## 1.0 INTRODUCTION

- 1.1 David Tucker Associates has been commissioned by Greystoke CB to provide highways and transport advice and to prepare a Transport Assessment (TA) report to support the outline planning application for the construction of up to 140,000 sqm of employment floorspace (use class B8 with ancillary offices and facilities), and servicing and infrastructure including new site accesses, internal roads and footpaths, landscaping including earthworks to create development platforms and bunds, drainage features and other associated works including demolition of the existing farmhouse. All matters of detail (including access) reserved. The illustrative site layout is included in **Appendix A**.
- 1.2 Oxfordshire County Council and National Highways were consulted as part of a pre-application request. The responses received are attached at **Appendix B** and **Appendix C**, respectively. The detailed comments from the response are considered in the relevant sections of this report.
- 1.3 The primary vehicle access to the site will be taken from the A361 and is likely to involve the creation of a primary site access roundabout and a secondary ghost island right turn priority junction to the west.
- 1.4 This TA includes the following headings:
  - Chapter 1: Introduction
  - Chapter 2: National and Local Policy
  - Chapter 3: Existing Conditions
  - Chapter 4: Development Proposals
  - Chapter 5: Future Traffic Flows
  - Chapter 6: Proposed Traffic Generation and Distribution
  - Chapter 7: Traffic Impact
  - Chapter 8: Contributions and Mitigation
  - Chapter 9: Conclusions

- 
- 1.5 This report concludes that proposed development, subject to the proposed mitigation, will have no material residual adverse impact on the safe operation of the local highway network.

---

## 2.0 NATIONAL AND LOCAL POLICY

### 2.1 National Planning Policy Framework

2.1.1 In July 2021, the Government published a revised National Planning Policy Framework (NPPF). This report should therefore be read in the context of the new NPPF.

2.1.2 Paragraph 111 of the NPPF is clear that: "*Development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe*".

2.1.3 Within this context, the NPPF identifies in Paragraph 112 that applications for development should:

- a) *give priority first to pedestrian and cycle movements, both within the scheme and with neighbouring areas; and second – so far as possible – to facilitating access to high quality public transport, with layouts that maximise the catchment area for bus or other public transport services, and appropriate facilities that encourage public transport use;*
- b) *address the needs of people with disabilities and reduced mobility in relation to all modes of transport;*
- c) *create places that are safe, secure and attractive – which minimise the scope for conflicts between pedestrians, cyclists and vehicles, avoid unnecessary street clutter, and respond to local character and design standards;*
- d) *allow for the efficient delivery of goods, and access by service and emergency vehicles; and*
- e) *be designed to enable charging of plug-in and other ultra-low emission vehicles in safe, accessible and convenient locations.*

2.1.4 Paragraph 113 of the NPPF goes on to state that: "*All developments that will generate significant amounts of movement should be required to provide a travel plan, and the application should be supported by a transport statement or transport assessment so that the likely impacts of the proposal can be assessed*".

2.1.5 In reinforcing the principle of supporting sustainable development, paragraph 10 stipulates that at the heart of the Framework is "...*a presumption in favour of sustainable development*".

### **Transport Assessments and Statement – PPG**

2.1.6 Following directly on from paragraph 108 of the NPPF, the PPG states:

*"Local planning authorities must make a judgement as to whether a development proposal would generate significant amounts of movement on a case by case basis (i.e. significance may be a lower threshold where road capacity is already stretched or a higher threshold for a development in an area of high public transport accessibility).*

*In determining whether a Transport Assessment or Statement will be needed for a proposed development local planning authorities should take into account the following considerations:*

- *the Transport Assessment and Statement policies (if any) of the Local Plan;*
- *the scale of the proposed development and its potential for additional trip generation (smaller applications with limited impacts may not need a Transport Assessment or Statement);*
- *existing intensity of transport use and the availability of public transport;*
- *proximity to nearby environmental designations or sensitive areas;*
- *impact on other priorities/ strategies (such as promoting walking and cycling);*
- *the cumulative impacts of multiple developments within a particular area; and*
- *whether there are particular types of impacts around which to focus the Transport Assessment or Statement (e.g. assessing traffic generated at peak times)."*

2.1.7 The Guidance advocates initial consultation with key decision makers at an early stage through pre-application discussions to determine the scope of the technical work required to underpin the associated transport assessments and travel plans. The key issues it suggests that should be considered are:

- *"the planning context of the development proposal;*
- *appropriate study parameters (i.e. area, scope and duration of study);*

- 
- *assessment of public transport capacity, walking/ cycling capacity and road network capacity;*
  - *road trip generation and trip distribution methodologies and/ or assumptions about the development proposal;*
  - *measures to promote sustainable travel;*
  - *safety implications of development; and*
  - *mitigation measures (where applicable) – including scope and implementation strategy.”*

2.1.8 It acknowledges that the scope and level of detail in reports will vary from site to site, but suggests the following should be considered when confirming the scope of the proposed assessment:

- *"information about the proposed development, site layout, (particularly proposed transport access and layout across all modes of transport);*
- *information about neighbouring uses, amenity and character, existing functional classification of the nearby road network;*
- *data about existing public transport provision, including provision/ frequency of services and proposed public transport changes;*
- *a qualitative and quantitative description of the travel characteristics of the proposed development, including movements across all modes of transport that would result from the development and in the vicinity of the site;*
- *an assessment of trips from all directly relevant committed development in the area (i.e. development that there is a reasonable degree of certainty will proceed within the next three years);*
- *data about current traffic flows on links and at junctions (including by different modes of transport and the volume and type of vehicles) within the study area and identification of critical links and junctions on the highways network;*
- *an analysis of the injury accident records on the public highway in the vicinity of the site access for the most recent three-year period, or five-year period if the proposed site has been identified as within a high accident area;*
- *an assessment of the likely associated environmental impacts of transport related to the development, particularly in relation to proximity to environmentally sensitive areas (such as air quality management areas or noise sensitive areas);*

- 
- *measures to improve the accessibility of the location (such as provision/ enhancement of nearby footpath and cycle path linkages) where these are necessary to make the development acceptable in planning terms;*
  - *a description of parking facilities in the area and the parking strategy of the development;*
  - *ways of encouraging environmental sustainability by reducing the need to travel; and*
  - *measures to mitigate the residual impacts of development (such as improvements to the public transport network, introducing walking and cycling facilities, physical improvements to existing roads).*

*In general, assessments should be based on normal traffic flow and usage conditions (e.g. non-school holiday periods, typical weather conditions) but it may be necessary to consider the implications for any regular peak traffic and usage periods (such as rush hours). Projections should use local traffic forecasts such as TEMPRO drawing where necessary on National Road Traffic Forecasts for traffic data.*

*The timeframe that the assessment covers should be agreed with the local planning authority in consultation with the relevant transport network operators and service providers. However, in circumstances where there will be an impact on a national transport network, this period will be set out in the relevant Government policy.”*

## **2.2 DfT Circular 02/2013 – ‘Strategic Road Network and the Delivery of Sustainable Development’**

- 2.2.1 This document sets out the way in which Highways England will engage with communities and the development industry to deliver sustainable development and, thus, economic growth, whilst safeguarding the primary function and purpose of the strategic network.
- 2.2.2 Where development proposals are consistent with an adopted Local Plan, Highways England does not anticipate the need for engagement in a full assessment process at the planning application stage. However, where proposals are not consistent with the adopted Local Plan then a full assessment of the impact will be necessary.
- 2.2.3 Highways England require that:

*"In consultation with relevant infrastructure providers, statutory environmental advisors and consenting authorities, developers must ensure all environmental implications associated with*

---

*their proposals, are adequately assessed and report so as to ensure that the mitigation of any impact is compliant with prevailing policies and standards. This requirement applies in respect of the environmental impact arising from the temporary construction works and permanent transport solution associated with the development, as well as the environmental impact of the existing trunk road upon the development itself."*

## 2.3 Cherwell Local Plan 2011-2031

2.3.1 This document seeks to look to the future and set out proposals to support the local economy and communities up to 2031. It forms part of the statutory Development Plan for Cherwell. The Plan was formally adopted by the Council on 20<sup>th</sup> July 2015.

2.3.2 The plan addresses a number of broad parameters, such as:

- A strategy for development in Cherwell;
- Policies for development in Cherwell;
- Policies for Cherwell's places;
- Infrastructure, and
- Delivery

## 2.4 Oxfordshire Local Transport Plan 2015-2031

2.4.1 The Oxfordshire Local Transport Plan (LTP4) sets out the proposed transport solutions for Oxfordshire up to 2031. The LTP4 has been developed with four over-arching transport goals:

- *To support jobs and housing growth and economic vitality;*
- *To reduce transport emissions and meet our obligations to Government;*
- *To protect, and where possible enhance Oxfordshire's environment and improve quality of life; and*
- *To improve public health, air quality, safety and individual wellbeing*

2.4.2 The policies which are relevant to this development are listed below:

---

*Policy 12 - Oxfordshire County Council will work with partners to identify how access to employment, education, training and services can be provided, particularly for those with disabilities or special needs, or who otherwise have difficulties in walking, cycling and/ or using public transport, or for people without access to a car.*

*Policy 19 – Oxfordshire County Council will encourage the use of modes of travel associated with healthy and active lifestyles.*

*Policy 22 – Oxfordshire County Council will promote the use of low or zero emission transport, including electric vehicles and associated infrastructure where appropriate.*

*Policy 26 – Oxfordshire County Council will aim to record, protect, maintain and improve the public rights of way network so that users are able to understand and enjoy their rights in a safe and responsible way.*

*Policy 34 – Oxfordshire County Council will require the layout and design of new developments to proactively encourage walking and cycling, especially for local trips, and allow developments to be served by frequent, reliable and efficient public transport.*

---

### **3.0 EXISTING CONDITIONS**

#### **3.1 Site Location**

- 3.1.1 The site is located to the east of the A361 and is approximately 3.2km north-east of Banbury Town Centre.

#### **3.2 Local and Wider Road Network**

- 3.2.1 The site will be accessed from the A361. The A361 is a single carriageway road which measures approximately 7.5m in width. The road is subject to the national speed limit of 60mph. This is to be reduced to 50mph as part of the permitted planning application for the land to the west of the A361 (ref: 19/00128/HYBRID; 'Frontier Park') from the M40 Junction 11 for a distance 250m north of the Frontier Park site access. The A361 runs between the M40/ A422/ A361 Roundabout to the A45 on the south-western boundary of Daventry.
- 3.2.2 The A422 is a dual carriageway road with each direction separated by a grass central reservation. The road is subject to the national speed limit of 70mph. The A422 becomes single carriageway and subject to a 50mph speed limit to the east of the B4525/ A422/ Mansion Hill Roundabout. The A422 runs between Banbury and the A43 to the south of Brackley.
- 3.2.3 The M40 motorway is a dual three-lane motorway which links London, Oxford and Birmingham. The site is approximately 500m from Junction 11 of the M40 motorway which is a partially signalised grade-separated roundabout.

#### **3.3 Existing Traffic Flows**

- 3.3.1 An Automatic Traffic Count (ATC) was undertaken on the A361 at the speed limit change between Friday 3<sup>rd</sup> December 2021 and Thursday 9<sup>th</sup> December 2021. Whilst the counts were not undertaken during a 'neutral month', they are only used for the speeds collected in order to assess the visibility splays which are required at the site access points. This also means that it is considered that the flows do not need to be

compared with a pre-Covid year as the flows are not being used within the assessment. At the time of traffic count there were roadworks on the M40 Junction 11 roundabout and a reduced speed limit to the south of the site on the A361, however the reduced speed limit was not where the ATC was located.

- 3.3.2 To supplement these, ATCs were also undertaken along Hennef Way, North Bar Street and the A422 between Monday 28<sup>th</sup> February 2022 and Sunday 6<sup>th</sup> March 2022. This is a neutral month and followed the completion of road works on J11.
- 3.3.3 The location of the ATCs and the full results can be seen in **Appendix D**. A summary of the results can be seen in **Table 1** below.

**Table 1** - Automatic Traffic Count Summary

| Direction        | Total Vehicles | 5-day Average | 7-day Average | Average 85 <sup>th</sup> %ile Speed | Average Mean Speed |
|------------------|----------------|---------------|---------------|-------------------------------------|--------------------|
| A361             |                |               |               |                                     |                    |
| Northbound       | 29042          | 4593          | 4149          | 57.2                                | 50.4               |
| Southbound       | 27184          | 4195          | 3883          | 54.3                                | 47.6               |
| Hennef Way       |                |               |               |                                     |                    |
| Eastbound        | 142686         | 21805         | 20384         | 49.3                                | 41.3               |
| Westbound        | 161139         | 24730         | 23020         | 55.7                                | 48.6               |
| North Bar Street |                |               |               |                                     |                    |
| Northbound       | 66475          | 9848          | 9496          | 27.9                                | 22.8               |
| Southbound       | 70608          | 10355         | 10087         | 26.2                                | 20.4               |
| A422             |                |               |               |                                     |                    |
| Eastbound        | 33177          | 5075          | 4740          | 64.9                                | 57.0               |
| Westbound        | 34514          | 5368          | 4931          | 64.6                                | 57.7               |

- 3.3.4 In order to inform junction assessment at J11, classified Turning Counts (CTCs) were also undertaken at the M40/ A422/ A361 Roundabout and the A422/ Hennef Way Roundabout between 07:00-10:00 and 16:00-19:00 on Tuesday 1<sup>st</sup> March 2022. These counts include queue counts at each arm of the junctions. The location of these and the full results can be seen in **Appendix E**.

### 3.4 Personal Injury Collision Data

- 3.4.1 Personal Injury Collision (PIC) data has been obtained from Oxfordshire County Council for the full five-year period preceding the introduction of Covid-19 restrictions up to the most recent PICs published (1<sup>st</sup> January 2015 to 31<sup>st</sup> December 2021). The study area includes the A361 between the M40 J11 gyratory and Banbury Road, the A422 between the M40 J11 gyratory and Banbury Lane, the M40 J11 slip roads, Hennef Way, and approximately 500m north and south of the Hennef Way/ Southam Road roundabout. The location of the PICs and the full output can be seen in **Appendix F**.
- 3.4.2 In the five years preceding the introduction of Covid-19 restrictions (01/01/2015 to 31/12/2019) 83 PICs occurred in the study area – 70 slight, 11 serious, and 2 fatal. In the most recent five-year period (01/01/2017 to 31/12/2021) 79 PICs occurred in the study area – 68 slight, 11 serious, and 0 fatal.
- 3.4.3 As can be seen above, the two time periods have a similar level of PICs split similarly over the three severity classifications. Due to this, the most recent five-year period has been assessed as is standard with Transport Assessments. The fatal PICs which occurred in the years before 2017 have however been assessed in order for the assessment to be robust.
- 3.4.4 The first fatal PIC occurred on the A422 Hennef Way at the roundabout junction with Ermont Way. It occurred when vehicle 1 (pedal cycle) crossed the roundabout entry from west to central refuge and hit the nearside of vehicle 2 (HGV) travelling north on Ermont Way in the offside lane waiting to enter the roundabout. The PIC was very likely caused by vehicle 1 using a mobile phone, vehicle 1 impaired by drugs (illicit or medicinal), vehicle 1 executing a poor turn or manoeuvre, and vehicle 1 failing to look properly.
- 3.4.5 The second fatal PIC occurred on Beaumont Road approximately 100m west of the junction with the A423 Southam Road. It occurred when vehicle 1 (HGV) travelling west along Beaumont Road stopped ahead of an access for delivery. The HGV then started to reverse to the access when a person (stow away/ attempting to enter the

country) believed to be alighting from under the HGV sustained a fatal injury. The PIC was very likely caused by the casualty failing to judge the vehicles path or speed.

- 3.4.6 Due to the nature of the fatal PICs, it is not considered that they would contribute to a significant accident issue within the study area, and it is unlikely to be related to Covid-19 that there were no fatal PICs in the most recent five-year period.
- 3.4.7 Of the 79 PICs which have occurred since 1<sup>st</sup> January 2017, 9 have involved vulnerable road users which have been assessed below. There have also been 2 PICs which have 'road layout' listed as a causation factor. On further assessment, it appears that these PICs have occurred more due to driver error than any road layout issues that require mitigation (car in the incorrect lane cutting in front of another car, and excessive speed leading to a junction overshoot).
- 3.4.8 The first PIC which involved a vulnerable road user was classified as 'slight' in severity and occurred on the A361 Southam Road on the footway on the eastern side of the road approximately 40m northeast of the junction with Marley Way. It occurred when a mobility scooter was travelling northeast on the footway and hit a pedal cycle travelling southeast also on the footway. The PIC was possibly caused by the mobility scooter being careless/ reckless/ in a hurry, failed to judge other persons path or speed, aggressive driving or passing too close to cyclist and possibly due to the pedal cycle travelling along the pavement.
- 3.4.9 The second PIC which involved a vulnerable road user was classed as 'slight' in severity and occurred on the A422 Hennef Way roundabout at the junction with the A4260 Concorde Avenue. It occurred when vehicle 1 (car) travelling west on the A422 Hennef Way on exiting the roundabout junction with the A4260 Concorde Avenue to continue west, hit a pedestrian crossing from the offside just west of the roundabout. The cause of the PIC was possibly due to the pedestrian failing to look properly and failing to judge the vehicles path or speed.
- 3.4.10 The third PIC which involved a vulnerable road user was classed as 'serious' in severity and occurred on the A422 Hennef Way roundabout at a toucan crossing approximately 40m southeast of the junction with the A423 Southam Road. It occurred when vehicle

1 (car) travelling southeast on the A422 in the offside lane failed to stop for a red signal at the toucan crossing and hit a pedestrian. The cause of the PIC was due to the vehicle failing to look properly and disobeying an automatic traffic signal.

3.4.11 The fourth PIC which involved a vulnerable road user was classed as 'slight' in severity and occurred on Waterworks Lane at the junction with Grimsbury Green. It occurred when vehicle 1 (car) travelling north on Waterworks Lane from the A422 roundabout turned right to Grimsbury Green but cut the corner and failed to give way to vehicle 2 (pedal cycle) travelling west of Grimsbury Green. The cause of the PIC was due to vehicle 1 being careless/ reckless/ in a hurry.

3.4.12 The fifth PIC which involved a vulnerable road user was classed as 'slight' in severity and occurred on the A361 Southam Road roundabout junction with the A422 Ruscote Avenue and Hennef Way. It occurred when vehicle 1 (car) travelling north on the A361 Southam Road overtook vehicle 2 (pedal cycle), also travelling north, intending to continue to the A423 Southam Road on immediate approach to the roundabout. Vehicle 1 went through a puddle suddenly splashing vehicle 2 causing the rider to fall. The cause of the PIC was due to a poor or defective road surface.

3.4.13 The sixth PIC which involved a vulnerable road user was classed as 'slight' in severity and occurred on the A422 Ruscote Avenue junction with Banbury Cross Retail Park. It occurred when vehicle 2 travelling east on the A422 Ruscote Avenue hit vehicle 2 (car) also travelling east as both vehicles exited the roundabout to continue east on the A422. Vehicle 2 stopped, and the passenger got out to speak to driver of vehicle 1 but vehicle 1 hit the pedestrian then fled the scene. The cause of the PIC was due to vehicle 1 executing a poor turn or manoeuvre and being careless/ reckless/ in a hurry.

3.4.14 The seventh PIC which involved a vulnerable road user was classed as 'serious' in severity and occurred on the A422 Ruscote Avenue junction with Lockheed Close. It occurred when vehicle 1 (car) travelling west having just exited the roundabout on the A422 Ruscote Avenue hit a pedestrian crossing from north to south pushing a bike across the road between cars. The cause of the PIC was due to vehicle 1 failing to look properly and possibly due to dazzling sun.

- 
- 3.4.15 The eighth PIC which involved a vulnerable road user was classed as 'slight' in severity and occurred on the A361 Southam Road junction with an unclassified road approximately 100m south of Hennef Way. It occurred when vehicle 1 (car) travelling north, turned right to the A361 failing to see vehicle 2 (pedal cycle) travelling south of the footway and hit vehicle 2. The cause of the PIC was due to vehicle 1 failing to look properly.
- 3.4.16 The ninth PIC which involved a vulnerable road user was classed as 'slight' in severity and occurred on Ermont Way roundabout junction with the A422 Hennef Way. It occurred when vehicle 1 (car) travelling north on Ermont Way entered the roundabout to turn left to the A422 but failed to give way to vehicle 2 (pedal cycle) which had entered Ermont Way from the cycle track from Daventry Road then entered roundabout to continue north to Wildmere Road rather than using the toucan crossing.
- 3.4.17 It is considered that there is currently no significant accident issue within the study area that would require intervention and that the proposed development will not be detrimental to the safe operation of the local highway network.

### **3.5 Public Transport Provision**

#### Bus

- 3.5.1 There are currently no bus stops in the vicinity of the site. The nearest bus stop to the site is located approximately 1.3km south on Ermont Way. This stop is serviced by the numbers 132, 200, 500 and B9. A summary of these bus services can be seen in **Table 2** below.

**Table 2 - Summary of Bus Services**

| Service | Route                                       | Frequency               |                         |                         |
|---------|---|-------------------------|-------------------------|-------------------------|
|         |   | Monday-Friday           | Saturday                | Sunday                  |
| 132     | Banbury – Brackley – Tingewick – Buckingham | -                       | 11:23 & 14:58           | -                       |
| 200     | Banbury – Daventry                          | Hourly<br>(06:42-18:27) | Hourly<br>(07:52-18:27) | -                       |
| 500     | Banbury – Brackley                          | 30mins<br>(06:00-23:10) | 30mins<br>(06:40-23:10) | Hourly<br>(08:10-18:30) |
| B9      | Banbury Gateway – Hardwick                  | 30mins<br>(06:49-22:19) | 30mins<br>(07:29-22:19) | Hourly<br>(09:19-18:19) |

- 3.5.2 Frontier Park are required to introduce bus stops along the site frontage. The bus stops will be sheltered and provide up to date timetable information, as well as being fully accessible for all users.
- 3.5.3 Pedestrian crossing points will also be provided as part of the permitted application which will be located at the main pedestrian desire lines. The crossings will benefit from the introduction of dropped kerbs and tactile paving.
- 3.5.4 The bus stops will be served by the number 200 which currently runs along the A361 in both directions.

### Rail

- 3.5.5 The closest Railway station is Banbury Station which is approximately 2.7km north-east of the site. This equates to a circa 33-minute walk or a circa 9-minute cycle. There are 63 cycle storage spaces at the station and 978 pay and display car parking spaces, 14 of which are accessible.
- 3.5.6 The station has the services Chiltern Railways, Cross Country Trains and Great Western Railway. The services go to a variety of other stations such as Birmingham Moor Street, Southampton Central, Newcastle, London Marylebone, Bournemouth and Manchester Piccadilly. The station has parking, bicycle stands and ticket machines.

---

### 3.6 Walking and Cycling

- 3.6.1 At present there are no pedestrian footways along the A361. Following the development to the Frontier Park, a 2m wide footway leading from the northern side of the access and along the western side of the A361 as far as the new bus layby. A dropped kerb and tactile crossing with pedestrian refuge island leading to a 2m wide footway on the eastern side between the crossing and a new bus layby is also being provided as part of Frontier Park.
- 3.6.2 A pedestrian/ cycle link to Banbury Gateway Shopping Centre is provided via the Motorway underpass beneath the M40. There are 'Cyclists Dismount' signs either side of the underpass. As part of the outline consent for the site to the Frontier Park, a shared use footway/ cycleway along Wildmere Road between the existing cycle facility at Banbury Gateway Retail Park and Hennef Way is to be provided.
- 3.6.3 The plan showing the requirements in this respect are attached at **Appendix G** and the requirements for the provision of this link set out in the Section 106 agreement (from which **Appendix G** is extracted).
- 3.6.4 Once this link is completed, it is considered to be an appropriate pedestrian/ cycle link for the employees of Frontier Park, and therefore the employees of the development to the east of the A361 considered in this report, to access Banbury.
- 3.6.5 National Cycle Route (NCR) 5 is approximately 5km south-west of the site. NCR 5 is a long-distance route which connects Reading and Holyhead via Oxford, Stratford-upon-Avon, Bromsgrove, Birmingham, Stoke-on-Trent, Chester, Colwyn Bay and Bangor.

### 3.7 Local Amenities

- 3.7.1 Accessibility by foot to local amenities was determined by measuring the distances from the site access to the local amenities. It is generally considered that for distances under 2km, walking offers the greatest potential to replace short car trips. For distances under 5km, cycling also has the potential to substitute for short car trips.

- 
- 3.7.2 The nearest food store, a Marks and Spencer Foodhall, is currently located approximately 1.6km west of the site in Banbury Gateway Shopping Park. This equates to a circa 19-minute walk or a circa 5-minute cycle. The walking route to this store is likely to be shortened when planning application 19/00128/HYBRID is built.
- 3.7.3 The nearest hospital with an emergency department is Horton General Hospital which is approximately 3.9km from the site which equates to a circa 15-minute cycle or a circa 11-minute drive.

---

## 4.0 DEVELOPMENT PROPOSALS

### 4.1 Development Description

- 4.1.1 The development proposals are for an outline planning application for the construction of up to 140,000 sqm of employment floorspace (use class B8 with ancillary offices and facilities), and servicing and infrastructure including new site accesses, internal roads and footpaths, landscaping including earthworks to create development platforms and bunds, drainage features and other associated works including demolition of the existing farmhouse. All matters of detail (including access) reserved. The illustrative site layout is included in **Appendix A**.

### 4.2 Site Access

- 4.2.1 Vehicular access would be taken from the A361, and the proposed access arrangement is shown on **Drawing 23457-05**. The drawing shows a three-arm roundabout to the south of the site and a standard priority junction to the north which will be connected by internal roads.
- 4.2.2 The drawing also shows the location of the repositioned location of the bus stops and the pedestrian crossing point.
- 4.2.3 The interaction of this access in relation to the M40 J11 gyratory is discussed below in respect of the modelling.

### 4.3 Public Transport Strategy

- 4.3.1 Development of land adjacent to the site (Frontier Park) has been consented and found acceptable in terms of public transport accessibility. As part of their mitigation package there are required to provide bus stops on the A361 and a contribution (of £100k towards enhanced bus services between the Frontier Park and Banbury town).
- 4.3.2 The proposed development will provide direct connection to those bus stops and hence will benefit from the same transport accessibility as already agreed as acceptable.

- 
- 4.3.3 As an added benefit, a circular access route within the site will allow for buses to enter the site and that will support the provision of a new bus route between the site and Banbury Town Centre / Railway Station. This could be an improvement to the existing 200 or a wholly new shuttle service.
  - 4.3.4 The estate road area including footpaths can be seen in the parameters plan. These show that the footways can be 2m in width as required by OCC in the pre-application response.
  - 4.3.5 The strategy for accessing the site focuses on high quality public transport but there is clearly already an approved and accepted strategy for providing cycle and pedestrian access to the Frontier Park development which this site will benefit from.

#### **4.4 Parking**

- 4.4.1 Car parking numbers will be confirmed as part of a Reserved Matters application. They will be in line with the parking standards at the time of the application and will be of sufficient size.
- 4.4.2 The site will also be compliant with EVI 8 of the Oxfordshire Electric Vehicle Infrastructure Strategy (adopted in 2021) which requires 25% of all new parking areas to be provided with EV Chargers.

#### **4.5 Travel Plan**

- 4.5.1 The site will be covered by a Framework Travel Plan (FTP) which will be agreed by condition.

## 5.0 FUTURE TRAFFIC FLOWS

### 5.1 Committed Development

- 5.1.1 During the planning stage, it is important to take into consideration other developments in the vicinity of the site whose generated traffic could potentially have an impact on the proposed development and its associated junctions. No committed developments in the vicinity of the site which are not allocated in the local plan, and therefore included in TEMPro factors, have been identified by OCC.
- 5.1.2 Despite Frontier Park is allocated through Policy Banbury 15, the Phase 3 application departs from the allocation and so the entire site has been considered as a committed development as part of this application in order to assess a worst-case. Flows have been extracted from the two TAs submitted as part of the original Frontier Park application (069717-CUR-00-XX-RP-TP-001-V02) and the Phase 3 Frontier Park application (079074-CUR-00-XX-RP-TP-001-V02), and are summarised in **Appendix H**.

### 5.2 Traffic Growth

- 5.2.1 The base traffic flows will be factored up to the years of 2025 and 2032. The Middle Super Output Area (MSOA) of Cherwell 004, in which the site is located has been assessed. The resulting factors are shown in **Table 3**.

**Table 3 – TEMPro Growth Factors**

| Road Type | Growth Years | AM     | PM     |
|-----------|--------------|--------|--------|
| Principal | 2022-2025    | 1.0315 | 1.0307 |
|           | 2022-2032    | 1.0917 | 1.0900 |
| Motorway  | 2022-2025    | 1.0437 | 1.0428 |
|           | 2022-2032    | 1.1300 | 1.1282 |

## **6.0 TRAFFIC GENERATION AND DISTRIBUTION**

### **6.1 Proposed Traffic Generation**

- 6.1.1 To assess the proposed traffic movements from the development the TRICS database was interrogated (TRICS v7.8.4 online). This database contains surveys of the vehicle and multimodal trip generation of a wide variety of sites which are classified by land use and various other attributes.
- 6.1.2 The database was interrogated for multimodal surveys for 'Land Use 02 – Employment/F – Warehousing (Commercial)', with sites in London, Scotland, Ireland, and Wales manually excluded. The resulting TRICS printout are attached at **Appendix I**.
- 6.1.3 These trip rates have been discussed and agreed with both National Highways and OCC.
- 6.1.4 The total vehicle and HGV trip rates are shown below in **Table 4** with the associated generation in **Table 5**.

**Table 4** – Vehicle and HGV Trip Rates – Warehousing

|             | Vehicle Trip Rates |       |       | HGV Trip Rate |       |       |
|-------------|--------------------|-------|-------|---------------|-------|-------|
|             | In                 | Out   | Total | In            | Out   | Total |
| 08:00-09:00 | 0.161              | 0.093 | 0.254 | 0.051         | 0.056 | 0.107 |
| 17:00-18:00 | 0.068              | 0.155 | 0.223 | 0.042         | 0.030 | 0.072 |
| 07:00-19:00 | 1.223              | 1.292 | 2.515 | 0.472         | 0.457 | 0.929 |

**Table 5** – Vehicle and HGV Generation – Warehousing

|             | Total Vehicle Generation |      |       | HGV Generation |     |       |
|-------------|--------------------------|------|-------|----------------|-----|-------|
|             | In                       | Out  | Total | In             | Out | Total |
| 08:00-09:00 | 225                      | 130  | 356   | 71             | 78  | 150   |
| 17:00-18:00 | 95                       | 217  | 312   | 59             | 42  | 101   |
| 07:00-19:00 | 1712                     | 1809 | 3521  | 661            | 640 | 1301  |

- 6.1.5 As can be seen above, the proposed development is expected to generate around 356 two-way vehicle movements in the AM peak period and 312 two-way vehicle movements in the PM peak period. This equates to approximately 5-6 two-way vehicle movements every minute.

- 6.1.6 The TRICS database was also interrogated for multimodal surveys for 'Land Use 02 – Employment/ G – Parcel Distribution Centres', with sites in London, Scotland, Ireland, and Wales manually excluded. The resulting TRICS printout are attached at **Appendix J**. The total vehicle and HGV trip rates are shown below in **Table 6**.

**Table 6** – Vehicle and HGV Trip Rates – Parcel Distribution Centre

|             | Vehicle Trip Rates |       |       | HGV Trip Rate |       |       |
|-------------|--------------------|-------|-------|---------------|-------|-------|
|             | In                 | Out   | Total | In            | Out   | Total |
| 08:00-09:00 | 0.067              | 0.378 | 0.445 | 0.022         | 0.111 | 0.133 |
| 17:00-18:00 | 0.378              | 0.378 | 0.756 | 0.044         | 0.000 | 0.044 |
| 07:00-19:00 | 2.982              | 3.805 | 6.787 | 0.688         | 0.955 | 1.643 |

- 6.1.7 For robustness it has been assumed that a maximum of 20% of the site could be used as parcel distribution centres and the remainder for B8 as derived above.
- 6.1.8 The modelling has therefore been undertaken based on the following traffic generation.

**Table 7** – Vehicle and HGV Generation – Sensitivity

|             | Total Vehicle Generation |      |       | HGV Generation |     |       |
|-------------|--------------------------|------|-------|----------------|-----|-------|
|             | In                       | Out  | Total | In             | Out | Total |
| 08:00-09:00 | 199                      | 210  | 409   | 63             | 94  | 157   |
| 17:00-18:00 | 182                      | 279  | 461   | 59             | 34  | 93    |
| 07:00-19:00 | 2205                     | 2512 | 4717  | 721            | 779 | 1501  |

- 6.1.9 As can be seen above, the proposed development is expected to generate around 409 two-way vehicle movements in the AM peak period and 461 two-way vehicle movements in the PM peak period. This equates to approximately 7-8 two-way vehicle movements every minute.

## 6.2 Traffic Distribution

- 6.2.1 The light vehicle traffic has been distributed using the 2011 Census Journey to Work data for the Middle Super Output Area (MSOA) of Cherwell 004 within which the proposed development is located.

- 6.2.2 This approach has been agreed with NH and OCC. A summary of the journey to work data can be seen in **Table 8** below.

**Table 8 – 2011 Census Journey to Work Data for Cherwell 004 MSOA**

| Residence              | Percentage |
|------------------------|------------|
| Cherwell               | 52.7%      |
| South Northamptonshire | 13.9%      |
| Stratford-upon-Avon    | 5.2%       |
| Daventry               | 4.0%       |
| West Oxfordshire       | 3.1%       |
| Warwick                | 2.7%       |
| Aylesbury Vale         | 1.7%       |
| Coventry               | 1.0%       |
| <i>Other</i>           | 15.7%      |

- 6.2.3 The distribution for heavy vehicles on the wider highway network has been derived using data included within the Base Year Freight Matrices (BYFM) published by the Department for Transport (2012).
- 6.2.4 This approach has been accepted by NH and OCC.
- 6.2.5 The traffic has been distributed between the two access points based on the building locations shown in the illustrative site layout at **Appendix A**. This indicates that approximately 35% of the GFA is located to the north of the site and would therefore use the northern access. The remaining 65% of the GFA is located more southerly within the site and would therefore use the southern access point.
- 6.2.6 The BYFM consist of the number of vehicles per average day between a set of origin-destination zone pairs for a 2006 base year. These zones are based on all 408 local authority districts, unitary authorities and London Boroughs and point zones for the 88 largest ports, 5 main freight airports and 56 major concentrations of distribution centres.
- 6.2.7 The distribution of heavy vehicles to each region and the route which the vehicles are expected to take can be seen in **Table 9** below.

**Table 9 – BYFM Distribution**

| Region                   | Percentage | Routeing  |
|--------------------------|------------|---|
| East of England          | 11.4%      | A422 E  |
| East Midlands            | 10.8%      | A361 N  |
| North West of England    | 3.5%       | M40 N   |
| Scotland                 | 0.6%       | M40 N   |
| South East of England    | 57.0%      | M40 S – 48.1%<br>A422 E – 7.3%<br>A422 W – 1.7% |
| South West of England    | 5.5%       | M40 N – 1.6%<br>M40 S – 2.5%                    |
| Wales                    | 0.3%       | M40 N   |
| West Midlands            | 7.5%       | M40 N   |
| Yorkshire and the Humber | 3.4%       | M40 N   |

6.2.8 The distribution of the light and heavy vehicles has been analysed using Google Maps and the proposed traffic assignment can be seen in **Table 10** below.

**Table 10 – Proposed Traffic Assignment (Sensitivity Test Flows)**

| Link   | Light Vehicles |     |     | HGVs       |    |    |
|--------|----------------|-----|-----|------------|----|----|
|        | Assignment     | AM  | PM  | Assignment | AM | PM |
| M40 N  | 12.5%          | 32  | 46  | 16.9%      | 26 | 16 |
| M40 S  | 8.5%           | 22  | 31  | 50.6%      | 79 | 47 |
| A422 E | 18.0%          | 45  | 66  | 18.7%      | 29 | 17 |
| A422 W | 53.5%          | 135 | 197 | 1.7%       | 3  | 2  |
| A361 N | 7.5%           | 19  | 28  | 10.8%      | 17 | 10 |

6.2.9 The junction matrices adopted in the junction modelling are provided at **Appendix H**.

---

## 7.0 TRAFFIC IMPACT

### 7.1 Overview

7.1.1 The junctions at which operational traffic assessments have been requested are

- A361/ Proposed Site Access Junction Standard Priority Junction
- A361/ Proposed Site Access Roundabout
- M40 Junction 11 Grade Separated Roundabout Junction
- A422 Hennef Way/ Ermont Way Roundabout
- A422 Hennef Way/ Concorde Avenue Roundabout
- A422 Hennef Way/ Southam Road Roundabout

7.1.2 Merge/ diverge assessments on the M40 Junction 11 Grade Separated Roundabout Junction have been undertaken in accordance with the guidance within Design Manual for Roads and Bridges (DMRB) CD122 'Geometric design of grade separated junctions'. This considers the configuration of the slip road merge and diverge arrangements for a given combination of mainline and slip road flows against a number of different standard layouts.

### 7.2 VISSIM Model

7.2.1 Both OCC and NH have requested the scheme be tested using their VISSIM Microsimulation model. The applicant has been seeking permission to undertake this modelling and that is awaited. The model outputs will therefore follow.

7.2.2 In the meantime, the following junctions have been assessed:

- A361/ Proposed Site Access Junction Standard Priority Junction
- A361/ Proposed Site Access Roundabout
- M40 Junction 11 Grade Separated Roundabout Junction

### 7.3 Merge/ Diverge Assessments

- 7.3.1 Merge/ diverge assessments on the M40 Junction 11 Grade Separated Roundabout Junction, for the opening year of 2025, have been undertaken in accordance with the guidance within Design Manual for Roads and Bridges (DMRB) CD122 'Geometric design of grade separated junctions'. This considers the configuration of the slip road merge and diverge arrangements for a given combination of mainline and slip road flows against a number of different standard layouts.
- 7.3.2 All the above merge/ diverge assessments are plotted in **Appendix K**.
- 7.3.3 At present, both diverging slip roads are a Layout A with three lanes up and downstream on the mainline, and both merging slip roads are Layout C with three lanes up and downstream on the mainline.
- 7.3.4 The base flows for the northbound diverge in the AM peak period warrant a Layout A with 2 lanes up and downstream on the mainline. The base flows in the PM peak period warrant a Layout C with 3 lanes upstream and 2 lanes downstream. The 'plus development' scenario warrants a Layout A with 2 lanes up and downstream on the mainline in the AM peak period and a Layout C with 3 lanes upstream and 2 lanes downstream in the PM peak period. On this basis, the existing Layout A with three lanes up and downstream on the mainline provides a higher capacity than is required in the AM peak period. In the PM the existing Layout A will be below the required capacity, however, since the base flows require a Layout C the capacity issue is not caused by the proposed development.
- 7.3.5 The base flows for the northbound merge in the AM peak period warrant a Layout A with 2 lanes up and downstream on the mainline. The base flows in the PM peak period warrant a Layout B with 2 lanes up and downstream on the mainline. The 'plus development' scenario warrants a Layout A with 2 lanes up and downstream on the mainline in the AM peak period and a Layout D with 2 lanes upstream and 3 lanes downstream in the PM peak period. On this basis, the existing Layout C with three lanes up and downstream on the mainline provides a higher capacity than is required and so is suitable for the proposed development flows.

- 7.3.6 The base flows for the southbound diverge in the AM and PM peak periods warrant a Layout A with 2 lanes up and downstream on the mainline. The 'plus development' scenario in both the AM and PM peak periods also warrant a Layout A with 2 lanes up and downstream on the mainline. On this basis, the existing Layout A with three lanes up and downstream offers a higher capacity than is required and so is suitable for the proposed development flows.
- 7.3.7 The base flows for the southbound merge in the AM and PM peak periods warrant a Layout A with 2 lanes up and downstream on the mainline. The 'plus development' scenario in both the AM and PM peak periods also warrant a Layout A with 2 lanes up and downstream on the mainline. On this basis, the existing Layout C with three lanes up and downstream on the mainline provides a higher capacity than is required and so is suitable for the proposed development flows.

#### **7.4 Junction Capacity Assessments**

##### A361/ Proposed Site Access Junction Standard Priority Junction

- 7.4.1 The A361/ Site Access Priority Junction has been assessed using the PICADY module of Junctions 10. A summary of the results can be seen in **Table 11** below with the full output attached at **Appendix L**.

**Table 11 - A361/ Site Access Priority Junction Assessment Summary**

|  | AM      |           |      | PM      |           |      |
|--|---------|-----------|------|---------|-----------|------|
|  | Q (PCU) | Delay (s) | RFC  | Q (PCU) | Delay (s) | RFC  |
| <b>2025 Base + Committed + Development</b> |         |           |      |         |           |      |

NB: A – A361 N; B – Site Access; C – A361 S

- 7.4.2 As can be seen above, the maximum RFC is 0.13 in both the 2025 and 2032 'plus committed and development' scenarios in the PM peak period for the left turn traffic

movements from the site access to the A361 S. This indicates that the junction is suitable for the proposed development and the local highway network in both the opening year and the future year.

A361/ Proposed Site Access Roundabout

- 7.4.3 The proposed roundabout site access allows for the removal of a substandard bend on the approach to M40 Junction 11. At present the road bends through a centreline radius of 100m through 90° which is four design steps below desirable minimum at 70kph (six design steps below desirable minimum at 100kph). The roundabout allows the alignment of the A361 to be straightened in accordance with CD109 prior to the immediate approaches which are designed in accordance with CD116. The roundabout has been designed in accordance with the best practice guidance set out in DMRB CD116.
- 7.4.4 The proposed site access roundabout has been modelled using ARCADY. ARCADY is the industry standard modelling tool. Here it is likely to slightly underestimate the performance of the junction on the A361 approaches where the circulatory flows are likely to be relatively low however unequal lane usage is likely, i.e., the ahead flows will be greater than the turning flows, and therefore the entry widths have been constrained to 4.5m (a wide single lane width) as a worse-case appraisal.
- 7.4.5 The results of the assessment are summarised below in **Table 12** below with the full output attached at **Appendix M**.

**Table 12 - A361/ Site Access Roundabout Assessment Summary**

|                                     | AM      |           |      | PM      |           |      |

| A361 S                              | 0.7     | 3.11      | 0.35 | 1.1     | 3.59      | 0.50 |

- 7.4.6 As can be seen above, the maximum RFC is 0.38 in the 2032 'plus committed and development' scenario in the PM peak period for the A361 N arm. This indicates that the junction is suitable for the proposed development and the local highway network in both the opening year and the future year.
- 7.4.7 The operational appraisal shows that the introduction of the roundabout will not result in a direct interaction with the gyratory of Junction 10 even on the onerous assessment assumptions and consideration of modulation of downstream traffic.

---

M40 Junction 11 Grade Separated Roundabout Junction

- 7.4.8 M40 Junction 11 is a grade separate junction with a two-bridge roundabout layout (DMRB CD122 V1.1.1 Diagram A4). In addition to the motorway entries and exits there are two additional arms on the eastern side of the junction and one additional arm on the western side of the junction. The junction is partially signal controlled.
- 7.4.9 The width of the circulatory carriageway is variable between two and five lanes wide. Both over-bridges are two lanes wide.
- 7.4.10 The M40 southbound off-slip has two traffic lanes with a long flare on the offside lane. The nearside lane is marked for the A361 and A422 exits. The offside lane and flare serve the right turn towards the A422
- 7.4.11 On the western side of the junction is the A422 Hennef Way into Banbury. A422 Hennef Way is a dual two-lane carriageway road. It has a two-lane entry onto the gyratory has recently been signal controlled. There is a single lane bypass lane to M40 North.
- 7.4.12 On the eastern side of the junction are A361 Williamscot Hill and A422 towards Middleton Cheney/ Brackley. The A361 is a single carriageway road which flares to a two-lane entry onto the gyratory. The A422 is a dual two-lane carriageway road with a very short flare at the entry onto the gyratory
- 7.4.13 The operation of the junction has been modelled using LINSIG. The signal-controlled lanes have been modelled with saturations flows derived from RR67. In practice MOVA control will typically increase the actual saturation flows and hence this approach should be robust. A cycle time of 64 seconds has been applied for all scenarios. The priority-controlled lanes have been modelled with slope and intercept values from ARCADY which have been apportioned evenly where there are multiple lanes. The results are summarised in **Table 13**.

**Table 13 - Existing M40 Junction 11 Gyratory Operational Summary**

|  | AM Peak |       | PM Peak |       |

| A361 (DOS Max)                         | 89.4%   |       | 72.9%   |       |

7.4.14 The results show that without the development the junction will experience a degree of stress in the future year scenario. Two changes to the junction are proposed: signalisation of the M40 northbound off slip road entry and widening of the A361 priority entry.

7.4.15 The critical node within the gyratory is at the M40 northbound off slip road with the western end of the southern overbridge. In the AM peak there is currently an inbound flow towards Banbury of 2,600vph split across two lanes. Circa 600 vph originates from the M40 slip road and 2,000vph crosses the southern overbridge. In addition, there is a further 300vph which crosses the southern overbridge but continues around the circulatory carriageway towards the M40 N and A361. The resulting critical flow is therefore around 1,500vph before growth and development traffic.

- 7.4.16 The slip road is already widened to three lanes splitting out the Banbury bound traffic from all other movements on the two nearside lanes. The overbridge is two lanes wide and hence the traffic flows are combined. It is therefore proposed to introduce a flare on the circulatory carriageway by widening into the centre of the gyratory between the end of the overbridge and the stop line. With a short cycle time a flare capable of accommodating three vehicles increases the throughput of the node by circa 200+ vehicles per hour thereby offsetting in full the additional development demand.
- 7.4.17 At present the A361 entry is priority controlled. It is proposed to maintain priority control but to widen the access to three lanes. The circulatory at this location is four lanes wide upstream and five lanes wide downstream and so there is no bottleneck on the circulatory. As set out in **Table 14** this will increase the intercept, the maximum entry capacity (unopposed) from 2154 vph to 2887 vph. The slope increases from 0.51 to 0.60. A similar improvement would be achieved by signal controlling this node however upstream of this location the circulatory widens from two lanes to five lanes over a relatively short distance and it was considered that the introduction of an additional stop-line in this location would risk poor driver positioning within lanes without upstream widening.

**Table 14 - Priority Capacity Calculations**

|                          |                | existing | proposed |
|--------------------------|----------------|----------|----------|
| half width               | v              | 3.65     | 7.3      |
| entry width              | e              | 8.5      | 11.1     |
| conflict angle           | Phi            | 39.4     | 41.6     |
| radius                   | r              | 40       | 25       |
| flare length (effective) | l'             | 41       | 24.2     |
| diameter                 | D              | 140      | 140      |
| ARCADY calculations      | k              | 0.99     | 0.97     |
|                          | t <sub>D</sub> | 1.00     | 1.00     |
|                          | x <sup>2</sup> | 7.17     | 9.83     |
|                          | S              | 0.19     | 0.25     |
| intercept                | F              | 2154     | 2887     |
| slope                    | f <sub>c</sub> | 0.51     | 0.60     |

7.4.18 The resulting operation is summarised in **Table 15**. As can be seen from these results the impact of the additional development traffic is mitigated by the proposed changes to the junction layout.

## 8.0 CONTRIBUTIONS AND MITIGATION

### 8.1 Contributions

- 8.1.1 Contributions will be agreed with OCC as part the application. The contributions agreed as part of the Frontier Park application can be seen in **Table 16** below.

**Table 16** - Contributions agreed as part of Frontier Park Application

| Contribution                    | Frontier Park contribution | Towards  |
|---------------------------------|----------------------------|--|
| Highway Works                   | £752,081                   | A highway improvement scheme to relieve congestion on Hennef Way.  |
| Public Transport Services       | £100,000                   | The enhancement of bus services on the A361 allowing employees to travel to/from the site at shift change times, late evenings, Sundays and Bank Holidays. |
| Public Transport Infrastructure | £18,470                    | A pair of bus stop flagpoles on the A361 and one within the site, a shelter on the A361 southbound, and a shelter within the site.                         |
| Travel Plan Monitoring          | £2,040                     | To cover the cost of monitoring the travel plan for a 5-year period.   |

- 8.1.2 The applicant for the proposed development is willing to make proportional contributions to the same measures as shown in the table above.

### 8.2 Mitigation

- 8.2.1 As part of the mitigation strategy, a Travel Plan is being submitted alongside this TA with the objective to reduce the percentage of occupants travelling by single occupancy car. As well as this, a routeing and signage strategy will be agreed with OCC as part of a condition for the site.

- 8.2.2 Two forms of mitigation are proposed on the M40 J11 gyratory as part of the proposed development which will be secured by planning condition / S278. These are considered in full in **Section 7.4** above, can be seen in **Drawing 23457-05** and are summarised below:

- 
- A361 entry widening to three lanes; and
  - Southern overbridge flare at signal stop line.

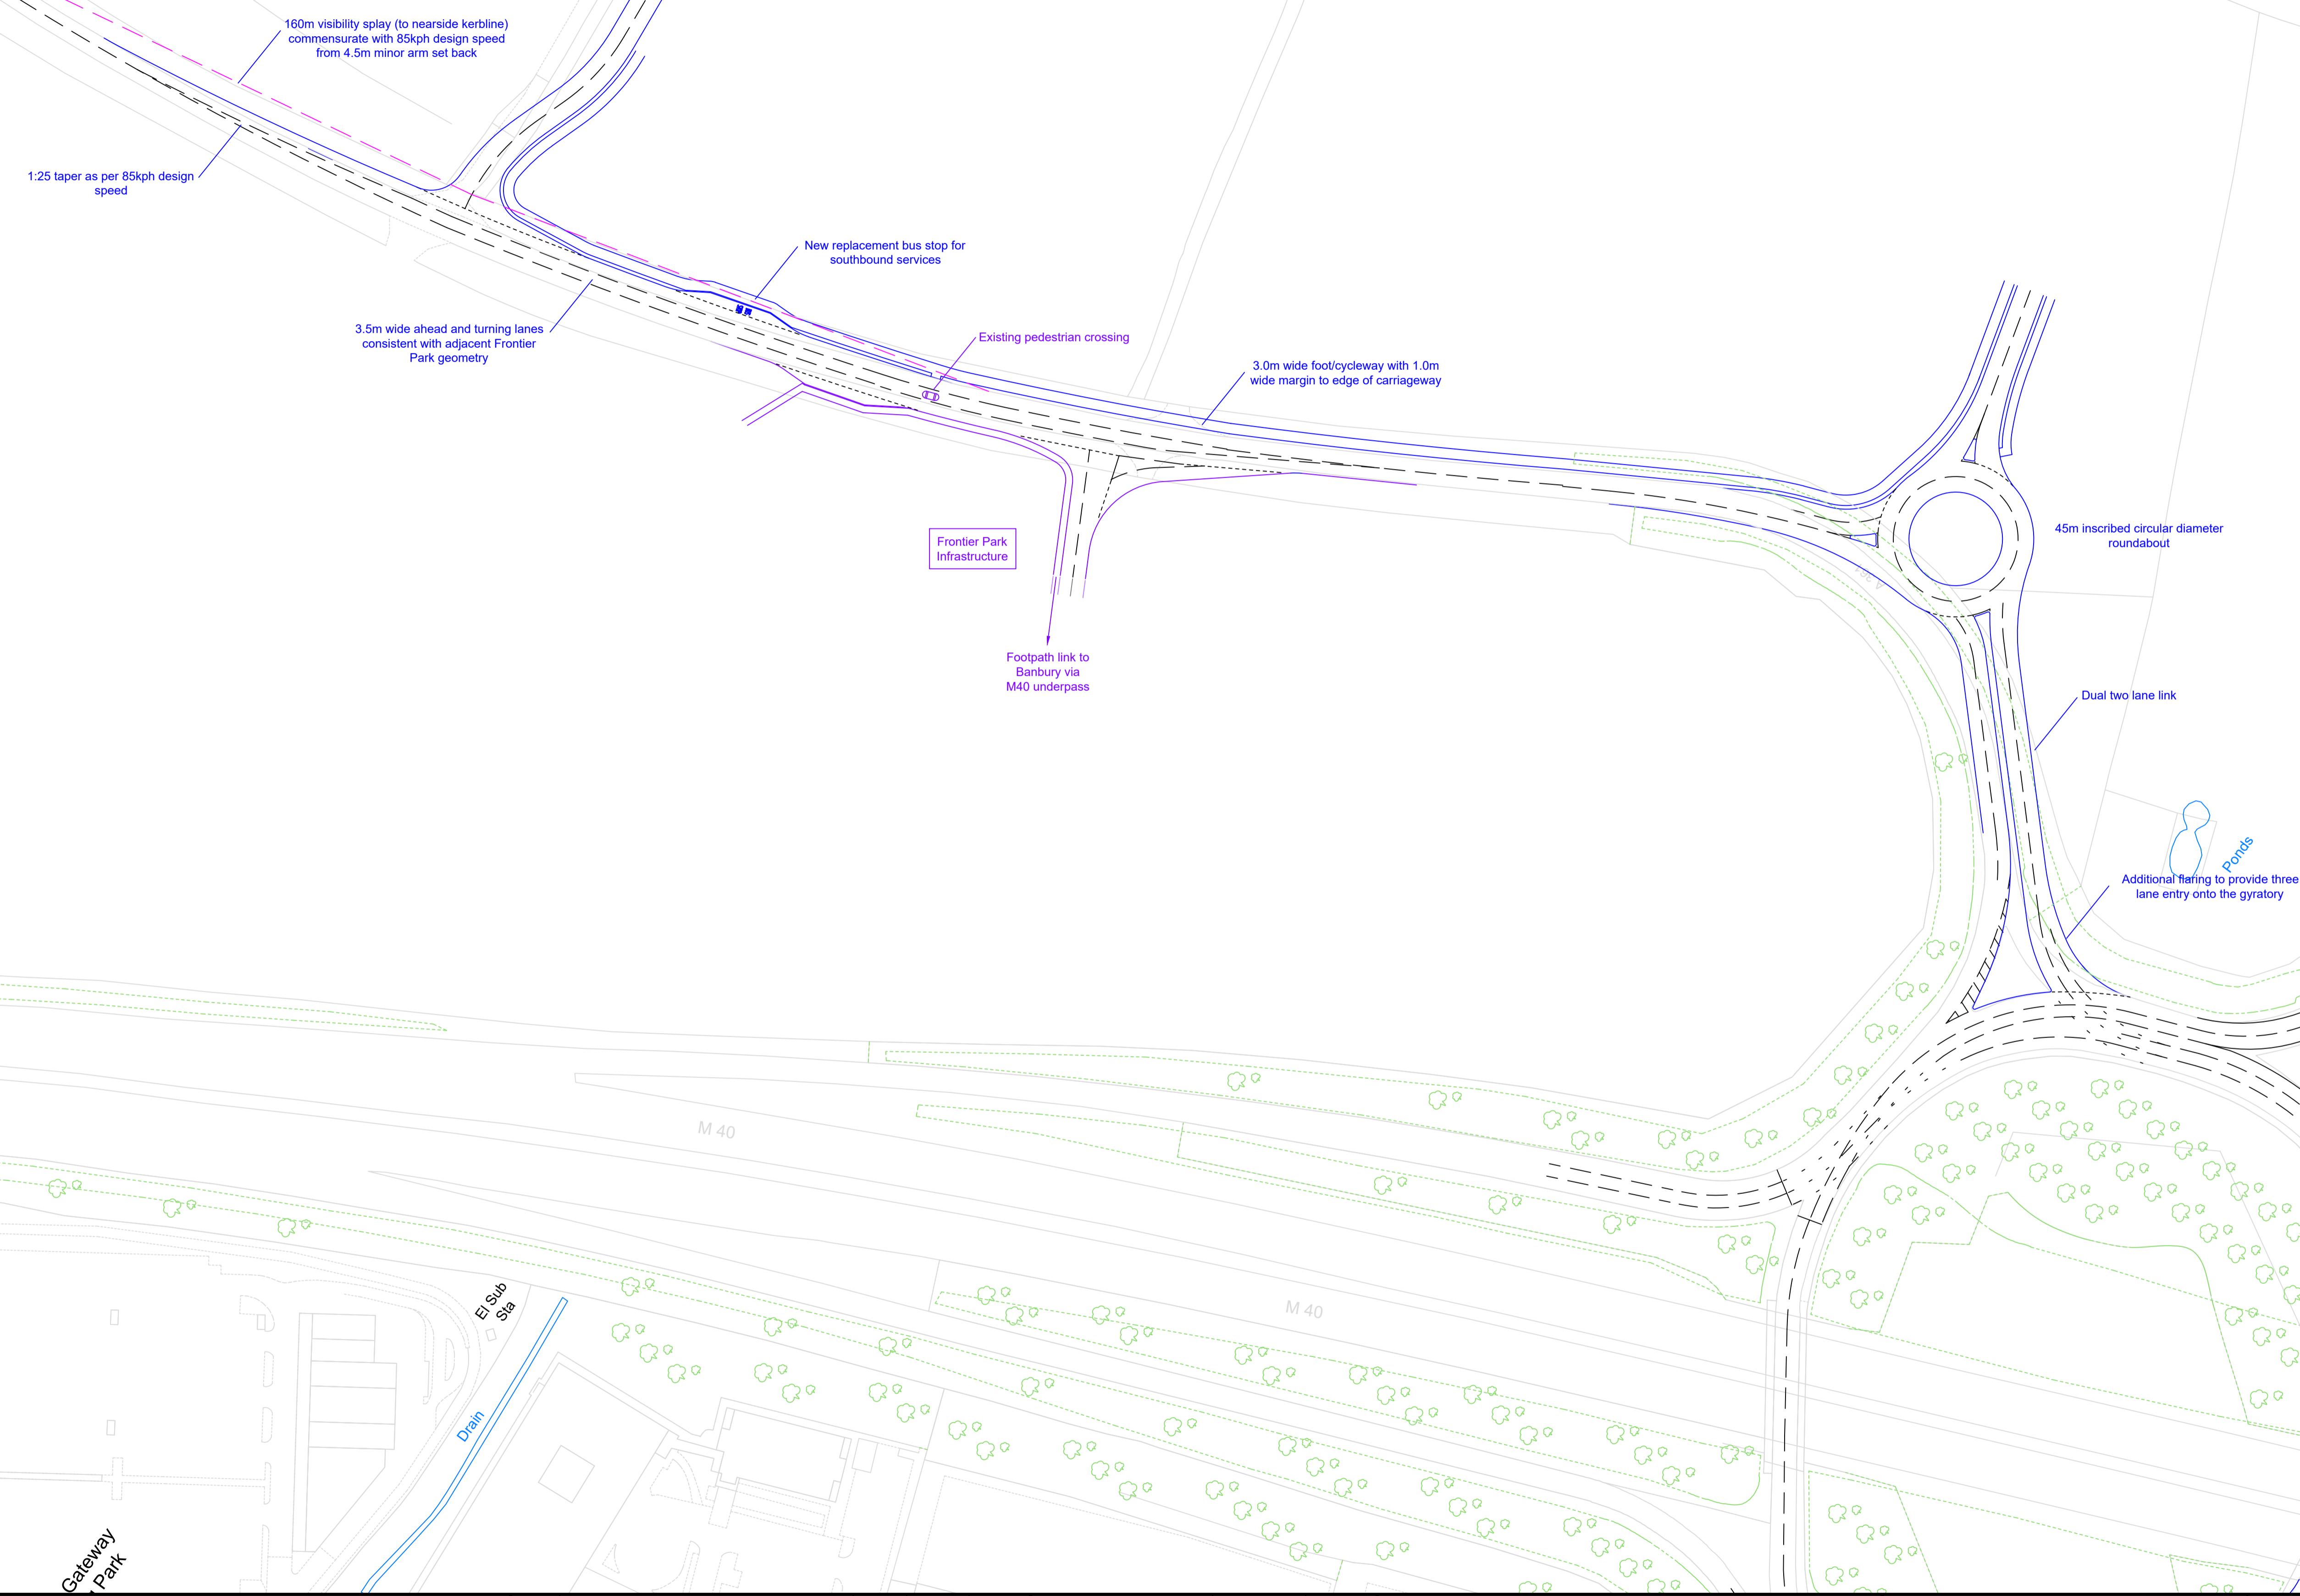

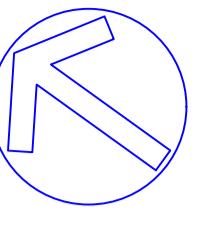

---

## 9.0 CONCLUSION

- 9.1 David Tucker Associates has been commissioned by Greystoke CB to provide highways and transport advice and to prepare a Transport Assessment (TA) report to support the outline planning application for the construction of up to 140,000 sqm of employment floorspace (use class B8 with ancillary offices and facilities), and servicing and infrastructure including new site accesses, internal roads and footpaths, landscaping including earthworks to create development platforms and bunds, drainage features and other associated works including demolition of the existing farmhouse. All matters of detail (including access) reserved.
- 9.2 The primary vehicle access to the site will be taken from the A361 and will involve the creation of a primary site access roundabout and a secondary standard priority junction.
- 9.3 The development site will be designed to prioritise foot and cycle movements along desire lines through the development, linking to the external access points. Public transport improvements are being provided with the site opposite on the A361.
- 9.4 A review of the latest five-year personal injury collision data for the surrounding area has been undertaken and does not indicate any existing highway safety issues within the study area.
- 9.5 Following the proposed mitigation, the traffic impact of the proposed development will not be material to the local highway network.
- 9.6 Overall, the proposed development, subject to the proposed mitigation, will have no material residual adverse impact on the safe operation of the local highway network. As such, highways matters should not feature as a reason for refusal.

## **Transport Development Control**

Oxfordshire County Council is a consultee of the local planning authority and provides advice on the likely transport and highways impact of development where necessary. In line with confidentiality requirements, OCC will not carry out any external consultation on the proposals, although we may discuss them with the relevant Local Planning Authority. We encourage the applicant to carry out local engagement and can make recommendations of specific local groups to consult, on request.

It should be noted that the advice below represents the informal opinion of an Officer of the Council only, which is given entirely without prejudice to the formal consideration of any planning application, which may be submitted. Nevertheless, the comments are given in good faith and fairly reflect an opinion at the time of drafting given the information submitted.

I have reviewed the following documents and plans submitted.

Proposed Site Layout 5166 CA 00 00 DR A 05001 Rev P1  
Transport Strategy Report SJT\RT\23457-01 Transport Statement

Based on the information provided, I set out the main issues/information that will need to be considered with the proposal, and these are:

- Principle of development
- Access arrangements
- Internal layout
- Sustainable transport connectivity
- Traffic surveys
- Traffic distribution
- Traffic impact
- Accident data
- Likely mitigation required

The following links provide basic information needed to assist in the highway and transport consideration of many proposals.

## **Detailed Comments**

### **Principle of Development**

The proposed site is not allocated for development in the Cherwell District Council Plan. The applicant is advised to approach the District Council for pre-application advice to establish if this site would be supported for development.

The County Council have two significant concerns with development at this location. Firstly, development at this location would not be sustainable. The site does not benefit from direct and convenient links for pedestrians and cyclist or a frequent bus service from Banbury or the surrounding villages. Therefore, trips to the site are likely to be dependent on the car. Secondly, development at this location is likely to require significant mitigation for all travel modes. This concern was raised at the Examination of the Local Plan by the Planning Inspector as discussed below.

The Planning Inspector's Report on the Examination into the Cherwell Local Plan commented on Banbury 15, which originally extended from the boundary with the M40 and across the A361 to the fields east of the A361. The Inspector concluded that only the smaller portion of the site bound by the M40 to the west and the A361 to the east would be appropriate for development in this Plan period. He commented:

*'In addition, for the whole site to be developed as a mainly road based B2/B8 employment scheme, major contributions are likely to be necessary to other transport and highway improvements, especially to the motorway junction itself. There is no clear evidence that an acceptable programme of works could viably and practically be*

*delivered, taking into account the impacts of other developments committed in the plan.’ Pg 41 of Inspector’s Report*

His commentary regarding the development to the east of the A361 also raised concerns regarding ‘*...significant traffic generation impacts going north into Northamptonshire towards Daventry, on the A422 travelling east, including at Farthinghoe, or “rat running” on the B4525 through Middleton Stoney [Note – this should be Middleton Cheney]’.* Pg 42 of Inspector’s Report

The Inspector’s Report also confirms that development to the east of the A361 is likely to require the South East Relief Road to be brought forward earlier than planned as confirmed by National Highways and Oxfordshire County Council.

Given the above, the County Council raises concerns regarding the principle of development at this location for the proposed use of 125,000sqm of industrial use.

The applicant is advised to seek pre-application advice from both the District Council and National Highways before progressing the proposal much further.

#### Access arrangements

It would be informative to include a discussion on whether other access arrangements have been considered and rejected.

The primary access roundabout is considered to be too close to the M40 J11 roundabout and is, therefore, unlikely to be acceptable for reasons outlined below.

The traffic survey shows nearly 400 southbound vehicles on the A361 in the weekday am peak hour. This arm on the J11 roundabout is not signalised so significant queues are expected. These queues could easily block the proposed site access roundabout which is only approximately 100m from the J11 roundabout. There is a high probability that northbound A361 queues could then form, which would impact on the circulation of the J11 roundabout and potentially restrict the M40 exit slips.

Future analysis will need to include queue length surveys on the A361, with appropriate increases for traffic generated by the committed development west of the A361 (Frontier Park, ref. 19/00128/HYBRID).

As the proposed site access roundabout is halfway around a significant left-hand curve (when leaving the M40), forward visibility is severely restricted. Furthermore, there may be insufficient distance to accommodate the necessary direction signage. These issues must be addressed in a full application.

Primary and secondary access points must take account of the approved Frontier Park access (ref. drg. no. 6917-CUR-00-XX-DR-TP-75001-P05 of application no. 19/00128/HYBRID)

## Internal layout

The internal street layout is simple, with each industrial unit being accessed directly from the distributor road which terminates at the primary and secondary access points. All footways must be 2.0m wide and car parking spaces 5.0m x 2.5m.

The County Council is concerned about the lengths of straight road that will encourage speeding. New *residential* developments in Oxfordshire must be designed for 20mph (ref. Decisions by the County Council, 8 December 2020). Although there are likely to be fewer pedestrians than on a typical residential street, there will be on-carriageway cyclists (unless a network of cycle routes is designed in) and a high proportion of HGVs. Therefore, consideration must be given to designing the street layout in order to restrict speeds to appropriate levels.

The Site Layout shows the road leading from the primary access to be a straight length of 460m, and directly serving only three of the nine Units. The majority of vehicles will therefore be travelling the full length, so are likely to do so at speed if not calmed somehow. Deviations or features are typically placed at a maximum spacing of 70m to reduce speeds. All three links of the distributor road have excessive straight lengths so a major adjustment to the road layout will be necessary before it may be considered acceptable.

It needs to be explained why the proposals include a “truck stop”. This will attract additional HGV movements that are not associated with the development.

Clarification needs to be provided regarding the 44 car parking spaces at the truck stop, the users of these are not immediately clear in the submitted information.

## Sustainable transport connectivity

Para. 2.5.1 says that the opposite development is to provide a *pedestrian* link to Banbury, beneath the M40. Please confirm if this is for pedestrians only, as this would mean there is no connectivity for cyclists. It is disputed that there are “adjacent residential areas” close to the Gateway Shopping Park. The route through Gateway Shopping Park is not of a high standard and there are not clear and direct links to other areas from Banbury from this link underneath the M40. Therefore, the County Council does not accept this as adequate mitigation for a development of the size proposed.

Para. 3.2.4 Active travel connectivity is crucial to meet the requirements of the NPPF and the County Council’s Local Transport Plan, although there are no obvious solutions given the location of the development and severance presented by the M40. This issue must be addressed with any forthcoming planning application.

Frontier Park will be providing a pedestrian island only on the A361 to enable access to the southbound bus stop. If this crossing point is to be relied on by the proposed development for pedestrian (and possibly cyclist) access to Banbury, then it may need to be upgraded to an appropriate signalised crossing. Whether this can be accommodated within the Frontier Park access arrangement is debatable, due to the

presence of the right turn filter lane and the bus stops. (See drawing 6917-CUR-00-XX-DR-TP-75001-P05).

Further to the above, internal site footways and cycle routes will have to emerge at the crossing location.

### Traffic surveys

The traffic survey took place in early December 2021. Please confirm whether any roadworks were present in the vicinity at the time, as this would invalidate the speed data (Google Streetview shows substantial roadworks and temporary speed limits in November 2021, associated with the Frontier Park works).

December is not a Neutral Month for traffic surveys, so they are of limited value. Furthermore, there should be a comparison with pre-Covid years to understand if flows are representative of normal conditions.

## Traffic distribution

Ref. Tables 5 and 6, please explain how the HGVs are assigned to each link. For example:

- Only 50.6% assigned to M40(S), yet 57% of BYFM distribution is to SE England
- 18.7% is assigned to A422(E), which appears high, especially compared to A422(W), 1.7%

## Traffic impact

It is noted that the estimated traffic generation represents approximately a 50% increase on the A361 surveyed flows (4253 vehs in 12 hours c/w 8788 per day, five-day average two-way).

As the site will benefit from excellent access to the M40 there is a high possibility that some of the Units may be used as parcel distribution centres. This categorisation has its own Sub Land Use in TRICS which will result in a higher trip generation than Industrial Estate, so a justified proportion of the GFA should be assigned to this usage. The proportion should be agreed with the County Council.

As per the previous Hybrid application on the Frontier Park site, capacity assessments will have to be undertaken at the following junctions:

- A361/ Proposed Site Access Junction;
- M40 Junction 11 Grade Separated Roundabout Junction;
- A422 Hennef Way/ Ermont Way Roundabout;
- A422 Hennef Way/ Concorde Avenue Roundabout; and,
- A422 Hennef Way/ Southam Road Roundabout.

The analysis is to be conducted using the VISSIM microsimulation model that has been developed by OCC and Stantec and which covers all of the above junctions. The model has recently been validated and updated to reflect the MOVA system in operation at the J11 roundabout. To obtain access to the VISSIM model, please contact Jacqui Cox, [Jacqui.cox@oxfordshire.gov.uk](mailto:Jacqui.cox@oxfordshire.gov.uk)

## Accident data

There is no indication in the Transport Strategy Report of the extent of the PIC data reported and the collision locations are not illustrated with the output in Appendix C.

The area for consideration should be the same as that agreed on and used for the Frontier Park development, 19/00128/HYBRID, but updated to the latest available five-year period. The Frontier Park plan is included below for information.

## Likely mitigation required

The area known as Banbury 15, which incorporates the sites both west (Frontier Park) and east of the A361, was assessed during the Examination of the Cherwell Local Plan and documented in the Inspectors Report (2015). The full report can be found here:

<https://www.cherwell.gov.uk/downloads/download/381/report-on-the-examination-into-the-cherwell-local-plan-june-2015>

| It is recommended that any full application that may follow should address the reasons highlighted by the Inspector for not including the site east of the A361 in the Local Plan.

The South East relief road is discussed in the Oxfordshire Local Transport Plan 4 (LTP4), which also includes other mitigation measures for Banbury. This document may be found at:

[https://mycouncil.oxfordshire.gov.uk/documents/s33712/Background%20CA\\_JUN28\\_16R13%20Connecting%20Oxfordshire%20vol%208%20part%20ii%20-%20Area%20Strategies.pdf](https://mycouncil.oxfordshire.gov.uk/documents/s33712/Background%20CA_JUN28_16R13%20Connecting%20Oxfordshire%20vol%208%20part%20ii%20-%20Area%20Strategies.pdf)

LTP4 states "*The increase in Local Plan growth to the south of Banbury has renewed the need to investigate the opportunities, costs and benefits of a link road over the railway for the post 2024 period, to manage traffic movements within the town.*" No decision has been taken to date on the requirement for a SE relief road or the route it may take. However, there is greater commitment in LTP4 for a link road to the east of the M40 J11:

13. In the longer term (post 2024), there is likely to be a need for additional road capacity to manage anticipated traffic growth at M40 Junction 11.

- **A new link road east of Junction 11** will provide a strategic solution to helping mitigate the impact of traffic travelling to/from Banbury from surrounding areas including from the M40.

This is clarified in the Policy BAN1 with the following confirmed measure:

- Provision of a link road east of M40 Junction 11 (Overthorpe Road to A422).

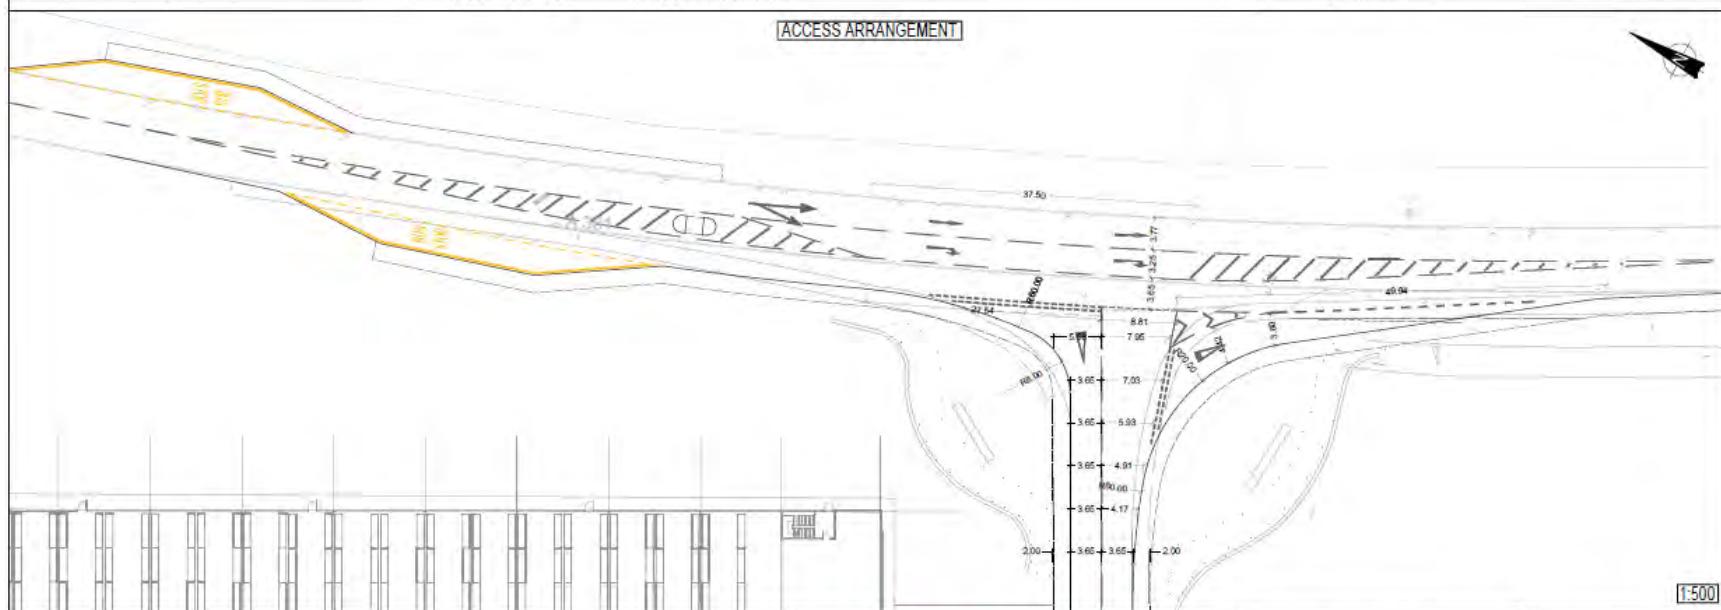

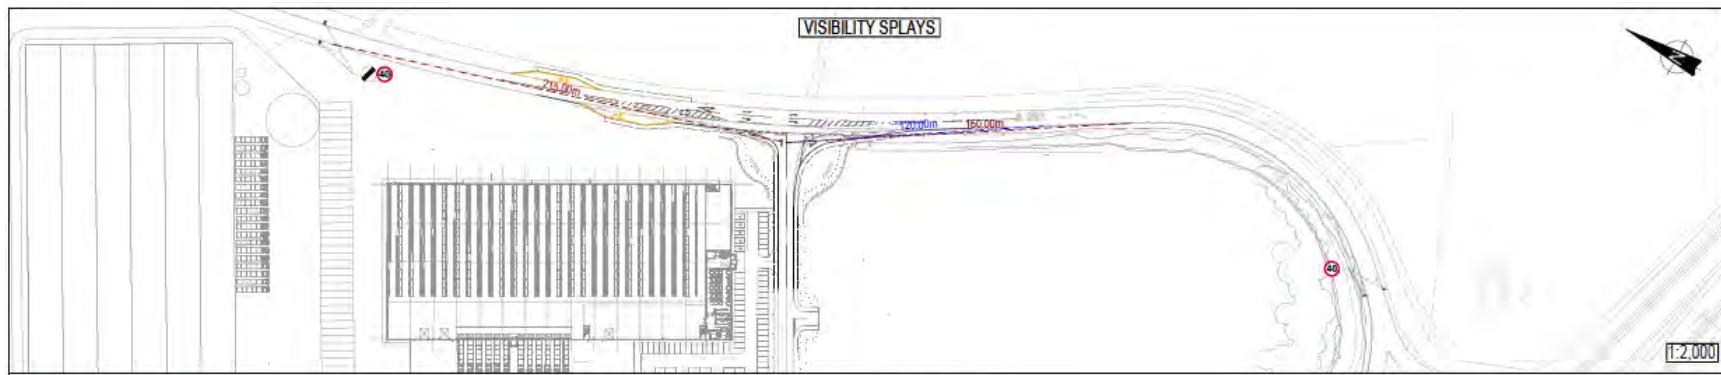

| This potential link road has also not been designed or costed. However, OCC shall require a contribution that will allow delivery of this road should the development site gain planning approval.

Another mitigation will be in the form of a contribution towards public transport serving the site. At present, the 200 route passes the site along the A361 and the Frontier Park development will provide convenient bus stops. As suggested in the Transport Strategy Report, the contribution will go towards either enhancing the 200 service or establishing a shuttle bus between the site and transport interchanges/ residential areas of Banbury.

| OCC will also be requiring a contribution towards measures along Hennef Way and adjoining roads, given the severe issues already experienced and the additional traffic to be generated by the site. This will be proportionate to the sum being paid by Frontier Park.

The VISSIM modelling work will also identify other mitigation required to support a development at this site.

## Executive Summary

AECOM have conducted a review, on behalf of National Highways (NH), of the Transport Strategy Report (TSR) prepared by David Tucker Associates (DTA), on behalf of Greystoke, prepared in support of a planning application for a proposed industrial development located at Land at M40 Junction 11, Oxfordshire. Following this review, AECOM make the following recommendations.

### Recommendations regarded as critical to the acceptability of this planning application:

1. Traffic surveys undertaken during a time of Covid-19 restrictions should be removed when determining trip rates (paragraph 5.3); and
2. An assessment of the merge/diverge capacity on the M40 should be undertaken and the TA should make use of an approved VISSIM model of Junction 11 (paragraph 5.13).

### Recommendations regarded as important but not critical to the acceptability of this planning application:

3. Reference should be made to DfT Circular 02/2013, Highways England's 'The strategic road network: Planning for the future (A guide to working with Highways England on planning matters)', and the adopted Cherwell Local Plan (paragraph 2.1);
4. The locations and type of the pedestrian crossings on the A361 should be presented (paragraph 3.8);
5. A full description of bus services within the vicinity of the proposed development site should be provided (paragraph 3.9);
6. The full five-year period preceding the introduction of Covid-19 restrictions should be used when analysing personal injury collisions (paragraph 3.11);
7. The discrepancy between the area of the proposed development stated within the TSR and shown on the Proposed Site Layout Plan should be explained (paragraph 4.1);
8. The format of the proposed site access junctions should be confirmed at a later date (paragraph 4.2);
9. The presence of a truck stop facility, management centre, and an unnamed building on the Proposed Site Layout Plan should be explained (paragraph 4.3);

---

*This document has been prepared by AECOM Limited for the sole use of our clients ("National Highways") and in accordance with generally accepted consultancy principles, the budget for fees and the terms of reference agreed between AECOM Limited and the Client. Any information provided by third parties and referred to herein has not been checked or verified by AECOM Limited, unless otherwise expressly stated in the document. No third party may rely upon this document without the prior and express written agreement of AECOM Limited.*

- 
10. The trip rates for the proposed development should be derived using the most appropriate land use from TRICS (paragraph 5.2);
  11. Development traffic from any nearby committed developments should be included in any future year analyses. The details of these committed developments should also be included in the forthcoming Transport Assessment (paragraph 6.2);
  12. A suitable base year, an opening year, and a future horizon year should be provided for consideration in any junction impact analysis (paragraph 6.3);
  13. 'Base', 'base + growth + committed development' and 'base + growth + committed development + development' scenarios should be included in any junction capacity assessments (paragraph 6.4);
  14. Growth factors should be identified and included within the forthcoming Transport Assessment (paragraph 6.5); and
  15. Details of a travel plan should be provided within the forthcoming Transport Assessment (paragraph 7.1).

## 1. Introduction

- 1.1. AECOM have prepared this Technical Note (TN) on behalf of National Highways (NH) to document a review of the Transport Strategy Report (TSR), dated 21 December 2021, prepared by David Tucker Associates (DTA) on behalf of Greystoke. The TSR has been prepared in support of a proposed industrial development, comprising circa 125,000sqm of industrial units, located on land to the east of the A361.
- 1.2. The site is located to the north-east of Banbury, Oxfordshire, where the local planning authority is Cherwell District Council (CDC), with the local highway authority being Oxfordshire County Council (OCC).
- 1.3. The nearest part of the Strategic Road Network (SRN) to the proposed development site is M40 Junction 11, which is located immediately to the west of the site boundary.
- 1.4. The purpose of this TN is to conduct a review of the TSR to determine whether the potential impact of the proposed development on the SRN will be reasonably assessed in the forthcoming Transport Assessment.
- 1.5. For ease of reference, AECOM's main comments and recommendations are presented in bold and underlined text throughout the note. Recommendations regarded as critical to the acceptability of this planning application are coloured **red**. Recommendations that are regarded as important but not critical to the acceptability of this planning application are highlighted in **amber**.

## 2. Policy Review

- 2.1. The TSR states that consideration has been given to the National Planning Policy Framework (NPPF). While this is welcomed by AECOM, it is **recommended that, when considering the impact of the proposed development on the SRN, reference be made to DfT Circular 02/2013, which provides guidance regarding how the impact of the proposed development on the SRN should be assessed, together with Highways England's 'The strategic road network: Planning for the future (A guide to working with Highways England on planning matters)'. Consideration should also be given to the Adopted Cherwell Local Plan.**

## 3. Existing Conditions

### *Site Location*

- 3.1. The TSR states that the proposed development site is located to the west of the A361 (it is actually to the east of the A361), approximately 3.2km north-east of Banbury town centre, Oxfordshire.

### *Local Highway Network*

- 3.2. The TSR states that the site will be accessed from the A361, which is a single-carriageway road linking the M40/A422/A361 roundabout to the A45 on the south-western boundary of Daventry.
- 3.3. The M40, which is located to the west of the site, forms part of the Strategic Road Network (SRN), linking London to Birmingham. The M40 connects with the M25 at Junction 16, and the M42 at Junction 3A.
- 3.4. The A422 (eastbound) is a dual carriageway linking the M40 at Junction 11 to the A43 at Brackley. The A43 is part of the SRN, linking the M40, the A5, and the M1. Westbound, the A422 is the main route into Banbury from the SRN.

## ***Existing Traffic Flows***

- 3.5. The TSR states that an Automatic Traffic Count (ATC) was undertaken on the A361 between 3 and 9 December 2021 to determine existing traffic flows. It should be noted that December is not considered a neutral month within Department for Transport TAG unit M1.2.
- 3.6. The ATC shows that the average 85<sup>th</sup> percentile speed on the section of the A361 that passes the proposed development site is between 54.3mph and 57.2mph. It is noted that, in November 2021, there was a temporary speed restriction of 40mph on this section of road; however, it is not known whether this speed restriction was in place during the period when the data was collected.

## ***Walking and Cycling***

- 3.7. The proposed development site is not currently accessible to pedestrians and cyclists as there are no footways on the A361, nor is it considered safe for cyclists to be expected to use the M40 Junction 11 roundabout to access the site. There is an existing underpass under the M40, which connects the Banbury Gateway Shopping Park to a development located to the west of the A361.
- 3.8. The TSR states that there will be pedestrian crossing points provided as part of the permitted application, located at the main pedestrian desire lines. **AECOM recommend that the locations of these crossings should be provided. Furthermore, it should be stated what type of crossings these are to be (puffin, toucan, etc.) to better determine the proposed development's accessibility by foot or cycle.**

## ***Public Transport***

- 3.9. The TSR states that there are currently no bus stops within the vicinity of the site; however, bus stops are proposed to be installed as part of the proposed development to the west of the A361. The TSR states that bus route number 200 is the only route that would pass the site, however, there is also bus route number 500. **AECOM, therefore, recommend that a full description of bus services within the vicinity of the site should be provided.**
- 3.10. The TSR states that the nearest railway station to the proposed development site is Banbury Station, located approximately 2.7km south-west of the site. It should be noted that TSR states that the railway station is to the north-east of the site as opposed to the south-west.

## ***Personal Injury Collisions***

- 3.11. The TSR states that personal injury collision (PIC) data has been obtained from Oxfordshire County Council (OCC) for the most recent five-year period. The data provided covers the period January 2016 to November 2021. This period includes PIC data between March 2020 and September 2021 which should be discounted due to Covid-19 restrictions. Therefore, **AECOM recommend that the five-year (60-month) period preceding the introduction of Covid-19 restrictions should be used to better reflect 'normal' traffic conditions.**

## **4. Development Proposals**

- 4.1. The TSR states that the proposed development comprises 125,000sqm for industrial use, split across nine different units. Each of the units is to be warehousing with offices. It should be noted, however, that the total gross internal area (GIA), stated within the Proposed Site Layout Plan, is to be 118,239sqm. **AECOM, therefore, recommend that the development floor area should be confirmed.**
- 4.2. The primary access to the site is proposed via a newly constructed three-arm roundabout on the A361 near to the A422/A361/M40 Junction 11 roundabout, with a standard priority junction also constructed further to the north. The proximity of the proposed roundabout to Junction 11 is potentially of concern with regards to the possibility of interaction between the two junctions. This

will need to be considered within the Transport Assessment, along with any reasoning behind the selection of the junction type. **AECOM, recommend that alternative access proposals are considered in order to demonstrate the most suitable option is chosen.**

- 4.3. A secondary access is proposed further north along the A361, which is shown as being a priority junction with a turning lane to prevent blocking of through traffic on the A361. It is noted that one of the bus stops proposed as part of the neighbouring development is shown in the carriageway and would need to be relocated.
- 4.4. It should be noted that, supplementary to the nine development units shown, the Proposed Site Layout Plan also shows a truck stop facility, a management/business centre, and an unnamed building; none of which have been referenced within the TSR. **AECOM, therefore, recommend that further details are provided in relation to the intended use and likely trip generation of this area.**

## 5. Trip Rates, Trip Generation and Distribution

### *Trip Rates*

- 5.1. The TSR states that the TRICS database (version 7.7.3) has been used to derive trip rates for the proposed development. It should, however, be noted that the TRICS outputs supplied in Appendix D show that version 7.8.3 of the TRICS database has been used. The derived trip rates, as presented within the TSR, are shown in Table 1, below.

**Table 1: Weekday peak hour vehicle and HGV trip rates, as presented within the TSR**

| Peak Hour      | Vehicle Trip Rates |            |       | HGV Trip Rates |            |       |
|----------------|--------------------|------------|-------|----------------|------------|-------|
|                | Arrivals           | Departures | Total | Arrivals       | Departures | Total |
| <b>AM Peak</b> | 0.299              | 0.080      | 0.379 | 0.012          | 0.013      | 0.025 |
| <b>PM Peak</b> | 0.068              | 0.306      | 0.374 | 0.01           | 0.009      | 0.019 |

- 5.2. The TSR states that surveys for land use 'Employment – Industrial Estate' were used to derive trip rates for the proposed development; however, the TRICS land use definitions state that, if the industrial estate is predominantly warehousing, then 'Employment – Warehousing' should be used to derive trip rates. Paragraph 4.1.2 in the TSR states that the predominant use will be B8 and, as such, **AECOM recommend that trip rates for the proposed development should be derived using the 'Employment – Warehousing' land use.** As shown in Table 6 later in this TN, the overall impact of this is a slight reduction in trip generation which explains why this comment is amber and not red.
- 5.3. It is noted by AECOM that one of the traffic surveys used to derive trip rates was undertaken during a time of Covid-19 restrictions and, therefore, may not accurately reflect 'normal' traffic conditions. As such, **AECOM recommend that traffic surveys undertaken during times of Covid-19 restrictions should be omitted.**
- 5.4. To verify the trip rates presented within the TSR, AECOM consulted the TRICS database (version 7.8.4) to derive trip rates for the proposed development, which are shown in Table 2 below. In doing so, the land use 'Employment – Warehousing' was selected to better reflect the development proposals.

**Table 2: Weekday peak hour vehicle and HGV trip rates, as derived by AECOM**

| Peak Hour      | Vehicle Trip Rates |            |       | HGV Trip Rates |            |       |
|----------------|--------------------|------------|-------|----------------|------------|-------|
|                | Arrivals           | Departures | Total | Arrivals       | Departures | Total |
| <b>AM Peak</b> | 0.145              | 0.094      | 0.239 | 0.052          | 0.057      | 0.109 |
| <b>PM Peak</b> | 0.068              | 0.141      | 0.209 | 0.043          | 0.031      | 0.074 |

# Technical Note 01

- 5.5. It was found that, by changing the land use, the overall number of arriving and departing vehicles decreased; however, the proportion of those being HGVs greatly increased. A comparison between the HGV percentage for the trip rates presented within the TSR and those derived by AECOM is shown in Table 3 below.

**Table 3: Comparison of HGV percentage**

| Peak Hour | TSR      |            |       | AECOM    |            |       |
|-----------|----------|------------|-------|----------|------------|-------|
|           | Arrivals | Departures | Total | Arrivals | Departures | Total |
| AM Peak   | 4.0%     | 16.3%      | 6.6%  | 35.9%    | 60.6%      | 45.6% |
| PM Peak   | 14.7%    | 2.9%       | 5.1%  | 63.2%    | 22.0%      | 35.4% |

## **Trip Generation**

- 5.6. The resulting trip generation of the proposed development, as presented in the TSR, is shown in Table 4 below.

**Table 4: Weekday peak hour vehicle trip generation, as presented within the TSR**

| Peak Hour | Vehicle Trip Generation |            |       | HGV Trip Generation |            |       |
|-----------|-------------------------|------------|-------|---------------------|------------|-------|
|           | Arrivals                | Departures | Total | Arrivals            | Departures | Total |
| AM Peak   | 374                     | 100        | 474   | 15                  | 16         | 31    |
| PM Peak   | 85                      | 383        | 468   | 13                  | 11         | 24    |

- 5.7. The resulting trip generation of the proposed development, calculated using the trip rates derived by AECOM, is in Table 5 below.

**Table 5: Weekday peak hour vehicle trip generation, as derived by AECOM**

| Peak Hour | Vehicle Trip Generation |            |       | HGV Trip Generation |            |       |
|-----------|-------------------------|------------|-------|---------------------|------------|-------|
|           | Arrivals                | Departures | Total | Arrivals            | Departures | Total |
| AM Peak   | 181                     | 118        | 299   | 65                  | 71         | 136   |
| PM Peak   | 85                      | 176        | 261   | 54                  | 39         | 93    |

- 5.8. As can be seen when comparing Table 4 and Table 5, the total number of general vehicles generated using the trip rates derived by AECOM is lower; however, there is a large increase in the number of HGVs generated, between 69 and 105 more. It should be noted that, despite this, there is a reduction in the total peak hour trip generation in terms of passenger car units (PCUs), as can be seen in Table 6 below.

**Table 6: Peak hour trip generation comparison, in terms of PCU**

| Peak Hour | TSR      |            |       | AECOM    |            |       |
|-----------|----------|------------|-------|----------|------------|-------|
|           | Arrivals | Departures | Total | Arrivals | Departures | Total |
| AM Peak   | 395      | 123        | 518   | 272      | 217        | 490   |
| PM Peak   | 103      | 398        | 501   | 160      | 231        | 391   |

## **Trip Distribution**

- 5.9. The TSR states that the vehicle distribution for light vehicle traffic is to be done using data from the 2011 Census 'Journey to Work', using the Middle Super Output Area (MSOA) of Cherwell 004 as the destination. The use of Census Journey to Work data is considered by AECOM to be a reasonable method to determine the distribution of light vehicle traffic. The vehicle distribution, as presented within the TSR, is shown in Table 7 below. The presented share of vehicles has been verified by AECOM.

**Table 7: 2011 Census Journey to Work data for Cherwell 004 MSOA**

| Residence              | Share |
|------------------------|-------|
| Cherwell               | 52.7% |
| South Northamptonshire | 13.9% |
| Stratford-on-Avon      | 5.2%  |
| Daventry               | 4.0%  |
| West Oxfordshire       | 3.1%  |
| Warwick                | 2.7%  |
| Aylesbury Vale         | 1.7%  |
| Coventry               | 1.0%  |
| Other                  | 15.7% |

- 5.10. The TSR states that the distribution for heavy vehicles has been derived using data included within the Base Year Freight Matrices. The use of Base Year Freight Matrix data is considered by AECOM to be a reasonable method to determine the distribution of heavy vehicle traffic. The distribution of heavy vehicles, as presented within the TSR, is shown in Table 8 below.

**Table 8: Base Year Freight Matrix vehicle distribution**

| Region                   | Share |
|--------------------------|-------|
| East of England          | 11.4% |
| East Midlands            | 10.8% |
| North West of England    | 3.5%  |
| Scotland                 | 0.6%  |
| South East of England    | 57.0% |
| South West of England    | 5.5%  |
| Wales                    | 0.3%  |
| West Midlands            | 7.5%  |
| Yorkshire and the Humber | 3.4%  |

- 5.11. The TSR states that the assignment of development traffic to the network has been undertaken using Google Maps. A summary of the proposed development traffic assignment, as presented within the TSR, is shown in Table 9 below.

**Table 9: Proposed traffic assignment, as presented within the TSR**

| Link          | Light Vehicles |         |         | HGVs         |         |         |
|---------------|----------------|---------|---------|--------------|---------|---------|
|               | Distribution   | AM Peak | PM Peak | Distribution | AM Peak | PM Peak |
| <b>M40 N</b>  | 12.5%          | 55      | 55      | 16.9%        | 5       | 4       |
| <b>M40 S</b>  | 8.5%           | 38      | 38      | 50.6%        | 16      | 12      |
| <b>A422 E</b> | 18.0%          | 80      | 80      | 18.7%        | 6       | 4       |
| <b>A422 W</b> | 53.5%          | 237     | 237     | 1.7%         | 1       | 0       |
| <b>A361 N</b> | 7.5%           | 33      | 33      | 10.8%        | 3       | 3       |

- 5.12. After having undertaken a review of the distribution profile presented within the TSR, AECOM consider the traffic assignment shown to be acceptable.

### **Traffic Impact on the SRN**

- 5.13. The impact of the development on the SRN needs to consider the impact on the M40 J11 signal controlled roundabout, and also the impact on the merge and diverge flows with the mainline of the M40. There is currently a plan to develop a new VISSIM model that includes the J11 roundabout, and it is recommended that when undertaking the formal Transport Assessment for

this development that access to this model is sought in order to enable the best assessment of the likely traffic impact to be provided. **AECOM, therefore, recommend that an assessment of the merge/diverge capacity should be undertaken and that the TA makes use of an approved VISSIM model of Junction 11.**

## 6. Junction Impact Analysis

- 6.1. The TSR states that, once trip rates have been agreed, OCC's updated microsimulation model for M40 Junction 11 and the A422 Hennef Way corridor is to be used to review potential impacts of the proposed development. The use of this model will need to be agreed with OCC. This is considered by AECOM to be an acceptable method of determining the potential impacts of the proposed development.

### *Committed Developments*

- 6.2. While the TSR does not state that any development traffic from committed developments will be included in any junction impact analysis, the TSR makes mention of the proposed development located to the west of the A361. **AECOM, therefore, recommend that development traffic from committed developments that could have a point impact at junctions in the vicinity of the proposed development and include these within any future year traffic impact assessments. Details of these committed developments and the flows associated with them should be included within the TA. Furthermore, it is recommended that DTA check whether any infrastructure changes on the SRN or LRN have been identified to support any of these committed developments and include these within any junction assessments that are undertaken.**

### *Assessment Scenarios*

- 6.3. The TSR does not include any assessment years to be used in junction impact analysis. **AECOM, therefore, recommend that a suitable base year be selected, alongside the expected opening year, and a future horizon year to be considered in any junction impact analyses. The future horizon year should be either the end year of the current Local Plan or 10 years after the expected opening year, whichever is the later, as per DfT Circular 02/2013.**
- 6.4. The TSR also does not include any assessment scenarios to be assessed as part of any junction impact analysis. **Therefore, AECOM recommend that 'base', 'base + growth + committed development' and 'base + growth + committed development + development' scenarios are included in any junction capacity assessments to determine the impact of the proposed development on the SRN. Flow diagrams should also be provided individually for base flows, base + growth flows, committed development flows, proposed development flows and total flows.**
- 6.5. Furthermore, growth factors have not been presented within the TSR. **AECOM, therefore, recommend that these are identified and included within the forthcoming TA.**

## 7. Travel Plan

- 7.1. The TSR makes no reference to the preparation of a Travel Plan (TP) in accordance with OCC guidance. **AECOM, therefore, recommend that a TP be prepared, including targets for single vehicle use reduction over the course of travel plan period. AECOM also recommend that the TP attempts to reduce single occupancy car use at the site.**
- 7.2. It should be noted that paragraph 33 of DfT Circular 02/2013 states that travel planning should take precedence over highway-based capacity mitigation.

## 8. Conclusion

- 8.1. AECOM have prepared this Technical Note (TN) on behalf of National Highways (NH) to document a review of the Transport Strategy Report, dated December 2021, prepared by David Tucker Associates on behalf of Greystone.
- 8.2. This TN has identified some recommendations which are summarised in the Executive Summary. AECOM's recommendations regarding these concerns are highlighted by the use of bold underlined text throughout this document. Recommendations regarded as critical to the acceptability of this planning application are coloured **red**. Recommendations that are regarded as important but not critical to the acceptability of this planning application are highlighted in **amber**.

## **Appendix D**

## **Appendix I**

Calculation Reference: AUDIT-623801-220321-0329

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 02 - EMPLOYMENT  
Category : D - INDUSTRIAL ESTATE  
**TOTAL VEHICLES**

Selected regions and areas:

|    |                                |        |
|----|--------------------------------|--------|
| 02 | SOUTH EAST                     |        |
|    | EX ESSEX                       | 3 days |
| 03 | SOUTH WEST                     |        |
|    | DC DORSET                      | 1 days |
|    | DV DEVON                       | 1 days |
|    | SM SOMERSET                    | 1 days |
| 05 | EAST MIDLANDS                  |        |
|    | LN LINCOLNSHIRE                | 1 days |
|    | NR NORTHAMPTONSHIRE            | 1 days |
| 06 | WEST MIDLANDS                  |        |
|    | WK WARWICKSHIRE                | 3 days |
|    | WO WORCESTERSHIRE              | 2 days |
| 07 | YORKSHIRE & NORTH LINCOLNSHIRE |        |
|    | WY WEST YORKSHIRE              | 5 days |
| 08 | NORTH WEST                     |        |
|    | LC LANCASHIRE                  | 2 days |

This section displays the number of survey days per TRICS® sub-region in the selected set

Primary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: Gross floor area  
Actual Range: 1776 to 150564 (units: sqm)  
Range Selected by User: 708 to 974258 (units: sqm)

Parking Spaces Range: All Surveys Included

Public Transport Provision:

Selection by: Include all surveys

Date Range: 01/01/13 to 21/10/20

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

|           |        |
|-----------|--------|
| Monday    | 4 days |
| Tuesday   | 3 days |
| Wednesday | 3 days |
| Thursday  | 4 days |
| Friday    | 6 days |

This data displays the number of selected surveys by day of the week.

Selected survey types:

|                       |         |
|-----------------------|---------|
| Manual count          | 20 days |
| Directional ATC Count | 0 days  |

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaking using machines.

Selected Locations:

|                                  |    |
|----------------------------------|----|
| Edge of Town                     | 18 |
| Free Standing (PPS6 Out of Town) | 2  |

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

|                  |    |
|------------------|----|
| Industrial Zone  | 12 |
| Commercial Zone  | 1  |
| Development Zone | 1  |
| Out of Town      | 3  |

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Secondary Filtering selection:

Use Class:

|           |         |
|-----------|---------|
| Not Known | 20 days |
|-----------|---------|

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Filter by Site Operations Breakdown:

All Surveys Included

Population within 500m Range:

|                                  |        |
|----------------------------------|--------|
| All Surveys Included             |        |
| <u>Population within 1 mile:</u> |        |
| 1,000 or Less                    | 1 days |
| 1,001 to 5,000                   | 1 days |
| 5,001 to 10,000                  | 4 days |
| 10,001 to 15,000                 | 6 days |
| 15,001 to 20,000                 | 2 days |
| 20,001 to 25,000                 | 3 days |
| 25,001 to 50,000                 | 3 days |

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

|                    |         |
|--------------------|---------|
| 5,001 to 25,000    | 1 days  |
| 25,001 to 50,000   | 1 days  |
| 50,001 to 75,000   | 3 days  |
| 75,001 to 100,000  | 3 days  |
| 100,001 to 125,000 | 1 days  |
| 125,001 to 250,000 | 10 days |
| 250,001 to 500,000 | 1 days  |

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

|            |         |
|------------|---------|
| 0.6 to 1.0 | 6 days  |
| 1.1 to 1.5 | 13 days |
| 1.6 to 2.0 | 1 days  |

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

|    |         |
|----|---------|
| No | 20 days |
|----|---------|

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

|                 |         |
|-----------------|---------|
| No PTAL Present | 20 days |
|-----------------|---------|

This data displays the number of selected surveys with PTAL Ratings.

This section provides a list of all survey sites and days in the selected set. For each individual survey site, it displays a unique site reference code and site address, the selected trip rate calculation parameter and its value, the day of the week and date of each survey, and whether the survey was a manual classified count or an ATC count.

| Total Rates:  |          | 2.730    |           |            | 2.622    |           |          |          | 5.352     |

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP\*FACT. Trip rates are then rounded to 3 decimal places.

#### Parameter summary

|   |                            |
|---|----------------------------|
| Trip rate parameter range selected:           | 1776 - 150564 (units: sqm) |
| Survey date date range:                       | 01/01/13 - 21/10/20        |
| Number of weekdays (Monday-Friday):           | 20                         |
| Number of Saturdays:                          | 0                          |
| Number of Sundays:                            | 0                          |
| Surveys automatically removed from selection: | 0                          |
| Surveys manually removed from selection:      | 3                          |

*This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.*

| 21:00 - 22:00 |          |          |           |            |          |           |          |          |           |
| 22:00 - 23:00 |          |          |           |            |          |           |          |          |           |
| 23:00 - 24:00 |          |          |           |            |          |           |          |          |           |
| Total Rates:  |          | 0.217    |           |            | 0.206    |           |          | 0.423    |           |

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP\*FACT. Trip rates are then rounded to 3 decimal places.

## **Appendix J**

Calculation Reference: AUDIT-623801-220321-0341

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 02 - EMPLOYMENT  
Category : G - PARCEL DISTRIBUTION CENTRES  
**TOTAL VEHICLES**

Selected regions and areas:

|                    |        |
|--------------------|--------|
| 05 EAST MIDLANDS   |        |
| LN LINCOLNSHIRE    | 1 days |
| NT NOTTINGHAMSHIRE | 1 days |

This section displays the number of survey days per TRICS® sub-region in the selected set

Primary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: Gross floor area  
Actual Range: 1496 to 3000 (units: sqm)  
Range Selected by User: 763 to 24154 (units: sqm)

Parking Spaces Range: All Surveys Included

Public Transport Provision:

Selection by: Include all surveys

Date Range: 01/01/13 to 11/05/21

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

|        |        |
|--------|--------|
| Monday | 1 days |
| Friday | 1 days |

This data displays the number of selected surveys by day of the week.

Selected survey types:

|                       |        |
|-----------------------|--------|
| Manual count          | 2 days |
| Directional ATC Count | 0 days |

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaken using machines.

Selected Locations:

|              |   |
|--------------|---|
| Edge of Town | 2 |
|--------------|---|

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

|                 |   |
|-----------------|---|
| Industrial Zone | 1 |
| Commercial Zone | 1 |

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Secondary Filtering selection:

Use Class:  
B8 2 days

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Filter by Site Operations Breakdown:

All Surveys Included

Secondary Filtering selection (Cont.):

Population within 500m Range:

All Surveys Included

Population within 1 mile:

|                  |        |
|------------------|--------|
| 10,001 to 15,000 | 1 days |
| 25,001 to 50,000 | 1 days |

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

|                    |        |
|--------------------|--------|
| 125,001 to 250,000 | 1 days |
| 500,001 or More    | 1 days |

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

|            |        |
|------------|--------|
| 1.1 to 1.5 | 2 days |
|------------|--------|

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

|    |        |
|----|--------|
| No | 2 days |
|----|--------|

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

|                 |        |
|-----------------|--------|
| No PTAL Present | 2 days |
|-----------------|--------|

This data displays the number of selected surveys with PTAL Ratings.

| 17:00 - 18:00 | 2        | 2248     | 0.378     | 2          | 2248     | 0.378     | 2        | 2248     | 0.756     |
| 18:00 - 19:00 | 2        | 2248     | 0.400     | 2          | 2248     | 0.423     | 2        | 2248     | 0.823     |
| 19:00 - 20:00 | 2        | 2248     | 0.089     | 2          | 2248     | 0.222     | 2        | 2248     | 0.311     |
| 20:00 - 21:00 | 2        | 2248     | 0.111     | 2          | 2248     | 0.178     | 2        | 2248     | 0.289     |
| 21:00 - 22:00 | 1        | 3000     | 0.000     | 1          | 3000     | 0.000     | 1        | 3000     | 0.000     |
| 22:00 - 23:00 |          |          |           |            |          |           |          |          |           |
| 23:00 - 24:00 |          |          |           |            |          |           |          |          |           |
| Total Rates:  |          | 5.856    |           |            | 4.540    |           |          |          | 10.396    |

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP\*FACT. Trip rates are then rounded to 3 decimal places.

#### Parameter summary

|   |                          |
|---|--------------------------|
| Trip rate parameter range selected:           | 1496 - 3000 (units: sqm) |
| Survey date date range:                       | 01/01/13 - 11/05/21      |
| Number of weekdays (Monday-Friday):           | 2                        |
| Number of Saturdays:                          | 0                        |
| Number of Sundays:                            | 0                        |
| Surveys automatically removed from selection: | 0                        |
| Surveys manually removed from selection:      | 0                        |

*This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.*

| 21:00 - 22:00 | 1        | 3000     | 0.000     | 1          | 3000     | 0.000     | 1        | 3000     | 0.000     |
| 22:00 - 23:00 |          |          |           |            |          |           |          |          |           |
| 23:00 - 24:00 |          |          |           |            |          |           |          |          |           |
| Total Rates:  |          | 1.957    |           |            | 1.378    |           |          |          | 3.335     |

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

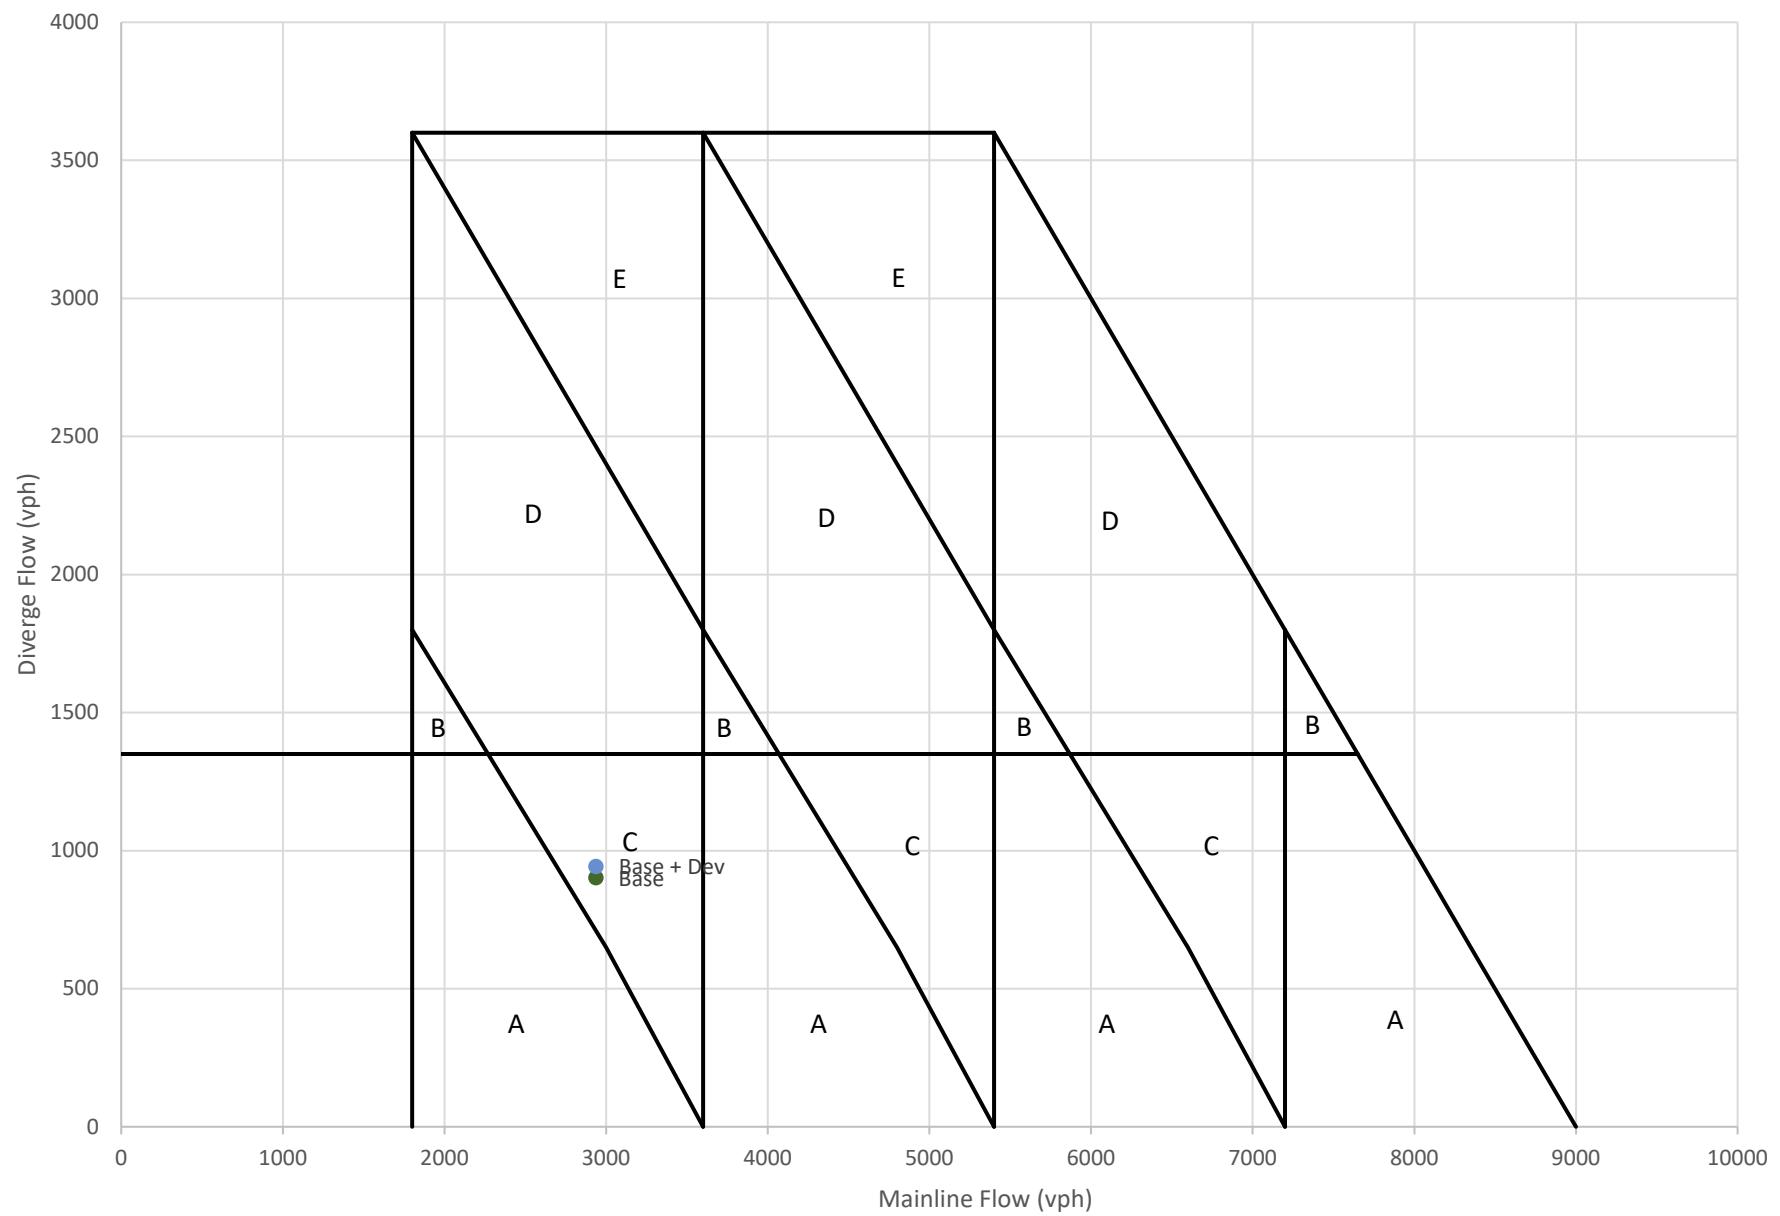

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP\*FACT. Trip rates are then rounded to 3 decimal places.

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of Av. delay per arriving vehicle.

## Data Errors and Warnings

| Severity | Area                          | Item                             | Description   |
|----------|-------------------------------|----------------------------------|---|
| Warning  | Minor arm visibility to right | Site Access - Minor arm geometry | Visibility to right expected to have two components if the arm has two lanes, or two lanes in a flared section. |

## Junction Network

### Junctions

| Junction | Name     | Junction type | Arm A Direction | Arm B Direction | Arm C Direction | Use circulating lanes | Junction Delay (s) | Junction LOS |
|----------|----------|---------------|-----------------|-----------------|-----------------|-----------------------|--------------------|--------------|
| 1        | untitled | T-Junction    | Two-way         | Two-way         | Two-way         |                       | 0.00               | A            |

### Junction Network

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 0.00              | A           |

## Arms

### Arms

| Arm | Name        | Description | Arm type |
|-----|-------------|-------------|----------|
| A   | A361 N      |             | Major    |
| B   | Site Access |             | Minor    |
| C   | A361 S      |             | Major    |

### Major Arm Geometry

| Arm    | Width of carriageway (m) | Has kerbed central reserve | Has right-turn storage | Width for right-turn storage (m) | Visibility for right turn (m) | Blocks? | Blocking queue (PCU) |
|--------|--------------------------|----------------------------|------------------------|----------------------------------|-------------------------------|---------|----------------------|
| A361 S | 7.15                     |                            | ✓                      | 3.50                             | 250.0                         | ✓       | 21.00                |

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

### Minor Arm Geometry

| Arm         | Minor arm type      | Width at give-way (m) | Width at 5m (m) | Width at 10m (m) | Width at 15m (m) | Width at 20m (m) | Estimate flare length | Flare length (PCU) | Visibility to left (m) | Visibility to right (m) |
|-------------|---------------------|-----------------------|-----------------|------------------|------------------|------------------|-----------------------|--------------------|------------------------|-------------------------|
| Site Access | One lane plus flare | 10.00                 | 9.62            | 5.67             | 4.48             | 4.40             | ✓                     | 3.00               | 250                    | 250                     |

### Slope / Intercept / Capacity

#### Priority Intersection Slopes and Intercepts

| Stream | Intercept (PCU/hr) | Slope for A-B | Slope for A-C | Slope for C-A | Slope for C-B |
|--------|--------------------|---------------|---------------|---------------|---------------|
| B-A    | 726                | 0.126         | 0.318         | 0.200         | 0.454         |
| B-C    | 814                | 0.119         | 0.300         | -             | -             |
| C-B    | 820                | 0.302         | 0.302         | -             | -             |

The slopes and intercepts shown above include custom intercept adjustments only.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

## Traffic Demand

### Demand Set Details

| ID | Scenario name | Time Period name | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) | Run automatically |
|----|---------------|------------------|----------------------|--------------------|---------------------|---------------------------|-------------------|
| D1 | 2022 Base     | AM               | ONE HOUR             | 07:45              | 09:15               | 15                        | ✓                 |

| Vehicle mix varies over turn | Vehicle mix varies over entry | Vehicle mix source | PCU Factor for a HV (PCU) |
|------------------------------|-------------------------------|--------------------|---------------------------|

## Data Errors and Warnings

| Severity | Area                          | Item                             | Description   |
|----------|-------------------------------|----------------------------------|---|
| Warning  | Minor arm visibility to right | Site Access - Minor arm geometry | Visibility to right expected to have two components if the arm has two lanes, or two lanes in a flared section. |

## Junction Network

### Junctions

| Junction | Name     | Junction type | Arm A Direction | Arm B Direction | Arm C Direction | Use circulating lanes | Junction Delay (s) | Junction LOS |
|----------|----------|---------------|-----------------|-----------------|-----------------|-----------------------|--------------------|--------------|
| 1        | untitled | T-Junction    | Two-way         | Two-way         | Two-way         |                       | 0.00               | A            |

### Junction Network

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 0.00              | A           |

## Traffic Demand

### Demand Set Details

| ID | Scenario name | Time Period name | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) | Run automatically |
|----|---------------|------------------|----------------------|--------------------|---------------------|---------------------------|-------------------|
| D2 | 2022 Base     | PM               | ONE HOUR             | 16:45              | 18:15               | 15                        | ✓                 |

| Vehicle mix varies over turn | Vehicle mix varies over entry | Vehicle mix source | PCU Factor for a HV (PCU) |
|------------------------------|-------------------------------|--------------------|---------------------------|
| ✓                            | ✓                             | HV Percentages     | 2.00                      |

### Demand overview (Traffic)

| Arm         | Linked arm | Profile type | Use O-D data | Av. Demand (PCU/hr) | Scaling Factor (%) |
|-------------|------------|--------------|--------------|---------------------|--------------------|
| A361 N      |            | ONE HOUR     | ✓            | 319                 | 100.000            |

## Data Errors and Warnings

| Severity | Area                          | Item                             | Description   |
|----------|-------------------------------|----------------------------------|---|
| Warning  | Minor arm visibility to right | Site Access - Minor arm geometry | Visibility to right expected to have two components if the arm has two lanes, or two lanes in a flared section. |

## Junction Network

### Junctions

| Junction | Name     | Junction type | Arm A Direction | Arm B Direction | Arm C Direction | Use circulating lanes | Junction Delay (s) | Junction LOS |
|----------|----------|---------------|-----------------|-----------------|-----------------|-----------------------|--------------------|--------------|
| 1        | untitled | T-Junction    | Two-way         | Two-way         | Two-way         |                       | 0.00               | A            |

### Junction Network

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 0.00              | A           |

## Traffic Demand

### Demand Set Details

| ID | Scenario name | Time Period name | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) | Run automatically |

## Data Errors and Warnings

| Severity | Area                          | Item                             | Description   |
|----------|-------------------------------|----------------------------------|---|
| Warning  | Minor arm visibility to right | Site Access - Minor arm geometry | Visibility to right expected to have two components if the arm has two lanes, or two lanes in a flared section. |

## Junction Network

### Junctions

| Junction | Name     | Junction type | Arm A Direction | Arm B Direction | Arm C Direction | Use circulating lanes | Junction Delay (s) | Junction LOS |
|----------|----------|---------------|-----------------|-----------------|-----------------|-----------------------|--------------------|--------------|
| 1        | untitled | T-Junction    | Two-way         | Two-way         | Two-way         |                       | 0.00               | A            |

### Junction Network

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 0.00              | A           |

## Traffic Demand

### Demand Set Details

| ID | Scenario name    | Time Period name | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) | Run automatically |

## Data Errors and Warnings

| Severity | Area                          | Item                             | Description   |
|----------|-------------------------------|----------------------------------|---|
| Warning  | Minor arm visibility to right | Site Access - Minor arm geometry | Visibility to right expected to have two components if the arm has two lanes, or two lanes in a flared section. |

## Junction Network

### Junctions

| Junction | Name     | Junction type | Arm A Direction | Arm B Direction | Arm C Direction | Use circulating lanes | Junction Delay (s) | Junction LOS |
|----------|----------|---------------|-----------------|-----------------|-----------------|-----------------------|--------------------|--------------|
| 1        | untitled | T-Junction    | Two-way         | Two-way         | Two-way         |                       | 1.19               | A            |

### Junction Network

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 1.19              | A           |

## Traffic Demand

### Demand Set Details

| ID | Scenario name                  | Time Period name | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) | Run automatically |
|----|--------------------------------|------------------|----------------------|--------------------|---------------------|---------------------------|-------------------|

# 2032 Base, AM

## Data Errors and Warnings

| Severity | Area                          | Item                             | Description   |
|----------|-------------------------------|----------------------------------|---|
| Warning  | Minor arm visibility to right | Site Access - Minor arm geometry | Visibility to right expected to have two components if the arm has two lanes, or two lanes in a flared section. |

## Junction Network

### Junctions

| Junction | Name     | Junction type | Arm A Direction | Arm B Direction | Arm C Direction | Use circulating lanes | Junction Delay (s) | Junction LOS |
|----------|----------|---------------|-----------------|-----------------|-----------------|-----------------------|--------------------|--------------|
| 1        | untitled | T-Junction    | Two-way         | Two-way         | Two-way         |                       | 0.00               | A            |

### Junction Network

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 0.00              | A           |

## Traffic Demand

### Demand Set Details

| ID | Scenario name | Time Period name | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) | Run automatically |
|----|---------------|------------------|----------------------|--------------------|---------------------|---------------------------|-------------------|
| D9 | 2032 Base     | AM               | ONE HOUR             | 07:45              | 09:15               | 15                        | ✓                 |

| Vehicle mix varies over turn | Vehicle mix varies over entry | Vehicle mix source | PCU Factor for a HV (PCU) |
|------------------------------|-------------------------------|--------------------|---------------------------|
| ✓                            | ✓                             | HV Percentages     | 2.00                      |

### Demand overview (Traffic)

| Arm         | Linked arm | Profile type | Use O-D data | Av. Demand (PCU/hr) | Scaling Factor (%) |
|-------------|------------|--------------|--------------|---------------------|--------------------|
| A361 N      |            | ONE HOUR     | ✓            | 413                 | 100.000            |

# 2032 Base, PM

## Data Errors and Warnings

| Severity | Area                          | Item                             | Description   |
|----------|-------------------------------|----------------------------------|---|
| Warning  | Minor arm visibility to right | Site Access - Minor arm geometry | Visibility to right expected to have two components if the arm has two lanes, or two lanes in a flared section. |

## Junction Network

### Junctions

| Junction | Name     | Junction type | Arm A Direction | Arm B Direction | Arm C Direction | Use circulating lanes | Junction Delay (s) | Junction LOS |
|----------|----------|---------------|-----------------|-----------------|-----------------|-----------------------|--------------------|--------------|
| 1        | untitled | T-Junction    | Two-way         | Two-way         | Two-way         |                       | 0.00               | A            |

### Junction Network

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 0.00              | A           |

## Traffic Demand

### Demand Set Details

| ID  | Scenario name | Time Period name | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) | Run automatically |
|-----|---------------|------------------|----------------------|--------------------|---------------------|---------------------------|-------------------|
| D10 | 2032 Base     | PM               | ONE HOUR             | 16:45              | 18:15               | 15                        | ✓                 |

| Vehicle mix varies over turn | Vehicle mix varies over entry | Vehicle mix source | PCU Factor for a HV (PCU) |
|------------------------------|-------------------------------|--------------------|---------------------------|

## Data Errors and Warnings

| Severity | Area                          | Item                             | Description   |
|----------|-------------------------------|----------------------------------|---|
| Warning  | Minor arm visibility to right | Site Access - Minor arm geometry | Visibility to right expected to have two components if the arm has two lanes, or two lanes in a flared section. |

## Junction Network

### Junctions

| Junction | Name     | Junction type | Arm A Direction | Arm B Direction | Arm C Direction | Use circulating lanes | Junction Delay (s) | Junction LOS |
|----------|----------|---------------|-----------------|-----------------|-----------------|-----------------------|--------------------|--------------|
| 1        | untitled | T-Junction    | Two-way         | Two-way         | Two-way         |                       | 0.87               | A            |

### Junction Network

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 0.87              | A           |

## Traffic Demand

### Demand Set Details

| ID  | Scenario name                  | Time Period name | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) | Run automatically |
|-----|--------------------------------|------------------|----------------------|--------------------|---------------------|---------------------------|-------------------|
| D14 | 2032 + Committed + Development | PM               | ONE HOUR             | 16:45              | 18:15               | 15                        | ✓                 |

| Vehicle mix varies over turn | Vehicle mix varies over entry | Vehicle mix source | PCU Factor for a HV (PCU) |
|------------------------------|-------------------------------|--------------------|---------------------------|
| ✓                            | ✓                             | HV Percentages     | 2.00                      |

### Demand overview (Traffic)

| Arm         | Linked arm | Profile type | Use O-D data | Av. Demand (PCU/hr) | Scaling Factor (%) |
|-------------|------------|--------------|--------------|---------------------|--------------------|
| A361 N      |            | ONE HOUR     | ✓            | 428                 | 100.000            |

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of Av. delay per arriving vehicle.

## File summary

### File Description

|             |            |
|-------------|------------|
| Title       |            |
| Location    |            |
| Site number |            |
| Date        | 09/05/2022 |
| Version     |            |
| Status      | (new file) |
| Identifier  |            |
| Client      |            |
| Jobnumber   |            |
| Enumerator  | DTA\arcady |
| Description |            |

## Units

| Distance units | Speed units | Traffic units input | Traffic units results | Flow units | Av. delay units | Total delay units | Rate of delay units |
|----------------|-------------|---------------------|-----------------------|------------|-----------------|-------------------|---------------------|
| m              | kph         | PCU                 | PCU                   | perHour    | s               | -Min              | perMin              |

### Analysis Options

| Vehicle length (m) | Calculate Q Percentiles | Calculate detailed queueing delay | Show lane queues in feet / metres | Show all PICADY stream intercepts | Calculate residual capacity | RFC Threshold | Avg. Delay threshold (s) | Q threshold (PCU) | Use iterations with HCM roundabouts | Max number of iterations for roundabouts |
|--------------------|-------------------------|-----------------------------------|-----------------------------------|-----------------------------------|-----------------------------|---------------|--------------------------|-------------------|-------------------------------------|--|
| 5.75               |                         |                                   |                                   |                                   |                             | 0.85          | 36.00                    | 20.00             |                                     | 500                                      |

### Demand Set Summary

| ID  | Scenario name                       | Time Period name | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) | Run automatically |
|-----|-------------------------------------|------------------|----------------------|--------------------|---------------------|---------------------------|-------------------|

### Analysis Set Details

| ID | Include in report | Network flow scaling factor (%) | Network capacity scaling factor (%) |
|----|-------------------|---------------------------------|-------------------------------------|
| A1 | ✓                 | 100.000                         | 100.000                             |

# 2022 Base, AM

## Data Errors and Warnings

| Severity | Area     | Item                         | Description  |
|----------|----------|------------------------------|--|
| Warning  | Geometry | A361 N - Roundabout Geometry | Effective flare length is over 30m, which is outside the normal range. Treat capacities with increasing caution. |

## Junction Network

### Junctions

| Junction | Name     | Junction type       | Use circulating lanes | Arm order | Junction Delay (s) | Junction LOS |
|----------|----------|---------------------|-----------------------|-----------|--------------------|--------------|
| 1        | untitled | Standard Roundabout |                       | 1, 2, 3   | 2.10               | A            |

### Junction Network

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 2.10              | A           |

## Arms

### Arms

| Arm | Name        | Description | No give-way line |
|-----|-------------|-------------|------------------|

### Roundabout Geometry

| Arm         | V (m) | E (m) | I' (m) | R (m) | D (m) | PHI (deg) | Entry only | Exit only |
|-------------|-------|-------|--------|-------|-------|-----------|------------|-----------|
| A361 N      | 4.10  | 8.70  | 36.0   | 20.0  | 45.0  | 45.4      |            |           |
| Site Access | 4.00  | 7.40  | 9.9    | 20.0  | 45.0  | 39.0      |            |           |
| A361 S      | 7.30  | 8.35  | 3.4    | 20.8  | 45.0  | 43.3      |            |           |

### Slope / Intercept / Capacity

#### Roundabout Slope and Intercept used in model

| Arm         | Final slope | Final intercept (PCU/hr) |
|-------------|-------------|--------------------------|
| A361 N      | 0.693       | 2112                     |
| Site Access | 0.609       | 1650                     |
| A361 S      | 0.725       | 2267                     |

The slope and intercept shown above include any corrections and adjustments.

## Traffic Demand

### Demand Set Details

| ID | Scenario name | Time Period name | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) | Run automatically |
|----|---------------|------------------|----------------------|--------------------|---------------------|---------------------------|-------------------|
| D1 | 2022 Base     | AM               | ONE HOUR             | 07:45              | 09:15               | 15                        | ✓                 |

| Vehicle mix varies over turn | Vehicle mix varies over entry | Vehicle mix source | PCU Factor for a HV (PCU) |
|------------------------------|-------------------------------|--------------------|---------------------------|
| ✓                            | ✓                             | HV Percentages     | 2.00                      |

## Demand overview (Traffic)

| Arm         | Linked arm | Profile type | Use O-D data | Av. Demand (PCU/hr) | Scaling Factor (%) |

# 2025 Base, PM

## Data Errors and Warnings

| Severity | Area     | Item                         | Description  |
|----------|----------|------------------------------|--|
| Warning  | Geometry | A361 N - Roundabout Geometry | Effective flare length is over 30m, which is outside the normal range. Treat capacities with increasing caution. |

## Junction Network

### Junctions

| Junction | Name     | Junction type       | Use circulating lanes | Arm order | Junction Delay (s) | Junction LOS |
|----------|----------|---------------------|-----------------------|-----------|--------------------|--------------|
| 1        | untitled | Standard Roundabout |                       | 1, 2, 3   | 2.17               | A            |

### Junction Network

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 2.17              | A           |

## Traffic Demand

### Demand Set Details

| ID | Scenario name | Time Period name | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) | Run automatically |
|----|---------------|------------------|----------------------|--------------------|---------------------|---------------------------|-------------------|

## Data Errors and Warnings

| Severity | Area     | Item                         | Description  |
|----------|----------|------------------------------|--|
| Warning  | Geometry | A361 N - Roundabout Geometry | Effective flare length is over 30m, which is outside the normal range. Treat capacities with increasing caution. |

## Junction Network

### Junctions

| Junction | Name     | Junction type       | Use circulating lanes | Arm order | Junction Delay (s) | Junction LOS |
|----------|----------|---------------------|-----------------------|-----------|--------------------|--------------|
| 1        | untitled | Standard Roundabout |                       | 1, 2, 3   | 2.56               | A            |

### Junction Network

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 2.56              | A           |

## Traffic Demand

## Data Errors and Warnings

| Severity | Area     | Item                         | Description  |
|----------|----------|------------------------------|--|
| Warning  | Geometry | A361 N - Roundabout Geometry | Effective flare length is over 30m, which is outside the normal range. Treat capacities with increasing caution. |

## Junction Network

### Junctions

| Junction | Name     | Junction type       | Use circulating lanes | Arm order | Junction Delay (s) | Junction LOS |
|----------|----------|---------------------|-----------------------|-----------|--------------------|--------------|
| 1        | untitled | Standard Roundabout |                       | 1, 2, 3   | 3.30               | A            |

### Junction Network

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 3.30              | A           |

## Traffic Demand

### Demand Set Details

| ID | Scenario name                       | Time Period name | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) | Run automatically |
|----|-------------------------------------|------------------|----------------------|--------------------|---------------------|---------------------------|-------------------|

## Data Errors and Warnings

| Severity | Area     | Item                         | Description  |
|----------|----------|------------------------------|--|
| Warning  | Geometry | A361 N - Roundabout Geometry | Effective flare length is over 30m, which is outside the normal range. Treat capacities with increasing caution. |

## Junction Network

### Junctions

| Junction | Name     | Junction type       | Use circulating lanes | Arm order | Junction Delay (s) | Junction LOS |
|----------|----------|---------------------|-----------------------|-----------|--------------------|--------------|
| 1        | untitled | Standard Roundabout |                       | 1, 2, 3   | 2.14               | A            |

### Junction Network

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 2.14              | A           |

## Traffic Demand

### Demand Set Details
