**Subject:** RE: 8469031 / DSW2225274 Off Hook Norton Road, Sibford Ferris, Oxfordshire - FW Pump Rate / Storage

ST Classification: OFFICIAL PERSONAL

Tom,

I received further information from our sewage treatment team and I can conclude that the proposed pump rate of 4.5 l/sec will have to be tolerated (we appreciate that is practically the lowest rate to enable the main to be kept free from debris build up, as there is an impact at the works) this has been raised with our Tactical Asset Promotions (TAP) team who will promote this for either an increase in storage in the networks or at the works to help regulate the flows to the works for treatment.

I trust the above is helpful to you at this stage for your site works to commence when planned.

Kind regards,

Keith Baker
