based on information and drawings supplied by the client. It remains the client's responsibility to ensure that shading from nearby buildings and trees does not affect the system. Weight of solar panels: PV16 21kg V20/PV20 Y20/PV20 43kg/37kg Where the panels are fitted into a pitched filed/slate roof, they are fixed directly to the roof battens with a uniformly distributed load of 21kg per m² (20 and 30 series) or 13kg per m² for PV16. Therefore, they probably weigh less than the roof covering they are replacing. Roof structure modifications are unlikely to be necessary.
