

# Graven Hill

## A41 Roundabout Drainage Strategy

**Date:** June 2020

**Client Name:** Graven Hill Village Development Company

**Document Reference:** WIE11386-101-TN-1-1-2

This document has been prepared and checked in accordance with  
Waterman Group's IMS (BS EN ISO 9001: 2015, BS EN ISO 14001: 2015 and BS EN ISO 45001:2018)

Issue	Prepared by	Checked & Approved by
First -24.06.20	Karthi Palanniyapan Senior Engineer 	Nick Jones-Hill Senior Associate Director 

## 1. Introduction

- 1.1. This technical note has been produced to brief the surface water drainage strategy proposed for A41 Roundabout adjacent to the Graven Hill Site. Proposed roundabout to replace existing Pioneer Road/A41 junction to improve traffic flow from Graven Hill Development and to provide a future vehicular link to the adjacent Wretchwick Green development site.

## 2. Surface Water Drainage Strategy

- 2.1. The drainage strategy has been developed on following assumptions.
  - All highway surface, adjacent footways and verge between highway and footway has been considered to be 100% impermeable.
  - The greenfield rate of 4.2 l/s/ha has been applied for storage estimate.
  - MicroDrainage 2019.1 Quick Storage Estimator tool has been used to determine the attenuation requirements.
  - Drainage catchment includes proposed A41 roundabout and highway widening on the east and west of the roundabout.
  - Exiting surface water sewer arrangement serving the existing highway catchment will be retained where possible.
  - Existing ditch base level is shallow therefore, to collect, convey, attenuate and discharge surface water into existing shallow ditch requires careful consideration to avoid pumping.

- Surface water from proposed highway widening formed at low level on the west arm would be discharged to existing ditch, due to gravity connection to proposed attenuation not being feasible. To compromise, the existing highway surface located adjacent to and within the proposed roundabout footprint, which is currently discharging surface water into ditch, has been connected to proposed attenuation system.
- Filter drains will be provided adjacent to proposed widening to provide treatment to “First Flush” from highway runoff.
- Kerb outlets will be used along the perimeter of the central island and filter drains to convey flow to attenuation system.
- Kerb drainage will be provided where gullies unable to provide gravity drainage system.
- SuDS Maintenance plan will be prepared following consultation with OCC Highways.

### 3. Drainage Catchment

- 3.1. It should be noted that the proposed roundabout would replace the existing Pioneer Road and A41 junction. Proposed catchment includes the full extent of the roundabout and road widening on the both east and west arm.
- 3.2. Attenuation feature has been proposed at the middle of the roundabout therefore, surface water from the catchment has to flow to attenuation feature by gravity. The proposed road widening has been designed to tie-in to existing road levels, a small part of proposed highway formed at low level referred as AREA1 which extends to an area of 1125m<sup>2</sup>, which is unable to connect to attenuation by gravity. This area will be connected to the existing ditch to the north of the highway.
- 3.3. Existing highway has been previously connected to existing ditch and currently located adjacent to proposed roundabout and within roundabout footprint referred as AREA2 which extends to an area of 1650m<sup>2</sup>. AREA2 has been proposed to connect to attenuation system, which provides approximately 50% betterment.
- 3.4. Table 1 below summarises the catchment impermeable area and discharge rate. Discharge rate is calculated based on greenfield runoff rate of 4.2 l/s/ha. See Appendix A for greenfield runoff calculation.

Table 1: Catchment Area and Discharge Rate

Catchment	Impermeable Area (ha)	Flow Rate (l/s)
A41 Highway (100%)	0.677	2.80

- 3.5. Table 2 below shows the Quick Storage estimate attenuation requirement based on the impermeable area and allowable discharge rate. See Appendix B for Quick Storage Estimate Calculation.

Table 2: Attenuation Requirements

Catchment	Impermeable Area (ha)	Discharge Rate (l/s)	Attenuation Required (m <sup>3</sup> )
A41	0.677	2.8	528

## **4. Existing Ditches**

- 4.1. Surface water from A41 roundabout proposed to outfall into the existing ditch to the east. Connectivity survey to be carried out to confirm downstream levels and connectivity.
- 4.2. Existing ditch under proposed road will be culverted.

## **A. Greenfield Runoff Calculation**

## CALCULATIONS

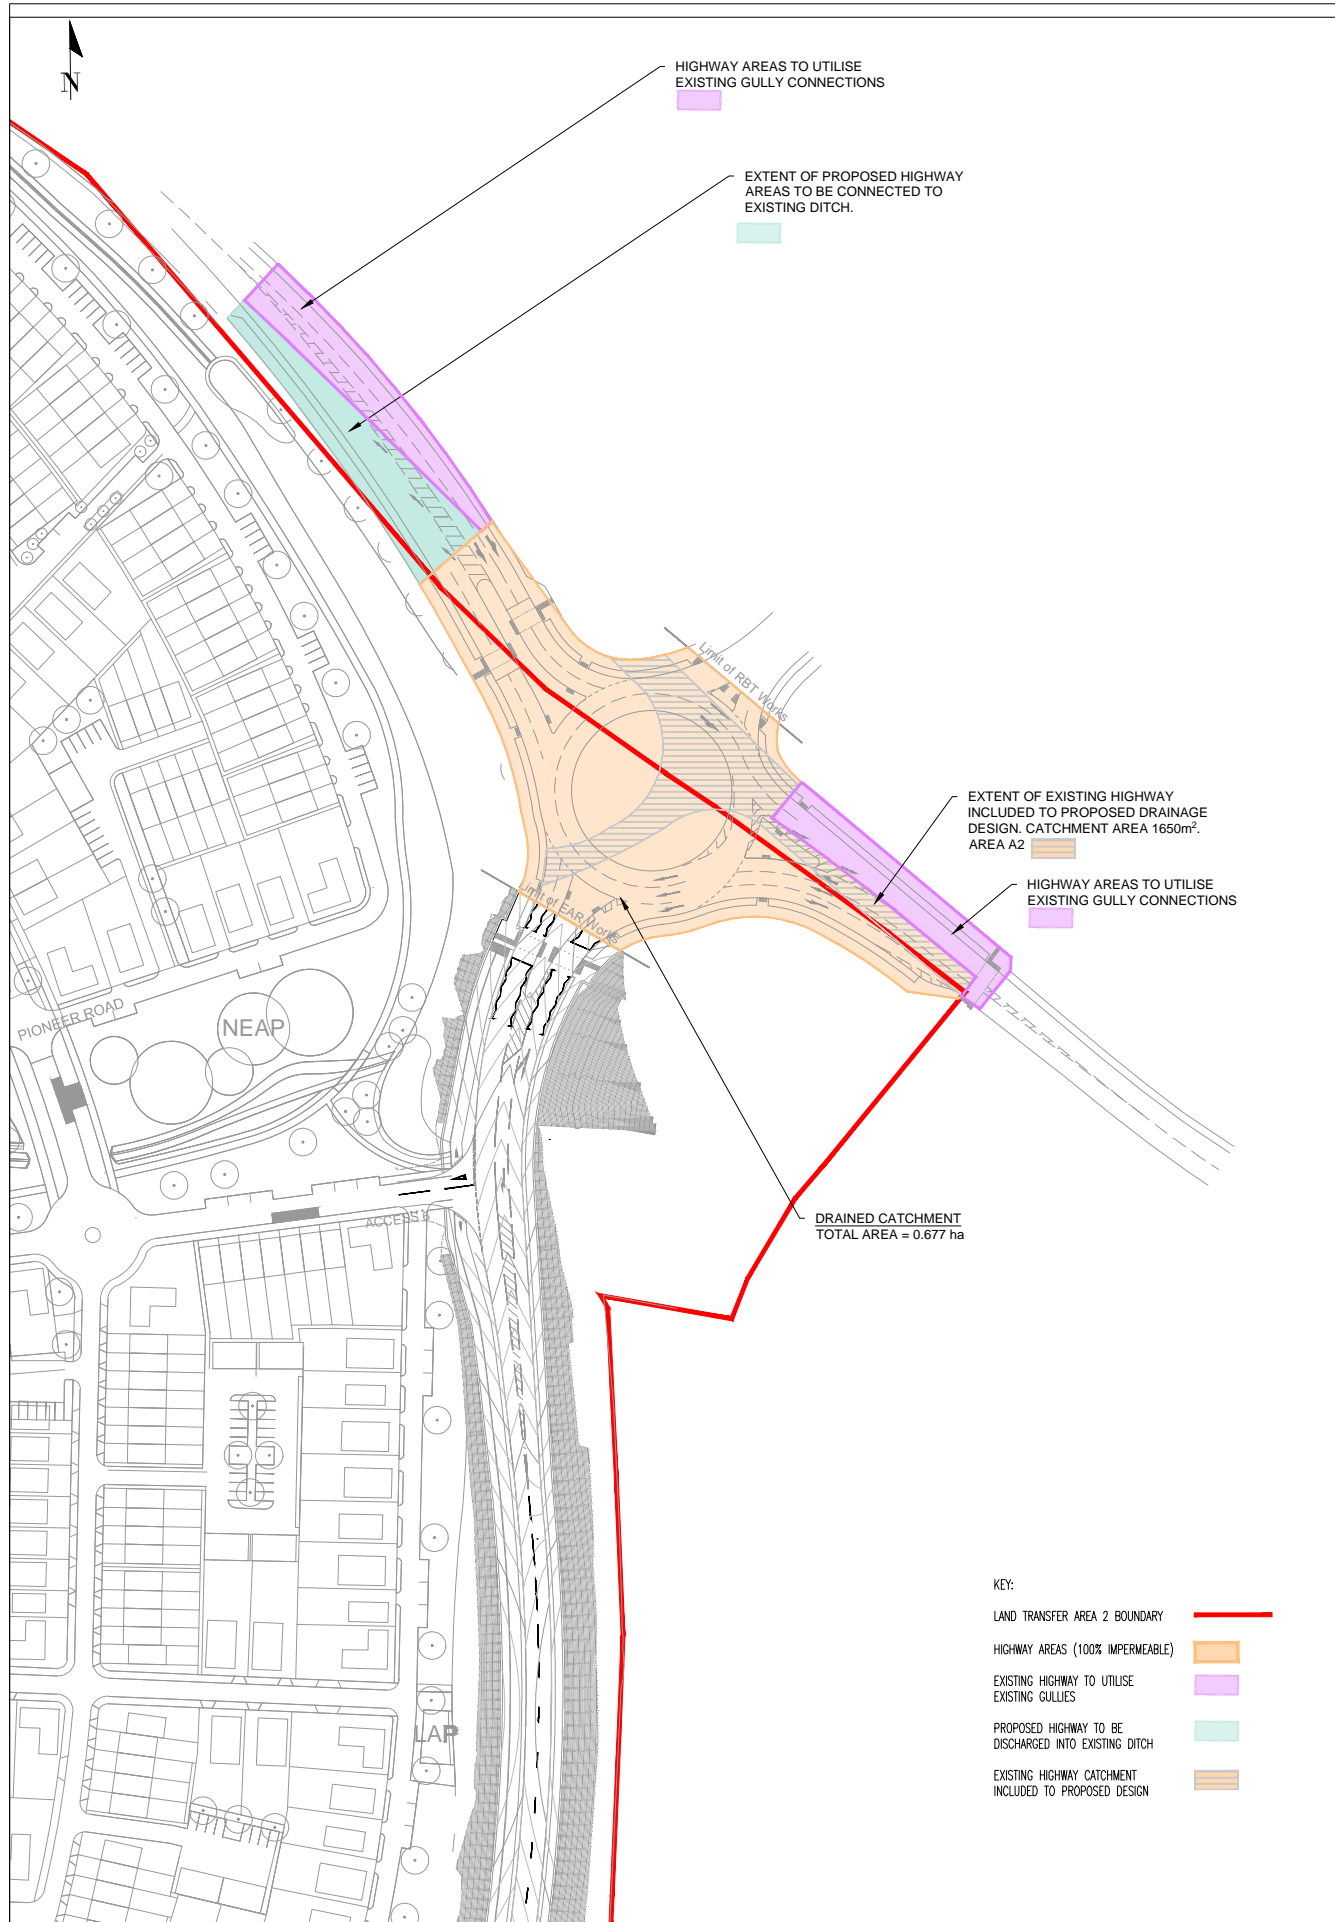

Company:	WIE	Office:	Birmingham
Sheet No:	1 of 1	Project No:	WIE11386
By:	Karhi P	Date:	12.06.2020
Checked:	Nick J	Date:	12.06.2020

Project Title WIE11386 - Graven Hill  
 Calculations Title Surface Water Management - Cacthment A41 Roundabout

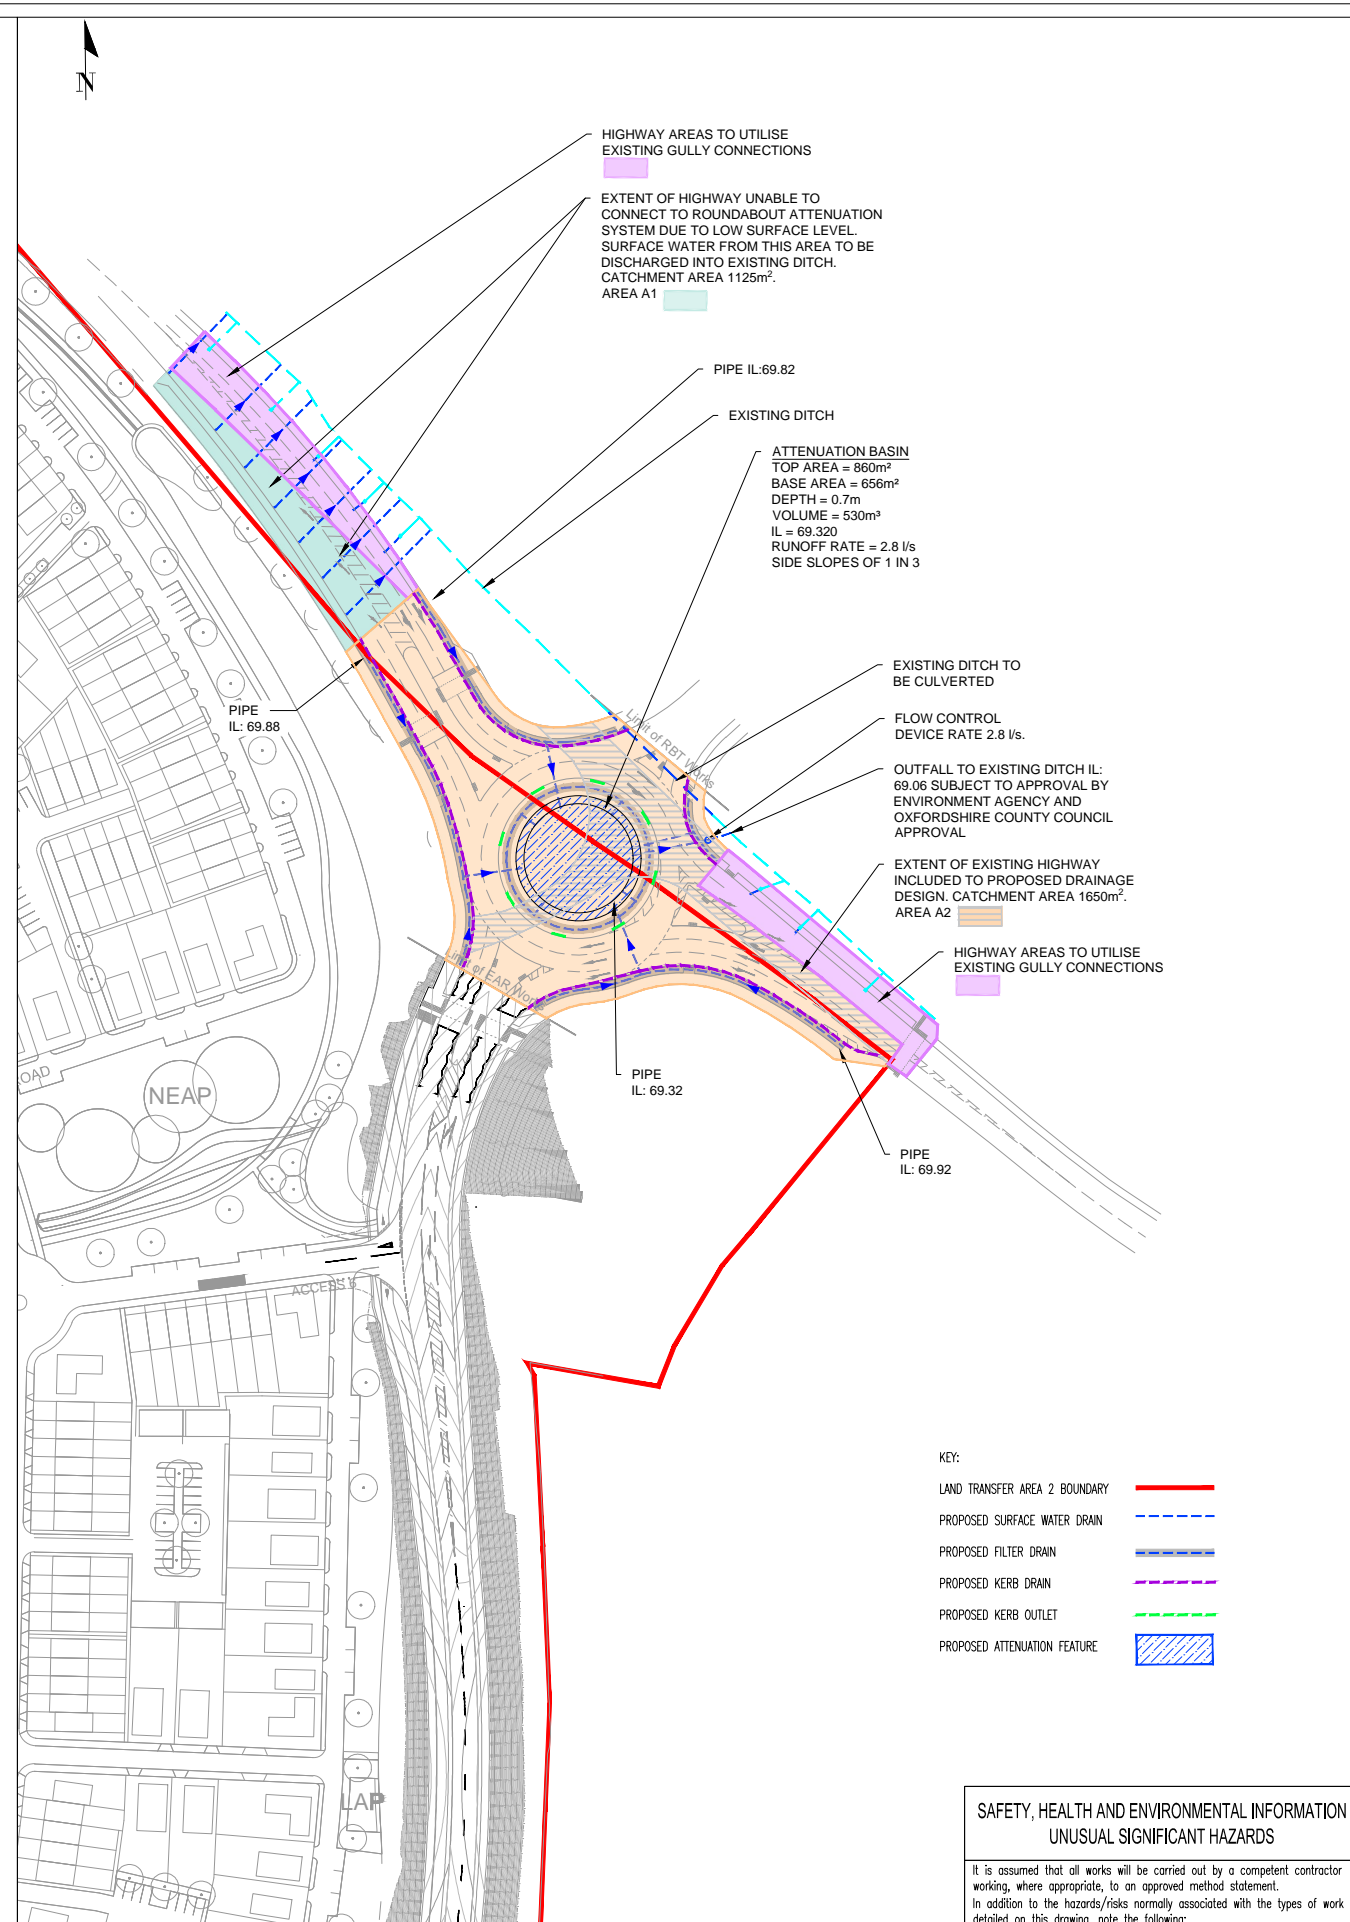

LOCATION	CALCULATIONS	OPTIONS																				
	In order to calculate the volume of surface water attenuation required for the Site, Windes Microdrainage version 2019.1, Source Control module, Quick Storage Estimate has been used. The input and output data for which are shown below;																					
<u>Input:</u>	 <p>The screenshot shows the 'Quick Storage Estimate' dialog box with the 'Variables' tab selected. The inputs are: FEH Rainfall (dropdown), Return Period (years) = 100, Version = 2013, Point (button), Site = GB 459667 220739 SP 59667 20739. The outputs are: Cv (Summer) = 0.750, Cv (Winter) = 0.840, Impemeable Area (ha) = 0.677, Maximum Allowable Discharge (l/s) = 2.8, Infiltration Coefficient (m/hr) = 0.00000, Safety Factor = 2.0, and Climate Change (%) = 40.</p>																					
<u>Output:</u>	 <p>The screenshot shows the 'Quick Storage Estimate' dialog box with the 'Results' tab selected. The output text reads: 'Global Variables require approximate storage of between 484 m³ and 572 m³. These values are estimates only and should not be used for design purposes.'</p>																					
	As Windes Quick Storage Estimate provides a range of attenuation volumes it is considered that an average value of the range is suitable for preliminary design sizing.																					
	<table border="0"> <tr> <td>Minimum:</td> <td>484.0</td> <td>m<sup>3</sup></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>Maximum:</td> <td>572.0</td> <td>m<sup>3</sup></td> <td>Preliminary Estimate:</td> <td>528</td> <td>m<sup>3</sup></td> <td></td> <td></td> <td></td> <td></td> </tr> </table>	Minimum:	484.0	m <sup>3</sup>								Maximum:	572.0	m <sup>3</sup>	Preliminary Estimate:	528	m <sup>3</sup>					
Minimum:	484.0	m <sup>3</sup>																				
Maximum:	572.0	m <sup>3</sup>	Preliminary Estimate:	528	m <sup>3</sup>

**SAFETY, HEALTH AND ENVIRONMENTAL INFORMATION  
UNUSUAL SIGNIFICANT HAZARDS**

It is assumed that all works will be carried out by a competent contractor working, where appropriate, to an approved method statement. In addition to the hazards/risks normally associated with the types of work detailed on this drawing, note the following:

CONSTRUCTION	1.		
	2.		
	3.		
MAINTENANCE / CLEANING	1.		
	2.		
	3.		
DECOMMISSIONING / DEMOLITION	1.		
	2.		
	3.		

This drawing should not be scaled. Dimensions to be verified on site. Any discrepancies should be referred to the Engineer prior to work being put in hand. This drawing is the property of Waterman Infrastructure & Environment Limited, and the drawing is issued on the condition that it is not copied, reproduced, retained or disclosed to any unauthorised person, either wholly or in part without the consent in writing of Waterman Infrastructure & Environment Limited Pickfords Wharf, Clink Street, London SE1 9DG 1 020 7928 7888 1 020 7902 0992

**GENERAL NOTES**

- THIS DRAWING IS TO BE READ IN CONJUNCTION WITH ALL ENGINEER'S, ARCHITECT'S OR OTHER RELEVANT DRAWINGS AND SPECIFICATIONS.
- ALL DIMENSIONS AND LEVELS ARE TO BE CHECKED ON SITE BY THE CONTRACTOR PRIOR TO PREPARING ANY WORKING DRAWINGS OR COMMENCING ON SITE.
- THE CONTRACTOR MUST ENSURE AND WILL BE HELD RESPONSIBLE FOR THE OVERALL STABILITY OF THE BUILDING/STRUCTURE/EXCAVATION AT ALL STAGES OF THE WORK.
- ALL WORK BY THE CONTRACTOR MUST BE CARRIED OUT IN SUCH A WAY THAT ALL REQUIREMENTS UNDER THE HEALTH AND SAFETY AT WORK ACT ARE SATISFIED.
- ALL WORK IS TO BE CARRIED OUT IN COMPLIANCE WITH THE REQUIREMENTS OF THE RELEVANT STATUTORY AUTHORITIES AND REGULATIONS.
- OS DATA, TOPOGRAPHICAL SURVEY AND LIDAR DATA PROVIDED BY GLENN HOWELLS ARCHITECTS ON 3RD OCTOBER 2013
- ADDITIONAL DRAINAGE SURVEY INFORMATION PROVIDED BY MK SURVEYS ON 18TH DECEMBER 2014
- LAND TRANSFER AREA 1&2 BOUNDARY BASED ON GLENN HOWELLS ARCHITECTS DRAWING NO: 1982-A-L-573 REV V
- NORTHERN AREA MASTERPLAN PROVIDED BY GLENN HOWELLS, DRAWING NO: 1982-A-L-011-AA
- EMPLOYMENT AREA MASTERPLAN PROVIDED BY INC DESIGN, DRAWING NO: INC-SA[20]020 REV. P08
- CHOICE OF SURFACE WATER ATTENUATION FUTURE SUBJECT TO PROPOSED ROUNDABOUT FINISHED LEVELS.
- INVERT LEVELS OF PIPE SHOWN HERE ARE INDICATIVE MINIMUM INVERT LEVELS SUBJECT TO FINAL ROUNDABOUT DESIGN LEVELS.
- DRAINAGE PROPOSAL IS SUBJECT TO APPROVAL BY OXFORDSHIRE COUNTY COUNCIL HIGHWAYS/DRAINAGE ENGINEERS.
