## 1.0 INTRODUCTION

### 1.1 Appointment of Connect Consultants

1.1.1 Connect Consultants Limited is a firm of transport planning and highway design consultants that have been instructed by Mercian Group in relation to their proposed care home development on land west of Longford Park Road, Bodicote.

### 1.2 Site Location

1.2.1 The proposal site is located west of Longford Park Road and south of Canal Lane, Bodicote. The site is undeveloped and has no valid, historic planning permission.

1.2.2 The proposal site is rectangular in shape and is bound to the north by a path called Canal Lane, to the east by Longford Park Road and to the south and west by residential dwellings.

1.2.3 The site as a whole falls within what is generally referred to as the Longford Park development: a 78 acre site comprising over 1,000 dwellings, primary school and Community Centre. Longford Park primary school is located directly opposite the site, to the sites eastern side. The development site is an undeveloped green field.

1.2.4 The location of the proposal site, in the context of the urban area, is presented at Figure 1.1 below.

**Figure 1.1 – Site Location Plan**

Source: Bing Maps/Ordnance Survey. Site is denoted by a blue star

1.2.5 The site is located in a largely built-up urban area, within the Longford Park residential development.

1.2.6 As noted, Longford Park primary school is located to the east of the site. Figure 1.2 below identifies the context of the site in relation to the local area.

### Figure 1.2 – Site in its Local Context

Source: Google Earth. Site boundary is indicative

## 1.3 Development Proposals

1.3.1 The development proposals are shown on the plan provided at Appendix 1. The proposals include the development of a care home, comprising the following;

- A care home with 128 beds.
- A car park with 42 spaces of which, two will be reserved for disabled users, one for deliveries, and one for ambulance use.
- Parking for 10 cycles

1.3.2 The proposed site access arrangements are shown on the site layout plan at Appendix 1. Appendix 2 shows the access in more detail. The access comprises a simple priority T-junction formed with Longford Park Road. Sightlines of 2.4m x 43m are provided to the left and to the right.

## 1.4 National Planning Policy Framework

1.4.1 This report section provides a brief overview of the national planning policy context and objectives.

---

National Planning Policy Framework (NPPF), July 2021

1.4.2 The National Planning Policy Framework (NPPF) was first published on the 27<sup>th</sup> March 2012. A revised NPPF was published on 20<sup>th</sup> July 2021. It sets out the Government's planning policies for England and sets out a framework for local authorities to produce their own local plans.

1.4.3 The key purpose of the NPPF is to contribute to the achievement of sustainable development. It sets out three overarching interdependent objectives as, a) an economic objective, b) a social objective, and c) an environmental objective.

1.4.4 At its heart, the NPPF maintains its presumption in favour of sustainable development.

1.4.5 Chapter 9 *Promoting sustainable transport* sets out at paragraph 108 that,

*"Maximum parking standards for residential and non-residential development should only be set where there is a clear and compelling justification that they are necessary for managing the local road network,..."*

1.4.6 Paragraph 110 addresses how development proposals are to be considered. It sets out that,

*"In assessing sites that may be allocated for development in plans, or specific applications for development, it should be ensured that:*

*a) appropriate opportunities to promote sustainable transport modes can be – or have been – taken up, given the type of development and its location;*

*b) safe and suitable access to the site can be achieved for all users; and*

*c) the design of streets, parking areas, other transport elements and the content of associated standards reflects current national guidance, including the National Design Guide and the National Model Design Code 46; and*

*d) any significant impacts from the development on the transport network (in terms of capacity and congestion), or on highway safety, can be cost effectively mitigated to an acceptable degree."*

1.4.7 Paragraph 111 states,

*"Development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe."*

Local Planning Policy

1.4.8 At a local level, Cherwell District Council acts as local planning authority and the Adopted Cherwell Local Plan 2011-2031 and the saved policies from the Cherwell Local Plan 1996 are relevant.

1.4.9 Transport is considered within the saved policies from chapter 5 of the 1996 Cherwell Local Plan. The relevant policies to the development site are TR1, TR7, and TR10.

1.4.10 Policy TR1 seeks to ensure that development proposals are only permitted when the car and non-car infrastructure that exists is suitable to serve those developments, and if not that suitable infrastructure or improvement works are provided.

1.4.11 Policy TR7 reads as follows;

*"Development that would regularly attract large commercial vehicles or large numbers of cars onto unsuitable minor roads will not normally be permitted."*

1.4.12 Policy TR10 seeks to ensure that developments that may generate frequent heavy goods vehicle movements are restricted to areas where they will not create traffic problems nor will they have effect residential areas or villages.

1.4.13 Oxfordshire County Council act as highways authority. They provide advice on parking within '*Parking Standards for New Developments*'

1.4.14 Table 5 of '*Parking Standards for New Developments*' outlines car parking requirements for care homes, indicating that provision should be justified on a site-by-site basis. Cycle parking provision is given as 0.5 spaces per bedroom. Disabled parking provision is indicated, at paragraph 8.9 as being 6% of overall provision.

## **1.5 Report Overview**

1.5.1 The remainder of this report is divided into five further sections, which are as follows:-

Section 2.0 Site Transport Context

1.5.2 This section of the report provides details of the site context, including its accessibility by all relevant transport modes.

Section 3.0 Proposed Development

1.5.3 The various components of the development proposal, including the site access arrangements and parking provision, are described within this section of the report.

Section 4.0 Traffic Assessment

1.5.4 This report section provides an assessment of the vehicular attraction of the proposed development and its traffic effects.

Section 5.0 Junction Capacity and Collision Analysis

1.5.5 The results of the traffic assessment have been used to inform junction capacity and collision analysis, and the methodology and results are outlined in this section of the report.

Section 6.0 Summary & Conclusions

1.5.6 A summary and the conclusions of the report are provided in this section.

---

## 2.0 SITE TRANSPORT CONTEXT

### 2.1 Introduction

2.1.1 This section of the report considers the accessibility of the site in terms of a range of transport modes.

### 2.2 Pedestrian Access

2.2.1 The Department for Transport's (DfT) document titled 'Manual for Streets' dated 2007 provides guidance in relation to walk distances. Section 4.4 gives the following advice:-

*"Walkable neighbourhoods are typically characterised by having a range of facilities within 10 minutes' (up to about 800 m) walking distance of residential areas which residents may access comfortably on foot".*

2.2.2 The CIHT document 'Planning for Walking' (April 2015) has been consulted with reference to pedestrian catchments. Reiterating the advice presented in 'Manual for Streets', Section 6.4 of 'Planning for Walking' states the following:

*"Walking neighbourhoods are typically characterised as having a range of facilities within 10 minutes' walking distance (around 800 metres). However, the propensity to walk or cycle is not only influenced by distance but also the quality of the experience; people may be willing to walk or cycle further where their surroundings are more attractive, safe and stimulating. Developers should consider the safety of the routes (adequacy of surveillance, sight lines and appropriate lighting) as well as landscaping factors (indigenous planting, habitat creation) in their design."*

2.2.3 Furthermore, 'Planning for Walking' indicates that approximately 80% of journeys shorter than 1 mile (1.6km) are made wholly on foot.

2.2.4 Table 3.2 of The Institute of Highways and Transportation (IHT) guidance document titled 'Providing for Journeys on Foot' identifies a maximum walk distance of 2.0km for commuter, school and sightseeing walk trips, 800m for town centre walk trips and 1.2km for trips elsewhere.

2.2.5 The actual distance that people will be prepared to walk will vary depending on the trip purpose and other factors such as the presence of road crossings, terrain, and the attractiveness of the environment.

2.2.6 Based on a maximum walk distance of 2km for employees, the approximate walk catchments are shown at Figure 2.1.

**Figure 2.1 – 2km Walk Catchment**

Source: Bing Maps/Ordnance Survey. N.B. Site is denoted by a blue star

- 2.2.7 The walk catchment above indicates that there is a substantial staff pool residing within the 2km walk catchment. The catchment covers all of Bodicote, including Longford Park which would lie well within a 1.2km walk from the site. To the northwest, the residential/built-up areas of Calthorpe and Easington lie within the 2km walk distance.
- 2.2.8 Immediately adjoining the site to the west is Longford Park Road, which has a footway on both sides. To the northeast of the site is a path called Canal Road, which is an east-west connection that can only be used by those on foot. Being a modern development, Longford Park Road has a comprehensive footway provision throughout, with extensive use of dropped kerbs and tactile paving.
- 2.2.9 In light of the local pedestrian facilities, the site is well connected to the local pedestrian network with good opportunities for future staff members to walk to work.

## 2.3 Cycling

- 2.3.1 The 2021 National Travel Survey table NTS0303 identifies average journey lengths by cycle in England of c.5.8km. The CIHT document titled 'Planning for Cycling' (October 2014) indicates that 80% of cycling trips are less than five miles (8km) and 40% are less than two miles (3.2km). This suggests that cycling can offer an alternative to car travel particularly for trips of less than 5km.
- 2.3.2 For the purposes of this assessment, it has been assumed that cycling has the potential to replace short car trips, particularly for journeys of less than 5km in length.
- 2.3.3 Based on a maximum cycle distance of 5km, the approximate cycle catchment is shown at Figure 2.2 below.

**Figure 2.2 – Cycle Catchment Area**

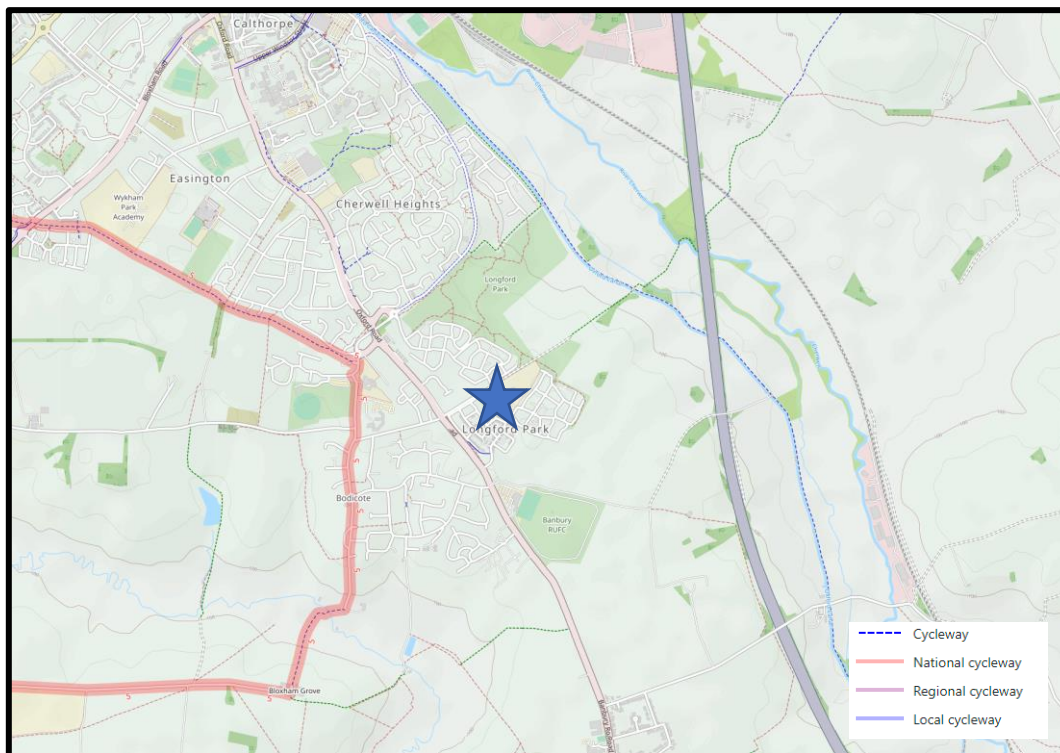

Source: Bing Maps/Ordnance Survey.

- 2.3.4 The 5km cycle catchment includes all of the main built-up areas Bodicote and the vast majority of Banbury. The villages of Kings Sutton (to the southeast) and Bloxham (to the southwest) are also covered by the notional 5km cycle distance. This provides a significant local population within cycle distance of the site.
- 2.3.5 Figure 2.3 below, shows a cycle map covering Bodicote and the surrounding areas taken from OpenStreetMap, showing local and national cycle ways in the area.

**Figure 2.3 – Bodicote Cycle Map**

Source: OpenStreetMap. N.B. The proposal site is indicated by a blue star.

- 2.3.6 Regional Cycle Route 5 runs to the west of the site along quiet and lightly trafficked roads. This long distance route connects Reading and Holyhead via Oxford, Stratford-upon-Avon, Bromsgrove, Birmingham, Stoke-on-Trent, Chester, Colwyn Bay and Bangor.
- 2.3.7 Locally, there are cycle routes to the north, through the residential areas of Cherwell Heights.
- 2.3.8 Considering that the roads local to the site are urban in character, and that the local topography is generally gentle, cycling provides an opportunity to access the store by a sustainable mode of transport for those visiting the site locally and for staff.

## 2.4 Bus Access

- 2.4.1 The publication 'Planning for Public Transport in Developments' produced by the Institution of Highways and Transportation (IHT) specifies that new developments should be located within 400m of the nearest bus stop.
- 2.4.2 The nearest bus stop to the site is directly to the site frontage on Longford Park Road. The stop gives access to bus service B3 operated by Stagecoach. The service operates six days a week with a typical service frequency of every 30 minutes. The service is a circular loop service running from Banbury via Cherwell Heights, Bodicote and Longford Park Primary school.
- 2.4.3 There are additional bus service on the A4260, to the southwest. The bus stops on this road would be an approximate 450m walk from the site. The bus stops give access to service H4 and S4 Gold.
- 2.4.4 Service H4 and S4 operate seven days a week, between Banbury Town Centre and Oxford City Centre. Typical service frequency is hourly.

2.4.5 The above bus stops and their recommended walk routes are shown at Figure 2.4 below.

**Figure 2.4 – Bus Stop Locations**

Source: Google. N.B All Distances, Locations and Areas approximate.

2.4.6 The services identified above provide access to a variety of destinations, notably Banbury and Oxford.

2.4.7 Having regard to the proximity of the bus stops, the frequency of buses and the areas that the existing local buses serve, the site is accessible by public transport.

## 2.5 Highways Access

2.5.1 The proposal site will be served from the existing simple priority T-junction formed with Longford Park Road.

2.5.2 Longford Park Road serves as the principal point of access to the Longford Park development. Longford Park Road is subject to a 30mph speed limit and runs in a broad northwest to southeast orientation.

2.5.3 To the northwest, Longford Park Road joins the A4260 via a roundabout which in turn leads to the A4260 via a series of northbound and southbound on and off-slips.

2.5.4 Access to the A4260 is also possible from the southeast by way of a 3-arm signalised junction. The A4260 forms the north and south through arms, with Longford Park Road merging in to the junction from the east.

2.5.5 To the north, the A4240 heads into the centre of Banbury, which is approximately 2.5km distant. To the southeast, the A4240 leads to the villages of Addington and Dedbury.

2.5.6 Figure 2.5 shows the site in its local highway context.

**Figure 2.5 – Highway Network**

*Image Source: Google Maps | Site is denoted by a blue star*

2.5.7 Overall, the site has a prominent location in relation to the local road network from which it is readily accessible.

## **2.6 Section Conclusion**

2.6.1 The proposal site is surrounded by a pedestrian network that includes a number of crossing facilities, and a residential catchment within walking distance of the site. The area surrounding the site is conducive to cycling and the bus stops local to the site are served by frequent bus services, which provide access to / from a variety of destinations. The proposal site also has a prominent location relative to the local highway network. Overall, the site has a good level of accessibility by all relevant transport modes.

## 3.0 PROPOSED DEVELOPMENT

### 3.1 Introduction

3.1.1 This report is based on a scheme comprising a 128 bed new care home. The development includes a total of 42 parking spaces, inclusive of one ambulance and one delivery space. 40 car parking spaces are thus provided.

3.1.2 The proposed site layout is identified on the plan provided at Appendix 1.

### 3.2 Proposed Site Access Arrangements

3.2.1 The site will be accessed via the existing simple priority T-junction formed with Longford Park Road. All vehicles will access the site via this access.

3.2.2 The site access arrangement is shown at Appendix 2.

3.2.3 The access junction features sightlines of 2.4m x 43m to the left and right. 43m is considered suitable for a 30mph road speed, as indicated by Table 7.1 of Manual for Streets.

### 3.3 Servicing

3.3.1 The proposed site layout has been assessed for an 11.2m refuse collection vehicle. Details of the swept path assessment are provided at Appendix 3. The track plots show that the service route through the car park is satisfactory and that service vehicles would be able to manoeuvre within the site, enabling service vehicles to enter and exit the site in forward gear.

### 3.4 Car Parking Policy

3.4.1 Paragraph 107 of the National Planning Policy Framework NPPF, July 2021 states: -

*"If setting local parking standards for residential and non-residential development, policies should take into account: -*

- *The accessibility of the development;*
- *The type, mix and use of the development;*
- *The availability of and opportunities for public transport;*
- *Local car ownership levels; and*
- *The need to ensure an adequate provision of spaces for charging plug-in and other ultra-low emission vehicles."*

3.4.2 Paragraph 108 of the NPPF 2021 states: -

*"Maximum parking standards for residential and non-residential development should only be set where there is a clear and compelling justification that they are necessary for managing the local road network, or for optimising the density of development in city and town centres and other locations that are well served by public transport (in accordance with chapter 11 of this Framework). In town centres, local authorities should seek to improve the quality of parking so that it is convenient, safe and secure, alongside measures to promote accessibility for pedestrians and cyclists."*

- 
- 3.4.3 Oxfordshire County Council has previously indicated to Connect Consultants that the level of car parking for care homes should be assessed on a case-by-case basis and that a figure in the region of 1 car parking space per 3 residencies/beds would be of the correct order.
- 3.4.4 The 128-bed unit would be served by 40 car parking spaces. This equates to a parking ratio of 1 space per 3.2 beds which is of the correct order relative to the level indicated by Oxfordshire County Council as being suitable.

### **3.5 Disabled Car Parking Provision**

- 3.5.1 It is typical for disabled car parking provision to be provided for at a rate of between 5%-6%. A figure of 6% is given at paragraph 8.9 of the Oxfordshire County Council document '*Parking Standards for New Developments*'.
- 3.5.2 A total of two disabled car parking spaces have been provided for the site which based on a car parking provision of 40 spaces equates to a provision of 5%.
- 3.5.3 Disabled parking provision is therefore aligned with policy.

### **3.6 Cycle Parking Provision**

- 3.6.1 A total of five 'Sheffield' style cycle stands are provided allowing for up to ten cycles to be parked. The stands are located in covered shelter. This level of parking is considered appropriate to accommodate anticipated future demand.

### **3.7 Section Conclusion**

- 3.7.1 Swept path analysis has shown that access arrangements of the proposed development are suitable for their intended use.
- 3.7.2 Parking provision is aligned with policy.

## 4.0 TRAFFIC ASSESSMENT

### 4.1 Introduction

- 4.1.1 This section of the report outlines the level of trips that the development could generate.
- 4.1.2 The report also summarises the results of a traffic survey undertaken on Longford Park Road in September 2022.

### 4.2 Proposed Trip Attraction

- 4.2.1 To assess the level of trips that could be attracted to the proposed care home, the TRICS database has been queried under the *Health-> Care Home* category. The remainder of the selection criteria are as set out in Table 4.1. The TRICS outputs are provided at Appendix 4.

**Table 4.1 – TRICS Database Key Selection Criteria**

Land use and trip rate selection	
Select Land Use By:	Full list Of Active Main/Sub Land Uses
Main Land Use:	05 – Health
Sub Land Use:	F – Care Home
Calculation Options:	Multimodal Trip Rates
Regions:	England, Excl Greater London
Primary filtering	
Trip Rate Parameters:	Per bed/resident
Selected Dates:	01/01/14 – 02/05/19 (default)
Week days to include:	Weekdays only
Location Types to include:	Suburban Area & Edge of Town

- 4.2.2 The resultant trips rates and trips, during the traditional weekday peak hours of 08:00-09:00, 17:00-18:00, are set out at Table 4.2.

**Table 4.2 – TRICS Data**

Peak	Average Trip Rates (per bed)			Trips (128 bed)		
	Arrivals	Departures	Total	Arrivals	Departures	Total
<b>AM</b>	0.076	0.052	0.128	10	7	16
<b>PM</b>	0.04	0.056	0.096	5	7	12

- 4.2.3 The results given at table Table 4.2 indicates the traffic effect of the development would be minimal as it results in the addition of only 16, two-way trips in the AM and 12, two-way trips in the PM.

### 4.3 Traffic Survey

- 4.3.1 In order to ascertain traffic flow on Longford Park Road, an automatic traffic count (ATC) tube was installed on Longford Park Road over the seven-day period Thursday 8<sup>th</sup> to Wednesday 14<sup>th</sup> September 2022. The ATC results can be seen at Appendix 5.
- 4.3.2 The average 5-day flow, in vehicles, recorded on Longford Park Road can be seen at Table 4.3.

**Table 4.3 – Average Weekday Traffic Flow on Longford Park Road**

<b>Movement</b>	<b>08:00 – 09:00</b>	<b>17:00 – 18:00</b>
<b>Northbound (average 5-day)</b>	99	78
<b>Southbound (average 5-day)</b>	116	89
<b>2-Way Flow (combined)</b>	214	167

- 4.3.3 The results at Table 4.3 shows that Longford Park Road is subject to a low level of vehicle flow. Table 4.2 has shown that the vehicle trips attributable to the development are low. In unison, this suggests that the effect of development upon the operation of Longford Park Road would be small.

### 4.4 Section Conclusions

- 4.4.1 The potential increase to traffic due to the proposed development has been shown to be minimal due to the very modest level of trips attracted by the proposal.

## 5.0 JUNCTION CAPACITY AND COLLISION ANALYSIS

### 5.1 Introduction

5.1.1 The assessment in Section 4.0 identifies that the net traffic effect of the proposed development is small.

### 5.2 Collision Analysis

5.2.1 No collision analysis of the development is considered necessary as the level of traffic generated by the development is very small.

### 5.3 Computer Modelling Software

5.3.1 The operation of the proposed site access junction will be assessed using PICADY

5.3.2 The PICADY9 module of the Junctions9 package is an industry standard computer package for modelling the operation of priority (give-way) junctions. PICADY uses the geometry of the junction combined with traffic flow information to predict capacity. The software provides a number of results in its output, the most meaningful of which is the Ratio of Flow to Capacity (RFC), where an RFC of 1.00 on any approach to the junction reflects a traffic demand equal to the theoretical capacity of that approach.

5.3.3 PICADY is typically operated using 'One Hour' mode which estimates the traffic profile for an hour-long period based a bell-shaped curve with a 15-minute 'Warm Up' period before, and a 15-minute 'Cool Down' period either side of the 60-minute peak-hour. This simulates the robust scenario of a peak within the peak hour.

### 5.4 Capacity Analysis

#### Site Access.

5.4.1 The PICADY9 computer program has been used to assess the operation of the site access junction.

5.4.2 Junction geometries are as per the site access arrangement given at Appendix 2.

5.4.3 With regards the distribution of the development traffic at the site access, a simple assessment methodology has been employed by distributing 50% trips 50/50 at the site access.

5.4.4 The operation of the junction has been assessed for the AM and PM weekday peak periods.

5.4.5 The results of the PICADY tests are set out at Table 5.1. and can be seen in full at Appendix 6.

**Table 5.1 – PICADY Summary – Proposed Site Access Junction**

	AM			PM		
	Queue (PCU)	Delay (s)	RFC	Queue (PCU)	Delay (s)	RFC
<b>Survey + Development</b>						
<b>Stream B-AC</b>	0.0	6.98	0.02	0.0	6.86	0.02
<b>Stream C-AB</b>	0.0	5.41	0.01	0.0	5.47	0.01

---

5.4.6 Table 5.1 shows how the site access junction will operate with a significant degree of reserve capacity, to the point whereby changes to development traffic levels or distribution would have no significant effect upon the operation of the junction.

## **5.5 Section Conclusions**

5.5.1 The capacity assessment shows that the site access junction will operate within capacity for the assessed peak periods.

5.5.2 Overall therefore, the traffic effect of the proposed development is acceptable.

---

## **6.0 SUMMARY AND CONCLUSIONS**

### **6.1 Summary**

6.1.1 Connect Consultants Limited is a firm of transport planning and highway design consultants that have been instructed by Mercian Group in relation to their proposed 128-bed care home development on land west of Longford Park Road, Bodicote.

6.1.2 The report is summarised as follows:-

- The site is accessible by a choice of travel modes and will reduce reliance on the private car consistent with national and local planning policy.
- The proposed development is well conceived in terms of its access arrangements, composition and layout.
- Parking is aligned with Oxfordshire County Councils requirement and there is no reason to presume that on-road parking will occur.
- It has been demonstrated that the service arrangements will be able to accommodate delivery traffic.
- The traffic assessment included in this report is based on a realistic traffic impact scenario and demonstrates the development traffic effects will be negligible; vehicle movements on Longford Park Road are low and the traffic effect of the development is minimal.
- The site access junction has been assessed as operating within capacity and thus the traffic effect of the development is acceptable.

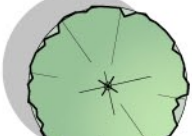

### **6.2 Conclusions**

6.2.1 The results of this assessment highlight that the proposed development is acceptable from a transport perspective.

## TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 05 - HEALTH  
 Category : F - CARE HOME (ELDERLY RESIDENTIAL)  
 TOTAL VEHICLES

Selected regions and areas:

02	SOUTH EAST	
	SP SOUTHAMPTON	1 days
04	EAST ANGLIA	
	SF SUFFOLK	1 days
05	EAST MIDLANDS	
	DY DERBY	1 days
07	YORKSHIRE & NORTH LINCOLNSHIRE	
	NY NORTH YORKSHIRE	1 days
08	NORTH WEST	
	BP BLACKPOOL	1 days
09	NORTH	
	TW TYNE & WEAR	1 days

*This section displays the number of survey days per TRICS® sub-region in the selected set*

## Primary Filtering selection:

*This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.*

Parameter: Number of residents  
 Actual Range: 17 to 70 (units: )  
 Range Selected by User: 17 to 180 (units: )

Parking Spaces Range: All Surveys Included

Public Transport Provision:

Selection by: Include all surveys

Date Range: 01/01/14 to 02/05/19

*This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.*

Selected survey days:

Monday	1 days
Tuesday	3 days
Thursday	1 days
Friday	1 days

*This data displays the number of selected surveys by day of the week.*

Selected survey types:

Manual count	6 days
Directional ATC Count	0 days

*This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaken using machines.*

Selected Locations:

Suburban Area (PPS6 Out of Centre)	2
Edge of Town	4

*This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.*

Selected Location Sub Categories:

Residential Zone	5
No Sub Category	1

*This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.*

Secondary Filtering selection:

Use Class:

C2 6 days

*This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.*

Population within 500m Range:

All Surveys Included

Population within 1 mile:

5,001 to 10,000	1 days
10,001 to 15,000	1 days
15,001 to 20,000	1 days
25,001 to 50,000	3 days

*This data displays the number of selected surveys within stated 1-mile radii of population.*

Population within 5 miles:

25,001 to 50,000	1 days
125,001 to 250,000	2 days
250,001 to 500,000	3 days

*This data displays the number of selected surveys within stated 5-mile radii of population.*

Car ownership within 5 miles:

0.6 to 1.0	2 days
1.1 to 1.5	4 days

*This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.*

Travel Plan:

No 6 days

*This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.*

PTAL Rating:

No PTAL Present 6 days

*This data displays the number of selected surveys with PTAL Ratings.*

LIST OF SITES relevant to selection parameters

1	BP-05-F-01 LYTHAM ROAD BLACKPOOL SQUIRES GATE Edge of Town Residential Zone Total Number of residents: <i>Survey date: TUESDAY</i>	NURSING HOME      31 <i>27/09/16</i>	BLACKPOOL       <i>Survey Type: MANUAL</i>
2	DY-05-F-01 29 VILLAGE STREET DERBY  Suburban Area (PPS6 Out of Centre) Residential Zone Total Number of residents: <i>Survey date: TUESDAY</i>	NURSING HOME      70 <i>21/10/14</i>	DERBY       <i>Survey Type: MANUAL</i>
3	NY-05-F-05 SEAGRIM CRESCENT RICHMOND  Edge of Town Residential Zone Total Number of residents: <i>Survey date: MONDAY</i>	NURSING HOME      37 <i>04/03/19</i>	NORTH YORKSHIRE       <i>Survey Type: MANUAL</i>
4	SF-05-F-01 COLCHESTER ROAD IPSWICH  Edge of Town Residential Zone Total Number of residents: <i>Survey date: FRIDAY</i>	CARE HOME      17 <i>18/09/15</i>	SUFFOLK       <i>Survey Type: MANUAL</i>
5	SP-05-F-01 BOTLEY ROAD SOUTHAMPTON  Edge of Town No Sub Category Total Number of residents: <i>Survey date: TUESDAY</i>	CARE HOME      42 <i>24/11/15</i>	SOUTHAMPTON       <i>Survey Type: MANUAL</i>
6	TW-05-F-03 MOORE STREET GATESHEAD FELLING SHORE Suburban Area (PPS6 Out of Centre) Residential Zone Total Number of residents: <i>Survey date: THURSDAY</i>	NURSING HOME      52 <i>02/05/19</i>	TYNE & WEAR       <i>Survey Type: MANUAL</i>

*This section provides a list of all survey sites and days in the selected set. For each individual survey site, it displays a unique site reference code and site address, the selected trip rate calculation parameter and its value, the day of the week and date of each survey, and whether the survey was a manual classified count or an ATC count.*

22:00 - 23:00									
23:00 - 24:00									
Total Rates:			0.944			0.958			1.902

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is:  $COUNT/TRP*FACT$ . Trip rates are then rounded to 3 decimal places.

The survey data, graphs and all associated supporting information, contained within the TRICS Database are published by TRICS Consortium Limited ("the Company") and the Company claims copyright and database rights in this published work. The Company authorises those who possess a current TRICS licence to access the TRICS Database and copy the data contained within the TRICS Database for the licence holders' use only. Any resulting copy must retain all copyrights and other proprietary notices, and any disclaimer contained thereon.

The Company accepts no responsibility for loss which may arise from reliance on data contained in the TRICS Database. [No warranty of any kind, express or implied, is made as to the data contained in the TRICS Database.]

#### Parameter summary

Trip rate parameter range selected: 17 - 70 (units: )  
 Survey date range: 01/01/14 - 02/05/19  
 Number of weekdays (Monday-Friday): 6  
 Number of Saturdays: 0  
 Number of Sundays: 0  
 Surveys automatically removed from selection: 0  
 Surveys manually removed from selection: 0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are shown. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

Summary of junction performance

	AM			PM		
	Queue (PCU)	Delay (s)	RFC	Queue (PCU)	Delay (s)	RFC
Survey + Development						
Stream B-AC	0.0	6.98	0.02	0.0	6.86	0.02
Stream C-AB	0.0	5.41	0.01	0.0	5.47	0.01

*There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.*

*Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.*

File summary

File Description

Title	
Location	
Site number	
Date	21/10/2022
Version	
Status	(new file)
Identifier	
Client	
Jobnumber	
Enumerator	CCL\jcarver
Description	

Units

Distance units	Speed units	Traffic units input	Traffic units results	Flow units	Average delay units	Total delay units	Rate of delay units
m	kph	PCU	PCU	perHour	s	-Min	perMin

### Analysis Options

Calculate Queue Percentiles	Calculate residual capacity	RFC Threshold	Average Delay threshold (s)	Queue threshold (PCU)
		0.85	36.00	20.00

### Analysis Set Details

ID	Network flow scaling factor (%)
A1	100.000

### Demand Set Details

ID	Scenario name	Time Period name	Traffic profile type	Start time (HH:mm)	Finish time (HH:mm)	Time segment length (min)
D1	Survey + Development	AM	ONE HOUR	07:45	09:15	15

# Survey + Development, AM

## Data Errors and Warnings

Severity	Area	Item	Description
Warning	Vehicle Mix		HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning.

## Junction Network

### Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	untitled	T-Junction	Two-way		0.38	A

### Junction Network Options

Driving side	Lighting
Left	Normal/unknown

## Arms

### Arms

Arm	Name	Description	Arm type
A	Longford Park Rd South		Major
B	Site Access		Minor
C	Longford Park Rd North		Major

### Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C - Longford Park Rd North	6.20			100.0	✓	0.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

### Minor Arm Geometry

Arm	Minor arm type	Lane width (m)	Visibility to left (m)	Visibility to right (m)
B - Site Access	One lane	2.75	50	50

## Slope / Intercept / Capacity

### Priority Intersection Slopes and Intercepts

Stream	Intercept (PCU/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
B-A	506	0.091	0.231	0.145	0.330
B-C	639	0.097	0.245	-	-
C-B	632	0.243	0.243	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

## Traffic Demand

Vehicle mix source	PCU Factor for a HV (PCU)
HV Percentages	2.00

### Demand overview (Traffic)

Arm	Linked arm	Use O-D data	Average Demand (PCU/hr)	Scaling Factor (%)
A - Longford Park Rd South		✓	104	100.000
B - Site Access		✓	8	100.000
C - Longford Park Rd North		✓	121	100.000

## Origin-Destination Data

### Demand (PCU/hr)

From	To		
	A - Longford Park Rd South	B - Site Access	C - Longford Park Rd North
A - Longford Park Rd South	0	5	99
B - Site Access	4	0	4
C - Longford Park Rd North	116	5	0

## Vehicle Mix

### Heavy Vehicle Percentages

From	To		
	A - Longford Park Rd South	B - Site Access	C - Longford Park Rd North
A - Longford Park Rd South	0	0	0
B - Site Access	0	0	0
C - Longford Park Rd North	0	0	0

## Results

### Results Summary for whole modelled period

Stream	Max RFC	Max Delay (s)	Max Queue (PCU)	Max LOS
B-AC	0.02	6.98	0.0	A
C-AB	0.01	5.41	0.0	A
C-A				
A-B				
A-C				

### Main Results for each time segment

#### 07:45 - 08:00

Stream	Total Demand (PCU/hr)	Capacity (PCU/hr)	RFC	Throughput (PCU/hr)	End queue (PCU)	Delay (s)	Unsignalised level of service
B-AC	6	537	0.011	6	0.0	6.773	A
C-AB	4	670	0.006	4	0.0	5.403	A
C-A	87			87			
A-B	4			4			
A-C	75			75			

08:00 - 08:15

Stream	Total Demand (PCU/hr)	Capacity (PCU/hr)	RFC	Throughput (PCU/hr)	End queue (PCU)	Delay (s)	Unsignalised level of service
B-AC	7	532	0.014	7	0.0	6.856	A
C-AB	5	678	0.008	5	0.0	5.349	A
C-A	103			103			
A-B	4			4			
A-C	89			89			

08:15 - 08:30

Stream	Total Demand (PCU/hr)	Capacity (PCU/hr)	RFC	Throughput (PCU/hr)	End queue (PCU)	Delay (s)	Unsignalised level of service
B-AC	9	525	0.017	9	0.0	6.975	A
C-AB	7	689	0.010	7	0.0	5.276	A
