Offices Rental Trend – Key Oxfordshire Markets**

Source: VSL Oxfordshire Commercial Property Market Update 2021

**5.2.24** Headline office rents for Grade A stock are reported now at between £50-55 per sq.ft for space in Oxford City Centre, and £30-40 psf for office space in more fringe/ periphery, based on our engagement with CBRE and wider market publications. Fitted lab space (< 10,000 sq.ft) is now achieving higher rents in the mid £60s. Market commentators expect office rental values to grow, with Bidwells Oxfordshire Market Databook (Summer 2022) expecting headline office rents to rise to £59.50 psf by 2026. However the wider economic backdrop is weakening at the time of writing.

Office market fundamentals in Oxfordshire remain stronger than in many locations, influenced by its focus towards life sciences and technology-focused businesses. There is a limited supply in Central Oxford; whilst around the ring road there is

greater availability with a pipeline of schemes coming forwards which will support market growth.

The core market is focused on Oxford and includes the City Centre and Science/Technology Parks, and then stretching south to Harwell Campus and Milton Park in Didcot down the A34. In the short/medium-term, demand is considered likely to remain focused in these areas.

### 5.3 Labs Market

**5.3.1** There is a strong market for laboratories, which includes both dry and wet labs, in Oxfordshire. This section should be considered a sub-set of the wider office market analysis. Underpinning the strength of the sub-region's commercial property market are:

- The close inter-relationship between the Universities and industry. Oxford University is ranked 1<sup>st</sup> of universities in the UK but also globally. It has a global brand but also significant **research depth**.
- This generates significant volumes of **spin-out companies** through successful commercialisation of academic innovation. Of spin outs from UK universities over the 1998-2008 decade analysed by GovGrant, the University of Oxford accounted for 16% ranking it No1 and generating a total value of £6.4 billion. Key spin outs include Oxford Nanopore Technologies (valued at £2.4 bln), NighthstaRx (£665m), Oxford Immunotec, Perspectum, Vaccitech, and Semmler. There is a particular focus on the life sciences sector.<sup>10</sup>
- Supporting this **entrepreneurial ecosystem** is Oxford Science Enterprises (OSE) which since its foundation in 2015 has invested £0.5 billion and provided access to start-up space and business support, focused on three high-growth sectors – life sciences, health tech and dept tech.
- A strong **investment market** with commercial investment volumes reaching £805 million in 2021, as reported by Savills, which included investment by Singaporean investor GIC at Oxford Science Park; and Brookfield Asset Management's acquisition of Arlington which included the Oxford Business Park.
- Inward investments which result from businesses' desire to co-locate with the world-class academic institutions.

**5.3.2** In the lifesciences sector, OxBox, Oxford Biomedica's new 84,000 sq.ft facility opened in January 2021. Other recent completions include the Bellhouse Building at Oxford Science Park (30,000 sq.ft) and the Zeus Building at Harwell. The delivery of the Vaccines Manufacturing & Innovation Centre at Harwell has evolved and is now being built out by Catalent as a working factory capable of making a range of vaccines and therapeutics.<sup>11</sup> Oxford University also established the Ineos Oxford Institute of Antimicrobial Research (IOI) in January 2021 focusing on antimicrobial resistance. This will be based in the new 25,000 sqm Life and Mind Building (which is

<sup>10</sup> <https://www.govgrant.co.uk/university-spinout-report/>

<sup>11</sup> <https://biologics.catalent.com/oxford/>

under construction) once completed in 2023. Another notable deal was the Ellison Institute for Transformative Medicine's acquisition of Plot 18 at Oxford Science Park, announced in July 2022, connecting to the adjacent Littlemore House site which it acquired in 2021.

**5.3.3** At Oxford Business Park, Brookfield is refurbishing second-hand space to attract science occupiers and looking at hybrid office/industrial development. It is also planning to bring forward 10 acres of consented land to deliver c. 750,000 sqft of office and lab space. Kadans has purchased the 75,000 sq.ft Quadrant scheme at Abingdon Science Park with the intention of enhancing the laboratory offer.

**5.3.4** Strong recent demand has led to a position where lab space is in short supply at the start of 2022. VSL report unsatisfied demand for between 400,000 – 600,000 sq.ft. Savills estimate requirements for “a couple of million square feet from companies looking to get into the Oxford market.”<sup>12</sup> Savills describe the situation as follows:

*“What is clear, as seen in other markets across the UK, is the availability of Grade A office and laboratory space, which is severely limited in Oxford in the city centre and key ring road locations. The development pipeline for this year and 2023 is very low. The strength of the science sector, driven by the global reputation of the academic institutions, as well as the city's contribution to the global pandemic, has ensured the city is a top target location for companies, of all sizes, working within the many areas of human health.”<sup>13</sup>*

**5.3.5** Bidwells' more recent Summer 2022 Databook identifies requirements for c. 860,000 sq.ft for labs space from 24 companies. Their analysis of take-up trends points to a 5 year average of c. 135,000 sq.ft (12,500 sq.m) annually, but indicates that this has been growing since the pandemic.

<sup>12</sup> Savills Spotlight: Oxford Offices and Laboratories, March 2022

<sup>13</sup> Savills Spotlight: Oxford Offices and Laboratories, March 2022

**Figure 5.10: Laboratory Demand – Oxfordshire, June 2022**

Source: Bidwells Offices and Labs Databook (Summer 2022)

**5.3.6** The impacts of the energy crisis, inflationary pressures and weakening economic outlook have inevitably had some market impact. Bidwells report that venture capital funding is slowing, albeit reporting “Q2 2022 funding still exceeded every quarterly funding level recorded in 2020. Whilst both late stage (down 38% year on year) and early stage funding (down 18% year on year) tightened, seed finance bucked the trend, growing by 9% over the comparable Q2 2021 figure. Office and lab demand in Oxford remains driven in large part by high growth VC funded companies.” Whilst there is thus some evidence of funding slowing; trends in spin-out companies appear to be accelerating and some companies have been growing very rapidly.

**5.3.7** Headline rents track office rents. Much of the lab space in the Oxford market is outside the City Centre, but laboratory-enabled buildings command a premium rent akin to that in the City Centre. Over time, Savills expect rents for lab space to exceed those in Oxford City Centre. Lab-enabled buildings at Milton Park have reached a rent of £35 psf.

**5.3.8** For fully-fitted labs, rental cost are around £65 psf currently; and Bidwells forecast that these can be expected to rise significantly over the next few years to reach £72.50 in 2027.

## 5.4 Key Development Sites

### 5.4.1 Key development sites for the office/lab market include:

- **Oxford Business Park** – located on the south-eastern side of the City in Cowley, the business park is home to a range of high-tech businesses. There are two large office/lab spaces of over 1,500 sq.m each (available short-term) and four plots available for development<sup>14</sup> providing collectively 10.5 acres (4.3 ha).
- **Oxford Science Park** – an existing established science park, with a particular concentration of lifescience and technology companies, there is potential for over 300,000 sq.ft of further development space. There are 6 identified plots of land currently available for development with potential to provide 44,300 sq.m.
- **Oxford North** – hybrid planning permission was granted for a mixed use scheme on this site in 2021<sup>15</sup> including provision for up to 87,300 sq.m of E(g) space. The first phase of development is expected to deliver 15,793 sq.m (170,000 sq.ft) of laboratory and office space in three buildings including flexible office space, and two office/dry lab buildings of 55,000 sq.ft each.<sup>16</sup>
- **Begbrooke Science Park** – An established science park which provides an environment that helps innovative science & technology businesses through the difficult early stages of growth by providing a range of flexible property offers. The park is home to a mix of start-ups, spinouts, growing technology companies, R&D groups from larger international businesses (around 30 overall), and University research groups (around 20). The science park offers a countryside setting with sustainable transport links and easy access, together with a mix of listed buildings alongside modern labs and office space. Oxford University Development Ltd recently received permission for a further 12,500 sqm of new lab and office space, doubling the existing offer. One of the two new buildings will be used by University research groups with the other leased to innovative private companies. In the longer term the University hopes to transform the wider area around the Science Park into a world-leading innovation district, including housing, schools, communal facilities, green spaces and sustainable transport links.
- **Abingdon Science Park** – Located in the heart of the ‘Science Vale’, Abingdon Science Park contains approximately 75,000 sqft of office and laboratory space anchored by Oxford University and also including a world-leading cancer gene therapy company and data science firms. Kadans Science Partner, the owners of the park, have secured planning permission for a new, purpose-built laboratory and office building at the park (around 20,000 sqft). The scheme also brings forward communal and café space to the park.
- **Harwell Campus** - Harwell is a leading UK science and innovation campus. There are plans in place to deliver in excess of 1.5m sqft of cutting-edge labs, office and

<sup>14</sup> Plot 1 (3.35 acres); Plot 2 (1.39 acres); Plot 3 (2.79 acres); and Plot 4 (3.01 acres), as at Sept 2022

<sup>15</sup> It is being brought forward through a JV between Thomas White Oxford, Cadillac Fairview and developer Stanhope on land close to the junction of the A40 and A34

<sup>16</sup> <https://www.oxfordnorth.com/offices/>

advanced manufacturing space alongside 3.5m sqft of new hotel, conference centre, homes and amenities by 2027.

- **Milton Park, Didcot** – The UK's largest single ownership business community with business, science and technology space for 250 companies and over 9,000 people. By 2040 the park aims to create flexible laboratory space to accommodate 10,000 new jobs along with new amenities and a 24/7 sustainable transport hub.
- **Oxford Technology Park** – A permitted 400,000 sqft technology park office, R&D and 'high-technology' business space to let, starting from 5,000 sqft and going up to 49,000 sqft. The site contains a mix of unit sizes and offers high levels of flexibility to occupiers. The park will also have an on-site hotel and restaurant. The lab-enabled 'Building One' of 34,000 sqft is now complete and will be occupied by TNAC, one of the world's leading suppliers of high-quality reagents for infectious diseases.

## 6 Industrial Market Review

### 6.1 Industrial Stock

**6.1.1** The VOA<sup>17</sup> provides information on the amount of industrial floorspace by administrative area. In Oxfordshire at the end of FY 2020/21, there was 3,706,000 sqm of industrial floorspace in total accounting for 10% of the South East's stock. Figure 6.1 breaks this down by local authority area.

**6.1.2** Cherwell has the largest share of Oxfordshire's industrial market but each authority has a significant proportion of stock.

**Figure 6.1 Industrial Floorspace (End FY 2020/21) by Local Authority**

Source: Icen analysis of VOA data

**6.1.3** Co-star suggests that Oxfordshire had around 4,039,770 sqm of industrial floorspace at the end of FY 2020/21 which is 9% higher than the VOA data suggests. This difference is due to a number of reasons including that the definition of office space used by CoStar differs to that used by the VOA and the fact that data is collected in a different manner by each organisation.

**6.1.4** Figure 6.2 shows the amount of industrial floorspace in Oxfordshire between 2010/11 and 2020/21. It can be seen that the amount of floorspace remained relatively constant between 2010/11 and 2016/17 before a sharp rise to a peak in the latest year for which data is available 2020/21. This has been driven by industrial development in Cherwell.

<sup>17</sup> VOA: Non-domestic rating: stock of properties including business floorspace, 2021

**Figure 6.2 Industrial Floorspace (2000/01 – 2020/21)**

Source: Icen analysis of VOA data

**6.1.5** Figure 6.3 shows how the amount of industrial floorspace has changed in each local authority and Oxfordshire as a whole relative to the region and England. It can be seen that Cherwell and South Oxfordshire's industrial markets grew at a faster rate than the South East and England. West Oxfordshire's industrial market has seen little overall change despite a decline between 2010/11 and 2012/13. The only authority to lose industrial space was Oxford.

**Figure 6.3 Indexed Office Floorspace Change (2010/11 – 2020/21)**

Source: Icen analysis of VOA data

**6.1.6** Table 6.1 shows the split of Oxfordshire's industrial floorspace by quality (in terms of CoStar star rating). It can be seen that over a third of floorspace is 3-star rated, with 23% 1-2 star and just 10% 4-5 star. Cherwell and the Vale of White Horse have the highest percentages of 4-5 star floorspace whilst Oxford, South Oxfordshire and West Oxfordshire have very little of this high quality floorspace. However, Oxford has a very low percentage of 1-2 star floorspace.

**Table 6.1 Industrial Floorspace by CoStar Grade, 2022**

	Stock Grade				
	1	2	3	4	5
<b>Cherwell</b>	1%	26%	57%	15%	2%
<b>Oxford</b>	1%	7%	90%	1%	0%
<b>South Oxfordshire</b>	1%	28%	67%	3%	0%
<b>Vale of White Horse</b>	1%	18%	69%	13%	0%
<b>West Oxfordshire</b>	2%	34%	61%	3%	0%
<b>Grand Total</b>	1%	22%	67%	9%	1%

Source: Icen analysis of CoStar data

**6.1.7** Table 6.2 shows the split of Oxfordshire's industrial floorspace by age (built or renovated – the later of the two). It can be seen that 57% of Oxfordshire's industrial floorspace was built before the year 2000.

**6.1.8** Cherwell and the Vale of White Horse have the highest percentages of the most modern floorspace (built/renovated from 2010 onwards). Whilst Oxford has very little floorspace built/renovated from 2010 onwards, nearly half of its floorspace has been built from 2000 onwards. South Oxfordshire and, to a lesser extent, West Oxfordshire have the highest percentages of stock built pre-2000.

**Table 6.2 Age of Industrial Floorspace**

	Pre 1940	1940-1979	1980-1999	2000-2009	2010-2019	2020-2022
<b>Cherwell</b>	2%	21%	30%	15%	25%	7%
<b>Oxford</b>	1%	23%	29%	45%	3%	0%
<b>South Oxfordshire</b>	2%	24%	47%	14%	8%	5%
<b>Vale of White Horse</b>	1%	16%	32%	19%	22%	9%
<b>West Oxfordshire</b>	1%	22%	42%	16%	12%	7%
<b>Grand Total</b>	2%	21%	34%	21%	17%	6%

Source: Icen analysis of CoStar data

**6.1.9** Table 6.3 below at the scale and spatial distribution of strategic B8 units (units over 9,000 sq.m in size). It can be seen that the majority of strategic B8 units are in Cherwell with the District accounting for 55% of the total. However, the figures for Cherwell are more modest than those for instance in West Northamptonshire reflecting the stronger market for space on the M1 relative to the M40.

**Table 6.3 Profile of Strategic B8 Floorspace by Area**

	sq.m	% Total
<b>Cherwell</b>	481,226	55%
<b>Oxford</b>	73,313	8%
<b>South Oxfordshire</b>	81,123	9%
<b>Vale of White Horse</b>	198,100	23%
<b>West Oxfordshire</b>	45,122	5%
<b>Oxfordshire</b>	878,883	100%

Source: Icen analysis of CoStar data

**6.1.10** The table below looks at the age of strategic B8 floorspace across Oxfordshire. It shows that the majority of floorspace was built from 2000 onwards. This points to a relatively low level of ‘replacement demand’ arising and could moderate future development needs.

**Table 6.4 Age of Strategic B8 Floorspace**

	Units	Floorspace sq.m	% Floorspace
<b>Pre 1980</b>	5	60,993	7%
<b>1980-89</b>	11	157,141	18%
<b>1990-99</b>	8	149,735	17%
<b>2000-09</b>	7	155,656	18%
<b>2010-19</b>	12	206,627	24%
<b>2020+</b>	6	148,731	17%
<b>Total</b>	49	878,883	100%

Source: Icen analysis of CoStar data

**6.1.11** Demand for large-scale warehousing and logistics space has increased notably over recent years, driven in particular by the growth in e-commerce, increased stock holding requirements and the need for modern warehousing space with sufficient power capacity (to support automation and increasing moving forwards electric vehicles) and appropriate sustainability credentials. We have also seen growth in demand for last mile logistics, including cross-docking facilities at the edge of urban areas where consignments are reloaded from HGVs to LGVs for final mile delivery.

**6.1.12** For warehouse development, the employment land forecasts in this report are based on historical completions trends.

Overall, Oxfordshire’s industrial market is significantly sized and has seen some growth over the last 10 years, driven by growth in Cherwell and South Oxfordshire. In general, Oxfordshire’s industrial floorspace is of a middling quality and around 67% of the area’s industrial floorspace was built before the year 2000.

Oxfordshire has relatively modern strategic B8 stock which is predominantly located in Cherwell.

## 6.2 Industrial Market

**6.2.1** The last couple of years has witnessed record take-up of industrial property, with VSL recording record take-up of 1,573,083 sq.ft in 2021 – a 24% uplift on the level in 2020 which itself surpassed previous records. As a result the level of available supply has been diminishing and is approaching all-time lows.

**6.2.2** In the Oxfordshire market, key drivers of demand include logistics/distribution, which VSL report accounted for 50% of take-up in 2021; as well as science and technology (31%). The latter accounted for 482,200 sq.ft of space in 2021.

VSL's analysis of take-up by sector is shown in Figures 6.4 and 6.5. This shows that:

- For Oxfordshire's industrial market, logistics/distribution and science and technology are key drivers of overall demand for industrial space;
- There is a notable upward trend in the take-up in both of these areas in recent years, with the growth of e-retailing and increased stock-holding requirements driving demand for warehouse space and investment and growth in life sciences underpinning science & technology. Demand from more traditional industrial/manufacturing businesses is more modest.

**Figure 6.4 Industrial Take-up by Sector – Oxfordshire**

Source: VSL Oxfordshire Commercial Property Market Update 2021

**6.2.3** The aggregate take-up across sectors shows a notable upturn in 2020 and 2021 in particular. Speculatively development schemes have been brought forward at Banbury, Bicester, Witney and Didcot.

**Figure 6.5 Industrial Take-up and Supply – Oxfordshire****A34 Corridor Industrial Supply & Take-Up**

Source: VSL Oxfordshire Commercial Property Market Update 2021

**6.2.4** VSL report that the pace of take-up of new-build space has led to a shortage of good quality available space which will continue through 2022. They report 1.1m sq.ft of available industrial space, which is less than 1 years' supply based on recent take-up. This could support further rental growth (depending on wider economic circumstances).

**6.2.5** In terms of the supply of land, CBRE suggest that opportunities are drying up which is exacerbated by the relative strength of the life sciences market and crucially power supply constraints. They note that the most suitable land supply is likely to be around Didcot and Bicester around the M40.

### **Net Absorption and Vacancy Trends**

**6.2.6** CoStar provides data on net absorption and net deliveries. Net absorption is the balance between the amount of space moved into and moved out of (i.e. net absorption = move ins – move outs). It provides an indicator of the strength of demand. Net deliveries are the difference between floorspace delivered (i.e. constructed and brought onto the market) and demolished (or otherwise taken out of use and removed from the market). When net absorption is greater than net delivery this leads to a falling vacancy rate and vice versa.

**6.2.7** Figure 6.6 below shows net absorption, net deliveries and their resulting impact on vacancy rates across Oxfordshire. It can be seen that vacancy rates fell from around 11% in 2012 to around 2% in 2018, driven by strong net absorption which was not matched by deliveries (particularly in 2013, 2014 and 2018). By the end of 2019, the vacancy rate grew to around 5% due to a year without net absorption and record levels of delivery.

**6.2.8** 2020 saw strong net absorption (matching national trends of high demand, particularly from the logistics sector) with less but still decent levels of delivery. This caused a slight decline in the vacancy rate. 2021 saw similarly strong levels of net absorption and deliveries.

**6.2.9** 2022 is forecast to see a slightly increased vacancy rate driven by strong deliveries and lower net absorption. This is mainly driven by strong levels of delivery in Q2. The current vacancy rate is 4.1% which is forecast to increase slightly to 4.2% by the end of the year. This is a low vacancy rate which suggests a strong demand for industrial space relative to supply and a constrained market.

**6.2.10** From here, the vacancy rate is forecast to fall slightly to 3.4% due to strong forecast net absorption in 2023, before settling at 3.5% up to 2026. This suggests that the demand could continue to outweigh supply in the medium term meaning the market will remain constrained.

**Figure 6.6 Net Absorption, Net Deliveries and Vacancy Rates, Oxfordshire**

Source: CoStar

### Vacancy and Availability by Authority Area

**6.2.11** Table 6.5 below sets out vacancy rates by local authority. It can be seen that Cherwell and Oxford have the lowest vacancy rates suggesting there is particularly strong demand relative to supply in these areas. On the other hand, the Vale of White Horse and West Oxfordshire have higher vacancy rates suggesting there is less imperative to improve supply at present in these areas.

**Table 6.5 Vacancy Rate by Authority Area**

Authority Area	Vacancy Rate
Cherwell	2.9%
Oxford	2.2%
South Oxfordshire	3.9%
Vale of White Horse	6.3%
West Oxfordshire	7.3%
Overall	4.1%

Source: CoStar

**6.2.12** Table 6.6 summarises current levels of availability across Oxfordshire and its constituent authorities recorded on CoStar, taking into account existing floorspace and floorspace which is under construction. The evidence points to:

- Oxford having the most available industrial space, the vast majority of which is between 500 and 2,000 sqm in size.
- The Vale of White Horse and West Oxfordshire has the least available floorspace.

It can be seen that over half of available floorspace is in the 500 – 2,000 sqm size band.

**Table 6.6 Availability by Authority Area, October 2022<sup>18</sup>**

	0-100 sqm	100 - 500 sqm	500 - 2,000 sqm	2,000 - 5,000 sqm	5,000 - 10,000 sqm	10,000+ sqm	Grand Total
Cherwell	99	13,766	47,851	10,495		31,903	104,113
Oxford	73	5,816	121,709			11,148	138,747
South Oxon	921	13,815	21,612	16,071	7,831		60,250
Vale of White Horse	700	7,560	32,002	4,693		32,137	77,093
West Oxon	2,856	11,302	20,951	37,686	6,875	11,619	91,288
Grand Total	4,650	52,259	244,124	68,945	14,706	86,807	471,491

Source: Icen analysis of CoStar data

**6.2.13** Cherwell and the Vale of White Horse have the most 10,000 sqm plus floorspace available. This includes 20,000 sqm of existing space at Frontier Park.

<sup>18</sup> Including existing stock, stock which is in 'final planning' and will start construction in the next 12 months and stock under construction.

### Demand by Size and Authority

**6.2.14** The amount of leasing activity which has occurred in various size bands has been assessed to provide an indication of industrial demand by size band. Leasing activity differs from absorption in that it refers to the amount of space which is leased (i.e. signed for rather than physically moved in to). However, it should be kept in mind that leasing activity is constrained by the size of available stock.

**6.2.15** As can be seen in the figure below, industrial leasing activity across Oxfordshire spiked in 2021 in line with nationwide demand for industrial (particularly logistics) floorspace during the pandemic. This was particularly driven by leasing of 'big box' space (over 10,000 sqm in size), most of which was by large-scale logistics operators (including 65,000 and 28,000 sqm leases by DHL at Axis J10 in Bicester, a 41,873 sqm lease by Asda at Sutton Courtenay Road in Abingdon, and 19,000 sqm by Amazon at Southam Road in Banbury).

**6.2.16** DTRE suggest that the M40 corridor has historically been second favourite to the M1 in terms of big box space. However there is potential for the M40's role to develop over time. DTRE believe that historically lower take-up around the M40 may be because there are a limited number of sites which can come forward quickly, as well as less speculative development.

**6.2.17** The graph at Figure 6.7 below also shows a consistent take-up of smaller space. This is backed up by DTRE who suggest that there is a strong market from smaller occupiers and for trade counter space in Oxfordshire. CBRE also noted a strong demand from trade counter operators.

**Figure 6.7 Leasing Activity by Size Band and Year, Oxfordshire**

Source: Icen analysis of CoStar data

**6.2.18** Figure 6.8 below shows the split of leasing activity by size band for each authority area and across Oxfordshire as a whole from 2015 onwards. It can be seen that 45% of leasing activity across Oxfordshire is for space over 10,000 sqm (again

most of which is for strategic logistics). There is a relatively even split of floorspace leased in deals of less than 10,000 sqm.

**6.2.19** It can be seen that when compared to Oxfordshire as a whole, Cherwell has a larger proportion of leasing of greater than 10,000 sqm. This is backed up by DTRE who suggest that the logistics market is currently focussed on Bicester and Banbury. On the other hand Oxford and South Oxfordshire have no leasing of greater than 10,000 sqm which are characterised by a prominence of small to mid-sized leases.

**Figure 6.8 Leasing Activity by Size Band, 2016-2022 YTD, Oxfordshire**

Source: Icen analysis of CoStar data

### Rental Trends

**6.2.20** The strength of demand has however seen rental growth across all markets, with particularly strong growth in prime rents for industrial space in Oxford and Kidlington over the period since 2017. Prime rents in Oxford are highest, at £13 psf. Overall the rental evidence points to stronger demand for space in locations along the A34 and M40 Corridors; with lower rents away from this such as at Witney.

**Figure 6.9 Prime Industrial Rents – Oxfordshire**

Source: VSL Oxfordshire Commercial Property Market Update 2021

**6.2.21** Building cost inflation plus the shortage of supply have combined to drive growth in industrial rents; and with diminishing supply there are evidently prospects of further rental growth.

**6.2.22** CoStar suggests that average industrial rents are £11.25 psf across Oxfordshire. Light industrial rents come in higher at around £12 psf whilst specialised industrial rents are less than £11. Logistics rents sit very slightly above the overall average and, since mid-2019, have been growing faster than other types of industrial space. Despite logistics rents sitting around the overall average, big box rents are the highest at £12.15 psf.

**Figure 6.10 Average Industrial Rents, Oxfordshire (psf)**

Source: CoStar

Oxfordshire's industrial market has seen high demand and diminishing floorspace and land supply in recent years. This demand is driven by the logistics and the science and tech sectors.

These conditions have driven strong rental growth, particularly in the logistics sector. Rental price evidence points to stronger demand along the A34 and M40 corridors.

Vacancy rates are already low and are forecast to decline in the medium term suggesting high demand and low levels of supply will continue. Floorspace supply is most constrained in Cherwell, Oxford and South Oxfordshire.

### 6.3 Mid-tech Space

**6.3.1** A key trend has been growing demand for what we would term 'mid tech space' for science/technology-focused occupiers, which is suitable and can accommodate R&D, office, lab, clean room and light engineering/production space. This type of space has been brought forward in the Zeus Building at Harwell Campus; with VSL reporting a wider programme of development of space at Bicester, Kidlington, Harwell and Milton Park during 2022.

**6.3.2** CBRE suggest that this type of space may be pushed out to the margins due to land prices for core life sciences space. DTRE believe that expected levels of demand for mid tech space have not yet materialised but that they are likely to do so soon with a big shift towards this type of space.

### 6.4 Key Development Sites

**6.4.1** Key development sites for industrial space include:

- Signia Park, Didcot – part of the former 'Power Station B' site. 120 acre site which was formally the coal yard for Didcot 'A' Power Station. A first phase development was of a 242,066 sq.ft warehouse unit which was pre-let to publishing company Hachette UK. The remaining 100 acre park is ready for construction with development potential for around 1.5 million sq.ft for B2/B8 use. It is being brought forward by Graftongate with the masterplan showing principally big box units of greater than 150,000 sq.ft. There is currently a 94,000 sqft data centre under construction in the south west of the site which is due for completion in 2022.
- Frontier Park, Banbury – located alongside the M40 at Banbury, two units are under construction on a speculative basis, available Q2 2022, these being FP217 (217,461 sq.ft) an FP130 (13,400 sq.ft), with a further plot available which can accommodate 165,000 sq.ft.<sup>19</sup>
- Axis J9, Bicester – a development by Albion Land, the development provides a total of 500,000 sqft of new commercial buildings all of which is now built (the last unit was delivered in 2021). The space ranges from 7,000 to 160,000 sqft units.
- Catalyst Bicester – located just off the A41, close to the Graven Hill development, this scheme is being brought forward by Albion Land. A phase 1 development of 4 buildings has been completed; with Building 4 available (21,520 sq.ft). Phase 2 (5

<sup>19</sup> <http://frontierpark.com/banbury/>

buildings) providing 121,734 sq.ft of floorspace un units of between 18,000 – 30,000 sq.ft is due to be completed by Autumn 2023. A third phase of development is then expected to follow.<sup>20</sup>

- Tungsten Park, Whitney – In Witney, Tungsten Park has proved popular. Improvements to the A40 will support demand for industrial space.

There have been a number of recent planning applications for further industrial/logistics schemes, particularly focused at M40 Junctions.

# **PART B: Reviewing and Refreshing Oxfordshire's Growth Scenarios**

---

## 7 Reviewing and Updating the Oxfordshire Growth Scenarios

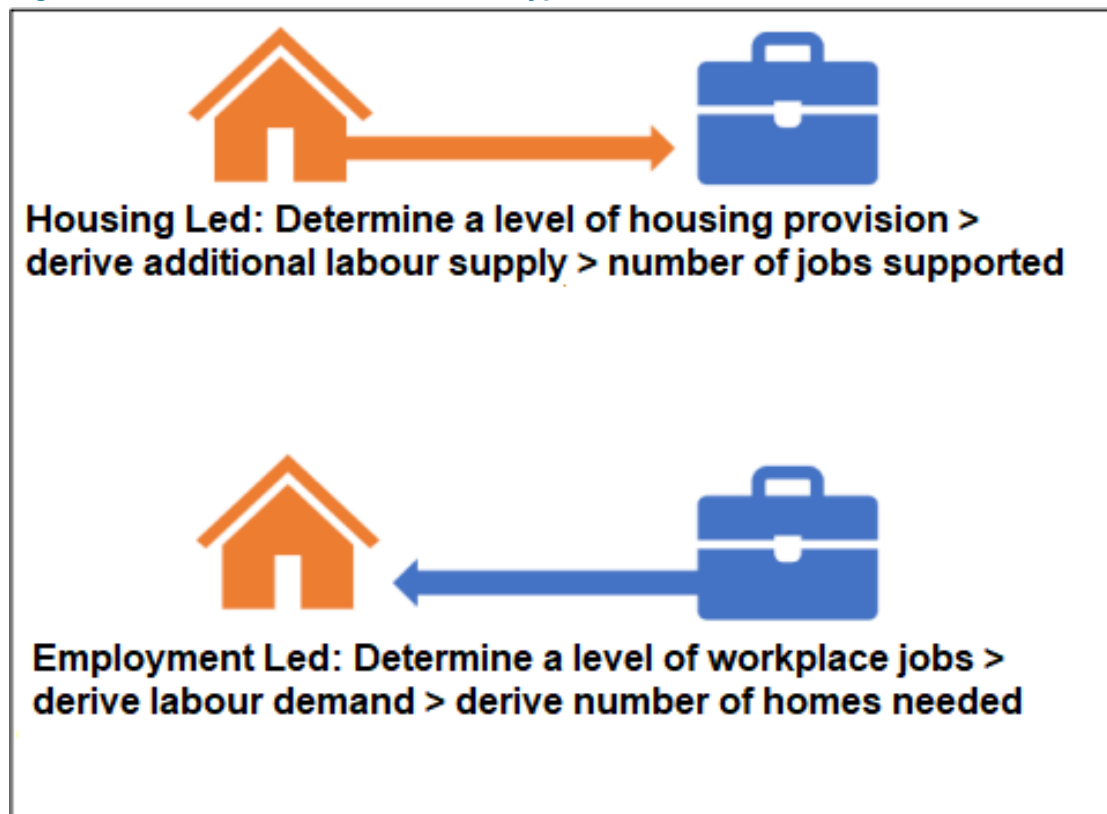

### 7.1 Summary of the 2021 OGNA Scenarios

**7.1.1** For the 2021 OGNA, four growth scenarios were devised, two based on demographic projections with upward adjustments for affordability (in line with the standard method set out in Planning Practice Guidance) and two based on scenarios for employment growth. The objective of the scenarios was to determine the level of housing and job provision that each one could support, in order to assess which of the scenarios would best meet Oxfordshire's growth needs. The approach was based on the evidence within the report showing that Oxfordshire's economic dynamism was a key driver of housing need.

**7.1.2** For the demographic-led scenarios, a fixed level of housing provision is identified by taking demographic growth and applying adjustments to support improved housing affordability (using the framework of the standard method). A series of calculations follow to identify what that level of housing provision could look like in terms of labour market effects, commuting and sustainability effects, as well as potential housing market effects.

**7.1.3** The employment-led scenarios start out with an assessment of future employment growth. These scenarios then consider what a particular level of employment provision would demand in terms of housing, based on certain labour supply assumptions. The scenario outputs can then similarly be analysed for housing market, commuting and sustainability effects. The two scenario types are represented by the graphic at Figure 7.1. Each stage of the scenarios is set out in Table 7.1.

**Figure 7:1 Visualisation of two scenario types**

**Table 7.1: Summary of Scenario Stages**

	Housing-led Scenarios	Employment-led Scenarios
Set Level of Housing or Employment	Start from housing provision based on demographic growth, uplifted using housing affordability ratio	Take a fixed level of <i>workplace</i> employment
Ratio	Derive population	Derive number of workers
Ratio	Derive number of resident workers	Set target level of commuting
Output	Determine deficit/surplus of workers relative to employment demand	Determine number of workers to be housed locally
Output	Derive labour demand	Derive dwelling demand
Output	Derive commuting results, assess sustainability effects	Derive commuting results, assess sustainability effects
Output	Derive labour / housing demand: assess housing market effects	Derive labour / housing demand: assess housing market effects

**7.1.4** The rationale for this approach was to assess housing need from different perspectives, capturing influences from demographic trends, market signals and the affordability position as well as economic performance. These provide two different contexts with which to assess and draw conclusions on housing need, the first being that of population dynamics and market signals; and the second being that of labour market dynamic, each equally valid as a starting point for assessing housing need.

**7.1.5** While NPPF guidance suggests that the standard method is used as a starting point for determining housing need, the same guidance recognises that economic factors can be taken into consideration when assessing need, and strong economic performance and a buoyant labour market were assessed as a key driver of Oxfordshire's housing market in the 2021 OGNA report.<sup>21</sup>

**7.1.6** In particular, that report identified how employment growth had been running ahead of housing delivery in Oxfordshire resulting in a growing surplus of workforce workers over resident workers and growth in net commuting into Oxfordshire and deteriorating housing affordability resulting from the associated supply/demand imbalance. It pointed to strong demand for housing as workers sought to live locally to their employment. As such, it was considered relevant and appropriate, in an Oxfordshire-specific context, to continue the approach of assessing need from both economic and demographic standpoints.

**7.1.7** A summary of the housing need figures generated in the 2021 OGNA scenarios are shown in table 7.2.

**Table 7.2: 2021 OGNA Scenarios - Housing need results**

	Change in households, 2020-50	Change in households p.a., 2020-50	Local housing need (dwellings) p.a., 2020-50
Standard Method (adjusted) economic trajectory	98,592	3,286	<b>3,386</b>

## 7.2 Reviewing the 2021 OGNA Scenarios

**7.2.1** Careful consideration was given to how the scenarios would be updated for 2022. Three key questions were asked to achieve this:

- Is the general approach, assessing housing need in the context of both demographic- and economic-driven estimates, still appropriate?
- Are the specifications of each scenario still appropriate, particularly in the context of feedback and representations received in relation to the 2021 OGNA report?
- What updates can be made to the scenarios?

**7.2.2** Firstly, it was considered that the original method of using demographic/ standard method-led and employment led scenarios remained a valid and appropriate approach. Population change remains the basis of the standard method calculation that should be used to establish the baseline level of area's housing need (with Planning Practice Guidance indicating that the standard method calculation, using 2014-based Household Projections, should be used to provide a minimum starting point in determining the number of homes needed in an area) . As described previously, the same guidance also outlines that an area's economic characteristics be accounted for in determining housing need. Additionally, the 2021 OGNA report noted the role of Oxfordshire's buoyant economy as a key driver of housing demand.

**7.2.3** For these reasons, and also for reasons of consistency of approach, it was considered appropriate to carry over the approach to this report and that this would continue to be in line with planning guidance.

**7.2.4** Secondly, the specifications of the scenarios from the 2021 OGNA were considered in detail. Finally, careful consideration was given to how the scenario specifications could be updated and amended with reference to new data and inputs and feedback received on the original report. The scenarios have thus been refreshed and reviewed taking account of the latest data and economic circumstances within this report.

The specification of each 2021 OGNA scenario is considered in detail below.

### Standard Method Scenario and Standard Method Adjusted Scenario

**7.2.5** The first scenario was based upon the housing number produced by the Government's standard method formula for assessing a minimum baseline for housing need. This uses population and household projections produced by the Office for National Statistics (ONS) / Government as the basis for establishing a trajectory of housing growth, which is subsequently adjusted to reflect issues of local affordability. In particular, the method uses 2014-based household projections, in accordance with the NPPF guidance.

**7.2.6** As of late 2022, the standard method remains the basis for determining the minimum level of housing need in a local planning authority area. For the 2021

OGNA, the method produced an annual need figure for Oxfordshire of 3,383 dwellings per annum (uncapped). At the district level, this translated into a need for 756 dwelling per annum in Cherwell and 762 dpa in Oxford City.<sup>22</sup>

**7.2.7** In the 2021 OGNA report, the Standard Method ‘adjusted’ scenario produced a near identical annual need figure of 3,386 dwellings. The adjusted baseline was created as a result of the uncertainty surrounding the ongoing use of 2014 household projections in the standard method itself, and of concerns regarding the robustness of the ONS demographic projections in the county, particularly for Oxford City.

**7.2.8** The adjustments made in the scenario included the use of 2018-based population projections, as well as an adjustment to reflect population data gathered from GP patient registers. The patient register data and evidence of housing completions indicated that the ONS mid-year population estimates had been underestimating Oxfordshire’s population. This has since been confirmed through by data from the 2021 Census (as per the analysis in Section 3).

**7.2.9** Nevertheless, with these revisions to the demographic estimates, the final outturn need figure was little different to the un-adjusted standard method (3386 dpa vs 3383 dpa).

**7.2.10** The Standard Method Adjusted (SMA) scenario estimated that this level of housing provision would support approximately 57,400 additional jobs between 2020 and 2040, based on the provision of 67,720 homes over the same period. This equates to 2,870 jobs supported per year.

### Business as Usual Scenario

**7.2.11** This scenario was the first of the two employment led scenarios. It calculated the number of dwellings that would be needed to support a given level of employment growth.

**7.2.12** The level of employment growth selected is the central assumption that underlies this scenario. For this scenario, that level of job growth was modelled by Cambridge Econometrics using the baseline growth rate that informed the 2014 Strategic Housing Market Assessment, combined with Oxfordshire’s 2008-2018 employment growth trend, which was then extrapolated forward to 2050. This scenario saw the creation of approximately 77,825 jobs by 2040 or 3,891 jobs per annum. To support this, an annual housing need of 4,113 homes was estimated.

### Transformational Scenario

**7.2.13** The final employment led scenario was based upon the Local Industrial Strategy (LIS) produced by the Local Enterprise Partnership. The scenario’s employment estimate was derived from the ‘go for growth’ scenario in the LIS that targeted a doubling of the county’s GVA, from £23bn to £46bn by 2040. The scenario produced an additional jobs figure of approximately 108,200 between 2020 and 2040 or 5,410 jobs per annum. To support this, the scenario estimated a housing need of 5,093 homes per year.

<sup>22</sup> Figures from Oxfordshire Growth Needs Assessment 2021, Phase 1 Report, Table 7.2.2, p92

## Summary 2021 Scenario Results

**7.2.14** Table 7.3 summarises the housing and employment outputs of the 2021 OGNA scenarios. Note that for the standard method (adjusted) scenario, the starting point is a demographic projection which an affordability uplift then applied which is then used to derive the number of jobs that level of housing would support. Conversely, for the employment led scenarios, these begin with an estimate of job creation, from which the associated housing need is then quantified making assumptions on economic participation and commuting.

**Table 7.3: 2021 OGNA Scenarios – Summary Housing and Jobs results**

2020-2040	Housing need (annual)	Jobs supported	Jobs created	Housing need (annual)	Population Change (increase)
Standard Method (adjusted)	3,386	51,770	-	-	159,819
Business as usual economic	-	-	77,825	4,113	194,134
Transformational economic	-	-	108,227	5,093	240,390

## 7.3 Updating the Scenarios for the 2022 HENA

### 2014-Based Standard Method Scenario

**7.3.1** As is mentioned, the standard method remains the appropriate starting point as per the NPPF / Planning Practice Guidance for establishing a base level of housing need for individual local authorities. As such this scenario remains an important baseline for establishing the growth needs and implications of delivering what the guidance identifies as the minimum level of housing provision.

**7.3.2** The standard method takes data from the 2014-based Household Projections for individual districts which is used to calculate the average annual household growth. A percentage uplift is then applied based on the latest median house price-to-income ratio for the area.

**7.3.3** The only update necessary for this report is therefore to ensure that the latest data is used within the calculation, using projected household growth over the 2022-32 period (using the current year as the starting point as per the PPG) and taking account of the most recent housing affordability ratios (which at the time of writing are for 2021). The results are set out in Table 7.4.

**7.3.4** At an Oxfordshire level this shows a need for 3,482 dpa (uncapped) or 3,388 dpa when Oxford City's figure is capped. At an Oxfordshire level the aggregate affordability adjustment derived is of a 44% uplift to the household projections in calculating the uncapped need.

**Table 7.4: Standard Method Housing Need Calculations**

	Cherwell	Oxford	South Oxon	VoWH	West Oxon	Oxfordshire
Households 2022	63,256	62,530	59,088	55,650	48,274	288,798
Households 2032	68,582	68,225	63,179	60,466	52,256	312,708
Change in households	5,326	5,695	4,091	4,816	3,982	23,910

Per annum change	533	570	409	482	398	2391
Affordability ratio (2021)	10.28	12.05	13.07	9.96	11.4	-
Uplift to household growth	39%	50%	57%	37%	46%	44%
Uncapped need (per annum)	742	856	641	661	582	3,482
Cap figure	1907	762	1260	1439	924	
Capped need (per annum)	742	762	641	661	582	3388

Source: *Iceni Analysis of Standard Method Housing Need Calculations*

## 2022 Census Adjusted Scenario

**7.3.5** In the 2021 OGNA report, the rationale for the adjustment to the standard method was both to recognise any uncertainties surrounding the ongoing use of 2014 household projections, and in particular to recognise and respond to evidence pointing to stronger population growth particularly for Oxford. This was assessed in detail in the 2021 OGNA Report<sup>23</sup>.

**7.3.6** Since that report, the completion of the 2021 Census and the release of the population results from it in June 2022, has clarified some of the issues surrounding Oxfordshire's population estimates. Indeed, as the analysis in Section 3 has shown, the Census has shown the County's population to be 18,700 higher than projected in the ONS 2014-based population projections which feed into the standard method, with weaker population growth in Oxford and stronger population growth in other parts of the County (with the exception of West Oxfordshire).

**7.3.7** The release of new census data provides the opportunity to create a new, Census based scenario that makes a more robust assessment of recent population trends and also population projections. A full analysis of the new census results is set out in section 3, including an outline of the approach to developing revised projections.

**7.3.8** The Census adjusted scenario calculates housing need by taking the revised projection of household growth of 3,274 households per annum over the 2022-32 period, as calculated in Section 3. It then applies a consistent 44% uplift to this based on affordability characteristics in Oxfordshire. This generates a need for 4,721 dpa. The outturn figures are shown in Table 7.5.

**Table 7.5: Census Adjusted Scenario Housing Need (dpa)**

	Oxfordshire
Households 2022	296,596
Households 2032	329,339
Change in households	32,743
Per annum change	3,274
Uplift to household growth	44%
Housing need (per annum)	4,721

Source: *Iceni Project, JGC Consulting*

**7.3.9** Whereas the 2021 OGNA's demographic analysis pointed to a similar scale of housing need as shown in the standard method (3386 vs 3383 dpa), the updated projection developed herein, informed by the 2021 Census data, points to stronger

<sup>23</sup> Section 3.8: *Developing an Adjusted Baseline*, p36, Oxfordshire Growth Needs Assessment Phase 1 Report, 2021

trend-based population growth. When a consistent affordability uplift is applied the housing need is higher (4,721 dpa vs 3,482 dpa uncapped).

## 2022 CE Baseline Trend Scenario

**7.3.10** For the 2021 OGNA, a medium-term growth trend for Oxfordshire was used, in combination with Cambridge Econometrics forecasts used in the 2014 Strategic Housing Market Assessment. This was used to reflect the area's clear outperformance in the decade from 2008.

**7.3.11** In feedback to the original report, questions were raised about the likelihood of this level of outperformance being sustained. In response, it can be said that as a general rule, the factors that lead to strong economic performance in a local economy such as access to high skill labour markets, and high rates of innovation and investment, once established, tend to remain and support ongoing growth, which is reflected in the economic modelling in the CE projections.

**7.3.12** Nevertheless, the macro-economic and geo-political events that have taken place since the last report demonstrate the cyclical nature of economic growth and can now be said to represent the completion of another economic cycle. Economic cycles are generally represented by the time between one period of economic contraction and another, characterised by a period of growth in between. The last cycle can be identified by the Global Financial Crisis to the current downturn resulting from the Covid-19 pandemic and subsequent energy and inflation crisis associated with the war in Ukraine.

**7.3.13** Given the level of uncertainty associated with the current downturn and the unpredictability of the recovery, it is considered most appropriate to use the 2022 update of Cambridge Econometrics' (CE) projection of economic growth for Oxfordshire. The new projection, while accounting for the County's strong past performance, also reflects negative GDP shock of the Covid-19 pandemic and subsequent recovery, plus the economic uncertainties surrounding 'Brexit'. A fuller explanation of the latest CE baseline projections is provided at Appendix A and B.

**7.3.14** Overall, the baseline projection reflects a slowing of national GDP growth and therefore of the GVA and employment outturn for Oxfordshire relative to the previous baseline. This is appropriate given the change in economic outlook since the OGNA was prepared. This is discussed in more detail in section 7.7. Details of how the CE baseline projections are constructed, and how they are subsequently updated, are provided in the appendices.

**7.3.15** The graph at Figure 7.2 shows the outturn for employment growth under the current and previous baselines, as well as that for Economic Development Led scenario (which is described further below). This shows that compared to the 2019 BAU scenario baseline, there are approximately 10,000 fewer jobs created by 2040 under the 2022 updated CE baseline scenario.

**Figure 7.2: Cambridge Econometrics Baseline Projection 2019 vs 2022 vs Economic Development Led Scenario**

An overview of the methodology for CE's projections, plus a summary of the 2022 update, is included in Appendix A and B.

### Economic Development Led Scenario

**7.3.16** The OGNA transformational economic growth scenario generated feedback that questioned the value of using an 'aspirational' scenario, reflecting the economic development aspirations of the Local Enterprise Partnership in its Local Industrial Strategy (LIS). However the NPPF in Para 82 does set out that in setting out an economic vision, planning policies should have regard to Local Industrial Strategies and other local policies for economic development and regeneration.

**7.3.17** The intention of this scenario is therefore to show what an aspirational, growth focussed strategy might look like in terms of the development needs it would generate.

**7.3.18** While accepting that this will be the scenario with the highest development need in terms of housing and labour demand, it is still felt to be a valid exercise to assess the needs of a growth focussed development strategy. On this basis, the updated scenario will be referred to as the Economic Development Led scenario.

**7.3.19** It is also recognised however, that any economic development plans or projects that may inform this scenario, should be realistic and achievable and not so aspirational as to be unlikely or unrealistic. This appears to have been recognised in the more recent Local Investment Plan (LIP) that followed the LIS in late 2020. Rather than the previous aim to double GVA by 2040 (by £23bn), the LIP now cites a more modest goal to add £1.2bn to Oxfordshire's annual GVA by 2030. Were this to be achieved, GVA would increase by around £12bn by 2040, not accounting for any

additional output also achieved in the 2020s. In effect therefore, the LIP halves the GVA growth target originally outlined in the LIS.

**7.3.20** This £1.2bn increase is based upon only the more concrete economic development and investment plans in the area that have either already begun or are close to coming forward. To this end, the £1.2bn increase in GVA by 2030 has been modelled within Cambridge Econometrics projections to produce corresponding growth and employment outputs to form the basis of this scenario.

**7.3.21** Overall, the objective of this scenario is to estimate and understand the development needs associated with a realistic expectation of Oxfordshire's economic development goals and projects. These are both important to Oxfordshire and of national significance and value. The Local Investment Plan demonstrates how the area's investment plans and projects have had, and are likely to continue to have, national and international support and investment.

**7.3.22** However, it remains possible that macro-economic events and public funding constraints may slow projects down or lead to some not progressing. Equally there are potential downside risks to economic growth associated with the global geo-political and macro-economic circumstances in 2022. These are considered in more detail later in this section (7.7.21).

**7.3.23** It is important to recognise that in the longer-term Oxfordshire remains one of the most important investment locations in the country and that there can be expected to be continued demand for investment and projects to locate there. In summary, this scenario is designed to represent an example of a scenario showing the housing and employment impacts of a realistic, growth led scenario. It is based on the economic impacts of a realistic set of known development plans. The scenario is meant to demonstrate the impacts in terms of housing and economic needs – it is not meant to judge whether the specific projects and investments will or will not come forward. Rather it is an assessment of growth needs should economic development plans and projects in Oxfordshire's knowledge and technical sectors come forward to the level indicated by the scenario.

## 7.4 The Ratio Assumptions Used in the Scenarios

**7.4.1** In order to run each of the scenarios they must make a number of assumptions in order to arrive at the outputs seen in the results. The employment-led scenarios take an estimated level of employment as a starting point. This is converted to workers and then resident workers using ratio assumptions for numbers of jobs per worker, for economic activity rates and finally for imported labour.

**7.4.2** For these scenarios, the amount of imported labour must be set in order to deduce how much of the FEMA workforce is to be housed locally. Areas with active and dynamic labour markets such as Oxfordshire rely on imported labour to some degree. The level of commuting is subsequently determined by the level of imported labour, adjusted to reflect previous housing under-delivery and post Covid-19 homeworking estimates. The basis and rationale for the commuting assumptions is set out later in this section.

**7.4.3** Once the number of workers to be housed is determined, the old age dependency ratio (the ratio of working age to retirement age people) is then applied to

determine the population that needs to be housed and the corresponding number of homes needed.

**7.4.4** These same assumptions are used to determine the labour supply position resulting from the number of homes provided under the standard method/ demographic-led scenarios.

**7.4.5** As a general rule, the assumptions made in the scenarios take levels and averages observed in current and recent data sets. The precise figures used in the scenario assumptions are set out in Table 7.6 and are described in more detail below.

**Table 7.6: Overview of Ratio Assumptions used in Scenarios**

	Ratio Used	Basis
1. Residents per Dwelling	2.36	Average ratio of population to household 2020-2040, from 2018 SNPP
2. Dependency Ratio	0.63	Current ratio of working age population in Oxon
3. Economic Activity Ratio	0.77	Current ratio of working-age to working people in Oxon
4. Job to worker ratio	0.955	Number of workers per job
5. Home based working	20% Remote 30% Hybrid 50% Workplace	CE Analysis
6. Commuting (Employment Led scenarios)	9,000 in commuters	Return to 2011 Levels

### Residents per Dwelling

**7.4.6** In the demographic/standard method-led scenarios, the initial assessment of housing need is first converted to a population figure, based on an assumption of household population. This figure is the result of dividing the total population according to the 2021 Census by the number of dwellings estimated by the standard method in 2040. This produces the same ratio of 2.36 resident per dwelling in Oxfordshire for both present day estimates (2022) and 2040 estimates. The ONS 2018 population projections produce a similar ratio, albeit on a mildly declining trend from 2.4 persons per household in 2022, to 2.35 in 2040.

**7.4.7** As the scenarios are based on the standard method however, using 2014 projections and the 2021 Census, it is considered most appropriate to use the ratio derived from these projections.

**7.4.8** Similarly, for the employment led projections, once the number of jobs and resident workers is established, the number of dwellings required to house those workers is derived from the same ratio.

### Dependency Ratio

**7.4.9** The dependency ratio is crucial to derive the level of labour supply in the total population. Traditionally this is represented by population estimates of the 16-64 age cohort. For the demographic/standard method-led scenarios, the larger the local

labour supply, the less demand for imported labour there is and the greater the level of sustainability that can be achieved. For the employment led scenarios, the larger local labour supply, the fewer homes are needed to house additional workers. As such, changes to these ratios can have a significant impact on the scenario outputs, so it is important that an appropriate ratio is used.

**7.4.10** This has been given careful consideration, particularly in respect to true labour supply trends and characteristics. Traditional estimates of labour supply, using the 16-64 cohort, is one area that was felt to merit further consideration. The assumption that labour supply stops after 64 in particular is of course not correct. Experimental statistics by the ONS, using PAYE analysis, estimates that around 1.3 million over 65s were in employment in the UK in 2020, and close to 1.5 million in 2022.<sup>24</sup> On a purely proportionate basis of the percentage of the population, this would add around 17,000 working people to the Oxfordshire population by 2040. However, these are classified as experimental statistics by ONS, and furthermore, it would not be appropriate statistically to assume the same proportion of older workers nationally applied to Oxfordshire.

**7.4.11** What can be done instead, is to use the 16-66 population as a more accurate measure of labour supply. This reflects the state pension age, which was equalised in late 2020 for men and women, at 66.<sup>25</sup>

**7.4.12** The result is that the working age population rate in Oxfordshire increases by one percentage point from 62.3% to 63.3%. The effect of a single percentage point reduction is to lower the housing requirement in the employment led scenarios, by between 300 and 400 dwellings per annum, and to reduce surplus labour demand by around 5,000 workers for the demographic-led scenarios.

### Economic Activity Ratios

**7.4.13** In the scenario steps, the economic activity rate follows from the working age population rate and derives the number of working people from the population of working-age people.

**7.4.14** Current economic activity rates have been at historic highs, with unemployment at record lows, resulting in especially tight labour markets. Oxfordshire has been no exception to this, as is seen in Figure 7.3. This demonstrates the county's strong labour market and labour market demand.

<sup>24</sup> [People aged 65 years and over in employment, UK - Office for National Statistics \(ons.gov.uk\)](https://ons.gov.uk/people-in-work/employment-and-unemployment/articles/peopleaged65yearsandoverinemploymentuk/2022-03-17)

<sup>25</sup> It is noted that the state pension age is set to rise from 66 to 67 by 2028 and from 67 to 68 by 2046. [State Pension age timetables \(publishing.service.gov.uk\)](https://publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/91111/state-pension-age-timetables.pdf)

**Figure 7.3: ONS Economic Activity Rates: Annual Population Survey**

Source: Time Series Economic Activity Rates, ONS Nomis Local Authority Profile

**7.4.15** As is seen in Figure 7.3 however, local labour market activity rates are volatile such that selecting a single point in time figure cannot be a robust basis to use in the scenarios given the level of variation from data point to data point. The local Oxfordshire figure has variously fallen below and above the average regional rate which is less volatile.

**7.4.16** Overall, it was considered more appropriate and statistically reliable to use an average of the regional economic activity rate for the scenarios, over the full period since the Annual Population Survey has been in use. This gives a long-term average that aligns more closely with the 20-year time frame of the plan period and minimises variation.

**7.4.17** The number of working residents can then be compared to estimates of workplace employment to determine the surplus or deficit of working residents necessary to meet local labour demand. This surplus or deficit represents a proxy for likely net commuting flows.

### Job to Worker Ratio

**7.4.18** This ratio is necessary to convert employment (number of jobs) to number of workers. It accounts for people who may have more than one job, reflecting the fact that the number of jobs estimated does not equal the number of required for those jobs. The ratio used of 0.955 is the same as that of the 2021 OGNA, taken from the Annual Population Survey.

### Commuting and Home-based Working

**7.4.19** Commuting trends reflect the balance of labour demand and labour supply, which are defined through job creation and housing supply. As such, this is a crucial aspect of determining current and future housing and employment needs. The 2021 OGNA report observed that,

*“Oxfordshire currently has a net commuting inflow of 20,500 people... This reflects the strength and attractiveness of Oxfordshire’s labour market and its high employment density.”*

*“... this number has rapidly increased over recent years as people reporting to work in the county continues to exceed the number of employed residents. With more people commuting into the county, and commuting a further distance, this has had implications for journey times, congestion and emissions in Oxfordshire.*

*Between 2011 and 2018, the number of people working in Oxfordshire is estimated to have increased by 36,100, whilst the number of employed residents increased by only 25,200. With some 82.8% of working age residents in active employment (the highest employment rate in the country), Oxfordshire’s already tight labour market has been reliant on workers residing outside the county to sustain its economic growth.*

*Resultantly, net commuting has more than doubled over this timeframe, from 9,000 to 20,500 daily inward commuters.”*

**7.4.20** The report showed that commuting levels began to substantially increase above the ten-year trend from 2004, as shown in Figure 7.4. This mirrored the observed trend of workplace employment growth (labour demand) accelerating ahead of resident population growth (labour supply), creating an imbalance reflected in market pressures and commuting trends. In effect the growth in commuting seen has been a symptom of an imbalance between housing demand and supply.

**7.4.21** Analysis of vehicle miles travelled further verifies these observations, demonstrating the commuting impact of the labour market imbalance observed in the period from 2013.

**Figure 7.4: Oxfordshire’s net commuting flows, 2004-19**

Source: ONS, Cambridge Econometrics.

**Figure 7.5: Miles Travelled in Oxfordshire – All Vehicles, 2004-19**

Source: DfT Road Traffic Statistics, Cambridge Econometrics.

**7.4.22** The 2021 OGNA report argued that a return to 2011 commuting levels, which equated to a ratio of 1.03 workforce workers per resident worker, was both achievable and less imbalanced relative to the position that was shown to have developed subsequently. A certain amount of commuting into the county is to be expected, particularly in areas of high labour demand, and needs to be factored into the employment-led scenarios to derive a housing need figure. Maintaining the 2011 ratio creates a labour supply deficit across the FEMA of around 14,000 workers by 2040 and an estimated commuting flow of 9,000 workers once homeworking is accounted for (see next section for home working calculations).

**7.4.23** It is felt relevant and appropriate to retain this modelling assumption for the employment led scenarios. This then shows the level of housing demand that would be necessary to achieve the labour supply and commuting balance implied by the 2011 position. This position also aligns with the lowest level of miles travelled in the published DfT traffic data from 2004 (Figure 7.5).

**7.4.24** The NPPF outlines in Paragraph 61 that it is important that calculations of housing need take into account market signals. The commuting imbalance described and which has arisen since 2011 is, the evidence shows, a function of an imbalance between supply and demand. It is appropriate therefore to take this into account in assessing housing need.

**7.4.25** The demographic-led scenarios produce two different levels of labour supply deficit (Table 7.8) and demonstrate the commuting effects of both a larger labour supply deficit, (35,000 - Standard Method Scenario) and a smaller labour supply deficit (7,300 - Census Adjusted Scenario).

## Home-based Working

**7.4.26** It is also important to recognise the role of home-based working, particularly its prevalence following the Covid-19 pandemic. As such, considerations of home-based working have been incorporated into the commuting calculations of the updated scenarios. This accounts for the fact that not all working residents will commute to work every day.

**7.4.27** An analysis of literature and recent research reveals a large amount of studies into the post pandemic working-from-home trends. Due to the variety of outputs generated by these studies and given how recent and untested they are, it is not possible to be definitive or conclusive about future homeworking trends.

**7.4.28** Instead, we have used a plausible scenario for homeworking patterns for Oxfordshire that accounts for a proportion of the workforce working from home. This is based on ONS survey data collected for the year ending December 2020<sup>26</sup>. This found that on average, 30% of Oxfordshire residents worked from home in the week leading up to being surveyed. However, this average masks a highly variable picture in the districts, with 24% and 28% in Cherwell and Oxford respectively working from home, compared to 41% in Vale of White Horse.

**7.4.29** Given the weighting of the county's total jobs towards Cherwell and Oxford, and that the survey was carried out in 2020 when various Covid-19 lockdowns were implemented, the home working assumption in the scenarios is reduced to 20% of the workforce from the 30% average for Oxfordshire.

**7.4.30** The ONS survey further revealed that just over 50% of Oxfordshire residents either worked from home at some point or worked from home entirely. These results were used to inform the assumption that overall, 50% of workers are either fully remote or hybrid workers, while 50% are fully workplace based.

**7.4.31** Overall, this produces the assumption that 20% of workers are fully remote, 30% are hybrid with a mix of home and workplace working (set to 2 days of homeworking a week), and 50% are fully workplace based. It should be emphasised that this assumption serves only to represent a likely scenario of homeworking patterns in Oxfordshire..

**7.4.32** The result is that the commuting estimate – derived from the 1.03 worker ratio – is reduced to account for the reduction in expected daily demand for workspace. The effect of this is to reduce the commuting estimate to 9,000 from the total worker deficit of around 14,000.

## Assumption Sensitivities

**7.4.33** It is important to understand that the assumptions are necessary and have to be fixed at a given level in order for any scenario to produce its output numbers. The nature of scenario planning will always be that it is possible to change the scenario outputs by changing the assumptions.

<sup>26</sup> [Homeworking in the UK labour market - Office for National Statistics \(ons.gov.uk\)](https://www.ons.gov.uk/employmentandlabourmarket/peopleinwork/employmentandemployeetypes/datasets/homeworkingintheuklabourmarket):

<https://www.ons.gov.uk/employmentandlabourmarket/peopleinwork/employmentandemployeetypes/datasets/homeworkingintheuklabourmarket>

**7.4.34** While it is not possible to say with certainty that the assumptions will represent reality, it is important to use known and realistic assumptions that represent recent reality and trends. This is the process that has been used for this HENA report.

**7.4.35** It is also a useful exercise however, to consider the implications of changes to the assumptions that could occur, even if they are not expected. Recent events such as the Covid 19 pandemic and the conflict in Ukraine show that unexpected events are all too common and may alter expected trends and outcomes. A summary of the effects of changes in the ration assumptions is provided in Table 7.7.

**Table 7.7: Summary of assumption variations and associated effects**

	Ratio	Possible variation	Effects of change
1. Residents per Dwelling	2.36	Faster declining trend over period. Unlikely.	Lower ratio will add to housing need
2. Dependency Ratio	0.63	Faster ageing of population reduces labour supply. Unlikely as balanced by later retirement age.  More older people in work, influenced by changes to state pension age	Reducing labour supply increases housing need in the scenarios.  Increases labour supply with associated reductions in housing need
3. Economic Activity Ratio	0.77	Activity rate highly variable at local level, generally high in areas of high employment/GVA.	Increasing activity rate increases labour supply, lowering housing need in the scenarios. Lower rate, has the reverse effect.
4. Job to worker ratio	0.955	Has remained broadly consistent over years, significant change not expected.	More people doing multiple jobs would reduce housing need in the scenarios.
5. Home based working	20/30/50 Ratios for remote, hybrid, workplace	Current scenario assumptions <i>reduce</i> housing need by reducing commuting effect due to remote working.	If pre-covid workplace trends were to return, the effect in the scenarios would be to increase housing need.
6. Commuting* (Employment Led scenarios)	9,000 in-commuters	Current figure for Employment Scenarios based on 2011 commuting levels and below current levels but above SM adjusted scenario.	Housing need figures for the Employment Scenarios can be reduced by accepting higher levels of imported labour.

*\*Commuters defined as difference between labour demand (Oxon workforce) and labour supply (working residents), adjusted for home working assumptions.*

## Housing Market Effects

**7.4.36** In the 2021 OGNA report, an analysis labour demand and housing supply identified a relationship between job to dwelling ratios and house prices<sup>27</sup>. This showed that as the number of jobs increased at a faster rate than the level of house building, the ratio increased in line with house prices, while a fall in the ratio coincided with an easing of house price inflation. This is explored in research by Cambridge Econometrics of housing market effects of employment and economic growth, which is set out in appendix C.

**7.4.37** This is similar in theory to the house price adjustment mechanism applied to the standard method, where the ratio of earnings to house prices is used to indicate a level of additional housing demand when the ratio is above regional or national averages.

**7.4.38** The housing market effect for the scenarios in this HENA consider the ratio of jobs to dwellings and shows the percentage change in the ratio between 2020 and 2040, based on the housing need indicated by each scenario. A change in the ratio represents a shift in the housing supply and demand balance.

## 7.5 The 2022 HENA Scenario Results

**7.5.1** In this section, the results produced by each of the scenarios are analysed. The results are summarised in Tables 7.8 and 7.9 below, showing the demographic-led and employment-led scenarios respectively.

**7.5.2** The scenario outputs show that the economic development led scenario supports the most employment and results in the greatest level of housing need. The standard method scenario, with the lowest level of housing provision, results in the largest labour supply deficit and commuting demand. The Census adjusted standard method scenario, and the 2022 CE baseline scenario, fall between the two with roughly similar outputs. These results are assessed in detail below.

### Standard Method Scenario Results

**7.5.3** This scenario demonstrates the likely impacts of providing the minimum level of housing as required by the NPPF and Planning Practice Guidance. When set against the CE baseline of labour demand, the scenario produces a substantial labour supply deficit (around 35,000) that must be met by imported labour, generating an estimated commuting inflow of around 22,500 workers per day. The housing market effect of this scenario shows a 4 percent improvement in the housing demand and supply ratio, the smallest housing supply improvement of the four scenarios.

### 2021 Census Adjusted Scenario Results

**7.5.4** The Census adjusted scenario produces a level of housing need using the adjusted population and household projections derived from the 2021 Census, as

<sup>27</sup> 2019 Oxfordshire Growth Need Assessment, Phase 1 Report, Chapter 13, Section 13.5

outlined in Chapter 3. It also incorporates the affordability uplift from the standard method formula.

**7.5.5** As in the first scenario, the outputs then assess the likely labour market, commuting and housing market impacts that arise from this level of provision, in this case 4,721 dwellings per annum.

**7.5.6** This scenario produces a much smaller labour supply deficit at around a fifth of that produced by the standard method scenario. This indicates a likely in-commuting effect of around 4,800 workers.

**7.5.7** The housing market effect sees a 10% improvement in the supply and demand ratio against 4% for the standard method scenario.

**Table 7.8: Summary Housing Led Scenario Results**

	Standard Method	2021 Census Adjusted
Housing Need (dpa)	<b>3,388</b>	<b>4,721</b>
Population 2040	875,522	932,148
Resident Workers 2040 (Labour Supply)	425,411	452,926
Workforce 2040 (Labour Demand)	460,268	460,268
Labour Supply Deficit	34,857	7,342
Commuting Demand (accounting for home working)	22,657	4,773
Housing Market Effect (Inc in supply /demand ratio)	4.1%	9.9%

### 2022 CE Baseline Scenario Results

**7.5.8** The scenario shows that the level of labour demand (i.e. employment growth) generated by the CE baseline employment scenario, which when accompanied with the commuting adjustments identified, produces a housing need of 4,406 dwellings per annum. This also has the same housing market effect as the adjusted standard method scenario, showing a 8.6% improvement in the housing supply and demand ratio.

### Economic Development Led Scenario

**7.5.9** The final employment led scenario generates the highest need for housing at 5,830 dwellings per annum, based on the level of GVA and employment growth

targeted by the LEP Investment Plan, and based on the same commuting assumptions used for the CE baseline scenario.

**7.5.10** This scenario improves the housing supply and demand ratio by 10%, so delivering the largest housing market supply impact.

**Table 7.9: Summary Employment Led Scenario Results**

	2022 CE Baseline	Economic Development Led
Workforce 2040 (Labour Demand)	460,268	489,655
Population 2040	918,763	979,244
Resident Workers 2040 (Labour Supply)	446,422	475,809
Housing Need (per annum)	<b>4,406</b>	<b>5,830</b>
Labour Supply Deficit	13,846	13,846
Commuting Target (with home working)	9,000	9,000
Housing Market Effect	8.6%	10.1%

## 7.6 Distribution of Housing Need by District

**7.6.1** The 2021 OGNA report concluded that the county of Oxfordshire represented a reasonable approximation of the Functional Economic Market Area (FEMA) and Housing Market Area (HMA). The scenarios used in the HENA are similarly based on the HMA/FEMA for the reason that labour and housing markets function over this market area which extends beyond the boundaries of individual districts.

**7.6.2** While the standard method provides housing need figures at district level, these are aggregated to the FEMA level in order to run the scenarios which produce more robust and consistent outputs at the FEMA/County level. In constrained urban districts like Oxford, the calculation of need using sub-national population projections that inform the standard method, can be distorted by historic suppression of household formation and impacts which constrained housing supply has on migration patterns. This effect is negated when assessing the whole FEMA as this covers the functional area where households will have formed beyond spatially constrained areas.

**7.6.3** As the scenario outputs are mostly informed by HMA/FEMA level data, the statistically robust approach is to apply district distributions once FEMA level housing need has been calculated for each of the scenarios.

**7.6.4** Due to the local area effects described above regarding suppressed population growth and household formation in Oxford, it is not considered appropriate to use the standard method as a basis for distributing housing across the FEMA, particularly given Oxford's role as the county's economic node, which sees acute affordability issues.

**7.6.5** Distribution using the standard method continues existing patterns of development, rather than trying to assign the need to where it is being generated. For reference, the results of distributing need on this basis are shown in Table 7.10.

**Table 7.10: Distribution of District Housing Need by 2014 based Standard Method**

		Housing Need Scenario			
2014 Based Standard Method Distribution		Standard Method	Census Adjusted	CE Baseline	Econ. Dev't Led
<b>Oxfordshire / FEMA</b>	<b>100%</b>	<b>3388</b>	<b>4721</b>	<b>4406</b>	<b>5830</b>
<b>Cherwell</b>	21.9%	742	1034	965	1277
<b>Oxford City</b>	22.5%	762	1062	991	1311
<b>South Oxfordshire</b>	18.9%	641	893	834	1103
<b>Vale of White Horse</b>	19.5%	661	921	860	1137
<b>West Oxfordshire</b>	17.2%	582	811	757	1001

**7.6.6** An alternative distribution method is to reflect the distribution of employment (jobs) in different areas. That is to say, the proportions of the total employment in each district are mirrored by the distribution of housing in each district. This option is proposed on the basis that employment creation can be expected to influence the geography of housing demand (even with the effects of working from home), while it is desirable from a sustainability point of view to locate housing and employment close together where possible. The employment projections indicate the level of job growth that can be expected to occur over the plan period in each district and as such it is appropriate to match housing need with job creation.

**7.6.7** Over the plan period, the projections show a greater concentration of jobs being allocated to Oxford and Cherwell and a lower concentration to South Oxfordshire, Vale of White Horse and West Oxfordshire. Figure 7.6 shows how the employment distribution in each district currently looks and is projected to look using the forward projections from CE's baseline forecasts (and the Economic Development based projection).

**Figure 7.6: Employment Projections by District – CE Baseline and Economic Development Led (dashed line). Data Labels in '000s**

Source: CE 2022 Baseline Projections including ED Scenario GVA Uplift

**7.6.8** It should also be noted that employment distribution is projected to change over time, unlike for the standard method distribution which remains constant over time. Therefore it is appropriate to consider whether to apply either the *current* distribution or the *projected* distribution at the end of the period in 2040. The full housing distribution outcomes in each district for the current and projected employment-based distributions are shown in Table 7.11 and 7.12 respectively.

**7.6.9** The employment distributions show how employment demand is highest in Oxford and is projected to increase. They also show how Cherwell, from having similar employment demand to South Oxfordshire and Vale of White Horse at the turn of the millennium, now supports a significantly higher proportion of jobs than the remaining districts. West Oxfordshire generates the least employment demand and its growth projections remain low over the plan period.

**Table 7.11: Distribution of District Housing Need by Distribution of Employment in 2021**

CE Baseline Trend Employment Based Distribution Current (2021) Distribution		SM	CA	CE-B	ED
Oxfordshire	100%	3388	4721	4406	5830
Cherwell	21.5%	728	1015	949	1253
Oxford City	26.7%	905	1261	1176	1557
South Oxfordshire	19.5%	661	921	857	1137
Vale of White Horse	18.5%	627	873	817	1079
West Oxfordshire	13.8%	468	651	607	805

**Table 7.12: Distribution of District Housing Need by Distribution of Employment in 2040**

CE Baseline Trend Employment Based Distribution Projected (2040) Distribution		SM	CA	CE-B	ED
Oxfordshire	100%	3388	4721	4406	5830
Cherwell	22.9%	776	1081	1009	1335
Oxford City	30%	1016	1416	1322	1749
South Oxfordshire	18%	610	850	793	1049
Vale of White Horse	16.2%	549	765	714	944
West Oxfordshire	12.8%	434	604	564	746

### Selecting a Distribution Methodology

**7.6.10** The employment-based distributions place the most homes where the most jobs are and the least homes where the least jobs are – they are thus demand-led. The results of the current (2021) distributions in Table 7.11 and the standard method distributions (Table 7.10) are similar and suggest that the affordability uplift in the standard method represents a reasonable proxy for a proportionate economic uplift representative of high economic pressures. While the affordability uplift represents economic pressures through housing costs and affordability, the employment distributions do this through job numbers. As is noted, both approaches produce similar distribution rates of housing need when comparing the current employment distribution, albeit with a slightly higher allocation in Oxford and slightly lower in West Oxfordshire. This reflects the respective high and low job densities of those districts.

**7.6.11** For the *projected* employment distribution (by 2040), the trend of increasing employment shares continues to the end of the plan period, increasing the employment distribution in Oxford and Cherwell, and marginally decreasing the distribution in the remaining districts.

**7.6.12** While the standard method and *current* employment-based distribution are similar, **the assumption of a static distribution through the plan period does not reflect the dynamic nature of the labour market and geography of expected employment growth.** Specifically, it does not account for the baseline forecast that Oxford and Cherwell are set to further develop as the drivers of the wider FEMA economy. The two districts are projected to represent well over half of the FEMA's employment by 2040.

**7.6.13** As such, **the employment led distributions represent the more appropriate approach of those considered for distributing the FEMA's housing need**, given that the geography of employment growth will influence that of housing need, the link to balancing the provision of homes and jobs, and the associated sustainability benefits. Furthermore, given the need for Local Plans to plan for the period to 2040, it makes sense, when using an employment-based distribution of housing, to select the distribution based on where the jobs are expected to be at the end of the plan period rather than the beginning. This recognises the role which the geography of future job creation will have on that for housing need.

**7.6.14** Therefore, it is recommended that the 2040 employment-based distributions are used to allocate homes across the districts.

### **Capacity Constraints in Oxford City**

**7.6.15** While all the scenarios and distribution approaches recognise and account for the economic role of Oxford, it is accepted that the physical and spatial constraints in Oxford mean that it may not be possible to deliver the high levels of both housing and commercial floorspace growth that the need calculations indicate are needed across the plan period to 2040.

**7.6.16** The reducing trend in the rate of population growth in Oxford, as shown in the most recent ONS population projections and in the 2021 Census, suggests that such constraints are already starting to show and are constraining the ability of people to move to the City and form households. Nevertheless, the scenario outputs and distributions present the opportunity to quantify any unmet need should capacity levels suggest that identified needs cannot be met.

## 7.7 Conclusions on Housing Need Scenarios

**7.7.1** National Planning Practice Guidance states that there will be circumstances where it is appropriate to consider if housing need is higher than indicated by the standard method calculation. The HENA's aim has been to carry out an objective assessment of housing and employment needs; this has been done using projections of population and employment growth alongside a realistic set of economic and demographic assumptions that derive the level of need arising from the projections.

**7.7.2** This is similar in approach to the standard method calculation that uses a projection of population growth and assumptions of household formation and population rates to derive a housing need figure. The HENA scenarios simply extend this process to additionally consider the labour demand/supply, commuting and housing market effects, as well as up-to-date demographic data from the 2021 Census. National Planning Practice Guidance makes clear that the standard method:

*“provides a minimum starting point in determining the number of homes needed in an area.”*

**7.7.3** As the standard method represents a minimum level of need, the scenarios in the HENA are designed to test the impacts of providing the minimum level of need, as well as three additional scenarios that consider the impacts of higher levels of housing provision. It can then be assessed which of these scenarios represents the most appropriate levels of housing and employment need for Oxfordshire, from which a final need figure can be derived, recognising that the PPG accepts that there will be circumstances where actual housing need is higher than the standard method indicates. This section considers each of the scenarios in this context.

### The 2014 Standard Method Scenario

**7.7.4** It is clear that delivering the minimum level of housing need, as defined by the 2014 standard method, provides a correspondingly low level of local labour to support Oxfordshire's economy, when compared to the labour market growth projected in the CE 2022 based employment baseline projection.

**7.7.5** The reason for this mismatch between population and employment in the standard method is likely to be related to underestimates of population growth since 2011, revealed by the 2021 Census; that the standard method does not capture demographic data post 2014 (which show that population growth has been stronger than in the 2014-based projections); and the method does not take account of economic factors which are key drivers of housing need in an Oxfordshire-specific context. The rapid growth of the workplace labour market has created the population / jobs imbalance identified in the 2021 OGNA report and reflected in the growth of imported labour as described in section 7.4.

**7.7.6** In delivering the minimum level of housing need, this scenario fails to address the labour supply issue, generating a deficit of around 35,000 people that must be met by imported labour. This results as the standard method will not provide sufficient housing to match the level of job creation expected to 2040. This has negative implications for sustainability, generating an estimated commuting inflow to the county of around 23,000 people per working day, incorporating allowances for new and ongoing home working patterns. This scenario also produces the most limited effect in terms of re-balancing housing supply and demand, which was identified to have become unbalanced in favour of demand in the 2021 OGNA report.

**7.7.7** Given Oxfordshire's economic dynamism and the substantial labour supply deficit which arises in this scenario, it seems unrealistic to assume that this scenario is likely to see affordability improve, as the Government aspires to.

**7.7.8** The evidence thus suggests that housing need will be higher than the 2014 Standard Method Scenario, particularly for Cherwell and Oxford City.

### The 2021 Census Adjusted Scenario

**7.7.9** This scenario sets the level of housing 40% higher than the 2014-based standard method, reflecting recent population trends revealed by the 2021 Census (with an equivalent affordability adjustment then applied). While this means the scenario reflects updated and more robust demographic projection and data as set out in section 3, it should be noted that this scenario also accounts for and reflects greater economic growth in a number of ways.

**7.7.10** This is firstly because the updated population data, by showing the greater level of population growth from the Census than was indicated by the 2018 population projections, is reflecting higher levels of economic growth that were a driver in the increased population growth. Secondly, the scenario incorporates the affordability uplift from the standard method calculation. Therefore, the scenario accounts for economic factors and market signals as represented in the affordability uplift.

**7.7.11** The resulting increase in housing supply proposed by this scenario leads to a much smaller labour supply deficit of around one fifth that of the standard method scenario (7,300 workers), translating to estimated daily in-commuting of around 4,800 journeys. This also means that housing provision is rebalanced by 10% in favour of supply versus demand, compared to 4% for the standard method scenario, relieving some pressure on the local housing market.

### The CE Baseline Trend Scenario

**7.7.12** The baseline trend scenario shows what the level of housing need will be to support the level of workforce implied by the 2022 CE baseline projection. In order to determine this, an assumption must be made about the proportion of workplace workers that should be housed locally, within the FEMA. As is described in section 7.4, in a regional and buoyant labour market such as Oxfordshire's, labour supply will always be supplemented with workers imported from beyond the FEMA.

**7.7.13** An appropriate level of labour supply deficit, derived from 2011 commuting levels, is considered in section 7.4. The adjustment made to commuting recognises that a key driver of increased in-commuting over the period since 2011 has been an imbalance between housing supply and demand in Oxfordshire, with the job creation exceeding the pace of housing delivery. The modelling approach thus responds to market signals. The modelling in this scenario results in a labour supply deficit of around 13,800 workers to be supplied from outside the FEMA, and a housing need figure of 4,406 dwellings per annum to support the remaining labour demand created in the CE baseline.

**7.7.14** If employment demand was to exceed the CE baseline, the labour supply deficit would increase, alongside housing demand in response. The baseline trend scenario increases the housing supply and demand ratio by 8.6%. The housing need

generated by a higher rate of employment demand is represented by the Economic Development led scenario.

### The Economic Development Led Scenario

**7.7.15** The Economic Development scenario demonstrates the potential change in housing need should the economy outperform the growth rate currently predicted by the CE 2022 Baseline, against which the other scenarios are based to derive labour demand.

**7.7.16** The Economic Development scenario proposes a workforce that is around 6.3% or 30,000 jobs larger than the CE baseline trend by 2040. This is based on the Local Enterprise Partnership Investment Plan target to add £1.2bn to Oxfordshire's GVA by 2030. This requires 5,830 homes per year based on maintaining the in-commuting rate as described above at 9,000 people. The scenario produces a similar housing supply rebalancing figure as the Adjusted Standard Method scenario at around 10%.

**7.7.17** However it remains possible that macro-economic events and public funding constraints may slow projects down or lead to some not progressing; and equally there are potential downside risks to economic growth which are explored further as part of the section on assessing the scenarios below.

### Assessing the Scenarios

**7.7.18** Overall, the evidence points to the overall scale of housing need being above the minimum level of housing need – based on the Standard Method 2014 Scenario - given the reliance which that scenario creates on imported labour, even accounting for weaker economic growth and for ongoing patterns of homeworking that have emerged as a result of the Covid-19 pandemic.

**7.7.19** The standard method does not capture demographic data post 2014 which show that population growth has been stronger than in the 2014-based projections. It will not provide sufficient housing to match the level of job creation expected to 2040. In these terms, the evidence indicates that it underestimates the actual scale of housing need in Oxfordshire.

**7.7.20** Planning on the basis of the 2014 standard method scenario would therefore have implications for sustainability, including congestion, emissions and net zero aspirations, as well as for Oxfordshire's economy by continuing to rely heavily on imported labour. This presents a risk that it becomes too difficult to attract large amounts of labour from outside of Oxfordshire, in turn constraining economic development, business growth and discouraging business from locating there – which would be inconsistent with national planning policy. The scenario also establishes no headroom for stronger economic performance or any degree of return to pre-pandemic patterns of home working. These would add further labour market pressures, with potential for additional wage and house price inflation. Again this is inconsistent with national policy. These are relevant considerations to take into account as part of Sustainability Appraisal of different growth options.

**7.7.21** As of the end of 2022, global geo-political events, following on from the economic disruption of the Covid-19 pandemic, are indicating a prolonged period of

economic weakness. This is reflected in recent Bank of England forecasts<sup>28</sup> that predict a UK recession throughout 2023 and into early 2024. While history shows that recovery from economic downturns is often strong, as was the case in the period after the 2008 Financial Crisis, it is difficult to speculate about the path of recovery in the UK and global economy over the next 20 years.

**7.7.22** It is recommended therefore, on balance, to use the scenarios that derive labour demand from the CE 2022 Baseline, therefore discounting the Economic Development led scenario that is adjusted down to the LIP from the LIS, because there is still over-optimism in that scenario.

### 2021 Census Adjusted and CE Baseline Trend

**7.7.23** This leaves the two middle scenarios of 2021 Census Adjusted and CE Baseline Trend. These are the recommended scenarios. These two assessments of need show the difference between providing around an additional 300 homes per year, set out in full in Table 7.1, which is to reduce the level of imported labour and commuting required when using the higher dwellings figure. The lower number results in a smaller population by around 14,000 people, resulting in about 6,500 fewer resident workers in the local labour supply.

**Table 7.1: Summary of outputs for recommended scenarios**

	2021 Census Adjusted Standard Method	CE Baseline Trend
Housing need per annum	4,721	4,406
Total Dwellings 2040	394,978	389,306
Total Population 2040	932,148	918,763
Working Residents 2040	452,926	446,422
Workplace Workers 2040	460,268	460,268
Inward daily commuting	4,773	9,000
Improvement in Housing Supply (relative to demand)	9.9%	8.6%

**7.7.24** The role of the scenarios in the HENA is to help determine the appropriate level of housing need and employment need for Oxfordshire. The standard method is shown not to reflect up-to-date demographic data and to underestimate need. An alternative approach is justified. Alternative scenarios for assessing need have been explored. This assessment has concluded that the 2021 Census Adjusted and CE Baseline Trend scenarios are justified assessments of need. Whichever approach is used to derive a housing figure, the data in relation to each scenario also helps show how that level of housing will address labour supply needs, housing market pressures and affect commuting patterns – factors that are within the scope of a housing and economic needs assessment.

# **PART C: Future Employment Land Needs, Affordable and Specialist Housing Need and Mix**

## 8 Future employment land needs

### 8.1 Introduction

**8.1.1** In this section we move on to consider future needs for employment land and floorspace to 2040. It addresses the need for office, land/R&D, industrial and warehouse/distribution uses.

**8.1.2** Planning Practice Guidance outlines a number of different forecasting techniques for considering future employment land needs. Different approaches have their advantages and disadvantages. Econometric forecasts take account of differences in expected economic performance moving forward relative to the past. However, a detailed model is required to relate net forecasts to use classes and estimate gross floorspace and land requirements. For office-based sectors consideration needs to be given to the impacts of trends in home working.

**8.1.3** Our approach works through a number of core stages:

- Firstly, considering net floorspace changes, drawing on a range of different models – the econometric forecasts (for labour demand); trends in net changes in employment floorspace; trends in net absorption (i.e. in occupied floorspace); and net completions/deliveries.
- Secondly considering net to gross relationships – considering what adjustments should be applied to take account for losses, and issues around replacement demand;
- Thirdly identifying what safety margin or flexibility is necessary to provide a choice of sites, recognising that business' floorspace needs are not homogenous and to provide some flexibility for delivery slippage/ non-delivery of sites.

These core stages are shown below.

**Figure 8.1: Overview of Forecasting Approach**

**8.1.4** For industrial sectors however the relationship between floorspace needs and employment trends may be weak – influenced by productivity improvements – meaning that a decline in employment does not necessarily mean a reduction in space requirements. In contrast, past take-up is based on actual delivery of employment development; but there is a need to consider whether future market dynamics may differ from the past. Past take-up trends, particularly for individual local authorities, are also potentially influenced by past land supply and/or policies.

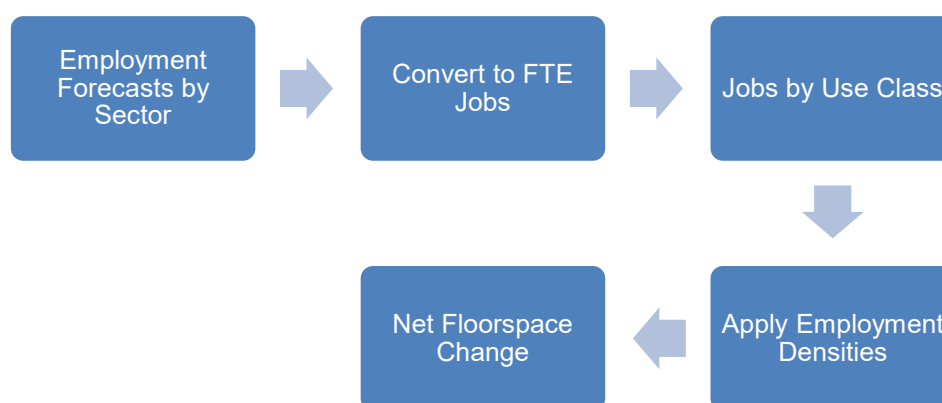

**8.1.5** Ultimately therefore an appropriate approach is therefore to utilise a range of different forecasting techniques alongside local intelligence and an understanding of the merits of different approaches in drawing conclusions. This approach of

triangulating different approaches and testing findings, which IcenI adopts, is consistent with the PPG.

## 8.2 Labour Demand Model

**8.2.1** IcenI has a standard model which considers how sectors relate to use classes which is used to estimate the proportion of employment in different broad use classes – offices (Eg(i) and E(g)(ii)), industrial (E(g)(iii) and B2) and warehousing (B8). We attribute changes in jobs to use classes first, using BRES data for Oxfordshire to estimate the sector-specific relationship between net changes in total employment and that for Full-Time Equivalent (FTE) jobs. Employment density assumptions are then applied to generate net floorspace change.

**Figure 8.2: Overview of Labour Demand Modelling**

### Employment Growth Scenarios

**8.2.2** The labour demand modelling considers two scenarios for employment growth:

- Trend-based Scenario:** this scenario is based on Cambridge Econometrics' latest 2022 baseline economic projections, (referred to as the Baseline Scenario);
- Economic Development Led Scenario:** this scenario is based on adjustments to the economic and sectoral outlook taking account of the LEP Investment Plan as outline in section 7 (referred to as the ED Scenario).

IcenI has sought to model the implications of these scenarios for future employment floorspace and land provision.

**8.2.3** IcenI has calculated estimated Full-time Equivalent (FTE) jobs considering the profile of full-time and part-time roles by sector using BRES data. From this, changes in FTE jobs have been modelled. We then use a standard model to relate use classes to sectors. The results for the two growth scenarios in FTE jobs by Use Class are shown in Table 8.1 and 8.2.

**Table 8.1: FTE Jobs Growth – Baseline Scenario, 2021-40**

2021-40	Office	R&D	Industry	Warehousing
Cherwell	2115	1381	-739	842
Oxford City	1762	2732	-1354	308
South Oxfordshire	1629	2630	-435	326
Vale of White Horse	3146	1397	-609	624

<b>West Oxfordshire</b>	1295	742	-661	393
<b>Oxfordshire</b>	9947	8882	-3798	2493

**Table 8.2: FTE Jobs Growth - ED Scenario, 2021-40**

<b>2021-40</b>	<b>Office</b>	<b>R&amp;D</b>	<b>Industry</b>	<b>Warehousing</b>
<b>Cherwell</b>	3194	1904	-122	1353
<b>Oxford City</b>	2891	4426	-1137	553
<b>South Oxfordshire</b>	2508	3301	-220	589
<b>Vale of White Horse</b>	4227	2154	-389	990
<b>West Oxfordshire</b>	1859	1023	-347	628
<b>Oxfordshire</b>	14680	12809	-2216	4113

**8.2.4** The next stage in the modelling is then to apply employment densities to estimate the net change in floorspace. The employment density assumptions used are set out. These relate to the Gross External Area (GEA):

- Office – 12.5 sq.m per FTE job
- R&D – 28 sq.m per FTE job
- Industrial – 44 sq.m per FTE job
- Warehousing/ Distribution – 70 sq.m per FTE job

**8.2.5** The employment density assumptions used in the core modelling have been applied to all of the Oxfordshire authorities. These are informed by the HCA Employment Densities Guide (3<sup>rd</sup> Edition) and the more science-based nature of Oxfordshire's economy. As part of preparing the HENA Report, Icenl has however engaged with the consultants working with both Oxford City and Cherwell District Councils on more local studies to consider further employment densities. The table below shows the variance in employment density assumptions used in different studies.

#### **Employment Density Assumptions**

	<b>HENA</b>	<b>Oxford Interim ENA</b>	<b>Cherwell ENA</b>
Office	<b>12.5</b>	12.5	12-13
R&D	<b>28</b>	46	60
Industrial	<b>44</b>	38-54	36-47
Warehousing	<b>70</b>	65	80

**8.2.6** The employment density applied for R&D space of 28 sq.m per FTE job is used for R&D space. This is based on consideration of planning applications for research / science park locations in both Oxford and Cambridge; and is equivalent to a wet lab floorspace figure (with densities for dry labs more similar to offices). Planning application data more specific to Oxford is limited, but a recent assessment submitted by Savills for a lab development at Plots 23-26 Oxford Science Park assumes 29 sq.m NIA per FTE job for lab space (and 9.1 sq.m NIA for offices).<sup>29</sup>

<sup>29</sup> Application 22/02168/FUL

The employment densities adopted are relatively similar with those in local evidence for Oxford and Cherwell albeit that a blended rate is used for industrial herein<sup>30</sup>; with the analysis separating out the office and R&D sectors taking account of the particular strength of the latter. There is some uncertainty regarding labs densities, with the evidence drawn on here assuming that most R&D floorspace is of labs and taking account of specific application evidence in Oxford and similar markets which points to higher employment densities than in other studies. However sensitivity analysis is included based on higher densities for both Oxford and Cherwell reflecting local evidence studies. Further consideration of appropriate densities may be warranted in drawing conclusions on employment land provision in individual local plans.

**8.2.7** Applying the core employment densities to the changes in FTE jobs envisaged results in a net need for employment floorspace is shown in Tables 8.3 and 8.4.

**Table 8.3: Net Floorspace Needs (sq.m) – Labour Demand Baseline Scenario**

2021-40	Office	R&D	Industry	Warehousing
<b>Cherwell</b>	26,440	38,670	-32,500	58,920
<b>Oxford City</b>	22,020	76,510	-59,570	21,570
<b>South Oxfordshire</b>	20,360	73,640	-19,160	22,820
<b>Vale of White Horse</b>	39,330	39,110	-26,810	43,660
<b>West Oxfordshire</b>	16,180	20,770	-29,080	27,540
<b>Oxfordshire</b>	124,330	248,700	-167,110	174,510

**Table 8.4: Net Floorspace Needs (sq.m) – Labour Demand ED Scenario**

2021-40	Office	R&D	Industry	Warehousing
<b>Cherwell</b>	39,920	53,320	-5,350	94,730
<b>Oxford City</b>	36,140	123,930	-50,040	38,710
<b>South Oxfordshire</b>	31,350	92,430	-9,690	41,250
<b>Vale of White Horse</b>	52,830	60,330	-17,130	69,270
<b>West Oxfordshire</b>	23,240	28,640	-15,280	43,940
<b>Oxfordshire</b>	183,500	358,640	-97,500	287,900

**8.2.8** A sensitivity analysis on the employment densities for R&D space is included below. This uses a density of 43 sq.m per FTE jobs in Oxford and a figure of 60 sq.m per job for Cherwell taking account of the local employment land evidence. For Cherwell the higher density reflects R&D within the motorsports sector (including

<sup>30</sup> Rather than separate figures for light industrial and general industry as it is in practice very difficult to disaggregate these to separate sectors

testing and prototyping) which the local evidence considers requires densities more akin to B8 development.

**Table 8.5: R&D Sensitivity Analysis (sq.m) – Baseline Scenario**

2021-40	Core Assumptions	Sensitivity Analysis	Midpoint
Cherwell	38,670	82,860	60,765
Oxford City	76,510	117,500	97,000

**Table 8.6: R&D Sensitivity Analysis (sq.m) – ED Scenario**

2021-40	Core Assumptions	Sensitivity Analysis	Midpoint
Cherwell	53,320	114,250	83,785
Oxford City	123,930	190,320	157,125

### 8.3 VOA Net Floorspace Trends

**8.3.1** The second modelling approach has been to take net changes in commercial floorspace from the Valuation Office Agency (VOA) data and model future trends. This works simply by considering net changes in floorspace over the most recent 5 year period (2016-21) and 10 year period (2011-21) and projecting these forward over the 19 year period to 2040.

**Table 8.7: Net Office Floorspace Needs (sq.m) – VOA Trend Projection**

	Historical Annual Net Change		Projection, 2021-40	
	5 Yr	10 Yr	5 Yr	10 Yr
Cherwell	-1,000	-1,100	-19,000	-20,900
Oxford	-1,000	900	-19,000	17,100
South Oxfordshire	-3,000	-2,000	-57,000	-38,000
Vale of White Horse	3,800	2,500	72,200	47,500
West Oxfordshire	600	-400	11,400	-7,600
Oxfordshire	-600	-100	-11,400	-1,900

**Table 8.8: Net Industrial Floorspace Needs (sq.m) – VOA Trend Projection**

	Historical Annual Net Change		Projection, 2021-40	
	5 Yr	10 Yr	5 Yr	10 Yr
Cherwell	20,600	11,200	391,400	212,800
Oxford	-5,000	-2,000	-95,000	-38,000
South Oxfordshire	4,000	2,800	76,000	53,200
Vale of White Horse	-400	700	-7,600	13,300
West Oxfordshire	5,800	500	110,200	9,500
Oxfordshire	25,000	13,200	475,000	250,800

### 8.4 Trends in Net Absorption

**8.4.1** A third measure of stock changes which can be considered is net absorption. Here, Icenis has taken trends in net absorption of office and industrial/ logistics space from CoStar and has projected this forwards to 2040. We have done so at an Oxfordshire level, recognising local supply-side influences on district figures.

**8.4.2** The net absorption projections for office space point to a need for between 168,000 – 214,000 sq.m of office floorspace as shown in Table 8.9.

**Table 8.9: Projection of Office Net Absorption, Oxfordshire**

Sq.m	Average Net Annual Net Absorption	Projection, 2021-40
<b>5 Years</b>	8,850	168,090
<b>10 Years</b>	11,250	213,720

**8.4.3** For industrial and logistics floorspace, a need is generated for almost 1.3 million sq.m of space based on net absorption trends projecting forwards the 10 year trend; and almost 1.6 million sq.m of space using the 10 year trend.

**Table 8.10: Projection of Industrial and Logistics Net Absorption, Oxfordshire**

Sq.m	Average Net Annual Net Absorption	Projection, 2021-40
<b>5 Years</b>	67,660	1,285,560
<b>10 Years</b>	83,660	1,589,510

Specific figures for individual local authorities are shown in tables later in this section.

## 8.5 Completions Data

**8.5.1** Next we consider evidence of past development trends. We have good quality monitoring data provided by the commissioning authorities – Cherwell and Oxford City.

### Completions Trends in Cherwell

**8.5.2** Table 8.11 shows projections of net completions of employment space by use in Cherwell. It shows projections based on 5 year trend data (2017-22), 10 year trends (2012-22) and 15 years (2007-22).

**Table 8.11: Projections of Net Employment Floorspace Completions, Cherwell (2021-40)**

Sq.m	5 Yr Trend	10 Yr Trend	15 Yr Trend
<b>B1a/ E(g)(i)</b>	95,910	58,070	75,870
<b>B1b/ E(g)(ii)</b>	63,660	35,150	24,000
<b>B1c/ E(g)(iii)</b>	69,210	47,220	37,590
<b>B1 Mixed</b>	475,160	233,650	155,780
<b>B2</b>	275,640	179,540	94,050
<b>B8</b>	1,628,700	1,022,780	696,880
<b>Mixed B</b>	405,950	326,710	233,290
<b>Total</b>	3,014,220	1,903,120	1,317,470

**8.5.3** As the chart in Figure 8.3 shows, the data is particularly influenced by very strong floorspace completions in 2021/22. This is driven in particular by recent B8 development.

**8.5.4** Gross floorspace completions across uses are around 17% higher than the net figures (for the 10 yr trend scenario). This figure also holds true for industrial space. The net figures account for losses, but also redevelopment / intensification of existing employment sites. However the differential for office floorspace is significant, with gross new-build completions over the 10 year period more than double (210%) of the

net figure; as new-build development has taken place but older stock has been lost through redevelopment/conversion (most likely particularly to residential use).

**Figure 8.3: Gross Floorspace Completions – Cherwell**

Source: CBC Monitoring Data

### Completions Trends in Oxford City

**8.5.5** Projections of net completions of commercial space in Oxford are shown below. The 10 year trend shows a fairly static position for office floorspace; with the most positive need shown (regardless of the projection period) for E(g)(ii) R&D floorspace influenced by the lab market. The net position in all scenarios for industrial and warehousing development is negative.

**Table 8.12: Projections of Net Employment Floorspace Completions, Oxford (2021-40)**

Sq.m	5 Yr Trend	10 Yr Trend	15 Yr Trend
B1a/ E(g)(i)	-38,100	510	8,280
B1b/ E(g)(ii)	69,940	85,360	95,360
B1c/ E(g)(iii)	-45,500	-30,350	-18,670
B1 Mixed	31,530	7,540	5,000
B2	-9,040	-64,560	-97,140
B8	-91,170	-127,080	-115,730
Mixed B	-3,040	-1,960	-16,860
<b>Total</b>	<b>-85,390</b>	<b>-130,550</b>	<b>-139,760</b>

**8.5.6** Gross completions for R&D floorspace are consistent to the net position; reflecting a position where there have not been losses in this use class.

**8.5.7** Gross levels of industrial development historically in the City have been very modest, influenced by high land values and a lack of supply. Across industrial use classes, 10 year gross completions have been averaged c. 2,100 sq.m per annum. In comparison the net position is evidently negative.

Industrial completions trends in Oxford are influenced by the City's constrained land supply and net trends thus are likely to underplay the actual need. In particular for an urban area of its size, there is likely to be some need from manufacturing businesses for more modern floorspace; and a case for provision of space for last mile logistics.

**8.5.8** For offices, the 10 year net completions trend points to a position which is essentially flat (equating to a broadly static office stock overall in the City). However underlying this is a trend of development of new space, together with losses/conversion of older stock. Thus relative to the trends above, the 5 and 10 year gross trend would lead to development of between 53,200 – 64,500 sq.m respectively over the 2021-40 period. This does not necessarily however completely require new land.

### Development Trends in Other Oxfordshire Authorities

**8.5.9** Iceni does not have access to robust completions data for other Oxfordshire authorities. This principally reflects issues with the quality of monitoring data. To address these issues, we have instead sought to use CoStar data on 'deliveries' of new-build development; and 'net deliveries' which describe the difference between

**8.5.10** The chart at Figure 8.4 shows development trends based on gross deliveries data from CoStar at an Oxfordshire-wide level. It shows that beyond Oxford, the main other office market is Vale of White Horse; with more limited levels of development in South Oxfordshire and West Oxfordshire.

**Figure 8.4: Gross New-Build Office Development, Oxfordshire**

Source: Iceni analysis of CoStar data

Specific data for individual authorities has been analysed and is set out in the tables in the next section.

## 8.6 Bringing the Different Modelling Approaches Together

**8.6.1** Below we have sought to bring the figures generated by the different modelling approaches together. We look first at the results at an Oxfordshire level, and then for different authorities. Table 8.13 brings the different scenario modelling together.

**Table 8.13: Net Floorspace Needs, Oxfordshire 2021-40**

	Office	R&D	Industry	Warehousing
Labour Demand Baseline Scenario	124,330	248,700	-167,110	174,510
Labour Demand ED Scenario	183,500	358,640	-97,500	287,900
VOA Net Floorspace Trends - 5Yr	-11,400		475,000	
VOA Net Floorspace Trends - 10Yr	-1,900		250,800	
Net Absorption - 5Yr	185,800		-2,650	1,124,710
Net Absorption - 10Yr	211,570		201,510	927,970
Net Deliveries - 5Yr Trend	198,460		29,600	1,132,290
Net Deliveries -10Yr Trend	166,110		84,520	750,780

**8.6.2** Conclusions at an Oxfordshire wide level are helpful in ensuring consistency of approach. But it is appropriate to bring these together with more detailed local evidence/studies in informing planning assumptions for individual local plans; as such studies can refine judgements based on more detailed interrogation of local market dynamics and the quality/nature/level of supply in different areas and issues related to the quality of supply. For instance, assessment of the quality of sites may inform the iteration of assumptions on losses; whilst local evidence of appropriate employment densities may also be relevant.

**8.6.3** For office space (E(g)(i)) in Oxfordshire:

- The labour demand model shows a level of need of between 124,300 – 183,500 (depending on the scenario selected). This builds in home-working on a sector-by-sector basis at 2020 levels. Past net absorption and delivery trends have been stronger, with the top end of the range sitting close to the 5 yr net absorption trend.
- However the pandemic has led to a notable shift in working patterns which can be expected to result in lower floorspace needs relative to the historical trend. There has been space coming onto the market in the short-term as companies downsize and this can be expected to moderate levels of new floorspace development (particularly short/medium-term); and indeed the labour demand model does not in itself make adjustments for these factors (in terms of the demand for and occupancy of existing stock).
- However the shift in employment patterns in office-based sectors can be expected to result in lower levels of net floorspace growth relative to historical trends, if the R&D sector is set aside. According to latest information from Savills, reporting on Remit Consulting data, national office occupancy at June 2022 is around 30% compared to around 70% pre pandemic, a substantial fall (although this data source is not considered fully representative). The British Council for Office (BCO) suggest that rates could settle at 60% in the longer term - although

again this could be potentially optimistic. Post covid there has certainly been a period – which continues based on market engagement – of a restructuring of corporate property portfolios and there are many examples of downsizing (with businesses reducing their office footprint on lease events) and this is evident in the Oxfordshire market.

However whilst office occupancy might fall, office utilisation may change to reflect the need for more meeting and break out space. The BCO suggest this could lead to a rise between 40% and 25%. Icen agree that for some businesses this is likely to be the case, particularly those at the higher end of the market, but that across the market as a whole this could be ambitious including when taking into account co-working space. This increase in densities will not exceed the reduction made by the reduced occupancy, as otherwise this would lead to overall higher requirements for offices which seems counter intuitive.

- **On this basis we consider that the labour demand model should be the starting point for offices**, but this may be optimistic. Future needs could be 30-40% below this but it is perhaps too early to be definitive, and it will be important to monitoring trends over time.

**8.6.4** In contrast the R&D sector (E(g)(ii)) is particularly strong in Oxfordshire and exhibits potential for strong growth. **Iceni recommend that the labour demand scenario should therefore be used in planning for future R&D space; with the trend-scenario treated as a minimum level of provision; but consideration given to providing sufficient supply potential to enable the higher LEP Scenario to be achieved so as not to constrain growth.** In terms of employment densities, we would advise that the ‘midpoint’ scenario should be used as a core modelling assumption but further consideration should be given to appropriate densities through local evidence.

**8.6.5** For industrial floorspace (E(g)(iii) and B2), Iceni has concerns about using the labour demand model, not least as trends in job numbers are projected to be downwards, the wider evidence points to growth in floorspace and positive net absorption (save for the most recent 5 yr trend). This is reinforced by consideration of what the LEFM model shows for GVA relative to employment, as shown below.

**8.6.6** Manufacturing GVA has grown over the last decade, as has floorspace; even through employment numbers have been reasonably stable. The long-term trend is of falling employment, but increasing GVA (linked to increased automation as well as wider productivity improvements); and the forecasts point to growth in GVA.

**8.6.7** Iceni’s view is that for industrial floorspace, **it would be appropriate to plan for positive provision in line with the 10-year trends in net absorption.**

**Figure 8.5: Comparing Past Trends and Forecast Employment and GVA Growth in Manufacturing in Oxfordshire**

Source: Iceni analysis of CE forecasts data

**8.6.8** For warehousing and distribution, labour demand modelling is typically a weak predictor of future floorspace needs as a significant component of demand arises from ‘replacement demand’ linked to the reprovion of older warehousing units (which typically have a 30-40 year lifespan). Similarly automation within the sector has a significant bearing on the relationship between floorspace and jobs, making accurate modelling from jobs forecasts problematic.

**8.6.9** Iceni consider that greater weight should therefore be given to trends in net absorption. Market conditions in the very recent past have been buoyed by the shift

towards e-retailing and the effects of Brexit (on increasing stock holding requirements) and market conditions over the period since 2020 have been exceptionally strong. The shift in retailing from bricks and mortar to warehouses has accelerated with prospects of further growth. There is some emerging evidence of the market beginning to soften. **For the warehousing and logistics sector, we therefore consider that a 10 year trend in net absorption should be taken.** This points to a need for around 1 million sq.m of floorspace to 2040 across Oxfordshire.

The resultant net employment floorspace needs are shown in the Table 8.14.

**Table 8.14: Net Employment Floorspace Needs (sq.m), 2021-40**

Sq.m	Office	R&D	Industry	Warehousing
<b>Cherwell - Low</b>	26,440	60,770	65,380	549,640
<b>Cherwell - High</b>	39,920	83,790	65,380	549,640
<b>Oxford - Low</b>	22,020	97,000	21,320	44,030
<b>Oxford - High</b>	36,140	157,130	21,320	49,460
<b>South - Low</b>	20,360	73,640	44,910	93,740
<b>South - High</b>	31,350	92,430	44,910	93,740
<b>Vale – Low</b>	39,330	39,110	39,780	149,590
<b>Vale – High</b>	52,830	60,330	39,780	149,590
<b>West – Low</b>	16,180	20,770	30,120	90,970
<b>West - High</b>	23,240	28,640	30,120	90,970
<b>Oxfordshire – Low</b>	124,330	291,290	201,510	927,970
<b>Oxfordshire - High</b>	183,480	422,310	201,510	933,400

## 8.7 Net to Gross Adjustments

**8.7.1** Net floorspace changes (as modelled above) can be expected to underestimate the overall volume of new development, as they take account of losses of employment floorspace. Evidently some redevelopment will take place on existing employment sites. However there can be losses of employment floorspace and land to other uses.

**8.7.2** There are generally different approaches which can be used to considering losses, including:

- Analysis of past trend data and inclusion of assumptions on expected replacement provision;
- Appraisal of sites and consideration of what employment land might expect to be lost and what re-provision is appropriate to address this.

**8.7.3** Iceni has not undertaken an assessment of existing supply, and the quality of this; and therefore is not in a position to draw firm conclusions on replacement provision. However we do have monitoring data on past losses and have therefore analysed this.

**8.7.4** To provide a basis for drawing quantitative conclusions on overall needs in this report, we have projected forwards past losses and assumed a 50% replacement

rate. Individual authorities may wish to consider this further based on more detailed consideration of the quality of existing supply.<sup>31</sup>

**8.7.5** For Cherwell and Oxford City we have had access to robust monitoring data on losses. This has therefore formed the basis for the calculations for these districts using data on losses over the last 10 years as shown in Table 8.15 and 8.16.

**Table 8.15: Indicative Allowance for Replacement of Losses in Cherwell and Oxford, 2021-40**

sqm	Office	R&D	Industrial	Warehouse
<b>Cherwell</b>	32011	0	61900	66226
<b>Oxford</b>	39873	124	14797	10057

**8.7.6** In the absence of robust data it has not been possible to robustly estimate losses for other areas. We have therefore sought to indicatively consider potential losses (at 50% of the historic rate over the last 10 years) using CoStar data on demolitions. This is shown below, but should be reviewed as appropriate through local studies in these areas.

**Table 8.16: Indicative Allowance for Replacement of Losses in Other Areas, 2021-40**

	Office	Industrial
<b>South Oxfordshire</b>	15,920	36,305
<b>Vale of White Horse</b>	3,235	3,148
<b>West Oxfordshire</b>	794	1353

**8.7.7** Replacement demand provision is a particular issue for the larger warehousing and distribution space. The average useful economic life of a warehouse building is typically around 30 years; however the capital value of stock built since 2000 means that over the plan period being considered there is little prospect of redevelopment of these units which would therefore more likely be refurbished.

**8.7.8** Across Oxfordshire, there is c. 370,000 sq.m floorspace in larger warehousing units which is pre-2000. This suggests that the potential that replacement of older warehousing units could generate additional demand for new floorspace. However it is feasible that this could occur, at least in part, through the in situ redevelopment of existing warehousing units particularly where these are at locations which relate well to the strategic road network, have good public transport accessibility and sufficient power capacity. These are issues which would be appropriately be considered further through either a specific warehousing study or individual local employment land reviews.

## 8.8 Margin to Provide Choice and Flexibility of Supply

**8.8.1** The final stage of the modelling has been to include a margin to ensure a flexible supply of employment land is maintained. This takes into account:

- The potential error margin associated with the forecasting process, and variance between different forecasting methodologies;

<sup>31</sup> The Oxford ELNA does not make assumptions on losses at this point but identifies this as an area where further work is required. The Cherwell EDNA assumes 100% replacement of losses based on historic trends from 2007-21

- The need to facilitate movement within the property market including the replacement of older outdated commercial space. The evidence points to tight market conditions, particularly for industrial provision, and case for providing some flexibility to allow vacancy levels to rise to market norms;
- The need for flexibility in the supply of land to allow for delays in individual sites coming forwards.

**8.8.2** It is normally reasonable to make provision for a 5-year margin based on gross development trends over a 20 year plan period. However, as land supply is particularly constrained within Oxford City and given the scale of recent industrial and warehouse development in Cherwell, we would concur with a more limited 2-year margin, as shown in Table 8.17. Individual local studies may want to consider the appropriate margin further, having regard to the nature of different local markets and indicators such as vacancy rates and availability for different employment uses.

**Table 8.17: Margin for Choice/ Flexibility**

	Offices	Labs	Industrial	Warehouse
<b>Oxford</b>	6790	8980	3830	360
<b>Cherwell</b>	12850	3700	61500	155990
<b>South Oxfordshire</b>	2510		300	4170
<b>Vale of White Horse</b>	10920		630	14170
<b>West Oxfordshire</b>	550		560	13500

## 8.9 Overall Employment Land Needs

**8.9.1** Drawing together the evidence of the net need, replacement allowance and margin, we have set out the overall employment floorspace and land needs generated in the tables below.

**8.9.2** To calculate a land need, we have assumed a plot ratio of 0.4 for industrial and warehouse development. For offices and labs/R&D in Oxford we have assumed 60% in business parks with a density of 1, and 40% in town centre locations with a plot ratio of 1.5. This generates a blended plot ratio of 1.2. In other areas (i.e. beyond Oxford City), we have assumed a plot ratio of 0.4 reflecting the balance towards business park development. The results are shown in Table 8.18.

**Table 8.18: Total Floorspace Needs, 2021-40**

	Office	R&D	Industry	Warehousing	Total
<b>Cherwell - Low</b>	65,240	69,750	131,110	616,230	882,330
<b>Cherwell - High</b>	78,720	92,770	131,110	616,230	918,830
<b>Oxford - Low</b>	74,750	100,820	97,610	210,080	483,260
<b>Oxford - High</b>	88,870	160,950	97,610	215,510	562,940
<b>South - Low</b>	38,790	73,640	81,510	97,910	291,850
<b>South - High</b>	49,780	92,430	81,510	97,910	321,630
<b>Vale – Low</b>	53,480	39,110	43,560	163,760	299,910
<b>Vale – High</b>	58,570	60,330	43,230	153,760	315,890
<b>West – Low</b>	17,530	20,770	32,040	104,470	174,810

<b>West – High</b>	24,590	28,640	32,040	104,470	189,740
<b>Oxfordshire - Low</b>	249,780	304,090	385,830	119,2450	213,2150
<b>Oxfordshire - High</b>	300,520	435,120	385,500	118,7880	230,9020

**Table 8.19: Total Employment Land Needs, 2021-40**

	<b>Office</b>	<b>R&amp;D</b>	<b>Industry</b>	<b>Ware-housing</b>	<b>Total</b>
<b>Cherwell - Low</b>	16.3	17.4	32.8	154.1	220.6
<b>Cherwell - High</b>	19.7	23.2	32.8	154.1	229.7
<b>Oxford - Low</b>	6.2	8.4	24.4	52.5	91.6
<b>Oxford - High</b>	7.4	13.4	24.4	53.9	99.1
<b>South - Low</b>	9.7	18.4	20.4	24.5	73.0
<b>South - High</b>	12.4	23.1	20.4	24.5	80.4
<b>Vale - Low</b>	13.4	9.8	10.9	40.9	75.0
<b>Vale - High</b>	14.6	15.1	10.8	38.4	79.0
<b>West - Low</b>	4.4	5.2	8.0	26.1	43.7
<b>West - High</b>	6.1	7.2	8.0	26.1	47.4
<b>Oxfordshire - Low</b>	50.0	59.2	96.5	298.1	503.8
<b>Oxfordshire - High</b>	60.3	82.0	96.4	297.0	535.6

**8.9.3** The figures set out relate to needs over the 2021-40 period. To calculate what levels of allocations are required, individual authorities can consider their pipeline employment land commitments against this to identify what further or additional provision is required.

## 9 Affordable Housing Need

### Introduction

**9.1.1** This section provides an assessment of the need for affordable housing in Oxfordshire and the five constituent local authorities. It follows the methodology set out in Planning Practice Guidance and is structured to consider the need for social/affordable rented housing; and secondly for affordable home ownership products.

**9.1.2** The affordable needs assessment is based on housing costs at the point in time of the assessment. House prices used are based on those for the year to March 2022. Entry level housing costs at the time of the assessment are as follows:

**Table 9.1: Lower Quartile Housing Costs, Year to March 2022**

	1-bedroom	2-bedrooms	3-bedrooms	4-bedrooms	All dwellings
Cherwell	£141,000	£218,000	£295,000	£418,000	£250,000
Oxford	£215,000	£279,000	£391,000	£489,000	£335,000
South Oxon	£172,000	£239,000	£382,000	£549,000	£320,000
VoWH	£154,000	£211,000	£321,000	£458,000	£275,000
West Oxon	£166,000	£221,000	£323,000	£438,000	£269,500

Source: Land Registry and Internet Price Search

Rental costs for the same time period are as follows:

**Table 9.2: Lower Quartile Market Rents, year to March 2022**

	Cherwell	Oxford	South Oxon	VoWH	West Oxon	Oxfordshire
Room only	£412	£510	£500	£575	£430	£475
Studio	£600	£725	£597	£660	£595	£625
1-bedroom	£700	£918	£765	£765	£725	£775
2-bedrooms	£850	£1,125	£950	£925	£875	£950
3-bedrooms	£1,050	£1,350	£1,150	£1,100	£1,125	£1,150
4-bedrooms	£1,450	£1,900	£1,650	£1,500	£1,500	£1,600
All properties	£825	£1,050	£895	£850	£850	£900

Source: ONS

**9.1.3** The affordable needs assessment compares housing costs to incomes. Median household incomes have been estimated as follows.

**Table 9.3: Estimated Median Household Income, mid 2022**

	Median income	As a % of County average
--	---------------	--------------------------

Cherwell	£44,200	95%
Oxford	£44,000	95%
South Oxon	£50,200	108%
VoWH	£47,100	102%
West Oxon	£46,500	100%
Oxfordshire	£46,300	-

## 9.2 Need for Social/Affordable Rented Housing

**9.2.1** The sections below work through the various stages of analysis to estimate the need for social/affordable housing in each local authority. Final figures are provided as an annual need (including an allowance to deal with current need). As per 2a-024 of the PPG, this figure can then be compared with likely delivery of affordable housing.

### Current Need

**9.2.2** In line with PPG paragraph 2a-020, the current need for affordable housing has been based on considering the likely number of households with one or more housing problems. The table below sets out the categories in the PPG and the sources of data being used to establish numbers. The PPG also includes a category where households cannot afford to own despite it being their aspiration – this category is considered separately in this report (under the title of the need for affordable home ownership).

**Table 9.4:** Main sources for assessing the current need for affordable housing

	Source	Notes
Homeless households (those in temporary accommodation)	MHCLG Statutory Homelessness data	Household in temporary accommodation at end of quarter.
Households in overcrowded housing	Census table LC4108EW	Analysis undertaken by tenure and updated by reference to national changes (from the English Housing Survey (EHS))
Concealed households	Census table LC1110EW	Number of concealed families
Existing affordable housing tenants in need	Modelled data linking to past survey analysis	Excludes overcrowded households – tenure estimates updated by reference to the EHS
Households from other tenures in need	Modelled data linking to past survey analysis	

Source: PPG [2a-020]

**9.2.3** It should be noted that there may be some overlap between categories (such as overcrowding and concealed households, whereby the overcrowding would be remedied if the concealed household moved). The data available does not enable analysis to be undertaken to study the impact of this and so it is possible that the figures presented include a small element of double counting (although this is likely to

be small). Additionally, some of the concealed households may be older people who have moved back in with their families and might not be considered as in need.

**9.2.4** Table 9.5 shows the initial estimate of the number of households within each local authority with a current housing need. These figures are before any ‘affordability test’ has been applied to assess the ability of households to meet their own housing needs; and has been termed ‘the number of households in unsuitable housing’. Overall, the analysis estimates that there are currently some 19,900 households living in unsuitable housing (or without housing).

**Table 9.5: Estimated Number of Households Living in Unsuitable Housing – Oxfordshire**

	Homeless/ concealed households	Households in overcrowded housing	Existing affordable housing tenants in need	Households from other tenures in need	Total
Cherwell	682	1,896	156	1,429	4,163
Oxford	965	3,856	268	1,878	6,967
South Oxon	535	1,436	140	1,238	3,349
VoWH	473	1,088	149	1,137	2,848
West Oxon	436	964	122	1,044	2,566
Oxfordshire	3,091	9,241	835	6,726	19,892

Source: MHCLG Live Tables, Census 2011 and Data Modelling

**9.2.5** The data modelling next estimates housing unsuitability by tenure. From the overall number in unsuitable housing, households living in affordable housing are excluded (as these households would release a dwelling on moving and so no net need for affordable housing will arise). The analysis also excludes 90% of owner-occupiers under the assumption (which is supported by analysis of survey data) that the vast majority will be able to afford housing once savings and equity are taken into account.

**9.2.6** A final adjustment is to slightly reduce the unsuitability figures in the private rented sector to take account of student-only households – such households could technically be overcrowded/living in unsuitable housing but would be unlikely to be allocated affordable housing (student needs are essentially assumed to be transient). Once these households are removed from the analysis, the remainder are taken forward for affordability testing.

**9.2.7** Table 9.6 shows it is estimated that there are around 11,400 households living in unsuitable housing (excluding current social tenants and the majority of owner-occupiers) in Oxfordshire.

**Table 9.6: Unsuitable Housing by Tenure and Number to Take Forward into Affordability Modelling (Oxfordshire)**

	In Unsuitable Housing	Number to Take Forward for Affordability Testing
Owner-occupied	4,578	458
Affordable housing	3,996	0
Private rented	8,227	7,833
No housing (homeless/concealed)	3,091	3,091
Total	19,892	11,382

Source: MHCLG Live Tables, Census 2011 and Data Modelling

**9.2.8** Having established this figure, it needs to be considered that a number of these households might be able to afford market housing without the need for subsidy. To consider this, the income data has been used, with the distribution adjusted to reflect a lower average income amongst households living in unsuitable housing which has been done drawing on data from the English Housing Survey.

**9.2.9** Just over half of households with a current need are estimated to be likely to have insufficient income to afford market housing and so **the estimate of the total current need is around 6,300 households across the County** – much of the need estimated to be arising in the City. Table 9.7 shows how this is estimated to vary by local authority.

**Table 9.7: Estimated Current Affordable Housing Need (for social/affordable rented housing)**

	In unsuitable housing (taken forward for affordability test)	% Unable to Afford Market Housing (without subsidy)	Revised Gross Need (including Affordability)
Cherwell	2,467	51.8%	1,277
Oxford	4,081	62.5%	2,552
South Oxon	1,814	50.3%	913
VoWH	1,542	51.2%	790
West Oxon	1,478	51.4%	760
Oxfordshire	11,382	55.3%	6,292

Source: CLG Live Tables, Census 2011 and Data Modelling

**9.2.10** The estimated figures shown above represents the number of households with a need currently. For the purposes of analysis, it is assumed that the local authorities would seek to meet this need over a period of time. To be consistent with the main period studied in the demographic projections (a ten-year period from 2022 to 2032) the need is annualised by dividing by 10 (to give an annual need for 629 dwellings across all areas). This does not mean that some households would be expected to wait 10-years for housing as the need is likely to be dynamic, with households leaving the current need as they are housed but with other households developing a need over time.

### 9.3 Newly Forming Households

**9.3.1** The number of newly forming households has been estimated through demographic modelling with an affordability test also being applied. This has been undertaken by considering the changes in households in specific 5-year age bands relative to numbers in the age band below, 5 years previously, to provide an estimate of gross household formation.

**9.3.2** In assessing the ability of newly forming households to afford market housing, data has been drawn from previous surveys undertaken nationally by JGC. This establishes that the average income of newly forming households is around 84% of the figure for all households. The analysis has therefore adjusted the overall household income data to reflect the lower average income for newly forming households. The adjustments have been made by changing the distribution of income by bands such that average income level is 84% of the all household average. In doing this it is possible to calculate the proportion of households unable to afford market housing. For the purposes of the need for social/affordable rented housing this will relate to households unable to afford to buy OR rent in the market.

**9.3.3** The assessment suggests overall that around two-fifths of newly forming households will be unable to afford market housing (to rent privately) and this equates a total of 2,700 newly forming households will have a need per annum on average across the County – Table 9.8 provides a breakdown by local authority.

**Table 9.8: Estimated Need for Social/Affordable Rented Housing from Newly Forming Households (per annum) – Oxfordshire**

	Number of new households	% unable to afford	Annual newly forming households unable to afford to rent
Cherwell	1,523	43.3%	659
Oxford	1,000	56.7%	567
South Oxon	1,265	41.1%	520
VoWH	1,365	41.5%	567
West Oxon	863	42.3%	365
Oxfordshire	6,016	44.5%	2,678

Source: Projection Modelling/Affordability Analysis

### Existing Households Falling into Affordable Housing Need

**9.3.4** The second element of newly arising need is existing households falling into need. To assess this, information about past lettings in social/affordable rented has been used. The assessment looked at households who have been housed in general needs housing over the past three years – this group will represent the flow of households onto the Housing Register over this period. From this, newly forming households (e.g. those currently living with family) have been discounted as well as households who have transferred from another social/affordable rented property. An affordability test has also been applied. Following the analysis through suggests a need arising from 616 existing households each year across the County, with

approaching a third of these households being in Oxford. Table 9.9 below breaks this down by local authority.

**Table 9.9: Estimated Need for Social/Affordable Rented Housing from Existing Households Falling into Need (per annum) – Oxfordshire**

	Total Additional Need	% of Total
Cherwell	161	26.1%
Oxford	188	30.5%
South Oxon	88	14.3%
VoWH	110	17.8%
West Oxon	69	11.2%
Oxfordshire	616	100.0%

Source: Derived from a range of sources

### Supply of Social/Affordable Rented Housing Through Relets

**9.3.5** The future supply of affordable housing through relets is the flow of affordable housing arising from the existing stock that is available to meet future need. This focusses on the annual supply of social/affordable rent relets. The Practice Guidance suggests that the estimate of likely future relets from the social rented stock should be based on past trend data which can be taken as a prediction for the future. Information from CoRe has been used to establish past patterns of social housing turnover. The figures are for general needs lettings but exclude lettings of new properties and also exclude an estimate of the number of transfers from other social rented homes. These exclusions are made to ensure that the figures presented reflect relets from the existing stock.

**9.3.6** On the basis of past trend data it has been estimated that 1,157 units of social/affordable rented housing are likely to become available each year moving forward for occupation by households in need. The full breakdown is shown in Table 9.10.

**Table 9.10: Analysis of Past Social/Affordable Rented Housing Supply, 2018/19 – 2020/21 (average per annum) – Oxfordshire**

	Total Lettings	% as Non-New Build	Lettings in Existing Stock	% Non-Transfers	Lettings to New Tenants
Cherwell	631	64.4%	407	70.7%	288
Oxford	509	92.7%	472	57.3%	270
South Oxon	524	62.2%	326	61.0%	199
VoWH	699	64.7%	452	57.3%	259
West Oxon	374	61.2%	229	61.9%	142
Oxfordshire	2,736	68.9%	1,885	61.4%	1,157

Source: CoRe/LAHS

**9.3.7** The PPG model also includes the bringing back of vacant homes into use and the pipeline of affordable housing as part of the supply calculation. These have however not been included within the modelling in this report. Firstly, there is no evidence of any substantial stock of vacant homes (over and above a level that might be expected to allow movement in the stock). Secondly, with the pipeline supply, it is

not considered appropriate to include this as to net off new housing would be to fail to show the full extent of the need, although in monitoring it will be important to net off these dwellings as they are completed.

### Net Need for Social/Affordable rented Housing

**9.3.8** Table 9.11 shows the overall calculation of affordable housing need. The analysis shows that **there is a need for around 2,800 social or affordable rented homes per annum** across the area – an affordable need is seen in all local authorities. The net need is calculated as follows:

$$\text{Net Need} = \text{Current Need (allowance for)} + \text{Need from Newly-Forming Households} + \text{Existing Households falling into Need} - \text{Supply of Affordable Housing}$$

**Table 9.11: Estimated Need for Social/Affordable Rented Housing by local authority (per annum)**

	Current need	Newly forming households	Existing households falling into need	Total Gross Need	Relet Supply	Net Need
Cherwell	128	659	161	948	288	660

## 9.4 Split Between Social and Affordable Rented Housing

**9.4.1** Typically, there are two main types of rented affordable accommodation (social and affordable rented) with the analysis below initially considering what a reasonable split might be between these two tenures.

**9.4.2** An analysis has been undertaken to compare the income distribution of households with the cost of different products. Data about average social and affordable rents has been taken from the Regulator of Social Housing (RSH) and this is compared with lower quartile and median market rents (from ONS data). This analysis, as set out in Tables 9.12 to 9.16, shows that social rents are lower than affordable rents; the analysis also shows that affordable rents are less than both lower quartile and median market rents – the data is fairly consistent across areas.

**Table 9.12: Comparison of rent levels for different products – Cherwell (2020/21)**

	Social rent	Affordable rent (AR)	Lower quartile (LQ) market rent	Median market rent	AR as % of LQ	AR as % of median
1-bedroom	£386	£549	£700	£780	78%	70%

All	£482	£748	£850	£1,000	88%	75%

Source: RSH and ONS

**9.4.3** For the affordability test, a standardised average rent for each product has been used (based on the proportion of stock in each size category). Table 9.17 below suggests that around 30% of households who cannot afford to rent privately could afford an affordable rent, with a further 37% being able to afford a social rent (but not an affordable one). A total of 33% of households would need some degree of benefit support to be able to afford their housing (regardless of the tenure).

**Table 9.17: Estimated need for affordable rented housing (% of households able to afford)**

	Afford affordable rent	Afford social rent	Need benefit support	All unable to afford market
Cherwell	30%	36%	34%	100%
Oxford	35%	32%	33%	100%
South Oxon	26%	41%	32%	100%

West Oxon	26%	39%	36%	100%
Oxfordshire	30%	37%	33%	100%

Source: Affordability analysis

**9.4.4** The finding that only 30% of households can afford an affordable rent does not automatically lead to a policy conclusion on the split between the two types of housing. For example, many households who will need to access rented

accommodation will be benefit dependent and as such could technically afford an affordable rent – hence a higher proportion of affordable rented housing might be appropriate – indeed the analysis does identify a substantial proportion of households as being likely to need benefit support. On the flip side, providing more social rents might enable households to return to work more easily, as a lower income would potentially be needed to afford the lower social (rather than affordable) rent.

**9.4.5** There will be a series of other considerations both at a strategic level and for specific schemes. For example, there may be funding streams that are only available for a particular type of housing, and this may exist independently to any local assessment of need. Additionally, there will be the consideration of the balance between the cost of housing and the amount that can be viably provided, for example, it is likely that affordable rented housing is more viable, and therefore a greater number of units could be provided. Finally, in considering a split between social and affordable rented housing it needs to be considered that having different tenures on the same site (at least at initial occupation) may be difficult – e.g. if tenants are paying different rent for essentially the same size/type of property and services.

**9.4.6** On this basis, **it is not recommended that the Councils have a rigid policy for the split between social and affordable rented housing**, although the analysis is clear that both tenures of homes are likely to be required in all areas. On the basis of the analysis it would be sensible to provide at least a third of rented affordable housing at social rent levels, whilst 30-35% could be delivered at affordable rents. The appropriate proportion for the remainder of the rented affordable homes could be determined by local priorities – there is a case for higher provision of social rented properties, but this needs to be balanced against viability considerations.

## 9.5 Establishing a Need for Affordable Home Ownership

**9.5.1** The Planning Practice Guidance confirms a widening definition of those to be considered as in affordable need; now including ‘households which can afford to rent in the private rental market, but cannot afford to buy despite a preference for owning their own home’. However, at the time of writing, there is no guidance about how the number of such households should be measured.

**9.5.2** The methodology used in this report therefore draws on the current methodology, and includes an assessment of current needs, and projected need (newly forming and existing households). The key difference is that in looking at affordability an estimate of the number of households in the ‘gap’ between buying and renting is used. There is also the issue of establishing an estimate of the supply of affordable home ownership homes – this is considered separately below.

**9.5.3** The analysis has been developed in the context of First Homes with the Government proposing that 25% of all affordable housing secured through developer contributions should be within this tenure. A definition of First Homes (from the relevant PPG (70-001)) can be found later in this document.

### Gross Need for Affordable Home Ownership

**9.5.4** The first part of the analysis seeks to understand what the gap between renting

and buying actually means in the County – in particular establishing the typical incomes that might be required. The information about incomes required to both buy and rent in different locations has already been provided earlier in this section and so the discussion below is a broad example.

**9.5.5** Using the income distributions developed (as set out earlier in this section) along with data about price and rents, it has been estimated that of all households living in the private rented sector, around 31% already have sufficient income to buy a lower quartile home, with 26% falling in the rent/buy 'gap'. The final 43% are estimated to have an income below which they cannot afford to rent privately (i.e. would need to spend more than the calculated threshold of their income on housing costs) although in reality it should be noted that many households will spend a higher proportion of their income on housing.

**9.5.6** These figures have been based on an assumption that incomes in the private rented sector are around 88% of the equivalent figure for all households (a proportion derived from the English Housing Survey) and are used as it is clear that affordable home ownership products are likely to be targeted at households living in or who might be expected to access this sector (e.g. newly forming households).

**9.5.7** Table 9.18 shows an estimate of the proportion of households living in the private rented sector who are able to afford different housing products by local authority. This shows a higher proportion of households in the rent/buy gap in South Oxfordshire. Lower figures can be seen in Cherwell and Oxford.

**Table 9.18: Estimated proportion of households living in Private Rented Sector able to buy and/or rent market housing – Oxfordshire**

	Can afford to buy OR rent	Can afford to rent but not buy	Cannot afford to buy OR rent
Cherwell	36%	23%	41%
Oxford	22%	23%	54%
South Oxon	30%	32%	39%
VoWH	34%	26%	39%
West Oxon	35%	25%	40%
Oxfordshire	31%	26%	43%

*Source: Derived from Housing Market Cost Analysis and Affordability Testing*

**9.5.8** The finding that a significant proportion of households in the private rented sector are likely to have an income that would allow them to buy a home is also noteworthy and suggests that for many households, barriers to accessing owner-occupation are less about income/the cost of housing and more about other factors (which could for example include the lack of a deposit or difficulties obtaining a mortgage (for example due to a poor credit rating or insecure employment)). However, some households will choose to privately rent, for example as it is a more flexible option that may be more suitable for a particular household's life stage (e.g. if moving locations with employment).

**9.5.9** To study current need, an estimate of the number of household living in the Private Rented Sector (PRS) has been established, with the same (rent/buy gap)

affordability test (as described above) then applied. The start point is the number of households living in private rented accommodation; as of the 2011 Census there were some 45,200 households living in the sector across the County. Data from the English Housing Survey (EHS) suggests that since 2011, the number of households in the PRS has risen by about 19% - if the same proportion is relevant to Oxfordshire then the number of households in the sector would now be around 53,700.

**9.5.10** Additional data from the EHS suggests that 60% of all PRS households expect to become an owner at some point (32,200 households if applied to Oxfordshire) and of these some 40% (12,900 households) would expect this to happen in the next 2-years. These figures are taken as the number of households potentially with a current need for affordable home ownership before any affordability testing.

**9.5.11** On the basis of income it is estimated that around 26% of the Private Rented Sector sit in the gap between renting and buying (varying depending on location). Applying this proportion to the above figures would suggest a current need for around 3,300 affordable home ownership units (328 per annum if annualised over a 10-year period).

**9.5.12** In projecting forward, the analysis can consider newly forming households and also the remaining existing households who expect to become owners further into the future. Applying the same affordability test (albeit on a very slightly different income assumption for newly forming households) suggests an annual need from these two groups of around 2,058 dwellings (1,567 from newly forming households and 491 from existing households in the private rented sector).

**9.5.13** Bringing together the above analysis suggests that there is a need for around 2,386 affordable home ownership homes (priced for households able to afford to rent but not buy) per annum across the County. This is before any assessment of the potential supply of housing is considered. These results are shown in Table 9.19.

**Table 9.19: Estimated Gross Need for Affordable Home Ownership by local authority (per annum) – Oxfordshire**

	Current need	Newly forming households	Existing households falling into need	Total Gross Need
Cherwell	61	355	91	507
Oxford	105	230	157	492
South Oxon	65	400	98	563
VoWH	51	363	76	489
West Oxon	46	220	69	336
Oxfordshire	328	1,567	491	2,386

Source: Range of sources

### Potential Supply of Housing to Meet the Affordable Home Ownership Need and Net Need

**9.5.14** As with the need for social/affordable rented housing, it is also necessary to consider if there is any supply of affordable home ownership products from the existing stock of housing. One source is likely to be resales of low cost home

ownership products with data from the Regulator of Social Housing showing a total stock in 2021 of 4,626 homes. If these homes were to turnover at the same rate seen for the social housing stock then they would be expected to generate around 126 resales each year. These properties would be available for these households and can be included as the potential supply.

**9.5.15** In addition, it should be noted that the analysis looks at households unable to afford a lower quartile property price. By definition, a quarter of all homes sold will be priced at or below a lower quartile level. According to the Land Registry, in Oxfordshire there were a total of 9,120 resales (i.e. excluding newly-built homes) in the last year (year to March 2022) and therefore around 2,280 would be priced below the lower quartile. This is 2,280 homes that would potentially be affordable to the target group for affordable home ownership products and is a potential supply that is similar to the level of need calculated.

**9.5.16** It is then possible to provide a best estimate of the supply of lower quartile homes that are bought by the target group of households (assumed to be first-time buyers). Whilst dated, a report by Bramley and Wilcox in 2010 (Evaluating requirements for market and affordable housing) noted that around 40% of first-time buyers with a mortgage buy at or below the lower quartile<sup>32</sup>. Other recent data suggests that first time buyers account for around half of home purchase loans<sup>33</sup> with a total of around 65% of all homes being bought with a loan (35% as cash buyers<sup>34</sup>).

**9.5.17** Bringing this together would point to 32.5% of homes being bought by first-time buyers and around 13% of all homes being a lower quartile home bought by a first-time buyer ( $32.5\% \times 40\%$ ) – this would point to around half of all lower quartile sales as being to first-time buyers (as half of 25% is 12.5%). Therefore, for the purposes of estimating a 'need' half of all lower quartile sales are included in the supply.

**9.5.18** We can therefore now provide three supply estimates which can be considered in the context of the estimated need. These are:

- Only count the supply from affordable home ownership resales (126 per annum);
- Include the supply from affordable home ownership and half of resales of lower quartile homes (1,266 per annum (1,140+126)); and
- Include the supply from affordable home ownership and all resales of lower quartile homes (2,406 per annum (2,280+126)).

**9.5.19** Table 9.20 shows the estimated net need from applying these three supply scenarios. Only including the resales of AHO shows a need for 2,260 dwellings per annum and this reduces to a need for 1,120 per annum if 50% of lower quartile sales are included. If all lower quartile sales are included in the supply, then there is a small

<sup>32</sup> [https://thinkhouse.org.uk/site/assets/files/1614/2010\\_20nhpau\\_202.pdf](https://thinkhouse.org.uk/site/assets/files/1614/2010_20nhpau_202.pdf)

<sup>33</sup> <https://www.mortgagesolutions.co.uk/news/2022/01/24/first-time-buyer-numbers-rose-to-nearly-410000-in-2021/#:~:text=First%2Dtime%20buyers%20accounted%20for,39%20per%20cent%20in%202009>

<sup>34</sup> <https://www.ft.com/content/e0ad2830-094f-4e61-acaa-d77457e2edbb>

surplus of affordable home ownership shown. Overall, the analysis shows it is difficult to conclude what the need for affordable home ownership is (and indeed if there is one).

**Table 9.20: Estimated Need for Affordable Home Ownership (per annum)**

	AHO resales only	AHO resales plus 50% of LQ sales	AHO resales plus 100% of LQ sales
Total gross need	2,386	2,386	2,386
LCHO supply	126	1,266	2,406
Net need	2,260	1,120	-20

Source: Range of sources

**9.5.20** Focussing on the middle of the three scenarios above (50% of lower quartile sales) the table below shows a need for affordable home ownership in all. It should be noted that the areas where the need for AHO is highest (notably Oxford) also show a high need for rented affordable housing.

**Table 9.21: Estimated Need for Affordable Home Ownership by sub-area (per annum)**

	Total Gross Need	Supply	Net need
Cherwell	507	314	193
Oxford	492	175	317
South Oxon	563	294	269
VoWH	489	263	226
West Oxon	336	220	115
Oxfordshire	2,386	1,266	1,120

Source: Derived from a range of sources

## 9.6 Implications of the Analysis

**9.6.1** Given the analysis above, it would be reasonable to conclude that there is a need to provide housing under the definition of ‘affordable home ownership’ – although this conclusion is based on only considering supply from resales of low cost home ownership and some resales of existing homes in the market. If supply estimates are expanded to include all market housing for sale below a lower quartile price then the need for AHO is less clear-cut.

**9.6.2** Regardless, it does seem that there are many households in Oxfordshire who are being excluded from the owner-occupied sector. This can be seen by analysis of tenure change (Table 9.22), which saw the number of households living in private rented accommodation increasing by 48% from 2001 to 2011 (with the likelihood that there have been further increases since). Over the same period, the number of owners with a mortgage dropped by 11%. That said, some households will choose to privately rent, for example as it is a more flexible option that may be more suitable for a particular household’s life stage (e.g. if moving locations with employment).

**Table 9.22: Change in number of owner-occupiers with a mortgage and number of households in the private rented sector (2001-11)**

	Owners with a mortgage				Private rented			
	2001	2011	Change	% change	2001	2011	Change	% change
Cherwell	25,376	21,791	-3,585	-14.1%	5,432	9,206	3,774	69.5%
Oxford	14,036	12,596	-1,440	-10.3%	10,784	15,634	4,850	45.0%
South Oxon	22,683	19,348	-3,335	-14.7%	5,199	7,211	2,012	38.7%
VoWH	19,045	17,046	-1,999	-10.5%	4,817	6,733	1,916	39.8%
West Oxon	15,874	15,226	-648	-4.1%	4,246	6,423	2,177	51.3%
Oxfordshire	97,014	86,007	-11,007	-11.3%	30,478	45,207	14,729	48.3%

Source: Census (2001 and 2011)

**9.6.3** On this basis, and as previously noted, it seems likely in Oxfordshire that access to owner-occupation is being restricted by access to capital (e.g. for deposits, stamp duty, legal costs) as well as potentially some mortgage restrictions (e.g. where employment is temporary) rather than just being due to the cost of housing to buy (although this will also be a factor).

**9.6.4** The NPPF indicates that 10% of all new housing (on larger sites) should be for affordable home ownership (in other words, if 20% of homes were to be affordable, then half would be affordable home ownership) unless this would exceed the level of affordable housing required in the area or significantly prejudice the ability to meet the identified affordable housing needs of specific groups. It is now the case that policy compliant planning applications would be expected to deliver a minimum of 25% affordable housing as First Homes (as a proportion of the total affordable housing), with Councils being able to specify the requirement for any remaining affordable housing (subject to at least 10% of all housing being for AHO). If for instance the AHO need of 193 per annum is compared to the 2021 Census adjusted figure for Cherwell of 1081 dpa, provision of 10% of homes on eligible sites for affordable home ownership would be justified as sufficient need is identified in line with NPPF Para 65.

**9.6.5** Whilst there are clearly many households in the gap between renting and buying, they in some cases will be able to afford homes below lower quartile housing costs. That said, it is important to recognise that some households will have insufficient savings to be able to afford to buy a home on the open market (particularly in terms of the ability to afford a deposit) and low-cost home ownership homes – and shared ownership homes in particular – will therefore continue to play a role in supporting some households in this respect.

**9.6.6** The evidence points to a clear and acute need for rented affordable housing for lower income households, and it is important that a supply of rented affordable housing is maintained to meet the needs of this group including those to which the authorities have a statutory housing duty. Such housing is notably cheaper than that available in the open market and can be accessed by many more households (some of whom may be supported by benefit payments). It is important in providing homes for those who have few other options.

**9.6.7** There will also be a role for AHO on any 100% affordable housing schemes that may come forward (as well as through Section 106). Including a mix of both rented

and intermediate homes to buy would make such schemes more viable, as well as enabling a range of tenures and therefore potential client groups to access housing.

**9.6.8** In addition, it should also be noted that the finding of a ‘need’ for affordable home ownership does not have any impact on the overall need for housing. It seems clear that this group of households is simply a case of seeking to move households from one tenure to another (in this case principally from private renting to owner-occupation); there is therefore no net change in the total number of households, or the number of homes required.

## **9.7 How Much Should Affordable Home Ownership Cost?**

**9.7.1** The analysis and discussion above suggest that there are a number of households likely to fall under the PPG definition of needing affordable home ownership (including First Homes) – i.e. in the gap between renting and buying – but that the potential supply of low-cost housing to buy makes it difficult to fully quantify this need. However, given the NPPF, the Councils are likely to need to consider some additional homes on larger sites as some form of affordable home ownership (AHO).

**9.7.2** The analysis below focusses on the cost of discounted market sale (which would include First Homes) to make them genuinely affordable before moving on to consider shared ownership (in this case suggestions are made about the equity shares likely to be affordable and whether these shares are likely to be offered). It is considered that First Homes and shared ownership are likely to be the main affordable home ownership tenures moving forward although it is accepted that some delivery may be of other products. This section also provides some comments about Rent to Buy housing.

**9.7.3** The reason for the analysis to follow is that it will be important for the Councils to ensure that any affordable home ownership is sold at a price that is genuinely affordable for the intended target group – for example there is no point in discounting a new market home by 30% if the price still remains above that for which a reasonable home can already be bought in the open market.

### **Discounted Market Sales Housing (focussing on First Homes)**

**9.7.4** In May 2021, MHCLG published a new Planning Practice Guidance (PPG) regarding First Homes. The key parts of this guidance are set out below:

*First Homes are a specific kind of discounted market sale housing and should be considered to meet the definition of ‘affordable housing’ for planning purposes. Specifically, First Homes are discounted market sale units which:*

- a) must be discounted by a minimum of 30% against the market value;*
- b) are sold to a person or persons meeting the First Homes eligibility criteria (see below);*
- c) on their first sale, will have a restriction registered on the title at HM Land Registry to ensure this discount (as a percentage of current market value) and certain other restrictions are passed on at each subsequent title transfer; and,*

*d) after the discount has been applied, the first sale must be at a price no higher than £250,000 (or £420,000 in Greater London).*

*First Homes are the government's preferred discounted market tenure and should account for at least 25% of all affordable housing units delivered by developers through planning obligations.*

**9.7.5** In terms of eligibility criteria, a purchaser should be a first-time buyer with a combined annual household income not exceeding £80,000 (or £90,000 in Greater London) and a mortgage needs to fund a minimum of 50% of the discounted purchase price. Local authorities can set their own eligibility criteria, which could for example involve lower income caps, a local connection test, or criteria based on employment status. Regarding discounts, a First Home must be sold at least 30% below the open market value. However, local authorities do have the discretion to require a higher minimum discount of either 40% or 50% (if they can demonstrate a need for this).

**9.7.6** As noted above, the problem with having a percentage discount is that it is possible in some locations or types of property that such a discount still means that the discounted housing is more expensive than that typically available in the open market. This is often the case as new build housing itself attracts a premium. The preferred approach in this report is to set out a series of purchase costs for different sizes of accommodation which ensure these products are affordable for the intended group. These purchase costs are based on current lower quartile rental prices and also consideration of the income required to access the private rented sector and then estimating what property price this level of income might support (assuming a 10% deposit and a 4.5 times mortgage multiple). Below is an example of a calculation based on a 2-bedroom home in Cherwell:

- Previous analysis has shown that the lower quartile rent for a 2-bedroom home in Cherwell is £850 per month;
- On the basis of a household spending no more than 30% of their income on housing, a household would need an income of around £2,833 per month to afford ( $£850/0.30$ ) or £34,000 per annum; and
- With an income of £34,000, it is estimated that a household could afford to buy a home for around £170,000. This is based on assuming a 10% deposit (mortgage for 90% of value) and a four and a half times mortgage multiple – calculated as  $£34,000 \times 4.5/0.9$ .

**9.7.7** Therefore, £170,000 is a suggested purchase price to make First Homes/discounted home ownership affordable for households in the rent/buy gap in Cherwell. This figure is essentially the equivalent price that is affordable to a household who can just afford to rent privately. In reality, there will be a range of incomes in the rent/buy gap and so some households could afford a higher price; however, setting all homes at a higher price would mean that some households will still be unable to afford.

**9.7.8** On this basis, it is considered reasonable to look at the cost of First Homes as a range, from the equivalent private rent figure up to a midpoint of the cost of open market purchase and the relevant private rented figure (for a 2-bedroom home the lower quartile price is this is £218,000, giving a midpoint of £194,000). The use of a midpoint would mean that only around half of households in the rent/buy gap could afford, and therefore any housing provided at such a cost would need to also be supplemented by an equivalent number at a lower cost (which might include other tenures such as shared ownership).

**9.7.9** Tables 9.23 to 9.27 therefore set out a suggested purchase price for affordable home ownership/First Homes in each area. The tables also show an estimated OMV and the level of discount likely to be required to achieve affordability. The OMV is based on taking the estimated lower quartile price by size and adding 15% (which is the typically newbuild premium seen nationally). It should be noted that the discounts are based on the OMV as estimated, in reality the OMV might be different for specific schemes and therefore the percentage discount would not be applicable. For example, if the OMV for a 2-bedroom home in Cherwell were to be £300,000 (rather than the modelled £251,000), the discount would be in the range of 35% and 43%.

**9.7.10** On the basis of the specific assumptions used, the analysis points to a discount of around 30% for 2-bedroom homes and a figure of around 40% for larger (3+-bedroom) properties on the OMV to make homes genuinely affordable. **Given that a single discount figure is likely to be needed for plan making purposes it is suggested that a 30% discount is reasonable in Cherwell, with the expectation that most First Homes will be 2-bedroom.**

**9.7.11** Property values indicate it will not be viable to provide significant levels of larger properties as First Homes. In Oxford, given that First Home sales values are capped at £250,000, a 40% discount will be necessary to achieve sales values of under £250,000 in many instances and this is therefore an appropriate policy basis.

**9.7.12** In doing so we recognise the more acute need for other forms of affordable housing, in particular for rented provision. Setting a discount for First Homes at a higher level would potentially impact negatively on viability and therefore reduce delivery of other forms of affordable homes which meet more acute needs. Given there is a cap of £250,000 on the purchase price, it seems unlikely that 3+-bedroom homes could be provided as First Homes in some locations (notably Oxford).

**9.7.13** Oxford City Council has set out its policies for First Homes in its First Homes Policy Statement (TAN16, March 2022).

## Shared Ownership

**9.7.14** Whilst the Government has a clear focus on First Homes, they also see a continued role for Shared Ownership, launching a ‘New Model for Shared Ownership’ in early 2021 (following a 2020 consultation) – this includes a number of proposals, with the main one for the purposes of this assessment being the reduction of the minimum initial share from 25% to 10%. A key advantage of shared ownership over other tenures is that a lower deposit is likely to be required than for full or discounted purchase. Additionally, the rental part of the cost will be subsidised by a Registered Provider and therefore keeps monthly outgoings down.

**9.7.15** For the purposes of the analysis in this report it is considered that for shared ownership to be affordable, total outgoings should not exceed that needed to rent

privately.

**9.7.16** Because shared ownership is based on buying part of a property, it is the case that the sale will need to be at open market value. Where there is a large gap between the typical incomes required to buy or rent, it may be the case that lower equity shares are needed for homes to be affordable (at the level of renting privately). The analysis below therefore seeks to estimate the typical equity share that might be affordable for different sizes of property with any share lower than 10% likely to be unavailable. The key assumptions used in the analysis are:

- OMV at LQ price plus 15% (reflecting likelihood that newbuild homes will have a premium attached and that they may well be priced above a LQ level) – it should be noted that this is an assumption for modelling purposes and consideration will need to be given to the OMV of any specific product;
- 10% deposit on the equity share;
- Rent at 2.75% pa on unsold equity;
- Repayment mortgage over 25-years at 4%;
- Service charge of £100 per month for flatted development (assumed to be 1- and 2-bedroom homes); and
- It is also assumed that shared ownership would be priced for households sitting towards the bottom end of the rent/buy gap and so the calculations assume that total outgoings should be no higher than the equivalent private rent (lower quartile) cost for that size of property;

**9.7.17** Tables 9.28 to 9.32 show that to make shared ownership affordable, equity shares in the region of 30% could work for most sizes of home in most locations, however, much lower shares are likely to be needed to make homes affordable for some dwelling sizes/locations (notably 3+-bedroom homes in South Oxfordshire). Overall, it is suggested that equity shares of around 30% should be considered but that it will be important to make sure the actual cost to the household is genuinely affordable in a local context.

**9.7.18** It should also be noted that the analysis below is predicated on a particular set of assumptions (notably about likely OMV). In reality costs do vary across the area and will vary from site to site. Therefore, this analysis should be seen as indicative with specific schemes being tested individually to determine if the product being offered is genuinely (or reasonably) affordable.

**Table 9.28: Estimated Affordable Equity Share by Size – Cherwell**

Source: Data based on Housing Market Cost Analysis

**9.7.19** In policy terms, whilst the analysis has provided an indication of the equity shares possibly required by size, the key figure is actually the total cost per month (and how this compares with the costs to access private rented housing). For example, whilst the tables suggest a 28% equity share for 2-bedroom home in Cherwell, this is based on a specific set of assumptions. Were a scheme to come forward with a 28% share, but a total cost in excess of £850 per month, then it would be clear that a lower share is likely to be required to make the home genuinely affordable. Hence the actual share can only be calculated on a scheme-by-scheme basis. Any policy position should seek to ensure that outgoings are no more than can reasonably be achieved in the private rented sector, rather than seeking a specific equity share.

### Rent to Buy

**9.7.20** A further affordable option is Rent to Buy; this is a government scheme designed to ease the transition from renting to buying the same home. Initially (typically five years) the newly built home will be provided at the equivalent of an affordable rent (approximately 20% below the market rate). The expectation is that the discount provided in that first five years is saved in order to put towards a deposit on the purchase of the same property. Rent to Buy can be advantageous for some households as it allows for a smaller 'step' to be taken on to the home ownership ladder.

**9.7.21** At the end of the five-year period, depending on the scheme, the property is either sold as a shared ownership product or to be purchased outright as a full market property. If the occupant is not able to do either of these then the property is vacated.

**9.7.22** In order to access this tenure it effectively requires the same income threshold for the initial phase as a market rental property although the cost of accommodation will be that of affordable rent. The lower than market rent will allow the household to save for a deposit for the eventual shared ownership or market property. In considering the affordability of rent-to-buy schemes there is a direct read across to the income required to access affordable home ownership (including shared ownership), it should therefore be treated as part of the affordable home ownership products suggested by the NPPF.

## 9.8 Relationship with Overall Housing Need

**9.8.1** The PPG encourages local authorities to consider increasing planned housing numbers where this can help to meet the identified affordable need. Specifically, the wording of the PPG [2a-024] states:

*‘The total affordable housing need can then be considered in the context of its likely delivery as a proportion of mixed market and affordable housing developments, given the probable percentage of affordable housing to be delivered by market housing led developments. An increase in the total housing figures included in the strategic plan may need to be considered where it could help deliver the required number of affordable homes’*

**9.8.2** However, the relationship between affordable housing need and overall housing need is complex. This was recognised in the Planning Advisory Service (PAS) Technical Advice Note of July 2015. PAS conclude that there is no arithmetical way of combining the OAN (calculated through demographic projections) and the affordable need. There are a number of reasons why the two cannot be ‘arithmetically’ linked.

**9.8.3** Firstly, the modelling contains a category in the projection of ‘*existing households falling into need*’; these households already have accommodation and hence if they were to move to alternative accommodation, they would release a dwelling for use by another household – there is no net need to provide additional homes. Secondly the modelling considers ‘*newly forming households*’ – but these households are a direct output from the demographic modelling and are therefore already included in the overall housing need figures.

**9.8.4** This just leaves the ‘*current need*’; however, much of this group will be similar to the existing households already described (in that they are already living in accommodation) although it is possible that a number will be households without housing (concealed and homeless households) – these households are not included in the demographic modelling and so are arguably an additional need, although uplifts for market signals/affordability (as included in the Government’s Standard Method and the adjusted standard method calculations) would be expected to deal with such households.

**9.8.5** Put simply, the scale of affordable housing need show is, to a significant degree, an issue of a **tenure imbalance** – in particular of households living in the Private Rented Sector who might otherwise have lived in social housing (had there been sufficient stock) or been able to move into the owner occupied sector (if they had sufficient earnings but particularly savings). In it in this context that the PPG section on the *Housing needs of different groups* outlines in [67-001]:

***How do the housing need of particular groups relate to overall housing need calculated using the standard method?***

*The standard method for assessing local housing need identifies an overall minimum average annual housing need figure but does not break this down into the housing need of individual groups. This guidance sets out advice on how plan-making authorities should identify and plan for the housing needs of particular groups of people.*

*This need may well exceed, or be proportionally high in relation to, the overall housing need figure calculated using the standard method. **This is because the needs of particular groups will often be calculated having consideration to the whole population of an area as a baseline as opposed to the projected new households which form the baseline for the standard method.** How can needs of different groups be planned for?*

*Strategic policy-making authorities will need to consider the extent to which the identified needs of specific groups can be addressed in the area, taking into account:*

- *the overall level of need identified using the standard method (and whether the evidence suggests that a higher level of need ought to be considered);*
- *the extent to which the overall housing need can be translated into a housing requirement figure for the plan period; and*
- ***the anticipated deliverability of different forms of provision, having regard to viability.***

*Authorities must also consider the implications of their duties under the Equality Act 2010, including the Public Sector Equality Duty.*

*Plan-making authorities should assess the need for housing of different groups and reflect this in planning policies.*

*When producing policies to address the need of specific groups, **plan-making authorities will need to consider how the needs of individual groups can be addressed having regard to deliverability.***

***The household projections that form the baseline of the standard method are inclusive of all households including travellers as defined in [Planning policy for traveller sites](#). (our emphasis)***

**9.8.6** This clearly implies that whilst the affordable need may be proportionally high relative to overall housing need assessed based on demographic modelling and/or using the standard method, a high affordable housing need does not mean that there are additional households to be accommodated overall. It can be an issue of tenure imbalance. This is as the scale of affordable need is influenced by current stock (which is in turn influenced by historical delivery and funding to support affordable housing delivery and losses, such as through Right-to-Buy sales). This means that in theory affordable housing need could be met by buying up existing housing stock.

**9.8.7** Policies for affordable housing provision in these terms can be set having regard to viability evidence; and the ability to meet the affordable housing need can be tempered by issues of deliverability. Nonetheless the affordable housing evidence is an element of the overall housing evidence which can inform judgements on what level of housing provision to plan for – and an authority may choose to set its housing target above that generated by the standard method (or indeed figures generated by other scenarios in this report) in order to boost the delivery of affordable housing.

**9.8.8** The analysis estimates an annual need for 2,767 rented affordable homes across Oxfordshire, which is notionally 82% of a Local Housing Need of 3,388 dwellings per annum (as calculated using the Standard Method 2014 Scenario) or 59% of the need for 4,721 dwellings per annum as calculated using the 2021 Census Adjusted Scenario.<sup>35</sup> Table 9.33 sets out how this rented need equates to the adjusted housing need figures. The evidence suggests it is unlikely that the affordable housing need would be fully met not least as viability is unlikely to support over 50% affordable housing provision.

**Table 9.33: Comparing Affordable Delivery and Need**

	Oxford-shire	Cherwell	Oxford	South Oxon	VoWH	West Oxon
Social/ affordable rented need (pa)	2767	660	740	501	497	368
Overall Need (2021 Census Adjusted Scenario)(dpa)	4721	1081	1416	850	765	604
% Census Adjusted Need	59%	61%	52%	59%	65%	61%

AH Delivery @ 50%	2361	541	708	425	383	302

<sup>35</sup> 2767 / 4721 = 59%

**9.8.9** However it is possible to investigate this in some more detail by re-running the model and excluding those already living in accommodation. This is shown in the table below which identifies that **meeting these (minimum) needs would lead to an affordable need for 1,775 homes per annum across the County** – notionally 52% of the Standard Method, 40% of the CE Baseline Scenario or 38% of the 2021 Census Adjusted Scenario. This figure is theoretical and should not be seen to be minimising the need (which is clearly acute).

**9.8.10** The analysis is arguably even more complex than this – it can be observed that the main group of households in need are newly forming households. These households are already included within demographic projections and so the demonstrating of a need for this group again should not be seen as over and above any need derived through the normal process of looking at need. Indeed, only the 254 per annum (current need) is in addition to demographic projections and this scale of uplift will already have been included in all the core scenarios taking account of uplifts for affordability and/or economic growth.

**Table 9.34: Estimated Need for Social/Affordable Rented Housing by local authority (per annum) – excluding existing households**

	Current need	Newly forming households	Existing households falling into need	Total Gross Need	Relet Supply	Net Need
Cherwell	55	659	0	714	288	426
Oxford	86	567	0	653	270	383

Oxfordshire	254	2,678	0	2,932	1,157	1,775

Source: Range of sources

**9.8.11** However if this model is taken forwards, it can be usefully used to consider the inter-relationship to the other evidence on housing needs. It does show what minimum affordable need is generated from looking at additional households specifically.

**Table 9.35: Comparing Affordable Delivery and Minimum Need – CE Baseline Scenario**

	Oxford-shire	Cherwell	Oxford	South Oxon	VoWH	West Oxon

AH Delivery @ 35%	1652	378	496	298	268	211
AH Delivery @ 40%	1888	432	566	340	306	242
AH Delivery @ 45%	2124	486	637	383	344	272
AH Delivery @ 50%	2361	541	708	425	383	302

**9.8.12** At 40% affordable delivery when using the 2021 Census Adjusted Scenario figures, the minimum affordable need would be met in all Oxfordshire authorities except the City. There is a much greater prospect of these needs being met. With a policy of 50% affordable housing provision, notionally 2,350 dpa would be needed to meet this minimum provision (or 3,938 dpa overall at 40% provision). Delivery above these levels would make in-roads into addressing the tenure imbalance.

**9.8.13** The analysis is indicative and is set out with the intention of informing the setting of housing targets within local plans, alongside other components of this HENA report. In setting policies for affordable housing, in terms of the percentage requirement to be met through eligible development schemes, viability evidence will be a key driver.

**9.8.14** Delivery of affordable housing through planning obligations is an important, but not the only means, of delivery affordable housing; and the Councils should also work with housing providers to secure funding to support enhanced affordable housing

delivery on some sites and through use of its own land assets.

**9.8.15** There are however other issues which are important in considering the affordable need in context. It should be noted that the need estimate is on a per annum basis and should not be multiplied by the plan period to get a total need. Essentially, the estimates are for the number of households who would be expected to have a need in any given year (i.e. needing to spend more than 30% of income on housing).

**9.8.16** In reality, some (possibly many) households would see their circumstances change over time such that they would ‘fall out of need’ and this is not accounted for in the analysis. One example would be a newly forming household with an income level that means they spend more than 30% of income on housing, as the household’s income rises they would potentially pass the affordability test and therefore not have an affordable need. Additionally, there is the likelihood when looking over the longer-term that a newly-forming household will become an existing household in need and would be counted twice if trying to multiply the figures out for a whole plan period.

**9.8.17** It is also relevant to recognise the role played by the Private Rented Sector (PRS) in providing housing for households who require financial support in meeting their housing needs should be recognised. Whilst the Private Rented Sector (PRS) does not fall within the types of affordable housing set out in the NPPF (other than affordable private rent which is a specific tenure separate from the main ‘full market’ PRS), it has evidently been playing a role in meeting the needs of households who require financial support in meeting their housing need. Government recognises this, and indeed legislated through the 2011 Localism Act to allow Councils to discharge their “homelessness duty” through providing an offer of a suitable property in the PRS.

**9.8.18** Data from the Department of Work and Pensions (DWP) has been used to look at the number of Housing Benefit supported private rented homes. As of May 2022, it is estimated that there were around 12,000 benefit claimants in the private rented sector in Oxfordshire. From this, it is clear that the PRS contributes to the wider delivery of ‘affordable homes’ with the support of benefit claims, and further complicates any attempts to find a relationship between affordable need and overall housing need.

**9.8.19** Table 9.36 shows the number of households in each authority claiming Housing Benefit or Universal Credit where there is a housing entitlement (in the PRS). The figure below the table shows the trend in the number of claimants for the whole County. This shows there has been a notable increase since March 2020, which is likely to be related to the Covid-19 pandemic. However, even the more historical data shows a substantial number of households claiming benefit support for their housing in the private sector (typically around 8,000-9,000 households).

**Table 9.37: Number of Housing Benefit claimants in the private rented sector – local authorities (May 2022)**

	Housing Benefit	Universal Credit (with housing allowance)	TOTAL
Cherwell	732	2,447	3,179
Oxford	1,270	2,430	3,700
South Oxon	598	1,237	1,835
VoWH	438	1,262	1,700
West Oxon	497	1,094	1,591
Oxfordshire	3,530	8,465	11,995

Source: Department of Work and Pensions

**Figure 9.38: Number of Housing Benefit claimants in the private rented sector – Oxfordshire**

Source: Department of Work and Pensions

**9.8.20** It is difficult to be precise about the annual level of new supply being provided by the private rented sector (supported by Housing Benefit) but data from the English Housing Survey for the past 5-years (2016-21) suggests around 7% of all private renting tenants are new to the sector in any given year. Assuming a similar proportion as being benefit claimants would imply around 840 benefit supported lettings across the County each year. A further 17% of private tenants move within the sector each year, which would imply around 2,040 benefit supported lettings (although it is likely that many of these households were claimants prior to moving home).

## 10 Housing Mix: Sizes and Types of Homes Needed

### Introduction

This section considers the appropriate mix of housing needed, with a particular focus on the sizes of homes required in different tenure groups for new development. The analysis focuses on the two commissioning authorities – Cherwell and Oxford City.

### 10.1 Household Composition

**10.1.1** There were 75,900 families as of the 2011 Census, accounting for 29% of households. This proportion is similar to the regional and national average. This analysis has drawn on 2011 Census data which is now somewhat out-of-date. However, it would be expected that general patterns between areas will remain broadly the same (i.e. areas with greater proportions of family households in 2011, will still be expected to have greater proportions now). New (2021) Census data should start to filter through later in 2022, which will allow for this analysis to be updated.

**10.1.2** Table 10.1 shows relatively few family households in Oxford (27%) and a higher proportion in Cherwell; Oxford does however see a higher proportion of lone parent households than other locations.

**Table 10.1** Households with dependent children (2011) – local authorities

	Married couple	Cohabiting couple	Lone parent	Other household (with dependents)	All other households (no dependent children)	Total	Total with dependent children
Cherwell	18.9%	4.2%	5.9%	2.4%	68.6%	100.0%	31.4%
Oxford	13.6%	3.1%	7.1%	3.1%	73.2%	100.0%	26.8%
Oxfordshire	18.1%	3.6%	5.5%	2.2%	70.7%	100.0%	29.3%
South East	17.1%	3.9%	6.1%	2.3%	70.6%	100.0%	29.4%
England	15.3%	4.0%	7.1%	2.6%	70.9%	100.0%	29.1%

Source: Census (2011)

**10.1.3** The figures below show the current tenure of households with dependent children in Cherwell and Oxford. For both areas there are some considerable differences by household type with lone parents having a very high proportion living in the social rented sector and also in private rented accommodation. In Cherwell, only 38% of lone parent households are owner-occupiers (21% in Oxford) compared with 79% (Cherwell) and 62% (Oxford) of married couples with children.

**Figure 10.1a: Tenure of households with dependent children (2011) – Cherwell**

Source: Census (2011)

**Figure 10.1b: Tenure of households with dependent children (2011) – Oxford**

Source: Census (2011)

**10.1.4** Figure 10.2 shows the number of bedrooms for family households at the point of the 2011 Census. The analysis shows the differences between married, cohabiting and lone parent families. Across the study area, the tendency is for family households to occupy 3-bedroom housing with varying degrees of 2- and 4+-bedroom properties depending on the household composition. The data also, unsurprisingly, highlights the small level of 1-bed stock occupied by families across the board. As a result, we could expect continued demand for 3+-bedroom homes from family households.

**Figure 10.2a: Number of Bedrooms by Family Household Type, 2011 – Cherwell**

Source: Census (2011)

**Figure 10.2a: Number of Bedrooms by Family Household Type, 2011 – Oxford**

Source: Census (2011)

## 10.2 The Mix of Housing

**10.2.1** A model has been developed that starts with the current profile of housing in terms of size (bedrooms) and tenure. Information is available about the age of households and the typical sizes of homes they occupy. By using projections for demographic growth linked to core scenarios it is possible to see which age groups are expected to change in number, and by how much. On the assumption that occupancy patterns for each age group (within each tenure) remain the same, it is therefore possible to assess the profile of housing needed over the assessment period (taken for the purposes of analysis to be the 2022-40 period).

**10.2.2** An important starting point is to understand the current balance of housing in the area – Table 10.2 profiles the sizes of homes in different tenure groups across

areas. The data shows a generally similar profile of housing in each tenure group when compared with the regional and national position; one difference is a higher proportion of 4+-bedrooms homes in the private rented sector in Oxford (which will in part be linked to the student population). Observations about the current mix feed into conclusions about future mix later in this section.

**Table 10.2 Number of Bedrooms by Tenure, 2011 – range of areas**

		Cherwell	Oxford	Oxford-shire	South East	England
Owner-occupied	1-bedroom	4%	5%	4%	5%	4%
	2-bedrooms	18%	21%	19%	22%	23%
	3-bedrooms	47%	47%	44%	44%	48%
	4+-bedrooms	31%	27%	33%	30%	25%
	Total	100%	100%	100%	100%	100%
Social rented	1-bedroom	24%	31%	26%	32%	31%
	2-bedrooms	30%	33%	34%	33%	34%
	3-bedrooms	42%	31%	35%	31%	31%
	4+-bedrooms	4%	6%	5%	4%	4%
	Total	100%	100%	100%	100%	100%
Private rented	1-bedroom	20%	24%	19%	24%	23%
	2-bedrooms	37%	32%	35%	37%	39%
	3-bedrooms	32%	23%	30%	27%	28%
	4+-bedrooms	11%	21%	16%	12%	10%
	Total	100%	100%	100%	100%	100%

Source: Census (2011)

**10.2.3** The method to consider future housing mix looks at the ages of the Household Reference Persons and how these are projected to change over time. However size of housing which households occupy relates more to their wealth and age than the number of people they contain – particularly for owner occupied homes. Equally issues of supply can also impact occupancy patterns, for example it may be that a supply of additional smaller bungalows (say 2-bedrooms) would encourage older people to downsize but in the absence of such accommodation these households remain living in their larger accommodation. The issue of choice is less relevant in the affordable sector (particularly since the introduction of the social sector size criteria) where households are allocated properties which reflect the size of the household, although there will still be some level of under-occupation.

**10.2.4** The approach used is to interrogate information derived in the projections about the number of household reference persons (HRPs) in each age group and apply this to the profile of housing within these groups. The data for this analysis has been formed from a commissioned table by ONS (Table CT0621 which provides relevant data for all local authorities in England and Wales from the 2011 Census).

**10.2.5** Figure 10.3 shows an estimate of how the average number of bedrooms varies by different ages of HRP and broad tenure group for Cherwell, Oxford and the South East. In the owner-occupied sector the average size of accommodation rises over time to typically reach a peak around the age of 45-50; a similar pattern (but with smaller dwelling sizes and an earlier peak) is seen in both the social and private rented sector. After peaking, the average dwelling size decreases – as typically some households downsize as they get older.

**Figure 10.3 Average Bedrooms by Age and Tenure in Cherwell, Oxford and the South East**

Source: Census (2011)

**10.2.6** However, replicating the existing occupancy patterns at a local level would however result in the conclusions being skewed by the existing housing profile. On this basis the modelling applies regional occupancy assumptions for the South East region. Assumptions are applied to the projected changes in Household Reference Person by age.

The analysis has been used to derive outputs for three broad categories. These are:

- **Market Housing** – which is taken to follow the occupancy profiles in the owner-occupied sector;
- **Affordable Home Ownership** – which is taken to follow the occupancy profile in the private rented sector (this is seen as reasonable as the Government's desired growth in home ownership looks to be largely driven by a wish to see households move out of private renting); and
- **Rented Affordable Housing** – which is taken to follow the occupancy profile in the social rented sector. The affordable sector in the analysis to follow would include social and affordable rented housing.

**10.2.7** The analysis for rented affordable housing can also draw on data from the local authority Housing Register with regards to the profile of need. The data has been taken from the Local Authority Housing Statistics ("LAHS") and shows a pattern of need which is focussed on 1- and 2-bedroom homes but also showing approaching a fifth of households as requiring 3+- bedroom homes.

**Table 10.3 Breakdown of Housing Register by Current Bedroom Need, 2021**

	1-bedroom	2-bedrooms	3-bedrooms	4+-bedrooms
Cherwell	46%	31%	16%	7%
Oxford	51%	28%	16%	6%
Oxfordshire	55%	27%	13%	5%

Source: Local Authority Housing Statistics, 2021

**10.2.8** The modelling includes adjustments for under- and over-occupation to move some of those who would have been picked up in the modelling as under-occupying into smaller accommodation. Where there is under-occupation by 2 or more bedrooms, the adjustment takes 25% of this group and assigns to a '+1' occupancy rating and a further 12.5% (i.e. an eighth) to a '0' rating. For households with one spare bedroom, 12.5% are assigned to a '0' rating (with the others remaining as '+1'). These do need to be recognised as assumptions but can be seen to be reasonable as they do retain some degree of under-occupation (which is likely) but does also seek to model a better match between household needs and the size of their home. For overcrowded households a move in the other direction is made, in this case households are moved up as many bedrooms as is needed to resolve the problems.

### Model Results

**10.2.9** The tables below show the modelling outputs for Cherwell and Oxford and for each of the two scenarios (CE Baseline and 2021 Census Adjusted). It shows the greatest need for 2- and 3-bed properties in both areas and that the choice of scenario makes very little difference to the outcomes..

**Table 10.4** Adjusted Modelled Mix of Housing by Size and Tenure – Cherwell (CE Baseline)

	1-bedroom	2-bedrooms	3-bedrooms	4+-bedrooms

## 10.3 Indicative Targets for Different Sizes of Properties by Tenure

**10.3.1** In drawing conclusions on the need for different sizes of homes it is important to take account of a range of factors, including the modelled outputs and an

understanding of the stock profile in different locations. The analysis (for rented affordable housing) also draws on the Housing Register data as well as taking a broader view of issues such as the flexibility of homes to accommodate changes to households (e.g. the lack of flexibility offered by a 1-bedroom home for a couple looking to start a family).

### Social/Affordable Rented Housing

**10.3.2** Bringing together the above, a number of factors are recognised, including that it is unlikely that all affordable housing needs will be met and that it is possible that households with a need for larger homes will have greater priority (as they are more likely to contain children). However there is also a possible need for 1-bedroom social housing arising due to homelessness (as well as a need other forms of accommodation e.g. foyer or supported housing). In taking any recommendations forward, the Councils will therefore need to consider any specific issues in their local area.

**10.3.3** As noted, the conclusions also consider the Housing Register, but recognises that this will be based on a strict determination of need using the bedroom standard; there will be some households able to afford a slightly larger home or who can claim benefits for a larger home than they strictly need (i.e. are not caught by the spare room subsidy ('bedroom tax') – this will include older person households). The conclusions also take account of the current profile of housing in this sector (which for example shows a varying proportion of 1-bedroom homes in the current stock across areas).

**10.3.4** It is suggested that the following mix of social/affordable rented housing (which is close to the modelled outputs) would be appropriate. The stronger need for 4+ bed properties in Cherwell reflects particularly long average waiting times for these sizes of homes reflecting the existing stock and turnover of this.

**Table 10.8** Suggested Mix of Social/Affordable Rented Housing by area

	1-bedroom	2-bedrooms	3-bedrooms	4+-bedrooms
Cherwell	35-40%	25-30%	20-25%	10-15%
Oxford	35-40%	30-35%	20-25%	5-10%

*Source: Conclusions drawn on a variety of sources*

### Affordable Home Ownership

**10.3.5** In the affordable home ownership and market sectors a profile of housing that closely matches the outputs of the modelling is suggested (with some adjustments to take account of student households in Oxford). It is considered that the provision of affordable home ownership should be more explicitly focused on delivering smaller family housing for younger households. Based on this analysis, it is suggested that the following mix of affordable home ownership would be appropriate, and it can be noted that there really is very little difference in the recommendations across areas.

**10.3.6** The profile of housing needed in this sector is generally for slightly larger homes than for the social/affordable rented sector – this will in part reflect the fact that some degree of under-occupation would be allowed in such homes. For 1-bedroom units, it needs to be recognised that the figures are driven by the modelling linked to demographic change; again, each Council may need to consider if the figures are appropriate on a local context. For example, in some areas Registered Providers find

difficulties selling 1-bedroom affordable home ownership homes and therefore the 1-bedroom elements of AHO might be better provided as 2-bedroom accommodation. Again it should be noted that the mix suggested for different locations shows relatively little variation.

**Table 10.9** Suggested Mix of Affordable Home Ownership Housing by area

	1-bedroom	2-bedrooms	3-bedrooms	4+-bedrooms
Cherwell	20-25%	40-45%	25-30%	5-10%
Oxford	20-25%	40-45%	20-25%	10-15%

Source: Conclusions drawn on a variety of sources

## Market Housing

**10.3.7** Finally, in the market sector, a balance of dwellings is suggested that takes account of both the demand for homes and the changing demographic profile (as well as observations about the current mix when compared with other locations and also the potential to slightly reduce levels of under-occupancy). This sees a slightly larger recommended profile compared with other tenure groups – again there is little variation across areas.

**Table 10.10** Suggested Mix of Market Housing by area

	1-bedroom	2-bedrooms	3-bedrooms	4+-bedrooms
Cherwell	5-10%	35-40%	35-40%	15-20%
Oxford	5-10%	35-40%	35-40%	15-20%

Source: Conclusions drawn on a variety of sources

**10.3.8** The suggested figures on housing mix are derived at an Oxfordshire and local authority level. The suggested figures can be used as a monitoring tool to ensure that future delivery is not unbalanced when compared with the likely requirements as driven by demographic change in the area. The recommendations can also be used as a set of guidelines to consider the appropriate mix on larger development sites, and the Councils could expect justification for a housing mix on such sites which significantly differs from that modelled herein. Site location and area character are also however relevant considerations the appropriate mix of market housing on individual development sites.

## 10.4 Built Form

**10.4.1** A final issue is a discussion of the need/demand for different built-forms of homes. In particular this discussion focusses on bungalows and the need for flats vs. houses.

### Bungalows

**10.4.2** The sources used for analysis in this report make it difficult to quantify a need/demand for bungalows in the County and constituent authorities as Census data (which is used to look at occupancy profiles) does not separately identify this type of accommodation. Data from the Valuation Office Agency (VOA) does however provide estimates of the number of bungalows (by bedrooms) although no tenure split is available.

**10.4.3** The tables below show a notable proportion of homes in Cherwell are bungalows (9% of all flats and houses) but with a very low proportion in Oxford (just 1%). In Cherwell approaching half (46%) of bungalows have 2-bedrooms (and most of the rest have 3-bedrooms); a similar proportion (also 9%) of homes across England are bungalows. Across the whole of Oxfordshire, some 8.4% of all homes are bungalows.

**Table 10.11** Number of dwellings by property type and number of bedrooms (March 2020) – Cherwell

	Number of bedrooms					All
	1	2	3	4+	Not Known	
Bungalow	880	2,860	2,020	460	10	6,230
Flat/Maisonette	4,350	3,600	170	40	20	8,170
Terraced house	1,050	6,100	8,930	1,360	30	17,470
Semi-detached house	250	3,090	12,140	2,510	50	18,030

Other	-	-	-	-	-	100
Unknown	-	-	-	-	-	160
All properties	-	-	-	-	-	61,740

Source: Valuation Office Agency

**10.4.4** In general, discussions with local estate agents find that there is a demand for bungalows and in addition, analysis of survey data (in other locations) points to a high demand for bungalows (from people aged 65 and over in particular). Bungalows are often the first choice for older people seeking suitable accommodation in later life and there is generally a high demand for such accommodation when it becomes available (this is different from specialist accommodation for older people which would have some degree of care or support).

**10.4.5** As a new build option, bungalows are often not supported by either house builders or planners (due to potential plot sizes and their generally low densities). There may, however, be instances where bungalows are the most suitable house type for a particular site; for example, to overcome objections about dwellings overlooking existing dwellings or preserving sight lines. There is also the possibility of a wider need/demand for retirement accommodation. Retirement apartments can prove very popular if they are well located in terms of access to facilities and services, and environmentally attractive (e.g. have a good view). However, some potential purchasers may find high service charges unacceptable or unaffordable and new build units may not retain their value on re-sale.

**10.4.6** Overall, the Councils should consider the potential role of bungalows as part of the future mix of housing. Such housing may be particularly attractive to older owner-occupiers (many of whom are equity-rich) which may assist in encouraging households to downsize. However, the downside to providing bungalows is that they are often relatively land intensive which is likely to constrain delivery in Oxford in particular.

**10.4.7** Bungalows are likely to see a particular need and demand in the market sector and also for rented affordable housing (for older people as discussed in the next section of the report). Bungalows are likely to particularly focus on 2-bedroom homes, including in the affordable sector where such housing may encourage households to move from larger 'family-sized' accommodation (with 3+-bedrooms). Where delivered, bungalows should be delivered as wheelchair-accessible (Part M(4)(3)(b)).

### Flats vs. Houses

**10.4.8** Although there are some 1-bedroom houses and 3-bedroom flats, it is considered that the key discussion on built-form will be for 2-bedroom accommodation, where it might be expected that there would be a combination of both flats and houses. At a national level, 81% of all 1-bedroom homes are flats, 35% of 2-bedroom homes and just 4% of homes with 3-bedrooms.

**10.4.9** The table below shows (for 2-bedroom accommodation) the proportion of homes by tenure that are classified as a flat, maisonette or apartment in Oxfordshire and England. This shows a total of 31% of all bedroom homes as flats and would potentially point to the majority of 2-bedroom homes in the future also being houses. The analysis does however show a higher proportion of flats in the social and private rented sectors. It is considered that greater emphasis should be given to mix by dwelling size than type recognising the potential for built-form to vary in different locations.

**10.4.10** This analysis is based on considering the current built-form in different tenures. Any decisions about the types of dwelling to be provided will need to take account of factors such as households type of those likely to occupy dwellings (where for example households with children will be more suited to a house than a flat). However, site characteristics may also play a role in deciding the most suitable built-form (e.g. city/town centre developments may be more suited to flats).

**Table 10.13** Proportion of 2-bedroom homes that are a flat, maisonette or apartment (by tenure)

	Owner-occupied	Social rented	Private rented	All (2-bedroom)
Cherwell	12%	23%	33%	20%
Oxford	37%	63%	63%	54%
Oxfordshire	19%	40%	43%	31%
England	21%	48%	50%	35%

Source: 2011 Census

**10.4.11** As noted, this analysis would suggest that most 2-bedroom homes should be built as houses (or bungalows) rather than flats. However, any decisions will still have to take account of site characteristics. Local evidence however also needs to be considered, and for instance 2+ bed rented affordable properties are particularly suitable for families who seek houses rather than flats.

## 10.5 Housing Needs of Older People and Those with Disabilities

**10.5.1** This section studies the characteristics and housing needs of the

**10.5.2** son population and the population with some form of disability. The two groups are taken together as there is a clear link between age and disability. It responds to Planning Practice Guidance on *Housing for Older and Disabled People* published by Government in June 2019. It includes an assessment of the need for specialist accommodation for older people and the potential requirements for housing to be built to M4(2) and M4(3) housing technical standards (accessibility and wheelchair standards).

### Understanding the Implications of Demographic Change

**10.5.3** The population of older persons is increasing, and this will potentially drive a need for housing which is capable of meeting the needs of older persons. The table below provides baseline population data about older persons. The population data has been taken from the 2021 Census and shows Oxfordshire has a similar age structure to other areas with 18% of the population being aged 65 and over.

**Table 10.14** Older Persons Population, 2021

	Oxfordshire	Southeast	England
Under 65	82.1%	80.6%	81.6%
65-74	9.3%	10.2%	9.8%
75-84	6.1%	6.5%	6.1%

**Projected Future Change in the Population of Older People**

**10.5.5** Population projections can next be used to provide an indication of how the number of older persons might change in the future with the tables below showing that Oxfordshire is projected to see a notable increase in the older person population. Using the trend-based projection developed the increase in the population aged 65 and over is around 27% - the population aged Under 65 is in contrast projected to increase by just 3.2%. In total population terms, the projections show an increase in the population aged 65 and over of 36,200 people. This is against a backdrop of an overall increase of 55,600 – population growth of people aged 65 and over therefore accounts for 65% of the total projected population change.

**10.5.6** In Cherwell the CE Baseline Forecast shows a 52.1% growth in the population aged over 65 while the population aged over 75 is expected to increase by 72.3%. In 2021 adjusted forecasts the equivalent figures are 53.2% and 73.5%

**Table 10.16 Projected Change in Population of Older Persons, 2022 to 2040 – Cherwell (CE Baseline)**

## 10.6 Characteristics of Older Person Households

**10.6.1** The figures below show the tenure of older person households. The data has been split between single older person households and those with two or more older people (which will largely be couples). The data shows that the majority of older persons households are owner occupiers (77% of older person households in Cherwell and 67% in Oxford), and indeed most are owner occupiers with no mortgage and thus may have significant equity which can be put towards the purchase of a new home. Some 16% (Cherwell) to 26% (Oxford) of older persons households across the study area live in the social rented sector; the proportion of older person households living in the private rented sector is relatively low (about 7% in both areas).

**10.6.2** There are also notable differences for different types of older person households with single older people having a much lower level of owner-occupation than larger older person households – this group also has a much higher proportion living in the social rented sector.

**Figure 10.4: Tenure of Older Persons Households in Cherwell, 2011**

Source: 2011 Census

**Figure 10.4: Tenure of Older Persons Households in Oxford, 2011**

Source: 2011 Census

## 10.7 Prevalence of Disabilities

**10.7.1** Table 10.20 below shows the proportion of people with a long-term health problem or disability (LTHPD) drawn from 2011 Census data, and the proportion of households where at least one person has a LTHPD. The data suggests that some 27% of households in Oxfordshire contain someone with a LTHPD. This figure is lower than seen regionally and nationally. The figures for the population with a LTHPD also typically show the same trends when compared with other locations – some 14% of the population having a LTHPD.

**10.7.2** The analysis also shows some differences between different parts of the study area, with Oxford seeing the lowest proportion of population and households with a

LTHPD – this is likely to be linked to then younger age structure in the City. Both areas show levels of disability below both the regional and national average

**Table 10.20** Households and People with a Long-Term Health Problem or Disability, 2011

	Households Containing Someone with a Health Problem		Population with a Health Problem	
	No.	%	No.	%
Cherwell	15,670	27.6%	20,072	14.1%
Oxford	14,504	26.2%	18,851	12.4%
Oxfordshire	69,824	27.0%	89,756	13.7%
South East	1,048,887	29.5%	1,356,204	15.7%
England	7,217,905	32.7%	9,352,586	17.6%

Source: 2011 Census

**10.7.3** As noted, it is likely that the age profile will impact upon the numbers of people with a LTHPD, as older people tend to be more likely to have a LTHPD. The figure below shows the age bands of people with a LTHPD. It is clear from this analysis that those people in the oldest age bands are more likely to have a LTHPD. The analysis also typically shows lower levels of LTHPD in each age band in Oxfordshire when compared with the regional and national position.

**Figure 10.6: Population with Long-Term Health Problem or Disability by Age**

Source: 2011 Census

## 10.8 Health Related Population Projections

**10.8.1** The incidence of a range of health conditions is an important component in understanding the potential need for care or support for a growing older population. The analysis undertaken covers both younger and older age groups and draws on prevalence rates from the PANSI (Projecting Adult Needs and Service Information) and POPPI (Projecting Older People Population Information) websites. Adjustments have been made to take account of the age specific health/disabilities previously shown.

**10.8.2** Of particular note are the large increases in the number of older people with dementia (increasing by up to 73% in Cherwell and 58% in Oxford from 2022 to 2040

and mobility problems (up 53%-64% over the same period). Changes for younger age groups are smaller, reflecting the fact that projections are expecting older age groups to see the greatest proportional increases in population. When related back to the total projected change to the population, the increase of people aged 65+ with a mobility problem represents around 10% of total projected population growth in Cherwell (and about 4% in Oxford).

**10.8.3** It should be noted that there will be an overlap between categories (i.e. some people will have both dementia and mobility problems). Hence the numbers for each of the illnesses/disabilities should not be added together to arrive at a total.

**Table 10.21** Projected Changes to Population with a Range of Disabilities – Cherwell (CE Baseline)

Disability	Age Range	2022	2040	Change	% Change
Dementia	65+	1,785	3,073	1,288	72.2%

Source: POPPI/PANSI and Demographic Projections

**10.8.4** Invariably, there will be a combination of those with disabilities and long-term health problems that continue to live at home with family, those who chose to live independently with the possibility of incorporating adaptations into their homes and those who choose to move into supported housing.

**10.8.5** The projected change shown in the number of people with disabilities provides clear evidence justifying delivering ‘accessible and adaptable’ homes as defined in Part M4(2) of Building Regulations, subject to viability and site suitability. Councils should ensure that the viability of doing so is also tested as part of drawing together its evidence base although the cost of meeting this standard is unlikely to have any significant impact on viability and would potentially provide a greater number of homes that will allow households to remain in the same property for longer.

## 10.9 Need for Specialist Accommodation for Older Persons

**10.9.1** The Planning Policy Guidance (PPG) provides guidance specifically on Housing for older and disabled people<sup>36</sup>. The Guidance answers the question as to why it is important to plan for the housing needs of older persons stating:

***“The need to provide housing for older people is critical. People are living longer lives and the proportion of older people in the population is increasing. In mid-2016 there were 1.6 million people aged 85 and over; by mid-2041 this is projected to double to 3.2 million. Offering older people a better choice of accommodation to suit their changing needs can help them live independently for longer, feel more connected to their communities and help reduce costs to the social care and health systems. Therefore, an understanding of how the ageing population affects housing needs is something to be considered from the early stages of plan-making through to decision-taking.”*** (Reference ID: 63-001-20190626)

**10.9.2** The Planning Practice Guidance (PPG)<sup>37</sup> defines the different types of specialist housing (as set out in the box below) but is clear that there is a significant variability in the types of specialist types of housing available. The Government states in the PPG that the need to provide housing for older people is critical.

<sup>36</sup> <https://www.gov.uk/guidance/housing-for-older-and-disabled-people>

<sup>37</sup> <https://www.gov.uk/guidance/housing-for-older-and-disabled-people>

### Definitions of Different Types of Older Persons' Accommodation

**Age-restricted general market housing:** This type of housing is generally for people aged 55 and over and the active elderly. It may include some shared amenities such as communal gardens, but does not include support or care services.

**Retirement living or sheltered housing (housing with support):** This usually consists of purpose-built flats or bungalows with limited communal facilities such as a lounge, laundry room and guest room. It does not generally provide care services, but provides some support to enable residents to live independently. This can include 24-hour on-site assistance (alarm) and a warden or house manager.

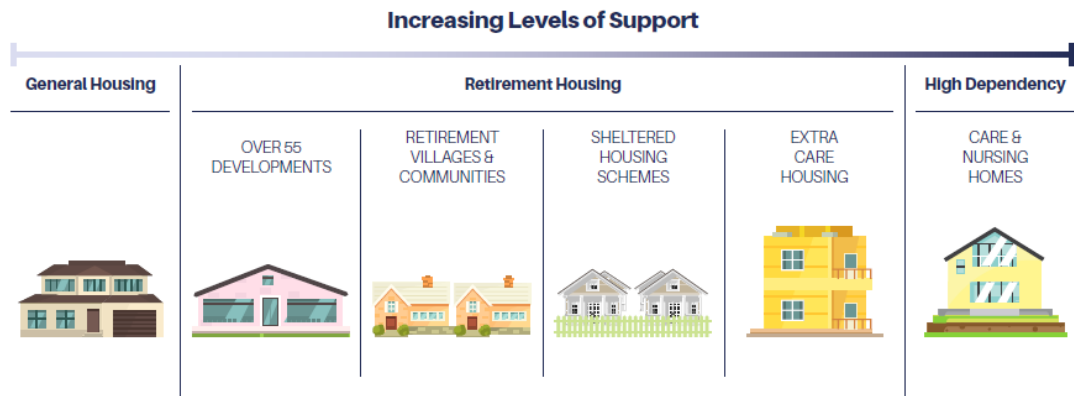

**Enhanced sheltered housing:** Sheltered housing with additional services to enable older people to retain their independence in their own home possible. Typically, there may be 24/7 (non-registered) staffing cover, at least one daily meal will be provided and there will be additional shared facilities. Also called assisted living and very sheltered housing.

**Extra care housing or housing-with-care (housing with care):** This usually consists of purpose-built or adapted flats or bungalows with a medium to high level of care available if required, through an onsite care agency registered through the Care Quality Commission (CQC). Residents are able to live independently with 24-hour access to support services and staff, and meals are also available. There are often extensive communal areas, such as space to socialise or a wellbeing centre. In some cases, these developments are known as retirement communities or villages - the intention is for residents to benefit from varying levels of care as time progresses.

**Residential care homes and nursing homes (care bedspaces):** These have individual rooms within a residential building and provide a high level of care meeting all activities of daily living. They do not usually include support services for independent living. This type of housing can also include dementia care homes.

Source: Planning Practice Guidance [63-010]

**10.9.3** As set out in the box above and illustrated in the figure below there are different models of specialist accommodation for older people and the most common form of differentiation between these models relates to the level and frequency of care and support provided to residents. These were also included within the PPG.

**Figure 10.8: Housing Options for Older People**

**10.9.4** For the purposes of this assessment we have considered the need for affordable and leasehold homes in the following categories:

- Housing with Support – as comprising retirement and sheltered housing;
- Housing with Care – as comprising housing where care is available;
- Residential and nursing bedspaces.

**10.9.5** As a general housing product this section of the report does not examine the need for age-restricted accommodation. It will effectively be up to the market to decide the level of this type of housing that should be delivered.

**The modelling of the older persons specialist accommodation needs focuses on the two commissioning authorities.**

### Current Supply

**10.9.6** We have drawn on data from the Elderly Accommodation Counsel (EAC) to examine the existing supply of specialist accommodation for older people in the Study Area. As shown in the table below the majority of supply comes in the form of housing with support. There is also a strong supply of care bedspaces which are principally nursing care. Provision of housing with care housing is less well developed but there is increasing market interest in this sector.

**Table 10.25** Current Supply

Type	Tenure	Cherwell	Oxford
Housing With Support	Affordable	1,296	920
	Market	712	357

	Market	71	0
<b>Housing with Care Total</b>		<b>305</b>	<b>190</b>
Residential Care		219	261
Nursing Care		943	606
<b>Care Bedspaces</b>		<b>1,162</b>	<b>867</b>

Source: Elderly Accommodation Counsel, 2022

## Modelling Approach and Assumptions

**10.9.7** There are a number of ‘models’ for considering older persons’ needs, but they all essentially work in the same way by applying a ‘prevalence rate’ to projected demographic growth. The model results are particularly sensitive to the prevalence rates applied. Prevalence rates are typically reported as the number of units/bedspaces required per 1,000 head of population aged 75 based on the proportion of people in this age group who could be expected to live in different forms of specialist housing. Whilst the population aged 75 and over is used in the modelling, the estimates of need would include people of all ages.

**10.9.8** Whilst there are no definitive rates, the PPG [63-004] notes that ‘the future need for specialist accommodation for older people broken down by tenure and type (e.g. sheltered housing, extra care) may need to be assessed and can be obtained from a number of online tool kits provided by the sector, for example SHOP@ for Older People Analysis Tool)’. The PPG does not specifically mention any other tools and therefore seems to be indicating that SHOP@ would be a good starting point for analysis. However, since the PPG was published the Housing Learning and Information Network (Housing LIN) has removed the Shop@ online toolkit although the base rates used for analysis are known. Prevalence rates identified in existing studies include:

**Table 10.26** Range of suggested baseline prevalence rates from a number of tools and publications

Type/Rate	SHOP@ (2008) <sup>38</sup>	Housing in Later Life (2012) <sup>39</sup>	2016 Housing LIN Review
Retirement living or sheltered housing (housing with support)	125	180	100
Extra care housing or Enhance Sheltered (housing with care)	45	65	30-40 (‘proactive
Residential care homes	65	(no figure apart from 6 for dementia)	40
Nursing homes (care bedspaces), including dementia	45		45

Source: Range of sources as identified

**10.9.9** In interpreting the different potential prevalence rates it is clear that:

- The prevalence rates used should be considered and assessed taking account of an authority’s strategy for delivering specialist housing for older people. The degree for instance which Oxfordshire County Council want to require extra care

<sup>38</sup> Based on the More Choice Greater Voice publication of 2008

([https://www.housinglin.org.uk/assets/Resources/Housing/Support\\_materials/Reports/MCGVdocument.pdf](https://www.housinglin.org.uk/assets/Resources/Housing/Support_materials/Reports/MCGVdocument.pdf)). It should be noted that although these rates are from 2008, they are the same rates as were being used in the online toolkit when it was taken offline in 2019.

<sup>39</sup>

[https://www.housinglin.org.uk/assets/Resources/Housing/Support\\_materials/Toolkit/Housing\\_in\\_Later\\_Life\\_Toolkit.pdf](https://www.housinglin.org.uk/assets/Resources/Housing/Support_materials/Toolkit/Housing_in_Later_Life_Toolkit.pdf)

housing as an alternative to residential care provision would influence the relative balance of need between these two housing types;

- The Housing LIN model has been influenced by existing levels of provision and their view on what future level of provision might be reasonable taking account of how the market is developing, funding availability etc. There is a degree to which the model and assumptions within it may not fully capture the recent growth in private sector interest and in the extra care sector in particular.

**10.9.10** Icenis has sought to consider these issues and the appropriate modelling assumptions for assessing future needs. Nationally, there has been a clear focus on strengthening a community-led approach and reducing reliance on residential and nursing care – in particular, focussing where possible on providing households with care in their own home. Equally, Oxfordshire County Council have stressed their desire to provide additional extra care to ease the burden on residential care.

**10.9.11** The County Council are currently developing their policy, however their interim position, based on our discussion with them, is that they would like to see a shift away from residential care towards Extra Care. This will provide cost savings to the County Council but more importantly it will provide services users with a more appropriate form of housing.

**10.9.12** For Extra Care it is considered that the prevalence rates shown in the Shop@ are an appropriate starting point i.e. 45 units per 1,000 persons aged over 65. This has regards to market growth in this sector in recent years, county policy and a number of planning judgements since the above studies were prepared.

**10.9.13** More appropriate accommodation, in terms of both facilities and level of care, means that people will be able to live in their accommodation longer. Increased extra care provision will reduce needs for residential care which is often necessitated by those in general housing no longer being able to live independently. We have therefore modelled a change in prevalence rates of residential care from a default target of 40 per 1,000 to 20 per 1,000 aged over 75 and shifted this need to Extra Care which goes from 45 per 1,000 to 65 per 1,000 aged over 75.

**10.9.14** As a further adjustment, where current rates of residential care provision is over 20 per 1,000 aged over 75 we have added this surplus to the Extra-Care need. However, where this is below 20 per 1,000 we have reduced this from the Extra-Care need.

**10.9.15** In addition, due to the increasing population there may still be a need for additional residential care despite the reduced prevalence as well as, in some cases, a need for better quality provision (such as provision of care homes with en-suite facilities and of a size which are commercially viable).

**10.9.16** For housing with support an appropriate starting point is 135 units per 1,000 persons aged over 75. This is an average of the three sources. For Nursing Care the only rate published is 45 per 1,000 aged over 75. This is therefore applied.

**10.9.17** The modelling is complicated by evidence that the existing provision for housing with support and residential/nursing care bedspaces is above the target rates. Future provision is however influenced by demographic growth.

**10.9.18** In order for the market for extra-care (and other typologies) to take hold we have sought to gradually increase the prevalence rates from the current position to the desired position (the ‘target prevalence rate’) over the next 18 years. The approach in these terms allows for the strategy for prioritising extra care housing rather than other forms to be delivered – but this strategy is delivered over time.

**Table 10.27** Current and Target Prevalence Rates (2022)

Prevalence	Tenure	Cherwell Current	Cherwell Target	Oxford Current	Oxford Target
Housing With Support	Affordable	96	31	101	45
	Market	53	104	39	90
<b>Housing With Support Total</b>		150	135	141	135
Housing with Care	Affordable	17	14	21	25
	Market	5	47	0	49
<b>Housing with Care Total</b>		23	61	21	74
Residential Care		16	20	29	20
Nursing Care		70	45	67	45
<b>Care Bedspaces</b>		87	65	95	65

Source: Icen Analysis based on EAC data

**10.9.19** In relation to the split between tenures for housing with support and housing with care, the recommended future supply is split as per the current levels of owner occupation in older age groups in each area.

### Specialist Housing Needs

**10.9.20** Applying these target prevalence rates to the population projections results in the following gross need over the period to 2040. As shown there is expected to be a growth in demand for all types of housing in all local authorities.

**Table 10.28** Gross Need for Specialist Housing for Older People (2022-2040) – CE Baseline

	Tenure	Cherwell		Oxford	
		2022	2040	2022	2040

**10.9.21** Once existing supply is taken into account, there broadly remains a significant future need in all areas. However, whilst there is a significant future need for most types of accommodation, there is an over-supply of affordable housing with support in Oxford and Cherwell. Each council should take a view as to whether future loss of this types of accommodation should be allowed or whether existing provision rates should be maintained. Issues related to the quality of existing provision may influence this.

**10.9.22** In Cherwell, there is a broad balance of need across housing with support housing with care and a lesser need for care bedspaces. However, any delivery should be focused on market accommodation. This is particularly the case for housing with support. In Oxford there is less of a demand for care bedspaces but a broadly even demand for housing with care and housing with support. Again the focus on this should be market accommodation.

The above figures do not take account of pipeline supply (as this will change over time).

## 10.10 Qualitative Need

**10.10.1** The provision of a choice of attractive housing options to older households is a component of achieving good housing mix. The availability of such attractive housing options for the growing older population may enable some older households to downsize from homes which no longer meet their housing needs or are expensive to run. The opportunity for older households to 'rightsize' can help improve their quality of life.

**10.10.2** As well as planning for a numerical increase in specialist accommodation, the Councils should also support a qualitative increase. They should work with the Care Quality Commission to better understand the requirements for modern specialist housing and ensure these are implemented in new schemes. They may well be the need for replacement or remodelling of some older stock (e.g. bedsit properties) or reconfiguration of the market. The residential/nursing care market is for instance moving towards larger schemes which offer economies of scale and quality premises (for instance with en-suite facilities).

## 10.11 Wheelchair User Housing

**10.11.1** Information about the need for housing for wheelchair users is difficult to obtain, particularly at a local level and estimates of need produced in this report draw on data from the English Housing Survey (EHS) which provides a range of relevant data, but often for different time periods. The EHS data used includes the age structure profile of wheelchair users, information about work needed to homes to make them 'visitable' for wheelchair users and data about wheelchair users by tenure.

**10.11.2** The analysis below sets out estimates of the number of wheelchair users in each local authority; this has been based on estimating prevalence rates from the 2011-12 EHS (Annex Table 6.11) combined with Census data. At the time, the EHS showed there were 184,000 households with a wheelchair user and the oldest person in the household was aged under 60; the 2011 Census showed around 40.6 million people aged under 60 and therefore a base prevalence rate of 0.005 has been calculated for this group – essentially for every 1,000 people aged under 60 there are around 5 wheelchair user households. The table below shows data for a full range of age groups; it should be noted that whilst the prevalence rates mix households and population they will provide a reasonable estimate of the number of wheelchair user households.

**Table 10.32** Baseline prevalence rates by age used to estimate wheelchair user households – England

	Number of wheelchair user households	Household population	Prevalence (per 1,000 population)
<b>under 60 years</b>	184,000	40,562,000	5
<b>60 - 74 years</b>	205,000	7,668,000	27
<b>75 - 84 years</b>	191,000	2,832,000	68
<b>85 years or over</b>	146,000	997,000	146

Source: Derived from EHS (2011-12) and 2011 Census

**10.11.3** The analysis also considers the relative health of the population of Cherwell and Oxford. For this, data has been taken from the 2011 Census for the household population with ‘day to day activities limited a lot’ by their disability. The tables below show this information by age in the study area and England, and also shows the adjustment made to reflect differences in health between the areas. Due to the age bands used in the Census, there has been some degree of adjustment for the under 60 and 60-74 age groups. The data shows lower levels of disability for all age groups in the two authorities, pointing to a slightly lower than average proportion of wheelchair user households.

**Table 10.33** Proportion of people with day to day activities limited a lot (by age) – 2011 – Cherwell

	% of age group with day to day activities limited a lot		Cherwell as % of England	Prevalence rate (per 1,000 population)

Source: 2011 Census

**10.11.4** The local prevalence rate data can be brought together with information about the population age structure and how this is likely to change moving forward. For Cherwell, the data estimates a total of 1,851 wheelchair user households in 2022, and that this will rise to 2,815-2,840 by 2040. In Oxford 1,443 wheelchair user households increases to around 2,100 over the same period.

**Table 10.35** Estimated number of wheelchair user households (2022-40) – Cherwell – CE Baseline

<b>Total</b>		<b>141,980</b>	<b>192,618</b>	<b>1,443</b>	<b>2,113</b>

Source: Derived from a range of sources

**10.11.5** The finding of an estimated current number of wheelchair user households does not indicate how many homes might be needed for this group – some households will be living in a home that is suitable for wheelchair use, whilst others may need improvements to accommodation, or a move to an alternative home. Data from the EHS (2014-15) shows that of the 814,000 wheelchair user households, some 200,000 live in a home that would either be problematic or not feasible to make fully ‘visitable’ – this is around 25% of wheelchair user households. Applying this to the current number of wheelchair user households and adding the additional number projected forward suggests a need for around 80 additional wheelchair user homes per annum in Cherwell and 60 for Oxford – this equates to about 8% of all housing need in Cherwell and 4% in Oxford (as set out in the table below).

**Table 10.39** Estimated need for wheelchair user homes, 2022-40 (figures per annum)

	Current need	Projected need	Total current and future need	Housing need	% of Housing Need
Cherwell – CE base	25	54	79	1,009	7.8%
Cherwell – Census adj.	25	55	80	1,081	7.4%
Oxford – CE base	20	36	56	1,322	4.2%
Oxford – Census adj.	20	37	57	1,416	4.0%

Source: Derived from a range of sources

**10.11.6** Furthermore, information in the EHS (for 2017/18) also provides national data about wheelchair users by tenure. This showed that, at that time, around 7.1% of social tenants were wheelchair users, compared with 2.7% of market households (owner-occupiers and private renters). Applying these national figures to the demographic change and need (as shown above) it is possible to estimate the potential need by tenure, as shown in the table below. This shows a need for around 3-6% of market homes to be M4(3) along with 8-16% of affordable.

**Table 10.40** Estimated need for wheelchair user homes by tenure, 2022-32

	Market	Affordable
Cherwell – CE base	6%	16%
Cherwell – Census adj.	6%	15%
Oxford – CE base	3%	9%
Oxford – Census adj.	3%	8%

Source: Derived from demographic projections and EHS prevalence rates

**10.11.7** To meet the identified need, the Councils could seek a proportion (maybe up to 10%) of all new market homes to be M4(3) compliant and potentially around a fifth in the affordable sector. These figures reflect that not all sites would be able to deliver homes of this type. In the market sector these homes would be M4(3)A (adaptable) and M4(3)B (accessible) for affordable housing.

**10.11.8** As with M4(2) homes it may not be possible for some schemes to be built to these higher standards due to built-form, topography, flooding etc. Furthermore, provision of this type of property may in some cases challenge the viability of delivery given the reasonably high build out costs (see table below).

**10.11.9** It is worth noting that the Government is currently consulting on changes to the way the needs of people with disabilities and wheelchair users are planned for as a result of concerns that in the drive to achieve housing numbers, the delivery of housing that suits the needs of the households (in particular those with disabilities) is being compromised on viability grounds<sup>40</sup>.

**10.11.10** One of the policy options tabled in this document is to remove M4(1) altogether, so that all new homes will have to at least have the accessible and adaptable features of an M4(2) home. M4(3) would apply where there is a local planning policy in place in which a need has been identified and evidenced. This is consistent with the evidence presented in this report, although the trade-off identified in the consultation paper between viability and the need to deliver sufficient numbers of market homes to meet general housing needs is unavoidable.

**10.11.11** The viability challenge is particularly relevant for M4(3)(B) standards. These make properties accessible from the moment they are built and involve high additional costs that could in some cases challenge the feasibility of delivering all or any of a policy target.

**Table 10.41** Access Cost Summary

	1-Bed Apartment	2-Bed Apartment	2-Bed Terrace	3-Bed Semi-Detached	4-Bed Semi-Detached
M4(2)	£940	£907	£523	£521	£520
M4(3)(A) – Adaptable	£7,607	£7,891	£9,754	£10,307	£10,568
M4(3)(B) – Accessible	£7,764	£8,048	£22,238	£22,791	£23,052

Source: EC Harris, 2014

<sup>40</sup> Raising accessibility standards for new homes, a consultation paper, page 10

**10.11.12** However, local authorities only have the right to request M4(3)(B) accessible compliance from homes for which they have nomination rights. They can, however, request M4(3)(A) adaptable compliance from the wider (market) housing stock.

**10.11.13** A further option for the Councils would be to consider seeking a higher contribution, where it is viable to do so, from those homes to which they have nomination rights. This would address any under delivery from other schemes (including schemes due to their size e.g. less than 10 units or 1,000 square metres) but also recognise the fact that there is a higher prevalence for wheelchair use within social rent tenures. This should be considered when setting policy.

## 10.12 Specific housing market segments

### Self- and Custom-Build

**10.12.1** This section considers the need for serviced plots to provide for self-build and custom housebuilding as well as an appropriate policy response.

**10.12.2** The Government has a clear agenda for supporting and promoting the self-build and custom building sector. The Self-Build and Custom Housebuilding Act 2015 (as amended by the Housing and Planning Act 2016) (“the 2015 Act”) provides a legal definition of ‘self-build and custom housebuilding’ which is where individuals or associations of individuals (or persons working with or for individuals or associations of individuals) build houses to be occupied as homes for those individuals.

**10.12.3** The Housing and Planning Act 2016 (“the 2016 Act”), which received Royal Assent on 12<sup>th</sup> May 2016, formally introduced the ‘Right to Build’. It required local planning authorities to set up a register of people wanting to undertake a custom or self-build project in their area. Under the ‘duty to grant planning permissions etc.’, the 2016 Act has placed a legal duty on the relevant authority to grant enough planning permissions to meet the demand for self-build housing as identified through its register in each base period. The Self-Build and Custom Housebuilding Regulations 2016 subsequently came into force on 31<sup>st</sup> October 2016, amending the 2015 Act and implementing Chapter 2 of the 2016 Act.

#### *Self and Custom Build Register*

**10.12.4** As of 1st April 2016, and in line with the 2015 Act and the Right to Build, relevant authorities in England are required to have established and publicised a self-build and custom housebuilding register which records those seeking to acquire serviced plots of land in the authority’s area in order to build their own self-build and custom houses.

**10.12.5** There has now been five full base periods up to 30th October 2020 as well as the initial half year base period. As the table below shows, the need shown is equivalent to an annual average of around 524 self-build plots per year in Cherwell and 22 in Oxford City.

**Table 10.42** Serviced Plot Demand by Base Period

Base Period:	1*	2	3	4	5	6	Average
Cherwell	2757	75	12	19	19	26	524
Oxford City	23	20	11	20	24	25	22

Source: Right to Build Registers Monitoring \*half year for initial base period. Average based on 5.5 years

**10.12.6** The numbers on the Cherwell register are the highest in the Country and more than double that of the next highest (Bristol at 230 per annum), This is due to the Graven Hill site in Bicester which is the largest self-build scheme in the UK and the second largest in Europe, providing up to 2,100 homes (of which 1,900 will be self-build). It is likely however that this scheme is not meeting the demand of the district but a much wider catchment. Due to the size of the development it currently enables people from outside the district to purchase plots for self-build properties, thus helping to meet demand from elsewhere.

**10.12.7** Cherwell introduced a local connection test in 2017 which may go some way to explain the subsequent fall off in individuals registering from the first base period to

subsequent base periods. At the same time the Council also introduced a financial viability test.

**10.12.8** It is worth highlighting that a survey<sup>41</sup> undertaken by YouGov on behalf of the National Custom and Self-Build Association (“NaCSBA”) in October 2020 found that awareness of the Right to Build legislation is low with 83% of people unaware that the local authority self-build registers exist. As a result, the number of individuals on a local authority’s self-build register may underestimate demand. However this is unlikely to be the case in Cherwell as the custom of and self-build market is very well known aided by publicity through programmes such as Grand Designs as well as a Graven Hill marketing suite in the development.

### Broader Demand Evidence

**10.12.9** In order to supplement the data from the Council’s own register, we have looked to secondary sources as recommended by the PPG, which for this report is data from NaCSBA - the national association for the custom and self-build housing sector.

**10.12.10** First, it is worth highlighting that the recent October 2020 survey undertaken by YouGov on behalf of NaCSBA found that 1 in 3 people (32%) are interested in building their own home at some point in the future, including 12% who said they were very interested. Notably, almost half (48%) of those aged between 18 and 24 were interested in building their own home, compared to just 18% of those aged 55 and over. This is notable as, traditionally, self-build has been seen as the reserve of older members of society aged 55 and over, with equity in their property

**10.12.11** Second, we can draw on NaCSBA data to better understand the level of demand for serviced plots. The association has recently published analysis with supporting maps and commentary titled “Mapping the Right to Build” in 2019. This includes an output on the demand for serviced plots as a proportion of total population relative to all other local authorities across England. This shows a demand in Cherwell equivalent to 413 per 100,000 head of population and 59 per 100,000 in Oxford.

### *Supporting the Self-Build and Custom Housebuilding*

**10.12.12** The Self-Build and Custom Housebuilding PPG sets out how authorities can increase the number of planning permissions which are suitable for self-build and custom housebuilding and support the sector. The PPG<sup>42</sup> is clear that authorities should consider how local planning policies may address identified requirements for self and custom housebuilding to ensure enough serviced plots with suitable permission come forward and can focus on playing a key role in facilitating relationships to bring land forward. There are a number of measures which can be used to do this, including but not limited to:

<sup>41</sup> A survey of 2,017 adults with fieldwork undertaken online between 9<sup>th</sup> – 11<sup>th</sup> October 2020. The figures are weighted and are representative of all GB adults aged 18+

<sup>42</sup> Paragraph: 025 Reference ID: 57-025-20210508

- supporting Neighbourhood Planning groups where they choose to include self-build and custom build housing policies in their plans;
- working with Homes England to unlock land and sites in wider public ownership to deliver self-build and custom build housing;
- when engaging with developers and landowners who own sites that are suitable for housing, encouraging them to consider self-build and custom housebuilding, and facilitating access to those on the register where the landowner is interested; and
- working with local partners, such as Housing Associations and third sector groups, to custom build affordable housing for veterans and other groups in acute housing need.

**10.12.13** Iceni would note that an increasing number of local planning authorities have adopted specific self-build and custom housebuilding policies in respective Local Plans to encourage delivery, promote and boost housing supply.

**10.12.14** Cherwell are a vanguard local authority when it comes to custom and self build housing. They have specifically allocated at Policy Bicester 2 of the Cherwell Local Plan 2011-2031 the Graven Hill site in Bicester for development of this type. As stated, this is meeting the wider demand rather than just that for Cherwell residents. Although, in order to widen the supply beyond Bicester, the Council may wish to seek a similar policy to Oxford (see below) on large sites not in Bicester.

**10.12.15** In Oxford, Policy H7 of the Local Plan supports self-build housing and requires sites of 50 or more units to provide 5% of the site area to be made available for self-build plots. These will be part of the 50% of market housing to be delivered on such sites unless conditioned to be otherwise. If such units remain unsold after 12 months then they will be built and brought forward in the normal way.

### *Build to Rent*

This section considers Private Rented Sector dynamics and considers the potential for Build-to-Rent development.

### **The Size of the Sector**

**10.12.16** In Oxfordshire the Private Rental Sector grew from around 10% of all households in 2001 to 15.2% in 2011. In order to bring this up to date, Iceni has drawn on data published by ONS which provides a view on how the tenure profile may have evolved since the 2011 Census. It should be caveated that the confidence value varies greatly by authority and the data is therefore only intended to provide a broad view on the potential tenure profile. Clearly as the Census 2021 data begins to emerge, we will have a clearer understanding of the true picture.

**10.12.17** ONS data suggests that the PRS sector peaked in 2016. In Cherwell this was at 18%, but has since fallen to 17.5%. Oxford also peaked at 29.8% in 2016 and has since fallen to 29%. This aligns with the national picture with the latest English

Housing Survey<sup>43</sup> stating that the proportion of households in the Private Rented Sector decreased over the period 2015/16 to 2020/21.

### The Profile of Renters

**10.12.18** The age of those renting at the point of the 2011 Census was skewed towards those aged 20 to 39 in line with the regional and national average. There is a comparatively higher percentage of all age groups privately renting in Oxford and lower percentage in younger age groups in Cherwell.

Figure 10.8: Age Profile of Private Rented Sector Tenants

Source: 2011 Census

**10.12.19** The 2011 Census indicated that the largest household group in the Sector was single person households aged under 65 accounting for around a quarter (23%-26%) of all households which is typical of the private rented sector profile. There is also a high percentage of couples with Dependent Children that are privately renting. In Oxford there was also a relatively high percentage of Couples with no Children and All Student Households.

**10.12.20** The Census showed that over 50% of private renters are high skilled, professional households in the top three major occupation groups. Although this is somewhat skewed by Oxford (63%) while Cherwell have more modest percentages (43% and 51% respectively)

### Rental Market Statistics

**10.12.21** The median rent in Oxford is £1250 per calendar month and the lower quartile rent is £1050 pcm. Even the lower quartile price in Oxford is above the median rents in Cherwell. If we drill into median rents by property size we see that for

<sup>43</sup> English Housing Survey 2020/21

all sizes of homes rents in Oxfordshire are above the other two local authorities as well as England and the South East. This is particularly the case for larger homes.

Figure 10.9: Monthly Median Rents by Size, Year to March 2021

Source: VOA, 2022

**10.12.22** The evidence indicates that median rents have increased over the last seven years in all areas but particularly in Oxford.

Figure 10.10: Rental Growth, 2014 – 2021

Source: Icen analysis of ONS Private Rental Market Statistics. Note no data provided for rooms.

**10.12.23** Oxford has seen a considerably strong comparable growth in 2-bedroom homes and room only rates and to a lesser degree 1-bedroom units. However, for studios and 3-bedroom units the increase was stronger in Cherwell. This is indicative of the role each area plays with greater demand for smaller units (in part driven by students) in the City and the demand for family sized units in the shire authorities.

Figure 10.11: Percentage Rental Growth by Size, 2014 – 2021

Source: Icen analysis of ONS Private Rental Market Statistics. Note no data provided for rooms.

**10.12.24** If we then set the relevant<sup>44</sup> LHA rates against lower quartile private rental values (i.e. the lowest 25% or “entry-level rents”) for each local authority, it is clear that LHA continues to be below market rents for all sizes in the area. This is particularly the case for Oxford. The table below shows the difference between the LHA cap and entry-level rents.

Table 10.43 LQ Rents set against LHA Rates

	1 BED	2 BEDS	3 BEDS	4 BEDS
<b>Cherwell LQ Rent</b>	<b>£650</b>	<b>£795</b>	<b>£950</b>	<b>£1,300</b>
Cherwell Valley BRMA	£646	£771	£897	£1,291
Difference	£4	£24	£53	£9
<b>Oxford LQ Rent</b>	<b>£925</b>	<b>£1,100</b>	<b>£1,300</b>	<b>£1,800</b>
Oxford BRMA	£773	£910	£1,096	£1,577
Difference	£152	£190	£204	£223

Source: VOA data and DWP Data, 2022

**10.12.25** The changing nature of welfare benefits payments, particularly housing benefits and the introduction and shift to Universal Credit have direct implications for lower earning and economically inactive households. The operation of the welfare benefit cap has been in place now for a number of years, restricting the total amount of benefit - including housing benefits - which in turn serves to restrict housing choice and opportunity for those family households affected as is evident from our analysis. The maximum amount of welfare and housing benefit is capped currently at £384.62

<sup>44</sup> Some local authorities cut across Broad Rental Market Areas, Oxford is entirely within the Oxford BRMA, Cherwell is split between Oxford and Cherwell Valley, West Oxfordshire is split across Oxford, Cherwell Valley and Cheltenham

per week or £1,666.67 per month outside of London for families with children and couples.

**10.12.26** It is the case that for many living in the PRS, barriers to households becoming homeowners are less likely to relate to income and/or the cost of housing and more about other factors such as saving for a deposit or difficulties obtaining a mortgage. However, it should also be noted that some households will choose to rent privately as this can be a more flexible option. In the context of the private rented sector's growth over the last 20 years and a national housing shortage, successive Governments have looked to the private rented sector to play a greater role in providing more new build housing and have sought to encourage "Build to Rent" development.

**10.12.27** According to the British Property Federation there are no build to rent schemes existing or in the pipeline in Oxfordshire. However, the market is still embryonic and has thus far focussed on urban areas with a large student body or a high percentage of younger working age adults.

**10.12.28** Market dynamics point to strong demand for PRS properties. However since 2016 there have been legislative and taxation changes which have made the sector less attractive for landlords, including changes to Stamp Duty and the ending of mortgage interest relief. The demographic profile of Oxford in particular makes an attractive potential location for Build-to-Rent development. Cherwell also has a sizeable PRS which is likely to be focused on the main towns. There is potential for the sector to grow in Bicester and Banbury over the plan-period particularly as the market matures and the suburban build-to-rent sub-sector develops. Both authorities should therefore seek to put in place local plan policies to guide development.

**10.12.29** A Local Plan policy would effectively set out parameters regarding how schemes would be considered, and how affordable housing policies would be applied. In considering the dwelling mix proposed in relation to a Build-to-Rent scheme; we would expect the focus to be on 1, 2 and some 3-bed properties given the occupancy profile associated with Build to Rent accommodation. However, given that this is still a relatively embryonic sector, the Councils need not be overly prescriptive.

**10.12.30** The Framework's definition of Build-to-Rent development sets out that schemes will usually offer tenancy agreements of three or more years and will typically be professionally managed stock in single ownership and management control. It would be appropriate for the Council to adopt a consistent definition.

**10.12.31** The Councils will need to consider affordable housing policies specifically for the Build-to-Rent sector. The viability of Build to Rent development will however differ from that of a typical mixed tenure development: returns from the Build to Rent development are phased over time whereas for a typical mixed tenure scheme, capital receipts are generated as the units are completed.

**10.12.32** In general terms, it is expected that a proportion of Build to Rent units will be delivered as 'Affordable Private Rent' housing. The PPG<sup>45</sup> states that:

*"The National Planning Policy Framework states that affordable housing on build to rent schemes should be provided by default in the form of affordable private rent, a class of affordable housing specifically designed for build to rent."*

<sup>45</sup> ID: 60-002-20180913

*Affordable private rent and private market rent units within a development should be managed collectively by a single build to rent landlord.*

*20% is generally a suitable benchmark for the level of affordable private rent homes to be provided (and maintained in perpetuity) in any build to rent scheme. If local authorities wish to set a different proportion, they should justify this using the evidence emerging from their local housing need assessment, and set the policy out in their local plan. Similarly, the guidance on viability permits developers, in exception, the opportunity to make a case seeking to differ from this benchmark.*

*National affordable housing policy also requires a minimum rent discount of 20% for affordable private rent homes relative to local market rents. The discount should be calculated when a discounted home is rented out, or when the tenancy is renewed. The rent on the discounted homes should increase on the same basis as rent increases for longer-term (market) tenancies within the development”*

**10.12.33** The Councils should have regard to the PPG on Build-to-Rent development with the starting point for affordable housing therefore being that 20% of units would be Affordable Private Rented units at a discount of 20% to local market rents.

## Appendix A: CE Economic Projections Methodology

---

### Methodology and data sources

Cambridge Econometrics (CE) have maintained and developed a highly disaggregated database of employment and GVA data by sector (12 broad sectors or more detailed 45 sectors<sup>46</sup>) from 1981 for all unitary authorities and local authority districts in Great Britain.

CE's projections are baseline economic projections based on historical growth in the local area relative to the region or UK (depending on which area it has the strongest relationship with), on a sector-by-sector basis. They assume that those relationships continue into the future. Thus, if a sector in the local area outperformed the sector in the region (or UK) as a whole in the past, then it will be assumed to do so in the future. Similarly, if it underperformed the region (or UK) in the past then it will be assumed to underperform the region (or UK) in the future.

They further assume that economic growth in the local area is not constrained by supply-side factors, such as population and the supply of labour. Therefore, no explicit assumptions for population, activity rates and unemployment rates are made in the projections. They assume that there will be enough labour (either locally or through commuting) with the right skills to fill the jobs. If, in reality, the labour supply is not there to meet projected growth in employment, growth could be slower.

The measure of employment is workplace-based jobs, which include full-time, part-time and self-employed. The data on employees in employment by sector, which distinguish full-time and part-time as well as gender for the local area, are taken from the Business Register and Employment Survey (BRES) and the earlier Annual Business Inquiry (ABI). Estimates of self-employment are taken from the Annual Population Survey (APS) from 2004 onwards. For earlier years estimates are generated under the assumption that the ratios of self-employed to employees at local level, by sector and gender, are the same as those at the corresponding regional level. The figures are made consistent with more recently-published estimates of jobs at a regional level (quarterly workforce jobs, June figures) published by ONS, which include people in the armed forces but do not include people on government training schemes.

The GVA data are consistent with sector data (balanced approach) at the local authority level from the ONS' Regional Accounts.

## Appendix B: CE 2022 Baseline Projection Update Overview

March 2022

### Assumptions regarding COVID-19

#### Overview

A sharp recession was experienced in the first half of 2020 (and the first quarter of 2021) as the UK government introduced public health measures and social distancing to contain the outbreak of COVID-19. Economic recovery has generally been robust as restrictions were wound down (i.e. in 2020H2 and 2021Q2), however the recovery has been uneven (across groups/regions/expenditure categories) and there is evidence of scarring in some economic variables. These developments are reflected in the quarterly GDP profile in

Figure 6.

Figure 6 Quarterly GDP 2018-2021<sup>47</sup>

In the near term, it is assumed that UK policy will transition towards “living with COVID” in which restrictions are no longer placed on activities of households and businesses. There are therefore no further COVID-related restrictions assumed in the forecast period.

The export outlook for UK has deteriorated since the previous forecast owing to supply chain issues (e.g. shortage of UK HGV staff, border disruptions, fuel shortages etc) and owing to impacts associated with UK exit of EU (see following section). These issues are expected to persist in the medium term, weighing down the recovery of exports over 2022-24 (note also, that unlike most other expenditure categories, published data

<sup>47</sup><https://www.ons.gov.uk/economy/grossdomesticproductgdp/bulletins/gdpmonthlyestimateuk/december2020>

indicate that exports continued to contract in 2021, despite the partial reopening of the global economy).

Despite the reversal of restrictions, persistent economic scarring and a muted economic recovery is expected. This comes as a result of business closures, weak capital accumulation and lasting productivity impacts of the pandemic. Moreover, UK trade prospects remain very weak due to slow global economic growth and Brexit trade disruptions (see EU exit section below).

Given this, the central assumption of this forecast is a 2.4% increase in GDP in 2022 (the final 'recovery' year in which above-trend growth rates are observed) and a 1.3% increase in GDP in 2023.

### • **Key forecast components**

The post-pandemic economic trajectory (i.e. short-term economic prospects) will depend on the responses of households, businesses and government.

**Households** – Both upside and downside uncertainties are present and the future outlook of households is expected to be heterogenous. High levels of household saving have been recorded during the pandemic, which has helped fuel economic recovery. Household choices regarding these savings could influence the future outlook. It is assumed in this forecast that due to the distribution of savings (skewed to high-income households with lower propensity to consume) and due to the dampening effects of rising inflation, the outlook for consumption is relatively muted in comparison to 2021 growth rates. Another key consideration is productivity and pay growth. Pay growth is expected to be sluggish, in line with scarred productivity. Household spending is assumed to recover partially in the short term, but experience permanent impacts from the pandemic.

**Businesses** – Cash-flow issues are expected to weigh down on business investment in the near/medium term, in light of rising input costs and weakened position as a result of economic shocks of COVID-19.

The medium-term prospects for the UK economy is dependent on developments in the global economic outlook. On the one hand, improvements in the global vaccine rollout have been observed since the previous forecast. However, new COVID variants and developments in Ukraine (war, sanctions and uncertainty) could dampen the global outlook.

### • **Long-term COVID-19 assumptions**

Due to a lack of conclusive evidence, the previous version of the forecast did not assume any specific long-term impacts of the COVID-19 pandemic. Since then, we have evaluated further evidence on:

- The [impact of COVID on UK population and its distribution](#). In the previous forecast we had introduced a temporary adjustment to UK population and its distribution due to international and internal migration. [Additional evidence](#) suggests that this impact on migration will likely have a lasting effect on UK population. Therefore, we assume that during the pandemic around 350,000 people have permanently left the UK. We also assume that as a result of flexible working policies and lifestyle changes, 180,000 people have permanently relocated from London to other UK areas. Furthermore, some additional population scarring effects of the COVID-19 pandemic are also reflected in this update of the forecast, as the population projections have been updated to align with the 2020-based ONS population projections.
- We have also reviewed the evidence on the long-term impact of the COVID-19 pandemic on productivity and the capacity of the economy, not only as a result of health scarring directly due to COVID-19, but also as a result of the

response policies. There is limited evidence on how severe and lasting the health scarring could be, and therefore, we are not introducing any related assumptions in this forecast.

- School closures and remote education will likely lead to long-term impacts on human capital and productivity. In order to account for this, we are introducing an assumption based on the evidence from a [McKinsey study](#), which found that lost education of the current student cohort could lower their lifetime earnings by approximately 3%. We apply this assumption as an exogenous shock to employee earnings in the model. Weighted by population and average earnings in different age groups, our assumption is that employee earnings will be 0.5% lower by 2040, when approximately 16% of the total workforce will have been at school during the pandemic. This is only a first-order direct impact, which could have further impacts throughout the economy calculated by the model. This impact is additional to the short and medium-term impacts of the pandemic already captured as part of our assumptions, or as part of dynamic modelling.

## How the EU exit assumptions were developed

### Overview

Our previous version of the forecast utilised assumptions on the future impact of Brexit that were aligned with the EU–UK Trade and Cooperation Agreement signed in December 2020. In broad terms, the agreement was assessed to be similar to a standard FTA with very few special provisions. Therefore, we adopted the following political assumptions for our forecast:

The agreed Free Trade Agreement with the EU avoids reversal to WTO terms, but results in some barriers to trade which will gradually phase in from 2022-30;

The points-based migration system introduced restrictions on inward migration from the EU;

The uncertainty about the possibility of no-deal Brexit was lifted in 2021. However, some uncertainty remains over the speed of regulatory divergence.

Some uncertainty remains over the possibility of changes to the agreement in the future that could affect the barriers to trade, such as the equivalence rules in the financial sector.

The UK will [continue to seek other trade agreements](#), which will reduce barriers to trade with non-EU countries in the future.

Since the previous forecast version, we have assessed the relevant developments relating to [new trade agreements](#). An FTA with Australia was signed in December 2021 (currently pending ratification), and similar deals with New Zealand and Singapore are at closing stages. The government suggests that the UK could join the Comprehensive and Progressive Agreement for Trans-Pacific Partnership (CPTPP) by the end of 2022, although CE assesses that the impact of such a deal could be limited, as the UK is already enjoying similar trade terms with most of the CPTPP members as a result of the ‘rolled-over’ agreements it had as an EU member. In addition, a consultation with the Gulf Co-operation Council (GCC) has been launched in October 2021, although the negotiations have not begun yet.

Overall, these developments are aligned with CE’s assumptions used in the previous 2021 version of the forecast, which aside from the negative effect of Brexit on exports to the EU, also assumed a small increase in UK exports to selected nations as a result of the likely trade deals with New Zealand, Australia, Canada, and a future trade deal with the US (for which the negotiations are still at an early stage). We also reviewed the new evidence on the [short-run impact of Brexit on UK-EU trade](#), which

tends to affirm our views. Therefore, Brexit trade assumptions remain identical to these supporting previous year's forecast.

In this version, we updated our migration projections to align with the newly-released 2020-based ONS migration projections. In comparison to the 2018-based projections, these suggest higher net migration to the UK in the next 20 years (by approximately 10,000 people annually, against the 2018-based projections). However, our assumption on the specific impact of Brexit on net migration from the EU remains unchanged from last year, as outlined below.

These political assumptions were converted into *economic* and *modelling* assumptions to explore the macroeconomic implications. The modelling assumptions provide inputs for our [MDM-E3](#) model, the central economic model used in the forecast. For the forecast, we focussed primarily on the macroeconomic effects of Brexit on **exports**, **migration** and **investment**.

### **Export assumptions**

We assume that UK trade with the EU will decline by 30.6% in the long term, with the impact on services trade being roughly twice as high as for manufacturing. We assume that a larger share of the total long-run impact happened immediately in 2021 (following the end of the transition period on 31 December 2020) for goods exports, compared to services exports. This reflects the relatively greater significance of non-tariff barriers at the border for goods trade (such as customs declarations), compared to services trade.

In addition, we have incorporated into the assumptions the potential effect of the future trade deals with non-EU countries, such as the US, Australia, Canada and New Zealand. We take a moderate view that is aligned with the potential impact of the UK-US free trade agreement [modelled by the Department for International Trade](#). We assume that UK exports to the US, Australia, Canada and New Zealand will increase by 4.3% in the long run (relative to a counterfactual in which UK remains in EU). The implicit assumption on trade with the remaining parts of the world is that the UK will form trade arrangements similar to those it achieved through EU membership.

The resulting combined effect of these assumptions is a decline in UK exports to the world by 13.2% in the long run, which is similar in magnitude to the impact assumed in the previous version of the forecast.

We used the relationships in MDM-E3 to develop a forecast for imports; no additional economic or modelling assumptions were developed as inputs to the model with respect to imports.

### **Migration assumptions**

Our assumption in this version of the forecast remains the same as in the previous version. It is assumed that the long run net migration to the UK will decline as a result of the new UK immigration policy. The starting point in developing the migration assumptions are the ONS population projections, which include migration assumptions. These migration assumptions have been updated in this version and are now based on the latest 2020-based ONS principal population projections<sup>48</sup>, which we subsequently adjusted using our estimate of the effect of Brexit on *total* net migration to the UK.

<sup>48</sup> [ONS National population projections: 2020-based interim](#)

The adjustment remains the same as in the previous version of the forecast, and is aligned to the recommendation made by the Migration Advisory Committee in 2018<sup>49</sup>, and the likely effect of the points-based system currently in place. Our assumption is that net annual migration will decline to 160,000 in the long run. Effectively, this reduces net immigration of the working-age population by 40,000 annually, a change primarily driven by a decline in net migration from the EU. This assumption is comparable with other estimates in the literature on the impact of Brexit.

The estimated decline in annual net migration is distributed across UK sectors according to the proportion of EU nationals in the sector's workforce. Data on workforce by nationality are obtained from the Annual Population Survey<sup>50</sup>.

### **Investment assumptions**

The investment assumptions remain unchanged from the previous version. Post-referendum uncertainty about the future of the UK-EU relationship depressed investment. While the new agreement clarifies the current relationship, our expectation is that reductions in UK-EU trade will outweigh any gains made through other trade agreements (as above). Combined with continued uncertainty about the speed of any future regulatory divergence, we continue to assume that UK investment post-Brexit will be lower than it might otherwise have been.

We assumed that the overall impact of the new agreement on investment in the UK will lead to a 5% decline in investment in the long-run (relative to a counterfactual in which UK remains in EU). This magnitude is similar to the realised impact of the post-referendum uncertainty. As post-referendum uncertainty lifted in 2021, in the short run the net combined impact of lifting of the uncertainty and the withdrawal agreement will be positive (viewed in isolation of the assumed impact of COVID-19), before the full negative impact of the withdrawal agreement is realised in the long run.

These long-run investment impacts have been distributed across broad sectors. We characterised these impacts according to several simplifying categories:

there would be no change in investment levels;  
 investment would adjust (up or down depending on the sector) based on changes to public spending;  
 investment would slow down:

- some businesses moving a proportion of their activity out of the UK – this would result in a decrease in investment, proportional to the lower level of activity in the UK;
- diminished growth prospects of a particular sector within the UK – this could further dampen investment intentions in the UK, as multi-national organisations in those sectors may choose to divert a disproportionate amount of their investment to countries with better growth prospects.

In the last case, expectations of diminished growth prospects may stem from factors such as lack of Single Market access, or skill shortages that have been further exacerbated by migration restrictions. Growth may also dampen in sectors that rely heavily on cooperation with other member states or funding from the EU. The mechanisms through which expectations of sectoral growth may diminish were not

<sup>49</sup>

[https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment\\_data/file/741926/Final\\_EEA\\_report.PDF](https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/741926/Final_EEA_report.PDF)

<sup>50</sup> [ONS Number of UK nationals, EU nationals, and non-EU nationals in employment by industry and region, April 2018 to March 2019](#)

explicitly accounted for when developing the economic and modelling assumptions. A judgement was taken on which of these are most applicable at a sectoral level.

### ***Detailed explanations of the assumptions in the forecast***

The summary table below presents a qualitative overview of the specific long-term economic assumptions of the impacts of Brexit by broad sector:

**Table 20: UK forecast assumptions**

Sector	Export assumptions	Employment assumptions	Investment assumptions
Agriculture	Mild negative impact on EU demand	Moderate employment constraints	Mild negative impact on investment
Mining & quarrying	No specific impact modelled	Moderate employment constraints	Moderate to pronounced negative impact on investment
Low and medium-low tech manufacturing	Mild negative impact on EU demand	Strong employment constraints	Moderate to pronounced negative impact on investment
High and medium-high tech manufacturing	Mild to moderate negative impact on EU demand	Strong employment constraints	Moderate to pronounced negative impact on investment
Construction	Mild negative impact on EU demand	Moderate employment constraints	Moderate to pronounced negative impact on investment
Utilities	Mild negative impact on EU demand	Moderate employment constraints	No specific impact modelled
Transport, distribution, retailing, accommodation, catering, and administrative and support services	Moderate to pronounced negative impact on EU demand	Moderate employment constraints	Moderate to pronounced negative impact on investment
IT, financial and insurance, real estate, professional, and scientific and technical services	Pronounced negative impact on EU demand	Mild employment constraints	Moderate to pronounced negative impact on investment
Public administration and defence, education, health and social work, and other services (arts and other services)	Mild negative impact on EU demand	Mild employment constraints	Mild negative impact on investment

## Mapping to broad sectors

The broad sector outlined above map to 86 MDM sectors according to the following classifications:

<b>Broad sectors</b>	<b>MDM sectors</b>	
Agriculture	1 Crop & animal product.	3 Fishing
	2 Forestry & logging	
Mining & quarrying	4 Coal	7 Other mining
	5 Oil extraction	8 Mining support service
	6 Gas extraction	
Low and medium-low tech manufacturing	9 Food products	18 Coke & petroleum
	10 Beverages	21 Rubber & plastic
	11 Tobacco	22 Other non-metallic
	12 Textiles	23 Basic metals
	13 Wearing apparel	24 Metal products
	14 Leather, etc.	30 Furniture
	15 Wood, etc.	31 Other manufacturing
	16 Paper, etc.	32 Repair & installation
	17 Printing & recording	
High and medium-high tech manufacturing	19 Chemicals, etc.	27 Machinery, etc.
	20 Pharmaceuticals	28 Motor vehicles, etc.
	25 Computers, etc.	29 Other trans. Equip
	26 Electrical equipment	
Utilities	33 Electricity	36 Sewerage
	34 Gas, heat & cooling	37 Waste disposal
	35 Water	38 Waste management
Construction	39 Construction	41 Specialised construction
	40 Civil engineering	
Transport, distribution, retailing, accommodation, catering, and administrative and support services	42 Motor vehicles trade	52 Publishing
	43 Wholesale trade	53 Film & music
	44 Retail trade	54 Broadcasting
	45 Land transport	55 Telecommunications
	46 Water transport	69 Rental & leasing

	47 Air transport	70 Employment activities
	48 Warehousing, etc.	71 Travel agencies, etc.
	49 Postal & courier	72 Security, etc.
	50 Accommodation	73 Services to buildings
	51 Food & beverage	74 Office admin.
IT, financial and insurance, real estate, professional, and scientific and technical services	56 Computer programming	63 Head offices, etc.
	57 Information services	64 Architect. & related
	58 Financial services	65 Scientific research
	59 Insurance & pensions	66 Advertising, etc.
	60 Aux. financial serv	67 Other professional
	61 Real estate	68 Veterinary
	62 Legal & accounting	
Public administration and defence, education, health and social work, and other services	75 Public admin. & def	81 Libraries, etc.
	76 Education	82 Gambling
	77 Health	83 Sport & recreation
	78 Residential care	84 Membership organ.
	79 Social work	85 Repair of goods
	80 Arts & entertainment	86 Other personal

## Appendix C: Understanding Affordability Implications

*NOTE: This appendix outlines a piece of research by Cambridge Econometrics relating to housing affordability. It explores the relationship between housing demand and supply and affordability and is relevant to this HENA and to considerations for determining levels of housing supply.*

*The HENA uses a simple housing supply and demand indicator to assess the impact of the scenarios on housing supply relative to housing demand as defined by the employment projections. This appendix explores this relationship between housing and employment and verifies the use of employment as a viable proxy for housing demand.*

As part of the approach to understanding the implications for housing affordability in Oxfordshire from the economic trajectories and spatial scenarios, CE has undertaken a detailed, nationwide analysis of local house price and affordability dynamics to inform and build a robust methodology and accompanying model. This is summarised below.

Ultimately, by refining and applying this approach for Oxfordshire, CE will be able to clearly assess and test the potential affordability implications of the three economic and fifteen housing (three trajectories, each with an additional five contrasting spatial scenarios) projections.

### Understanding the national affordability context

Before proceeding with the local analysis, it is beneficial to explore the national context around house prices and affordability, highlighting some its perceived determinants and drivers whilst considering the associated policy challenges and opportunities. This is increasingly important given the policy context around housing, with the UK's housing

**Figure C0:1: Population, employment and dwellings trends in England, 1971-2019**

market having been referred to as “*broken*” in recent years facilitated by a “*housing crisis*” which has stymied housing delivery in many local markets.<sup>51</sup>

**Table C1: Population, employment and dwellings trends in England, 1971-2019**

	At 1971	At 2019	Change, 1971-2019	% change, 1971-2019
Population	46,412,100	56,309,300	9,897,200	21.3%
Employment	22,237,400	30,438,700	8,201,300	36.9%
Dwellings	18,018,000	24,412,100	6,394,100	35.5%

Source: ONS, MHCLG, Cambridge Econometrics.

Figure C0:1 and Table C1 highlight the long run trends around three key housing market inputs: the total population, total employment (or ‘jobs’) and total stock of dwellings (or ‘housing’). Since 1971, housing delivery<sup>52</sup> in England has actually grown consistently faster than its population since 1971, whilst employment – which understandably is much more sensitive to the economic cycle – has also outpaced population growth and has grown marginally faster than housing delivery.

**Figure D0:2: Jobs per head and dwellings per head ratios in England, 1971-2019**

**Table C2: Jobs per head and dwellings per head ratios in England, 1971-2019**

	At 1971	At 2019	Change, 1971-2019	% change, 1971-2019
Jobs per head	0.48	0.54	0.06	12.8%
Dwellings per head	0.39	0.43	0.05	11.7%

Source: ONS, MHCLG, Cambridge Econometrics.

The result of this is that there are now both more homes and more jobs per person in England than ever before, as Figure D0:2 and Table C2 show. Again, whilst employment has trended upwards it has followed a more volatile path in line with the economic cycle. Dwellings per person has trended upwards much more smoothly, though with somewhat limited change since 2000 alongside a notable slowdown after the 2008 financial crisis.

<sup>51</sup> See for instance the Government's housing white paper '[Fixing our broken housing market](#)' (2017)

<sup>52</sup> Note this particular definition refers to net additional dwellings, rather than the narrower housebuilding definition; unlike the former, the latter only considers gross dwelling additions and excludes demolitions, change of use, extensions/additions etc.

**Figure C0:3: Earnings, rental prices and house prices in England, 1971-2019****Table C3: Earnings, rental prices and house prices in England, 1971-2019**

	At 1971	At 2019	Change, 1971-2019	% change, 1971-2019
Nominal average (annual) earnings	£1,700	£30,200	£28,500	1717.5%
Nominal average (annual) rental prices	£50	£860	£810	1651.0%
Nominal average house prices	£7,400	£304,500	£297,100	4026.7%

Source: ONS, Cambridge Econometrics.

Figure C0:3 and Table C3 consider the long run trends around the two alternative costs of housing – the cost of buying a home (house prices) and the cost of renting a home (rental prices)<sup>53</sup> – alongside average annual earnings. Since 1971, (nominal) house price growth has significantly outstripped (nominal) growth in rental prices. After being reasonably well aligned up to the late 1990's, the two have decoupled drastically; since 1971, the average house price has increased a substantial 40x over, more than twice the increase of the average rental price.

Wage growth and rental price growth (in nominal terms) meanwhile have been highly correlated, both increasing 17x over since 1971. The only notable decoupling of this relationship was a period during the late 1990's-2000's, where growth in wages actually eclipsed that of rental prices up until the 2008-09 recession, where it has since returned to trend. Understanding rental prices is important within housing affordability analysis, as economic theory suggests that they represent the 'true cost' of housing for consumers - and are therefore the most sensitive to changes in demand and supply.<sup>54</sup>

<sup>53</sup> Note that these particular measures of house and rental prices are not hedonically priced, in that they do not account for changes in housing quality or composition over the time series

<sup>54</sup> For a summary overview of this theory and relationship see [Wren-Lewis \(2018\)](#). For more detailed explanations and additional references, see [UK Centre for Collaborative Housing Evidence \(2018\) p.p. 14-18](#) and [Oxford Economics p.p. 16-18 \(2016\)](#)

**Figure C0:4: Rental affordability (left axis) and house price affordability (right axis) in England, 1971-2019****Table C4 Rental price affordability and house price affordability in England, 1971-2019**

	At 1971	At 2019	Change, 1971-2019	% change, 1971-2019
Rent/earnings ratio; 'rental affordability' <sup>55</sup>	0.35	0.34	-0.01	-3.7%
Price/earnings ratio; 'house price affordability' <sup>56</sup>	4.44	10.08	5.64	127.1%

Source: ONS, Cambridge Econometrics

Bringing these three variables together, Figure C0:4 and Table C4 present the relative affordability ratios (price relative to earnings) for house and rental prices. Since 1971, rental affordability has stayed relatively constant at around a third of annual earnings, with few significant deviations, though it had been trending upwards for the decade after the financial crisis. Housing affordability meanwhile was relatively stable from the 1970's to 1990's at around 4x annual earnings before accelerating sharply in the 2000's to an unprecedented 10x annual earnings.

Clearly the relative growth in house prices over the past 20 years has presented a significant challenge to aspiring homeowners, and is widely considered as a candidate example of the UK's 'broken' housing market. However, when both the ratio of dwellings per person and rental affordability has stayed so consistent over this timeframe, it is hard to justify calling this a housing 'crisis' – at least at the aggregate, national level.

So what is driving the divergence in house prices and rental costs, especially considering the latter is supposed to represent the 'true cost' of housing?

<sup>55</sup> In line with ONS guidance, rental affordability has been calculated as; annualized average rental price / annualized average workplace earnings. Average here refers to the mean. The median is typically preferred, but data is unavailable over the timeframe required.

<sup>56</sup> In line with ONS guidance, house price affordability has been calculated as; average house sale price / annualized average workplace earnings. Average here refers to the mean. The median is typically preferred, but data is unavailable over the timeframe required.

**Figure C0:5: Rent-house price ratio and real interest rates in England, 1971-2019****Table C5: Rent-house price ratio and real interest rates in England, 1971-2019**

	At 1971	At 2019	Change, 1971-2019	% change, 1971-2019
Rent/house price ratio	0.01	0.00	0.00	-57.6%
Real interest rate	2.96	-1.86	-4.82	-162.7%

Source: ONS, Bank of England, Cambridge Econometrics

As highlighted in Figure C0:5 and Table C5, one candidate explanation<sup>57</sup> is that the persistent decline in interest rates (in both nominal and real terms) during the 1990's and early 2000's, and sharply accelerated following the 2008-09 recession, has contributed and since maintained inflated house prices whilst subduing rental prices. In theory, this can happen for a variety of reasons; in a low interest rate environment:

- Landlords have to charge less to cover their mortgage costs, **reducing rental prices**
- It is easier and more affordable for potential house buyers to get a mortgage, hence the demand for renting decreases, **reducing rental prices and increasing house prices**
- Housing becomes a better and more attractive investment option, for both consumers and investors (both domestic and international), **increasing house prices**

Of course, this has implications for price/affordability-focussed housebuilding strategies; with house prices increasingly sensitive to and determined by a centralised monetary system, even the most substantial and well targeted strategies may not deliver the desired change in prices/increase in affordability. However, this also means that the correct and effective targeting of independent, locally-specific factors becomes ever more important for local policymakers – which are considered in the next chapter.

## Building the local evidence

Having considered the national context and established some of the key drivers and determinants of house prices and affordability, it is important to consider how these correspond at the subnational level, and what role local effects play in determining local prices and affordability. Notably, at this level much greater variability and functionality can

<sup>57</sup> For instance, as observed by the [OECD \(2011\)](#) and [Oxford Economics \(2016\)](#)

be seen in some of the aforementioned variables, reflecting independent, locally-specific characteristics and factors driving and determining local markets.

Though housing market data is available for regional markets (e.g. the South East NUTS1 Region), which are relatively functional and widely reported in subnational analysis, these geographies often fail to capture the unique and localised markets – and thus affordability challenges - within them; for instance, though both within the North West region, Manchester's housing market and affordability challenge is markedly different from Cumbria's.

Therefore, the following analysis considers the evidence at the Local Enterprise Partnership (LEP) level<sup>58</sup>, which comprises 38 intra-regional areas broadly analogous to functional economic areas (which often overlay with functional housing market areas). Though more detailed geographies are available (e.g. Unitary and Local Authority areas), these often map poorly to functional housing market areas, and decrease data quality and availability.

**Figure C0:6: Rental affordability across England, 1971-2019**

Source: ONS, Cambridge Econometrics

To begin with, Figure C0:6 considers the rental affordability ratios of the 38 LEP areas. Unsurprisingly, London is a relative outlier, with the highest rental affordability ratio (least affordable for renting) in the country; the average London worker can expect to spend at least half their gross earnings on rent. This is underscored by the Humber, which has the lowest rental affordability ratio (most affordable for renting) in the country; the average Humber worker could expect to spend only a fifth of their earnings on rent.

However, what is most notable from the data is that for most if not all LEP areas, current rental affordability ratios are not unusually high or trending notably upwards when compared across the whole period – even London for instance had lower rental affordability in the early 1970s and mid-1980s than what it does today. Again, when considering rental costs are supposed to represent the ‘true cost’ of housing for consumers, it is hard to justify the current prescription of a “housing crisis”, even in less affordable parts of the country such as London and the South East.

<sup>58</sup> Defined here as excluding overlap areas

Figure C0:7 replicates this analysis but for housing affordability. Here we see much greater regional variance and dispersion in affordability ratios; the average worker in London, Hertfordshire, and Buckinghamshire for instance can expect to spend 15x their annual earnings on purchasing a home. For the average worker in the Tees Valley, this more than halves to 6x times annual earnings. As with rental affordability though, what is of particular interest is the movement in these ratios over time.

**Figure C0:7: House price affordability across England, 1971-2019**

Source: ONS, Cambridge Econometrics

Whereas a number of 'Home County' LEP areas have had persistently high housing affordability ratios, London was only mid-ranking until the early 2000's. Many areas saw their fastest increase in housing affordability ratios (i.e. a decrease in affordability) over the late 1990's to early 2000's, but since the 2008-09 financial crisis, affordability ratios have stayed stubbornly high for almost all areas (even those weaker performing economically), which is in contrast to previous recession and recoveries e.g. early 1990's recession, early 1980's recession and mid-1970's recession.

**Figure C0:8: Housing delivery and house price growth across England, 1971-2019**

Source: ONS, MHCLG, Cambridge Econometrics

One frequently proposed solution to counteract or at least subdue rapid local house price growth and decreasing affordability is to increase local housing delivery. However, as Figure C0:8 shows, it should be emphasised that there is actually a positive correlation between housing delivery and house price growth: the LEP areas that have built the most houses are also amongst those to have experienced the fastest growth in house prices.

Of course, this doesn't mean that building more homes will increase the rate of house price growth and further decrease affordability - high house prices likely attract and incentivise further housing growth, though the relationship is probably bi-directional. But this doesn't help the argument that increased local housing delivery it is an effective method of reversing or even slowing it – as with many things, it is much more complicated than that.

**Figure C9: Housing delivery and employment growth across England, 1971-2019****Figure C0:9: Employment growth and house price growth across England, 1971-2019**

Source: ONS, MHCLG, Cambridge Econometrics

One of the reasons for this is because housing delivery tends to correlate with employment growth (as shown in Figure ), and employment growth correlates strongly with house price growth (as shown in Figure C0:9). Broadly speaking, more housing means more people, leading to a growth in both labour supply and demand for local services. Both of these are then likely to stimulate additional employment growth.

For instance, when looking at the relationship between employment growth and house price growth (Figure C0:9) it is likely that additional employment growth drives additional demand for housing in the area, putting upward pressure on house prices. Thus the downward pressure created by additional supply coming onto market, is likely to be partly, or maybe even wholly, cancelled out by this upward pressure.

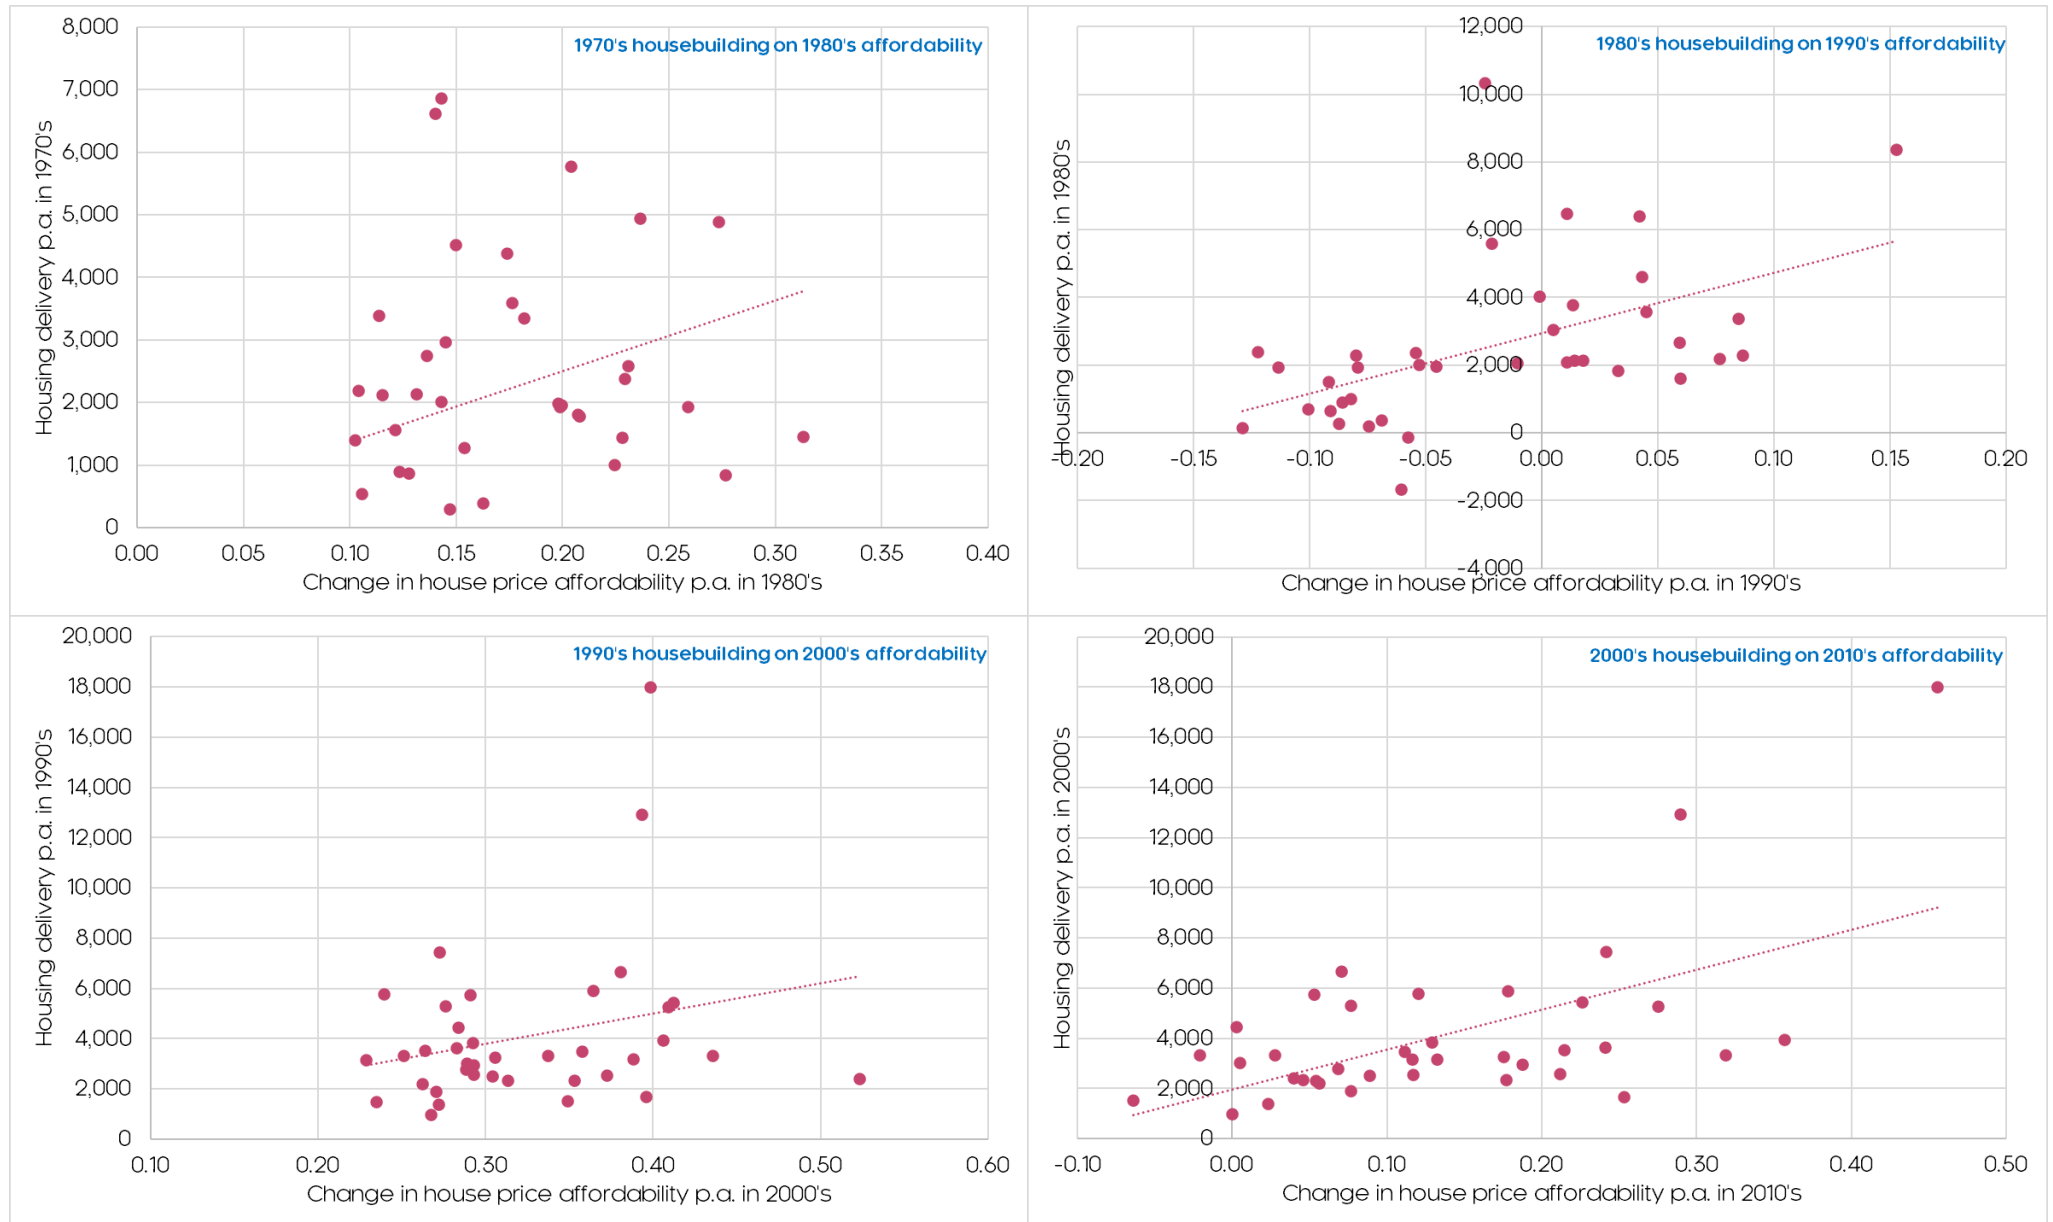

**Figure C0:10: Housing delivery and changes in house price affordability across England, 1971-2019**

Source: ONS, MHCLG, Cambridge Econometrics

As Figure C0:10 shows, the same positive correlation that is seen between an areas housing delivery and house price growth is also seen between an areas housing delivery and its change in affordability (ratios); LEP areas that have built more homes have typically seen a greater increase in affordability ratios (decrease in affordability). Again, this shows us that within local areas, housebuilding alone will not be sufficient to tackle affordability pressures.

Of course, housebuilding at time  $t$  is not an immediate input into house prices at time  $t$  – there is often a lagged effect. To try and better understand potential causality of this relationship, Figure C0:11 (presented over the following page) considers the lagged relationship between housing delivery and affordability changes a decade later – do the LEP areas that build the most houses see affordability ratios deteriorate (i.e. the area becomes more affordable) the following decade?

Across the time series, we continue to see a clear and positive relationship between higher housing delivery in an area and an increase in housing affordability ratios (a decrease in affordability). Generally, this relationship has also become more significant over time, though this has not been a continuous process, with the relationship weakening slightly in the 1990's and 2000's – a time where many areas saw rapid increases in their affordability ratios, as housing and financial markets became increasingly liberalised.

**Figure C0:11: The lagged relationship between housing delivery and changes in house price affordability across England, 1970's-2010's**

Source: ONS, MHCLG, Cambridge Econometrics

**Figure C0:12: Employment growth and housing delivery growth across England, 1971-2019**

Source: ONS, MHCLG, Cambridge Econometrics

As we have seen previously, there is a strong correlation between housing growth and employment growth. So what areas have grown the fastest since 1971, and how might this have impacted on affordability? As Figure C0:12 shows, Cambridge and Peterborough and neighbouring South East Midlands have emerged as the two fastest growing areas. Notably, Southern or rural LEP areas have seen faster growth than Northern or urban LEP areas, whilst London has grown comparatively slowly over this time period.

**Figure C0:13: Employment growth and housing delivery growth across England, 2009-2019**

Source: ONS, MHCLG, Cambridge Econometrics

Most of these trends still hold even when looking at just look at the last decade, as shown in Figure C0:13. Now Cambridge and Peterborough and the South East Midlands are joined by Oxfordshire as the fastest growing LEP areas in England. Southern and rural LEP areas are still typically growing faster than Northern and urban LEP areas. Growth in London has also accelerated, particularly in employment. Some Midland and Northern LEP areas have also seen robust employment growth, but slower housing growth.

However, this scatter plot is notably less tightly bound over the shorter time period, raising the question of whether differences in the ratio of housing delivery to job creation affect affordability?

**Figure C0:14: Changes to jobs-dwellings ratios and house price affordability across England, 2009-2019**

Source: ONS, MHCLG, Cambridge Econometrics

Indeed, as shown in Figure C0:14, LEP areas that have created jobs faster than they have built houses over the past decade have on average seen an increase their affordability ratio (that is, a decrease in affordability). Therefore, when considering the role of local effects in determining prices, it is the interaction between employment growth and housing delivery that can contribute to determining the affordability of an area. Therefore, even given the trends identified at the national level, local economic context still matters for affordability.

**Figure C0:15: Jobs-dwellings ratios and house price affordability across England, 2019**

Source: ONS, MHCLG, Cambridge Econometrics

Reflecting the strength of this relationship, areas with similar characteristics and fundamentals also largely cluster together – as shown in Figure C0:15 - enabling thematic groupings to be identified:

- **‘Left-behind’ places:** areas experiencing long-term economic underperformance (low-growth, high unemployment, low skills), driving down prices (relative to wages) and jobs densities. Dwelling totals can appear inflated due to a higher proportion of vacant dwellings. Examples include Tees Valley, Liverpool City Region, and Humber.
- **High natural amenities or commuter zones:** typically rural and/or coastal areas with relatively low jobs densities but higher than expected prices. The latter is driven by higher local amenity values in these areas (often proxied by high tourism activity) and/or commuting proximity to major urban centres. Examples include Dorset, South East, and New Anglia.
- **Reinvented commuting destinations:** a diverse grouping of areas, historically stable or underperforming, now reinvented as leading regional economic centres with high rates of in-commuting. This results in higher jobs densities but comparatively lower – but often increasing – prices (relative to wages). Examples include Greater Manchester, Greater Birmingham and Solihull, and South East Midlands.
- **High performing areas:** areas with highly successfully and competitive economies, typically regional commuting centres, resulting in very high jobs densities. This drives substantial demand for dwellings, which alongside typically high local amenity values, results in higher prices (relative to wages). Largely found in the South, examples include London, Oxfordshire, and Hertfordshire.

Such categorisations can be beneficial for understanding local housing markets, and resultantly the effective shaping of local housing strategies.

Dear Kathryn,

The land at Gosfield is no longer owned by Marden Homes Ltd. We are now acting on the site on behalf of it's new owner, Chelsteen Homes. The contact there is Bill Poulton.

A revised planning application has been submitted to BDC for consideration. There are no significant issues that have been identified however that should present delay to delivery should the revised application be determined favourably.

Please let me know if you would like us to complete a revised form in this regard.

Laura

**Importance:** High

Dear Laura,  
Please see the attached file. Braintree District Council needs to check information the anticipated timing of completions on the above site, as part of work on checking the deliverable housing land supply in the District. Our records show that you were the contact for the development; could you please advise on the site or provide contact details for someone who can confirm?  
Kind regards,

Kathryn Carpenter

## Review of Housing Sites Identified in the 5 Year Supply 2018-2023

The National Planning Policy Framework (July 2018) requires local planning authorities to identify and update annually a supply of specific deliverable sites to be measured against their housing requirements (paragraph 73). As part of this process, local planning authorities are required to engage with developers and others who have an impact on delivery (see paragraph 74).

As you represent one or more of these sites, we would appreciate you taking the time to fill out the below form. Please complete a separate form for each site.

This form can be returned electronically to [planningpolicy@braintree.gov.uk](mailto:planningpolicy@braintree.gov.uk) or in hard copy if necessary to: Planning Policy, Braintree District Council, Causeway House, Bocking End, Braintree, CM7 9HB.

This form has three parts: Part A – Developer/Company/promoter Details, Part B - Site details and Part C – Site Progress

### **PART A** Developer/Promoter Details

Contact Name:	Steve Read
Position:	Divisional Development & Planning Manager
Organisation:	Bellway Homes Ltd
E-mail Address:	
Telephone Number:	

### **PART B** Site Details (please use separate form for each site)

Site Address/Location:	Site 38 Land east of Sudbury Road Halstead
Planning application reference(s):	BTE/17/0705

Is the site:

Owned by Developer ☒

Site Actively being marketed ☐

Sale to developer under negotiation ☐

Site not actively being marketed ☐

### **PART C** Site Progress

Will Housing completions begin on site before April 2023?	Yes
Planning Status at 31 March 2018:	Outline planning permission
Update on Planning Status:	Full application submitted for 218 homes BTE/18/01749, agent jennifer.carroll@struttandparker.com

# Site Progress cont.. HALSTEAD

Full/reserved matters status: approved, applied for, when planned to be submitted	Submitted <i>FULL APPLICATION SUBMITTED</i>
Details of Discharge of conditions status: submitted	Submitted November 2018; Building Regs Initial Notice (NHBC) submitted
Information on Constraints: Actions needed before completions can be achieved	<i>PLANNING APPROVAL AND COMMENCEMENT OF BUILD.</i>
Access/transport:	<i>ACCESS POINTS AGREED AT OUTLINE APPROVAL</i>
Ground conditions/ contamination:	<i>FARM LAND NO CONTAMINATION EXPECTED.</i>
Drainage (SUDS, flood prevention etc):	<i>APPLICATION WITH FULL PLANNING SUBMISSION</i>
Land ownership:	<i>BELLWAY HOMES.</i>
Other constraints (describe), including market:	<i>N/A.</i>

Total/estimated total site capacity	205 <i>OUTLINE</i>
Dwellings built as at 31 March 2018	0
Outstanding capacity as at 31 March 2018	205
Forecast completions Year 1: April 2018/March 2019	<i>0</i>
Forecast completions Year 2: April 2019/March 2020	<i>20</i>
Forecast completions Year 3: April 2020/March 2021	<i>70</i>

**Subject:** 18/60196/PREAPP Land north East of Inworth Road

Hi Catherine,

Thank you for our meeting on Friday. I have asked Lee to go through the boundary treatment plan with me this week so I will provide comments on this shortly.

In terms of the coloured block plan, please may I have an electronic copy of this?

I have also been asked if I could get some confirmation in writing from you in respect to timescales for the REM submission? And when roughly will works commence?

Could you also please give an indication if possible please?:

- If the site will start to produce completions before April 2023
- View of expected development rates - how many of the 165 are expected to be completed by April 2023?

Many thanks in advance for your help.

Kind Regards,

**Mathew Wilde**

---

Dear Kathryn,

We intend to be in a position to submit an application for planning shortly - in late March or early April 2019. Assuming we are successful I would anticipate completion of the whole site in the first quarter of 2021 based on our clients current aspirations.

I am unable to provide the name of the developer at this time but I trust the above information answers your main queries.

Kind Regards,  
Heather.

Heather Organ BSc Architecture

Heather

**To:** Heather Organ <[REDACTED]>  
**Subject:** Development site at land at Ashen Road Ridgewell  
**Importance:** High

Dear Heather Organ,

We spoke on the telephone recently, when I was enquiring about whether this above site is coming forward for development in the next few years, as you acted as agent for a Mr J Williams in a 2018 pre application, following the sale of the site by the landowner to a developer. The site currently has the benefit of an extant outline permission and is shown as a draft allocation in the emerging Draft Braintree District Local Plan. You kindly provided me with a verbal response, confirming that the site is now owned by a developer, and that a detailed planning application is being drawn up for submission (in 2019?) following on from the pre-application consideration.

Could I please ask if you could provide this confirmation in writing for us – by e-mail response would be fine? If possible, as well as confirming whether the site is expected to start to produce completions by April 2023, any information would be helpful if available on expected estimated timescales for submission of the planning application, start on site, and expected number of dwellings by year –  
April 2019/March 2020 (I assume that will be 0)

April 2020/March 2021  
April 2021/March 2022, and  
April 2022/March 2023.

If you are able to confirm the name of the developer that would also be helpful.

Kind regards,

Kathryn Carpenter

## Review of Housing Sites Identified in the 5 Year Supply 2018-2023

The National Planning Policy Framework (July 2018) requires local planning authorities to identify and update annually a supply of specific deliverable sites to be measured against their housing requirements (paragraph 73). As part of this process, local planning authorities are required to engage with developers and others who have an impact on delivery (see paragraph 74).

As you represent one or more of these sites, we would appreciate you taking the time to fill out the below form. Please complete a separate form for each site.

This form can be returned electronically to [planningpolicy@braintree.gov.uk](mailto:planningpolicy@braintree.gov.uk) or in hard copy if necessary to: Planning Policy, Braintree District Council, Causeway House, Bocking End, Braintree, CM7 9HB.

This form has three parts: Part A – Developer/Company/promoter Details, Part B - Site details and Part C – Site Progress

### PART A Developer/Promoter Details

Contact Name:	Stuart Williamson agent Amec Foster Wheeler
Position:	
Organisation:	The Hunt Property Trust
E-mail Address:	
Telephone Number:	

### PART B Site Details (please use separate form for each site)

Site Address/Location:	Land rear of Halstead Road Earls Colne
Planning application reference(s):	BTE/15/1580

Is the site:

Owned by Developer ☐

Site Actively  
being marketed ☐

Sale to developer  
under negotiation ☒

Site not actively  
being marketed ☐

### PART C Site Progress

Will Housing completions begin on site before April 2023?	YES
Planning Status at 31 March 2018:	Outline permission
Update on Planning Status:	

## Site Progress cont..

Full/reserved matters status: approved, applied for, when planned to be submitted	JULY 2019
Details of Discharge of conditions status: submitted	NONE TO DATE
Information on Constraints: Actions needed before completions can be achieved	NONE BEYOND USUAL
Access/transport:	(Access Reserved ie approved)
Ground conditions/ contamination:	Further investigations per outline
Drainage (SUDS, flood prevention etc):	" " "
Land ownership:	-
Other constraints (describe), including market:	-

Total/estimated total site capacity	80
Dwellings built as at 31 March 2018	0
Outstanding capacity as at 31 March 2018	80
Forecast completions Year 1: April 2018/March 2019	
Forecast completions Year 2: April 2019/March 2020	25
Forecast completions Year 3: April 2020/March 2021	55
Forecast completions Year 4: April 2021/March 2022	
Forecast completions Year 5: April 2022/March 2023

[image002.jpg](#)

---

Morning,

I would advise the following for Conrad Road, Witham (Southfields):

- We have submitted the application and awaiting for further timescales etc
- Yes, this scheme along with Silver End are key to delivering our Homes England Programme and overall targets
- Completions are assumed as follows but these will likely change following appointment of a contractor and also the decision date:

April 2019/March 2020: 0  
April 2020/March 2021: 21  
April 2021/March 2022: 67  
April 2022/March 2023: 36  
April 2023/March 2024: 26

Please be advised that we are currently programming the S106 units to be delivered April 21/22 hence the spike in completions.

Regards,

Conan

Sorry Emma,

I was trying to speak to the client.

Yes please use the latest delivery information we provided you with. In terms of pre-app we don't really have an issue advising that you are aware that we are progressing the reserved matters application despite the outline having not quite been issued yet.

In terms of the time limit extension, I am hopeful that the final matters will be tidied up and agreed well in advance of this date however, to allow for some slippage I am happy to agree this date on behalf of my client. Of course, the sooner we can get this issued the better from our point of view!

Many thanks and have a good weekend.

Hi Dawn

I have worked through the info we have and I can see that you already responded to us on delivery (attached). So sorry to have asked again. I will suggest we increase delivery rates to 30 in 2024/25 and 30 2025/26 as per your email on 8 March 2021.

I would be grateful for a response to the other two matters.

With kind regards

Emma

**To:** Dawn Brodie [REDACTED]  
**Subject:** RE: P21/S0112/PEJ and P17/S3952/O - Hale Road, Benson

Many thanks Dawn – I will get this over to my manager for final sign off so if there is anything to resolve, we can do this before the S106 is complete.

I also had a quick query in terms of the delivery of this site, as we have an appeal coming up where our five year land supply is being challenged and this is one of the sites where the Appellant is questioning delivery – extract below from their proof (attached):

- a) **Site: 1929 Benson NDP: Site BEN 2 (52 dwellings).**
- 5.2 This Site was allocated in Benson NDP and the outline application has remained undetermined since 2017 (P17/S3952/O)
- 5.3 The Council's trajectory is based on developer's delivery intentions.  
*Appellants Commentary*
- 5.4 No Planning Permission has been granted. The target date for decision 20th April 2018 and there is no activity recorded on the application since 2018.
- 5.5 Reduce supply by 52 dwellings.

The council's housing land supply statement has this site down as delivering 26 homes in 2023/24 and 26 homes in 2024/25 and it states that this trajectory is based on the developers delivery intentions. Can you please confirm that this still accords with your expected delivery rates?

Also, I thought it might be prudent for us to agree a new target decision date for P17/S3952/O, to reflect the timeframes that we are working towards to complete the S106 and grant outline planning permission. Can you please agree to extend the target decision date for P17/S3952/O to 1 June 2021?

And finally, would it be acceptable to you / your client for the council to refer to the fact that we have engaged in pre-application discussions for the subsequent Reserved Matters application? We would not need to attach our pre-application response, which at the moment is retained as confidential, but will be publicly available when a Reserved Matters application is submitted. It would simply involve referring to the dates of your pre-application request.

I would be grateful if you could get back to me on these three matters as soon as possible due to the tight timeframes involved in the appeal.

Kind regards

**Smith, Nicola**

**Subject:** Site delivery information

Dear Arron

South Oxfordshire District Council is updating its housing trajectory for sites. As part of this process we are updating the projected delivery rate of permitted and allocated sites. To assist the Council with this process, can you please provide the projected delivery rate for the site:

- Land to the south of Newnham Manor, Crowmarsh Gifford Planning reference P16/S3852/FUL.

Can you please provide the projected construction delivery rate by financial year (1st April to 31st March):

Year	2021/22	2022/23	2023/24	2024/25	2025/26		
No. of dwellings completed	0	30	40	30	x		

The projected delivery rate should be as realistic as possible, taking account of time to secure planning permission and site preparation, therefore can you also provide details on the following, if applicable:

- estimated timeframes for progressing the site through any further full or reserved matters applications;

We anticipate the planning application will be taken back to planning committee late spring and the completion of the S106 shortly thereafter. Although a hybrid planning application the housing will benefit from full planning consent.

- estimated timeframes for progressing discharge of conditions;

We would ensure the planning conditions are submitted for determination by SODC within the Summer 2021

- estimated timeframes for progressing the signing of S106;

Completion by early Summer 2021

- site preparation or whether the site is under construction, and if so the number of completions;

n/a

- whether there is a developer(s) on board;

The applicant is the developer.

- is the site being marketed; and/or

n/a

- any site constraints that could impact the delivery of the site.

None.

- If applicable, how many self-build or custom build plots will be provided on the site.

None.

- If applicable, how many gypsy and traveller pitches will be provided on the site.

None.

We understand that circumstances are difficult at the moment, but it would be greatly appreciated if you could provide at least an estimated delivery rate **by end of play 12 March** please.

If you are not the correct contact, please either forward this email on to the correct person with me cc'd or please pass on their contact details.

If you have any queries, please do not hesitate to contact me.

Best wishes,

**Subject:** RE: 17S19 - Land north east of Didcot - P15/S2902/O

Hi Phil,

Keeping well thanks.

Based on current information and assumed run rate, the following applies.  
This will be updated on a regular basis in line with occupations which we submit.

- **Completions to date: 45**
- **Completions by End of 2021: 95**
- **Completions by End of 2022: 173**
- **Completions by End of 2023: 251**
- **Completions by End of 2024: 330**
- **Completions by End of 2025: 408**

Kind Regards,

Grant Williams  
Engineer

**Subject:** FW: 17S19 - Land north east of Didcot - P15/S2902/O  
**Importance:** High

Hi Grant,

Hope you are well.

In addition to the number of completions to date, please could you provide the projected completions over the next 5 years. The most recent information we have for (Croudace) Didcot NE is shown below, but I do not think this can be correct as (i) you have completions already and (ii) you will have projected completions between now and 2024/2025.

Land Suppl	Site Name	Settlement (parish)	Major or	Detailed permission in	Outlin plan
1009	Land to the North East of Didcot	Didcot	Major	No	P15

If you could provide your projected completions that would be greatly appreciated. It is needed for a report, so if you could advise by Monday that would be great.

Many thanks in advance,

Phil

**Subject:** RE: Site delivery information

**Categories:** Green Category

Dear Yoanna

Further to your email below, I am pleased to provide the following information in respect of projected delivery on the Homes England land at Didcot Gateway South.

Year	2021/22	2022/23	2023/24	2024/25	2025/26	TOTAL
No. of dwellings completed			38	53	53	144

The above is based on an outline planning application being submitted in Spring 2021, with consent secured in October 2021. Homes England are anticipating tendering for delivery partners in 2021 with a developer to be appointed in May/June 2022. Reserved matters applications are anticipated during 2022, with consent secured by early 2023. On that basis, construction is anticipated to start in Spring 2023.

I trust this assists. Please do not hesitate to contact me if any further information would be of use.

Kind regards,

**Emily Ford**

Senior Planner

**Cc:** Sandith, Richard <[Richard.Sandith@southandvale.gov.uk](mailto:Richard.Sandith@southandvale.gov.uk)>  
**Subject:** Site delivery information

Dear Colin

South Oxfordshire District Council is updating its housing trajectory for sites. As part of this process we are updating the projected delivery rate of permitted and allocated sites. To assist the Council with this process, can you please provide the projected delivery rate for the site:

- Land West of Marley Lane, Chalgrove. Planning reference P17/S0094/O.

Can you please provide the projected construction delivery rate by financial year (1st April to 31st March):

Year	2021/22	2022/23	2023/24	2024/25	2025/26		
No. of dwellings completed		70	70	60			

The projected delivery rate should be as realistic as possible, taking account of time to secure planning permission and site preparation, therefore can you also provide details on the following, if applicable:

- estimated timeframes for progressing the site through any further full or reserved matters applications; **RM's approved March 2021**
- estimated timeframes for progressing discharge of conditions; **pre-comm conditions discharged April**
- estimated timeframes for progressing the signing of S106; **n/a**
- site preparation or whether the site is under construction, and if so the number of completions; **n/a**
- whether there is a developer(s) on board; **agreement in place to sell to Ridgpoint Homes who have RM's submitted**
- is the site being marketed; and/or **see above**
- any site constraints that could impact the delivery of the site. **no**
- If applicable, how many self-build or custom build plots will be provided on the site. **none**
- If applicable, how many gypsy and traveller pitches will be provided on the site. **none**

We understand that circumstances are difficult at the moment, but it would be greatly appreciated if you could provide at least an estimated delivery rate **by end of play 12 March** please.

If you are not the correct contact, please either forward this email on to the correct person with me cc'd or please pass on their contact details.

If you have any queries, please do not hesitate to contact me.

Best wishes,

## Scotting, Cathie

---

**From:** Eastwood, Stephanie (Avison Young - UK)  
**Sent:** 12 March 2021 12:58  
**To:** Mircheva, Yoanna  
**Cc:** Gardner, Robert (Avison Young - UK); Ward, Louisa (Avison Young - UK)  
**Subject:** FW: Site delivery information - OBU Wheatley Campus

Hi Yoanna

I hope you are well.

Further to your email below we have reviewed the housing delivery trajectory for the Wheatley Campus site following the outcome of the appeal in April last year based on what we consider to be reasonable assumptions from the information currently available, noting that my client will be disposing of the site to a developer to construct and deliver the scheme.

Please see below our updated housing trajectory:

2021/2022	2022/2023	2023/2024	2024/2025	2025/2026	2026/2027	2027/2028	2028/2029
-	-	76	92	92	92	92	56

CBRE has been appointed by the University to market and dispose of the site. It expects formal marketing to commence in late spring and for the sale of the site to be completed by the end of the summer this year. However, there is already significant interest in the site from multiple house builders.

We would assume that a lead in of c. 16 months be allowed for the approval of reserved matters and discharge of pre-commencement conditions in relation to the first phase of development by the housebuilder before a start on site in around December 2022. Following site preparation, it is anticipated that the first dwelling could then be complete and occupied by around June 2023.

The trajectory is based on the assumption that development will commence in two phases on the areas of the site where there are no significant existing University buildings that would need to be demolished whilst the University continues to occupy certain buildings within the centre of the site in the short-term. The University would vacate the small number of buildings that it continues to occupy in the main body of the campus and demolition works would take place whilst the initial phases of development are under construction and subsequent phases of development would follow.

At this stage, it is anticipated that there would be two sales outlets on site. It is expected that these would each deliver approx. 2.5 market sales per month (i.e. 60 dwellings per annum across the two outlets). As affordable housing would be pepper-potted through the site and be built out contiguously with the private sale dwellings. We assume that an additional approx. 32 affordable dwellings per annum would be delivered based on the proportion of affordable housing secured as part of the consent (34.5%). This would give a total annual delivery rate of c. 92 dwellings (in a full year) as set out above.

Hopefully this is of assistance and is all clear, however, please let us know if you have any queries.

Many thanks,

Steph

Dear Stephanie and Robert,

South Oxfordshire District Council is updating its housing trajectory for sites. As part of this process we are updating the projected delivery rate of permitted and allocated sites. To assist the Council with this process, can you please provide the projected delivery rate for the site:

- Land at Wheatley campus, Oxford Brookes University.

Can you please provide the projected construction delivery rate by financial year (1st April to 31st March):

Year	2021/22	2022/23	2023/24	2024/25	2025/26		
No. of dwellings completed							

The projected delivery rate should be as realistic as possible, taking account of time to secure planning permission and site preparation, therefore can you also provide details on the following, if applicable:

- estimated timeframes for progressing the site through any further full or reserved matters applications;
- estimated timeframes for progressing discharge of conditions;
- estimated timeframes for progressing the signing of S106;
- site preparation or whether the site is under construction, and if so the number of completions;
- whether there is a developer(s) on board;
- is the site being marketed; and/or
- any site constraints that could impact the delivery of the site.
- If applicable, how many self-build or custom build plots will be provided on the site.
- If applicable, how many gypsy and traveller pitches will be provided on the site.

We understand that circumstances are difficult at the moment, but it would be greatly appreciated if you could provide at least an estimated delivery rate **by end of play 12 March** please.

If you are not the correct contact, please either forward this email on to the correct person with me cc'd or please pass on their contact details.

If you have any queries, please do not hesitate to contact me.

Best wishes,

Hi Tracy

I can confirm that the site has been bought from RV with the intention to build it out and deliver the scheme in line with the outline planning permission. The operator will be ARCO accredited as an operator of a retirement villages with 24/7 care and facilities. The intention is to submit reserved matters/discharge planning conditions with a view to commence development in Q1 2022.

I hope that helps but please let me know if you have any queries.

Kind regards

Charlotte

**Subject:** Site delivery information

Dear Tom and Alex,

South Oxfordshire District Council is updating its housing trajectory for sites. As part of this process we are updating the projected delivery rate of permitted and allocated sites. To assist the Council with this process, can you please provide the projected delivery rate for the site:

- Watlington NDP: Site B- Land Off Cuxham Road and Willow Close.

Can you please provide the projected construction delivery rate by financial year (1st April to 31st March):

Year	2021/22	2022/23	2023/24	2024/25	2025/26		
No. of dwellings completed		10	30	20	10		

The projected delivery rate should be as realistic as possible, taking account of time to secure planning permission and site preparation, therefore can you also provide details on the following, if applicable:

- estimated timeframes for progressing the site through any further full or reserved matters applications;

RM submission likely this year

- estimated timeframes for progressing discharge of conditions;

Pre-commencement conditions anticipated to be discharged by 2022/23

- estimated timeframes for progressing the signing of S106;

S106 expected to finalise early this year

- site preparation or whether the site is under construction, and if so the number of completions;

Construction has not yet commenced

- whether there is a developer(s) on board;

Terms agreed with interested housebuilder

- is the site being marketed; and/or

- any site constraints that could impact the delivery of the site.

No significant constraints. In terms of timescale, the route of the edge road needs to be finalised to inform the RM submission

- If applicable, how many self-build or custom build plots will be provided on the site.

0

- If applicable, how many gypsy and traveller pitches will be provided on the site.

0

We understand that circumstances are difficult at the moment, but it would be greatly appreciated if you could provide at least an estimated delivery rate **by end of play 12 March** please.

If you are not the correct contact, please either forward this email on to the correct person with me cc'd or please pass on their contact details.

If you have any queries, please do not hesitate to contact me.

Best wishes,

**Yoanna Mircheva**

**Subject:** Site delivery information

Dear Tom and Alex,

South Oxfordshire District Council is updating its housing trajectory for sites. As part of this process we are updating the projected delivery rate of permitted and allocated sites. To assist the Council with this process, can you please provide the projected delivery rate for the site:

- Watlington NDP: Site C- Land off Pyrton Lane.

Can you please provide the projected construction delivery rate by financial year (1st April to 31st March):

Year	2021/22	2022/23	2023/24	2024/25	2025/26		
No. of dwellings completed			25	25	10		

The projected delivery rate should be as realistic as possible, taking account of time to secure planning permission and site preparation, therefore can you also provide details on the following, if applicable:

- estimated timeframes for progressing the site through any further full or reserved matters applications;

RM submission likely this year

- estimated timeframes for progressing discharge of conditions;

Pre-commencement conditions anticipated to be discharged by 2022/23

- estimated timeframes for progressing the signing of S106;

S106 expected to finalise early this year

- site preparation or whether the site is under construction, and if so the number of completions;

Construction has not yet commenced

- whether there is a developer(s) on board;

Terms agreed with interested housebuilder

- is the site being marketed; and/or

- any site constraints that could impact the delivery of the site.

No significant constraints. In terms of timescale, the route of the edge road needs to be finalised to inform the RM submission

- If applicable, how many self-build or custom build plots will be provided on the site.

0

- If applicable, how many gypsy and traveller pitches will be provided on the site.

0

We understand that circumstances are difficult at the moment, but it would be greatly appreciated if you could provide at least an estimated delivery rate **by end of play 12 March** please.

If you are not the correct contact, please either forward this email on to the correct person with me cc'd or please pass on their contact details.

If you have any queries, please do not hesitate to contact me.

Best wishes,

Yoanna Mircheva

**Subject:** Land at Marley lane, Chalgrove

Dear both,

I hope you are well,

As I have mentioned previously, I am involved in a Public Inquiry which starts next week, the appellants have questioned our five year land supply and yours is one of the sites where the Appellant is questioning delivery – extract below from their proof :

#### **I) 1639 Land West of Marley Lane, Chalgrove (P17/S0094/O) 10/04/2018 (200 dwellings)**

6.2 Site has outline planning permission.

6.3 The Council's trajectory is based on developer delivery intentions; RM approval Q3 2020 and start on site Q4 2020.

#### *Appellants Commentary*

6.4 While there has been activity in discharging conditions it is noted that a further OL application was submitted by Hill Property Investments on the 18 December 2020 on the grounds that:

*Given the ongoing uncertainty regarding COVID, the applicants consider it prudent to submit this application in case for any reason the extant application should expire on 1st May 2021.*

6.5 The reserved matters are still outstanding the landowner has expressed doubts regarding the implementation of the consent in a timely manner. Furthermore, the lead in time and build out rate is more optimistic than the councils evidence base (CD:K32 appendix C page 57).

Utilising this evidence would suggest that there will be at least a year between RM approval and first completions so first completion will be 2022/3 build out rate of 52 dpa as per Interim Report would deliver 156 dwellings not 200 and this would mean a reduction of 44 dwellings.

6.6 Reduce supply by 44 dwellings.

The council's housing land supply statement has this site down as delivering 20 homes in 2021/22, 90 in 2022/23 and 90 in 2023/24 and it states that this trajectory is based on the developers delivery intentions. I would be extremely grateful if could please confirm as soon as possible that this accords with your expected delivery rates? I am currently preparing a rebuttal statement so I would be grateful for a response as soon as possible.

Kind Regards

Nicola

## **Information from Developers/Landowners relating to Expected Delivery of Housing from Disputed Large Sites within the District**

## Chris Wood

**From:** Thomas Corbin <[REDACTED]>  
**Sent:** 12 September 2022 17:28  
**To:** Chris Hargraves  
**Cc:** Paul Comerford  
**Subject:** RE: Letter to Prior and Partners re Salt Cross Garden Village  
**Attachments:** Salt Cross Garden Village (September 2022 housing trajectory).doc

Hi Chris,

Sorry slightly behind Friday's deadline but please see attached updated housing trajectory for the Salt Cross Garden Village. You will note this is behind the 150 homes previously assumed in the Council's 5yhls paper but consistent with the latest AAP phasing and reinforced by the fact that the Applicant and Landowners are committed to delivering homes on this site as soon as the submitted OPA is determined. We have included some key assumptions in the attached regarding targeting milestones. In all honesty, we believe this could be expedited through the renewed focus on the OPA's determination and on-going Section 106 negotiations but have updated to attached to represent current likelihoods.

The estimate for resolution to grant (RTG) in the Salt Cross phasing report (EV36, March 2022) aimed for an August 2022 RTG (extract below) resulting in completions in the second half of 2026. Despite currently assuming a delayed RTG (which is now targeted for the end of this year) is achieved, we would hope we could retain a mid-2023 section 106 agreement through collaborative working over the next few months.

Kind regards,

Tom

**Table 1: Assumed lead-in period to first completions**

Item	Description	Potential timing
1.	WODC resolution to grant outline planning permission.	June - August 2022
2.	Completion of section 106 agreement(s).	June - August 2023
3.	Grant of outline planning permission.	June - August 2023
4.	Discharge pre-commencement conditions.	October - December 2023
5.	Initial infrastructure works; i.e. to open up the site (see Note 1).	January - June 2024
6.	Pre-planning and marketing of first sub-phase.	January - June 2024
7.	Conditional contract with first housebuilder.	June - December 2024
8.	Phase 1a - pre-application design and consultation work.	January - March 2025
9.	Submission of first sub-phase reserved matters application ("RMA").	May - July 2025
10.	Determination of first sub-phase RMA.	August - October 2025
11.	Discharge pre-commencement conditions.	October - December 2025
12.	Mobilization.	January - March 2026
13.	Commencement on site.	April - June 2026
14.	First completions.	Second half of 2026

**Notes:**

1. The overall timeline may need to be extended to allow more time for design work on and subsequent approval of enabling infrastructure RMAs; e.g. the first sections of the spine road.

Your Ref :  
Our Ref :  
Date : 31 August 2022

Dear Paul

**West Oxfordshire District Council Housing Land Supply Position Update (2022 – 2027) - Information required in relation to Salt Cross Garden Village**

I am writing to inform you that the District Council is in the process of updating its Housing Land Supply (HLS) Position Statement for the period 1<sup>st</sup> April 2022 – 31<sup>st</sup> March 2027.

The update will take account of housing completions from 1<sup>st</sup> April 2011 – 31<sup>st</sup> March 2022 and extant planning permissions and other commitments as of 1<sup>st</sup> April 2022.

As you will be aware, where sites have outline planning permission only or are allocated in a development plan, to be considered deliverable, the Council must have clear evidence that housing completions will begin on site within five years.

As such, I would be grateful if you could complete the pro-forma overleaf, taking into account the current stage which Salt Cross Garden Village has reached in the planning process and the anticipated build trajectory.

As you will see, the pro-forma extends beyond the 5-year period 2022 – 2027 reflecting the fact that for a number of sites, completions are likely to extend beyond 2027.

If you are able to complete the trajectory for the entire build out of your site that would be helpful, not least because this information will also help to inform our forthcoming Local Plan review.

If you are able to provide any additional information in support of your anticipated trajectory (including assumed timings around grant of outline planning permission, Section 106 discussions, reserved matters, discharge of conditions etc.) that would be helpful.

I look forward to hearing from you at your earliest convenience. I appreciate it is holiday season and that you may be unable to respond immediately but if you could provide the requested information no later than Friday 9 September or sooner if possible, I would be grateful.

Thank you in advance for your assistance with this important matter. If you wish to discuss or require any further information or clarification, please let me know as soon as possible.  
Yours sincerely

**Chris Hargraves**  
**Planning Policy Manager**

### Anticipated development trajectory – Salt Cross Garden Village

	<sup>1st</sup> April 2022 – 31 <sup>st</sup> March 2023	<sup>1st</sup> April 2023 – 31 <sup>st</sup> March 2024	<sup>1st</sup> April 2024 – 31 <sup>st</sup> March 2025	<sup>1st</sup> April 2025 – 31 <sup>st</sup> March 2026	<sup>1st</sup> April 2026 – 31 <sup>st</sup> March 2027	<sup>1st</sup> April 2027 – 31 <sup>st</sup> March 2028	<sup>1st</sup> April 2028 – 31 <sup>st</sup> March 2029	<sup>1st</sup> April 2029 – 31 <sup>st</sup> March 2030	<sup>1st</sup> April 2030 – 31 <sup>st</sup> March 2031	<sup>1st</sup> April 2031 – 31 <sup>st</sup> March 2032	<sup>1st</sup> April 2032 – 31 <sup>st</sup> March 2033	<sup>1st</sup> April 2033 – 31 <sup>st</sup> March 2034	<sup>1st</sup> April 2034 – 31 <sup>st</sup> March 2035	<sup>1st</sup> April 2035 – 31 <sup>st</sup> March 2036	<sup>1st</sup> April 2036 – 31 <sup>st</sup> March 2037
Number of anticipated housing completions (per annum)					50	70	135	160	180	195	195	210	210	210	195
Cumulative completions for reference					50	120	255	415	595	790	985	1,195	1,405	1,645	1,810

### Additional notes (please set out here any further information in support of the above assumptions)

- Grosvenor's outline planning application (20/01734/OUT) was submitted in July 2020. Although the Salt Cross AAP is yet to be formally adopted, we believe the Inspector finding the AAP sound subject to main modifications provides weight to the AAP as a material consideration in the determination of the OPA a strong indicator of the deliverability of the OPA. Grosvenor remain committed to the delivery of the Garden Village and eagerly await the positive determination of the submitted planning application.
- The above housing trajectory is based on the below estimated milestones and the trajectory within the Salt Cross Phasing report (March 2022):
  - December 2022 - Salt Cross AAP adopted
  - December 2022 / January 2023 - Resolution to grant
  - August 2023 – Section 106 signed
  - 2024/25: Early phase RMA(s) produced, submitted and approved
  - 2025/26: Construction starts on site
  - Late 2026: First completions

## Chris Wood

**From:** Ashley Maltman [REDACTED]  
**Sent:** 11 September 2022 23:28  
**To:** Chris Hargraves  
**Cc:** Roger File; Nigel McGurk  
**Subject:** FW: Letter to Blenheim re Land at Hill Rise and Land North of Banbury Road  
**Attachments:** Letter to Blenheim re Land at Hill Rise and Land North of Banbury Road (003).doc

Hi Chris,

Thanks for your e-mail in relation to our proposals at Hill Rise and Banbury Road, for completeness I have also sought to provide delivery rates on our sites at Eynsham and Park View, Woodstock.

### Hill Rise and Banbury Road

See attached completed trajectory for both sites. As you know these are 2 allocated sites and two planning applications are with WODC planning officers for consideration, both originally submitted January 2021. We sent back to officers last week what we hope are final responses that address any concerns they previously had. We are hoping that they will both go to and receive approval at the October Uplands Committee meeting, however, we are yet to hear confirmation of this from Officers.

Hill Rise is a hybrid application, and our current plan is to be on site Q2 2023 - 1<sup>st</sup> completion Q1 2024 - if a consent is granted at the October planning committee and any s106 concluded rapidly, any reserved matters application will follow for the remainder of the site to allow continuity of delivery on site.

Banbury Road is an outline application, and we would immediately follow with preparing a Reserved Matters application but would not expect to be on site for 12-18 months following grant of outline permission to allow for reserved matters approval and discharge of conditions

Both planning applications have been with officers for a considerable amount of time and hopefully we are in a position where positive recommendations will be forthcoming in October/November 2022. We have invested considerable time and money into these applications and if consents are not forthcoming, for reasons discussed with my colleagues, we will need to review our position and no realistic timeline can be predicted. In such a scenario, we must consider proceeding to appeal as our view is that the determination timescales for both planning applications - which are ambitious proposals for exemplar schemes on 2 allocated sites - have taken far too long.

### Eynsham

See below our proposed trajectory, however, in similar vein to Hill Rise and Banbury Road, this is dependent upon the timely determination of the planning application (full planning application) which is to be submitted in Q4 2022:

- 2022-2023
- 2023-2024
- 2024-2025 - 18 dwellings
- 2025-2026 - 35 dwellings
- 2026-2027 – 17 dwellings

### Park View, Woodstock

See below our completions expected over the corresponding period.

- 2022-2023 – 70 dwellings
- 2023-2024 - 70 dwellings
- 2024-2025 – 53 dwellings

- 2025-2026 – 42 dwellings

You will also note we now have an interest in North Witney site allocation; however, the consortium's position and trajectory will be conveyed through Tim Burden at Turleys for this site.

If you have any further questions, please don't hesitate to contact me.

Kind regards

Ash

Dear Tim

**West Oxfordshire District Council Housing Land Supply Position Update (2022 – 2027) - Information required in relation to the North Witney Strategic Development Area (SDA)**

I am writing to inform you that the District Council is in the process of updating its Housing Land Supply (HLS) Position Statement for the period 1<sup>st</sup> April 2022 – 31<sup>st</sup> March 2027.

The update will take account of housing completions from 1<sup>st</sup> April 2011 – 31<sup>st</sup> March 2022 and extant planning permissions and other commitments as of 1<sup>st</sup> April 2022.

As you will be aware, where sites have outline planning permission only or are allocated in a development plan, to be considered deliverable, the Council must have clear evidence that housing completions will begin on site within five years.

As such, I would be grateful if you could complete the pro-forma overleaf, taking into account the current stage which the North Witney SDA has reached in the planning process and the anticipated build trajectory.

As you will see, the pro-forma extends beyond the 5-year period 2022 – 2027 reflecting the fact that for a number of sites, completions are likely to extend beyond 2027.

If you are able to complete the trajectory for the entire build out of your site that would be helpful, not least because this information will also help to inform our forthcoming Local Plan review.

If you are able to provide any additional information in support of your anticipated trajectory (including assumed timings around grant of outline planning permission, Section 106 discussions, reserved matters, discharge of conditions etc.) that would be helpful.

I look forward to hearing from you at your earliest convenience. I appreciate it is holiday season and that you may be unable to respond immediately but if you could provide the requested information no later than Friday 9 September or sooner if possible, I would be grateful.

Thank you in advance for your assistance with this important matter. If you wish to discuss or require any further information or clarification, please let me know as soon as possible.

Yours sincerely

Dear Andrew

I hope you are well. Abby Fettes kindly provided your contact details and I attach a letter in relation to land east of Monahan Way, Carterton in the context of anticipated housing land supply.

Essentially we would be grateful for an update on your expected timescales for taking the site through to completion. I am aware from Abby that you are looking for some additional numbers on the site so please feel free to reflect that possibility when providing your response.

I look forward to hearing from you at your earliest convenience. Do let me know if you need any further information or clarification.

Kind regards

### Anticipated development trajectory – Land East of Monahan Way, Carterton

	1 <sup>st</sup> April 2022 – 31 <sup>st</sup> March 2023	1 <sup>st</sup> April 2023 – 31 <sup>st</sup> March 2024	1 <sup>st</sup> April 2024 – 31 <sup>st</sup> March 2025	1 <sup>st</sup> April 2025 – 31 <sup>st</sup> March 2026	1 <sup>st</sup> April 2026 – 31 <sup>st</sup> March 2027	1 <sup>st</sup> April 2027 – 31 <sup>st</sup> March 2028	1 <sup>st</sup> April 2028 – 31 <sup>st</sup> March 2029	1 <sup>st</sup> April 2029 – 31 <sup>st</sup> March 2030	1 <sup>st</sup> April 2030 – 31 <sup>st</sup> March 2031	1 <sup>st</sup> April 2031 – 31 <sup>st</sup> March 2032	1 <sup>st</sup> April 2032 – 31 <sup>st</sup> March 2033	1 <sup>st</sup> April 2033 – 31 <sup>st</sup> March 2034	1 <sup>st</sup> April 2034 – 31 <sup>st</sup> March 2035	1 <sup>st</sup> April 2035 – 31 <sup>st</sup> March 2036	1 <sup>st</sup> April 2036 – 31 <sup>st</sup> March 2037
Number of anticipated housing completions (per annum)	119	103	103	103	103	0	0	0	0	0	0	0	0	0	0

### Bloor Commentary:

Our current delivery rate to date has been approximately 100 dwellings per annum.

Our forecast completions for 1<sup>st</sup> April 2022 to 31<sup>st</sup> March 2023 total 119 dwellings.

The current outline planning permission for the site is for 700 dwellings. Bloor will shortly be submitting a planning application for a further 100 dwellings approximately.

Whilst inevitably there will be some uncertainty as to economic and market conditions going forwards, currently, and assuming we obtain planning permission for the additional 100 dwellings, it is reasonable to forecast the delivery of a further 100 (approx.) dwellings per annum over the four years from 1<sup>st</sup> April 2023, with site completion by mid-2027.

Dear Ms Simpkins

Many thanks for your email. It is very helpful to understand your position. We are about to review our local plan and I wonder if we should look at 'de-allocating' the site if you have no interest in bringing it forward for development.

Perhaps you could let me know if this is something you would like us to further consider or whether you would like to retain it as an allocated housing site to provide some more flexibility in the longer term should your position change?

Kind regards

Chris

Dear Mr Hargraves

Thank you for your email. Our position hasn't changed since last September. We will not be considering the land for development before 2027.

To be honest, Long Hanborough has had 3 developments to absorb in very quick succession, together with the small development currently under construction on the old Oliver's Garage site - another 24 homes. Our local infrastructure is at breaking point and we strongly feel that, in all fairness, we cannot be responsible for further development in the village.

We hope you understand our position.

Yours sincerely

Dear Ms Simpkins

I write by way of follow up to my previous email of September last year. I appreciate that you said you would get in touch with us should your position change, but as we are about to update our housing land supply position statement, I thought it would be sensible just to quickly contact you to see if there was any movement regarding the potential release of this site for development.

Our new position statement will cover the 5-year period 2022 – 2027 and will essentially set out how many new homes we anticipate being delivered for particular sites over that timescale.

As such, if you could just provide a further brief update that would be very helpful.

Kind regards

Dear Ms Simpkins

I hope this email finds you well. You will recall from previous correspondence (below) that my colleague Deborah Wyatt contacted you last year regarding land at Myrtle Farm and whether there was any interest in bringing the site forward for development.

As it has been some time since this last exchange, I thought I would seek a further update from you to see if the position remains the same.

As part of its commitment to tackling the climate emergency, the District Council is looking for flagship schemes to demonstrate best practice in terms of building fabric efficiency and the use of renewable energy and I thought this site could be a potential candidate.

We are also about to embark on a review of our local plan and as part of that process will need to consider those sites which are already allocated for development and whether they are realistically likely to come forward or not.

As such, if you do have time to give me a very brief update on your thoughts regarding the site, it would be very much appreciated.

Many thanks in anticipation.

Subject: Land at Myrtle Farm, Long Hanborough

Thank you for your letter of 18th June regarding the development of land at Myrtle Farm, Long Hanborough.

My brother and I have also had numerous requests from private developers to sell the land, but we have decided, for the foreseeable future, to leave it as an agricultural field.

As you will know, our village has had to absorb three large housing estates along with smaller developments, and the amenities in the village are already heavily overburdened. (We have a brand new larger doctors' surgery being built but with no guarantee of additional doctors.) We cannot, in good conscience, add to this state of affairs.

If we have a change of mind in the future, and land is still required for housing, we will get back in touch with you.

Yours sincerely

Annette Simpkins

Dear Jessica  
Thank you for your email.  
We are content for the delivery rates to be based on the Council's own assumptions and expect the site to be brought forward for development once a decision has been issued but we are unable to put a timeframe on this.  
Hope this helps.  
Kind regards

Angela Rennie

**Subject:** South Kesteven District Council Annual Position Statement Housing Deliverability Request Form APS041

Dear Angela,

Thank you for your email. The request for a submission on delivery rates is to inform the Council's APS and the anticipated delivery of housing on all sites across the District. The site LV-H7 Main Road (South), Long Bennington is allocated for housing within the Local Plan and the principle of development for housing is accepted by the Local Plan. Should you wish to continue to not submit a response, the site is considered to be deliverable and delivery rates will be based on the Council's own assumptions.

I would be grateful if you could confirm that once a decision has been issued the site will be brought forward for development?

Kind regards,

Jessica.

Dear Amy

Thank you for your email below, requesting information on **Local Plan Allocation LV-H7 Main Road (South), Long Bennington**.

This site refers to application ref : S20/0775, which is still undetermined; we are waiting for a date when the application will be heard at committee.

Until a decision has been issued unfortunately we are not able to complete the information you are requesting.

Kind regards

Angela Rennie

<b>Landownership</b>		
<b>1</b>	Do all landowners with an interest in the site support the development of the site?	Yes.
<b>2</b>	Have the landowners agreed to sell the land for development?  If so, are there any restrictions included in the option /developer agreement	Yes.
<b>3</b>	Please provide a signed statement (as attached – section 4) to demonstrate the commitment of all landowners and developers to the development of this site	Confirmed.
<b>Timescales</b>		
<b>4</b>	When do you expect development of the site to commence (subject to assumptions relating to the planning process)? If commencement is delayed, please explain why.  <i>If site is under construction, please state commencement date and total of units completed so far. If delivery has exceeded or not progressed as expected, please explain why.</i>	Approximately 2025/26.

<b>5</b>	If you do not have planning permission but completions are expected on site within 5 years, please provide evidence (e.g. progress towards detailed permission)	The intention is to prepare and submit an outline planning application by the end of 2022.	
<b>6</b>	If the site is not expected to be built within the next five years (i.e. by 2026/27) what are the reasons for this?	N/A	
<b>Site Delivery</b>			
<b>7</b>	Has the site got planning permission	Yes/No	Application number and date of decision
	Full	No	
	Outline	No	
	Reserved Matters	No	
<b>7a</b>	If you answered Outline to question 7 and no reserved matters have been submitted when do you intend to submit a reserved matters application?	N/A	
<b>8</b>	If you do not have planning permission, when do you intend to submit a planning application?	The intention is to prepare and submit an outline planning application by the end of 2022.	
<b>9</b>	Are there any events that may change the delivery schedule (such as other sites being prioritised elsewhere)?	Unknown.	
<b>10</b>	When do you think that the affordable housing element will be delivered?	Delivery of affordable housing to be confirmed.	
<b>11</b>	What is the planned phasing of delivery and are there any specific reasons for this?	Planned phasing of delivery to be confirmed.	
<b>12</b>	If site is not under construction what time has been allowed for site preparation works?	To be confirmed.	
<b>13</b>	If site is not under construction when do you expect to complete the first dwelling?	Approximately 2025/26.	

### Section 3 – Infrastructure

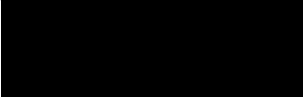

14	What new or improved infrastructure is needed within the scheme to ensure the development is deliverable and attractive to the market?	To be confirmed.
15	Is an implementation plan in place for the provision of infrastructure and if so, what are the timescales for delivery?	To be confirmed.
16	Is the site dependent upon the provision of off-site infrastructure? If so, is delivery of this infrastructure likely to affect the delivery of development on your site?	To be confirmed.

### Section 4 – Signed Statement

Section 2 question 3 requests a signed statement to demonstrate the commitment of landowners and developers to the development of this site. Please use this page to confirm that all parties involved in the site are committed to its development
