PR6a Water Eaton

Traffic Noise Review

Dice Environmental has undertaken a noise assessment in relation to the proposed development PR6a Water Eaton to the north of Oxford. This was based on predicted traffic flows around the site, provided by i-Transport in December 2022. This is set out in the Noise & Vibration Chapter of the Environmental Statement for that project, issued in February 2023. Following this, a scheme of revised traffic flow predictions has been generated, considering comments received from Oxfordshire County Council.

Table 1 presents the previous (Dec. 2022) and current (Oct. 2023) datasets for predicted traffic flows around the site. It can be seen from the table and following figures that the revised traffic flow predictions have an insignificant impact on the outcomes of the noise assessment issued previously. The conclusions stated in the Environmental Statement Chapter issued are still applicable and do not require modification.

Table 1: Comparison of Dec. 2022 and Nov. 2023 traffic flow prediction datasets
