Description

Carbon steel, zinc primed, and finished with a hard-wearing powder coat in satin black.

The 3mm thick mounting plate and cable hole are designed to fit perfectly with the charge point.

There is a cable entry hole at the bottom at the back and on the side. This is used when the cable does not go underground.

The square section is 60mm x 60mm and the solid 8mm base plate has pre-drilled holes for bolting down. (Bolts included)

At 1.3m tall, it is the perfect height for everyday use and comes with all required fasteners to fit the charger to the mount.

This can be turned into a double simply by bolting on an additional mounting plate on the opposite side.

Charger not included.

Designed and manufactured in the UK using carbon steel.
