Dear CDC

"We are deeply concerned that the proposed development will introduce a significant risk to the safety of our own two boys and all those children who attend the primary and pre-school in Steeple Aston. Traffic congestion at both school drop off and collection already pose significant challenges to safely navigate the children, parents and staff into and out of the school premises due to the traffic congestion and volume of vehicular movements already happening.

The introduction of these industrial units is going to introduce a further 100-300 extra vehicular movements each day, at similar times to when the school drop offs and collections will be taking place. We would strongly encourage CDC to put the safety of the local children ahead of an industrial development which in truth isn't in keeping with the local area, and one would seriously question whether the already fragile infrastructure is capable of taking the pounding that will come with the construction and operation of the proposed development. "

Kind regards

Damian and Josie Cassidy
