Ecology Technical Note: Condition 20, Axis J9, Bicester (Ref 10706_R01_Biodiversity Enhancements Tech Note_Condition 20_GS)

Date Issued: 04/09/2023

Background/Context

Tyler Grange Group Ltd were commissioned Quod to provide ecological services in relation to a planning application at Axis J9, Phase 3 (Grid Reference: SP 56480 23271), hereinafter referred to as 'the site'.

A planning application for the construction 5 units within 3 buildings and associated parking and servicing, landscaping and associated works was granted permission by The Planning inspectorate (appeal application number APP/C3105/W/22/3304021) in January 2023 subject to several conditions.

This technical note aims to discharge condition 20. Full details of the condition are provided below as per the appeal decision notice for the site:

- ***Condition 20:*** *Full details of the proposals to provide a biodiversity net gain of 5.5% and enhance biodiversity as referred to within paragraphs10.6.30, 10.6.31 and 10.6.32 of the Environmental Statement including the position and type of each proposed enhancement measure shall be submitted to and approved in writing by the Local Planning Authority prior to the development reaching slab level. Thereafter, the biodiversity enhancement measures approved shall be carried out prior to occupation and retained in accordance with the approved details.*

This tech note provides details of the biodiversity net gain and other ecological enhancements which were detailed in the Environmental Statement, and has the following objectives:

- **Objective 1 – Provide +5.5% biodiversity net gain**

- **Objective 2 – Enhance biodiversity as referred to within 10.6.30, - 10.6.32 of the ES including the position and type of each proposed enhancement measure.**

The responsibility for ensuring all recommendations are carried out in line with this technical note lie with the appointed contractor for the works. Overall control will be help by the contractors site manager.

OBJECTIVE 1: Biodiversity Net Gain Detail

Habitats and Biodiversity Net Gain

Biodiversity Net Gain has been assessed using Warwickshire Coventry and Solihull - Biodiversity Impact Assessment Calculator v. 18.3 (08/08/2014).

Existing habitats

The site prior to development was dominated by an arable field, other habitats included the field boundaries associated with the hedgerows and a section of footpath. Hedges with trees were also present on site and were of a moderate-high distinctiveness and moderate condition, ditches (which were dry at time of survey in 2016) were also present.

In total the **existing habitat areas** on site had a biodiversity value of **41.29 Habitat Impact Score (HIS)** and the **existing linear habitats** on site had a value **of 9.44 Linear Impact Score (LIS)**. 50.73

Full details of habitats and condition assessments are provided in the appended excel calculator (Appendix 1).

Proposed Habitats

The proposed habitats on site include wildflower grassland, wetland vegetation (swales), woodland planting, scattered trees, dense scrub, wet grassland, meadow grassland, and native species rich hedgerows as well as enhanced field margins and hedgerows.

In total the created habitats and enhanced habitats on site will provide a **habitat mitigation score (HMS) of 43.04 habitat units** which will gain of **+2.35 units** from the baseline existing habitats. The **Linear Mitigation Score (LIS) will be 10.85** which would provide an uplift of **+1.41 units**. 53.89

The overall change from existing habitats to proposed habitats equates to a +5.7% increase in habitat score and 14.9% in linear score.

OBJECTIVE 2: Biodiversity Enhancements

The proposed enhancement measures are set out below (Landscape Plan, Appendix 2).

Habitat enhancements being provided:

- **Amphibians** – new and enhanced field margins, hedgerows and wildflower grassland will improve the terrestrial habitat provision and the two new swales will provide aquatic habitat for this species group. Overall based on the landscaping plans for the site there will be an uplift in value for amphibians and in particular great crested newts.
- **Bats** – no habitats of value to commuting, foraging or roosting bats will be impacted by the development. There will however be an uplift in habitats for the species in the form of the

swale, grassland buffers, and improved management of existing hedgerows. Lighting on site will also comply with best practice guidelines (Guidance Note 8 Bat and Artificial Lighting).

Bird Boxes

Bird boxes will be erected onto poles (kestrel box) adjacent to hedgerows /grassland on site (see 10706/Bio enhancement Plan for specific installation locations) and retained trees within hedgerow (x4 general purpose boxes) following manufacturers specification with the entrances facing between north and east to avoid the strongest sunlight and wettest winds and to be placed 3-8m off the ground. The box entrances will have a clear unobstructed flight path to ensure safe access/egress.

The bird boxes proposed include provision for species of conservation concern kestrel, flycatchers, house sparrows, and redstarts all of which are listed as either red or amber Birds of Conservation Concern 5th addition which assess the status of UK bird populations. The following boxes are recommended :

- **1 x 2TF Schwegler Kestrel Nest Box (or similar)**

Figure 1: Pole Mounted Kestrel Box (CJ Widlife, 2023)

- **2 x 1MR Schwegler Avianex (General purpose) – Open fronted (or similar)**

Figure 2: General purpose bird box – open fronted (NHBS, 2023)

- **2 x 1MR Schwegler Avianex (General purpose) – entrance hole (or similar)**

Figure 3: General purpose bird box - nest hole (NHBS, 2023)

The specified bird boxes are made from materials that are rugged and long-lasting and thus require minimal maintenance. The boxes should be cleaned out once per year during the winter months when nesting birds are not present (October to February).

Bat Boxes

Bat boxes will be pole mounted at a height of 4m and installed adjacent to hedgerows on the western perimeter of the site (see 10706/Bio enhancement Plan for specific installation locations) and will be faced east our south facing to provide maximum amount of daylight exposure to generate heat. The proposed bat boxes are designed to benefit a range of bat species associated with urban edge habitats. The box entrances will have a clear unobstructed flight path to ensure safe access/egress.

- **3 x Pole Mounted – Single Box (or similar)**

Figure 4 Pole Mounted Bat Roost (Wildcare, 2023)

The bat boxes recommended are suitable for soprano pipistrelle bats which listed as species of principal importance (NERC Act 2006)

The bat boxes will be positioned at a height that aims to minimise potential predation risks (4 to 5m). The specific bat box model recommended above has been designed to require no cleaning or maintenance.

Conclusion

The above measures have been designed to provide an improvement to the existing biodiversity value of the site. The proposed landscape planting including swales, field margins, wildflower grassland and hedgerows are of known benefit to wildlife, including amphibians, bats, and birds. The proposed bird and bat boxes also offer additional nesting and roosting opportunities for these species groups. The proposed measures are in-line with the approved Environmental Statement and provide an uplift of habitat value of >5.5%.

Linear Features
Hedges and other linear features can offer a higher biodiversity value per length than a standard area of habitat due to factors such as connectivity and must therefore be compensated for in parallel to the standard metric.

Linear Impact Score (LIS): **9.44**

CAUTION - Destruction of features of medium or high distinctiveness, e.g. hedgerows and streams, may be against local policy. Has the mitigation hierarchy been followed, can impact to these habitats be avoided?
Any unavoidable loss of valuable habitats must be replaced like-for-like. E.G. Loss of hedgerows must be replaced with similar or better hedgerows. All newly planted hedges should be native species-rich hedgerows.

Value of existing habitat loss per distinctiveness	0.00	0.00	0.00	1.11
Value of created habitats per distinctiveness	10.16	0.00	26.63	4.71
Would this result in trading down habitats?	Never	No	No	No
If no, value each distinctiveness still requiring compensation	0	0	0	0
Surplus gain to be carried over to compensate loss of lower habitats (rolls over)	10.16	10.16	36.78	40.39
Trading down correction value	n/a	0	0	0

This calculator assess whether there is any down trading in habitats value. E.g. loss of high distinctiveness habitat cannot be compensated for by surpluss medium mitigation. correction value which enters into the primary calculator to take this into account. Such that the full level of high habitat loss compensation is required. However if additional me generated above the value of the high loss, this surplus is still be taken into account with on site gain.

CAUTION - Destruction of habitats of high distinctiveness, e.g. lowland meadow or ancient woodland, may be against local policy. Has the mitigation hierarchy been followed, can impact to these habitats be avoided?
Any unavoidable loss of habitats of high distinctiveness must be replaced like-for like.

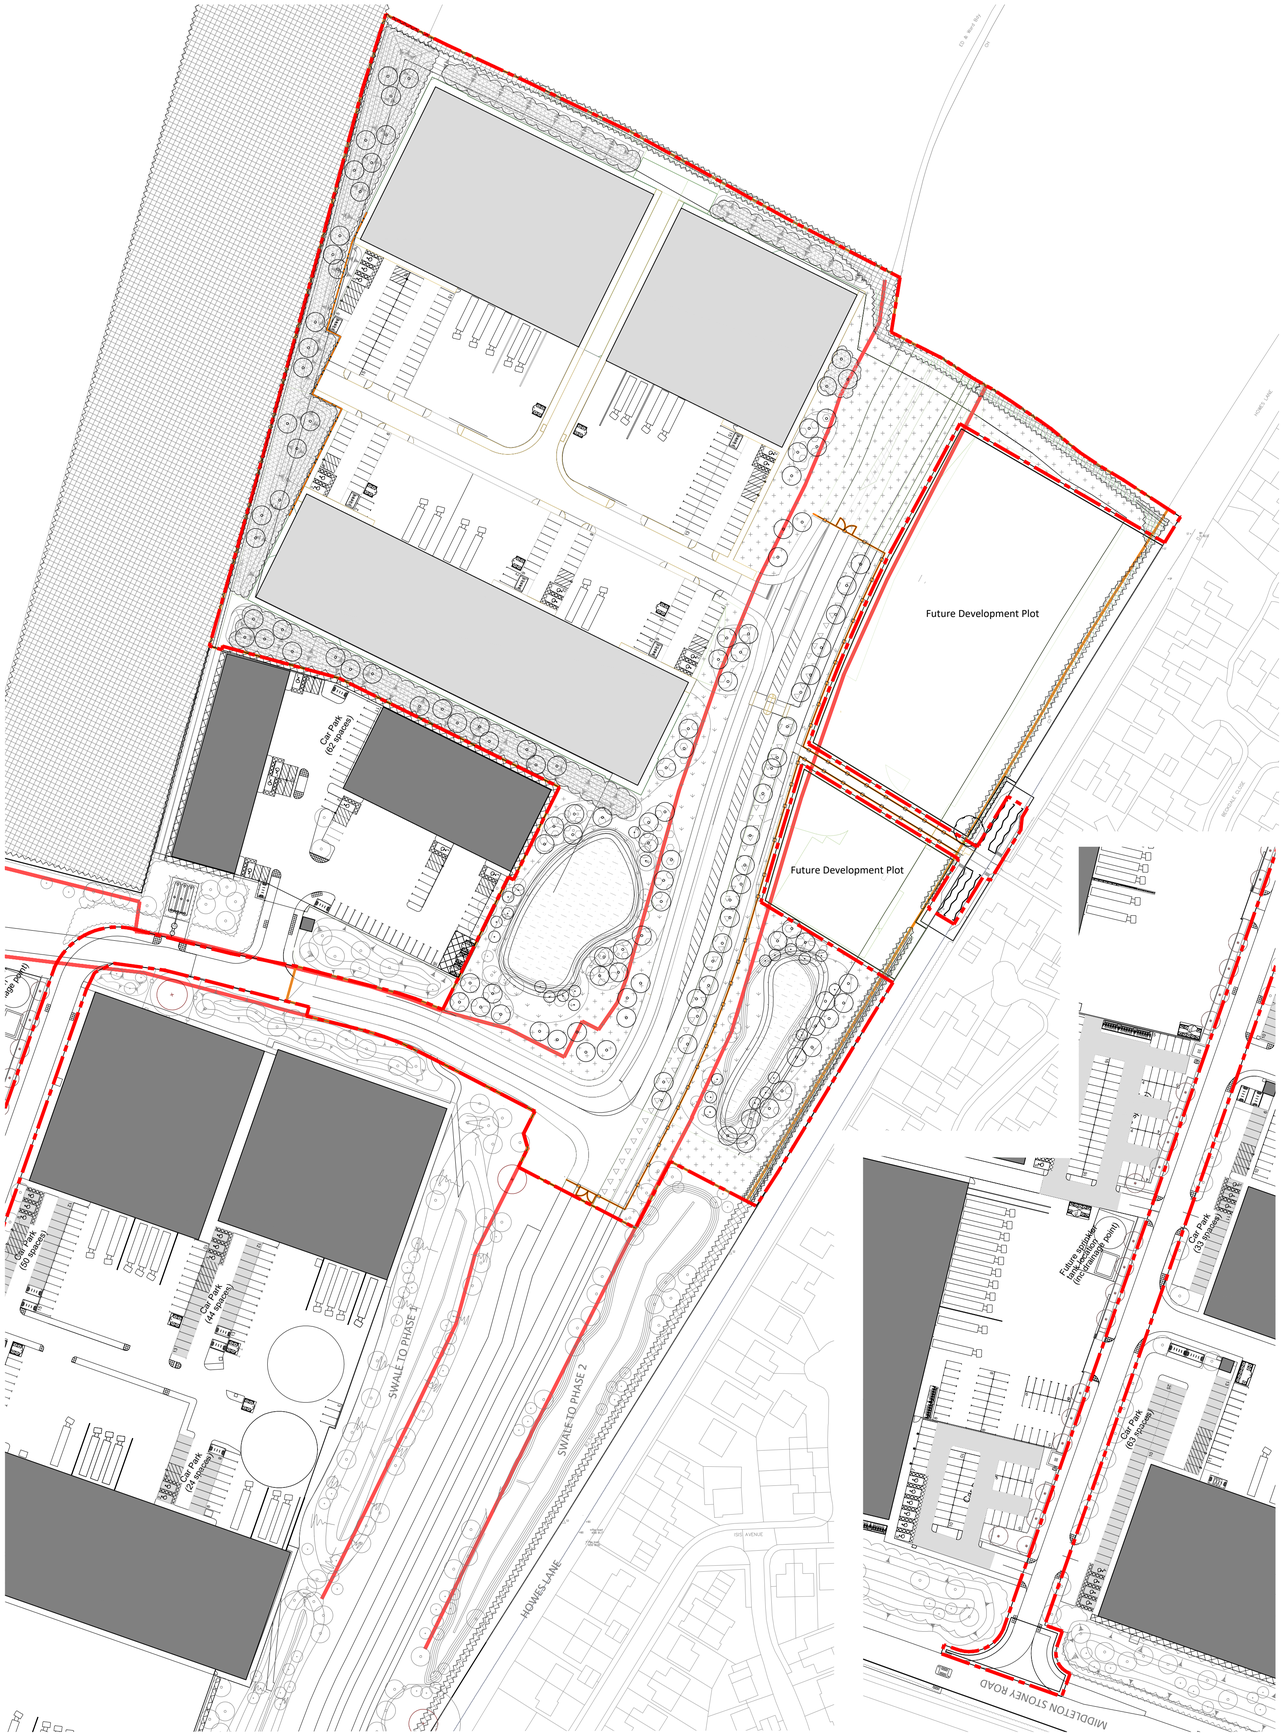
TOTAL	2.19		5.21	5.64	0.00	0.00	0.00

Linear trading down correction	High	Medium-High	Medium	Medium-Low	Low
Value of existing habitat loss per distinctiveness	0.00	8.20	0.00	0.00	1.24
Value of created habitats per distinctiveness	5.21	5.64	0.00	0.00	0.00
Would this result in trading down habitats?	Never	No	No	No	No
If no, value each distinctiveness still requiring compensation	0	0	0	0	1.24
Surplus gain to be carried over to compensate loss of lower habitats (rolls over)	5.21	2.65	2.65	2.65	n/a
Trading down correction value	n/a	0	0	0	0

This calculator assess whether there is any down trading in linear habitats. E.g. loss of high distinctiveness habitat and surplus creation of medium or low habitats. It calculates a correction value which enters into the primary calculator to take this into account. Such that the full level of high habitat loss compensation is required. However if additional medium gain is generated above the value of the high loss, this surplus is still be taken into account with on site gain.

CAUTION - Destruction of each habitat of medium distinctiveness and above should be mitigated for with creation/restoration of a similar habitat. Trading up of habitat type is encouraged.



Key

- Planning application boundary
- BLDG — Proposed building
- BLDG — Existing building
- Contours / landform
- Existing vegetation to be protected and retained
- Native hedgerow planting
- Native woodland planting
- Swale meadow grass (seasonally wet)
- Tall meadow grass (through management)
- Short meadow grass (through management)
- Native understorey mix
- Amenity shrub planting
- Proposed tree in soft landscape
- Existing trees to be retained
- Accounstic 4m fence Refer to architect's drawing
- Low fence Refer to architect's drawing

Botanical Name	Root condition	Form	Height (cm)	
Native understory mix				% Mix
Cornus sanguinea	BR	bushy, 3 brks	60-80cm	15
Viburnum opulus	BR	bushy, 3 brks	60-80cm	20
Viburnum lantana	BR	bushy, 3 brks	60-80cm	20
Euonymus europaeus	BR	bushy, 3 brks	60-80cm	15
Crataegus monogyna	BR	bushy, 3 brks	60-80cm	15
Salix purpurea	BR	bushy, 3 brks	60-80cm	15

Planted in swathes of 3-5 species at 1500mm centres

Swale meadow grass mix (seasonally wet)		
MIXTURE	SUPPLIER	SOW RATE
EG8 (Meadow grass mixture for wetlands)	Emorsgate Seeds	5g/m2 (50kgs/ha)

Meadow grass mix (Long and short)		
MIXTURE	SUPPLIER	SOW RATE
EM1 - Basic general purpose meadow mixture	Emorsgate Seeds	5g/m2

Amenity grass to 'Grassroad'		
MIXTURE	SUPPLIER	SOW RATE
A3 Grass seed mix	Germinal Seeds	50g/m2

Botanical Name	Root condition	Size	Density
Amenity shrub planting			
Carex oshimensis 'Evergold'	C	2L	6/m²
Cornus sanguinea 'Midwinter fire'	C	3L	5/m²
Cotinus coggygria 'Purple Flame'	C	5L	3/m²
Escallonia 'Apple Blossom'	C	3L	5/m²
Hebe 'Red Edge'	C	3L	5/m²
Hebe 'Mrs Winder'	C	3L	5/m²
Photinia x fraserii 'Red Robin'	C	5L	3/m²
Prunus 'Otto Luyken'	C	3L	5/m²
Lonicera nitida 'Maigrun'	C	3L	5/m²
Miscanthus sinensis	C	3L	3/m²

Botanical Name	Root condition	Height	% mix
Native shrub mix			
Crataegus monogyna	C	60-80cm	35
Prunus spinosa	C	60-80cm	35
Cornus sanguinea	C	60-80cm	30

Planted with spacing at varied centres from 0.8-1.2m. Species in groups of 3-7no

Notes

1. All dimensions in mm, unless otherwise stated.
2. Scaling from drawing if printed incorrectly may lead to errors.
3. All information outside red line boundary shown for contextual purpose only.
4. All hatch patterns are indicative only unless stated otherwise.
5. This drawing is to be read in conjunction with the following re-form landscape architecture documentation:
   - 0897-RFM-XX-00-DR-L-0002-LANDSCAPE SECTIONS

   AND all relevant documentation from the design team
6. Levels information on this drawing illustrates the design intent. The contractor is to check and verify all levels and dimensions against site survey information.
7. Any discrepancies in the design information are to be brought to the attention of re-form landscape architecture, in writing, prior to commencement of construction works.
8. All proprietary products shall be installed in strict accordance with manufacturers written instructions.
9. Refer to other consultants' drawings and specifications for the following design information:
   - Foundation details
   - Base course and/or sub bases design & specification
   - Waterproofing of any element
   - Levels & Drainage design and infrastructure
   - Lighting and ducting
   - Existing & proposed utilities
10. Plant quantities are to suit site areas in accordance with scheduled plant densities.
11. Any proposed plant substitution shall be agreed with the landscape architect prior to ordering.
