RSK Environment Limited (RSK) has prepared this report for the sole use of the client, showing reasonable skill and care, for the intended purposes as stated in the agreement under which this work was completed. The report may not be relied upon by any other party without the express agreement of the client and RSK. No other warranty, expressed or implied, is made as to the professional advice included in this report.

Where any data supplied by the client or from other sources have been used, it has been assumed that the information is correct. No responsibility can be accepted by RSK for inaccuracies in the data supplied by any other party. The conclusions and recommendations in this report are based on the assumption that all relevant information has been supplied by those bodies from whom it was requested.

This work has been undertaken in accordance with the quality management system of RSK Environment Ltd. No part of this report may be copied or duplicated without the express permission of RSK and the party for whom it was prepared.

Where field investigations have been carried out, these have been restricted to a level of detail required to achieve the stated objectives of the work.

## **1** INTRODUCTION

## 1.1 Commissioning

RSK Environment Limited (RSK) was commissioned by E.P. Barrus (henceforth referred to as Barrus for the purposes of this report) to undertake a Phase I Desk Study on the proposed development areas located at their Glen Way, Launton Road, Bicester, Oxfordshire premises. The proposed development includes the construction of a new reception, new warehouse and an extension to an existing yard.

The project was undertaken to an agreed brief as set out in RSK's proposal (Ref. 302540 T01 (00), dated 23 January 2023).

RSK's service constraints are shown in Appendix A.

## **1.2 Proposed development**

The development area and for the purpose of this report termed '<u>the site</u>' comprises three parcels of land as summarised below and indicated on Figure 2:

- A new warehouse (east of site) ~570m<sup>2</sup>
- A new reception (centre of site) ~35m<sup>2</sup>
- the extension of an existing yard (west of site) ~275m<sup>2</sup>

The development plans for the proposed new warehouse comprise a building constructed from PVC coated polyester membrane cladding over a steel frame used for the product storage (mainly bespoke engines).

The proposed yard extension will be utilised as open storage for various components. The curved wall located on the western boundary will be relocated to run parallel along Granville Way.

The reception proposal involves the extending the atrium outwards from the current Barrus entrance way.

## 1.3 Objectives

The objective of the work is:

- to identify land contamination and/or geotechnical constraints associated with the proposed development and to support discharge of relevant planning conditions and relevant building control requirements
- to identify the need for any additional investigation or remediation works to demonstrate that the site is suitable for its proposed use

### 1.4 Scope of works

The scope of this assessment has been developed in accordance with relevant British Standards and authoritative technical guidance as referenced through the report. The

assessment of the contamination status of the site is in line with the technical approach presented in Land Contamination Risk Management (LCRM) (Environment Agency, 2021) – which supersedes CLR11 Model Procedures for Land Contamination – and in general accordance with BS 10175: 2011 + A2 2017 (BSI, 2017). It is also compliant with relevant planning policy and guidance.

A brief summary of relevant legislation and policy relating to land contamination is given in Appendix B.

The scope of works for the assessment has included the following:

#### Desk study:

- review of the history of development on the site and surroundings
- assessment of local geology, hydrogeology and hydrology
- assessment of the potential risks from past, present and future coal mining activities
- review of relevant information held by appropriate statutory authorities
- review of any previous site investigation reports made available
- completion of a site reconnaissance survey to assess the visual condition of the site
- development of an initial conceptual site model (CSM)
- preliminary consideration of geotechnical constraints and hazards
- identification of the need for further action, e.g. intrusive investigations, if any.

## 1.5 Existing reports

No existing reports relevant to the site assessment have been provided to RSK.

## 1.6 Limitations

This report is subject to the RSK service constraints given in Appendix A and limitations that may be described through this document.

## 2 SITE DETAILS

### 2.1 Site location and description

The site is located off Glen Way and Launton Road in Bicester, Oxfordshire. The town centre is located approximately 2.3km west of the site, which is centred on grid reference 459438, 222924. The site location plan is provided on **Figure 1**.

The site area comprises the Barrus premises including a main building (offices, warehouse) across the southern portion and the car park across the north. The current site layout is shown in **Figure 2**.

#### 2.1.1 Site Reconnaissance

An RSK engineer visited the site on 31 January 2023, to assess the current site uses and discuss the proposed development. A photo appendix is included in Appendix D.

#### New reception

The new reception parcel is currently surfaced by paving slabs with grass along the margins leading from the macadam car park to the current entranceway. A lamp post was noted within the paved area, and a drain cover noted within the grass suggesting services and drainage are present within the development area.

#### Yard extension

The extended yard area is currently surfaced by macadam. The western margin of the site is bound by a footpath onto Granville Way. To the south is the existing yard, which is currently used as a boat storage and assembly area surrounded by a brick wall. The yard is currently also used as storage for small quantities of antifreeze, coolant, petrol and several 45 gallon barrels of oil. No visual or olfactory evidence of hydrocarbon spillage was observed and the yard was concrete surfaced. The Barrus main building is present to the east and further macadam is present to the north of the site.

#### New warehouse

The new warehouse parcel comprises a greenspace with five trees. A macadam car park and bike shed are present on the western third of the parcel. The grass is at ground level (i.e. not raised or curbed) and enclosed by a wire fence along the north and east boundaries. Along the southern boundary is a brick wall which adjoins a yard used for loading/unloading of articulated lorries and storage. The southeastern extremity of the new warehouse area is used for trailer storage (which is included within the development parcel). A RUBB style warehouse has been constructed to the east of the new warehouse area.

#### Surroundings

The main building was not inspected during the walkover. A representative of Barrus stated the premises are used solely for assembling purposes and no parts are manufactured. No basements are indicated to be present beneath the building. No above or below ground fuel tanks were indicated to be present on site.

## **3 DESK-BASED ASSESSMENT**

The desktop study was designed generally to meet the objectives of a preliminary (Phase 1) investigation, as defined by BS 10175:2011 + A2 2017 (BSI, 2017) and this assessment relates to LCRM Stage 1, Tier 1 preliminary risk assessment. The "vicinity" of the site for the purposes of this report is defined as locations situated within an approximate 250m radius of the site, although certain sources and/ or sensitive targets further than 250m may also have been considered.

### 3.1 Site history

#### 3.1.1 Historical development record

The history of the site and surrounding land (based upon assessment of historical plans and records) is detailed in Table 1. The historical maps reviewed are shown within the environmental database report in Appendix C.

| Date of source                         | Historical Land Use (on-site)  | Historical Land Use (off-site)   |
|--|--|--|
| 1881-1885<br>(1:2,500/10,560<br>scale) | • The site comprises of open fields.   | <ul> <li>A possible pond is indicated<br/>approximately 10m east of the site.</li> <li>An enclosure is located ~30m to the<br/>northwest which appears to have small<br/>buildings and a possible pond 30m west.</li> <li>A possible pond or excavation is<br/>indicated 50m north of the site.</li> <li>A small collection of buildings with a<br/>small footpath and woodland (Rose<br/>Cottages) are located ~80m east.</li> <li>An unnamed road is located ~80m north<br/>to northwest of the development area.</li> <li>A drain is indicated 100m north of the<br/>site.</li> <li>A train line is located approximately<br/>200m south of the site in an<br/>approximately northeast to southwest<br/>orientation.</li> </ul> |
| 1889-1900<br>(1:2,500 scale)           | <ul> <li>The new warehouse parcel has an allotment present across the northeastern portion.</li> <li>The possible pond is no longer indicated 30m west of the development area.</li> <li>Wells are indicated 50m west and 70m east of the development area.</li> </ul> | <ul> <li>Jarvis Lane is indicated ~100m east of<br/>the development area.</li> <li>The southern train line is labelled 'L &amp;<br/>N.W.R Oxford &amp; Bletchley Branch'.</li> </ul>   |
| 1922 - 1958<br>(1:2,500 scale)         | • The majority of the new warehouse is shown as an orchard.  | <ul> <li>The pond or excavation indicated 50m north of the site is no longer shown.</li> <li>Two allotment gardens are present to the north of the unnamed road ~80m northwest of the development area.</li> <li>A yard with small buildings is located ~170m to the northwest of the yard extension.</li> </ul>   |

#### Table 1 Summary of historical development

| Date of source                 | Historical Land Use (on-site)   | Historical Land Use (off-site)   |
|--------------------------------|---|--|
|                                |   | <ul> <li>A train line is shown ~195m southwest of<br/>the development area, labelled 'G.W.R<br/>Ashden &amp; Aynho'.</li> </ul>  |
| 1967 – 1968<br>(1:2,500 scale) | No change   | <ul> <li>Two small building are shown ~20m northwest of the development area.</li> <li>The pond to the east and building to the west are no longer shown.</li> <li>The building and yard ~170 northwest is labelled 'slaughterhouse'.</li> </ul>   |
| 1970<br>(1:10,000<br>scale)    | • The new reception and yard extension are no longer shown within field boundaries.   | <ul> <li>The unnamed road to the northwest is<br/>labelled 'Launton Road'.</li> <li>The southern watercourse is shown to<br/>flow south eastwards.</li> </ul>  |
| 1972 – 1977<br>(1:2,500 scale) | <ul> <li>The yard extension and reception appear<br/>to be crossed form part of the access road<br/>for a gas works.</li> <li>The new warehouse area is still shown as<br/>an orchard.</li> </ul> | <ul> <li>An area of trees is indicated adjacent to the north of the development area.</li> <li>To the north of Launton Road are multiple warehouse units labelled as works (~65m north), goods vehicle test centre (~65 northwest) and furniture works (~90m west).</li> <li>A gas works (Steam Naphtha and Reform Plant) is indicated adjacent southwest, south and east of the development area.</li> <li>4No. chimneys (closest 65m southwest) and 3No. unspecified tanks (closest 110m south) are labelled.</li> <li>2No. large (~25m<sup>2</sup> in diameter) storage tanks are shown approximately 95m and 125m southeast to south of the yard extension.</li> <li>'Works (disused)' are labelled ~65m southeast of the new reception. Beyond 2No. tanks are indicated ~175m and ~185m southeast.</li> <li>A drain is shown ~115m northeast of the new warehouse parcel.</li> <li>2No. electrical substations are shown ~70m north and ~175m southwest of the yard extension.</li> </ul> |
| 1977 - 1978<br>(1:2,500 scale) | No change   | <ul> <li>The tanks within the surrounding area are no longer shown.</li> <li>Further industrial 'works' are shown ~150m west of the yard extension and ~155m east of the new warehouse.</li> </ul>   |
| 1981 - 1999<br>(1:2,500 scale) | <ul> <li>The northern part of the site is indicated to comprise a yard.</li> <li>The remaining site is indicated to comprise an access road for an industrial estate.</li> </ul>                  | <ul> <li>A large warehouse (potentially Barrus) is shown adjacent to the development area's southeastern boundary.</li> <li>An area of open space is indicated</li> <li>A yard is indicated adjacent to the yard extension and another yard is indicated adjacent to the new warehouse.</li> <li>'Works' warehouses have been constructed ~20m east of the new warehouse.</li> <li>3No. electrical substation are located ~45m northeast and ~150m east of the</li> </ul>  |

| Date of source                     | Historical Land Use (on-site)  | Historical Land Use (off-site)   |
|------------------------------------|--|--|
|                                    |  | new warehouse, ~150m southeast of the<br>new reception.  |
| 1999<br>(aerial<br>photography)    | <ul> <li>The new warehouse is shown as<br/>greenspace with a tree at the centre. The<br/>new reception and yard extension are<br/>occupied as a car park.</li> </ul> | The surrounding industrial units are<br>predominantly comprised of large shed-<br>like warehouses. |
| 1999 – 2023<br>(1:10,000<br>scale) | No change  | No change  |

The historical mapping indicates that the site and the surrounding land were fields with an orchard present in the north. From the 1970s the area to the south and east predominantly comprised a gas works (Steam Naphtha and Reform Plant) which is likely to have produced town gas from the processing of petroleum products. From the early 1980s the site and its surroundings are indicated to comprise an industrial estate.

## 3.2 Unexploded ordnance

A review of publicly available unexploded ordnance (UXO) risk maps indicates that the site is located in an area with low potential for wartime bombs to be present (Zetica, 2023).

## 3.3 Site Geology

The following information has been established from a review of geological map data published by the British Geological Survey (BGS) online and within a Envirocheck Report (included in Appendix C).

#### 3.3.1 Anticipated superficial deposits

No superficial deposits are expected to underlie the site.

#### 3.3.2 Anticipated bedrock deposits

The site is expected to be underlain by the Cornbrash Formation, described as fine to medium grained limestone with beds of calcareous mudstone.

The Kellaway Clay Formation is indicated approximately 50m south of the yard extension. This clay is described as mudstone, with subordinate siltstone and sandstone layers.

#### 3.3.3 Anticipated made ground

No made ground or potentially infilled land is indicated in the Envirocheck Report on site. However, there are two entries noted within 250m which relate to the presence of potentially infilled ground (water). The entries relate to infilled ponds located 29m southeast and 53m north of the site. The entries appear to correspond to ponds which are indicated as infilled on the historical mapping.

#### 3.3.4 BGS historical boreholes

No relevant boreholes are indicated within the vicinity of the site.

## 3.4 Radon

The environmental database report provides an assessment of site-specific radon risk. The report indicates that no radon protective measures are required within new buildings or extensions at the site.

## 3.5 Mining and quarrying

The Coal Authority interactive viewer indicates the site lies outside their Coal Mining Reporting Area and therefore no further assessment of coal mining issues is required.

No other mineral sites are reported within 500m of the site.

### 3.6 Ground Stability Hazards

The Envirocheck Report indicates that there is potential for ground stability hazards on site, summarised below:

- Very low potential for Collapsible Ground
- No hazard relating to potential for Compressible Ground
- Very Low potential for Ground Dissolution Hazards
- Very Low potential for Landslide Ground Stability Hazards
- No hazard relating to potential for Running Sand
- No hazard relating to potential for Shrinking or Swelling Clay

### 3.7 Hydrogeology

#### 3.7.1 Aquifer Characteristics

No superficial aquifer is indicated to be present on site. The bedrock (Cornbrash Formation) is designated as a Secondary A aquifer which are described as 'permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers.

#### 3.7.2 Groundwater abstractions

The Envirocheck report indicates that there are no groundwater abstractions reported within the site boundary or within 250m of the site.

#### 3.7.3 Groundwater flooding

The Envirocheck report indicates that onsite there is limited potential for groundwater flooding to occur. This report is not intended to replace a full hydrological study and it is recommended that additional specialist studies be conducted to confirm flood risks at the site.

#### 3.7.4 Source Protection Zone

Information available in the Envirocheck report indicates that the site does not lie within a currently designated Groundwater Source Protection Zone (SPZ).

## 3.8 Hydrology

#### 3.8.1 Surface watercourses

The Envirocheck report indicates that the closest surface watercourses is a drain located 102m northwest of the site.

#### 3.8.2 Discharge consents

The Envirocheck report shows one entry relating to a discharge consent within 250m of the site. This entry relates to the Thames Valley Utilities Ltd Pumping Station on sewerage network (water company) located at Chaucer Estate approximately 185m south of the site. This license was revoked in November 2002.

#### 3.8.3 Flooding

The site is classified as Flood Zone 1 (i.e. not at risk of flooding from rivers without Defences). However, parts of the site are designated to be at a low risk of flooding from surface water (1000 year return).

This report is not intended to replace a full hydrological study and it is recommended that additional specialist studies be conducted to confirm flood risks at the site.

#### 3.8.4 Sensitive Land Use

The site is within a nitrate vulnerable zone relating to the Cherwell (Ray to Thames) and Woodeaton Brook surface water, and Bicester North groundwater. There are no other sensitive land uses identified.

#### 3.8.5 Pollution incidents to controlled waters

The Envirocheck report indicates that there have been three pollution incidents to controlled waters recorded onsite or within 250m of the site boundary, as summarised below.

- 127m NW classified as a category 3 (minor incident)
- 174m NW classified as a category 3 (minor incident)
- 203m N classified as a category 3 (minor incident)

#### 3.8.6 Industrial Land Uses

The Envirocheck Report indicates that there are 75 active contemporary trade directory entries within 250m of the site. The closest active entry is registered to E.P. Barrus Distribution Centre (29m SE) which is related to Barrus' operations on site. Additional entries are summarised below:

#### Table 1 Summary of active and inactive on-site and off-site industrial land uses

| On-site                                 | Off-site  |
|---|---|
| No contemporary trade directory entries | Print works, builders merchants, food             |
| recorded on site                        | manufacturing, vehicle inspection services,       |
|   | metal fabrication, exhaust system                 |
|   | manufacturing and sales, commercial cleaning,     |
|   | laboratory, car servicing and parts, brake and    |
|   | clutch servicing, vehicle part manufacturing      |
|   | and engineers, garage services and car            |
|   | detailing/breakers, animal feed, processed        |
|   | food, dairies, various manufacturers including    |
|   | pumps, office furniture, engines, seal and joint, |
|   | air compressors), road haulage and                |
|   | distribution, painting and decorating suppliers.  |

#### 3.8.7 Recorded landfill and waste sites

No landfills (historical or active) or waste sites are indicated within 1km of the site.

## 3.9 **Previous Investigations**

RSK has not been provided with any previous site investigation reports pertaining to the subject site.

## 3.10 Data gaps and uncertainties

There is no information on the potential concentrations of contaminants in the soil at the site. The origin, thickness and composition of any made ground, if present, is unknown.

## 4 INITIAL CONCEPTUAL SITE MODEL

In line with LCRM (Environment Agency, 2021) and BS 10175: 2011 + A2 2017 (BSI, 2017), RSK has used information in the preceding sections to identify hazards (sources of contaminants), receptors that may be impacted and plausible linking pathways. Where all three are present this is termed a potentially complete contaminant linkage and a qualitative risk estimation is made.

## 4.1 Potential soil, soil vapour and groundwater linkages

#### 4.1.1 Potential sources of contamination

Potential sources of soil and groundwater contamination identified from current activities and the history of the site and surrounding area are presented in Table 3. Ground gas sources are addressed in the next section.

| Potential sources                             | Contaminants of concern   |
|---|---|
| On-site                                       |   |
| Made ground (i.e. fill material)              | Unknown fill material but potentially including brick, ash clinker etc and containing metals, inorganics, polycyclic aromatic hydrocarbons (PAHs) and asbestos. |
| Off-site                                      |   |
| Former gas works (adjacent to the south/east) | BTEX, PAHs, phenol, cyanide, metals, tar, hydrocarbons, ammonia, sulphate, asbestos   |
| Storage of oils on-site (existing yard)       | Hydrocarbons  |

#### Table 2 Potential sources of soil and groundwater contamination

#### 4.1.2 Sensitive receptors and linking exposure/ migration pathways

Sensitive receptors identified at or in the vicinity of the site that could be affected by the potential sources identified above comprise:

- current and future site users workers [oral, dermal and inhalation exposure with impacted soil, soil vapour and dust, inhalation of vapours from groundwater]
- current adjacent site users commercial [migration of contamination via dust/fibre deposition, vapour or groundwater migration combined with inhalation]
- current and future buildings and services [direct contact with contaminated soils or groundwater and chemical attack]
- groundwater in secondary aquifer within Cornbrash Formation bedrock deposits [percolation through permeable strata to aquifer/ lateral migration of dissolved phase/ NAPL]
- surface water courses (closest situated 102m northeast) [lateral migration of dissolved phase/site run-off/ drainage]

Potential linking pathways are show in brackets for each item above.

Please note that construction workers and future maintenance workers have not been identified in the conceptual model as receptors because risks are considered to be managed through health and safety procedures according to the CDM Regulations.

Ecological receptors are only considered within the conceptual model in the context of statutory protected sites.

## 4.2 Potential ground gas linkages

#### 4.2.1 Ground gas sources and gas generation potential

Potential ground gas sources identified for the site and surrounding are shown in Table 4.

| Potential sources   | Indicative<br>ground gas<br>generation<br>potential<br>(CIEH, 2008) | Additional information  |  |  |
|---|---|---|--|--|
| On-site   |   |   |  |  |
| No significant sources identified                         | NA  | -   |  |  |
| Off-site  |   |   |  |  |
| Infilled ponds (10m east, 29m southeast<br>and 52m north) | Very low  | The relatively small ponds are<br>considered unlikely to represent<br>a significant ground gas risk<br>(CL:AIRE RB17 (2012) states<br>that 'infilled ponds do not<br>generally pose a significant risk<br>of lateral gas migration'). |  |  |

#### Table 3 Potential ground gas sources

No significant potential sources of ground gas generation have been identified therefore a potential contaminant linkage has not been identified.

## 4.3 Preliminary risk assessment

The preliminary risk assessment findings and potentially complete contaminant linkages are shown in Table 5 overleaf. The risk classification based on the combination of hazard consequence and probability using a risk matrix from CIRIA C552 (Rudland et al., 2001), a summary of which is included in Appendix E. This relates to Tier 1 preliminary risk assessment in LCRM (Environment Agency, 2021).

#### Table 4 Risk estimation for potentially complete contaminant linkages

| Potential source   | Potential receptor                               | Possible pathway   | Likelihood | Severity | Potential risk | Justification   |
|--|--|--|------------|----------|----------------|---|
|  | Future site<br>users/occupants                   | Oral, dermal and inhalation<br>exposure with impacted soil, soil<br>vapour and dust/fibres | Likely     | Medium   | Moderate       | There is potential for localised contamination<br>due to the site's former use and adjacent former<br>gas works. However, the exposure pathway to<br>soils will be limited as the proposed<br>development will likely comprise hard surfacing<br>only.  |
| Contaminants associated<br>with made ground,<br>hydrocarbon storage (off | Proposed buildings and services                  | Direct contact with contaminated<br>soils or groundwater and<br>chemical attack            | Likely     | Mild     | Moderate / Low | If contaminants associated with the made<br>ground and former adjacent gas works are<br>present, locally aggressive ground conditions<br>may exist. It is considered that risks posed to<br>future buildings and structures by chemical<br>attack due to aggressive ground conditions can<br>be mitigated through the concrete specification.<br>It is possible that organic contaminants may<br>permeate potable water supply pipes, and<br>subsequently result in chronic damage to<br>human health. Potable water supply pipe routes<br>are not known at this stage. |
| site), former gas works<br>(adjacent off site)                           | Surface watercourses<br>(closest 102m northeast) | Vertical and lateral migration<br>including leaching                                       | Unlikely   | Medium   | Low            | Contaminants associated with the made ground<br>may be present and may leach into the<br>groundwater underlying the site. Should the<br>groundwater underlying the site be in hydraulic<br>conductivity with the drain there is potential for<br>pollution of surface waters.   |
|  | Adjacent site users                              | Vertical and lateral migration<br>including leaching                                       | Unlikely   | Medium   | Low            | If contaminants within made ground and natural<br>strata are present migration of soil-borne dust,<br>fibres, vapours or groundwater giving rise to<br>vapours and subsequent inhalation may cause<br>chronic damage to human health. However, the<br>site is hard surfaced reducing the potential for<br>this to occur.  |
|  | Groundwater                                      | Vertical and lateral migration including leaching  | Likely     | Medium   | Moderate       | Contaminants may be present within the made ground. Leaching from soils may cause impact to groundwater within the Secondary A aquifer.   |

| Potential source  | Potential receptor             | Possible pathway  | Likelihood | Severity | Potential risk | Justification   |
|---|--------------------------------|---|------------|----------|----------------|---|
| Ground gases (methane<br>and carbon dioxide)<br>associated with<br>potentially infilled ponds | Future site<br>users/occupants | Possible migration of gas through<br>permeable infilled ground /<br>building foundations (piled or<br>ground improvement) | Unlikely   | Medium   | Low            | The generation of ground gas from the ponds<br>10m, 29m and 52m distance from the site is<br>considered unlikely. |

| Risk matrix |                | Consequences |              |              |              |  |  |  |
|-------------|----------------|--------------|--------------|--------------|--------------|--|--|--|
|             |                | Severe       | Medium       | Mild         | Minor        |  |  |  |
|             | Highly likely  | Very high    | High         | Moderate     | Moderate/low |  |  |  |
| obability   | fill<br>Likely | High         | Moderate     | Moderate/low | Low          |  |  |  |
|             | Low likelihood | Moderate     | Moderate/low | Low          | Very low     |  |  |  |
| đ           | Unlikely       | Moderate/low | Low          | Very low     | Very low     |  |  |  |

## **5 CONCLUSIONS AND RECOMMENDATIONS**

### 5.1 Site summary

The earliest historical mapping indicates that the site and the surrounding land were fields with an orchard present in the north. From the 1970s the area to the south and east predominantly comprised a gas works (Steam Naphtha and Reform Plant). From the early 1980s the site and its surroundings are indicated to comprise an industrial estate. Latterly, the area has been occupied by Barrus who assemble marine engines and boats (no parts are manufactured on site). The site is located within the wider Barrus site as follows:

- New reception currently surfaced by paving slabs with grass along the margins leading from the macadam car park to the current entranceway.
- Yard extension currently surfaced by macadam. The western margin of the site is bound by a footpath onto Granville Way.
- New warehouse currently comprises a greenspace with trees, with an area of macadam housing a bike shed and car parking to the west.

The site is indicated to be underlain by the Cornbrash Formation which is designated as a Secondary A aquifer. There are no groundwater abstractions reported within the site boundary or within 250m of the site. No landfills (historical or active) or waste sites are indicated within 1km of the site.

### 5.2 Geo-environmental assessment

Due to the limited use of fuels/oils adjacent to the site and the former presence of a gas works adjacent to the sites south/east the following contaminants may be present within the development area associated with these land uses:

- Heavy metals associated with any made ground.
- Polycyclic Aromatic Hydrocarbons (PAHs) with any made ground and the adjacent former gas works.
- BTEX, PAHs, phenol, cyanide, metals, tar, hydrocarbons associated with the adjacent yard and the adjacent former gas works.
- Ammonia, cyanide and sulphate from the adjacent former gas works
- Asbestos associated with the sites demolition of the adjacent former gas works.
- Volatile hydrocarbon vapours associated with the adjacent former gas works (the requirement for vapour monitoring in dedicated monitoring wells would be subject to the concentrations of volatile hydrocarbons detected in the soils and the CSM).

The above contaminants have the potential to impact the soil and the groundwater beneath the development area. Groundwater monitoring may be required subject to ground conditions encountered and levels of soil contamination detected.

## 5.3 Geotechnical assessment

Ground conditions are indicated to comprise the Cornbrash Formation, with no superficial deposited expected. It is possible that strip or trench fill foundations may be suitable at the site for lightly loaded structures. The Cornbrash Formation can be encountered as limestone interbedded with clay/mudstone necessitating the deepening of foundations to encounter a single stratum to avoid differential settlement.

Soft/loose soils (where present), highly loaded buildings, or deep made ground may require the use of piled foundations or ground improvement. Foundations should be deepened to bear on suitably competent natural strata. Floor slab design is subject to ground conditions, settlement tolerances and loadings.

## 5.4 Recommendations

The following recommendations are made for further assessment of the site to investigate the risks identified above:

- A Phase II Geo-environmental Ground Investigation including the advancement of window sample boreholes and potentially trial pits within the proposed footprint of the **new warehouse** parcel and **reception**. This would be for the purpose of investigating the depths of potential made ground, strength of the underlying strata and the contamination scenario. Trial pits may be required as the Cornbrash Formation can contain an upper limestone crust which is underlain by less competent clay/mudstone A window sample rig is unlikely to penetrate the limestone but may provide coverage of the shallow soils within the area. However, it is recognised that the development areas are relatively small and therefore the scope of the site investigation should be discussed with the project team to ensure that the works are proportional to the development.
- Subject to development proposals, investigation works in the yard extension may not be required as it is likely the construction will be predominantly above ground limiting a contamination exposure pathway for future site users (subject to Local Authority approval). CBR/plate testing could be undertaken if values are required for design purposes.

## **APPENDICES**

## APPENDIX A SERVICE CONSTRAINTS

- 1. This report and the site investigation carried out in connection with the report (together the "Services") were compiled and carried out by RSK Environment Limited (RSK) for E.P. Barrus (the "Client") in accordance with the terms of a contract [RSK Environment Standard Terms and Conditions] between RSK and the Client, dated 23 January 2023.. The Services were performed by RSK with the reasonable skill and care ordinarily exercised by an environmental consultant at the time the Services were performed. Further, and in particular, the Services were performed by RSK taking into account the limits of the scope of works required by the client, the time scale involved and the resources, including financial and manpower resources, agreed between RSK and the Client.
- 2. Other than that, expressly contained in paragraph 1 above, RSK provides no other representation or warranty whether express or implied, in relation to the Services.
- 3. Unless otherwise agreed in writing, the Services were performed by RSK exclusively for the purposes of the Client. RSK is not aware of any interest of or reliance by any party other than the Client in or on the Services. Unless expressly provided in writing, RSK does not authorise, consent or condone any party other than the client relying upon the Services. Should this report or any part of this report, or otherwise details of the Services or any part of the Services be made known to any such party, and such party relies thereon that party does so wholly at its own and sole risk and RSK disclaims any liability to such parties. Any such party would be well advised to seek independent advice from a competent environmental consultant and/or lawyer.
- 4. It is RSK's understanding that this report is to be used for the purpose described in the introduction to the report. That purpose was a significant factor in determining the scope and level of the Services. Should the purpose for which the report is used, or the proposed use of the site change, this report may no longer be valid and any further use of or reliance upon the report in those circumstances by the client without RSK 's review and advice shall be at the client's sole and own risk. Should RSK be requested to review the report after the date of this report, RSK shall be entitled to additional payment at the then existing rates or such other terms as agreed between RSK and the client.
- 5. The passage of time may result in changes in site conditions, regulatory or other legal provisions, technology or economic conditions which could render the report inaccurate or unreliable. The information and conclusions contained in this report should not be relied upon in the future without the written advice of RSK. In the absence of such written advice of RSK, reliance on the report in the future shall be at the Client's own and sole risk. Should RSK be requested to review the report in the future, RSK shall be entitled to additional payment at the then existing rate or such other terms as may be agreed between RSK and the client.
- 6. The observations and conclusions described in this report are based solely upon the Services which were provided pursuant to the agreement between the Client and RSK. RSK has not performed any observations, investigations, studies or testing not specifically set out or required by the contract between the client and RSK. RSK is not liable for the existence of any condition, the discovery of which would require performance of services not otherwise contained in the Services. For the avoidance of doubt, unless otherwise expressly referred to in the introduction to this report, RSK did not seek to evaluate the presence on or off site of asbestos, invasive plants, electromagnetic fields, lead paint, heavy metals, radon gas, persistent, bioaccumulative or toxic chemicals (including PFAS and related compounds) or other radioactive or hazardous materials, unless specifically identified in the Services.
- 7. The Services are based upon RSK's observations of existing physical conditions at the Site gained from a visual inspection of the site together with RSK's interpretation of information, including documentation, obtained from third parties and from the Client on the history and usage of the site, unless specifically identified in the Services or accreditation system (such as UKAS ISO 17020:2012 clause 7.1.6):
  - a. The Services were based on information and/or analysis provided by independent testing and information services or laboratories upon which RSK was reasonably entitled to rely.

- b. The Services were limited by the accuracy of the information, including documentation, reviewed by RSK and the observations possible at the time of the visual inspection.
- c. The Services did not attempt to independently verify the accuracy or completeness of information, documentation or materials received from the client or third parties, including laboratories and information services, during the performance of the Services.

RSK is not liable for any inaccurate information or conclusions, the discovery of which inaccuracies required the doing of any act including the gathering of any information which was not reasonably available to RSK and including the doing of any independent investigation of the information provided to RSK save as otherwise provided in the terms of the contract between the Client and RSK.

- 8. The intrusive environmental site investigation aspects of the Services are a limited sampling of the site at pre-determined locations based on the known historic / operational configuration of the site. The conclusions given in this report are based on information gathered at the specific test locations and can only be extrapolated to an undefined limited area around those locations. The extent of the limited area depends on the properties of the materials adjacent and local conditions, together with the position of any current structures and underground utilities and facilities, and natural and other activities on site. In addition, chemical analysis was carried out for a limited number of parameters (as stipulated in the scope between the client and RSK, based on an understanding of the available operational and historical information) and it should not be inferred that other chemical species are not present.
- 9. Any site drawing(s) provided in this report is (are) not meant to be an accurate base plan but is (are) used to present the general relative locations of features on, and surrounding, the site. Features (intrusive and sample locations etc) annotated on site plans are not drawn to scale but are centred over the approximate location. Such features should not be used for setting out and should be considered indicative only.
- 10. The comments given in this report and the opinions expressed are based on the ground conditions encountered during the site work and on the results of tests made in the field and in the laboratory. However, there may be conditions pertaining to the site that have not been disclosed by the investigation and therefore could not be taken into account. In particular, it should be noted that there may be areas of made ground not detected due to the limited nature of the investigation or the thickness and quality of made ground across the site may be variable. In addition, groundwater levels and ground gas concentrations and flows, may vary from those reported due to seasonal, or other, effects and the limitations stated in the data should be recognised.
- 11. Asbestos is often observed to be present in soils in discrete areas. Whilst asbestos-containing materials may have been locally encountered during the fieldworks or supporting laboratory analysis, the history of brownfield and demolition sites indicates that asbestos fibres may be present more widely in soils and aggregates, which could be encountered during more extensive ground works.
- 12. Unless stated otherwise, only preliminary geotechnical recommendations are presented in this report and these should be verified in a Geotechnical Design Report, once proposed construction and structural design proposals are confirmed.

# APPENDIX B SUMMARY OF LEGISLATION AND POLICY RELATING TO LAND CONTAMINATION

## Part IIA of the Environmental Protection Act 1990

Part IIA of the Environmental Protection Act 1990 (Part IIA) and its associated Contaminated Land Regulations 2000 (SI 2000/227), which came into force in England on 1 April 2000, formed the basis for the current regulatory framework and the statutory regime for the identification and remediation of contaminated land. Part IIA of the EPA 1990 defines contaminated land as 'any land which appears to the Local Authority in whose area it is situated to be in such a condition by reason of substances in, on or under the land, that significant harm is being caused, or that there is significant possibility of significant harm being caused, or that pollution of controlled waters is being or is likely to be caused'. Controlled waters are considered to include all groundwater, inland waters and estuaries.

In August 2006, the Contaminated Land (England) Regulations 2006 (SI 2006/1380) were implemented, which extended the statutory regime to include Part IIA of the EPA as originally introduced on 1 April 2000, together with changes intended chiefly to address land that is contaminated by virtue of radioactivity. These have been replaced subsequently by the Contaminated Land (England) (Amendment) Regulations 2012, which now exclude land that is contaminated by virtue of radioactivity.

The intention of Part IIA is to deal with contaminated land issues that are considered to cause significant harm on land that is not undergoing development (see Environmental Protection Act 1990: Part 2A Contaminated Land Statutory Guidance, April 2012). This document replaces Annex III of Defra Circular 01/2006, published in September 2006 (the remainder of this document is now obsolete).

## **Planning Policy**

Contaminated land is often dealt with through planning because of land redevelopment. This approach was documented in Planning Policy Statement: Planning and Pollution Control PPS23, which states that it remains the responsibility of the landowner and developer to identify land affected by contamination and carry out sufficient remediation to render the land suitable for use. PPS23 was withdrawn early in 2012 and has been replaced by much reduced guidance within the National Planning Policy Framework (NPPF), reference ISBN: 978-1-5286-1033-9, February 2019.

The new framework has only limited guidance on contaminated land, as follows:

#### Chapter 11. Making effective use of land

- 117 Planning policies and decisions should promote an effective use of land in meeting the need for homes and other uses, while safeguarding and improving the environment and ensuring safe and healthy living conditions. Strategic policies should set out a clear strategy for accommodating objectively assessed needs, in a way that makes as much use as possible of previously-developed or 'brownfield' land.
- 118. Planning policies and decisions should:

c) give substantial weight to the value of using suitable brownfield land within settlements for homes and other identified needs, and support appropriate opportunities to remediate despoiled, degraded, derelict, contaminated or unstable land.

#### Chapter 15. Conserving and enhancing the natural environment

170. Planning policies and decisions should contribute to and enhance the natural and local environment by:

e) preventing new and existing development from contributing to, being put at unacceptable risk from, or being adversely affected by, unacceptable levels of soil, air, water or noise pollution or land instability. Development should, wherever possible, help to improve local environmental conditions such as air and water quality, taking into account relevant information such as river basin management plans; and

f) remediating and mitigating despoiled, degraded, derelict, contaminated and unstable land, where appropriate.

#### Ground conditions and pollution

178. Planning policies and decisions should ensure that:

a) a site is suitable for its proposed use taking account of ground conditions and any risks arising from land instability and contamination. This includes risks arising from natural hazards or former activities such as mining, and any proposals for mitigation including land remediation (as well as potential impacts on the natural environment arising from that remediation);

b) after remediation, as a minimum, land should not be capable of being determined as contaminated land under Part 2A of the Environmental Protection Act 1990; and

c) adequate site investigation information, prepared by a competent person, is available to inform these assessments.

179. Where a site is affected by contamination or land stability issues, responsibility for securing a safe development rests with the developer and/or landowner.

## Water Resources Act (WRA)

The Water Resources Act 1991 (Amendment) (England and Wales) Regulations 2009 updated the Water Resources Act 1991, which introduced the offence of causing or knowingly permitting pollution of controlled waters. The Act provides the Environment Agency with powers to implement remediation necessary to protect controlled waters and recover all reasonable costs of doing so.

## Water Framework Directive (WFD)

The Water Framework Directive 2000/60/EC is designed to:

- enhance the status and prevent further deterioration of aquatic ecosystems and associated wetlands that depend on the aquatic ecosystems
- promote the sustainable use of water
- reduce pollution of water, especially by 'priority' and 'priority hazardous' substances
- ensure progressive reduction of groundwater pollution.

The WFD requires a management plan for each river basin be developed every six years.

## **Groundwater Directive (GWD)**

The 1980 Groundwater Directive 80/68/EEC and the 2006 Groundwater Daughter Directive 2006/118/EC of the WFD are the main European legislation in place to protect groundwater. The 1980 Directive is due to be repealed in December 2013. The European legislation has been transposed into national legislation by regulations and directions to the Environment Agency.

## **Priority Substances Directive (PSD)**

The Priority Substances Directive 2008/105/EC is a 'Daughter' Directive of the WFD, which sets out a priority list of substances posing a threat to or via the aquatic environment. The PSD establishes environmental quality standards for priority substances, which have been set at concentrations that are safe for the aquatic environment and for human health. In addition, there is a further aim of reducing (or eliminating) pollution of surface water (rivers, lakes, estuaries and coastal waters) by pollutants on the list. The WFD requires that countries establish a list of dangerous substances that are being discharged and EQS for them. In England and Wales, this list is provided in the River Basin Districts Typology, Standards and Groundwater threshold values (Water Framework Directive) (England and Wales) Directions 2010. In order to achieve the objectives of the WFD, classification schemes are used to describe where the water environment is of good quality and where it may require improvement.

## **Environmental Permitting Regulations (EPR)**

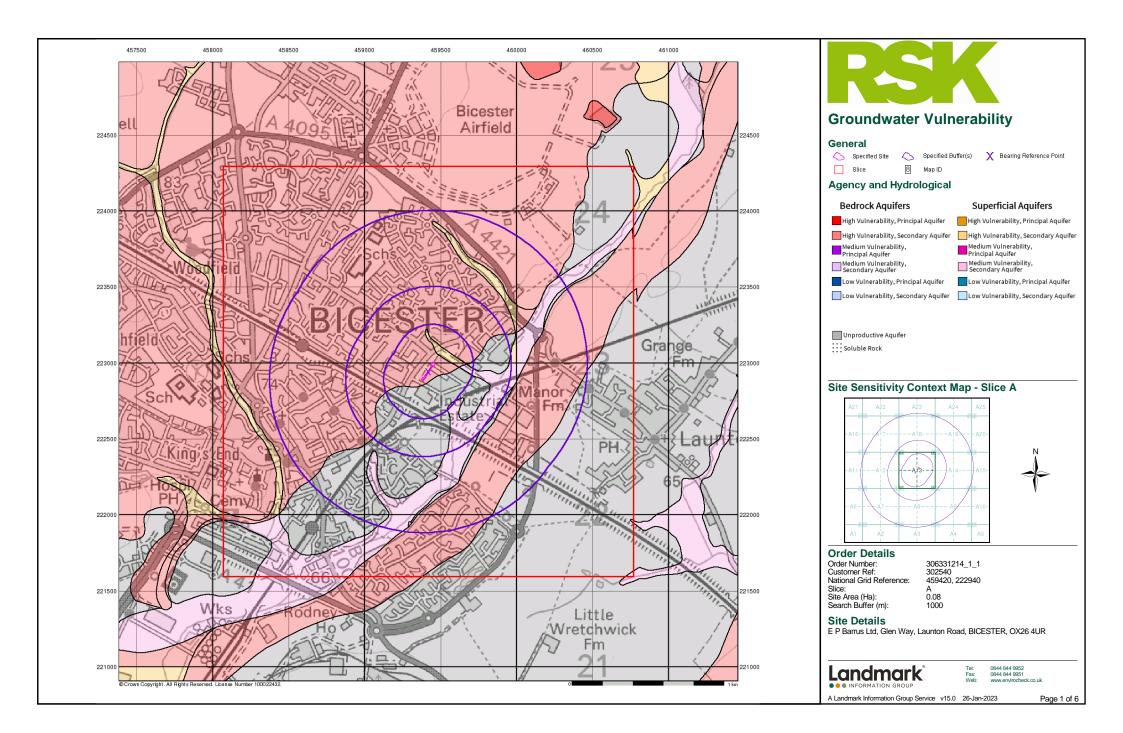

The Environmental Permitting (England and Wales) Regulations 2016 (as amended) provide a single regulatory framework that streamlines and integrates waste management licensing, pollution prevention and control, water discharge consenting, groundwater authorisations, and radioactive substances regulation. Schedule 22, paragraph 6 of EPR 2016 states: 'the regulator must, in exercising its relevant functions, take all necessary measures - (a) to prevent the input of any hazardous substance to groundwater; and (b) to limit the input of non-hazardous pollutants to groundwater so as to ensure that such inputs do not cause pollution of groundwater.'

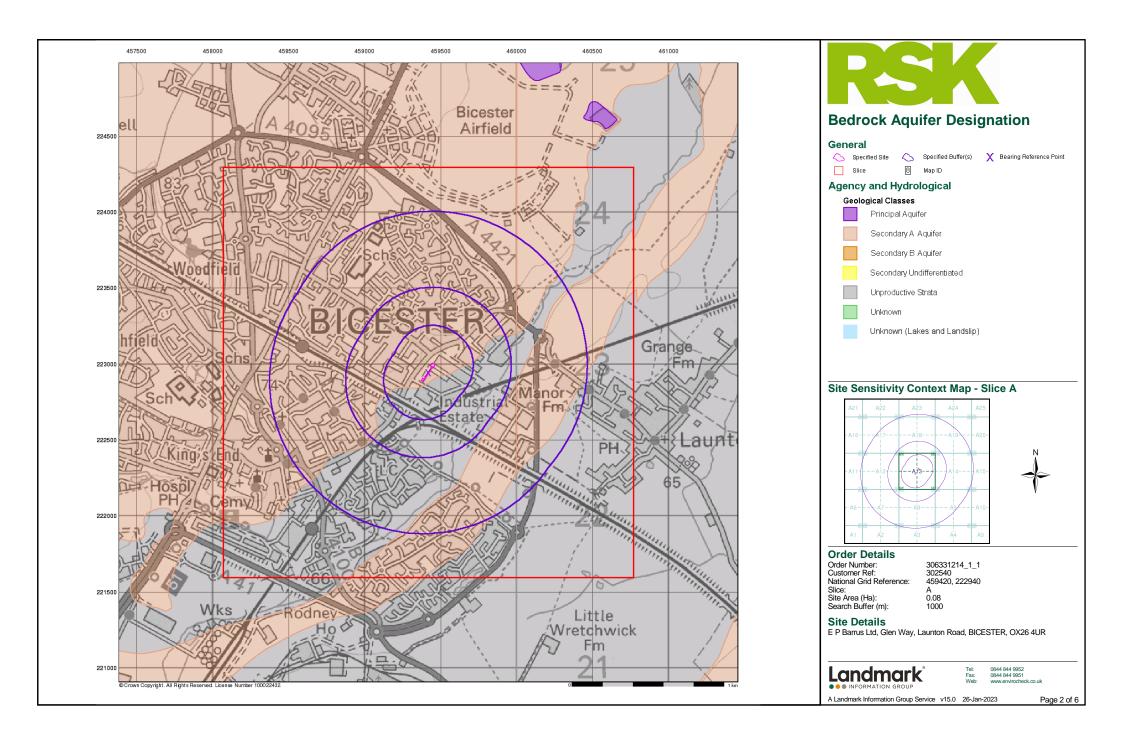

Notes:

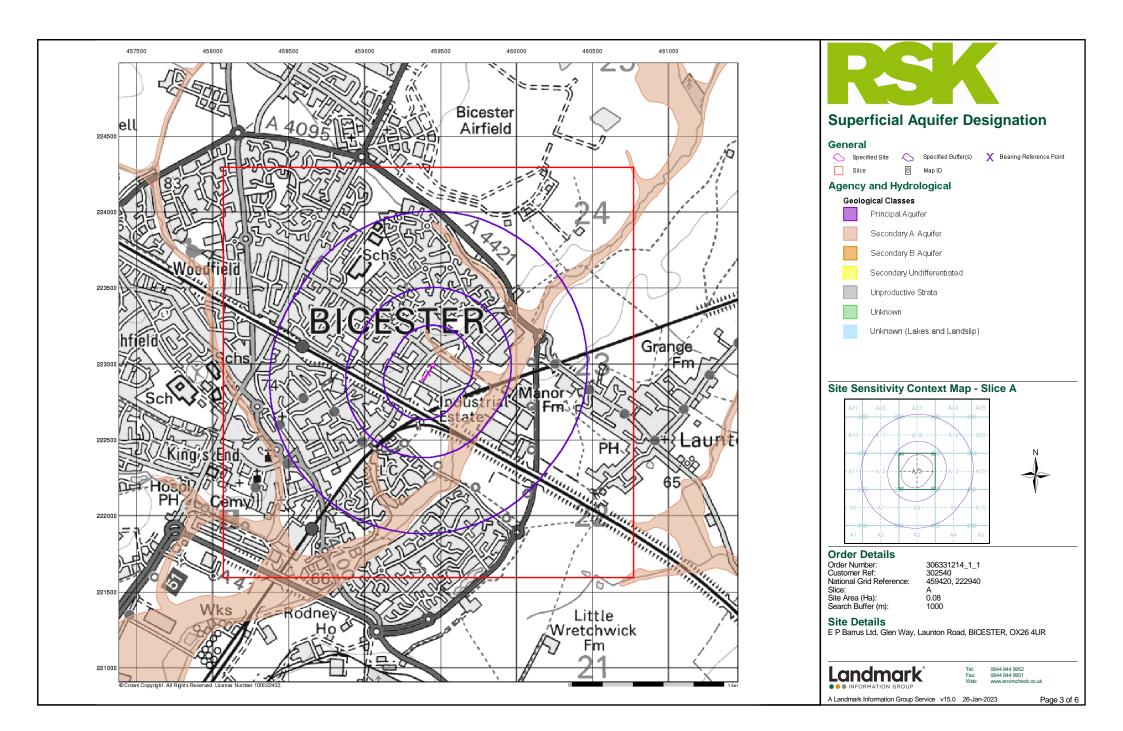

- 1. The above information is provided for background but does not constitute site-specific advice
- 2. The above summary applies to England only. Variations exist within other countries of the United Kingdom

#### Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.

Tor this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

## Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps. The various geological layers - artificial and landslip deposits, superficial

The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

## Artificial Ground and Landslip

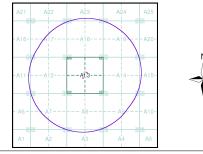

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often engineering conditions and unstable ground.

### Artificial ground includes:

- Made ground man-made deposits such as embankments and spoil heaps on the natural ground surface. - Worked ground - areas where the ground has been cut away such as
- quarries and road cuttings.
- Infilled ground areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground areas where the surface has been reshaped.
  Disturbed ground areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

## **Superficial Geology**

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and in place. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

## **Bedrock and Faults**

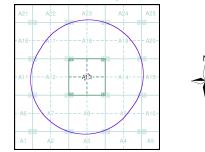

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

## **Combined Surface Geology**

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

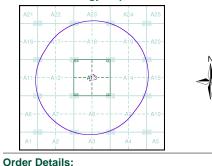

## Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.

produced between 1944 and 1951 as an interim measure, pending preparation of conventional mapping, due to post war resource shortages. New security measures in the 1950's meant that every photograph was rechecked for potentially unsafe information with security sites replaced by fake fields or clouds. The original editions were withdrawn and only later made available after a period of fifty years although due to the accuracy of the editing, without viewing both revisions it is not easy to spot the edits. Where

# **Historical Aerial Photography - Slice A** IBRARY HSILIN E P Barrus Ltd, Glen Way, Launton Road, BICESTER, OX26

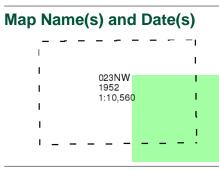

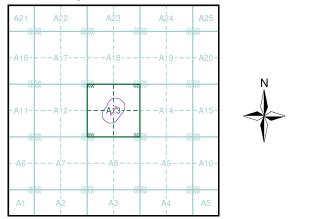

# Published 1952 Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

# Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

# Large-Scale National Grid Data

# Published 1994

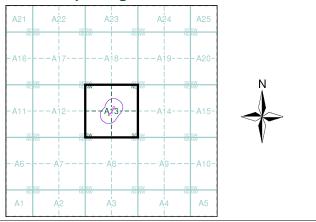

# Source map scale - 1:2,500

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

 Customer Ref:
 302540

 National Grid Reference:
 459420, 222940
 Slice: Site Area (Ha): Search Buffer (m): А 0.08 100

### Site Details

E P Barrus Ltd, Glen Way, Launton Road, BICESTER, OX26 4UR

### **Index Map**

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

#### Slice

Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

#### Segment

A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

#### Quadrant

A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

A selection of organisations who provide data within this report:

British Geological Survey NATURAL ENVIRONMENT RESEARCH

Envirocheck reports are compiled from 136 different sources of data.

#### **Client Details**

Mr M Brannock, RSK Environment Ltd, Spring Lodge, 172 Chester Road, Helsby, Cheshire, WA6 0AR

# APPENDIX E TECHNICAL BACKGROUND

# H1 Desk Study

### Aquifer designation and Source protection zones

Principal aquifer: layers of rock or drift deposit that have high intergranular and/or fracture permeability (usually providing a high level of water storage). They may support water supply and/or river base flow on a strategic scale.

Secondary A aquifer: permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers.

Secondary B aquifer: predominantly lower permeability layers that may store and yield limited amounts of groundwater due to localised features such as fissures, thin permeable horizons and weathering.

Secondary undifferentiated aquifer: it has not been possible to attribute either a category A or B to a rock type. In most cases this means that it was previously designated as both a minor and non-aquifer in different locations owing to the variable characteristics.

Unproductive' strata: low permeability with negligible significance for water supply or river base flow.

The EA generally adopts a three-fold classification of source protection zones (SPZ) surround abstractions for public water supply. The Site is situated in an area defined as follows:

- Zone 1 or the 'inner protection zone' is located immediately adjacent to the groundwater source and is based on a 50-day travel time from any point below the water table to the source. It is designed to protect against the effects of human activity and biological/chemical contaminants that may have an immediate effect on the source
- Zone 2 or the 'outer protection zone' is defined by a 400-day travel time from a point below the water table to the source. The travel time is designed to provide delay and attenuation of slowly degrading pollutants
- Zone 3 or the 'total catchment' is the area around the source within which all groundwater recharge is presumed to be discharged at the source.

### Preliminary risk assessment methodology

LCRM outlines the framework to be followed for risk assessment in the UK. The framework is designed to be consistent with UK legislation and policies including planning. An outline conceptual model should be formed at the preliminary risk assessment stage that collates all the existing information pertaining to a site in text, tabular or diagrammatic form. The outline conceptual model identifies potentially complete (termed possible) contaminant linkages (contaminant–pathway–receptor) and is used as the basis for the design of the site investigation. The outline conceptual model is updated as further information becomes available, for example as a result of the site investigation.

Production of a conceptual model requires an assessment of risk to be made. Risk is a combination of the likelihood of an event occurring and the magnitude of its consequences. Therefore, both the

likelihood and the consequences of an event must be taken into account when assessing risk. RSK has adopted guidance provided in CIRIA C552 for use in the production of conceptual models.

The likelihood of an event can be classified on a four-point system using the following terms and definitions based on CIRIA C552:

- highly likely: the event appears very likely in the short term and almost inevitable over the long term or there is evidence at the receptor of harm or pollution
- likely: it is probable that an event will occur or circumstances are such that the event is not inevitable, but possible in the short term and likely over the long term
- low likelihood: circumstances are possible under which an event could occur, but it is not certain even in the long term that an event would occur and it is less likely in the short term
- unlikely: circumstances are such that it is improbable the event would occur even in the long term.

The severity can be classified using a similar system also based on CIRIA C552. The terms and definitions relating to severity are:

- severe: short term (acute) risk to human health likely to result in 'significant harm' as defined by the Environment Protection Act 1990, Part IIA. Short-term risk of pollution of sensitive water resources. Catastrophic damage to buildings or property. Short-term risk to an ecosystem or organism forming part of that ecosystem (note definition of ecosystem in 'Draft Circular on Contaminated Land', DETR 2000)
- medium: chronic damage to human health ('significant harm' as defined in 'Draft Circular on Contaminated Land', DETR 2000), pollution of sensitive water resources, significant change in an ecosystem or organism forming part of that ecosystem
- mild: pollution of non-sensitive water resources. Significant damage to crops, buildings, structures and services ('significant harm' as defined in 'Draft Circular on Contaminated Land', DETR 2000). Damage to sensitive buildings, structures or the environment
- minor: harm, not necessarily significant, but that could result in financial loss or expenditure to resolve. Non-permanent human health effects easily prevented by use of personal protective clothing. Easily repairable damage to buildings, structures and services.

Once the probability of an event occurring and its consequences have been classified, a risk category can be assigned according to the table below.

|             |                | Consequences |              |              |              |
|-------------|----------------|--------------|--------------|--------------|--------------|
|             |                | Severe       | Medium       | Mild         | Minor        |
| Probability | Highly likely  | Very high    | High         | Moderate     | Moderate/low |
|             | Likely         | High         | Moderate     | Moderate/low | Low          |
|             | Low likelihood | Moderate     | Moderate/low | Low          | Very low     |
|             | Unlikely       | Moderate/low | Low          | Very low     | Very low     |

Definitions of these risk categories are as follows together with an assessment of the further work that may be required:

- very high: there is a high probability that severe harm could occur or there is evidence that severe harm is currently happening. This risk, if realised, could result in substantial liability; urgent investigation and remediation are likely to be required
- high: harm is likely to occur. Realisation of the risk is likely to present a substantial liability. Urgent investigation is required. Remedial works may be necessary in the short term and are likely over the long term
- moderate: it is possible that harm could arise, but it is unlikely that the harm would be severe and it is more likely that the harm would be relatively mild. Investigation is normally required to clarify the risk and determine the liability. Some remedial works may be required in the longer term
- low: it is possible that harm could occur, but it is likely that if realised this harm would at worst normally be mild
- very low: there is a low possibility that harm could occur and if realised the harm is unlikely to be severe.
