

**Table 8 – Biomass storage calculations**

|                | Peak Output (kW) | Annual heat energy delivered (kWh) | Energy Density by Volume - Lower Limit - Wood chip at 30% moisture content (kWh/m³) | Energy Density by Volume - Upper limit - Wood chip at 30% moisture content (kWh/m³) | Wood chip volume combusted per annum - Lower Limit (m³) | Wood chip volume combusted per annum - Upper Limit (m³) |
|----------------|------------------|------------------------------------|---|---|---|---|
| Biomass boiler | 579.0            | 764,348                            | 694   | 868   | 1,101   | 881   |
| Biomass CHP    | 0.0              | 0                                  |   |   | 0   | 0   |

**DELIVERY VEHICLE SIZE**

| TYPE                               | VOLUME (m³) |
|------------------------------------|-------------|
| Flexible hose from a blower tanker | 20          |
| Topper Trailer                     | 30          |
| Walking floor trailer              | 60          |

**TOTAL DELIVERIES PER ANNUM**

| LOWER LIMIT    | Fuel                                 | m³    | Flexible hose from a blower tanker | Topper Trailer | Walking floor trailer |
|----------------|--------------------------------------|-------|------------------------------------|----------------|-----------------------|
| Biomass boiler | Wood chip combusted volume per annum | 1,101 |                                    |                |                       |
| Biomass CHP    | Wood chip combusted volume per annum | 0     | 55                                 | 37             | 18                    |

| UPPER LIMIT    | Fuel                                 | m³  | Flexible hose from a blower tanker | Topper Trailer | Walking floor trailer |
|----------------|--------------------------------------|-----|------------------------------------|----------------|-----------------------|
| Biomass boiler | Wood chip combusted volume per annum | 881 |                                    |                |                       |
| Biomass CHP    | Wood chip combusted volume per annum | 0   | 44                                 | 29             | 15                    |

**PEAK DELIVERIES PER DAY**

| LOWER LIMIT    | Fuel                                 | kWh combusted per day peak | m³ combusted per day peak | Flexible hose from a blower tanker | Topper Trailer | Walking floor trailer |
|----------------|--------------------------------------|----------------------------|---------------------------|------------------------------------|----------------|-----------------------|
| Biomass boiler | Wood chip combusted volume per annum | 13897                      | 20.0                      |                                    |                |                       |
| Biomass CHP    | Wood chip combusted volume per annum | 0                          | 0.0                       | 1.0                                | 1.5            | 3.0                   |

| UPPER LIMIT    | Fuel                                 | kWh combusted per day peak | m³ combusted per day peak | Flexible hose from a blower tanker | Topper Trailer | Walking floor trailer |
|----------------|--------------------------------------|----------------------------|---------------------------|------------------------------------|----------------|-----------------------|
| Biomass boiler | Wood chip combusted volume per annum | 13897                      | 16.0                      |                                    |                |                       |
| Biomass CHP    | Wood chip combusted volume per annum | 0                          | 0.0                       | 1.2                                | 1.9            | 3.7                   |

**AVERAGE DELIVERIES PER DAY**

| LOWER LIMIT    | Fuel                                 | m³ combusted per day average | Flexible hose from a blower tanker | Topper Trailer | Walking floor trailer |
|----------------|--------------------------------------|------------------------------|------------------------------------|----------------|-----------------------|
| Biomass boiler | Wood chip combusted volume per annum | 3.02                         |                                    |                |                       |
| Biomass CHP    | Wood chip combusted volume per annum | 0.00                         | 0.15                               | 0.10           | 0.05                  |

| UPPER LIMIT    | Fuel                                 | m³ combusted per day average | Flexible hose from a blower tanker | Topper Trailer | Walking floor trailer |
|----------------|--------------------------------------|------------------------------|------------------------------------|----------------|-----------------------|
| Biomass boiler | Wood chip combusted volume per annum | 2.41                         |                                    |                |                       |
| Biomass CHP    | Wood chip combusted volume per annum | 0.00                         | 0.12                               | 0.08           | 0.04                  |

**PEAK STORAGE VOLUMES**

| LOWER LIMIT    | Fuel                                 | Peak daily combusted volume (m³) storage | Peak 2 day storage | Peak 3 day storage | Peak 5 day storage | Peak 7 day storage | Peak 2 week day storage |
|----------------|--------------------------------------|--|--------------------|--------------------|--------------------|--------------------|-------------------------|
| Biomass boiler | Wood chip combusted volume per annum | 20.0                                     |                    |                    |                    |                    |                         |
| Biomass CHP    | Wood chip combusted volume per annum | 0.0                                      | 40.0               | 60.1               | 100.1              | 140.2              | 280.3                   |

| LOWER LIMIT    | Fuel                                 | Peak daily combusted volume (m³) storage | Peak 2 day storage | Peak 3 day storage | Peak 5 day storage | Peak 7 day storage | Peak 2 week day storage |
|----------------|--------------------------------------|--|--------------------|--------------------|--------------------|--------------------|-------------------------|
| Biomass boiler | Wood chip combusted volume per annum | 16.0                                     |                    |                    |                    |                    |                         |
| Biomass CHP    | Wood chip combusted volume per annum | 0.0                                      | 32.0               | 48.0               | 80.1               | 112.1              | 224.1                   |

**STORE DIMENTIONS**

| LOWER LIMIT    | Height (m) | Footprint (m²) | Length (m) | Width (m) | 3.0  | 3.0  | 3.0  | 3.0  | 3.0  | 3.0 | 3.0 |
|----------------|------------|----------------|------------|-----------|------|------|------|------|------|-----|-----|
| Biomass boiler |            |                |            |           | 13.3 | 20.0 | 33.4 | 46.7 | 93.4 |     |     |
| Biomass CHP    |            |                |            |           | 3.7  | 4.5  | 5.8  | 6.8  | 9.7  |     |     |
|                |            |                |            |           | 3.7  | 4.5  | 5.8  | 6.8  | 9.7  |     |     |

| UPPER LIMIT    | Height (m) | Footprint (m²) | Length (m) | Width (m) | 3.0  | 3.0  | 3.0  | 3.0  | 3.0  | 3.0 | 3.0 |
|----------------|------------|----------------|------------|-----------|------|------|------|------|------|-----|-----|
| Biomass boiler |            |                |            |           | 10.7 | 16.0 | 26.7 | 37.4 | 74.7 |     |     |
