

Basic Details

Client name: A2 Dominion.

Principal contractor: Willmott Dixon

Owner of document: Willmott Dixon

Project title: Bicester Eco development: Exemplar Site

Project location: Exemplar Site

Project postcode: OX27 8TG

Construction value: £59,000,000.00

Type of construction: Mixed use developments

Activity: New construction

Metrics

Please select metrics applicable to your project. These metrics are then used in the KPI sheet to track your progress.

Metric	Amount	Unit
Footprint (m2) of site	211,245	m2
Gross Internal Floor Area	1,280	m2

Project targets

Please select project targets applicable to your project

Target	Amount	Unit
Waste to landfill	0	t
Recycled content	20	%

Schedule

Start date : 31/09/2011 dd/mm/yy
Completion date : 31/09/2017 dd/mm/yy

Persons legally required to be identified (SWMP Regulations 2008 Section 6 (1))									
Position	Name	Contact Details							
Client	A2 Dominion.	Steve Hornblow, A2Dominion Group, Godstow Court, 5 West Way, Oxford, OX2 0GE

Step 1.1	Explanation	Practice Level	How to achieve	Guidance available to help
	At this early stage it is advisable that high level targets are set which will govern and inform company strategy.		policy goals for company performance on reducing waste arisings and increasing waste	WRAP have produced a number of Model Procurement clauses which can be incorporated into procurement documents to help meet these requirements. The model wording relates to policy documents, invitation to tender documents, pre-qualification questionnaires or contractual
Policy / target	These targets will then be incorporated into each construction project as	Good	targets for reducing waste arisings and increasing waste recovery into	appointment documents. Actions 1A, 1B and 1C contain model wording that helps clients and principal contractors to set corporate, high
setting	they progress along the project lifecycle (and through the RIBA stages).			level and project specific targets for achieving resource efficiency in construction projects. The guidance can be found here: http://www.wrap.org.uk/construction/achieving_resource_ efficiency/model_procurement_requirements/index.html

Practice level targeted (please select)	Action (use to record more detail if you wish)
Best Practice	

Step 1.2	Explanation	Practice Level	How to achieve	Guidance available to help
	There are a number of required responsibilities for early stage coordination of the Site Waste Management Plan (SWMP).	Standard	Meet requirements for identifying the client, principal contractor and person drafting the Site Waste Management Plan. Involve all members of the project	WRAP have produced a number of Model Procurement Requirements to help incorporate these requirements into prequalification questionnaires and invitation to tender documents
Responsibilities (for the SWMP)	Responsibilities for the operation of the SWMP are listed below in section 5.1.	Good	team and ensure everyone knows about SWMP and how it affects them.	The guidance can be found here: http://www.wrap.org.uk/construction/achieving_resource_
	iised below iii seedoli 5.1.	Best	Include SWMP responsibilities as an agenda item at project team meetings, ensuring all team members are involved and contribute to project waste reduction and recovery actions	efficiency/model procurement requirements/index.html

Practice level targeted (please select)	Action (use to record more detail if you wish)
Best Practice	

2.0 Preparation and Concept design

It is advisable that early on in the design process waste planning is included in the agenda of client and design team meetings. The design guidance document,

Step 2.1	Explanation	Practice Level	How to achieve	Guidance available to help
Designing Out Waste	There are numerous opportunities to reduce waste during the design process. Designing out waste before it arises is one of the most efficient ways to reduce project waste arisings. However, as such decisions need to be taken early, engagement with the design team early on in the life of a project is key.	Standard	Capture decisions made that may have an impact on waste. These decisions may not have been taken with waste reduction in mind, but may have an effect on project waste arisings nonetheless. Discuss with the project team at an early design stage how it might be best to reduce waste arisings through making changes to the design.	WRAP provide regeneration and demolition guidance that can be found here: http://www.wrap.org.uk/construction/tools_and_quidance/ regeneration.html WRAP provide guidance on Designing Out Waste, which can be found here: http://www.wrap.org.uk/construction
		Best	Systematically identify, prioritise and implement waste reduction actions at the design stage. Consider cost, programme and waste reduction potential.	

Practice level targeted (please select)	Action (use to record more detail if you wish)
Best Practice	

3.0 Detailed Design

DIO DOCUITOR	no Detailed Design				
Step 3.1	Explanation	Practice Level	How to achieve	Guidance available to help	
	Estimating waste arisings involves identifying and recording the amount and destination of each waste	Standard	Standard practice is to estimate waste arisings at the pre- construction stage.	WRAPs freely available Net Waste Tool allows you to enter simple project details and forecast likely waste arisings, together with suggesting waste reduction and segregation opportunities and recycled content material	
Estimate waste arisings	stream that will be generated on site. The earlier in the project lifecycle that waste	Good	Forecast waste arisings for each component using industry data.	The Net Waste Tool can be accessed here:	
	streams are estimated, the more opportunity there will be to prevent their	Best	Forecast waste arisings for each component using modified wastage rates based on past company experience.		

Practice level targeted (please select)	Action (use to record more detail if you wish)
Best Practice	

Step 3.2	Explanation	Practice Level	How to achieve	Guidance available to help
	This Step involves identifying and recording waste reduction methods to reduce the quantity of waste estimated in Step	Standard	Identify waste management action for each of the different waste types forecast to arise on the construction project, including re-using, recycling, recovery and disposal.	WRAPs freely available Net Waste Tool allows you to enter simple project details and forecast likely waste arisings, together with suggesting waste reduction and segregation opportunities and recycled content material substitutions.
	3.2.	Good	Target waste arisings for each construction component using industry standard actions	The Net Waste Tool can be accessed here: http://nwtool.wrap.org.uk/
Target waste reductions		Best	Target waste arisings for each construction component. As an example these actions could be to target accurate ordering (accurate material requirements, realistic wastage rates), logistics planning (delivery strategy, adequate storage, efficient movement of materials to the workface) or installation elements (efficient working and installation and storage of offcuts for reuse).	WRAP also provide guidance on logistics planning that can be found here: http://www.wrap.org.uk/construction/achieving_resource_efficiency/materials_logistic_plan/index.html

Practice level targeted (please select)	Action (use to record more detail if you wish)
Best Practice	

4.0 Pre-construction

Step 4.1	Explanation	Practice Level	How to achieve	Guidance available to help
	In addition to designing out waste at (Step 2.1), and estimating outline waste arisings (Step 3.1), it is required to forecast residual waste arisings before going to site.	Standard	Forecast waste according to general estimates, fulfilling requirement to identify each waste type expected to be produced in the course of the project.	WRAPs freely available Net Waste Tool allows you to enter simple project details and forecast likely waste arisings, together with suggesting waste reduction and segregation opportunities and recycled content material substitutions. The Net Waste Tool can be accessed here: http://mwtool.wrap.org.uk/
Forecast residual waste	This final residual waste forecast is the last and most detailed waste forecast that is done before site mobilisation. Once this final waste forecast is completed, waste management and recovery options can be	Good	forecasting residual waste arisings in	WRAP have produced a number of Model Procurement Requirements to help incorporate these requirements into prequalification questionnaires invitation to tender documents, and appointment contracts. The guidance can be found here: http://www.wrap.org.uk/construction/achieving resource
	implemented to ensure the waste is recycled, reused or recovered.	Best	Building on Good Practice, hold talks with the rest of the supply chain (waste management contractors, sub-contractors) to determine waste reduction and recovery actions for the project.	efficiency/model_procurement_requirements/index.html

Practice level targeted (please select)	Action (use to record more detail if you wish)
Best Practice	The initial forecast of waste has been produced at outline planning using BRE KPIs.

Step 4.2	Explanation	Practice Level	How to achieve	Guidance available to help
	This step relates to the efficient management of waste once it has been created on site. Step 4.2 which deals with the management of waste on site should be	Standard		WRAPs freely available Net Waste Tool allows you to enter simple project details and forecast likely waste arisings, together with suggesting waste reduction and segregation opportunities and recycled content material substitutions. The Not Waste Tool on he accessed here: http://mwtool.wrap.org.uk/
Management of Waste	on site should be implemented in line with any targets identified in sections 1.0, 2.0 and 3.0 above. As noted above in Step 2.1, off-cuts should be stored safely on site for reuse.	Good	Identify recycling and recovery options for each waste stream for which recycling and recovery is viable	WRAP also provide guidance on developing and implementing a material logistics plan. http://www.wrap.org.uk/construction/achieving_resource_efficiency/materials_logistic_plan/index.html
	Best	Maximise opportunities for resource efficiency through following the waste hierarchy (prevention, minimisation, reuse, recycling, recovery, disposal)	The Building Research Establishment's BREMAP online tool allows you to enter the postcode of your site and pin point waste management facilities and materials/products suppliers within a region or radius of your chosen http://www.bremap.co.uk/bremap/about.jsp	

Practice level targeted (please select)	Action (use to record more detail if you wish)
Best Practice	

Step 4.3	Explanation	Practice Level	How to achieve	Guidance available to help
Training	It is a requirement that all site workers are trained on the Site Waste Management Plan, providing information on how it affects them. Training prospects should be seen as opportunities to engage with the supply chain and gain buy-in from them — as it will be the supply chain who will be able to significantly	Standard	The principal contractor should provide training to every construction worker needed for the particular work to be carried out within the terms of the site waste management plan. This can be in the form of toolbox talks. Building on standard practice, provide bespoke training to all subcontractors and identify waste reduction actions where they can contribute.	WRAP provide a wealth of background information on waste reduction and recovery, including guidance documents, case studies and best practice guides. General WRAP construction guidance can be found here: http://www.wrap.org.uk/construction/lools and guidance/ index.html WRAP also provide a short guidance note for small and medium sized contractors on reducing construction waste. It can be downloaded here: http://www.wrap.org.uk/downloads/Reducing_your_construction http://www.wrap.org.uk/downloads/Reducing_your_construction
	contribute to any project resource efficiency targets.	Deat	Building on good practice and share experience from previous projects or sites. Use the training exercise to inform continual improvement.	uction_waste _a_pocket_guide_for_SME_contractors.e5bf6111.6667.p df

5.0 Construction

Step 5.1	Explanation	Practice Level	How to achieve	Guidance available to help
	Once the Once the SWMP has been developed it must be implemented on site. This Step outlines	Standard	the client, principal contractor and person drafting the Site Waste Management Plan.	WRAP have produced a number of Model Procurement Requirements to help incorporate these requirements into prequalification questionnaires and invitation to tender documents
Responsibilities	how to assign responsibility for ensuring the SWMP is delivered.		Waste champion is appointed for the whole site.	The guidance can be found here:
(on site)	uie swiir is delivered.	Dt	Building on Good Practice, individuals and sub contractors should be made responsible for specific waste streams, with the waste champion holding these project members to account.	http://www.wrap.org.uk/construction/achieving_resource_ efficiency/model_procurement_requirements/index.html

Practice level targeted (please select)	Action (use to record more detail if you wish)
Best Practice	

Step 5.2	Explanation	Practice Level	How to achieve	Guidance available to help
	Space permitting, key waste streams should be segregated. The segregation scheme should include appropriate training, monitoring and	Standard	Meet requirement that all waste from the site is dealt with in accordance with the Environmental Protection Act and Environmental Protection (Duty of Care) Regulations.	WRAP have produced a number of Model Procurement Requirements to help incorporate these requirements into prequalification questionnaires and invitation to tender documents The guidance can be found here:
Site design, storage and logistics	enforcement with clear signage and using the National Colour Coding Scheme.	Good	layout and skip locations. Use segregated containers at the workface.	http://www.wrap.org.uk/construction/achieving_resource_efficiency/model_procurement_requirements/index.html
	Suleme.	Best	Ensure separate containers are provided for Hazardous Waste, material storage areas are clearly located and signed or arrange for just in time delivery and prevent idouble handling.	

Practice level targeted (please select)	Action (use to record more detail if you wish)
Best Practice	

Step 5.3	Explanation	Practice Level	How to achieve	Guidance available to help
	Monitoring progress against the actions in the site waste management plan more often that every six months can inform ongoing site achievement of the planned waste		every six months	WRAP provide guidance on measurement and reporting on construction projects. It can be found here: http://www.wrap.org.uk/construction/tools_and_guidance/reporting_portal.html
Monitoring	reduction and recovery actions. It can be part on the live review process and inform continual improvement. Once data is collected, it	Good	Principal contractor to review the construction schedule and set appropriate project review and monitoring dates with the client.	
	will form a baseline against which clients can evaluate and improve on resource efficiency performance. Step 5.3 should therefore be linked with Step 6.2.	Best	Building on Good Practice, review site progress against the Site Waste Management Plan and implement changes to revise site activities based on performance where necessary.	

Practice level targeted (please select)	Action (use to record more detail if you wish)
ctice	
Best Practice	

Step 5.4	Explanation	Practice Level	How to achieve	Guidance available to help
	Reporting is an integral part of the Site Waste Management Plan process. Good and best practice relate to recording and reporting waste arisings in increasing levels of detail.	Standard	Ensure the Site Waste Management Plan is kept at the site, and that the Plan is available for two years after completion of the construction project.	WRAPS Reporting Portal has been developed to allow the construction industry to report on its progress in implementing Site Waste Management Plans and record actual site achievements. It can be found here: http://www.wrap.org.uk/construction/tools_and_guidance/ reporting_portal.html
Reporting	WRAP provide a method note that defines the standard by which the construction industry has agreed to record and	Good	Report waste generation, recovery and disposal arising by construction phase (construction, demolition and excavation).	
	report waste arisings. The link to this guidance is listed in the 'quidance'	Best	Report lessons learnt through the project, including the good and best practice levels achieved.	

Practice level targeted (please select)	Action (use to record more detail if you wish)
Best Practice	

6.0 Post-completion

Step 6.1	Explanation	Practice Level	How to achieve	Guidance available to help
On-site project review	The on-site project review is an opportunity for the site project team to review their progress post completion. Good and best practice items relate to the process of continuous review and learning.	Standard	Meet requirements to compare Site Waste Management Plan forecast versus actual performance, and record any deviations from the Plan. Building on Standard Practice, review the Site Waste Management Plan to identify any improvements that could have been made (e.g. to improve waste reduction or recovery, or the accuracy of the forerast)	WRAPs National Reporting Portal has been developed to allow the construction industry to report on its progress in implementing Site Waste Management Plans and record actual site achievements. It can be found here: http://www.wrap.org.uk/construction/tools and guidance/ reporting_portal.html
		Best	Building on Good Practice, hold a post completion project team meeting to debrief and learn lessons from the Site Waste Management Plan process that can be used to inform future practice.	

Practice level targeted (please select)	Action (use to record more detail if you wish)
Best Practice	

Step 6.2	Explanation	Practice Level	How to achieve	Guidance available to help
	The corporate level review uses the SWMPs produced on individual sites to compare construction	Standard	Meet requirements to compare Site Waste Management Plan forecast versus actual performance, and record any deviations from the Plan.	WRAPs Reporting Portal has been developed to allow the construction industry to report on its progress in implementing Site Waste Management Plans and record actual site achievements. It can be found here:
	projects against company baseline performance. If a baseline does not exist, then the first project will become the baseline against which performance	Good	Record project performance in the following areas: cost savings achieved, total waste arisings, total waste to landfill, total waste reductions achieved and recycled content used.	http://www.wrap.org.uk/construction/tools_and_guidance/ reporting_portal.html
Corporate level review	against winch performance in future projects will be measured against.	Best	Use data collected in Step 6.1 standard practice to benchmark performance across your portfolio of projects, using the data to inform continual improvement. Using the data gathered and lessons learnt, set company policy on expected metrics (cost savings, waste arisings, waste reductions, total waste to landfill) for similar project types going forward. Integrate lessons learnt into

Tell me about this sheet

A2 Dominion. Willmott Dixon Bicester Eco development: Exemplar Site Exemplar Site

- The Client and Principal Contractor Shall:
 . Develop and implement a Site Waste Management Plan (SWMP) in compliance with the Site Waste Management Plans Regulations 2008 No.314 and containing not less than the following information:
 - the SWMP shall identify:
 - the Client;
 - . the principal Contractor; and
 - the person who drafted it.
 - the SWMP must describe the construction work proposed, including:
 the location of the site; and

 - . the estimated cost of the project.
 - , the SWMP must record any decision taken before the Plan was drafted on the nature of the project, its design, construction method or materials employed in order to minimise the quantity of waste produced on site.
 - the SWMP must:
 - describe each waste type expected to be produced in the course of the project;

 - estimate the quantity of each different waste type expected to be produced; and identify the waste management action proposed for each different waste type, including re-using, recycling, recovery and disposal.
 - $_{\mbox{\scriptsize \blacksquare}}$ the SWMP must contain a declaration that the Client and the principal Contractor will take all reasonable steps to ensure that:
 - all waste from the site is dealt with in accordance with the waste duty of care in section 34 of the Environmental Protection Act 1990(3) and the Environmental Protection (Duty of Care) Regulations 1991(4); and
 materials will be handled efficiently and waste managed appropriately

update the SWMP when any waste is removed from site and state:

- the identity of the person removing the waste;
- the waste carrier registration number of the carrier;
 a copy of, or reference to, the written description of the waste required by section 34 of the Environmental Protection Act 1990; and
- the site that the waste is being taken to and whether the operator of that site holds a permit under the Environmental Permitting (England and Wales) Regulations 2007 or is registered under those Regulations as a waste operation exempt from the need for such a
- as often as necessary to ensure that the Plan accurately reflects the progress of the project, and in any event not less than every six months: $\frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \int_{-\infty}^{\infty}$
- · review the Plan:
- record the types and quantities of waste produced;
- record the types and quantities of waste that have been:

 - re-used (and whether this was on or off site);
 recycled (and whether this was on or off site);
 - sent for another form of recovery (and whether this was on or off site);
 - sent to landfill; or
 - otherwise disposed of; and
- · update the Plan to reflect the progress of the project.

• add the following to the SWMP within 3 months of the Works being completed:

- confirmation that the Plan has been monitored on a regular basis to ensure that work progressed according to the plan and that the plan was updated in accordance with the
- Regulations;
 a comparison of the estimated quantities of each waste type against the actual quantities of each waste type;
- $\ \, \hbox{\Large .}\ \,$ an explanation of any deviation from the Plan; and
- an estimate of the cost savings that have been achieved by completing and implementing the Plan.

ensure that the SWMP is kept:

- . at the site office, or
- . if there is no site office, at the site:
- ensure that every contractor knows where it is kept, and make it available to any contractor carrying out work described in the Plan
- keep the SWMP for two years after the completion of the project at the principal Contractor's principal place of business or at the site of the project;
- are co-ordination of the work and co-operation among contractors at work during the construction phase:
- ensure so far as is reasonably practicable that every worker carrying out the construction work is provided with:
 - suitable site induction; and
 - any further information and training needed for the particular work to be carried out within the terms of the SWMP:
- make and maintain arrangements that will enable the principal Contractor and the workers engaged in the construction work to co-operate effectively in promoting and developing measures to ensure that any waste arising on site is managed within the terms of the SWMP and in checking the effectiveness of such measures;
- ensure, so far as is reasonably practicable, that waste produced during co re-used, recycled or recovered;
- take all reasonable steps to ensure that sufficient site security measures are in place to prevent the illegal disposal of waste from the site; and
- , review, revise and refine the SWMP as necessary, to ensure that any changes in role and responsibilities are clearly communicated to those affected."

Additional Duties

Additional duties on the principal contractor

- The principal contractor must, so far as is reasonably practicable, ensure co-ordination
 of the work and co-operation among contractors at work during the construction phase
- The principal contractor must ensure so far as is reasonably practicable that every worker
- carrying out the construction work is provided with
 (a) suitable site induction; and

 (b) any further information and training needed for the particular work to be carried out within the terms of the site waste management plan.
- The principal contractor must make and maintain arrangements that will enable the principal contractor and the workers engaged in the construction work to co-operate effectively in promotting and developing measures to ensure that any waste arising on site is managed within the terms of the site waste management plan and in checking the effectiveness of such measures.
- The principal contractor must ensure, so far as is reasonably practicable, that waste produced during construction is re-used, recycled or recovered
- Failure to comply with this paragraph is an offence.
 Additional duties on the client

The client must give reasonable directions to any contractor so far as is necessary to enable the principal contractor to comply with these Regulations.
 Failure to comply with this paragraph is an offence.
 dditional duties on both the client and the principal contractor

- Both the client and the principal contractor must review, revise and refine the site waste management plan as necessary, to ensure that any changes in respective roles and responsibilities are clearly communicated to those affected.
 Both the client and the principal contractor must take reasonable steps to ensure that
- sufficient site security measures are in place to prevent the illegal disposal of waste from the site.
- Failure to comply with this paragraph is an offence.

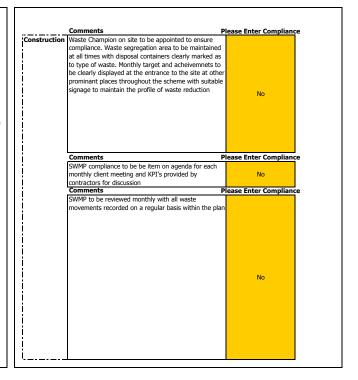

These Regulations require any person intending to carry out a construction project with an estimated cost greater than £300,000 to prepare a site waste management plan. The plan must be updated in accordance with the Regulations, with different requirements

depending on whether the cost of the project is greater than £500,000.

The Regulations are enforced by the Environment Agency and the local authority

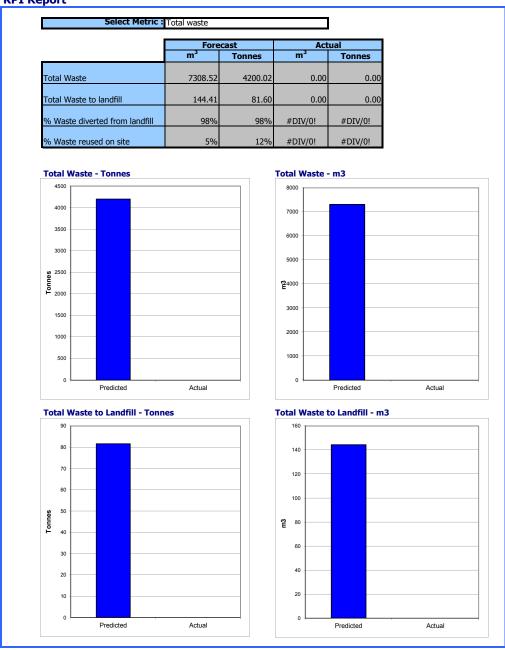

- Breach of the Regulations is an offence punishable-(a) on summary conviction, by a fine not exceeding £50,000, or (b) on conviction on indictment, by a fine.

An impact assessment of the effect that this instrument will have on the costs of business and the voluntary sector is available on the Defra website.

06/03/2013 Bicester Eco-town Exemplar Site SWMP Template V3 130304.xls

E-learning: A full e-learning module can be found on the WRAP website. This will show you how to complete the template and work through an example. http://www.wrap.org.uk/construction/tools and guidance/site waste management planning/swmp tools and.html

Welcome to the WRAP Site Waste Management Plan Template. This short help page has been provided to guide you through how to use the template. You may find it easier to use Excel Full Screen view to navigate around the SWMP Template.

Project Homepage

Project Stage

Policy and setup

Guidance

Section 1.0

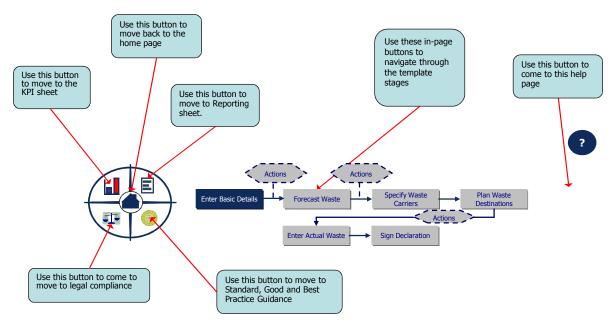

Tell me about this sheet

This is the main part of the SWMP Template and allows you navigate to all worksheets in the Template. The buttons on the homepage as shown here allow you to navigate through the document. Start at the top with Enter Basic Details and end at the declaration, each button is also accompanied by guidance as shown.

The template follows the project stages to help you find where you are in your project.

Each Step is accompanied by guidance that explains how to use an SWMP to achieve Good and Best Practice waste reduction and recovery on site.

The 'Tell me about your sheet' tab tells you what each sheet is for and how to use it. If you get stuck hover over the box and it will tell you what to do.

Expected Facility

There is more guidance on each sheet, hover over a box where you see a red trangle in the corner.

Please select project targets applicable to	our project		
Target	Amount	Unit	
Total waste arisings	▼ 15	t	
Total waste arisings	70	t	
Waste recovery	45	%	

When you click on a box you will see that some you enter using a drop down list and others use free entry. Look for the arrow on the right side of the box. If there is one there click it and select from the menu.

<u>Site Waste Management Plan – Bicester Eco-Town</u> <u>Additional Notes – Revision March 2013</u>

Ambitions for total waste reductions

WDH will be working with consultants to design out waste through build ability, choice of materials and promoting recycled materials within components such as windows. The site team will also be employing a 'just in time' material delivery process to ensure materials are not stored for long periods on site. Materials that require storing will be stored within storage containers and purpose built covered racks to ensure they are protected from the elements and minimising waste through damage. The subcontractors will also be working to the 'just in time' philosophy to make sure material coming into site is used immediately. Please refer to the SGBP tab on the SWMP as an example of what we will working towards.

Segregated waste storage arrangements

We will have segregated skip areas and tipping skips around the site colour coded up and controlled by the waste champions on the site. This will make it easy for all to follow the coded system and ensure waste is stored in the correct areas. This will form part of the inductions and daily supervisors meetings. We will be monitoring our monthly waste reports and any areas of concerns will be communicated to the entire workforce through these daily meetings with the waste champions to ensure improvement where needed is realised.

Space set aside or arrangements made for collection of reusable materials

The same as the waste segregation on site, we will be setting up a central location within the retail area of the project opposite the Energy Centre for all recycled waste such as timber, plastics and plasterboard. These again will be fully sign posted and colour coded up to ensure waste is segregated effectively. Waste to be collected as unusable on site will be stored in one place and waste that can be re-used during site works such as off cuts of timber for 1st fix and roof works will be stored within timber racks as specified.

We will be looking to donate any unusable timber *and other suitable materials* to local colleges or schemes that can use the waste to carry out there activities. A member of the site team will be designated of waste champion for the waste segregation area and also the recycling area as discussed above to control and monitor these areas and report back through the Site Waste Management plan and the EKPI's

Monthly waste target monitoring

This is carried out through our EKPI procedure which uses figures from the *reporting section* of the SWMP from the recycled waste and waste that has left site to landfill including muck away volumes. This is reported to the business and the client on a monthly basis but is carried out daily so the reporting periods can be more frequent if required.

How the site office or site canteen will minimise waste

The site office will be Eco cabins which have low flow rate taps/toilets. Showers, energy light fittings run by PV panels, automatic lights on sensors to ensure no lights are left on in unused rooms, Paper recycling scheme within all our site set ups and majority of site procedures are now paperless, highly insulated units to minimise heating requirements, and meters monitored daily and recorded by the commercial team to monitor uses age. There will be annual energy surveys undertaken to display good/bad and offer improvements that the site team will take up.

Our Supply Chain

How we plan to implement targets, train and incentivise our subcontractors in terms of waste minimisation and efficient waste segregation.

Within every subcontractors package we have a mutually agreed amount for waste. This is normally expressed in terms of numbers of skips, but could be in volume (m3). Each subcontractor can be then measured against agreed amounts and incentivised by passing on cost savings generated by smaller amounts of waste being generated to the subcontractor concerned. The targets for these arrangements will be agreed and formalised at the point of order for each subcontractor.

At Bicester we will be providing all skips required in designated waste zones. This method provides us with the necessary controls to ensure efficient segregation of waste. Training of supply chain staff is seen as vital to ensuring the success of this process. At the initial induction that each operative must have prior to being able to commence work on site. Instruction will be given as to where waste stations are on site and what segregation measures are in place on site.

Our environmental manager will be visiting site regularly and education and awareness training will be high on their agenda. It is planned that training sessions in form of tool box talks etc will be taking place on at least a monthly basis.

Site Waste Management Plan

North West Bicester Exemplar Development Rev A Jan 2013

Introduction

Planning Policy Statement: Ecotowns - A Supplement to Planning Policy Statement 1, requires developers to ensure that no construction, demolition and excavation waste is sent to landfill, except for those types of waste where landfill is the least environmentally damaging option (ET 19.1 (d)).

Planning condition 88 attached to planning permission 10/01780/HYBRID requires a Site Waste Management Plan (SWMP) which demonstrates how zero carbon waste will be sent to landfills. The scheme has been designed accordingly and the SWMP prepared in line with these targets.

The SWMP is a live document and is updated regularly during the course of the project. This document should be read in line with the Construction Environmental Management Plan.

Site Location

The Exemplar Site is located immediately north west of Bicester, along the B4100.

Project Description

The Exemplar scheme is to provide 393 dwellings, an energy centre (up to 400 square metres), means of access, car parking, landscape, amenity space and service infrastructure, and a nursery, community centre, retail units, office space and pub. The scheme has a contract value of approximately £60m. The land is currently a 'greenfield' site which has been farmed with no industrial use for the last 100 years +.

Commencement of Development

The anticipated start date of the project is November 2012 commencing with junction works on the B4100.

Project Aim

Planning Policy Statement: Ecotowns states that no construction, demolition and excavation waste should be sent to landfill, except for those types of waste where landfill is the least environmentally damaging option (ET 19.1 (d)).

In the context of the Site Waste Management Plan Regulations (2008), the project aim is to ensure that no recyclable construction and excavation waste is sent to landfill as set out in the Environmental Statement, submitted as part of the original planning application.

Accordingly, this SWMP has been prepared to demonstrate how such standards will be achieved.

Site Waste Management Plan Approach

The SWMP has been prepared by Willmott Dixon. The Management Plan is based on a template successfully used by Willmott Dixon on other schemes within the United Kingdom and provides a composite document for the Operations Team to use on site. It details the approaches and actions required to be undertaken to manage waste in line with the set targets, and the required monitoring strategy.

The site waste management approach employed on this scheme is the WRAP template. The WRAP format is the agreed best method of monitoring waste streams within the industry.

The WRAP template will be used to initially assess waste levels of the construction materials and then used monthly to monitor performance against initial forecast to maintain focus on the objectives of the scheme which has a target value of 0% waste to landfill. The Site Waste Management Plan is structured as follows:

- **1.** Project Homepage: This sets out the structure of the Management Plan for the Waste Manager and Operations Team.
- **2.** Basic Details: This page sets out general project information for the Operations Team, including client details, contractor details, development specifications, start/ end date, waste management targets and key contact details.
- **3.** Actions: This details the waste minimisation actions considered prior to preparation of the Site Waste Management Plan, for the Waste Manager/ Operations Team's information. Detail includes the type of actions undertaken to minimise waste, actual action undertaken, action owner, waste stream type, material type and the date on which the action was undertaken.

- **4.** Forecast Waste: This section details the type of waste anticipated during construction, for the Waste Manager/ Operations Team's information. Specifically, it sets out the waste stream, material type, quantity and whether it is considered waste or re-useable.
- **5.** Specify Waste Carriers: This details the waste carrier and management facilities used during construction. This will be completed during construction by the Waste Manager/ Operations Team, and will include detail on all persons removing waste, identify all waste carriers, a description of the waste and where the waste is going.
- **6.** Plan Waste Destinations: This section details the waste management action proposed for each different waste type, for the Waste Manager and Operations Team's information.
- **7.** Actual Waste Movements: This section is for completion once works have commenced, and will be used to monitor actual waste movements.
- **8.** SGBP Levels: This section outlines the processes that need to be undertaken by the Operations Team, and to what extent. Additionally, it provides links to additional guidance to inform processes.
- **9.** Compliance: This sets out the various actions the Waste Manager/ Operations Team must undertake throughout construction, post construction, and requires the sign off of these actions at the appropriate time. This section will be completed throughout the project, as and when appropriate.
- **10.**KPIS: This section provides a monitoring spreadsheet in which forecast waste can be compared against actual waste. This section is for completion once works have commenced, and will be used to monitor actual waste movements.
- **11.**Reporting: This is a spreadsheet for the Waste Manager/ Operations Team to complete during development. It allowing actual waste movements to be tabulated against forecast, to monitor whether targets are being met.
- **12.** Help: This is to assist the Waste Manager/ Operations Team to effectively use the SWMP.
- 13. Monitoring The plan will be monitored by Willmott Dixons environmental manager. All Willmott Dixon SWMP are monitored on a monthly basis by our Environmental manager. They are also audited by our Health, Safety and Environmental Inspectors as part of our internal auditing procedures. External the plan and all associated records will be inspected on a six monthly basis by Hyder who are the consultant charged with co-ordinating this process across all the Bicester Eco village schemes .Responsibility for enforcement of these procedures remains with the site Production lead.

This SWMP is detailed in the appended excel spreadsheet, which outlines each stage set out above.

There are still a number of issues on the template which are to be confirmed in relation to waste carriers as Willmott Dixon are currently investigating the local companies, although companies are available further afield. The reason for this is to try and ensure minimal carbon embodiment in moving waste off of site by employing a suitable local carrier that is able to provide the level of service and reuse of the waste to meet our requirements.

Forecast Achievement

Planning Policy Statement: Ecotowns - A Supplement to Planning Policy Statement 1, requires developers to ensure that no construction, demolition and excavation waste is sent to landfill, except for those types of waste where landfill is the least environmentally damaging option (ET 19.1 (d)).

In accordance with Planning Policy Statement: Ecotowns, the Site Waste Management Plan prepared by Willmott Dixon concludes that 100% of recyclable waste created will not be sent to landfill.

There are a range of materials which are widely used on and around construction sites which are non-recyclable. These include:

- Light Bulbs
- Window Panes (Toughended & Laminated)
- Glassware Cups, Glasses etc
- Mirrors
- Bottle and Jar Lids with Plastic Liners
- Cans used for Chemicals
- Antifreeze
- Oil contaminated with Solvents
- Grocery and Plastic Bags
- Styrofoam (Cups, Plates and Packing Materials)

These have been taken into account to arrive at the figure of 98% of all materials used are to be recycled. In an ongoing drive to remove materials unsuitable for recycling and in order to reduce waste to landfill, within the management of the scheme Willmott Dixon will be looking to remove the use of materials containing these elements where possible and replacing them with more environmentally friendly products as they become available.
