Subject: Solar development manor farm noke 22/01682/F Objection

Dear Mr Kirkham

I object in the strongest terms to this proposed development. It would totally damage the protected green belt and adversely affect Otmoor and the surrounding area.

Cherwell district council should demonstrate due diligence on the accuracy of the sources and country and integrity of the investors in this proposed scheme and fully risk assess this , and not only the proposed development's impact on the landscape and inhabitants in the short term but also the potential THREAT to future bio/ energy security to the supply of energy to our country and be fully transparent with ALL findings in this respect to the local community before any planning decisions are made.

The glossy brochure circulated some time ago to local residents by the proposers seeking this planning approval felt to me to be superficial.

Cherwell DC should consider and propose a different plan with wind turbines or smaller solar areas north of Bicester/Banbury, (with Uk central government backed funding) and protect this local farmland which is equally required.

You will damage the goodwill of a proactive eco aware community if this proposal is not more fully considered. The 'Special circumstances' claimed by the proposers surely should NOT ever just override democratic planning constraints.

I would argue it should be REFUSED and greater consultation undertaken into more suitable alternatives and with great urgency.

Do you really want this to be a very contentious and ill conceived project?
