Subject: RE: New comments for application 21/03644/OUT

David

Within the NPPG reservoirs should be considered as potential flood hazards and therefore the risks associated with them assessed. However, I do accept the principal intent is probably to cover open and perched bodies of water rather than reinforced concrete contact tanks of the nature here.

If a precedent has been set whereby the flood risk from this particular “reservoir” was not considered during the determination of a nearby site which is more at risk, I am prepared to withdraw my comments regarding this application site.
