

Title: Howes Lane (A4095) / Bucknell Road / A4095 Junction

Technical Note 10 v8

Date: February 2023

## 1.0 Introduction

- 1.1.1 Jubb has been commissioned by Hallam Land Management Ltd (HLM) to provide highways and transportation advice in relation to a proposal for a residential-led mixed use development on land north-east of the railway line in North West Bicester 'Hawkwell Village'.
- 1.1.2 A planning application (Ref: 21/04275/OUT) was submitted in December 2021 for a residential led mixed use development for up to 3,100 dwellings.
- 1.1.3 The Site forms part of the allocated North West Bicester Eco-Town development. Historical traffic modelling of the allocation has shown a need for the implementation of the A4095 Strategic Link Road (SLR) to bypass the Howes Lane (A4095) / Bucknell Road / A4095 double junction.
- 1.1.4 The Howes Lane (A4095) / Bucknell Road / A4095 consists of a roundabout junction to the north of the railway line and a priority junction to the south of the railway line and currently operates over capacity.
- 1.1.5 Oxfordshire County Council (OCC) received funding from Homes England and the Oxfordshire Housing and Growth Deal to implement infrastructure in order to enable proposed development to come forward. The funding allocated to the SLR has enabled the completion of the rail underbridge. Unfortunately, due to time limits on spending of the allocated fund, the remaining monies have been reallocated to other strategic highway schemes in Oxfordshire. Hallam are currently in discussion with OCC and Cherwell District Council (CDC) to investigate other potential funding mechanisms for the SLR.
- 1.1.6 The SLR is a large strategic piece of highway infrastructure and will cost a considerable sum of money. Hawkwell Village will need to deliver and release a significant quantum of dwellings in order to be able to financially contribute its share of the s106 requirements to fund the road.
- 1.1.7 Therefore, this Technical Note (TN) undertakes a review of the operation of the existing Howes Lane (A4095) / Bucknell Road / A4095 junctions and promotes a signalisation scheme to mitigate the effects of the early phases of the development in the interim, before the SLR is delivered. The scheme, which offers improved active travel crossing facilities, has been designed so that it can be adjusted with minimal disruption when the SLR is delivered.
- 1.1.8 Following the submission of Version 6 of this TN to OCC and the return of initial comments from the Highway Officer, this version provides a redesign of the junction and subsequent remodelling to address the matters raised by OCC.
- 1.1.9 The Firethorn planning application (Ref: 21/01630/OUT) for 530 residential dwellings, with a recommendation by the planning officer for permission to be granted (subject to the expiry of the consultation period, conditions and subject to a s106 agreement), was considered by Councillors at the CDC Planning Committee held on 12<sup>th</sup> January 2023; the application was deferred due to the need of Councillors to consider the submission of late comments.

- 1.1.10 Following extensive discussions between the applicant's transport consultants and OCC Highways regarding the effect of the development on the Howes Lane (A4095) / Bucknell Road / A4095 junction, OCC have concluded **that a 50% increase in delay at the junction is not a 'severe' impact and that in "the context of an increasingly urban setting, drivers will become accustomed to congestion on all routes into and around Bicester by 2026"**.
- 1.1.11 OCC have also given weight to the delivery of the SLR, stating "the most challenging element of the road scheme, the bridge under the railway, has already been delivered" and that "there are current development proposals on the land required for the scheme, which means the land can potentially be safeguarded". **OCC Highways conclude that the impact of the development, given the future delivery of the SLR will be temporary and is not considered to be severe.**
- 1.1.12 OCC removed their Highways Objection and thus a precedent has been set regardless of the result of the Planning Committee. **This decision enables a minimum of 530 dwellings in North West Bicester to be occupied with no mitigation at the Howes Lane (A4095)/Bucknell Road/A4095 junction.**

## 2.0 Technical Background

- 2.1.1 OCC have specified that the recently revalidated Bicester Transport Model (BTM) is the preferred modelling tool to assess future development and mitigation options in Bicester. It is OCC's model and the development trip generation used in this assessment is the model's trip generation i.e. not the reduced 'Vision' trip generation which has recently been discussed with OCC. Therefore, it is understood that the traffic flow movements produced by the BTM and used for the purposes of this assessment, are in accordance with the requirements of OCC. The model's trip generation is considered to offer an assessment that is a worst-case scenario and in reality, the trip generation of the development will be less.
- 2.1.2 Tetra Tech, custodians of the Bicester Transport Model (BTM), were commissioned by HLM to undertake SATURN model runs of the following scenarios:
- 2026 Reference Case – Base + Committed Traffic;
  - 2026 Hawkwell with Development 1a – 675 dwellings; and
  - 2026 Hawkwell with Development 2a – 1250 dwellings.
- 2.1.3 Tetra Tech provided turning movements for each scenario attached at **Appendix A**. From these turning movements, Traffic Flow Diagrams, attached at **Appendix B**, have been produced.
- 2.1.4 It should be noted that the revised TN uses the revised turning movements provided by Tetra Tech (26<sup>th</sup> January 2023). It is understood that an issue was identified requiring the demand model to be altered which led to the 2026 and 2031 'with development' scenarios to be rerun.

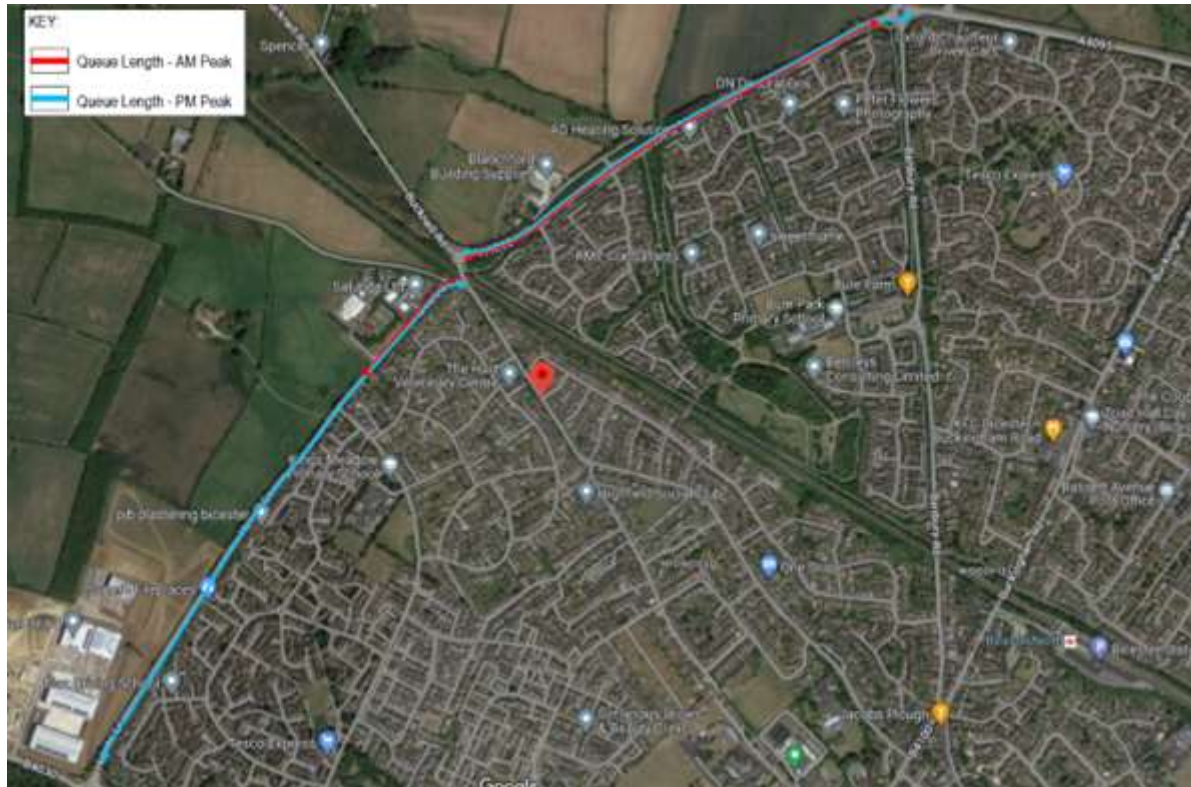

## 3.0 Existing Junctions

- 3.1.1 Using the traffic flows provided by the BTM, the '2026 Reference Case' operation of the existing junctions has been undertaken using the JUNCTIONS 10 software. Due to the proximity of the two junctions and their operation being dependent on each other, the modelling has been undertaken using 'linked lane simulation'. A summary of the results is shown in **Table 3.1** with the output report attached at **Appendix C**.
- 3.1.2 The roundabout is modelled as Junction 1 and the priority junction as Junction 2.

Arm	AM			PM		
	Queue (PCU)	Delay (s)	Max LOS / RFC	Queue (PCU)	Delay (s)	Max LOS / RFC
J1 – Bucknell Road (North)	1.1	14.74	B	0.7	11.40	B
J1 – A4095 (East)	184.6	622.83	F	193.5	638.13	F
J1 – Bucknell Road (South)	1.2	4.68	A	1.2	4.50	A
J2 – Bucknell Road (South)	0.2	0.68	A	0.1	0.47	A
J2 – A4095 Howes Lane (West)	53.4	291.99	F	232.6	972.07	F
J2 – Bucknell Road (North)	3.1	16.51	C	3.0	14.67	B

*Table 3.1 – Summary of Junction Results for Existing Junctions – Base + Committed Development*

- 3.1.3 The 'linked lane simulation' results indicate that the existing junctions will operate over capacity in 2026 with committed traffic. The committed development traffic is generated by the following committed development that is included in the 2026 BTM: 8,085 dwellings, 15,642sqm retail use, 308,335sqm employment use and 1,899 jobs of other employment use.
- 3.1.4 Queues on the A4095 East arm of Junction 1 (roundabout) are predicted to be 185 pcus in the AM peak hour and 194 pcus in the PM peak hour. In the AM peak hour queues will extend to just before the A4095 / B4100 (Banbury Road) roundabout and in the PM peak hour the queue will extend across the A4095 / B4100 (Banbury Road) roundabout.
- 3.1.5 Queues on the A4095 West arm of Junction 2 (priority) are predicted to be 54 pcus in the AM peak hour and 233 pcus in the PM peak hour. These queues extend across the Avonbury Business Park and Thames Valley Police junctions in the AM peak hour and to just before the A4095/ B4030 / Middleton Stoney Road roundabout in the PM peak hour.
- 3.1.6 **Figure 3.1** shows a visual representation of the predicted traffic queues for the '2026 Reference Case' scenario.

*Figure 3.1 – 2026 Reference Case – Predicted Vehicle Queue Lengths*

3.1.7 OCC have commented that the queues lengths reported by the ‘2026 Reference Case’ modelling appear to be longer than modelling undertaken for other developments. As requested, the modelling has been undertaken using the BTM traffic flows and as the model provides future year traffic flows only it is not possible to undertake a validation exercise. In addition, the modelling undertaken for the Firethorn development has assessed and validated only the southern priority junction; due to the proximity of the two junctions and their obvious interaction and subsequent blocking of movements, it is considered that the presented modelling is a more accurate assessment of the junctions’ performance. Finally, as shown in this report, the mitigation scheme(s) do not only mitigate the development traffic (i.e. the performance of the junction remains the same as the ‘2026 Reference Case’ scenario) but they mitigate all traffic (i.e. background + committed) and therefore, the performance relative to the existing design is not of relevance; it is sufficient to understand that the existing junctions are operating over capacity and the mitigation scheme provides a comprehensive solution.

#### **4.0 Proposed Interim Mitigation Scheme**

4.1.1 In order to improve the junction and reduce queues and delay, it is proposed to signalise the two junctions with the added benefit of providing controlled pedestrian / cycle crossing points. The preliminary design drawing including signal head positions and swept path assessment is attached at **Appendix D**.

4.1.2 The footways around the junction are all provided with a width of 2m and includes the widening of the footway on the eastern side of Bucknell Road south of the railway. A controlled pedestrian crossing has been introduced on the Bucknell Road south arm to improve east/west pedestrian movements and increase pedestrian safety at the junction and an uncontrolled crossing with a central refuge has been introduced on Howes Lane (western arm) to maintain a route to and from the Aldershot Farm Public Right of Way.

4.1.3 The design of the junction has been undertaken to ensure a minimum of 1m clearance from the bridge structure enabling the installation of crash barriers if required by Network Rail.

- 4.1.4 HGVs manoeuvring through the existing priority junction, from Howes Lane turning left to Bucknell Road North, track over the opposing side of the carriageway requiring oncoming vehicles travelling southbound on Bucknell Road to give way. Additionally, HGV manoeuvring through the priority junction, turning right from Bucknell Road North to Howes Lane, require the right turn lane on Howes Lane to be free of vehicles in proximity of the give-way line. The introduction of the signals and its associated stop lines enables unfettered HGV movements through the junction, allowing free movement of all vehicles within the signal stages and improving highway safety.
- 4.1.5 Junction capacity modelling has been undertaken using the LINSIG software. A summary of the results is shown in **Table 4.1** with the output report attached at **Appendix E**.
- 4.1.6 The results indicate that with 1,250 dwellings all arms of the junction operate with a Degree of Saturation below 90%. The modelling indicates that all queued vehicles will move through the junction using an optimised 180 second cycle time.
- 4.1.7 The existing junction is known to be congested and this congestion at a land constrained junction is the main reason for the delivery of the SLR. The loss of the Homes England funding means that unless alternative funding is sourced, the cost of this expensive piece of infrastructure will have to be met by developments that increase traffic flows along the A4095. To enable the Hawkwell development to be able to fund its share of the SLR requires a period of house sales to be undertaken. The aim of this TN is to provide a mitigation solution that provides additional vehicle capacity until the developer is able to fund its share of the SLR; a positive of the design is that pedestrian safety can be improved through the provision of crossing facilities and the widening of an existing substandard footway. OCC have commented that 180s cycle time is too long for pedestrian phases; it should be noted that this is an interim scheme and OCC as the highway network manager are able to reduce the cycle time to improve pedestrian wait times at the expense of vehicle capacity.

*Table 4.1 – Summary of LINSIG Results for Signals Mitigation Scheme*

- 4.1.8 The queues on the A4095 eastern arm are significantly improved. With 1,250 dwellings there is a queue of 22 vehicles in the AM peak hour and 24 pcus in the PM peak hour both peak hours effectively removing any impact on nearby junctions as the queue ends before the Trefoil Drive junction. Comparing the junction's operation in 2026 with development against the 2026 Reference Case there is a reduction in queues on this arm of 163 pcus in the AM peak hour and 170 pcus in the PM peak hour. Maximum delay reduces from 623s per pcu to 84s per pcu in the AM peak hour and from 638s per pcu to 89s per pcu in the PM peak hour, a saving of 9 minutes on travel times in the peak hours.
- 4.1.9 The queues on the A4095 western arm also see a significant reduction generating a queue of 12 pcus in the AM peak hour and a queue of 32 pcus in the PM peak hour with the traffic generation of 1,250 dwellings and removes any knock-on impact on nearby junctions with the exception of the Avonbury Business Park junction. Comparing the junction's operation in 2026 with development against the 2026 Reference Case there is a reduction in queues on this arm of 41 pcus in the AM peak hour and 201 pcus in the PM peak hour. Maximum delay reduces from 292s per pcu to 88s per pcu in the AM peak hour and from 972s per pcu to 138s per pcu in the PM peak hour, a saving of 4 minutes in the AM peak hour and 14 minutes in the PM peak hour.
- 4.1.10 The introduction of signals introduces a delay to the movements on Bucknell Road (i.e. north and south arms). However, the assessment of 1,250 dwellings, indicates a queue of 12 and 13 pcus on the Bucknell Road North arm in the AM and PM peak hours respectively and queues of 23 and 19 pcus on the Bucknell Road South arm in the AM and PM peak hours respectively. The predicted delay is considered within a normal range for a signalised junction in an urban environment and the associated vehicle queues do not affect the operation of nearby junctions.

4.1.11 **Figure 4.1** shows a visual representation of the predicted traffic queues for the '2026 Reference Case + 1250 dwellings' scenario.

*Figure 4.1 – 2026 Reference Case – Predicted Vehicle Queue Lengths*

## 5.0 2031 Future Year Assessment with Full Development Buildout

5.1.1 Jubb received the BTM modelling outputs for the following scenarios from Tetra Tech:

- 2031 Reference Case - Base + Committed Traffic; and
- 2031 Hawkwell with Development 1a – full buildout using BTM trip generation.

5.1.2 Tetra Tech provided turning movements for each scenario attached at **Appendix A**. From these turning movements, Traffic Flow Diagrams, attached at **Appendix B**, have been produced.

5.1.3 The development is proposing to provide an all vehicle link road between the western site access and the Bucknell Road / A4095 existing roundabout junction i.e. to the south of the SLR. This link road enables the removal of the previously proposed junction on the SLR to the east of the western site access and reduces delay on the SLR. The BTM modelling did not assess this proposal and therefore, a manual adjustment of the future traffic flows through the junction has been undertaken (see **Appendix B**).

5.1.4 A 'final solution' scheme has been designed which enables the downgrade of Bucknell Road to an active travel route and the introduction of the proposed all vehicle link to the SLR. The interim scheme was designed to enable the final solution scheme to be constructed with minimal disruption.

5.1.5 This scheme introduces two controlled active travel crossings which will provide access to the existing Public Right of Way which routes alongside the northern side of the railway.

5.1.6 The preliminary design drawing including signal head positions and swept path assessment is attached at **Appendix F**.

- 5.1.7 Junction capacity modelling of the final solution mitigation scheme has been undertaken using the 2031 BTM turning movement outputs (modified) and LINSIG software. A summary of the results is shown in **Table 5.1** with the output report attached at **Appendix G**.

Arm	Lane	AM			PM		
		DoS (%)	Queue (PCUs)	Delay s/PCU	DoS (%)	Queue (PCUs)	Delay s/PCU
<b>2031 Full Buildout – BTM Trip Generation</b>							
Bucknell Road (North)	Left	53.1	4.1	40.6	52.6	4.9	29.7
	Right	53.1		39.5	52.6		30.6
A4095 (East)	Left	51.5	6.2	29.8	54.2	5.0	37.6
	Right	50.2		38.5	53.7		41.0
Bucknell Road (Internal Southbound)	-	39.9	0.5	0.3	37.2	0.3	1.5
Bucknell Road (South)	Left	17.5	1.6	30.6	20.8	1.7	31.2
	Right	17.5		19.1	20.8		18.0
A4095 (West)	Left	17.5	1.4	9.5	21.2	1.5	10.0
	Right	17.5		40.3	20.3		36.3
Bucknell Road (Internal Northbound)	Left	17.8	0.9	6.0	18.6	0.8	1.6
	Right	17.8		7.4	18.6		9.0
<b>PRC (%)</b>		<b>69.6</b>			<b>66.0</b>		
<b>Cycle Time</b>		<b>90s</b>					

- 5.1.8 The results indicate that with the realignment of the A4095 there will be a significant reduction in vehicles routing through the Howes Lane / Bucknell Road / A4095 junction and the final solution mitigation scheme will perform with plenty of spare capacity operating on a 90s cycle.

## 6.0 Summary and Conclusion

- 6.1.1 The existing Howes Lane (A4095) / Bucknell Road / A4095 currently exceeds capacity. Modelling of the two junctions for a '2026 + Committed Development' scenario indicates that there will be queuing on the two A4095 arms and therefore, any further development would only increase the queues and journey times through the junction.

- 6.1.2 An interim mitigation scheme that signalises the two junctions and improves pedestrian severance is proposed to enable initial phases of the proposed Hawkwell Village development to come forward to enable funding of the A4095 Strategic Link Road. The scheme also improves HGV movement through the junction with HGVs accessing and egressing the Howes Lane arm no longer being reliant on the position of other vehicles. The interim scheme has been designed with a 'final solution' mitigation scheme in mind in order that minimal disruption is caused when the road network alters i.e. when the SLR is constructed.
- 6.1.3 Using traffic flows from the recently revalidated Bicester Transport Model and in accordance with the requirements of OCC, the junction modelling undertaken indicates that the proposed interim scheme will operate within capacity and offer a benefit to the existing configuration, to all road users in terms of queuing, journey times and crossing facilities for pedestrians, for at least 1,250 dwellings.
- 6.1.4 The reductions in terms of queues and delays at this junction would be extremely beneficial to the local transport network (both public and private modes) and the local economy and also enable the vital delivery of allocated housing at NW Bicester.
- 6.1.5 The proposed interim mitigation scheme should be considered by OCC as an interim scheme to accommodate at least 1,250 dwellings at Hawkwell Village until the A4095 Strategic Road Link can be funded and delivered.
- 6.1.6 Junction modelling of the future 2031 with full development buildout indicates that a modified interim mitigation scheme will operate with plenty of spare capacity due to the reduction in traffic flows through the junction brought about by the realignment of the A4095. This modified scheme provides additional active travel infrastructure facilitating safe pedestrian and cycle movements across the junction to the existing Public Right of Way that routes alongside the railway.
- 6.1.7 Whilst interim and final solution mitigation schemes, that offer vehicle delay and active travel improvements for the junction have been presented within the TN, the decision of OCC Highways on the vehicle impact (i.e. temporary and not severe) of the Firethorn application for 530 dwellings is considered to be a material consideration on the need to mitigate for the vehicular impact of the Hawkwell Village development at the junction. Therefore, as well as a technical review of the proposed mitigation schemes, the position on the need to mitigate the temporary impact of the Hawkwell Village development traffic at the junction, is sought from OCC.

**Summary of junction performance**

	AM			PM		
	Queue (PCU)	Delay (s)	RFC	Queue (PCU)	Delay (s)	RFC
Linked [Lane Simulation] - Strategic Model Base + Committed						
Junction 1 - Arm A	1.1	14.74		0.7	11.40	
Junction 1 - Arm B	184.6	622.83		193.5	638.13	
Junction 1 - Arm C	1.2	4.68		1.2	4.50	
Junction 2 - Arm A	0.2	0.68		0.1	0.47	
Junction 2 - Arm B	53.4	291.99		232.6	972.07	
Junction 2 - Arm C	3.1	16.51		3.0	14.67	

*There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.*

*Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle. Arm and junction delays are averages for all movements, including movements with zero delay.*

**File summary**

**File Description**

<b>Title</b>	A4095 / Bucknell Road Junction Network (Existing)
<b>Location</b>	Bicester, Oxfordshire
<b>Site number</b>	
<b>Date</b>	11/02/2022
<b>Version</b>	
<b>Status</b>	
<b>Identifier</b>	
<b>Client</b>	Hallam Land Management Ltd
<b>Jobnumber</b>	20300

<b>Description</b>	

**Units**

Distance units	Speed units	Traffic units input	Traffic units results	Flow units	Average delay units	Total delay units	Rate of delay units
m	kph	PCU	PCU	perHour	s	-Min	perMin

Flows show original traffic demand (PCU/hr). Lane simulation visualisation time: 07:30:00

The junction diagram reflects the last run of Junctions.

### Analysis Options

Vehicle length (m)	Calculate Queue Percentiles	Calculate detailed queueing delay	Show lane queues in feet / metres	Show all PICADY stream intercepts	Calculate residual capacity	RFC Threshold	Average Delay threshold (s)	Queue threshold (PCU)	Use iterations with HCM roundabouts	Max number of iterations for roundabouts
5.75						0.85	36.00	20.00		500

### Lane Simulation options

Criteria type	Stop criteria (%)	Stop criteria time (s)	Stop criteria number of trials	Random seed	Results refresh speed (s)	Individual vehicle animation number of trials	Average animation capture interval (s)	Use quick response	Do flow sampling	Suppress automatic lane creation	Last run random seed	Last run number of trials	Last run time taken (s)
Delay	1.00	100000	100000	-1	3	1	60	✓			1916309826	190	16.12

### Demand Set Summary

ID	Scenario name	Time Period name	Traffic profile type	Start time (HH:mm)	Finish time (HH:mm)	Time period length (min)	Time segment length (min)	Run automatically
D1	Strategic Model Base + Committed	AM	FLAT	07:30	08:30	60	15	✓
D2	Strategic Model Base + Committed	PM	FLAT	16:15	17:15	60	15	✓

**Analysis Set Details**

ID	Name	Use Lane Simulation	Include in report	Network flow scaling factor (%)	Network capacity scaling factor (%)
A2	Linked	✓	✓	100.000	100.000

# Linked - Strategic Model Base + Committed, AM

## Data Errors and Warnings

Severity	Area	Item	Description
Last Run	Lane Simulation	Junction 2 - Arm B - Lane Simulation	Arm B: Queue at end of modelled period is greater than 10 PCU. Delay is likely to have been underestimated.
Last Run	Lane Simulation	Junction 1 - Arm B - Lane Simulation	Arm B: Queue at end of modelled period is greater than 10 PCU. Delay is likely to have been underestimated.
Info	Lane Simulation	A2 - Linked [Lane Simulation]	This analysis set uses Lane Simulation mode. For detailed information on this mode, please see the User Guide.

## Junction Network

### Junctions

Junction	Name	Junction type	Arm A Direction	Arm B Direction	Arm C Direction	Use circulating lanes	Arm order	Junction Delay (s)	Junction LOS
1	Bucknell Road / A4095 Roundabout	Standard Roundabout					A, B, C	288.72	F
2	Bucknell Road / A4095 Priority T-Junction	T-Junction	Two-way	Two-way	Two-way			93.00	F

### Junction Network

Driving side	Lighting	Network delay (s)	Network LOS
Left	Normal/unknown	193.97	F

## Arms

### Arms

Junction	Arm	Name	Description	No give-way line	Arm type
1	A	Bucknell Road (North)			
	B	A4095 (East)			
	C	Bucknell Road (South)			
2	A	Bucknell Road (South)			Major
	B	A4095 Howes Lane (West)			Minor
	C	Bucknell Road (North)			Major

### Roundabout Geometry

Junction	Arm	V - Approach road half-width (m)	E - Entry width (m)	I' - Effective flare length (m)	R - Entry radius (m)	D - Inscribed circle diameter (m)	PHI - Conflict (entry) angle (deg)	Entry only	Exit only
1	A	2.97	9.00	9.2	67.9	30.0	25.0		
	B	3.70	6.00	12.5	17.6	30.0	11.0		
	C	3.50	6.80	5.7	30.7	30.0	48.0		

### Major Arm Geometry

Junction	Arm	Width of carriageway (m)	Has kerbed central reserve	Has right-turn storage	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)	Vehicles causing blocking (%)
2	C	7.10			250.0	✓	0.00	100

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

### Minor Arm Geometry

Junction	Arm	Minor arm type	Lane Width (Left) (m)	Lane Width (Right) (m)	Visibility to left (m)	Visibility to right (m)
2	B	Two lanes	3.76	3.60	27	38

## Slope / Intercept / Capacity

### Roundabout Slope and Intercept used in model

Junction	Arm	Final slope	Final intercept (PCU/hr)
1	A	0.646	1565
	B	0.666	1652
	C	0.572	1347

The slope and intercept shown above include any corrections and adjustments.

### Priority Intersection Slopes and Intercepts

Junction	Stream	Intercept (PCU/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
2	B-A	535	0.091	0.229	0.144	0.327
	B-C	697	0.104	0.263	-	-
	C-B	719	0.265	0.265	-	-

The slopes and intercepts shown above include custom intercept adjustments only.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

### Lane Simulation: Arm options

Junction	Arm	Lane capacity source	Traffic considering secondary lanes (%)
1	A	Evenly split	10.00
	B	Evenly split	10.00
	C	Evenly split	10.00
2	A		10.00
	B		10.00
	C		10.00

### Lanes

Junction	Arm	Side	Lane level	Lane	Destination arms	Has limited storage	Storage (PCU)	Has bottleneck	Has obstruction	Minimum capacity (PCU/hr)	Maximum capacity (PCU/hr)	Signalised
1	A	Entry	1	1	A, B, C		Infinity			0	99999	
		Exit	1	1				Infinity				
	B	Entry	1	1	A, B, C			Infinity		0	99999	
		Exit	1	1				Infinity				
	C	Entry	1	1	A, B, C	✓	2.90			0	99999	
		Exit	1	1		✓	3.20					
2	A	Entry	1	1	B, C		Infinity			0	99999	
		Exit	1	1				Infinity				
	B	Entry	1	1	C			Infinity		0	99999	
		Exit	1	1	A			Infinity		0	99999	
	C	Entry	1	1	A, B	✓	3.20			0	99999	
		Exit	1	1		✓	2.90					

### Entry Lane slope and intercept

Junction	Arm	Side	Lane level	Lane	Final slope	Final intercept (PCU/hr)
1	A	Entry	1	1	0.646	1565
	B	Entry	1	1	0.666	1652
	C	Entry	1	1	0.572	1347

### Summary of Entry Lane allowed movements

Junction	Arm	Lane Level	Lane	Destination arm		
				A	B	C
2	A	1	1		✓	✓
	B	1	1			✓
			2	✓		
C	1	1	✓	✓		

### Summary of Entry Lane allowed movements

Junction	Arm	Lane Level	Lane	Destination arm		
				A	B	C
1	A	1	1	✓	✓	✓
	B	1	1	✓	✓	✓
	C	1	1	✓	✓	✓

## Traffic Demand

### Demand Set Details

ID	Scenario name	Time Period name	Traffic profile type	Start time (HH:mm)	Finish time (HH:mm)	Time period length (min)	Time segment length (min)	Run automatically
D1	Strategic Model Base + Committed	AM	FLAT	07:30	08:30	60	15	✓

Vehicle mix varies over turn	Vehicle mix varies over entry	Vehicle mix source	PCU Factor for a HV (PCU)
✓	✓	HV Percentages	2.00

### Linked Arm Data

Junction	Arm	Feeding Junction	Feeding Arm	Link Type	Flow source	Uniform flow (PCU/hr)	Flow multiplier (%)	Internal storage space (PCU)
1	C	2	C	Queue limited	Normal	0	100.00	10.00
2	C	1	C	Queue limited	Normal	0	100.00	10.00

### Demand overview (Traffic)

Junction	Arm	Linked arm	Profile type	Use O-D data	Average Demand (PCU/hr)	Scaling Factor (%)
1	A		FLAT	✓	242	100.000
	B		FLAT	✓	869	100.000
	C	✓				
2	A		FLAT	✓	634	100.000

## Lane Results

Lane Level notation: Lane Level 1 is always closest to the junction.

### Lanes: Main Results for each time segment

**07:30 - 07:45**

Junction	Arm	Side	Lane level	Lane	Destination arms	Total Demand (PCU/hr)	Capacity (PCU/hr)	RFC	Throughput (PCU/hr)	Average throughput (PCU/hr)	Start queue (PCU)	End queue (PCU)	Delay (s)	Unsignalised level of service

## Data Errors and Warnings

Severity	Area	Item	Description
Last Run	Lane Simulation	Junction 2 - Arm B - Lane Simulation	Arm B: Queue at end of modelled period is greater than 10 PCU. Delay is likely to have been underestimated.
Last Run	Lane Simulation	Junction 1 - Arm B - Lane Simulation	Arm B: Queue at end of modelled period is greater than 10 PCU. Delay is likely to have been underestimated.
Info	Lane Simulation	A2 - Linked [Lane Simulation]	This analysis set uses Lane Simulation mode. For detailed information on this mode, please see the User Guide.

## Junction Network

### Junctions

Junction	Name	Junction type	Arm A Direction	Arm B Direction	Arm C Direction	Use circulating lanes	Arm order	Junction Delay (s)	Junction LOS
1	Bucknell Road / A4095 Roundabout	Standard Roundabout					A, B, C	301.44	F
2	Bucknell Road / A4095 Priority T-Junction	T-Junction	Two-way	Two-way	Two-way			363.58	F

### Junction Network

## Project and User Details

<b>Project:</b>	<b>North West Bicester - Land North East of the Marylebone-Birmingham Railway Line</b>
<b>Title:</b>	<b>A4095 / Bucknell Road</b>
<b>Location:</b>	Bicester, Oxfordshire
<b>Client:</b>	Hallam Land Management Ltd
<b>Additional detail:</b>	Based on Drawing No. 20300-031-P1.
<b>File name:</b>	A4095_Bucknell Road Junction Network (Pre-Link Road Layout)_2023.01.27.lsg3x
<b>Author:</b>	MD / SR
<b>Company:</b>	Jubb
<b>Address:</b>	Suite B, Ground Floor West, St James Court, St James Parade, Bristol, BS1 3LH
<b>Linsig Version:</b>	3, 2, 44, 1
